**Skin.**—*Formication and itching in the paralyzed parts.* General itching of the body. Itching of the back, and bends of the knees. Violent itching at night, of the arms, legs, back, and abdomen. Itching and gnawing of the abdomen, arms, and thighs; scratching brought on red streaks. Itching of the whole body at night with much heat and dryness of the mouth. Burning itching of the whole body. Frequent prickings in the skin. Stitches, with pressure in various parts of the body.—Itching, large vesicles over the whole body, also in the face.—*Round herpetic spots over the whole body.* °Furfuraceous dry herpes. *Bloches and blotch-like spots*, brownish and bluish-red, as in leprosy patients. Brownish, dark, sometimes elevated spots in the bends of the knees, on the chest, forehead, and below the corner of the mouth. °Yellow or brown spots on the body. °Sanguineous spots.—Painful hard blisters, in various parts, not itching. Blisters bursting with moisture. Itching vesicles between the fingers, and in the bend of the knee.—\**Small boils* -on the nape of the neck, chest and thighs. Large boils on the thighs, chest and forehead. Sore excoriated spots on the skin, with redness, or smarting and stinging pain. *Trifling wounds bleed a good deal.* Black blood oozes from the cicatrix of an old vesicatory. Pinching contractive pain in a cicatrix.—Sealing off of the epidermis.—Itching of the wart on the forehead. Burning in a wart as in a suppurating

wound, in the evening after lying down.—°Affections of glands after contusion. Tensive drawing in the glands, also on the neck.

**General Symptoms.**—°Scrofulous and rachitic affections. °*Is suitable to persons with phthisical constitution*; but is frequently hurtful when the nerves are very weak, in which case *China*, *Nux v.*, or some other remedy, ought to be employed first. Is suitable to persons with *blonde hair*, or *red hair*, also to lean, slender persons. °Catarrhal affections. °Ailments from cliagrin. °*Rheumatism and attacks of gout of years' standing*. °Weakness from loss of animal fluids, semen. °*Bad effects from onanism*. °Hysteric and hypochondriac affections.—Increased feeling of warmth in the paralyzed parts. *Burning*, in various parts, particularly on the arms and thighs, in the hands and lower limbs, and on the whole side of the body.—°*Lymphatic abscesses*, full of fistulous ulcers with callous edges, fetid, badly-coloured pus, and hectic fever.—°*Affections of bones*.—Exostoses, with nightly pains.—Bad effects from suppression of scarlatina and measles.—°Chlorosis.?—°Dropsical affections.?—Chilblains. Stitching in the chest and back, also in the right arm, during motion, especially at night, in bed. Drawing in arms and legs, with weeping mood. Tearing in the right forearm and knee as soon as she becomes cold. Tearing and sticking after every cold. \**Sensitiveness to cool weather*. His pain increases when the weather changes. \*Liability to take cold in the open air, bringing on colic, pain in the nape of the neck, stiffness of the arms, toothache, lachrymation, hic-cough, cutting and stitching in and above the pit of the stomach, dulness of the head, or at last cold and damp-cold feet and hands, with hot cheeks, etc. Sort of coryza during a walk. Catarrhal feeling through the whole body, with chilliness and drowsiness. A slight wetting or cold of the feet brings on weariness in all the limbs, burning of the hands, headache; has to go to bed; next day coryza. Catarrh and toothache when rising, after having slightly perspired during the night, with sudden paroxysms of slight pain in the teeth.—\**Agitation of the blood*. In the night he thinks he hears the blood rush through the body. Orgasm of the blood, with chilliness and trembling, and anxiety in the intestines. Heat in the head and chest when talking animatedly. Profuse bleeding of small wounds. Hemorrhage from various parts of the body, hæmoptysis, bleeding of the gums, varices, etc. °Pulsations in the whole body.—Sensation as if all the limbs were rigid, when performing quick motions. Hands and feet go to sleep. Deadness of the hands and feet. Rigidity of the hands, feet and nose. A sort of insensibility in the whole body.—Coldness, want of warmth in the whole body. Icy-coldness of the hands and feet the whole day, also in bed. Chilliness when sitting, not when walking. Pain in all the limbs. \**The limbs feel bruised*. All the joints are painful, especially during motion. Languid feeling, as of being bruised, not disposed to do anything. Pale, and bruised all over. Bruised feeling and heaviness in the left knee and elbow.—*Heaviness of the hands and feet*. \**Heaviness of the mind and body*. Painful heaviness of the whole body, now of the head, then the chest, now the thighs and legs, then all over, making him indolent, and putting him out of humour; the heaviness is preceded by a general exhausting sweat. *Hands and feet are heavy as lead*. Heaviness of the limbs before rising.—°Liability to strain a part. Sprained feeling in every limb during quick motions.—Languor and weakness in the joints, especially the knee-joints, during motion and when sitting. Feeling of looseness in the knee-joint, he is scarcely able to stand. Weakness and languor in the limbs, especially the knee-joints, with stinging, and burning, sometimes most after rising, and aggravated by rest, relieved by walking, for several days. Great weakness in the limbs, for upwards of three weeks. Great weakness in the morning, when rising and during the day, general sick feeling,

heartburn, and after a quick walk canine hunger and trembling of the limbs. walking exhausts him very much. Frequent and sudden attacks of great weakness. \**General sudden excessive weakness.* Sudden general weakness, with heat in the face. Faint, oppressed feeling the whole day. \**Hysterie weakness,*—she is unable to move a limb, with gnawing, gulping up, and pressure in the chest. Sensation in the chest and abdomen as if everything would fall to pieces. \**Languor,* with great nervous weakness.—*Weariness* of the whole body, especially of the thighs, in a robust man. Tired and drowsy, after drinking a glass of wine in the afternoon.—*Paralytic feeling* after sitting, for some minutes. *Sick and paralytic feeling in the body.* Loss of strength in all the limbs, especially the joints, with good appetite. The whole right side feels paralyzed, with nausea. He walks like one paralytic, without noticing it himself. As if *paralyzed mentally and bodily*, in the morning and the whole day. As if paralyzed in the back and arms after the siesta.—Tremulous in the morning, with perceptible twitching of the limbs. Chattering of teeth and general trembling in the morning when waking. *Tremor of the hands.* Tremor of the thighs like shuddering. Trembling of the chest and hands as if she had taken too much coffee. Sick feeling in the whole body, especially the stomach.—Fainting.—\**Emaciation* especially of the hands. \**Hectic fever* and emaciation.—Convulsions.—Death by gangrene and inflammation; in one case the body shone in all its parts.

**Characteristic Peculiarities.**—The majority of the symptoms appear *early in the morning, and in the evening in bed*, other symptoms commencing at dinner, and disappearing after dinner. Most of the symptoms cease after dinner, in the afternoon. He feels better *in the open air*. She is impelled to go into the open air. Many symptoms are *most violent* from afternoon till next morning. Constant yawning and watery urine during the paroxysms of pain.

#### PATHOLOGICAL ANATOMY.

*In men:* The cutaneous veins were very large and shone through the skin like broad, dark-brown strings. The whole anterior half of the body was covered with somewhat elevated spots, of the size of a hemp-seed, and of a rather light-red appearance (petechiæ). The nails of the fingers were blue-black, the nails of the toes had a natural colour. No erosions in the buccal and pharyngeal cavity. The vessels of the pia mater were distended with blood; between the pia mater and the tunica arachnoidea there was a wide-spread accumulation of a yellowish-white, opalescent exudation of the thickness of a fig-leaf, by means of which those two membranes were glued to each other in several places. The lower lobes of the lungs felt solid, and were turgid with venous blood, the right ventricle was filled with a dark, fluid blood; the coronary veins looked like thick, black strings; the mucous membrane of the œsophagus was inflamed and red, interstitially distended, and, in the region where it passed through the diaphragm, it was dark-gray and might easily be pulled off. The abdomen was distended with gas, the peritoneum and the omentum were inflamed and red; the vessels of the omentum and mesentery are distended like strings and turgid with black blood; the stomach has a dingy-gray appearance externally, with a reddish tinge, the ileum is of a dark-red brown colour, and is dotted here and there with spots looking like verdigris; the stomach which had been tied up, contained two ounces of a green, thick pap; on the posterior wall of the stomach, in the neighbourhood of the pylorus, there were two gangrenous ulcers perforating the mucous membrane, a similar ulcer was discovered at the fundus of the stomach, which had perforated all the coats of the stomach as far as the peritonæum; the mucous membrane of the stomach, from the cardia to the fun-

dus, was partly ash-coloured and dark-red, partly interstitially distended and softened; the villous coat of the ileum as far as the valvula Banhini, exhibited ramifications of a dark inflammatory redness; the villous coat of the large intestine was in a normal condition (Oesterr. Med. Wochens., 1843, No. 39).—*Worbe* discovered at both extremities of the stomach, in the region of the cardia and pylorus, black or ash-coloured spots, which were found to be true ecchymozed spots, (Mém. lue à la soc. m'éd. d'émulation, 1825).

*In animals*: The mucous membrane of the stomach is very much inflamed, and lined with a floeculent, tenacious, easily-separable layer; the muscular coat exhibited an intense redness at one spot; the stomach contained a small quantity of greenish, thick fluid; the mucous membrane of the duodenum, jejunum and ileum was *purple-red*, and lined with a thick, ink-coloured liquid. Several ecchymozed spots in the cellular tissue and at the base of the heart, on the ventricles, part of the aorta and on the pulmonary artery within the pericardium. The lungs exhibited several blue spots, of a dense and slightly crepitating tissue; the remaining portion of the lungs was rose-coloured. According to Noote's experiments on dogs, Phosph., if used internally, destroys fibrin so completely, that no trace of it can be discovered through the microscope. The bladder was red internally; the cerebral veins were filled with blood, the dura mater was injected; the pia mater was ecchymozed.—*Magendie* discovered that Phosph. causes an obstruction of the pulmonary vessels (hepatization); *Flacksland* found the kidneys, and *Worbe* the bladder inflamed.

## 191. PHOSPHORIC ACID.

PHOSPH. AC.—See HAHNEMANN'S Chronic Diseases, V.

COMPARE WITH—*Asa f.*, Bell., *Chin.*, Coff., Con., Fer., Ign., Lach., Led., Lyc., Merc., Nitr. ac., Op., *Phosph.*, *Rhus*, Sec., Sep., Staph., Sulph., Thuja., Verat. Phosph. ac. is frequently most serviceable after Lach. and *Rhus*.—After Phosph. ac. are frequently suitable *Chin.*, *Fer.*, *Rhus*, *Verat*.

ANTIDOTES.—Camph., Coff.

### CLINICAL OBSERVATIONS.

According to Noack and Trinks, the following affections have been cured with Phosph. ac.: arthritis, inveterate arthritis. Inveterate tearing pains in the limbs.—*Debility* from loss of animal fluids (semen, blood), excessive night-sweats, chronic diarrhoea. Onanism and many of its evil consequences. Bad effects from grief, anguish, sorrow, unhappy love and long watching.—Rachitis of the lower limbs in boys of four years.—Softening and consequent curvature of the bones.—Pædarthrocæ.—Caries of bones. Necrosis.—Drawing *darting*, *tearing and burning* pains in the limbs.—Great weariness after walking.—Intolerance of noise and conversation.—Scarlatina? (Rau).—Typhoid scarlatina, with stupor, angina and involuntary diarrhoea.—Measles.—Erysipelas? (Rau). Pimples on various parts of the body.—*Humid itch-like eruption* on the forehead, face, back, thighs, occasioned by hydrargyrosis.—Herpetic, humid eruption on the vermilion border of the lips and on the cheek near the corners of the mouth; the affected portions of the lips were partly sore, and partly covered with yellow and brown scurf, (in a boy of four years).—*Furuncles on the thighs and under the axillæ*.—Itching of the ulcers.—Inveterate ulcers, with secretion of bad pus and corroded base and edges, with stinging and burning pain. Flat,

painless ulcers on the leg, without redness, with indented, uneven base and dirty pus.—Constant drowsiness from excessive languor.—Constant sleeplessness.—*Remittent fever*.—Typhus.—*Typhus stupidus*, with great insensibility, taciturnity, diarrhœa and great debility.—*Typhus abdominalis*, second stage: constant somnolence or also sleeplessness, bland delirium in the waking or sleeping state, apathy, stupid countenance with circumscribed redness of the cheeks, incipient desiccation and parched condition of the Schneiderian membrane, lips, tongue, or else gastric tongue coated with thick mucus, thirst, rumbling in the abdomen, particularly after drinking, slight sensitiveness of the abdomen, particularly in the right ileo-cæcal region, two or three thin, fermented, painless evacuations a day, great languor and prostration, fever with remittent type, dry and hot skin, or also profuse sweats which do not afford any relief, clear urine, etc. In a large number of cases Phosph. ac. was sufficient to arrest the development of the disease and to bring about recovery. In severer cases when the nervous life is more intensely invaded, and the affection of the ganglionic system and the intestinal mucous membrane has a more malignant character, the stools are more copious, and have a fetid smell, and pass off involuntarily, when the abdomen is much more sensitive, and rash and septic phenomena make their appearance, when a rapid prostration of strength supervenes, no time should be lost in giving Phosph. and Ars.—Typhus versatilis with dulness of the head, vivid redness of the face, great relaxation of the body without vivid delirium, the fever being on the point of passing into the stupid stage.—Incipient typhus stupidus with great apathy.—Typhus gastricus and typhus stupidus biliosus.—Typhus gastricus with disposition to watery stool, coated tongue, pappy taste, and prostration of strength.—Night-sweats.—Copious, exhausting night-sweats, in many cases, particularly after severe influenza.—Profuse, exhausting night-sweats in the case of a nursing female.—Melancholia, in one case, (*Trinks*).—Nervous irritation.—Nervous irritation, with dulness of the head, momentary vanishing of the senses and thoughts in consequence of severe illness and mental depression.—Dulness and weakness of the mind, (in many cases after onanism, *Trinks*). Dulness of sense and inability to perform any mental labour, (a sort of mental paralysis, as frequently takes place after onanism).—Inability to perform any mental labour, with great discouragement and indolence of body and mind.—Chronic dulness and confusion of the head.—Heaviness of the head, as if it were full of water.—Nervous vertigo.—Morning-headache.—Great falling out of the hair in consequence of anguish and grief.—Ophthalmia with burning.—Lachrymation.—Dread of the light of the sun.—The eyes are dazzled by looking at bright objects.—Short-sightedness after onanism.—Difficulty of hearing anything close to the ear.—Scuffs from the nose.—Bleeding of the nose.—Fetid smell from the nose.—Burning of the cheeks. Pimples on the forehead and chin.—The teeth become yellow.—Angina of the tonsils and fauces. Hawking-up of tenacious mucus.—Putrid, flat, sourish and bitter, also *slimy* taste.—Sensation, after dinner, as if the stomach were balancing up and down.—Constant nausea in the throat.—Gastric symptoms, with diarrhœa and shuddering, as if cold water were poured into the pit of his stomach.—Sourish and putrid eructations.—Gastric and bilious conditions with thick white or yellow coating of the tongue, flat, slimy, or bitter taste, aversion to meat and broth, rumbling in the abdomen, disposition to diarrhœa with or without fever.—Burning in the abdomen.—Copious watery diarrhœa with rumbling in the abdomen, flatulence, mostly setting in in the summer.—Disposition to diarrhœa.—Chronic diarrhœa.—Lienteria.—Gastric conditions with and without fever, violent pain and dulness of the head, thick and white-coated tongue, bad smell from the mouth, putrid taste, disposition to diarrhœa, general languor and prostration, restless, unrefreshing night-sleep disturbed by

dreams, exhausting morning sweats, thick urine which deposits a good deal of mucus, (*Trinks*, in a number of cases).—Cholericine.—*Intolerable pain of the protruded hæmorrhoidal varices, when sitting. Excessive hemorrhage from the varices, which protrude during stool.*—Nocturnal enuresis.—*Milky urine*: the urine is white as milk, as if stirred with lime, with clots of bloody jelly and white cheesy coagula, smelling like raw meat, with pains in the back and kidneys, and emaciation (in men and women).—Diabetes mellitus.—Cutting urine, particularly in pregnant females.—Extinction of the sexual instinct.—Impotence in consequence of sexual excesses.—Gnawing pains in the testicles.—The testicles are painful when touched.—*Excessive nocturnal emissions* with subsequent weakness of the nervous system, (*Trinks*, in many cases).—Pain in the liver during the menses.—Too early and too long menses.—*Passive metrorrhagia.*—Roughness of the throat. Scraping of the larynx inducing cough.—Hacking with expectoration of mucus early in the morning.—Hæmoptoe, (in many cases, *Trinks*).—Typhoid pneumonia, (in conjunction with *Acon.*, *Bernstein*).—Shortness of breath, with inability to talk for any length of time. Weakness of the chest from talking. Weakness in the small of the back and back, occasioned by excessive nocturnal emissions. Pimples on the anus. Swelling on the nates. Swelling of the feet. Corns.

## SYMPTOMS.

**Mind and Disposition.**—Lowness of spirits.—*Sadness.*—She apprehends sickness. *Is constantly brooding over his illness.* Apprehensive for the future.—Weeping mood as if home-sick.—Sad, serious, low-spirited, *only when walking in the open air*; the longer he walks, the more these symptoms increase.—*Anxiety* and uneasiness in the whole body. Great anxiety; he has to lie down in the afternoon. Anguish as if the chest were too narrow, with internal heat.—Internal uneasiness prevents him from attending to his business.—*Hurriedness* when talking; when asking for something, he cannot get it fast enough. Great *irritation* of the nerves, the mind feels oppressed, the body faint.—Out of humour, *\*not disposed to talk.*—*Not satisfied with himself.* Out of humour, peevish, irritated. Headstrong. He gets easily angry. Vehement about a trifling vexation. Taciturn, *\*indifferent*, °apathic, indisposed to work.—*Cheerful*, frequently to excess. Dancing vehemently and wildly, for several days without resting herself, except at night.

**Sensorium.**—He is unable to connect his ideas properly. He dwells upon one and the same idea, and is unable to connect any other with it. He is at a loss to find the words he wishes to use. When alone he becomes thoughtless and unconscious of himself, in the morning. Want of ideas and weakness of mind; he became giddy when reflecting upon something. Dull, heavy mind, without imagination, not disposed to do anything, not even to perform any pleasant intellectual labour. When reading, he thought of a thousand other things, he was unable to comprehend anything, he forgot immediately what he had been reading, and had great difficulty in recollecting that which he had known for a long time past.—*Illusion of the senses*; he imagined he heard the clock strike or he saw high things placed beyond the sphere of his vision, move by his side. In the evening when sitting he saw mere figures, his head feeling at the same time dull and sick, and finally very hot.—*Dulness of the head.* Muddled state of the head, for three hours. Dulness of the sinuiput, especially the orbits. Inability to think. Dulness of the head, as from indulging in sexual excesses, for three days. Sensation in the head and limbs as if one had been intoxicated or as if one had not slept enough. Reeling sensation in the morning after rising.—*Vertigo when standing or walking*, as if intoxicated. Vertigo when stooping,

or sitting. *The head inclines to fall backwards and forwards (immediately).* Vertigo when rising, after having been seated for a long time. Vertigo after reading. Vertigo in the morning, in bed; when closing his eyes, he felt as if the feet were being raised and as if he stood on his head. Frequent vertigo from heat in the head, even when sitting; when writing he had to nod frequently and involuntarily; the objects appeared to turn, the table seemed to fall; and when walking or standing he fell forward, and had to make a step forward to keep himself on his feet.

**Head.**—Headache when turning the head rapidly, and when stepping firmly. Aching pain in the occiput, obliging him to lie down. Violent headache, with stiffness of the nape of the neck. Headache increased by the slightest concussion. Violent pain over the eyes, she is unable to open them. Headache, as after an effort in lifting something. Heaviness of the whole head, with violent pressure towards the left frontal eminence. Heaviness and pressure from behind forwards in the occiput, only when stooping, disappearing upon inclining the head backwards. Dull headache in the forehead and temples, with tolerable cheerfulness. Dull creeping pain in the forehead, with sweat on the forehead. *Dull headache with buzzing in the head*; when coughing the pain increases as if the head would burst.—Pressure in the brain, behind the left ear. Painful pressure in the right side of the occiput, from within outwards. Aching pain in the right occiput, increased when pressing upon it and turning the head. Dull, stitching pressure, at intervals, deep in the left vertex. Dull painful pressure over the orbits, with stitches behind the ears, in the afternoon. Hard pressure on the left side of the forehead. Violent pressure in the right frontal eminence, from within outwards. Pressure in the forehead, as after intoxication. Hard pressure above the left temple, extending to the occiput, with dread of motion. Pressure in the head, especially after going up stairs. Hard pressure in the forehead or temples, almost *as if bruised*, as if on the surface of the brain, when reflecting, especially in the evening, but not hindering thought. Violent, hard painful pressure as if on the surface of the brain, and in the periosteum of that portion of the skull on which he is lying, on waking after midnight; the pain becomes intolerable by remaining lying on the same side, but disappears when turning to another side, and is then felt in this one with the same degree of violence. Violent pressure from the forehead down upon the nose. Pressure in the head as from a load, from above downwards, or as if the upper part of the head were bruised. Violent pressure in the forehead, in the morning on waking, she was stupified and was unable to open her eyes; the pain scarcely allowed her to talk and was increased by the least motion. Excessively-violent pressure in the head, in the afternoon. Headache, as if the brain were pressed upwards, with painful pulsative throbbing in the brain. *Aching and stitching pain* in every part of the head, at intervals. Violent pressure in the right temple from within outwards. Crampy pressure in the parietal bones, more violent during motion. Pressure in the occiput as if lying on something hard. Crampy, dull, hard pressure in the left temple, at regular intervals. Crampy pressure and tearing in the brain, in different places. Crampy tearing pressure in the occiput, increased by noise and the slightest motion. Crampy pressure in the right temple.—*Compressive pain* in the whole brain. Pain as if both parietal bones were compressed by a pair of pincers. Pain in the evening, in bed, as if both temples were pressed towards each other in some parts.—Violent *pushing and pressing* through the vertex, from within outwards, for three days.—Jerking through the head from behind forwards, also pulsating.—*Drawing* with pressure in the right vertex and occipital bone, more violent during motion. Drawing in the left temple and the anterior cartilage of the ear, changing to

pressure during motion.—*Tearing* in the vertex and occiput. *Tearing* in the left temple, extending as far as the forehead, worse during motion.—*Stitch* above the left eye, from below upwards, in the head. Dull stitch through the middle of the forehead. Dull dartings in the right temple, striking deep into the brain, at frequent intervals. Violent stitch from the right temple to the eye. *Stitch*, with drawing, in the vertex, relieved by pressing upon it.—Single sharp *shocks* in the right temple. Single blows in the head, as with a hammer. *Haeking* in the head, as with a hatchet, (cured by Staphys).—*Prickling headache*, in the morning when rising, until noon. *Burning headache* in the upper part of the brain.—*Digging-up boring* in the right occiput. Boring with pressure in the left temple. Boring in the head as if the skull were being perforated, especially in the vertex.—Painful concussion in the head, when walking. Humming in the head.

**Scalp.**—Pain of the scalp, when touching it, as if sore, or as if the hairs were pulled. Dull pain of the hairy scalp. *Pressure* in the occiput, as from lying on a hard couch, diminished by friction. Aching pain in the right temple. Pressure and gnawing in the forehead, near the root of the nose.—Itching gnawing of the forehead. *Itching of the scalp*.—Pain in the occiput as if bruised, in the region where the cervical muscles are inserted. Drawing pain in the occipital bone, every day. Burning stitch in the upper part of the head. Long-continuing stitch in the vertex, increased by contact. Burning pain in the right side of the scalp. Burning pain in the skin of the forehead, left side. Feeling of warmth in the side of the frontal bone. Feeling of coldness on the hairy scalp.—Painful *elevation* on the scalp, with sensation as if he had been pulled by the hairs; pain as if bruised, when touching the parts.—\**Great falling off of the hair*, particularly after grief. °Flaxen, withering, gray hair.

**Eyes.**—The eyes are painful in the morning when opening them, she is unable to hold them open for a long time.—Sudden pain in the left eye, as from a grain of sand or a pimple in the eye. Pressure on the left lower eyelid. Pressure on the right eyelid and feeling of heaviness in the same. Constant pressure in the eyes as is felt when looking too long at one object, compelling one to close the eye. Pressure of the eyes, as if they were too large, with immobility of the same as if he had not slept enough, and with dulness of the head. Pressure under the lower left eyelid, increased by pressing upon it, and then disappearing immediately. Pressure in both eyes, towards the back part. Crampy sensation, with pressure in the upper border of the left orbit.—Pain as if the eyeballs were compressed and pressed into the head. Sensation as if the eyes would be pressed out, causing frequent winking.—*Itching* in the eye. Itching and pressure in the eye.—Drawing *stitching* through the eyelids, from one canthus to the other, with sharp stitches in the canthi and in the circumference of the orbits. The right eyeball is pressed into the outer canthus, in consequence of a dull, now stitching then burning, pain; afterwards sensation before the eye as of a long snowy plain to which fiery points descended, and afterwards a fiery plain before the eyes, to which shining white points descended. Sudden stitches under the right eyelid, as from electric sparks, he had to close the eyes firmly afterwards. Sharp stitch in the thin bony wall of the orbit, towards the root of the nose.—Perceptible coldness of the inner borders of the orbits, when closing the eyes.—Burning in the eyes, with burning tears. Sudden burning in the left eye. Burning and pressure in the eyes; she is unable to look at the light in the evening. Burning in the upper eyelids, the whole day, and burning itching in the inner canthus. Burning under the upper eyelid. Burning in the inner canthus, as if too much air and light were pressing in; the burning is less when closing the eyes firmly. Smarting burning in the eyes, especially in the

evening, at candle-light.—*\*Inflammation of the eyes* and styte on the upper eyelid. °Inflammation with congested vessels towards the inner canthus. °Inflammation of the eyelids. Swelling and redness of the lower eyelids.—Smarting *lachrymation* of both eyes. Dry gum in the lids, in the morning, with smarting when washing the eyes. Agglutination of the eyes.—*Yellow spot* in the white of the eye towards the inner canthus, but more towards the cornea, accompanied with dim-sightedness, disappearing on dilating the pupil.—Both eyes look glassy, the eyeballs moving almost involuntarily, mostly when staring. Faint, glassy, staring look. Sunken eyes.—Twitching of the lower eyelid, towards the inner canthus. *Heaviness* of the lids as if they would close.—First, dilatation, afterwards contraction of the pupils, for sixteen hours. Contraction of the pupils for several days. *Dilatation of the pupils*. Excessive dilatation of the right pupil increasing in proportion as he made an effort to see; even seven days after, it was four times as large as the left. °Photophobia in the day-time. *\*The eyes are dazzled by looking at bright things*.—*Short-sightedness* when sewing, reading or writing, as if a gauze were before the eyes; she does not recognize the letters; things at a distance are distinct and clear to her; when looking away from her work for one moment, she then sees again the objects near her better; but the dim-sightedness returns immediately on re-commencing to read. °He sees better at a distance, (curative effect). Increased short-sightedness. He sees everything in a fog beyond the distance of six steps.—*Dimness of sight*, with quick and short luminous vibrations before the eyes, and pressure in the internal canthus when looking long at one spot; rubbing brings on lachrymation and the dimness passes off. Weak eyes, more so in the forenoon than afternoon; distant objects seemed to be wrapped in mist; every near but somewhat bright object dazzled him and caused a pressure in the eyes; the same symptom was felt when looking suddenly in the dark.—*Black streak* before the eyes, wiping does not remove it; she feels as if she might see over her own head when lowering it. Vibrations before the eyes when reading at candle-light.

**Ears.**—Cramp-like drawing pain in the right ear. *Drawing* in the inner and outer right meatus auditorius. Fine twitching in the right lobule. Jerking *tearing* or simple tearing in the cartilage of the left ear. Tearing in the outer and inner ear.—Almost painless *stitch* in the left ear, going off when inserting the finger into the ear. Stitches in the ears when she hears a musical sound or the stroke of a bell, or even when singing herself. Stitches in the ears, with *drawing pain* in the jaws and teeth. Stitches in the ears, with drawing pains in the left cheek. Long-lasting fine stitch, deep in the right ear. Burning stitches in the ears. Itching stitches in the interior of the right ear, continuing while moving the jaw. Stinging itching of the right lobule.—*Swelling* and heat of both ears, with burning and itching. Large tubercle on the posterior surface of the right lobule, sore, especially when touching it.—Every sound re-echoes loudly in the ear. Constant singing in the ears, when lying. *Ring*ing before the ears. Shrill sound in the ear when blowing the nose. *Whizzing* in the ears every day. Whizzing in the ears, in the evening, not when lying in bed, but again in the morning. *Roaring* in the ears, especially the right. Roaring in the ears, with hard hearing.—He does not hear the tick of a watch when held at a moderate distance from the ear; he hears it more distinctly at the distance of a foot and a half, when held close to the ear he only hears a hissing, no tick.—*\*For a long time he found musical sounds very disagreeable*.—°Intolerance of noise and conversation.

**Nose.**—Cold nose. Itching of the tip of the nose, he had to scratch it. Creeping and burning of the nose. *Pimple* on the tip of the nose, with beating in the nose and pain when touching it. *Swelling* of the dorsum of the nose, with red spots

on the dorsum and sides, going and coming, with a tensive sensation. \**Scurfs on the nose.* Itching scurf on the lower part of the septum.—Suppression of the secretion of mucus in the nose. Bitter mucus frequently gets into the mouth and fauces from the posterior nares.—Purulent discharge from the nose.—*Bleeding* of the nose and frequent discharge of blood from the nose when blowing it.—Sensitive smell.—°Fetid smell from the nose.—Dry nose. Catarrhal fever, with pain in all the limbs and loss of appetite. Violent coryza, and red margins of the nostrils.

**Face.**—*Pale face* when rising, with disposition to stare. *Blue margins around the eyes.* Sunken eyes. Heat of that side of the face on which he was not lying. The face is frequently *dark-red*, momentarily, with flushes of heat.—Tension of the skin of the face, as if albumen were drying on it; it feels hot to the touch. Formication in the face and in other parts. Fine, sudden drawing through the left cheek, as far as the ear. \**Burning pain in the skin of the cheek*,—near the right corner of the mouth. Burning pain at a small spot on the left cheek.—*Itching* of the whole face. *Large pimples in the face*,—or on the forehead and chin. Red pimples on the cheeks and nose, filled with pus, and itching, especially when touched. *Blotches* on the forehead, with soreness when touched.—°Moist scurfs, herpes on the cheeks, lips, and in the corners of the mouth. °Dry lips. Violent *burning* pain in the lower lip, continuing even when moving it. Dull stitching and creeping in one point of the vermilion border of the lip. The lower lip is chapped in the middle. Oblique fissure in the right side of the upper lip, with sore pain, especially when moving the lip, for several days. Burning, painful *pimples on the vermilion border of both lips.* Ulcerated, deep sores in the vermilion border of both lips, with tensive smarting, even when not touched; they form a dark skin which is easily rubbed off when washing the face; in this case the sores bleed and smart when touched. Yellow-brown, crust-like eruption with pus on the lower lip towards the corner of the mouth, painless, for six days.

**Jaws and Teeth.**—Pain of the lower jaw as if it were torn out of its joint, more so when chewing. Pain of the left submaxillary gland when touching it, resembling a broad stitch with pressure, simultaneously with sore throat. Dull drawing pain with pressure, in the angle of the right lower jaw. Violent aching in a hollow tooth, when particles of food get into it, going off after they had been removed. Pain of the wisdom-tooth.—Jerking tearing in the upper right molares, independent of chewing. Tearing in the teeth, extending into the head, as if the tooth would be pressed asunder and driven out, aggravated by the warmth of the bed, or by anything hot or cold. Boring-stitching toothache, ending with swelling of the cheek.—*Feeling of chilliness* in the roots, especially those of the molar teeth, when chewing; this feeling is painful in the morning and goes off after a meal. A sort of grumbling burning in the hollow tooth. Burning pain in the foreteeth, at night.—Dulness of the teeth, as from a corrosive acid. °The teeth become yellow. Violent *bleeding* from a hollow tooth.—Swelling of the inner gums, and pain when eating or touching them. Soreness of the gums when touched, bleeding when rubbing them. *Bleeding of the gums* from the slightest contact. °The gums stand off from the teeth. °Painful tubercle on the gum.

**Mouth.**—Sore and raw pain in the mouth, between the acts of deglutition. Great dryness in the mouth, in the afternoon, with a quantity of tasteless, viscid, soap-like mucus, which he spits out frequently. A quantity of sourish saliva in the mouth, having an acrid taste. A quantity of sourish saliva in the mouth. The mouth is slimy, oily and thirsty, in the morning. °Tenacious, viscid mucus in the mouth.—°Smarting on the tongue when chewing solid food. The tongue

is quite dry. *Feeling of dryness on the tongue* and in the palate, without thirst. *Stinging* in the tip of the tongue. Itching stinging in the tip of the tongue. Stinging pain in the right side of the tongue. Itching in the tongue for several days. Burning on the tongue, immediately. Burning in several parts of the tongue, as from something corrosive. *Swelling* of the tongue with pain when talking.—°Nasal speech.—*Dryness of the palate*, without thirst. Burning of the velum pendulum palati, as if inflamed. Painful soreness of the velum pendulum palati, and rawness in the throat, especially during an expiration. Swelling and sore feeling of the posterior nares. °Sore, ulcerated velum.

**Pharynx and Œsophagus.**—Pain of the throat when swallowing, in the region of the thyroid cartilage. Rawness of the throat, with pain when talking or swallowing. Sore throat when swallowing. Smarting of the throat, between the acts of deglutition. Scraping in the throat when swallowing bread. Stinging in the throat when swallowing food. Stitch, with pressure in the throat, when swallowing saliva. Soreness of the left side of the throat, *ulcerative*, beating, tensive and dry, between the acts of deglutition; talking is troublesome; when swallowing he experiences a scraping and sore pain, extending into the ears, where he feels likewise a scraping and stinging pain. Inflammation of the throat, with a smarting *vesicle*. Sensation as if something had lodged behind the palate, impeding deglutition.

**Taste and Appetite.**—Putrid, flat *taste*. Taste constantly acid. Putrid, smoky taste. Taste, as of herbs, in the morning after waking. Tasting the bread a long time after eating it, with some scratching in the throat. Aversion to brown bread, when merely looking at it, and especially on account of its sour smell, also when eating it, almost causing vomiting. Bread tastes like bile, the taste in the mouth being natural.—\**Violent thirst*. Violent desire for cold milk or beer.—Loss of appetite.—The child wants to eat all the time, without eating much.—°Desire for juicy, refreshing things.—°Acids occasion eructations and other ailments.

**Gastric Symptoms.**—After a meal: dulness of the head. *Pressure in the stomach, as from a load*, with drowsiness. Excessive relaxation of the body (after breakfast), she had to be carried to bed. Oppression of the stomach with drowsiness. Load in the stomach like lead. Repletion and anxiety. Frequent rising of air, preceded by rumbling in the stomach. °Sensation as if the stomach were balanced up and down. Ineffectual offensive eructations. Sour eructations.—\*Nausea, as if in the palate. °Constant nausea as if in the throat. Nausea obliging one to lie down, -also with writhing *around the stomach*. Nausea unto vomiting in the region of the stomach.—*Vomiting* of the ingesta, and afterwards vomiting every hour.

**Stomach.**—*Oppression of the stomach*, before and after dinner. Painful oppression of the stomach *when touching the pit*, he dares not button up his clothes.—*Stitching*, with pressure, *in the pit of the stomach*, as if something were pulled away. Stitching in the pit of stomach, and a drawing thence to the small of the back.—Coldness in the stomach. Burning under the pit of the stomach, then moving to the left side.—Rumbling in the region of the stomach.

**Hypochondria.**—Pressing and pushing in the *hypochondria*, with great anguish, as if he would be deprived of his life, most when standing. Periodical crampy sensation, with pressure under the short ribs. Crampy sensation with pressure, after walking, above the liver, and extending thence to the umbilical region.—Feeling of heaviness *in the liver*. Stitching in the region of the liver and spleen. Burning pain at one spot of the region of the liver.

**Abdomen.**—*Pressure in several parts of the epigastrium*. Painful pinching in the abdomen, like flatulent colic.—*Crampy pain in the abdomen*. Crampy

sensation with pressure *in the umbilical region*. Contraction of the intestines, in the morning during stool, and afterwards smarting in the rectum. Excessive pinching contraction of the intestines, from both sides of the umbilical region. Gripping and pinching in the umbilical region, when sitting. Cutting pinching in the abdomen, as if diarrhœa would come on.—*Cutting pain* across the abdomen, in paroxysms. Tensive stitching pain in the whole right side of the abdomen and chest, almost arresting the breathing. Cutting colic, with drawing in the pelvis.—Intermittent, dull *stitches*, with pressure, around the umbilical region and in many other parts of the body. Fine intermittent stitches in the abdomen, towards the pit of the stomach, especially when raising the body while sitting. Stitching colic under the last left rib, more violent during an inspiration. Stitches above the groin, when changing his position, when beginning to walk, or when just sitting down.—Burning and smarting in the umbilical region, when walking in the open air. °Burning in the abdomen.—Distention of the abdomen, ceasing entirely after the passage of a single flatus. Distention of the abdomen, with nausea. Tensive pain in the epigastrium, almost arresting the breath.—Incarceration of flatulence. *Rumbling* in the epigastrium and abdomen. *Gurgling* in the abdomen, as of water, when bending forward or backward, also when touching the abdomen. \**Emission of a quantity of flatulence*, °particularly after taking anything acid.—Stitches in the left abdominal muscles. Boring stitch in the skin of the epigastrium, also during an inspiration and expiration.—Cutting in the left groin. Gurgling twinges in the right groin. Pressing from within outwards in the right groin, as if hernia would form, increased by pressure.—Swelling of the inguinal glands.

**Stool.**—Stool first hard, then papescent. No stool for two days, with flatulence.—*Frequent desire for stool*. Unsuccessful desire, then difficult stool, next day no stool. Hard stool, in pieces. Stool with great exertions, although not hard.—Stool every day the first 6 days, then every 2, afterwards every 3 days.—Stool loose and frequent. \*Diarrhœa. \**White-gray diarrhœa*. °Slimy diarrhœa. °Watery diarrhœa. °Lienteria. Involuntary, light-yellow, papescent stool, coming out while emitting flatulence.—Protrusion of the *varices* during stool.—Smarting of the *anus* after difficult stool. Tenesmus after stool.—Tearing in the *anus* and penis, evening and morning. Itching stitch in the border of the anus. Itching gnawing in the region of the os coccygis. Smarting itching of the anus.—Tearing in the rectum, and sensation as if diarrhœa would come on, but no stool.

**Urinary Organs.**—*Retention of urine* the first 7 hours, then frequent micturition, with burning in the neck of the bladder.—\**Desire to urinate*, -with scanty emission. Urging to urinate, 8 times a day, 2 or 3 times a night. Urging with burning during micturition. °Urging with pale face, heat and thirst. °Irresistible desire to urinate. Pressing in the urethra and rectum. Enuresis with cutting burning in the urethra, and cramp-pain in the small of the back. \**Frequent micturition, the urine being either watery* or dark with clouds.—*Pale urine* forming thick, whitish flocculi. Milky urine with bloody jelly-like lumps, or as if stirred with flour.—Fetid urine.—Burning during micturition, followed by gonorrhœal discharge. °Cutting in the urethra. Sensation towards the end of micturition, as if a load in the abdomen were pressing towards the genital organs. Great burning in the urethra, arresting the urine, and exciting a desire to urinate. Burning during, and cutting previous to, micturition. °Anguish and uneasiness before micturition. Cutting, with ineffectual desire before micturition. *Drawing* in the urethra, extending as far as the anus. Frequent *feeling of rawness* in the urethra, with occasional stitching in the same. Stitching in the urethra, between the acts of micturition, (immediately).

Creeping in the urethra, between the acts of micturition. Painful stitches at the termination of the urethra. Painful *spasmodic constriction of the bladder*, without urging. Swelling of the orifice of the urethra.

**Male Genital Organs.**—Tingling itching on the dorsum of the penis, externally. Feeling of heaviness in the glans, especially during micturition. Itching stinging of the glans. Fine stinging of the tip of the glans. Burning cutting of the glans, with painful pressure in the groins from within outwards. Itching creeping in the frænulum. *Vesicle* near the frænulum, itching when pressing on it. Humid, itching vesicles on the frænulum, preceded by creeping. Heat and burning of the syeotic excrescences. Soreness of the same, when walking or sitting.—*Drawing soreness in the testicles*, as if excoriated. °Pain of the testicles when touched. Pressure in both testicles, increased when touching them, or when walking. °Gnawing in the testicles. Burning tearing in the left testicle, and burning in the prostate gland, with frequent erections. Swelling of the left testicle. Itching of the *scrotum*. Long-itching stitch of the scrotum. Formication of the scrotum. Soreness of the scrotum. Inflammation of the scrotum. Hardness and tension of the *spermatic chord*. Swelling of the spermatic chord, with dulness of the head. Small red pimples on the scrotum and the posterior part of the penis, with feeling of heat in the same.—*Falling cut of the hair* of the genital organs. Suppression of the *sexual desire*.—Swelling of the penis for several minutes. Inclination to erection in the morning when standing. Violent erection. \**Frequent emissions*, °also after onanism.—*Discharge of the prostatic fluid*, when straining during stool.—Sudden relaxation of the penis, during an embrace, when the semen is on the point of being emitted, preventing the emission.

**Female Sexual Organs.**—°Meteoristic distention of the uterus.—Re-appearance of the menses at full moon, after having been suppressed for many months.—°Pain in the liver during the menses.—*Leucorrhœa after the menses*. Profuse, yellowish leucorrhœa with itching, some days after the menses.

**Larynx.**—Contractive pain in the region of the pit of the throat, worse when bending the neck. Roughness of the throat, hindering speech. *Violent hoarseness*. Irritation, occasioning a few stitches in the throat, but no cough. Cough, occasioned by a tickling from the middle of the chest to the larynx. Continual cough with irritation. Cough, occasioned by burning in the chest. Cough inducing a desire to vomit. Cough with vomiting of food. Cough from tickling in the chest, the cough is worse in the evening after lying down. Violent cough with expectoration, causing a pain in the abdomen. Cough with yellow expectoration. Cough *with expectoration tasting and smelling like herbs*. The cough occasions a headache, as if the skull would burst. Burning in the chest and throat, when coughing or during the fluent coryza, or even when she did not cough.

**Chest.**—Breathing heavy and oppressed, with stitches between the short ribs, mostly on the left side. Odours take away his breath. Want of breath, on waking from his siesta, with restlessness and sweat on the body. °Shortness of breath, with inability to talk for any length of time, on account of weakness of the chest. Oppressive anxiety in the chest. Pain in the chest, as if from weakness or sitting too long, relieved by walking.—Oppression and contraction of the chest, with stitches. Painful oppression of the chest, when beginning to walk. Constrictive pain of the chest. Painful spasm in the chest and diaphragm, in the region of the lowermost ribs of the right side, sudden and unexpected; she is obliged to sit bent, with stitches in that side when breathing.—*Pressure* in the chest for several hours. *Violent pressure* over the whole chest, in the night, shifting to the abdomen, and disappearing after emission of

flatulence. Pressure behind the sternum, impeding the breathing. Aching pain in the left side of the chest, most violent when breathing. Pressure in the middle of the chest, most violent during an inspiration, as if the sternum would be pressed out, more violent when pressing on the sternum, or when stooping or coughing. Crampy pressure in the right side of the chest, in the region of the seventh rib. Crampy pressure in either side of the chest, by several provers. Cutting pressure in the left side of the chest, during a deep inspiration.—*Stitch* in the lower part of the right side of the chest, during an inspiration, going off while walking. Dull stitches in the middle of the sternum. Dull stitch in the left side between the lowest rib and the pelvis, through the whole cavity of the abdomen, more violent during an inspiration. Sharp stitches in the region of the right lowest rib. Sharp stitch in the upper part of the chest, under the right arm, arresting the breathing momentarily. Boring, dull, continuous stitch in the left chest, more violent during an inspiration. Pinching stitch in the whole chest.—Boring pinching in the left chest, continuing during an inspiration. Burning sore pain internally in the region of the last rib.—Burning in the outer parts of the chest.—Burning-cutting pain in the left chest when sitting, worse when touching the part. Palpitation of the heart when starting from sleep.—Tingling pain in the chest when at rest; pain on the sternum when stooping, moving about, or touching the parts. Sensation as if the ribs had been knocked in. Sharp pressure in the left mamma. Itching pricking like flea-bites, between the mammae, obliging her to rise in the night. Itching gnawing in the region of the right false ribs.

**Back.**—Itching stitch in the region of the *os coccygis*. Fine stitches in the region of the *os coccygis* and sternum. Intense pain in the *small of the back*, a sort of drawing and pressing, sometimes tearing, very perceptible only when standing. Intermittent, quickly drawing, aching pain in the small of the back, mostly when standing, less when walking; going off by pressing upon the part, sitting and stooping. Intermittent tearing in the small of the back, when rising after stooping; when standing, the pain changes to a mere quiet drawing. Burning pain at a spot above the small of the back. Violent stitch in the small of the back when rising after squatting.—Itching and sweat in the *back*. Painful drawing in the dorsal vertebrae, as if bruised, most when sitting. Tearing pain in the back, at night. Pinching pain in the middle of the spine. Stitch in the loins when lifting something, continuing when sitting, but disappearing at once when commencing to walk. Stitches in the region of the kidneys. Short, violent stitches in the middle of the spine at intervals. Itching gnawing around the lumbar vertebrae and in other parts of the trunk, also in the thigh; he is obliged to scratch. Red pimples on the back, chest and neck, especially above the scapulae, less visible in the morning than evening, painful only when rubbing them and when touched by the clothes, and lasting a fortnight.—Eruption on the *scapulae*, without itching, painful only when touched. Painful tearing in the region of the left scapula, when sitting bent. Subdued drawing and pressing in the surface of the bones, like a sort of gnawing, below the apex of the scapula.—Drawing-sticking pressing in the nape of the neck, extending to the occiput. Jerking sensation in the nape of the neck, when at rest, but more frequently when raising the head. Stiff feeling in the nape of the neck, when at rest, disappearing by motion. Burning soreness on the side of the nape of the neck.—Pressure on the *neck*, in front and on the sides. Pinching pain at a small spot in the neck. Painful pressure on the left side of the neck, as from incipient internal ulceration, aggravated neither by swallowing nor by talking. Cramp-like drawing in the left cervical muscles as far as the eye,

when turning the head. Pain of the right cervical muscles. Painful stiffness of the left cervical muscles; the rigidity extends into the head.

**Upper Extremities.**—°Boils in the *axilla*. Swelling of an axillary gland, going off of itself. Drawing and beating in the shoulder-joint. Rheumatic laming pain in the right shoulder-joint. Tearing in the shoulder and left hand. Crampy pressure on the top of the right shoulder. Boils on the right shoulder.—Burning as from red-hot coal in different parts of the arm and on the shoulder. Weakness in the arm, in the forenoon, with trembling. The (injured) arm becomes stiff and painful at every motion; the hand becomes heavy as lead; pecking and pricking in the ulcer, and tearing and pricking in the ball of the thumb and fingers; painful burning in the interior of the hands, and the blood rushes into the hand when letting the arm hang. °Pimples on the arms.—Drawing in both arms, from the shoulder.—Itching stitch in the *upper arm*, not removed by scratching. Muscular twitchings in the upper arm, arrested by moving the arm. Painful jerking tearing in the arms, fingers and limbs generally. Paralytic crampy pressure in the upper arms, increased by contact. Feeling of icy-coldness in the right upper arm. Drawing from the elbow to the shoulder.—Burning sensation in the elbow-joints. Pain of the elbow-joint when feeling it. Drawing cutting in the elbow, wrist, and posterior finger-joints.—The *forearms* are painful as if bruised, when laying them on the table. Crampy pressure in the forearm, from without inwards, and from above downwards. Painful crampy weight in the right forearm. Sharp sticking boring in the inner side of the left forearm near the bend of the elbow, worst when at rest. Paralytic pain in the outer side of the forearm, below the elbow, not hindering the motion of the arm.—Feeling of stiffness and crampy feeling in the *wrist-joint*, increased by motion. Pinching crampy feeling between the metacarpal bones of the right hand. Tearing rolling, upwards and downwards, sometimes with stitches, in the bones of the hands, fingers and forearms. Pinching pain above the right wrist-joint. Tearing, transversely across the right wrist-joint.—Drawing sticking in the palms of the hands. Increased warmth in the palms of the hands. Trembling of the hands when writing, with tingling and itching in the hands. Heaviness like lead and burning of the hand of the injured arm, with determination of blood to the hand on letting it hang down.—Itching in the backs of the hands, increased by friction. *Wen* between the metacarpal bones, exceedingly painful, especially at night and when touching it. Rough, shrivelled, dry skin of the hands.—Stitches in the *finger-joints*. Tearing in the fingers, especially the joints, with tension when moving them, as if the tendons were too short. Violent, sharp-sticking tearing in the posterior joint of the right middle finger. Cramp-pain in the fingers of the left hand, uninfluenced by motion. Painful drawing, with pressure, in the little finger, especially the joint, going off by bending the finger towards the palm of the hand. Intermittent, dull stitches in the ball of the thumb. Fine stinging through the dorsum of the right thumb, extending as far as under the nail. Inflammation and suppuration behind the finger-nail. Corrosive itching of the left middle finger, recurring soon after scratching. *Deadness of one side* of the left index-finger, from cold, the dead part being marked off very abruptly. The fingers go to sleep, become cold, yellow and shrivelled, the pulse being slow, small and scarcely perceptible. Numbness of the tips of the fingers. Deep, hard, itching *vesicles* on the ball of the thumb. Pimple-shaped, red spots on the backs of the fingers, without sensation. Red *pimples* of the size of a pin's head, on and between the fingers, without any sensation, for five days, exhibiting finally a white elevation in the centre.

**Lower Extremities.**—\**Boil on the nates.*—Cramp-like drawing in the left side of the nates when walking. Itching twitching in the glutei muscles of both sides. Itching of the right hip. Pain of the hip-joint, as if broken, when walking or when touching it. Pain in the hip-joint, when rising from one's seat. Cramp in the hip-joint, with tearing extending through the whole thigh, intolerable when eating or sitting. Painful stretching and pain as if bruised, in the hip-joint, worse during motion. Heaviness and paralytic sensation in the hip-joint, when commencing to walk after sitting; going off after having walked a little.—Pain of the thighs and legs when walking, as if bruised. Tearing, from the thigh to the big toe. Heaviness, which soon becomes painful, in all the joints of the lower limbs. Rheumatic paralytic feeling of the whole left lower limb. The lower limbs go to sleep when sitting.—Dull pressure on the thigh. Cramp-pain, with pressure, in the right thigh. Tearing in the upper part of the thigh, commencing in the bend of the knee. Tearing with pressure in the outer side of the thigh and at the same time in the region of the tibia. Burning feeling in the posterior muscles of the thighs, when standing, disappearing when walking. Violent stitches in the thighs, during motion, most when sitting or when rising from a seat. Boring, dull stitch in the left thigh, near the abdominal ring, when at rest. Pain as if bruised, in the muscles of the thigh. Pain as if bruised across the middle of the thighs; they feel in walking as if they would break down. The thighs feel as if beaten lance, he is scarcely able to drag himself along, worse after sleeping. Painful swelling of the glands of the thighs, he is unable to extend the limbs. Weariness and anxiety in the thighs, when sitting; he is constantly obliged to move his feet. Sharp pressure in the muscles of the thighs, extending as far as the knee. Painful pulsative jerking from the middle of the thigh as far as the knee. Pressure on the thigh, a hand's breadth above either knee. Crampy feeling with pressure above the knee, on the outer parts of the thigh.—Painful rigidity in the hamstrings, worse during motion and when feeling the parts. Painful drawing in the inmost part of the left knee and in the direction of the tibia, when walking, but only when the body rests on the left foot in walking. Stitching pain in the bend of the right knee, worst during motion. Violently-itching pimples on the knee and calf, in the day-time and especially in the evening when in bed; scratching brings on a burning sensation; the pimples run into each other, spread and become converted into readily-bleeding ulcers.—Pressure in the legs, beneath either knee. Dull, crampy pressure, close below the left knee, every five or six minutes. Cramp-like drawing in the leg, also in the night; had to keep changing the position of the limb. Perceptible pulsations in the left leg, when at rest. Itching gnawing of the left leg, worse after scratching. °*Itching ulcers on the leg.* Languor of the legs, when walking. Tingling of the right leg. Itching of the region of the tibia. Aching pain in the right tibia, when at rest, disappearing when walking. Nightly, burning tearing in the tibia, from above downwards. Sharp stitches in the lower part of the tibia.—Cutting stitches in the calf, from above downwards. Cramp-like twitching in the left calf, abating after friction. Constant coldness, from the malleoli to the calves.—Dull, paralytic pain in the tarsal joint, when at rest, with cracking in the joint when moving it. Pains in the tarsal joint, as if sprained, even in the morning when in bed. Cramp-pains in the feet, after motion. Tensive, stitching pain in the right inner malleolus, extending to the tibia. Tension and going to sleep of the fore part of the right foot and toes, when walking. Crampy pressure in the soles. Violent stitches, in paroxysms, in the right sole. Intermittent pressure in the left sole, towards the big toe. Stitching in the sole and heel, and heaviness in those parts when at rest, as if they were made of lead. The heels and

balls of the toes feel sore when stepping. Smarting pain in the outer side of the right foot, in the morning. Burning stinging in the soles, especially in the evening, in the morning burning without the stinging. Burning in the feet and soles. Burning in the soles and head. *Burning heat of the soles*, and soreness between the toes. °Swelling of the feet. °Sweaty feet. The left foot is numb, insensible and dead, only when walking. Violent itching of the ankle; scratching makes the spot appear red. Itching of the heels.—Tearing stitches in the ball of the left big toe. Crampy pressure on both the two last toes of the right foot. Boring stitch in the left little toe. Ulcerative pain of all the toes. A nail which had grown into the flesh, causes inflammation and pain. *Swelling* on the joint of the big toe, with burning heating; when touching it, he experiences cuttings, causing a jerking of the toe; the pains are excited even by swallowing or by the fear lest some one should put his hand near the swelling. °Chilblains on the toes. *Blisters* on the balls of the toes. Stinging and burning in the corns.

**Sleep.**—*Yawning*, the water trickling down from the eyes. Continual stretching of the arms.—Great *drowsiness* in the day-time; sleeplessness at night, heat and sweat from evening till midnight. Drowsiness after dinner, he falls asleep while talking. Deep and sound sleep, coming over him while writing. Sleepiness early in the evening, and great drowsiness in the morning. Deep sleep, *can scarcely be roused in the morning*.—*Falling asleep late in the evening*; he saw nothing but figures for a few hours, which passed off after raising himself in bed.—*At night*: heat in the cheeks and ears in the evening before falling asleep. He is roused from his night-sleep by canine hunger. Anxious waking. Frequent starting, as if he were falling from a height or into the water. At one o'clock in the night he wakes with sad, solicitous thoughts, entertaining them for about half an hour, with pretty clear consciousness; after this he enjoys a calm sleep until morning.—*During sleep*: moaning. Jerking of the hands, and talking and moaning, with eyes half open. His features are at times laughing, at times weeping, distorting the half-opened eyes. Singing. He frequently bites his tongue. Emission, without erection.—Restless sleep with dry heat.—Sleep full of dreams, with erections. Lascivious *dreams*, with emission. Vexatious or indifferent dreams; towards morning he lays his arms under his head, they go to sleep. Vivid dreams about a dinner. He dreams every night of the things which he had last seen, done or heard the evening before. Strange dreams. Dreams causing anxiety. Dreams before and after midnight, the former agreeable, the latter frightful; does not recollect them. Dreams about dead persons, with fear on waking. Dreams full of quarrel; restless night.—*Early in the morning*: out of humour, weak and drowsy in the morning when getting up. In the morning, pressure in the head and bitter taste in the mouth.

**Fever.**—*Feeling of coldness*: with chilly feeling and coldness in the abdomen. Frequent feeling of coldness on the right cheek, with feeling of warmth on the left, without any change of temperature being perceptible externally. Frequent cold creepings with chilly feeling and palpitation of the heart. Cold and chilly feeling for hours, in the evening. Chilly feeling, even when walking about in a warm room.—*Attacks of shuddering*, in the evening, followed by exhausting sweat. Shivering over the abdomen, with cold tips of the fingers, mostly on being touched by cold air.—Chills, in the forenoon, with blue nails, tearing in the wrist-joints and paralytic weakness of the arms. Chilliness of the whole body, with drawing in the limbs, every evening, rousing her from sleep. Feeling of chilliness in the face, temples, on the forehead, as if a cold breeze blew upon the parts, with feeling of coldness in the tips of the fingers,

feeling also cold externally. Chilliness the whole forenoon, in paroxysms, a sort of general shuddering even in the room, with blue, icy-cold hands and dry palate, without any particular thirst. Chilliness in the evening when lying down, after which, on waking, heat over the whole body, with thirst. Chilliness with trembling, in the evening; next morning heat in the face, dryness in the mouth and pricking sore throat when swallowing. Violent chills from afternoon till evening, followed by dry heat, so violent that he almost lost his senses on account of it. Alternation of shiverings and heat, in the evening. Frequent alternation of chilliness and heat, in the evening; dry heat in the face without redness, with chilliness; after the termination of the heat, the chilliness returns with more violence, it is a cold thrill over the whole body; profuse sweat towards morning after he had fallen asleep again after waking. Chills over the whole body, with icy-cold fingers, no thirst, (an hour after dinner); four hours after, increase of warmth, without thirst. Chilly creepings from time to time, lasting several minutes, no thirst, shortly after followed by heat, and then again chilliness shortly after the heat.—Dislikes heat. Feverish heat without thirst, in the day-time. Heat over the whole body, in the evening, succeeded by restless night. Dry heat on going to bed. Heat over the whole head, in the evening after lying down, with cold feet and moderately warm body. Heat in the face, with thirst, in the afternoon, without redness. Heat through the whole body, without thirst, not perceptible to the hand, and no redness of the cheeks, with deep inspirations and slight anguish. Heat on the cheeks, and flushes of heat in the back, in the evening, during a walk in the open air. Heat and sweat all over, day and night, with violent desire for water, (for the fevers which have been cured with Ph. ac., see Cl. Obs.).—*Pulse* irregular, frequently intermittent. *Pulse* more full, the temporal and radial arteries being distended.—Profuse *sweat*, for two nights, about midnight and when waking, first about the head and most profuse on the chest. Morning-sweat with heavy dreams of dead persons and as if he were chased. Profuse *morning-sweat*. Sweat, the whole night, with hot feet and hot forehead. Sweat in the nape of the neck, especially during the siesta.

**Skin.**—*Formication of the whole body*. Itching creeping of the body and hands, in the evening after lying down. Sudden itching of different parts of the body, back, arms, genital organs and scalp, relieved only for a short while by scratching. Violent, burning pricking in several parts, increased by scratching.—Soreness of the skin all over, even shaving is painful. The skin is insensible.—*Red spots* on the upper and lower limbs. Increased *redness* of the whole body, with single large red spots on the shoulders, without sensation, and with red streaks over the patellæ and from the hips down to the umbilicus, accompanied with great sensitiveness to the open air; the warmth of the bed does him good. °Scarlet-like exanthems. °Erysipelas. Red, smooth *pimples* on the forearm and neck, with red areolæ, feeling sore when touched. *Rash* over the whole body, more burning than itching. °Clusters of red, fine rash.—*Itch-like pustules* on the nates, balls of the toes and toes. °Moist or dry herpes.—°Boils.—Sore places on the toes, in the bends of the thighs, and the genital organs.—°Ulcers, itching, inveterate or flat, with dirty pus or indented base. Burning pain of the ulcers. Every injured spot feels sore. \**Smarting pain* in the wounds, even in those of bones.

**General Symptoms.**—°*Arthritic affections*, particularly when inveterate. °*Pædarthrocæ* (spina ventosa?). Swelling of joints in children?.) °*Debility* from loss of animal fluids, (blood, semen,) also without pain and only with burning. °Bad effects of onanism. °*Bad consequences of too rapid growth*. °*Bad effects of grief, chagrin, care, anxiety*, unhappy love. °Bad consequences of

suppressed scarlatina or other exanthems. °Hypochondriac sufferings. °Sero-fula and rachitis. °Diseases of bones, also particularly pædarthrocæ, inflammation and caries. °Bone-pains and other sufferings from abuse of mercury?. —°Drawing and jerking tearing in the limbs.—Intense pain in the periosteum of all the bones, as if scraped with a knife. Cramp-like drawing in the hands and feet, as if gone to sleep, evening and morning.—°Burning through the whole lower half of the body, although the limbs feel cold to the hand.—The upper and lower limbs go to sleep in the night; he is obliged to have them moved by others. The thighs and legs feel weak, with tingling as if gone to sleep.—All the joints *feel bruised* in the morning, in the arms, lower limbs and nape of the neck. Hands and feet feel bruised and paralyzed. Bruised, contractive sensation in the limbs. \**Bruised sensation in the hips, arms, thighs and nape of the neck, as if caused by too rapid growth*, —with single lancinations in all these parts at the same time, especially when going up stairs and when beginning to walk.—Jaetitation of the muscles, especially in the lower limbs.—*Tumultuous movements in the blood*. Great agitation of the blood, he is beside himself. Restlessness in the body, in the evening, itching of the canthus, nostrils, face and hairy scalp.—*Heat* in the head, with icy-cold hands, when talking a good deal. *Sweat* over the whole body, when sitting.—*Sensitive to cool air*.—A walk tires him out, and makes him feel faint and desponding; feels chilly in his room. Sweat over the whole body when walking in the open air, especially in the genital organs.—Emaciation, with wretched appearance and sunken eyes.—*Languor* of the body, inactivity of the mind, mental oppression. He imagines he is staggering when walking. °Excessive weariness after walking.—Weakness after going up stairs, with pain in the pit of the stomach. Weakness in the morning after rising, with pale face, she has to lie down again for a time, after which she feels well. \**Weakness all over, also nervous weakness*, —with great disposition to sweat in the day-time. Epilepsy (immediately).

**Characteristic Peculiarities.**—Pains caused by Phosphoric acid remain unchanged by external pressure. The nightly pains can be relieved by pressure. He changes his place constantly; the pains are less during motion than rest.

## 192. PHYTOLACCA DECANDRA.

PHYTOL. DEC.—Poke.—TRANS. AMER. INST. HOM., Vol. II.

COMPARE WITH—?

**ANTIDOTES.**—*Of large doses*: coffee seems to diminish the action but does not stop it entirely: Opium is said to be the best antidote.—*Of small doses*: Ign.?

### CLINICAL OBSERVATIONS.

While the most prominent effects of Phytol. dec. appear to be produced on the stomach and bowels, the skin, the nervous system, the urinary and genital organs of both sexes share largely in its influence. When given to animals in large doses it produces vomiting, purging, bloody stools, perspiration, drowsiness or stupor, cough, tremors, convulsive motions, increased urination, and distention of the abdomen. In large doses it has produced on the human subject all the above symptoms and also great prostration of strength, vertigo and dimness of vision. In its operation on the stomach as an emetic it causes less straining and disagreeable sensations than tartar emetic or ipecacuanha. The

flesh of wild pigeons and other birds which eat the berries, acquires a highly red colour, a disagreeable flavour, and is destitute of adipose substance; and in some instances whole families have been excessively purged by eating game which has fed upon the berries, although children frequently eat the berries themselves without any bad consequences following. *Phytolacca* has been successfully used in veterinary practice for discussing tumours, fistulous ulcers, and in a disease called "yellow-water." Allopathically it has been used somewhat extensively at different times. The Cherokee Indians used to dress venereal chaneres with the powder of the dried root. And some physicians aver that it will cure syphilis *without the aid of mercury*. It has been applied externally in the form of powder and poultice to ulcers, and in the form of ointment to cutaneous eruptions, etc. The *Phytolacca* has been used with accredited success in cancer of the lips, and cancerous ill-conditioned ulcers of the face and breasts, in some cases producing slight eschars. The expressed juice of the berries, externally applied, is said to cure corns; scabies and herpes have often been removed by it. But the most extensive use of the *Phytolacca* and the most unequivocal success attending its administration, has been in syphilitic rheumatism. Other cases of chronic rheumatism and neuralgia have also been removed by it. *Tinea capitis*, secondary syphilis, swelling of the testicles, bleeding piles, and fistula lachrymalis, have all been successfully treated with it, according to allopathic observation. When externally applied it produces burning and smarting pains. From the application of the juice of the root to corns, the whole toe became inflamed and turned black like gangrene. Eating of the root causes inflammation of the fauces and pain in the stomach. Being given in a case of chlorosis where the leucorrhea had been cured by *Pulsatilla*, it brought the leucorrhea back again. Persons have had all the symptoms of severe catarrh and coryza from powdering the root.

#### SYMPTOMS.

**Mind and Disposition.**—Sense of entire indifference to life, and disgust for the business of the day, on waking early in the morning. Increased cheerfulness of the mind.

**Sensorium.**—Sensation of soreness in the interior of the head, deep in the brain.—Dulness of the head. Transient giddiness.—Vertigo, with dimness of vision.

**Head.**—Pains throughout the head; aching; dull feeling in the head; dullness, with the sensation of weight in the forehead; dull pain in the forehead; slight pain in the fore part of the head, with increased sense of hearing; dull, steady, aching pain, principally on the forehead: heavy aching pain about the forehead, after dinner; aching pain along the lower half of the right orbit; slight pain in the tuberosities of the forehead; Headache: with sickness of the stomach; from walking; one-sided pain just above the eyebrows, with sickness of the stomach.—The pain is increased by looking down and by stooping.—Headache; slight fulness of forehead with constant gaping; heaviness in the head and especially in the temples; Pain: in the region of time and mirthfulness, on the right side; in the top of the head and a sensation as if the brain were bruised, when stepping from a high step to the ground; in the left temple, followed by burning in the skin in the left region of time; in the left region of combativeness.—Cold in the head.—Pressure: in the temples and over the eyes; in the temples; in the forehead, after dinner, most in the glabella; on forehead and upper parts of both eyes, painful; on the temples and constrictive feeling at the præcordia, like the feeling that precedes sea-sickness; slight across the forehead, with gaping.—Sore pain: over the head, worse on the right

side and in damp weather, as if an attack of sick headache were approaching.—Slight constriction across the forehead.—Drawing sensation above the root of the nose; drawing pain in the right temple.—Moving, transitory pains in various parts of the head, almost constantly, generally on one side at a time, but more frequently and most severe on the right side. Shooting pain from the left eye to the top of the head, which passes off and returns at short intervals. Heat in the head.

**Eyes.**—Shooting pain from the left eye to the top of the head.—Pressure in the eyes.—Pressure around the eyes in the afternoon as if the eyes were too large.—Pressure over the eyes.—Some painful pressure on the upper parts of both eyes and forehead.—Burning and smarting sensation in the left eye with great flow of tears.—Sensation in the eyes like that caused by horse-radish.—Smarting in the left eye.—Sandy feeling in the eyes.—Itching at internal canthi of the eyes, very severe, which causing the application of the finger to rub the eye—the ball became very painful from the slightest pressure.—Sensation as if a grain of sand were lodged under the left eyelid, causing a secretion and flow of tears from that eye.—Smarting in the internal canthi of both eyes, but worse in the left one and very much aggravated by gas-light in the evening.—Feeling in the eyes and nose as if a cold would come on.—Soreness on closing the eyelids.—Reddish-blue swelling of the eyelids, worse on the left side and in the morning; cannot close the eye without pain all the forenoon, better in the afternoon.—Agglutination of the eyelids during the night. Flow of tears all the time from the eyes, relieved in the open air.—Photophobia in the morning.—Dimness of sight.—Long-sightedness.

**Ears.**—Shooting pain in the right ear, very quick.—Pain in both ears, worse in the right one.—Irritation in one of the eustachian tubes.—A sensation of obstruction in the left eustachian tube, with a rushing sound in the ear of the same side, and a feeling as if the hearing were dull, while at the same time it is sensitive to the most minute sounds.—Increased sense of hearing with pain in the forehead.

**Nose.**—Drawing sensation above the root of the nose.—Feeling in the nose and eyes as if a cold would come on.—Cold in the head.—Stoppage of the right nostril.—Coryza.—Flow of mucus from one nostril while the other is stopped.—Discharge of mucus from one nostril at a time, sometimes one and sometimes the other.—Total obstruction of the nose when riding, so that one is forced to breathe altogether through the mouth, and cannot relieve himself by blowing the nose.

**Face.**—Paleness of the face.—Heat in the face after dinner.—Heat on the left side of the face in the afternoon.—Heat with redness of the face and a sensation of fulness about the head, and coldness of the feet.—Eruption on the upper lip, left side.—Aching pain along the lower half of the right orbit.

**Teeth.**—Shooting pains in the molar teeth of the upper and lower jaws of the right side.—Disposition to bite the teeth together.—Irresistible inclination to bite the teeth together.

**Mouth.**—Small ulcers on the inside of the right cheek, like those caused by mercury.—Tenderness and heat in the roof of the mouth and on the tongue.—Flow of saliva into the mouth.—Mouth fills with water.—The saliva is yellowish and has a metallic taste.—Dryness of the palate in the morning.—Swelling of the soft palate.—Slight feeling of smarting and coldness towards the tip of the tongue.

**Pharynx and Œsophagus.**—Sensation in the pharynx like that caused by eating choke-pears.—Pressing pain in the right side of the throat.—Sore throat and swelling of the soft palate in the morning, with a thick white and yellow

mucus about the fauces, after the removal of which the throat feels better, and still better after breakfast.—Soreness of the throat, and a feeling when swallowing saliva as if a lump had formed there; the same sensation is felt on turning the head to the left side.—The throat feels very dry and sore, especially on swallowing in the afternoon.—General soreness of the posterior fauces, and apparent extension of the irritation into one of the eustachian tubes.—Roughness in the pharynx.—Unpleasant sensation of dryness in the pharynx towards morning, which makes him cough.—Great dryness of the throat.—Dryness of the throat on going to bed.—Dryness in the throat, worse in the morning.—Sensation of dryness of a spot in the fauces on the left side in the morning, continuing until after breakfast.

**Appetite and Taste.**—Taste like nuts in the mouth.—Taste, bitter at first, but leaving a slight feeling of smarting and coldness towards the tip of the tongue.—Raging appetite.—Hungry soon after eating.—Diminished appetite. The usual appetite remains notwithstanding the nausea of the stomach.

**Gastric Symptoms.**—Eruptions.—Eruptions with spitting of water.—Eruption of flatus.—Violent pressure in the stomach on waking in the morning, with accumulation of water in the mouth, disappears after rising.—Constrictive feeling at the præcordia, with pressure in the temples.—Sickly feeling in the stomach.—Nausea on being awake out of sleep in the night.—Feeling of sickness as if he would vomit.—Sickness of stomach accompanying the headache. Vomiting with but little distress in the stomach.

**Stomach.**—Cutting in the pit of the stomach and in the abdomen.—Tenderness to the touch of the pit of the stomach.—Pain in the region of the pylorus.

**Hypochondria.**—Digging pain in the right hypochondrium, in the upper and outer portion of the liver, preventing motion; first felt at two o'clock in the afternoon, then every morning before daylight; some soreness remaining through the afternoon and evening.—Pain in the region of the pylorus.—Cannot lie on the right side after midnight, on account of penetrating pain in the right hypochondrium.—Violent dull pressing pain in the left hypochondrium, in the evening, so that he cannot remain in the sitting posture, he lies on the painful side all night and the pain is gone the next morning.—\*Soreness and pain in the right hypochondrium during pregnancy.

**Abdomen.**—Boring pain to the left and a little above the umbilicus, continuing but a few minutes.—Deep-seated, but not severe pain, in the left iliac region.—Neuralgic pain in the left groin. Cutting in the abdomen.—Gripping pain, as before a diarrhoea.—Gripping all day long, followed by the passage of offensive flatus.—The gripping disappears in the night.—Sensation in the bowels, as if a diarrhoea would follow.—Rumbling noise in the bowels.—Frequent passage of wind downwards.

**Stool and Anus.**—\*Constipation of long-standing.—Hard stools.—Three stools during the day, the first one is hard and preceded by gripping, and the others with pains moving about in the abdomen.—Continual inclination to go to stool.—Mushy stool.—Diarrhoea attended with a sickly feeling in the bowels, but no tormina or tenesmus.—Copious discharges of bile from the bowels.—In the middle of the night, neuralgic pain shooting from the anus and the lower part of the rectum along the perinaeum, to the middle of the penis, followed in a few minutes by a neuralgic pain in the right big toe.

**Urinary Organs.**—\*Urgent desire to pass water.—Copious nocturnal urination.—Weakness, dull pain and soreness in the region of the kidneys, most on the right side, and connected with heat; uneasiness down the ureters; a chalk-like sediment in the urine.—A gurgling sensation in the prostate gland, repeatedly in the afternoon.—\*Pain the region of the bladder, before and during

urination.—\*Dark-red urine which stains the chamber of a mahogany colour, and is very hard to get off.

**Female Sexual Organs.**—\*Metrorrhagia.—\*Menstruation too copious and too frequent.—\*Painful menstruation.—\*Violent pains in the abdomen during menstruation, in a barren female.—\*Leucorrhœa.—\*Inflammation and swelling and suppuration of the mammæ.

**Windpipe and Cough.**—Tickling in the left side of the larynx, with hacking cough, and aching in the right side of the breast and great dryness of the throat.—Sensation of roughness in the bronchia.—Cough towards morning, from dryness of the pharynx. Dry bronchial cough, with the sensation of roughness and slight increase of heat in the trachea and bronchia.—Hacking cough.

**Chest and Respiration.**—Shortness of breath.—Aching pain in the right side of the breast.—Pain in the right side of the chest about the region of the nipple, passing through to the back, felt on taking a long breath, and on bending the shoulder backwards; better in the afternoon.—Pain in the right side of the chest, so bad after midnight as to prevent sleep, aggravated by lying on the right side; disappears after getting up in the morning.—Tenderness of the muscles of the chest, as if they were bruised.—Occasional shocks of pain in the region of the heart, and as soon as the pain in the heart ceases, a similar pain appears in the right arm.

**Back, Small of the Back.**—Pain in the left lumbar region, followed immediately by severe itching.—A lasting pain in the left shoulder-blade, as if from a blow.—An occasional sensation as if a small piece of cold iron were pressed on the painful shoulder-blade.—Sensation of weight and pressure on both shoulder-blades, as after carrying a heavy load.—Stiffness in the right side of the neck, worse in bed, after midnight. A very peculiar pressure and tension in the parotids.—Hardness of a gland on the right side of the neck. Suppuration of a tumour behind the right ear, with a discharge of matter and blood.

**Upper Extremities.**—Dull aching pain and tenderness along the top of the right shoulder, along the superior edge of the trapezius muscle, increased by pressing upon the part and by contracting the muscle.—Pain throughout the muscles of the left shoulder.—Pain at the humoral insertion of the left deltoid muscle.—Slight drawing pains in the right upper arm.—Pain appears in the right arm after a similar pain ceases in the heart.—Tenderness in the outside of the left arm just above the elbow, when pressing upon it, and when extending the arm.—Dull aching pain and excessive tenderness, as if from a bruise in the muscles of the outside of the right upper arm, most severe for about two inches above the elbow, felt particularly when the part is pressed upon and touched, and when extending the arm.—Twitching and fluttering of the muscles of the right upper arm, while it is resting on a table.—Weakness and aching in the bone of the right arm above the elbow, aggravated by motion and extension.—Rheumatic drawing in the right forearm.—Rheumatic drawing in the left forearm along the ulna, and the same sensation in the right leg.—Rheumatic pains in the hands and feet, sometimes in the arms and legs.—Drawing pain in the right hand, now and then, by shocks upwards to the elbow.—Rheumatic feeling in the little finger of the right hand, very annoying when writing.—Rheumatic pain, first in the left hand, and afterwards in the right one.—Shooting, like needles, in the end of the left thumb.—Violent shooting pain in the fleshy part of the left thumb, lasting about half a minute.—Lancinating pain in the little and ring-fingers of the right hand.—Neuralgic pains in the palm of the right hand.—Occasionally frequent sudden pricking in the points of the fingers, as if from electric sparks.—Shooting in the finger-points, sometimes in one hand and sometimes in the other.

**Lower Extremities.**—Sciatica.—Neuralgic pain on the outer side of the left thigh.—Neuralgic pain in the external part of the right thigh.—Neuralgic pain in the external part of the left thigh.—Neuralgic pain in the left groin.—Heaviness in the knee-joints, tired from a little walk.—Heaviness in the lower extremities, as if they were asleep, in the afternoon.—Rheumatic pain in the right knee, in the afternoon, increasing in the open air, and especially on a damp day.—Rheumatic drawing in the right leg and in the left forearm along the ulna.—Rheumatic feeling in the left knee, with the sensation of shortening of the tendons behind the knee when walking.—Rheumatic pains below the knees and in the arms.—Pain on the dorsum of the right foot at four o'clock in the morning.—Coldness of the feet with increase of the capillary circulation about the face and head.—Free sweating of the feet, most under the toes.—Neuralgic pain in the right big toe, in the middle of the night.—Pains at a spot on the ball of the right foot, which had been frost-bitten years before, and in a corn never painful before.

**Sleep.**—Yawning.—Frequent gaping in the day-time.—Drowsiness.—Sleepiness.—Very wakeful at night.—Restless sleep at night, he lies on his stomach.—Nausea on being woke out of sleep at night.

**Skin.**—A small boil behind the right ear.—Suppuration of painless tumours.—Drawing in cicatrices.—Pustule behind the right ear.—A painful boil on the left side of the back.—Eruption of spots on the chest of the size of lentils, elevated, with great itching.

**General Symptoms.**—Many of the symptoms, especially those about the head and throat, are better after breakfast, while the heat and many of the abdominal symptoms are worse in the afternoon.—Dryness of the fauces, most in the morning.—Some of the abdominal symptoms disappear in the night.—The symptoms of the chest are worse after midnight, better in the afternoon, and most of them on the right side.—The pains in the head are chiefly in the forehead, and worse after dinner.—Dulness, giddiness and vertigo.—The prominent feeling in the eyes is that of smarting.—The symptoms of the eyes and eyelids are worse in the morning, but the vision is worse in the evening.—Increased sense of hearing, the right is most affected.—Sensation of a lump in the throat.—The symptoms of the stomach, throat and mouth are worse in the morning.—The *first* appearance of the pain in the right hypochondrium was in the afternoon, but afterwards it was always worse before daylight in the morning.—Gripping pains without diarrhoea.—Pain in the left iliac region.—The symptoms of the lower extremities are worse in the afternoon. The pains are sometimes followed by itching and burning.—The pains shoot inwards and upwards.—Transitory pains.—Many of the symptoms are attended with heat.—Neuralgia in the perinaeum in the middle of the night.—The cough is worse towards morning.—Sudden translation of internal pains to the extremities.—During one of the provings, the symptoms of the eyes became so severe, that Sulphur was taken as an antidote, and all the subsequent symptoms appeared on the left side.

**Characteristic Peculiarities.**—The pains all partake of the nature of neuralgia; they are pressing and shooting, sometimes sore, drawing and aching. The pains are all made worse by motion and by pressure.—The pains in the extremities are always in the outer portions of the limbs.—The secretion of tears, saliva, bile, urine and the menses is increased.—Irresistible inclination to bite the teeth together.—Vomiting attended with but little distress in the stomach.—The diarrhoea appears to be kept up by the increased action of the liver, and consequent redundancy of bile, with but little tormina and tenesmus.—With the increase of the secretion of bile, there is a dry, irritative cough, and almost constantly—

recurring transitory pains in different parts of the head. We find the symptoms predominating in the right side of the head and neck, the right upper extremity, the right side of the chest, and the right lower extremity.—When enumerating the symptoms of the eyes only, we find the left one most frequently mentioned.—In the above extract there are forty symptoms located on the right side, and thirty-one on the left. In several instances, the symptoms appeared on the left side first, and either passed over to the right, or the next symptom occurred on the right side.

### 193. PINUS SILVESTRIS.

PIN. SILV.—Common fir.

This drug has not yet been proved; it has been employed with success for: difficulty of walking of serofulous children.

### 194. PIMPINELLA.

PIMPIN.—Pimpinella saxifraga, L.—Pimpernel, pimpinel.

#### SYMPTOMS.

**Head.**—Violent vertigo, drawing one sideways, early on rising.—Giddiness and dulness of the head.—Reading affects the occiput and thinking is difficult for him.—Heaviness in the head when reading, and disposition to sleep.—Dulness of the head, as if senseless and stupified. The head feels as if bandaged and screwed together. Headache, particularly in the occiput and nape of the neck. Constant dull aching in the occiput.—*Fine pinching stinging* in the vertex when reflecting. A stinging burning pain with pressure moves from the vertex down over the temples. Painful stitches around the occipital protuberances. Sticking in the forehead on both sides, above the eyes. Continual sticking and tension in the occiput and nape of the neck. Pushing and pressing pain wandering from the temples to the occiput and nape of the neck.—Buzzing in the whole head, with pressure, which increases by the buzzing. Humming in the head and sounding as in an empty barrel.—Rush of blood to the head, with heat, in the afternoon.—Heat, rushing of the blood and cloudiness of the head, soon after bleeding of the nose (after taking forty drops).

**Eyes.**—Sore pain of the eyelids.—Smarting sore pain in the right eye.—Burning of the eyes, particularly of the upper part of the eyeballs.—Disagreeable coolness in the eyes. Dimness of the eyes and indistinct sight, for a few minutes. Mistiness before the eyes.

**Ears.**—Fine stitches in the ear from within outwards, accompanied with buzzing.—Sensation in the ear as from distant noise.

**Nose.**—Bleeding of the nose, after heat, rushing of the blood and cloudiness of the head.—Dry, stopped nose. General catarrhal fever with languor and painful weariness.

**Face.**—Pain as of an ulcer in the cheek.

**Teeth.**—Sore aching pain in a stump of the left lower jaw.

**Mouth.**—Burning aromatic feeling on the tongue, palate and in the throat, the taste being like that of a pungent aroma from the commencement and not comparable to any other taste, not even that of horse-radish.—Piercing taste

as of an acrid spice, while chewing the drug and afterwards, not only felt in the mouth but spreading a warmth in the whole body, for one minute.—Acrid, burning, somewhat bitter, earthy taste in the mouth and fauces (immediately), changing in a quarter of an hour to a peculiar, mouldy taste.—Increased secretion of saliva during and after the chewing of the drug.—Mucus in the mouth and fauces, obliging one to hawk; while hawking up the tenacious whitish mucus, a friable, cheesy and fetid concrete substance is detached from the curtain and the back part of the fauces; this takes place several times; afterwards mucus is discharged.

**Stomach.**—Rising of inodorous air, frequently during the day.—Insipid eructations, with pressure at the stomach.—Rising of flatulence, accompanied with yawning and vertigo.—Sourish eructations, after stooping.—Sensation of heaviness in the præcordial region and the abdomen, as if the bowels would fall down by their own weight.

**Abdomen.**—Stinging above the umbilicus, several times.—Rumbling and gurgling in the abdomen, also with emission of flatulence.—Dry, hard stool in the evening, harder than usual.

**Larynx.**—Catarrh, passing off in a few days with expectoration of mucus and sweat.

**Chest.**—Oppressed breathing during a walk in the open air and in a room.—Oppressive anxiety in the chest.—Urging to draw deep breath, without pain.—Pain as from fatigue in that part of the chest which is pressed against the table.

**Back.**—Contractive pain in the small of the back, particularly when stooping.—Cramp-pain in the small of the back, when standing and walking. Burning pain in the small of the back and loins. Tensive pain, particularly in the small of the back and back. Pain as if broken around the hips and pelvis. Tension and tearing in the small of the back and hips, to and fro.—Sticking with pressure in the right lumbar region, when standing.—Aching pain in the nape of the neck, and tension towards the shoulders.

**Upper Limbs.**—Sticking pains with pressure in the right shoulder.—Aching pain and sticking in the right shoulder, stitches dart from the shoulders deep into the right breast.—Stinging in the right upper arm and drawing pain extending to the hand, with cold shuddering sensation through the limb.—The arm which is lying on the table goes to sleep.—Fine stinging as from nettles deep in the skin, when writing, near the last joint of the right ring-finger.

**Lower Extremities.**—Sensation as of a cooling stream moving through the right leg and foot, here and there, accompanied with stinging.—Burning pain in the corns (which had not been felt for a long time previous).

**Sleep.**—Yawning, with rising of flatulence.—Irresistible drowsiness. (Restless sleep disturbed with dreams.)

**Fever.**—Great sensitiveness to cool air.—Shuddering when merely opening the window, particularly in the back. Cold sensation in the back from below upwards. Unusual chilliness through the whole body, in a warm room and well clad. Chilliness on the hairy scalp and shuddering even in a warm room. The hair stands on end. Chilliness and feeling of coldness in the back, with icy-cold hands, the remaining portion of the body feeling warm. Feeling of coldness in the occiput, in a closed room, as if a sharp current of air were constantly blowing on the part.—Sweat, every morning.

**Skin.**—Itching on the vertex.

**General Symptoms.**—Constant pain, contractive pressure in various parts, alternately at times in the nape of the neck, at others in the side of the neck, then again in the right shoulder.—Fleeting prickings here and there in the sides

of the chest, in the back, small of the back, and abdominal integuments.—Languor and general feeling of exhaustion.—The whole body feels languid, weary, as if giddy, in the afternoon.—Painful weariness of the limbs during rest; that portion of the chest, which is pressed against the table, is painful as from fatigue.

## 195. PLATINA.

PLAT.—See HAHNEMANN'S Chronic Diseases, V.

COMPARE WITH—Agn., Angust., *Asa f.*, Aur., *Bell.*, Canth., Carb. a., *Croc.*, Fer., Hyos., Lyc., Magn., Mang., Natr., Natr. mur., Nitr. ac., *Plumb.*, *Puls.*, *Rhus tox.*, *Sabad.*, *Stron.*, Verb., Valer., Viol. od.—Is frequently suitable after *Bell.*

ANTIDOTES.—Spir. nitr. dulc., *Puls.*—Plat. antidotes *Plumb.*

### CLINICAL OBSERVATIONS.

According to *Noack* and *Trinks*, Platina has been employed with success in the following affections: affections of females characterized by crethism (vascular or nervous excitement), with predominant excitement of the sexual instinct resulting in frequent re-appearance of the menstrual flow.—*Eclampsia*: the patient sank into an adynamic condition as if by spasm, remained motionless for days and hours, became unable to speak, partly from a spasmodic closing of the jaws, partly from loss of voice, with her eyes turned upwards and full consciousness. The only movement made by the patient, was a convulsive trembling of the eyelids and a distortion of the corners of the mouth. This condition alternated with dyspnœa unto suffocation, the patient being obliged to draw deep and anxious breath and to cry out. Between the paroxysms the patient suffered with deeply-penetrating weakness, nausea, obstinate constipation, oppression of the stomach, aversion to meat, rigid stretching of the arms, feet and fingers, amenorrhœa of one year's standing, likewise yielding to the Platina.—*Epilepsy*.—Uterine epilepsy.—*Melancholia* with nightly sleeplessness, anguish about the heart, rigidity, uttering inarticulate shrieking sounds, fearfulness, tendency to start, trembling of the hands and feet, red face, small, feeble pulse.—*Sadness*, melancholia, absence of mind, forgetfulness, constipation after mania.—Fear with dread of death.—*Hysteria*: great lowness of spirits, anxious mood, fear of death, great nervous debility, vascular crethism.—Irresistible disposition to slight even that which one habitually honours and cherishes most, to overestimate one's-self, the objects around one appearing smaller to the sight, (Stapf considers this condition a species of melancholia which is not very rare).—*Monomania*, as an abnormal condition of special faculties of the mind.—*Puerperal mania* with furor uterinus.—*Violent cramp-pain in the anterior part of the head*, particularly above the root of the nose, with heat and redness of the face, whining and uneasy mood, with premature, profuse menses.—*Moritz Müller* recommends Plat. for hysteric megrim with uterine affections.—Beating digging in the right jaw with cramp-like numb feeling in the right side of the face.—Stinging pain in the tongue.—*Stuttering*.—Loss of appetite.—Eruetations after a meal.—*Colica plumbea*.—Constipation when travelling.—Discharge of prostatic fluid.—Profuse catamenia with labour-like pressing and yellowish leucorrhœa, with stitches in the uterus.—Premature menses.—Profuse catamenia with cutting, pressing, labour-like pains in the abdomen, small of the back and thighs.—*Too long and profuse menstruation, with pressing from the groins to the*

*genital organs and spasmodic labour-like pains in the abdomen; the blood is dark, partly fluid, and partly coming away in pieces.*—Metrorrhagia: dark, thick blood, with pains in the small of the back, which penetrate to both groins, pressing downwards in the inner parts and excessive sensitiveness of the genital organs.—Disposition to miscarriage in females of an excitable temperament.—Profuse exhausting metrorrhagia with miscarriage, the blood passing off in black lumps.—*Metrorrhagia* with morbid excitement in the sexual organs or excessive unusual desire for a sexual embrace. (This observation is by *Stapf*. *Trinks* observes that he has never seen metrorrhagia accompanied by nymphomania, and that the sexual desire generally disappears when metrorrhagia sets in. As far as I have been able to observe, Platina may be successfully exhibited in metrorrhagia without any sexual excitement being present, but there are females in whom metrorrhagia and excessive sexual excitement co-exist, *Hempel*.) Metrorrhagia of pregnant females. Metrorrhagia with thirst, anorexia, sensation as if a ball were moving about in the abdomen, pressing pain in the groins. Metrorrhagia with sensation as if the body were growing larger in every direction.—*Molimina abortus*.—False, very painful labour-pains.—*Puerperal fever*: acute pains in the abdomen, tumultuous congestion of blood to the head, excited fancy and anxiety and fear of death.—*Nymphomania*.—*Polypus uteri*.—Induration of the uterus.—*Scirrhus* of the uterus.—*Dry coryza*.—*Languor* of the extremities.—*Cold feet*.

## SYMPTOMS.

**Mind and Disposition.**—Low-spirited, taciturn. She imagines she is abandoned by everybody. *Anxiety*, with trembling of the hands and flushes of heat. *Anxiety* with palpitation of the heart, especially when walking. Frequent and sudden feeling of anxiety through the whole body. Great anxiety, with violent palpitation of the heart, when attempting to talk in company; talking is difficult to her.—*\*Anguish as of death, as if she would lose her senses, with trembling of all the limbs*, oppression of breathing, and palpitation of the heart. *\*Excessive anguish* about the heart, with excessive fear of death which is thought near. Oppressive anxiety about the heart and out of humour the whole day. *Sensation as if he would die soon*, being horrified by this thought. The same symptoms experienced by a female. °*Fear*, with trembling of the hands and feet, and illusion of the fancy, as if all who approach her were mere devils. °*Loud cries* for help.—°*Hysterie mood*, with great lowness of spirit, nervous weakness and vascular excitement.—Great uneasiness of the mind; she knows not what to do with herself; sadness, marring even her most agreeable moments; she imagines she is not fit for this world, is tired of living, *but has great aversion to death*, which she believes to be near.—*Discouraged* and lazy in the morning. Out of humour and dissatisfied. Taciturn, quarrelsome, vexed by the least trifle. She is discontented with the whole world; weeping mood. Sensitive. Taciturn, drowsy, sad, peevish, weeps when addressed. *Taciturn and weeping involuntarily*, even when addressed in the most friendly manner. Weeping mood, after having received a mild rebuke. *Weeping mood and out of humour*, weeping relieves her. *Easily angry and vehement*; he would like to beat innocent people. Vexed and irritated about innocent things and words; she would like to beat herself and friends.—Illusion of fancy; on entering the room after a walk she imagines that *everything around her is very small* and everybody inferior to her both in body and mind, *and that she herself is tall and elevated*; the room appears gloomy and disagreeable to her; accompanied with slight anguish, sad and vexed mood, vertigo and uncomfortable feeling in the midst of people of whom she is gene-

rally very fond; all this passes off *in the open air when the sun shines*.—*Looking down contemptuously and pitifully* upon otherwise venerable people, against her will, in paroxysms. During her contemptuous turns she is suddenly attacked with canine hunger and eats in a greedy, hasty manner; when the regular meal-time arrives, she has lost her appetite. \**Proud feelings* with over-estimation of one's-self.—*Cold, absent, indifferent* in company of friends; she only answers when she must, and is only half conscious of what she says; after having answered she reflects whether her answer had been suitable; she is constantly absent, without knowing where her thoughts are roaming. Indifference; he did not care whether his absent wife would die. She imagines she does not belong to her family; after a short absence, all things appear changed to her.—*Vacillating mood*.—Sad and out of humour the first morning; next morning she feels inexpressibly happy, especially in the open air, she felt like embracing everybody, and laughing about the saddest things. Serious and taciturn the whole day; next day everything appears laughable to her. *Great cheerfulness*, she would like to dance, *half an hour after the weeping*. *Great cheerfulness* for two days, followed by excessive sadness on the third; she cries even when addressed, or when seeing something merry and ridiculous.—Involuntary disposition to whistle and sing. Sensation of an increase of power, intellectual tranquillity, and disposition to think.

**Sensorium.**—Absence of mind, she listens to conversations around her, but forgets what she heard. *Great absence* of mind; she hears not what is said to her, even when addressed with great emphasis. °Loss of consciousness. °Delirium. °Mental derangement after fright and chagrin.—Not disposed to intellectual labour.—Dulness of the forehead. Dull, tensive sensation as of a board before the forehead.—Passing attacks of *vertigo* in quick succession, in the evening when standing, as if he would lose his senses. Violent vertigo, she dares not move her eyes, more in the day-time than at night, generally attended with palpitation of the heart. Headache after the vertigo, as if torn and pulled into shreds.

**Head.**—Passing headache, over the left eyebrow. *Headache, as if the head were jammed in*, a dull pain. *Tensive numb feeling in the whole sinciput*, as after a blow, extending as far as the nasal bone. Numb feeling in the sinciput, *as if constricted*, in a warm room full of men, increased after a short time to a violent pressing together with sensation as of a dull digging-up, with impatience and ill-humour, and heat on the upper part of the body, especially in the head, as if the sweat of anguish would break out; in the evening, when in the cool air, he feels an unusual heat, and when beginning to walk, a painful vibratory shaking of the brain, as if knocking against the skull like a ball; afterwards the same sensation is felt when lying in bed, accompanied with a slight roaring in the ears; while the pain is abating he falls asleep. A cramp-like contraction suddenly strikes through the head from the right temple to the left; afterwards feeling of numbness as if the head were tied too fast, with tremulousness in both sides of the head.—*Cramp-pain* in the right temple, in the afternoon. Cramp-pain in the forehead, as if between screws. Cramp-like drawing constriction in the head from time to time, especially around the forehead; it begins feebly, increases in violence and ends feebly. \**Cramp-like pressing in the temples from without inwards*, °also with heat and redness of the face, vexed mood and weeping. Cramp-like tension in the temples, as if between screws. Compression in the forehead, in paroxysms.—*Violent pressing in the forehead*, as if everything in the forehead would come out, with sensation as if a load were pressing on the head, which presses on the eyes and closes them, and presses out tears; increased by stooping, and by making the

slightest movement with the head; the attack is preceded by anguish about the heart, and a sensation as if knocked against the forehead, preventing her from talking; with the increasing anguish accompanied with burning heat and bright redness of the face and violent thirst, the headache increases likewise until 10 o'clock in the evening; the pain recurs for several days at the same hour. Sudden and short pressing from without inwards in the vertex. Sudden dull pressing in the left side of the forehead from without inwards. Undulating pressing in the left temple from without inwards.—*Pressure* under the left frontal eminence, increasing and decreasing in paroxysms. Headache, as if she had water in her head, about midnight, accompanied by great dryness and intensely-painful scraping in the throat, great ill-humour and large drops of sweat all over, especially in the face. Pressure, with a dull digging-up sensation, in the left half of the forehead, after dinner, when walking in the open air, and continuing in the room. Dull pressure in the right parietal bone, as from a plug. Crampy pressure in the left temple, first feeble, then increasing in violence, and decreasing again.—Sudden attack of contusive pain, at a small spot in the left parietal bone. Pain as from a blow on the right side of the head and in front. Quickly-passing pain in the right frontal eminence, *as if contused*.—Cramp-like *drawing* from the left side of the occipital bone to the jaw, through the head. Paroxysms of drawing in the right and left sides of the head. Drawing, from the left side of the forehead to the temple, where he feels a pressure.—Sharp *stitches* in the left side of the head, in the evening, in bed. Single dull stitches in the sinciput. Dull, corrosive stitching at a small spot in the left parietal bone, in paroxysms. Burning pricking in the left temple, going off by scratching.—Violent *boring* in the centre of the forehead, decreasing gradually and finally disappearing.

**Scalp.**—°Roaring in the head, as from a mill. Numb pain on the vertex, as if the scalp were drawn together, and as if pressed upon by a heavy weight. Formication in the right temple, afterwards down the side of the lower jaw, with feeling of coldness. Burning on the top of the head. Painful drawing in different parts of the head. Pain of the scalp, intolerable at night, as if lying upon hard stones; he had to sit up. Cold creeping in the occiput, down towards the cheek, where a dull burning pain is felt; lastly drawing in a hollow tooth.

**Eyes.**—Undulating, stupifying pressure over the right orbit. Intermittent cramp-pain near the outer border of the right orbit. Pain as from a blow on the right eyebrow. *Sore and gnawing sensation* in the upper border of the orbit, as if excoriated. Tensive pain in the upper borders of the orbits, and in the eyeballs which feel compressed.—*Burning sensation* in the eyes, with drowsiness, as if they would close, with sensation, on looking steadily at a thing, as if they would run, more in the room than in the open air. Pressure in the eyes as if drowsy, without drowsiness. Frequent creeping in the right canthus; he is obliged to rub. Smarting and feeling of coldness in the right eye. Sensation as if a grain of sand had got into the right eye. Painless drawing around the left eye, seeing as if through gauze, and sensation as if the eyes were agglutinated. The eyes are painful when using them in the evening at candle-light, and when exerting them; they first itch, obliging her to rub them; then they suppurate, are very painful, see a tremulous and twinkling light obliging her to close them and making it impossible for her to see any object.—°Distortion of the eyes.—*Twitching of the eyelids*.

**Ears.**—Otalgia, a sort of cramp-pain in both ears. Tearing, drawing and dull stitches in the right ear, a sort of otalgia. Paroxysms of dull stitches in the right external ear, with a feeling of numbness or coldness extending through

the cheeks as far as the lips. Sensation as if cold air were getting into the right ear. Burning heat of the ears, perceptible to the touch, with redness. Digging-up in the right ear and drawing in the left. Corrosive gnawing of the left lobule, he has to rub. Gnawing creeping in the right meatus auditorius.—*Tingling of the ears*, afterwards tearing in the same. *Whizzing in the ears*, with stitches in the head. Noise in the ears as from the wind blowing into them, increased by the least noise to such an extent that she has great difficulty in hearing others. Roaring in the right ear. \**Dull roaring and rolling* in the ear, every morning, and afterwards every evening after lying down, at the same hour for several weeks. Dull roaring in the right ear, with dulness of the head from a sort of cramp-like pressure. Reports in the right ear, like distant thunder.

**Nose.**—*Gnawing in the outer parts of the nose, as from something acrid.* Cramp-pain in the right side of the nasal bone, with a feeling of numbness. Cramp-like twitching in the left nasal wing, coming and going at regular intervals. Pulling sensation in the nose, above the left wing, as if a hair were pulled, afterwards feeling of numbness in that part. \**Dry coryza*, only in one nostril, and afterwards (during a walk in the open air) profuse fluent coryza with sneezing, followed by stoppage of the other nostril, and then again fluent coryza. Increased secretion of mucus from the nose.

**Face.**—*Face pale and sunken.* Pale, wretched looks, for several days.—Violent heat of the face, the eyes burned and itched a good deal. *Burning heat in the face with glowing redness*, accompanied with great dryness of the mouth, violent thirst, headache, and vibrations before the eyes causing giddiness, with lachrymation, for several evenings from 5 to 9 o'clock. Heat of the face and the whole head, oppressive heat and dull pain in the forehead, she knows not what to do with herself.—*Feeling of coldness, creeping and \*numbness in the whole right side of the face.* Cramp-like, painful feeling of numbness in the left malar bone. Tensive feeling of numbness in the malar bones and mastoid processes, as if the head were between screws. Dull, stupifying pressure in the right malar bone and the whole half of the nose. °*Pulsative digging* in the jaws, particularly in the evening and during rest, with involuntary weeping. Dull pressure, as from contusion, in the left mastoid process, when pressing upon it.—*Burning, fine stitch* in the left cheek; he is obliged to scratch. Itching stitch in the skin of the cheek, as from a splinter, going off by rubbing. *Gnawing in the cheeks* after scratching, soon recurring. Dull painful feeling of coldness in the chin, below the corner of the mouth.—Cramp-like jerking, at intervals, in the upper lip, in the morning when in bed. Gnawing around the mouth, as if sore, as when shaving with a dull knife. *Vesicles on the outer border of the lower lip*, smarting. Vesicle on the inner margin of the upper lip, with violent stinging pain when touched. Dry upper lip, as if burnt. *Great dryness and roughness of the lips.* Peeling off of the lips and bleeding of the same, for many days, with violent aching pain, and smarting in the open air. Erosive sensation in the lower lip, close below the vermilion border, as if the place had been rubbed sore. Erosive sensation on the inner side of the lip, with a painful feeling of looseness of the upper teeth, with smarting of the gums of both jaws.—Tensive feeling of numbness in the chin, as if between screws. Sensation as if the chin were suddenly pushed up, in paroxysms. Dull shocks under the chin, slowly going and coming. Corrosive gnawing in the chin as if sore, he has to rub the parts. Small aneurism by anastomosis in the chin, painless, for several days.

**Jaws and Teeth.**—°*Lock-jaw.*—Cramp-pain in the lower jaw or in the lower border of the lower jaw. Sudden cramp-like drawing through the lower

and upper rows. Numb pain in the left lower row of teeth, in the morning after rising. Continual digging-up drawing in both a hollow and sound incisor tooth. Drawing and throbbing in a molar tooth, first in the upper, then in the lower row, as if it were hollow. Paroxysms of drawing, first in the right side of the neck, afterwards in a hollow tooth, lastly in the ear, where the prover experiences dull stitches at intervals.—°Throbbing digging in the teeth.

**Mouth and Pharynx.**—Viscid and slimy mouth, the whole day, especially after a meal, also in the morning, with very bad humour. Occasional accumulation of water in the mouth.—Burning under the tongue, or in its right side. Creeping on the tongue. Sensation on the tongue as if burnt, increased by rubbing the teeth over it.—Scraping sensation in the throat, *as if raw*, in the evening after lying down and on the day following, sometimes accompanied with an irritation resulting in hacking cough.—*Painful feeling of rawness* in the throat, as if a piece of skin were hanging down in it, between and during empty deglutition. Feeling of rawness and soreness in the right half of the palate, with creeping in the left nostril. Scraping in the throat, as in incipient catarrh, or as after having swallowed acrid substances; she is frequently obliged to clear her throat, which causes a stinging pain. A subdued pain in the throat suddenly disappears and is succeeded by a feeling of drawing heaviness through the head.—Cramp-like drawing in the throat, around the os hyoides, as if the parts were constricted.—Pressure in the throat, as if constricted.—Sensation as if the *uvula* were elongated. Painful swelling of the right tonsil.—*Mucus* in the throat, occasionally.

**Appetite and Taste.**—Sweet taste on the tip of the tongue.—\**No appetite.* Aversion to eating, with weeping mood. She relishes the first mouthfuls but is soon satiated, also at supper, owing to great sadness.—Aversion to tobacco.—*Thirst, with much drinking*, also immediately after supper.—Continual hunger.—Pinching in the umbilical region after a meal, as if diarrhoea would come on.

**Gastric Symptoms.**—*Empty eructations, in the morning. Loud eructations, in the morning and after dinner.* °Pressure at the stomach after eating. Sudden gulping up of a bitter-sour fluid, inducing cough and a scraping sensation in the throat.—Nauseous feeling in the region of the stomach. Qualmishness in the region of the stomach, in the morning.—*Continual nausea, with great languor, anxiousness and a trembling sensation through the whole body, in the forenoon.* Desire to vomit, without vomiting, coming and going with increasing violence, accompanied with great qualmishness, and uneasiness in the limbs.

**Stomach.**—Visible twitchings in the region of the stomach, like jactitation of the muscles. Pressure in the pit of the stomach, also when touching it. Pressure in the pit of the stomach after eating bread and butter, as if he had eaten something that had not been digested. *Repletion* in the stomach and abdomen as if overloaded, in the morning before breakfast, with a good deal of empty eructations. Distention of the pit of the stomach and of the stomach itself, with a scratching and tearing sensation in the stomach.—Drawing pain with pressure, under the pit of the stomach, as if occasioned by a strain.—*Contractive pain* around the pit of the stomach, *as if she had laced herself too tightly*, with a suffocative sensation, or with sensation as if it would go off by eating.—*Pinching* in the region of the scrobiculus cordis, and shortly afterwards a sensation as of pressing towards the hypogastrium, as if flatulence were crowding down; this sensation went off when a desire for emission of flatulence made its appearance, which, however, took place with great difficulty. *Creeping* from the pit of the stomach to the throat, as if she had swallowed little particles of a feather, inducing a hacking cough with vomituration. Fermenting sensa-

tion in the region of the stomach.—Dull beating, as with a hammer, in and near the pit of the stomach, in the region of one of the cartilages of the ribs, (immediately). Violent *stitches* on the right side near the pit of the stomach.—Dull *shocks* in the pit of the stomach. Violent dull-sticking shocks in the pit of the stomach, slowly going and coming. Gnawing and writhing sensation in the stomach early in the morning, with canine hunger and accumulation of water in the mouth, not relieved by eating.—Itching in the region of the stomach, going off by friction.

**Abdomen.**—*Colic* towards evening, increased by raising one's-self in bed and then ceasing gradually. Sensation in the whole abdomen as if she had laced herself too tightly. °Constrictive sensation in the abdomen.—Sensation in the whole abdomen as of being pinched together from the umbilicus to the back. Painful pinching under the left short ribs. Attacks of pinching in both sides of the abdomen. °Colica plumbea.—Attacks of *drawing* in the right side of the abdomen, with some arrest of breathing. Drawing through the abdomen from the chest towards both groins, terminating in the genital organs, where it causes a pain. Darting pain through the abdomen, succeeded by weariness of the knees.—A *writhing sensation* around the umbilicus, with oppressed breathing and a tremulous sensation through the whole body.—Very painful *stitch* deep in the abdomen above the umbilicus, when suddenly raising one's-self after squatting. Dull stitches in the middle of the umbilicus. Stitches in the abdomen in the morning. Fine stinging in the right side of the abdomen, moving to the umbilical region when lying on the affected side, but increasing when lying on the left side. Dull shocks in the abdomen at intervals below the short ribs.—Anxiety in the whole abdomen, succeeded by a pain in the abdomen, as after fright; accompanied with urging to diarrhœa.—Slight burning around the umbilicus. Sudden burning, striking from above downwards in the right side of the abdomen. Burning sensation at a small place on the left side of the abdomen, in paroxysms.—Distention of the abdomen after a meal. Spasmodic distention of the abdomen in several places, causing elevations and depressions on the surface. Rumbling in the epigastrium before breakfast. Bubbling sensation in the abdomen, before breakfast, with a pinching and anxiety in the intestines. Emission of short, interrupted flatus, sometimes difficult. *Copious emission of flatulence.*—Sudden jerking, resembling a dull shock, at a small spot in the abdominal integuments. Dull contusive pain below the umbilicus, in the integuments. Dull shocks, a sort of beating, in the region of a true lower rib.

**Stool.**—\**Constipation* for several days, °also from poisoning by lead or when travelling.—Frequent desire for stool, the stools coming out in lumps, and causing great weakness and a sensation of rigidity in the abdominal muscles.—*Difficult stool*, with cutting, burning, and protrusion of the varices. Hard stool, as if burnt, with slight desire before and after. Difficult expulsion of scanty stool, cohering like soft clay. Stool every two days with much bearing down.—*Papescent stool* in the morning, half digested and somewhat bloody; afterwards increased tension in the left hypochondrium and small of the back.—*Papescent stool* in the evening, with discharge of ascarides. Stool *rather thin* with slight tenesmus in the anus before and after. Violent, noisy expulsion of fæces after dinner; first thin, then hard; in lumps which have to be squeezed out singly, and which are almost as dry as dry clay; after stool he experiences a shaking and shuddering in the upper part of the body, and after rising from stool, he feels a slight pain and weakness about the umbilicus.—Even when the stool is not hard he has to bear down considerably, after which he experiences a violent stitch in the anus with subsequent cramp-like contraction of the nates,

extending towards the small of the back; this pain is so intense that she has to discontinue the bearing down.—Shuddering over the head, chest and arms, after stool or micturition.—Blood with stool.—*Creeping tenesmus* in the anus, as if diarrhoea would set in, at the same hour every evening. Creeping and itching at the anus, in the evening as from ascarides.—Burning in the *rectum* during stool, followed by violent itching. Violent dull stitches in the fore part of the rectum. Violent pressing in the rectum, without stool.

**Urinary Organs.**—Slow flow of urine, but frequent.—Pale yellow *urine* in the morning, in the afternoon clear as water. *Red urine* with white clouds.—The urine becomes turbid and deposits a red sediment on the sides of the vessel.

**Male Genital Organs.**—*Corrosion* near the genital organs, as if sore and excoriated. A similar sensation in the scrotum even when lying in bed, for many days. °Excessive sexual desire.—°Discharge of prostatic fluid. Continual erections while asleep, with amorous dreams. Embrace with little pleasurable excitement.

**Female Sexual Organs.**—Excessive sexual desire, particularly in lying-in females. Painful drawing in both groins, as if the menses would appear. Pressure in the hypogastrium with qualmishness, as previous to the appearance of the menses. Cutting in the hypogastrium, as if the menses would appear, with drawing headache, (immediately). *Painful pressing towards the genital organs*, as if the menses would make their appearance; sometimes accompanied with desire for stool, extending through the groins as far as the small of the back, where the pain is then felt for some time. °Congestion of blood to the uterus. Painful sensitiveness and continual pressure in the region of the mons veneris and in the genital organs, with internal almost constant chills and coldness perceptible to the hand, (except in the face). The painful pressing as if the menses would appear, disappears in the evening but returns in the morning. *Voluptuous tingling in the pudendum* and abdomen, with oppressive anxiety and palpitation of the heart; afterwards painless pressure in the lower part of the genital organs, with a relaxed feeling and stitches in the sinciput.—°Induration of the womb. Cramp and stitches in the indurated womb.—\**Amenorrhœa* in Irish emigrants.—\**Menses too early* by 6, 8, 14 days, also accompanied with diarrhoea or \**profuse menses*, \*or too long, -also with drawing in the abdomen.—The menses which had been suppressed for months, appeared after 11 days. °Before the menses: cutting and labour-like pains in the abdomen. °*At the appearance of the menses*: cramps.—*During the menses*: pinching in the abdomen on the second day of the menses, followed by pressing in the groins, alternating with pressure in the pudendum, with increase of the menstrual blood. °Great sensitiveness of the parts, with pressing from above downwards. Pressing in the hypogastrium with ill-humour and menorrhagia. Discharge of a quantity of coagulated blood, on the first day of the menses. °Headache, restlessness, and weeping, (the menses being premature and profuse).—°*After the menses*: debility.—°*Metorrhagia* (see Cl. Obs.).—°Painful sensibility of the vulva after coition.—*Leucorrhœa*, like albumen, only in the day-time, without sensation, partly after micturition, partly after rising from a seat. (For the diseases which have been cured with Plat., see Cl. Obs.)

**Larynx.**—°Loss of voice. °Short, dry cough.

**Chest.**—Sudden arrest of breathing in the throat, as takes place when walking against a sharp wind. °Short, difficult, anxious breathing. *Oppressed breathing, with warm rising from the pit of the stomach to the pit of the throat*, she has to take deep breath, accompanied with a hoarse voice, going off again with the oppression. Impeded respiration from weakness of the chest. *Deep*

*breathing, as if a load were oppressing the chest.* Frequent deep breathing, without oppression of the chest. Dyspnœa as if laced too tightly, with heavy slow breathing.—Aching pain in the chest, as if strained.—*Cramp-pain in the left side of the chest*, slightly increasing and decreasing. Pushing pressure in the left half of the chest, partly below the axilla, partly in the middle of the chest. Cramp-like pressure in the chest at intervals, below the right clavicle. Pushes in the region of one of the costal cartilages near the sternum. Cutting shocks in the right chest from below upwards. Tension, pressure, and sticking, in the sides, not permitting one to lie on any side. Dull pressure at a small spot in the upper part of the chest.—Sudden *stitch* in the left side of the chest, below the axilla, causing him to start. *Stitch* in the right side during an inspiration.—*Burning* between two ribs on the left side, going and coming. Burning and stitching in the lower part of the region of the heart. Sensation in the chest as if fasting, as if from getting up too early, continuing a long time after getting up and gradually increasing until nausea, going off towards noon. Darting pricking at a small spot on the right side of the chest, speedily recurring after scratching.

**Back.**—Numb feeling in the *os coccygis*, as from a blow. Cramp-pain, contusive in the *os ilium*.—Pain in the *small of the back*, as if broken, especially when bending backwards. Pain in the back and small of the back, as if broken, after a walk. Dull pressure as from a plug, on the right side of the middle of the dorsal spine; pain when pressing on the part, as when pressing on a bad sore. Dull pressure and dull shocks in the middle and left side of the spine, slowly going and coming. Pricking in the right half of the back, as if excoriated.—Burning dull stitches in the left side of the back, going and coming, when sitting, and as if excoriated. Paroxysms of drawing from the right scapula to the hands. Sore feeling with pressure, going and coming, in the outer border of the right scapula. Pressure, with a feeling of coolness, in the apex of the left scapula.—Pain on the top of the left shoulder, as from a blow, slightly increasing and decreasing. Aching pain on the top of the right shoulder, as if he had carried a heavy burthen on it.—*Weakness of the nape of the neck, the head inclines forward.*—Tensive numb feeling in the nape of the neck, close to the occiput, as if tied together. Cramp in the posterior cervical muscles as if from a hard couch, worse during motion.—Cramp-pain in the side of the neck, when turning it towards the shoulder. Slight aching and soreness in the *goître*, especially when touching it.

**Superior Extremities.**—Cramp-pain near the shoulder and chest, as if constricted. Great weakness in the shoulder. Sharp stitches in the shoulder causing the arm to start. Relaxed feeling in both arms, as if they had lifted and carried heavy weight, diminished by moving them to and fro, but returning immediately when at rest, with a drawing sensation from the shoulder to the hand, as when a string is pulled. Pain in the arms as if beaten to pieces. Sudden lameness, as after an apoplectic fit, at times in the right, at times in the left arm. *Paralytic feeling in the left arm*, worse when leaning the arm against the stool, when sitting; it is even felt when merely leaning the shoulder against the chair. Weariness and weakness of the left arm, with drawing in the same. Burning in the right arm from the shoulder to the wrist-joint.—Dull pain in the *upper arm*, as from a blow, most violent when moving or stretching it. Small, painless *blue spot* in the left upper arm, soon diminishing and becoming dark-red.—*Burning in the elbow*, as if scraped or rubbed with wool. Undulating pain above the elbow-joint, as if bruised or contused. Pain in the right elbow, apparently in the periosteum.—Cramp-pain in the forearm, when leaning the elbow on something. Darting pain in the region of a tendon on the left ulna

close to the wrist-joint, in paroxysms. Paralytic feeling in the right forearm, from above downward. Pain in the right forearm, with contraction of the fingers when stretching the arm. Undulating beating pain in some parts of the bones of the forearms and legs. Cramp-like rigid feeling in the left forearm and hand. Cramp-like pressure, going and coming, in the bend of the left forearm.—Formication in the *hand*, or as if cool air were blowing upon it. Trembling of the hand and fingers when held out unsupported. *Cramp in the hand*, when exerting it. Cramp-pain of the hands and fingers, especially the joints, particularly when grasping something firmly. Cramp-like twitching jerking, at regular intervals, close below the styloid process of the radius. Cramp-pain in the hand, behind the first two fingers. Crampy twitching in the metacarpal bone of the thumb and the joints of the thumb, more violent when moving it strongly. Cramp-pain in the ball of the left thumb.—Burning, fine stitches in the metacarpal joint of the index-finger, shortly returning after scratching.—Itching and gnawing on the right wrist-joint. Itching prickling on the backs of the hands, going off after scratching.—Cramp-like drawing in the right hand and index-finger, at intervals. Contraction of the fingers, with painful drawing in the arm from below upwards, when bending the arm. Intensely-painful feeling of numbness and tremor of the right thumb in the morning, as if contused. Numbness of the little finger. Pain in the last phalanx of the index-finger, as if an ulcer would burst. Tingling in the left index-finger. Tingling in the inner side of the right thumb.

**Lower Extremities.**—Crampy tensive pain in the hip close above the joint, as after a blow, increasing and decreasing at intervals.—Jaetitation of the muscles of the *lower limbs*, after walking, especially those of the legs. Inclination to uncover his lower limbs at night, although he does not feel warm. Tingling in the limbs when laying them across one another in sitting.—When sitting with the legs stretched, the thighs are painful as if broken, with undulating, cramp-like darting in the limbs when drawing them up. *Feeling of weakness* with tremulous uneasiness in the thighs, especially towards the knees, as when tired by walking; only when sitting. Tensive sensation in the skin of the thighs as if bandaged too tightly, with a feeling of weakness in them. Cramp-pain in the middle of the thigh, when sitting. Cramp-like feeling of numbness, as from a blow, on the anterior surface of the right thigh. Cramp-pain in the posterior surface of the thigh, when sitting. Cramp-pain in the inner side of the right thigh. *Pain of the thighs as if bruised*, also more when sitting than when walking. *Drawing* in the upper part of the left thigh, so violent when stepping, that her limb gives way. Drawing and tearing extending from the middle of the groin to both thighs, increased by contact and breathing. Dull pain as after a fall, in the upper part of the left thigh, when sitting.—Drawing in the *knee*, afterwards burning and pain as if sprained, when stepping. Burning prickling in the right knee. Violent tension in the bend of the left knee, after a quick walk in the open air. Dull pressure on the inner side of the bend of the left knee, when sitting with his limbs drawn up. *Pain in the left knee as after a violent blow*. Contusive pain on the left side above the knee. Tremulous feeling of numbness in the knees, extending down to the foot, as if bandaged too tightly. Feeling of numbness and weakness, and dull pressure on the inner side of the bend of the left knee, when sitting. *Feeling of great weakness* in and around the knee-joints, greater when standing than when sitting, occasioning a vacillation of the limb. Weakness of the knee-joints, causing them to give way, greater when standing than when walking, most violent when going up stairs. Weak feeling in the knees when walking; when sitting it is also felt in the thighs, a sort of weariness as from walking.—Painful weariness below the knee,

when stepping, or sitting. Pulsations with erosive sensation in the middle of the right leg, anteriorly. Cramp-like sensation in the legs, in paroxysms, from above downwards, accompanied with a feeling of rigidity, which is likewise felt in the feet when sitting, especially in the evening. Intensely-painful shocks along the tibiæ, from above downwards. *Tremulous, tingling uneasiness in the legs*, accompanied with a feeling of numbness and rigidity when sitting, especially *in the evening* and also in bed. \**Languor* of the legs, after a short walk, with oppressed breathing, more at the commencement of a walk than after it; lastly nausea. Cramp-like drawing through the right calf, when sitting after a short walk. Beating in the right calf and tightness of the skin, causing the foot to tremble, when sitting.—Weariness of the *feet*, with a feeling of swelling around the ankles; when sitting, the weariness together with a tightness of the skin extends as high as the calves, in the evening. Pain in the tarsal joint as if sprained. *Feeling of numbness and weariness in the feet*, as after long standing, *only when sitting*. Painful tearing in the dorsum of the left foot, with dull cuttings across it. Tensive pain in the bend of the foot, especially when inclining the body forward while standing. Smarting sensation above the tarsal joint, on the outside. Violent stitch above the tarsal joint, not relieved by scratching. Corrosion and smarting around the ankles as if excoriated; when the parts are touched by the dress they pain her as if raw and sore. Stinging gnawing at a small spot on the sole; he is obliged to scratch. Stinging in the balls of the toes of both feet, in the evening after lying down, until midnight. Painful pullings in the right sole when standing, and pressure with creeping in the same, when sitting. Hard pressure in the right sole, near the toes. Cramp-pain in the right metatarsus. Cramp-like drawing in the right heel. Tremulous pain at a spot on the dorsum of the foot, as if occasioned by external pressure. °Cold feet.—Pain in the big toe, as if bandaged too tightly. Cramp-like, burning tension in the left big toe. Cramp-like drawing in the toes, especially the big one. Cramp-like beating in the left big toe, at irregular intervals. Painful beating under the little toe. Tearing with slight beating as in an ulcer, in the right toes, especially the big one. Prickling itching under the big toe. Itching tingling in the right big toe. Burning pricklings under the big toe. Sore pain in the ball of the toe which had formerly been frozen, especially when walking. Swelling of the ball of the toe, with nightly tearing pains.

**Sleep.**—Yawning inducing lachrymation. Violent yawning causing a pain in the cervical muscles. *Great inclination to violent, almost spasmodic yawning.* Stretching the limbs does her good.—Excessive weakness and *drowsiness* in the evening. She goes to sleep while talking. Great drowsiness in the evening; as soon as she closes her eyes, she dreams of distant things, but soon wakes again. Great drowsiness in the evening, she goes to sleep while reading, wakes frequently, asking “what?” because she hears indistinctly the speech of those around her; she sleeps soundly at night.—*Falls asleep after midnight*, with tearing in the ball of the toe.—*Symptoms at night, in bed: she wakes in a sort of stupor, and is unable to collect her senses. Wakes about midnight*, ideas which he is unable to repel crowding upon his mind, no sleep until morning. He wakes about midnight with melancholy thoughts and violent thirst, but after an hour he goes to sleep again. Uneasiness in the abdomen, as from a cold. Burning pain in the toes. Cramp and contraction of the soles, after rising. Violent itching of the whole body.—Anxious dreams, gloomy thoughts and sad visions when waking suddenly. Anxious confused dreams of war and bloodshed. She dreams that her distant sister had died, and is astonished that she should not have apprehended such an event. Incoherent dreams. She dreams of a conflagration, wants to go to it, but cannot get ready with her preparations of toilet, etc.

Dreams, even during the siesta. Sound sleep, with pleasant dreams.—He wakes in the morning with a peevish and anxious mood, as if he had suffered injury during his sleep. Drowsy, after a long and sound sleep. *In the morning, when waking, he lies with distended limbs*, or with the legs drawn up and the knees wide apart, one or both hands above his head, and *always on his back, with great desire to uncover the limbs* and constant erections.

**Fever.**—Chilly creeping over the back.—Constant shuddering through the body, particularly the limbs. Shuddering after yawning, pervading the body. Sudden shuddering about the head, chest and arms, after entering a warm room.—Chilliness in the evening when undressing, with chattering of teeth. Chilliness in the evening before bed-time, the coldness continuing even after having gone to bed; restless sleep, waking with anxiety, tremulous feeling through the whole body; nausea and headache.—*Chilly feeling with shuddering of the lower limbs from above downwards, especially in the open air, even when warm.*—Chilliness through the whole body, down to the feet. Chilliness in the evening. Attack of chilliness when going into the open air, out of her room. Chilliness in the forenoon, with drowsiness.—Chilliness and shuddering mixed with flushes of heat accompanied with ill-humour and taciturnity, in the open air; afterwards agreeable warmth through the whole body, the cheerfulness returning likewise.—She feels suddenly hot, and she imagines she looks very red, although she has her usual complexion.—Sweat during sleep.

**Skin.**—Itching, gnawing, stinging prickling and burning tickling in various parts, especially the arms, hands and scrotum, more violent towards evening when he goes to bed. Burning prickling in various parts of the body, speedily disappearing of itself. Itching stinging of the whole body, as from vermin, which cannot be removed by scratching.—Ulcers on the fingers and toes.

**General Symptoms.**—Plat. is particularly suitable to females of an irritable disposition, with copious menstruation and sexual excitement. °Chronic ailments from abuse of lead. °Ailments from chagrin, anger, mortification. °Neuralgia and neurosis. °Spasmodic affections, particularly of females and hysteric individuals.—Pressing pains from without inwards, *pushing pains*, constrictive pains, crampy pains with pressure *as from a plug*. *Cramp-like drawing or jerking in the limbs and joints*. Tension in the limbs, as if bandaged too tightly. *Pains as from blows or contusions*, particularly when pressing on the affected part. *Paralytic feeling of numbness and rigidity here and there*, also with trembling and palpitation of the heart. °*Spasmodic affections* (for the spasms which have been cured with Platina, see *Clin. Obs.*).—*Paroxysms*: 1. Fit of inclination to vomit, when walking in the open air, especially when walking against the wind; diminishing in the room, when leaning the head on the table; becoming again intolerable when raising the head, with vertigo, aggravated by looking in the air, with obscuration of sight, as if by smoke; when laying the head down, he at once falls into a state of half sleep and waking, with lively dreams; all these symptoms disappear on raising the head. 2. Drawing pain, with pressure, across the scrobiculus cordis, increasing and decreasing at intervals, accompanied with a sensation in the middle of the upper arm as if seized with violence, with a paralytic and numb sensation in the arm; the pain in the side increases by laughing, inspiration, pressure; at every step he feels a painful concussion in that place.—Burning in the limbs, here and there. Drawing in various parts of the body in succession, at times in the side of the chest, at times in the occiput, at times in the abdomen, at times in the shoulders, etc. *Dartings through the whole body*. Cramp-like jerking here and there in the limbs, resembling sudden throbs. Transitory, cramp-like drawing here and there, as from a cold. Pressing upon the parts affected with the cramp-pain, excites a

contusive pain in those parts.—Painful *tremulousness* of the whole body, with throbbing in the arteries. *Tremulous sensation through the whole body*, occasionally. Trembling sensation in the hands and feet, followed by chilliness and violent trembling of the whole body as during the paroxysm of a chill, with chattering of teeth, the face being warm, the hands cold.—*Weary*, relaxed, inclining to fall. Weariness of the whole body, she staggers when standing. Weariness from the open air, unto sleeping.—Staggering when standing, as if the limbs could not support the body. Weakness, with sensation in the face, as if cold sweat would break out.—Tremulous uneasiness of the feet, especially when sitting. Excessive languor and drowsiness immediately after a meal.

**Characteristic Peculiarities.**—The symptoms of the body disappear as the symptoms of the mind appear, and vice versa. Many symptoms are worse during rest, and relieved by motion. Many symptoms are worse in the evening. The symptoms which abate in the open air, are worse in the room.

## PLATINA CHLORICA.

### SYMPTOMS.

\* Small, unexpected movements of the transverse fibres of the occipital portion of the occipito-frontalis muscle, of the muscles of the back and extremities.—Slight shiverings.—Pulse 85.—Violent headache, particularly in the occiput.—Turns of nausea.—Disposition to vomit.—Acidity of the stomach, accompanied with violent headache.—Violent constriction of the throat, so that the voice and swallowing were perceptibly impeded.

### PATHOLOGICAL ANATOMY.

*In animals* : (dog, rabbits). Death amidst convulsions ; the orifice of the stomach and the lesser curvature and duodenum are tinged yellow ; the inner coat of those parts and of the œsophagus are very much softened, partly destroyed, the blood in the ventricles was fluid and not coagulated.—(In a dog) : the stomach, ileum and colon were very much inflamed even on the outside ; the stomach which was almost contracted and violently inflamed, contained only a bloody watery fluid ; the rectum was violently contracted and inflamed, the left lung was dotted with dark spots ; the right ventricle contained some coagulated blood ; from the large vessels flowed a dark, blackish, coagulated blood ; the bladder was very much contracted and inflamed, (see *Hoefer's* and *Gmelin's* experiments with *Baryta*, Chrome, etc., and the muriate of Platina).

## 196. PLUMBUM.

**PLUM.**—Lead.—See NOACK and TRINKS' Handbuch.

COMPARE WITH—Alum., Bell., Chin., Con., Hyos., *Merc.*, *Natr. mur.*, *Nux v.*, *Op.*, *Phosph.*, *Plat.*, Puls., Sabad., Sec. c., Stram., Sulph., Verat., Zinc.

ANTIDOTES.—Alum., Ac. sulph. in the shape of a lemonade, *Bell.*, Hyos., *Merc.*, *Nux v.*, *Op.*, *Plat.*, Puls., Sabad., Sec. c., Stram., *Strychnine*.—Plumbum antidotes the bad effects occasioned by long abuse of vinegar.

### CLINICAL OBSERVATIONS.

The principal physiological effects of this metal upon the animal organism were known to the older physicians ; they were first systematically arranged by Paulus de Ægina, (see de remediis, III., c. 8.) and have since been completed with great care and accuracy by the important and interesting observations of *Schmidt*, *Brambilla*, *Tanquerel de Planche*, *Sander* and many others. The first effects of lead are felt by the organs which derive their nerves from the splanchnic system of nerves, after these the sentient and motor nerves

are affected, and finally the brain and the cerebral nerves. The primary effects of lead are characterized by increased sensibility and spasms, and, after a shorter or longer space of time, exhibit an opposite character, that of local and general neuroparalysis, arising from impoverished nutrition, and principally from decomposition and degeneration of the nervous substance.

Lead is probably less suitable to acute than to chronic affections; it may be considered one of our best remedies for chronic affections of the cerebro-spinal and ganglionic system of nerves, characterized by increased sensibility or spasm, or by paralysis, even if this should have lasted for some time and should arise from an anomalous nutrition (degeneration) of the nervous substance.

The following affections have been cured by lead: Chlorosis.—Exulcerations of the mucous membranes.—Hypochondria.—Spasmodic vomiting; periodical vomiting with violent cardialgia, anxiety in the præcordial region, pains from the back to the stomach.—Pneus.—Obstinate constipation.—Affections of the bladder with slimy sediment in the urine.—Excessive involuntary emissions, (Hahnemann has observed that excessive nocturnal emissions stopped after giving the acetate of lead, but returned afterwards, see *Cullen's Mat. Med.*, II.).—Hæmoptoe.—Spasmodic palpitation of the heart?—Paresis of the lower extremities.

#### PATHOGENETIC EFFECTS OF DIVERS PREPARATIONS OF LEAD.†

**Mind and Disposition.**—Lowness of spirits and indifference, (*Voigtel.*)—Restless, hopeless, tortured by anguish during the paroxysms, and with lowness of spirits during the remissions. Indifference and somnolence, with lamentations about difficulty of breathing, and headache, (*Br.*)—Mental derangement and difficulty of motion, (*Gal.*)—Suppression, without derangement, of the mental activity, during the paroxysms.—Loss of memory, (*Mont.*)—Loss of all the senses, the convulsions returning with increased violence, (*Bramb.*)—Idioey, (*Ramaz.*)—Derangement of the affective sphere, (*Br.*)—Mistrust, (*Mont.*)—Melancholia, (*Richter.*)—Fright, (*Mont.*)—Delirium, after violent and frequent attacks of colic. *Delirium* (*Mont.*, *Warr.*): *furiosus*, constant or intermittent, (*Heine*), nightly, alternating with sopor, (*Br.*), calm and *furiosus* loquacity, frequently alternating with rage, (*Br.*)—ENCEPHALOPATHIA SATURNINA, (generally consisting of delirium, coma and convulsions, without fever, from four to seventeen days); precursory symptoms: violent headache, of different degrees of intensity; general or partial pains in the head, most frequently in the region of the forehead, frequently accompanied with vertigo and tremulousness; sleeplessness, or else sleep disturbed by dreams or hallucinations, so that the patients suddenly take fright and jump out of bed; ringing in the ears, weakness of sight, amaurosis, diplopia, contraction and dilatation of the pupils; squinting, fulness and feeling of heaviness with violent pain in the orbit, formi-

† Vapors of lead in lead and silver mines, effects of the metallic leads and its oxydes, see carbonate and muriate of lead. The symptoms of the latter will be found marked *Pl. mur.* This list of the physiological effects of lead has been derived from the following authorities: *Gmelin*, *Voigtel*, *Richter*, *Sundelin*, *Voigt*, etc.—*Beer*, (*Br.*) *Austrian Journ.*, 1841, No. 36.—*Griselle*, (*Gris.*) in *Journal hebdom.*, Dec. 1836.—*Schræder*, (*Schr.*) *Med. Vereinsz.*, für Pr. 1844, No. 9.—*Tanquerel de Planches*, (*T. de Pl.*) *traité des maladies du plomb*, Paris, I. and II.—*Montault*, (*Mont.*) in *l'expérience*, 1833, p. 217.—*Brenner*, (*Br.*) in *Rust's Magazine*, 1842, 17.—*Sander*, (*Sa.*) in *Casper's Med. Wochensch.* 1836, No. 2.—*Andral*, (*Al.*) *Malad. de l'abdom.*, II. p. 236.—*Duplat*, (*Dpt.*) in *Arch. générales*, 1824, May.—*Burton*, (*Bu.*) in *Froiep's Notices*, 1842, No. 453.—*Warren*, (*Wa.*) in *Med. Transact.*, II. p. 87.—*Christison*, (*Chr.*) on poisons, 1836.—*Hartlaub* and *Trinks' Mat. Med.*, vol. 5, p. 9, and the homœopathic authorities: *Munnecke*, *Kurz*, *Winter*, *Wiedemann*, *Muhlenbein*, *Hartlaub, sen.*, *Mansa*.

cation and prickling from the index and thumb of the right hand to the shoulder. *The look is suddenly changed*, as if *frightened, dull, or meditating*. Sadness, extreme uncasiness; indifference; taciturnity; peevish mood; weeping without any apparent cause; constant change of locality, as if driven by fear and terror. Stupor: slowness of thought and motion. Dysphagia: constrictive sensation in the fauces; turbid urine, which is pale and without sediment, during an attack of colic, (*Hulxam*). Paralysis. Colic (42 attacks). Sudden disappearance of the colic.—The encephalopathia generally commences at night. *Encephalopathia, with delirium*: it is either light or violent, partial or general, continuous, remitting or intermitting, with or without loss of one or more senses. *a*, With bland delirium: the following phenomena alternate with wonderful rapidity in a couple of hours: look full of wonderment with immobility of the eyes, look full of deep meditation, expression of countenance, which is at times full of mildness, at others, full of dissatisfaction, at other times the expression is stupid. Three patients seemed to be in a sort of ecstasis. Some were constantly laughing and seemed to be attacked with risus sardonicus, others were crying violently, with melancholy looks. Questions were answered in such a manner, as led one to suppose that there was no correspondence whatsoever between the physiognomy of the patients and their ideas. At first the answers are quite rational, after which they suddenly break forth in a multitude of incoherent words, and finally, after a long interval, they again talk rationally. Some do not answer immediately, but seem to be thinking of words for their ideas, speak one word for another, or they give correct answers without looking at the person who addressed the question to them; or the patients do not seem to understand the question except after it has been frequently repeated, or they return the same answer to every question. If left alone, the patients are at times silent, at times they talk to themselves, call to the neighbours or to absent persons; they reply to all who are talking around them, or whom they suppose to be present. In their delirium they talk about all sorts of things; frequently the ideas remain the same during several successive periods of their delirium. The speech in general unimpeded, and the voice has its natural vibration. Some mutter, and utter unintelligible sounds in a low tone. Accompanying symptoms are: agitated movement of the arms, throwing off the bed cover; desire to go away, to get into the bed of some other person; micturition at any place indiscriminately as soon as the desire is felt. The patients recognize persons imperfectly, but get into their beds again if admonished by their nurses. Some tremble slightly, particularly with the arms and face, or they use their arms with difficulty and stutter. Hallucinations of sight and hearing; they see frightful things which drive them out of their beds; or they hear music, etc. *b*, With furious delirium: the eyes are widely open, threatening, wild; the features are spasmodically contracted. They shriek, curse, tear their clothes and fetters. They rush upon others to injure them. The rage increases by violent opposition, the patients then run against the walls, or throw themselves out of the windows. Every opposition of force brings on an attack of rage. Accompanying symptoms: spasmodic contractions of the facial muscles, distortion of the eyes, cracking of the jaws, subsultus tendinum or trembling of the limbs, frightful hallucinations; lamentations and curses, induced by a belief that they will be poisoned, etc. Confused delirium, with abrupt stuttering words and loud voice. Delirium and paroxysms of rage generally set in together. There are frequently long intervals of rest between the paroxysms, the agitation is seldom permanent. The patients think of words, and become enraged if unable to find them. Sometimes a few words are rational, the others again delirious. The face is generally straw-coloured, sometimes injected, sweat breaks out after a long paroxysm. After long and violent paroxysms the tongue

becomes dry, parched, and, as well as the teeth, is covered with yellow or blackish crusts; the movements of the limbs are unsteady, trembling as in chorea. If amaurosis supervene, the patients stagger from side to side. Both the bland and furious delirium soon increase to the highest degree of violence; sometimes, however, the attack remains incomplete for hours and even days, and is confined to illusion of the senses and incoherence of the ideas, with trembling of the limbs and hurried speech. The completely-developed delirium is exceedingly irregular in its course, and increases or diminishes without order or periodicity. Sometimes the delirium progresses in paroxysms, with lucid intervals. The bland and furious delirium frequently alternate without regularity during the course of the malady, though each may exist isolatedly. Some patients are attacked with bland delirium in the day-time, and furious delirium at night. Between the paroxysms of alternate delirium the patients are soporose, with their eyes half closed, and frequently opened unequally, or entirely open at times, with stertorous breathing and muttering; this sopor likewise alternates with either kind of delirium, sets in from time to time, less frequently at night than in the day-time, generally one or two days after the commencement of the disease, for minutes or hours, but is almost always shorter than the paroxysms of delirium. In twenty-two patients, the blood taken from a vein was unchanged, in one case only there was a buffy coat; the pulse was full and regular, 70 to 80 (Br.).

**Head.**—*Vertigo* (Gris., Str.). Epileptic vertigo, (Gris.).—*Headache*, (Br. Gris.). Violent pains in the integuments of the skull from the occiput to the forehead, (Br.). Violent headache, with vomiting, every second and third day, (Br.). Headache proceeding from the occiput, with bilious vomiting, (Br.). Headache, with vomiting, and violent pains in the umbilical region, (Br.).

**Eyes.**—Contraction in the eyes and particularly the eyelids, (Bramb.). Violent closing of the eyelids, as if the eyes were in a press, (Bramb.). Complete paralysis and insensibility of the eyelids, (Bramb.).—Relaxed *œdematous* eyelids, (Br.).—Profuse discharge of acrid tears and diminution of sight, (Bramb.).—*Faint*, sad look, (Br.). Staring look, (Br.).—*Protruded eyes*, with staring look, (Br.).—Sunken eyes.—Livid colour of the eyes, and particularly of the inner canthi, (Bramb.).—Sugillations of the conjunctiva, (Br.).—Bluish, lead-coloured sclerótica, (Br.). *Contraction of the pupils*, (Rich., Br.). Mistiness of sight, (Br.).—*Diminution of the visual power*, (Br., Rich.).—Blindness, (Br.).—*Amaurosis saturnina*, (of which nineteen descriptions have been given): several paroxysms of colic, pain, convulsions or paralysis of the hands are succeeded by sudden obscuration of sight, increasing in a few hours to perfect blindness, and generally disappearing as suddenly; the blindness seldom lasts longer than a week, and seldom remains permanent. The pupil is very much dilated, and generally remains immovable, (Duplat, Rich., Br.); according to the latter the blindness is accompanied with congestion of the vessels of the conjunctiva and sclerótica, and a feeling of fulness in the eyeball. It generally sets in simultaneously with encephalopathia. It may be the only symptom of poisoning by lead, (Trouss., Mirand.); generally, however, it appears before, during, or a long time after other forms of the lead-disease, particularly colic and encephalopathia. In fourteen cases it set in suddenly; four patients complained of pain in the forehead, in one case it came on gradually. It reached its acme in a few hours, in one case only in eight days. In incomplete blindness light is distinguished from darkness, objects are seen as through a thick cloud; some patients saw all fixed objects white. The pupil is moderately dilated, and is still somewhat movable. In complete amaurosis the pupil is considerably dilated and perfectly immovable. The bottom of the eye is black, and not turbid. It not unfrequently happens that the two eyes are attacked with different degrees

of amaurosis, and that the pupils are capable of different degrees of dilatation; in this case the patients squint slightly. Complete amaurosis lasts a few hours, or usually from four to six days, after which period it disappears suddenly. In one case it lasted several years. If amaurosis sets in alone, without encephalopathia, it develops itself and disappears again rapidly; if it sets in simultaneously with colic or arthralgia, these affections disappear either gradually or suddenly, during which time the amaurosis continues the same as when it sets in alone. Amaurosis which sets in during encephalopathia, lasts longer than this condition, but less perfectly, and then disappears entirely in one or two days, very rarely in one month. Paralysis and anæsthesia almost always last longer than amaurosis. Amaurosis is very much subject to relapses. If it sets in gradually it disappears gradually. Complete amaurosis does not get well sooner than incomplete. Amaurosis attended with cerebral sufferings, generally gets well more rapidly than other varieties of that affection. Diagnostic characteristics of the lead-amaurosis are: the characteristic mode in which it develops itself; the considerable dilatation of the pupil, which is of unequal extent and changes with excessive rapidity; the black, non-transparent bottom of the eye; and lastly, the fact that one eye never gets blind alone, (*Smetius, Montauccix, Andral, Raquette, Duplay, Grisolle, T. d. Pl.*).

**Ears.**—Buzzing in the ears, (*Br.*).—Diminution of hearing and sight, (*Richt.*).

**Nose.**—*Bleeding of the nose*, (in 13 cases). Frequent, copious bleeding, (*Br.*).—Copious bleeding which can scarcely be arrested, (*Br.*).—Peaked nose. —Loss of smell, (*Ramazz.*).

**Face.**—Clay-coloured face, (*Br.*). Death-like, lead-coloured face, (*Ramazz.*).—Cadaverous face, (*Schm.*).—*Swelling of the face*: and eyelids, (*Br.*), and of the abdomen, (*Br.*), and feet, (*Br.*).—*Sunken features*, (*Gris, Br.*).—Emaciation, most in the face, which is traversed by furrows, looks much older, and has an expression of sadness (after a fortnight—or some years, *T. d. Pl.*).—Expression of anguish in the face, with animated, tumultuous jactitation of the muscles; the eyes, which are dim, wildly rolling, and surrounded with blue margins, are either sunken or protruded; the nose is peaked, the cheeks are sunken.—Expression of countenance as in mania or idiocy, when the colic lasts a long time, attended with despair and weakness of the senses.

**Teeth.**—*The gums are interstitially distended*, (*Br.*).—Turgescence of the gums, (*Thoms.*).—The margins of the gums of two or more teeth in each jaw are marked by a narrow, lead-coloured border of one-tenth of an inch in width, the parenchyma of the gums exhibiting the natural colour and consistence, (*Burt.*).—A peculiar coloration of the gums, mucous membrane of the mouth, and teeth.—That portion of the gums which is nearest the teeth, exhibits a violet-coloured border of from one to two lines in width, gradually changing to a bluish ash-colour. This bluish ash-colour sometimes extends over the whole gums and mucous membrane of the mouth; in some cases this mucous membrane exhibits only a few spots of a natural appearance, or single blue spots or streaks. Simultaneously with this change of colour, the gums, in many cases, dwindle away, either in thickness until they are like thin paper, or in height, in which case the tongue-shaped elevations of the gums between the teeth disappear, and the gums retreat below the teeth, where they assume a pad-shaped appearance. This alteration of the gums is accompanied with a correspondingly-increasing dark-brown colour at the base of the teeth, changing at the upper border to a light-brown, with a yellowish or greenish tinge; this alteration of colour is most marked in the region of the cuspidati. The colouring substance (consisting of the sulphuret of lead?), does not cover the teeth like common tartar, but seems to be intimately interwoven in the parenchyma of the teeth.

The teeth thus altered are fragile, disposed to be carious and to fall out, (*T. d. Pl.*).—The teeth turn black, (*Ram.*).—Looseness and falling out of the teeth, (*Ram.*).—Toothache similar to that which is occasioned by sour fruit.

**Mouth.**—*Dryness of the mouth*, (*T. d. Pl., Br., Gal., Voigtel*), with decrease of the secretion of saliva.—*Aphthæ*, (*Richt.*).—Dry tongue which is frequently covered with a brown crust. The tongue is generally moist, rose-coloured on the sides and at the tip, lined with a thin, white coating, which is sometimes yellow in the middle and at the base of the tongue; the tongue is frequently larger than in its normal condition. At the commencement of the colic the tongue is clean, in a few days the whitish, thin, but firmly adhering coating almost always makes its appearance. In some cases the tongue is red, grayish, cracked, dry, with enlarged papillæ.—The end of the tongue is dotted with a number of small, black-blue spots, resembling small ecchymoses; on the inner surface are several large foul ulcers, resembling mercurial ulcers; the tongue and lips are painful, with salivation and fetid smell from the mouth (as after abuse of *Merc.*), attended with languor; loss of appetite, burning sensation in the stomach, nausea, and vomiting, (*Mansa.*).—*Salivation* every day for several hours, (*Warr.*).—Increased secretion of saliva, the saliva having a *bluish colour*, (*Christ., Thoms.*).—The saliva re-acts like an acid, (in five cases).—Difficulty of enunciation, (*Mont.*).—*Dragging, scarcely-audible speech*, (*Br.*).—*Aphonia*, (*Schm.*).

**Pharynx and Œsophagus.**—Constriction of the throat, (*Str.*).—Feeling of constriction or lump in the pharynx, impeding deglutition.—Sensation as if a ball were rising from the epigastrium to the chest and pharynx.

**Appetite.**—Astringent taste in the mouth as from sugar, and fetid-styptic, (*T. d. L.*).—An intensely-bitter taste frequently makes its appearance in the place of the former styptic-sweet taste, the taste becomes rarely pappy.—Clay-like taste, (*Br.*).—*Loss of appetite*, (*Voigtel, Gabr., Br.*).—*Apepsia* and *dyspepsia*, (*Richt.*).—Violent hunger, (*Gris.*).—*Aversion to drink*, (*Mant.*).—The thirst is generally pretty intense, sometimes there is no thirst at all.—*Excessive thirst*, (*Br.*).

**Stomach.**—*Hiccough*, (*Mont.*).—Troublesome eructations, (*Gabr.*).—*Sweetish eructations*, (*Str.*), as if one would vomit; upwards of a hundred times in two hours, (*Schm.*).—Sour, sweet, bitter eructations, (*Voigtel*).—Loathing, (*Voigtel*).—Inclination to vomit and loathing, (*Mægl.*).—Excessive retching, causing him to stretch as if convulsed, (*Lehm.*).—Retching with discharge of a sour fluid, (*Richt.*).—*Vomiting*, (30 or 40 times in one day, *Thunb., Br.*).—Frequent vomiting of a grass-green substance, (*Br.*).—Vomiting of a greenish-gray substance, (*Br.*).—Constant vomiting of a substance resembling the acetate of copper, (*Schm.*).—Vomiting of a black substance, (*Richt.*).—Vomiting of bilious and foul substances, afterwards changing to an ineffectual retching, (*Voigtel*).—Heaviness in the stomach, (*Str.*).—Oppression of the pit of the stomach.—Slight oppression of the stomach, (*Richt.*).—Pressure in the stomach and intestinal canal, (*Voigtel*).—Violent pains in the region of the stomach and umbilicus, (*Str.*).—Great sensitiveness of the epigastrium, (*Br.*).—Violent burning pains in the region of the stomach, and tumultuous vomiting for several hours; violent pains in the pit and region of the stomach, (*Schb.*).—Constrictive pain in the præcordia, (*Br.*).—Paroxysms of cardialgia which are at first light, transitory and recur at long intervals, afterwards becoming more violent, more frequent and permanent, (*Voigtel*).

**Abdomen.**—Affections of the spleen, (*Ramazz.*).—Continual pressure in the epigastric region, (*Schm.*).—*Excessive pains in the abdomen*, (*Diosc., Laur.*), with oppression in the præcordia, trembling and weakness of the limbs, (*Tim. a G.*).—*Violent pains in the region of the umbilicus*, (*Schmidt, Richt.*), particu-

larly during the vomiting, (*Br.*), with obstinate constipation, (*Tronch.*).—*Retraction of the umbilicus*, (*Schm., Gabr.*).—*Pinching in the abdomen*, (*Bramb., Bæck., Str.*).—Distention of the abdomen, (*Br., P., Fr.*), with the umbilicus deeply drawn-in, (*Str.*).—*Meteorism*, (*Br.*).—*Sunken abdomen*, (*Br.*).—Retraction of the abdomen, not bearing to be touched, (*Tiss.*).—Constant pressure with anguish in the præcordia, dry cough, tearing colicky pains, while these symptoms last, the abdomen is drawn in so that the abdominal walls seem to be glued to the spine, attended with constriction of the sphincter ani and vomiting, (*Richt., Gabr.*).—*Tormina intestinorum*, (*Gal.*).—Inflammation of the bowels, mesentery, peritoneum, terminating in ulceration and gangrene, (*Hanck.*).—*Colic and paralysis of the lower extremities*, (*Plenck.*).—*Colic*: the face is bloated, reddened, the eyes are glistening and protruded from the sockets, the tongue is dry as well as the mouth, and reddened, with tormenting thirst and desire for cold water, distention of the abdomen and sensitiveness to contact; the pains are relieved by strong and deep pressure, on which account the patient pressed strongly against one whenever the pains became violent; with constipation, (*Schl.*).—Violent colicky pains, generally, but not always, accompanied with retraction of the abdomen, particularly in the umbilical region, constipation or discharge of dry, hard, black, globular faeces, constriction of the anus, violent pains in the limbs, and bluish, sweet saliva, (*Voigtel.*).

**COLICA SATURNINA, (lead-colic).**—Intolerable pains in the abdomen, frightful anguish, uneasiness day and night for eight days, constant retching, drawn-up testicles, feeling of lameness in the lower extremities, retraction of the abdomen, and particularly of the umbilicus, to such a degree that the vertebræ could be distinctly felt through the abdominal integuments, constant constipation, great thirst, (large doses of calomel, from two to three grains each, afforded speedy relief, in a young man of fifteen years, who had ground two hundred pounds of the acetate of lead, *Schr.*).—Violent, alternately-burning and tearing pains in the umbilical region, extending through the whole abdomen, moving towards the back and chest, with sensation as if the bowels were twisted and pulled to and fro. Accompanied with violent anguish and oppression, ineffectual tenesmus, vomiting of a viscid, discoloured, and frequently sour-smelling mucus, which is rarely mixed with bile; burning in the œsophagus and spasmodic constriction of the throat. The abdomen is not painful when but slightly touched; it is hard, and drawn-in; the false ribs and the anterior spinous processes of the ileum were very prominent, the umbilicus formed a fossa, and the orifice of the anus was drawn up. An evacuation of the bowels was accompanied with the most violent pains and tenesmus; the stools were scanty, and composed of hard, black-brown faeces, like sheep-dung, without affording any relief. The hands trembled, and the patient had great difficulty in bringing anything liquid to his mouth. The right eye was entirely turned towards the nose, the pupils were very much dilated, and saw things double particularly the flame of the candle. Sleep was uneasy, anxious, disturbed with frightful dreams, which drove him out of bed without consciousness. Mind and memory are very much weakened; the tongue is clean, the back part of it being covered with mucus, the appetite is strong, and accompanied with vomiting of the ingesta. Aqueous urine; skin dry, hard, and brittle. Pulse small, hard as wire, 65–75, (*Zwick.*).—Precursory symptoms: peevish mood, sinking of the features, fatigue from every occupation, interrupted, unrefreshing sleep, unusual coldness, with fleeting chills, abdominal complaints, such as chilly feeling in the epigastrium, dull, fleeting pains in the abdomen, worse after eating, vomituration, eructations, flatulence, decrease and loss of appetite, constipation, discharge of rather hard, blackish balls, difficult, and sometimes painful micturition. These precursory symptoms generally appear at night; the

precursory symptoms are very seldom entirely wanting; the colic likewise sets in at night, suddenly. The colicky pains are most frequently seated in the median line of the abdomen, without following exactly the course of the colon; in some cases the pain goes round the trunk like a belt, frequently it is only felt in some parts, and sometimes shifts from one place to another, in something like the following order: umbilicus, epigastrium, hypogastrium, these parts being the most painful even when the whole abdomen is sensitive to the touch, or when several parts are simultaneously invaded by the pain with different degrees of intensity; they are central points from which the pain radiates, observing the same order: umbilicus, epigastrium, hypogastrium, kidneys, testicles, etc. The pain is much less-frequently seated in the last-named parts, the region of the kidneys, the hypochondria, groins, iliac fossa, anus, testicles, spermatic chords, and penis. In some cases the pain spreads to the thorax. The pain is generally violently contractive, it consists less frequently of a sensation of tearing, pulling out, stinging, burning, boring; sometimes the pain is described as a simple contractive pain, or as an oppressive pain, as from a weight, in which case it is generally dull, and constantly uniform. The pain is remitting, with exacerbations, and remissions, the paroxysm lasting from a few seconds, to several hours and days. The more violent the colic, the nearer and more violent are the paroxysms; the more the colic progresses, the more prominent are the paroxysms; when the colic is retrograding, the pain becomes continuous. The pain is at times slight, at others moderate, at other times it is violent, or it is exceedingly varied in one and the same individual. When the pains are slight, the patient remains generally quiet, even during the paroxysm, the face sinking but little. When the pains are moderate the patient becomes uneasy, lies on his abdomen and sides, and moans and laments. Violent paroxysms are accompanied by excessive anguish, sunken features, sunken, dim, wildly-rolling eyes, moaning, shrieks, roaring, constant tossing about, lying on the belly or crosswise on the bed, jumping up and attempting to go out of the room, bending double, rolling about, balancing, leaning the body against something, hiding the body, which is trembling and rapidly jerked to and fro, deep under the cover, laying the hands on the abdomen, rubbing the umbilicus and pressing the thumb into it, tying a rope around the abdomen, laying heavy weights on the abdomen, striking the abdomen, making preparations to kill one's-self, answering questions incompletely, insensibility to hot water or a burning cylinder. During the remission of the paroxysms the patient is quiet and exceedingly exhausted; the patient scarcely complains, although a painful drawing, pressure, pinching, and a slight degree of bending-double remains. The remissions are rarely without any pain. Some patients think that the attack is brought on again by coughing, talking, deep breathing, drinking, moving about; in some the pains are increased by the application of cold, in others by the application of warmth. The pains are most frequent in the evening and at night, and abate at day-break; the reverse is very rare. The pain is diminished by external pressure. Violent and sudden pressure on any circumscribed part of the abdomen generally increases the pain, whereas it is diminished by pressing upon the abdomen with the palm of the hand, first slightly, then gradually, more strongly, or by making friction. In some cases pressure with the thumb decreased the pain, which was increased by a pressure with the palm of the hand. In some patients the pain was relieved by strong pressure, in others it was aggravated by slight pressure. In a few cases only the pain is exceedingly aggravated by gentle pressure. There are cases where pressure causes the pain to shift, for example, from the epigastrium to the hypogastrium, in which case the pain either remains the same, or is increased or diminished. In some cases the effect of the pressure varies from

day to day; one day pressure relieves the pain, and next day the pain is made worse by pressure, or else pressure has no effect whatever. The influence of pressure is not always the same in every part of the abdomen; in some cases, where the pain extends through several regions of the abdomen, pressure relieves the pain in one part of the abdomen, and increases it in another. Generally the effect of pressure is most intense, either in aggravating or relieving the pain, when this is at its acme. The intensity of the pain does not alter the result of pressure.—*Constipation of different degrees of intensity.* Mere difficulty of stool takes place rarely and only in the lighter cases of lead-colic; in violent cases the stool is suppressed for some days, in one case it remained suppressed for a fortnight. Frequently there is a momentary urging to stool, resulting in a violent, ineffectual, exhausting pressing, or in the protrusion of varices. Diarrhoea sometimes sets in after to constipation. The fæces which are pressed out with difficulty, and are very scanty (according to Merat the fæces of eighteen stools weighed six pounds), are yellow as goat-dung, black, and float on the urine.—*Depression or retraction and hardness, or contraction of the abdomen.* Retraction is generally accompanied with an equal degree of tension and hardness. During the height of the paroxysms retraction, and particularly contraction, is much more marked; during the remission the abdomen is softer and not much depressed. The abdomen may be drawn in in various degrees; in some cases the walls of the abdomen are not much more prominent than in their natural condition, in others they seem to adhere to the spinal column. At times the abdomen is uniformly depressed, at times the depressions exist only here and there, most frequently, however, in the region of the umbilicus, the retraction of which forms a cavity, having the shape of a goblet, or the epigastric and hypogastric regions are depressed; these three regions, the umbilical, epigastric, and hypogastric, are the most frequent seats of the depression. Contraction frequently induces a strong hardness of the abdomen, as of the muscles in a cramp of the calves; this hardness does not disappear even when the thighs are drawn up close to the pelvis. The bowels seem to be involved in this muscular contraction. The degree of contraction increases and decreases with the pains. In several cases the abdomen has been convulsively moved; in other cases the hand on the abdomen has been repelled by the tumultuous and violent movements of this organ. The contraction is either partial or general. In single cases it occasions an almost permanent contraction of the portion of the region traversed by the corresponding portion of the recti muscles, with a hard and somewhat concave prominence in the middle line, whereas the sides are flat, and have almost a natural shape. During the paroxysms, and rarely between, tumours are perceived on the abdominal walls, varying in tension and extent, which are probably formed both by the abdominal muscles and by the contraction of the bowels filled with gas; they can be moved to and fro. The retraction and the pain occupy the same parts of the abdomen.—*Tenesmus of the anus* is frequently present; some patients feel as if a string were drawn across the anus; when the paroxysms are violent the anus is drawn in and constricted internally.—*Inclination to vomit and vomiting;* the former is more frequent than the latter, precedes it, and is quite exhausting. The substance which is vomited up is green as leek, viscous, has a peculiarly-fetid smell, and is exceedingly bitter; if the vomiting is very hard, a blood-streaked mucus is sometimes thrown up. The patient throws up but little at a time, but the whole of the mass vomited is very considerable. The vomiting frequently proceeds from the seat of the colic in the epigastric region; it is frequently exceedingly difficult and attended with excessive anguish. In most cases it takes place at short intervals, at times during the paroxysms, at times (and this is very frequent) during the remission.—

Gas is always present in considerable quantity, and is generally discharged by the mouth, seldom by the rectum. Sometimes a subdued painful sensation passes from the epigastrium to the larynx, accompanied by discharge of gas, which is sometimes either preceded or succeeded by nausea and vomiting. The eructations have very frequently a peculiarly-fetid and bitter taste and smell, like that of the vomited substance; many patients are tormented by frequent eructations tasting like sugar. The accumulations of gas took place in various parts of the abdomen, particularly in the right iliac fossa. The gas which accumulates in the intestines here and there forms tumours which can be distinguished by percussion, pressure, and by their mobility, from the tumours formed by the spasmodic contraction of the bowels. Some tumours are painful from the distention of the bowels, the pain being somewhat relieved by the emission of flatulence. Sometimes the gas is in motion, and pervades with excessive rapidity and with a gurgling noise the whole intestinal canal, particularly during the remission. Sometimes an alternate contraction and dilatation of the bowels and the abdominal walls is observed.—Hiccough is present only in very violent paroxysms of colic, either during or before the vomiting, with eructations and pain in the epigastrium. The hiccough appears momentarily during or after the return of the paroxysms, with discharge of gas and convulsive movements in the whole abdomen, particularly the epigastrium.

According to its seat, we distinguish

1. *Colica umbilicalis*: pain in the region of the umbilicus; retraction and even deep depression of the umbilical region with hardness of the corresponding abdominal walls, constipation, nausea, vomiting, very rarely, however, and at long intervals, with scanty discharge.

2. *Colica epigastrica*: pain, retraction, and hardness of the epigastric region, nausea and frequently copious vomiting; anorexia and more thirst than in the former colic. Beating of the arteries in the epigastric region. Dyspnoea and other functional derangements of the respiratory organs; jaundice.

3. *Colica hypogastrica*: with difficulty of micturition, tenesmus of the bladder, pains and spasmodic movements in the region of the genital organs.

4. *Colica renalis*: pain in the region of the kidneys, whence it extends to the bladder along the ureters. Great diminution of urine, which is suppressed even for days; there is no urine found in the bladder even on inserting the catheter, (*T. d. Pl.*).

During the paroxysms of lead-colic many rest for hours on the occiput and nape of the neck, stretching the lower limbs up along the walls. At the same time they distort their features, push and roar so violently that the neck and head swell up, the voice is altered for a considerable length of time, and violent bleeding at the nose sets in. Other patients stretch themselves on their backs on the floor, and have their friends lay themselves across the patients' bellies; others again lay heavy weights on their bellies; others have themselves carried about, laying the lower limbs over the shoulders of those who carry, and letting head, chest and belly hang down behind. During such efforts umbilical and inguinal hernia is apt to set in, (*Sander*).—Eating frequently brings back the paroxysm even after it had completely ceased. Lead-colic becomes extremely dangerous if accompanied with delirium tremens, (*Sand.*).

**Stool.**—Disposition to flatulence, (*Voigtel*).—*Dysentery*, (*Gal.*, *Nard.*), attended with excessive colic, (*Fern.*).—Sluggish stool, (*Bramb.*).—The stools look burnt, and are like little balls, resembling sheep's-dung, (*Richt.*).—Scanty, hard, black-brown faeces resembling sheep's-dung, (*Zwick*).—Yellow, black, scanty stool, floating on the urine. Alternation of diarrhoea and constipation. Ineffectual *tenesmus*, (*Zwick*).—Disposition to constipation, increasing constantly and finally resisting every remedy, (*Richt.*).

**Anus.**—*Constriction of the sphincter ani*, (*Gabr.*).—The anus is drawn in and as if internally constricted, with sensation as if a string were stretched across.—Ineffectual, exhausting urging, inducing the formation of hæmorrhoidal tumours.

**Urinary Organs.**—Diminished secretion of urine, (*Tiss.*).—Suppression of the secretion of urine, (*Gal.*).—No urine is passed except when the paroxysm of the colic abates, (*Gabr.*).—Frequent urging to urinate; during the paroxysms of colic no urine is passed, except perhaps a few drops; during the remission the urine flows freely, and is frequently discharged quite suddenly after previous ineffectual efforts to urinate. *Tenesmus of the neck of the bladder*, before, during and after micturition, with a burning sensation in the urethra, preventing the introduction of the catheter.—*Ischuria*, (*Schm.*).—Red urine with painful and difficult micturition, the urine being rarely pale.—The urine looks saturated, brown, is mixed with blood, (*Br.*).—Copious, red or yellow urine without albumen.

**Genital Organs.**—Pulling, tearing and contractive pains in the testicles, spermatic chords, penis, uterus, vagina, breast, either setting in simultaneously with the pains in the abdomen, or setting in with increased violence at totally different periods; they cannot be considered as emanating from the abdominal pains. If the pains attack the testes and penis, they are frequently attended with violent pains in the hypogastrium. Most frequently both testes are affected, rarely one only; one testicle is sometimes more painful than the other. If the pains are violent, the testes are drawn up; if the left testicle is alone painful, it alone is drawn up towards the abdominal ring. The pain is most frequently relieved by pressure and suspension. The scrotum becomes wrinkled during the paroxysm and relaxes again during the remission. The sexual desire is diminished, (*Plin.*).—*Weakness of the sexual powers*, (*Fahn.*, *Ackerm.*, *Borch.*).—Great desire for an embrace, (from *Pl. mur.*).—Peculiar weakness of the genital organs (from *Pl. mur.*).—*Impotence and sterility*, (*Braun.*, *Ackerm.*).—Swelling of the testicles, (*Braun.*).—Disappearance of the male sexual instinct, neither erection nor emission of semen during the paroxysms, even when the testicles are drawn up very tightly.—Nocturnal emissions, (from *Pl. mur.*). *Spermatorrhœa*, (*gonorrhœa*), (from *Pl. mur.*). Corrosive sensation at the frænulum præputii during the emission of the semen, (from *Pl. mur.*).—Mucous discharge from the vagina, (from *Pl. mur.*).—Labour-like pains in the uterus and vagina. If the colic sets in at the time of the menses, these suddenly cease or they do not make their appearance, returning, however, after the paroxysm or else at the next turn. In one case the appearance of the menses relieved the colic considerably.—Miscarriage becomes quite frequent and habitual with women who live for some length of time in smelting-houses for silver-ore; likewise with cows, sheep and goats pasturing in the neighbourhood of such establishments, (*Sand.*).

**Larynx.**—*Fetid breath*, (*Richt.*) sometimes perceived by those around the patient, sometimes by the patient alone.—The power and vibration of the voice are diminished, particularly during the paroxysms. Rough and afterwards stuttering speech, (*Richt.*). Panting speech, as if out of breath. Talks in a low tone, lest the colic should return. Extinction of the voice, (*Richt.*).—*Cough*, (*Gal.*). *Dry cough*, (*Br.*). Short, dry, fatiguing cough. Dry cough, with frequent vomiting, (*Br.*). Dry cough during a deep inspiration, (*Br.*). *Cough with discharge of blood*, (*Br.*), terminating in fatal suppuration of the lungs (*Med. Ephem.*).

**Chest.**—*Oppression of the chest*, (*Str.*, *Schm.*, *Tronch.*).—The breathing is interrupted by moaning, (*Br.*).—Respiration is disturbed if the colic is seated in the epigastrium; the patient frequently takes from 60 to 70 inspirations a

minute, (*Br.*); at times the breathing is at the same time incomplete, difficult, noisy, moaning, and the patient complains of dyspnœa and suffocation; in some cases the movements of the lungs and diaphragm are impeded; some complain of constriction in the præcordial region and round about the chest; others complain of pains in the different parts of the chest, which are evidently traceable to the pains in the abdomen; sometimes the breathing is suddenly arrested.—The breathing sinks to 12 inspirations a minute.—Excessive dyspnœa, only 35 to 40 inspirations a minute.—*Anguish and suffocative oppression*, he was unable to breathe except when sitting, (*Br.*).—Sort of angina pectoris.—Suppuration of the lungs, (*Richt.*).—Pain in the region of the heart and violent spasmodic palpitation of the heart, (*Sand.*).—Violent palpitation of the heart, (*Mont.*).—Violent pulsations of the aorta in the epigastrium as far as the umbilicus.—Painful contraction in one or both breasts, during which they become momentarily harder, (*Stoll.*). During the colic the mamma becomes smaller. Itching and darting pains in both breasts, with discharge of a serous fluid from the left for 6 days, and induration in the right breast extending over the whole mamma, with livid colour and red streaks, attended with excessive pains in the arms; on making an incision, a large quantity of thin and acrid pus was discharged, (*Bramb.*).—*Pressure on the chest*, (*Br.*).

**Neck.**—Stiff neck, (*Gris.*).—Paralysis of the cervical muscles, (*Sand.*).

**Extremities.**—*Excessive pains in the limbs*, (*Br.*), increased by contact, (*Br.*).—Drawing pains in the limbs, accompanied with spasmodic movements, which are soon after succeeded by deficient sensation, and lastly paralysis and complete insensibility, (*Richt.*).—Exhaustion and languor of the extremities, (*Str.*).—*Coldness of the limbs*, (*Schm., Haase.*).—*Trembling of the limbs*, (*Br., Hg., Bramb.*).—*Convulsions of the limbs*.—Pains in the joints of the arm and head with convulsive movements, (*Bramb.*).—Dwindling of the muscles between the thumb and index-finger, causing a depression, (*Richt.*).—Trembling of the limbs, particularly the arms, (*Voigtel.*).—Difficulty of moving the fingers, (*Tiss.*).—*Paralysis of the arms*, (*Voigtel.*).—The flexor-muscles of the forearms are always paralyzed after several attacks of lead-colic with constipation, (*Sand.*).—Paralysis of the arms, hands and fingers being twisted as by some external force, (*Richt.*).—Violent pains in the joints of the lower limbs and in the limbs, (*Br.*). *Great languor and weariness of the lower limbs*, (*Br.*).—Violent cramps in the calves, (*Mont.*).—*Paralysis of the lower limbs*.

**Sleep.**—Restless sleep, (*Br.*).—No sleep during the colic; the sleeplessness continues even after the colic for several nights, (*T. d. Pl.*).—Sleeplessness for 7 nights, (*Tiss.*).—Somnolence, (*Richt.*).—*Sopor*, (*Br.*). **COMA**: 1. Simple coma; workers in lead are liable to be suddenly attacked with coma even when in good health apparently, rarely during an attack of colic or other lead-disease; in some cases amaurosis is said to precede the coma. In the highest degree of coma the patient is motionless, except occasional movements of the head, trunk and extremities; the patient sinks down all bent up, with his eyes closed either half or entirely, and the pupils dilated or contracted or very sensitive to the light; occasional stertorous breathing or deep moaning, tight closing of the jaws; he moves his lips as in smoking. Pinching is felt but not resisted. 2. Coma with partial delirium: the patient wakes suddenly between the paroxysms, opens his eyes, mutters indistinctly or else utters a torrent of distinct words alternately with crying and lamenting, and assumes the strangest postures. He is brought into this condition by violent pinching, or by mere contact or by cough. In this kind of waking condition he answers questions, but without knowing it. Sometimes, however, he gives a rational answer, or he slowly raises his hand and points to the seat of the pain or he stretches out his tongue, (*T. d. Pl.*).

**Fever.**—Chilliness.—Slight elevation of the temperature of the body, with more or less profuse sweats and excited circulation in the middle or towards the end of the paroxysms. Intolerable heat.—Cold sweat on the forehead and over the whole body, (*Schm.*).—*Great thirst* (*Voigt.*). Great dryness of the mouth and unquenchable thirst, (*Richt.*). *Slow pulse* falling from 70 and 60 to 50 and 40, (*Gris.*).—*Slow pulse*: in 370 patients it only beat 30 to 60 times a minute; in 376 patients from 65 to 70 times, in 120 patients from 80 to 120 times. On the first day of the colic the pulse is not as slow as towards the middle.—Pulse *small*, (*Schm.*), soft, (*T. d. Pl.*), easily compressible, (*T. d. Pl.*), extremely hard, (*Voigtel*), sluggish, small, spasmodic, intermittent, particularly during the spasm, (*Richt.*).—The pulse is hard like a wire vibrating uniformly and slowly. Large pulse. Irregular pulse, as it were remittent, not hard and seldom slow (in 299 cases); for a few moments the beats were exceedingly rapid, after which they became slow again suddenly. Pulsus dierotus, (one beat divided in two)—(in 22 cases). Undulating pulse, (in 5 cases). In encephalopathia the pulse is generally normal, 70 or 80, full and regular; during the furious and muttering delirium the rapidity of the pulse changes; during the convulsions it is very frequent and subdued; in coma it is slow and hard.

**Skin.**—Itching in the evening, (from *Pl. mur.*).—Excessive sensitiveness of the skin, (*Mont.*). The skin, particularly that of the arms and eyelids is very sensitive to contact, (*Br.*).—Serous infiltration of the skin, (*Br.*).—Jaundiced appearance and œdematous condition of the skin, (*Br.*).—Skin rough, dry, scaly, yellowish, (*Richt.*).—Skin pale, clay-coloured, dingy, particularly in the face, (*Voigtel*).—Eruptions, (*Richt.*). Dark spots on the skin, (*Richt.*).

**General Symptoms.**—ARTHRALGIA SATURNINA: Intense pains in the limbs, which are neither red nor swollen, and in the trunk; the pains do not follow the track of the nerves, they are permanent, but at times more violent than at others, relieved by pressure, aggravated by motion, and attended by various disturbances of the mobility of the muscles, cramps, tension and hardness of the parts.—*Precursory symptoms*: generally sweetish taste, jaundiced appearance of the skin; the parts which are affected at a later period, are attacked with a more or less violent numbness and weariness, lasting days or even months, sometimes showing itself in the morning on rising and disappearing in the day-time during work. The pain, which is the characteristic symptom of this affection, is generally felt at night and may affect every part of the limbs, trunk, head, etc. It is more frequently felt on the flexor than the extensor surface of the limbs, and is generally more frequent in the joints than in the body of the limbs. In the trunk, the lumbar region, the posterior portion of the chest, the dorsal spine, and sometimes the adjoining parts of the spine, the face and scalp are generally the seat of the pain. In most cases the pain is first felt in the lower limbs, then in the upper limbs, the lumbar region, the walls of the chest, the back and neck, and the head; in some cases several parts are affected at the same time. The pain is at times superficial, at times deep-seated; the skin, muscles, bones, or nerves are pointed out as the seat of the pain. The pain does not altogether or exclusively follow the track of the spinal nerves; or, when it does follow their track, on the posterior surface of the lower limbs, for instance, the pain is only felt in one half or one fourth of the track; moreover, the space in which the pain is felt, is wider than the nervous track. All the nervous parts of the affected limbs, seem to be invaded by the pain, which is at times felt in one, at times in the other limb, throughout its whole extent or only a part. The pains vary: simple prickling, rigidity or numbness, sensation of exhaustion or as if broken, a sort of constriction or withering, or shuddering, as if a number of ants were creeping through the part; pain as if bit, or as if from a red-hot coal, or as if a

hot fluid were coursing through the blood-vessels, or the pain is as from an icy body; most frequently, however, the pains are tearing, crushing, mingled with a few single violent sudden darts, recurring from time to time, and resembling electric shocks.—If different parts of a limb are affected, it is not equally violent in every part; in one part it is tearing and crampy-contractive, in another part it is convulsive and permanent, only in one part it is prickling. After having lasted more or less in one part, it sometimes changes both in character and locality, never shifting to a different limb, and being at times more violent in the region of the joints, at others in the intermediate parts. Generally the pain continues very rarely the same in regard to intensity, it remits and gradually increases again to the most violent degree of intensity. The more violent the pain, the more distinct the remissions. They last minutes and even hours. The exacerbations are not long at the commencement of the affection; when the disease is at its acme, the exacerbations become so frequent that the remissions almost disappear. Motion, coldness, etc., frequently occasion a sudden attack of pain; the pains are aggravated by moving the affected part, in spite of which the patients frequently change their position when the paroxysm has reached the highest degree of violence. The patients throw off the bed-cover, and hasten to place the limbs, if these should be affected, upon the floor, in order to cool them. Other patients avoid cold because it increases their pain. Slight and gradual pressure frequently allays the pains, particularly during the exacerbations, in other cases, the pains are increased by pressure. Slight friction frequently allays the pains, compression aggravates them. The pains exacerbate in the evening and at night, and are then attended with spasmodic rigidity and constriction of the muscles, which can be felt by others and by the patient. In violent paroxysms unequal hard pads are formed, or a sort of tetanus sets in. There are paroxysms where the muscles are attacked with more or less violent trembling or spasmodic movements. Sometimes the disease is confined to such spasms, and during the period of the remission, the patient is free from pain. During the violent paroxysm the motion of the affected limbs is not arrested, but it is uncertain, imperfect and irregular, and becomes natural again when the pains remit. The affected parts are neither hot, red, nor swollen; the pulse is naturally soft and regular; in 55 cases it was hard, slow and vibrating, in 17 cases it was irregular. Violent pains banish all sleep. If colic and arthralgia co-exist, the paroxysms alternate. If arthralgia and paralysis co-exist, one generally affects the upper limbs, the other the lower, one the flexor, the other the extensor muscles. If arthralgia and encephalopathia come together, the cerebral symptoms generally set in more or less suddenly in the course of the disease, or the two orders of symptoms alternate, the arthralgia sometimes lasting longer than the encephalopathia. The arthralgia lasts from 3 to 6 days, when well-treated, or even without being treated. Sometimes it lasts weeks and months, (*T. d. Pl.*).—Exhaustion and weariness, weakness, (*Gris.*).—Great failing of strength, (*Br.*). *Excessive languor*, (*Br.*).

**ANÆSTHESIA SATURNINA** (less frequent than paralysis).

1. *Deep-seated anæsthesia* of the limbs and trunk. Skin, cellular tissue and muscles are insensible to the action of external stimuli; in some cases the insensible parts are perfectly movable, in which case the patient complains only of numbness; in two cases the mobility of the affected muscles had gone. Anæsthesia set in suddenly, without any precursory symptoms, except a feeling of numbness. It likewise sets in during an attack of colic, but more frequently some time after paralysis has commenced. Arthralgia sometimes precedes anæsthesia. As the patient is getting better, the skin and muscles seem to

recover their sensibility at the same time ; in some cases the skin remains insensible after the muscles have recovered their sensibility.

2. *Superficial or cutaneous anæsthesia* : the subjacent muscles at times lose, at others preserve their mobility. It attains its highest degree of violence within a day or a few hours ; it is very changeable in regard to locality or intensity, and seldom lasts more than eight days or a fortnight. It is sometimes continuous, in others it comes and goes suddenly. It leaves a tendency to relapses, (*T. d. Pl.*). Stiffness of the neck, of a limb, or one half of the body, (*Gris.*).

PARALYSIS SATURNINA : consisting in debility or in suppression of the voluntary motion, particularly that of the extensor muscles. The precursory symptoms are : debility, sensation as if broken, feeling of coldness and rigidity, stupefaction, sometimes accompanied with heaviness, and more or less violent trembling, awkwardness of motion, weariness from the least exertions, so that the lower limbs can be scarcely dragged along, and everything drops out of the hands. In some cases there is increased sensibility of the parts, but the head and the vertebral column are never painful. The disease very rarely sets in without any precursory symptoms. Colic frequently precedes paralysis ; in some cases the colic is entirely relieved, though the limbs remain immovable. Paralysis is to be apprehended when the colic lasts too long or disappears suddenly, or when it is accompanied by sweats, (*Baglivi*). Paralysis is likewise to be apprehended when arthralgia affects different parts from those which are afterwards paralyzed. Symptoms of paralysis : loss of mobility of the affected part, which is rarely capable of performing any motions. The paralysis is either general or partial, and is frequently confined to a single muscle, or a bundle of muscular fibres. The upper limbs are more frequently paralyzed ; frequently, however, the upper and lower limbs, and the trunk and the organs of speech are paralyzed together. Only the extensor muscles are paralyzed. At times both limbs of the same side and the corresponding muscles are paralyzed, at times only one limb and muscles which differ both as to name and number. The extent of the paralysis and the loss of mobility by no means correspond. The first degree consists in a trembling, accompanied with a feeling of weakness, and weakness of the muscular contractions. The trembling affects only one part or limb, rarely both limbs at the same time, but it may also affect the tongue, lips, and organs of speech ; but it never took place simultaneously in all those parts, at least not when they were paralyzed. If it last for any length of time, the trembling constantly ends in complete paralysis of one or several muscles of the affected part. In the paralyzed parts, particularly in the joints, the patient feels a sensation as of a heavy weight, or a continual feeling of icy coldness, which is increased by every current of air or every decrease of temperature, without any coldness being perceptible to the hand. Paralysis is frequently accompanied with anæsthesia, and still more frequently with arthralgia ; sometimes with hyperæsthesia. Amaurosis and deafness rarely accompany it. The pulse of the paralyzed parts is vibrating, easily compressible, and, if the paralysis be extensive and inveterate, the impulse and the sounds of the heart suffer sympathetically. The blood which was drawn was very watery. In the morning the paralyzed parts are bathed with a copious, viscid sweat ; the secretion of tears is sometimes considerably increased, the secretion of the mucous membranes of the lungs diminished. There is a general emaciation, the urine is pale, watery, without sediment, alkaline, but soon turns sour again. If the paralysis last for some time, the affected parts become emaciated ; if only one or two muscles be paralyzed, the emaciation is confined to these. The skin becomes pale, livid, yellowish, clay-coloured, rough, dry, scales off, looks thinner and more relaxed. The cellular and adipose tissues disappear, the muscles are thin and soft. When this

atrophy has reached the highest degree, the patient is reduced to skin and bones ; some pathologists assert that the head of the femur has dropped spontaneously out of its cavity. If the atrophy continues, the whole organism becomes involved, and the patient is reduced to a walking skeleton. The limbs are infiltrated, either all over or in part ; gangrenous spots are seen here and there. Atrophy seems to supervene much sooner in paralysis saturnina than in paralysis from other causes, (*T. d. Pl.*).

1. *General paralysis of the upper limbs always accompanied with aphony and difficulty of speech.* By a great effort the arms can be slightly raised with the aid of the trapezius muscle ; if the dorsalis magnus and the pectoralis muscles are not paralyzed, the whole limb can be moved forwards and backwards, particularly one hand can be moved towards the other. An acute pain is experienced in the arm, when it is suddenly dropped after being raised, the pain being most intense in the axilla and scapula. Atrophy, particularly about the shoulders, the hand is frequently very painful, œdematous, livid.

2. *Paralysis of the shoulder, deltoid muscle,* inability to raise the arm, which remains resting on the chest. Generally accompanied with paralysis of the muscles of the arm.

3. *Paralysis of the arm ;* it stands off from the chest, the lower arm is bent towards the upper arm, cannot be stretched, on account of a pain in the posterior brachial muscle.

4. *Paralysis of the upper and lower arm, hand and fingers.* The lower arm is in a constant state of pronation, the wrist-joint is at a right angle to the forearm ; the fingers are turned towards the metacarpus, and the last phalanges are slightly bent towards the middle ones. The thumb is half bent under the first phalanges. This shows that the supinator of the arm, the extensor, abductor, and adductor muscles of the hand and fingers are affected. On the arched dorsum of the hand one or two bony prominences gradually make their appearance, and in the region between the carpus and metacarpus, there are constantly seen tumours of from six to seven lines in diameter. These are formed by the second and third knuckles, and sometimes by the scaphoid and semilunar bones.

5. *Paralysis of the wrist-joint and fingers.*

6. *Paralysis of the wrist-joint.* The hand is violently and permanently bent towards the forearm. The posterior radial and ulnar muscles are affected. Each of these muscles may be paralyzed alone.

7. *Paralysis of the fingers :* they are either paralyzed together or only some of them. In most cases, however, they are not all paralyzed, sometimes only one of them.

8. *General paralysis of the lower extremities :* the limb is perfectly motionless, and, when an effort is made to move the limb, the muscles become agitated. Atrophy frequently sets in after the lapse of one month.

9. *Paralysis of the thigh :* the triceps and anterior cruralis muscles, (the quadratus femoris in our books) are paralyzed. The leg is in a state of half contraction and cannot be stretched. When attempting to stand the patient staggers, he drags the limb in walking, and threatens to fall when attempting to pass over the least unevenness of the ground. Going down stairs is most difficult. Great weariness in the knees. The anterior portion of the thigh becomes atrophied.

10. *Paralysis of the thigh, leg, and foot :* the joints are bent, except the foot, which is constantly extended, the toes being considerably drawn towards the side of the foot. The triceps, anterior cruralis, peronæus parvus, extensor digitorum pedis communis, are paralyzed. Bony elevation in the middle region between the tarsus and metatarsus. Standing is impossible ; when lying the

leg can be moved to the right and left side. In a few weeks the anterior surface of the thigh becomes flat.

11. *Paralysis of the foot*: the toes are slightly drawn towards the sole of the foot. The foot cannot be bent towards the leg, the tip of the foot is directed forwards and downwards. This shows that the peronæus parvus, the extensor communis digitorum pedis, the exterior proprius pollicis are affected.

12. *Paralysis of the trunk*: *a*, of the intercostal muscles: sudden difficulty of expanding the chest in men affected with colic or paralysis of the limbs. On drawing a deep breath the clavicles only are raised, and the action of the diaphragm distends the abdomen; the breathing becomes rattling, mucus accumulates, after which asphyxia sets in as when the pneumo-gastric nerve is cut through; accompanied with irregular, frequent and small pulse. *b*, of the pectoralis muscle, and the dorsalis magnus, also of the sterno-pleuro-mastoideus.

13. *Paralysis of the muscles of the organs of speech*: in patients affected with colic or with paralysis the tongue and lips begin to tremble, and their motions are irregular and difficult. Stuttering, ptialism, uncertainty in drinking. Pharynx and oesophagus were never affected.

14. Paralysis of the muscles of the glottis, with aphonia (*Baglivi, de Haen, Bonté, Desbois, T. d. Pl.*).

15. Simultaneous paralysis of the muscles of the organs of speech, and of the glottis, generally accompanied with paralysis of the upper limbs.

All these different kinds of paralysis may be united in one and the same individual.

HEMIPLEGIA: Paralysis of the wrist-joint, and of the left fingers and lower limbs, (*Stoll, Andral, Wall.*).—The course of the lead-paralysis is slow, gradual, progressive.—It may exist simultaneously with the lead-colic;—generally the colic abates somewhat, and the paralysis increases imperceptibly. At times, colic and paralysis set in together, run their course together, and their symptoms increase and decrease together. Paralysis takes place least frequently in the midst of an attack of colic which subsides rapidly. The paralysis increases during the exacerbation in every successive attack of colic. Frequently, whilst paralysis of the upper limbs is setting in, arthralgia attacks the lower limbs, or those two affections attack the same limb simultaneously, or one of those affections appears before or after the other. The paralysis generally lasts longer than the arthralgia. The paralysis generally affects the upper parts of a limb first, the lower parts are attacked last; recovery follows the same course. The extensor muscles which are generally seized first, generally recover their mobility last; the flexor, pronator and supinator muscles are most frequently the first to recover their mobility. The disease may appear and disappear in the different parts of one and the same limb at longer or shorter intervals. Paralysis rarely attacks a whole limb at once. If the upper and lower limbs are attacked together, the lower limbs are generally the first to yield. In many cases one limb is entirely paralyzed before the other is affected. The paralysis may last days, years or a whole life. It terminates either in health, in other diseases or in death. It is more easily removed after the first, than after subsequent attacks. Paralysis of whole limbs, particularly the lower, is dangerous. Paralysis of the intercostal muscles is always fatal. Paralysis is cured more easily in spring than in winter. It scarcely ever gets well of itself, (*T. d. Pl.*).

GENERAL CONTRACTIONS: they set in pretty frequently during violent attacks of colic or tormenting pains in the joints, particularly in individuals who, exhausted by pain, are lying with desponding and sunken features. At first there is a general trembling and chattering of teeth as during a chill, and the

patients, as if they had a foreboding of the attack, extend themselves softly on the floor; afterwards they are attacked by violent and irregular shocks, particularly in the face and upper limbs, which are a sort of flexion and extension, after which general rigidity sets in. During the paroxysm, which lasts one or more minutes, consciousness does not entirely disappear; for the patients relate very rationally what they have been seeing and saying during the attack, although in some instances they first feel a little drowsy. Such attacks are very rarely followed by delirium, whether bland or furious. Some perceive a thick cloud before their eyes during the attack and some minutes after.—Convulsions, (*Voigtel*): small, convulsive movements with transitory colic (*Bramb.*).—Slight convulsions, (*Tiss.*).—Convulsions recurring at shorter and shorter intervals (*Str.*), continuing four hours, (*Schn.*), at times general, at times partial, (*Br.*), of the limbs, (*Br.*), of the upper limbs, which stand off from the trunk (*Mont.*), frightful, with retention of stool and urine, and retraction of the abdomen (*Bress.*); partial convulsions, attended with delirium, somnolence, or only with headache and hallucinations, appearing suddenly at intervals, and affecting the face, sides, or several limbs, like electric shocks, or like more or less permanent contractions. Sudden convulsions of an epileptic nature, preceded by aching pain in the forehead, and lasting several hours. Epileptic convulsions, consisting of almost constant, general, spasmodic shocks, alternating with flexion and extension of the limbs; in most of which cases there is neither foam at the mouth, nor rattling, nor red and swollen face, from one to four hours. *Epilepsy* (*Jahn, Richt.*), with foam at the mouth, (*Mont.*), the attacks succeeding each other with increasing rapidity and terminating in apoplexy (*Gris.*); the epileptic attacks recur very rapidly, are very violent, almost tetanic, last a long time, become rapidly fatal, and are frequently accompanied or succeeded by delirium and coma (*Br.*).

*Epilepsia saturnina*: After a few attacks of colic accompanied with headache, which abates somewhat, the patient has an epileptic attack followed by another attack in a few hours; during the intermission he is constantly attacked with headache and occasional paroxysms of violent vomiting; flat abdomen, pain in the umbilical and epigastric regions which is not increased by pressure; constipation, pulse 62, inspiration 16. Seven weeks after this first attack: sopor, dilatation of the pupils, paralysis of the limbs, incontinence of urine. On the day after a second attack: convulsions with furious delirium, coma, trismus, (post-mortem appearances: hypertrophy and induration of the hemispheres of the brain, which were, moreover, without blood, in the case of a boy of 11 years, whose business was to grind colours, *Bull. de Thérap.*, VII., 10). The epilepsy at times sets in suddenly, at times is preceded by precursory symptoms. In the latter case, one perceives suddenly, without any apparent cause, distortion of the features, listless talking or acting, or a sort of gyrating vertigo, or a slight frontal headache which lasts a few hours or a whole day, or even amaurosis, delirium, coma, but there is never the *aura epileptica*.† Only one patient uttered a cry on the occurrence of the attack, another sighed. In some the paroxysm is slight, lasting, however, a few hours, and attended with slight convulsions. After the paroxysm the patients are not entirely conscious, talk slowly and confusedly, their countenance remains stupid, their limbs tremble and they stagger. Violent attacks are at first marked by alternate redness and paleness of the face, alternate rigidity of the body and convulsive movements of the limbs, particularly

† For the benefit of our lay readers, we will observe, that this is a sensation as if a current of warm, and still more frequently of cold air, were suddenly rushing from a particular spot (generally one which had been previously affected by disease), spreading onward as an itching sensation, formication, cold creeping and frequently extending to the region of the stomach, chest and head. The attack sets in immediately after the occurrence of the aura.—*Hempel.*

the upper. Soon after, the thumbs are clenched, the limbs are flexed and stretched with the utmost violence, and, towards the termination of the paroxysm, are attacked with tetanic rigidity, which may, however, alternate with convulsions, with the head violently drawn backwards, chattering of teeth and trismus. If only one side is affected, the wretched-looking, pale, or violet-coloured face, is frightfully distorted, the breathing is short, interrupted, frequently stertorous, with the mouth shaped as in smoking, and the bitten tongue frequently spirting a bloody and frothy saliva out of the mouth; the pupils are generally insensible, dilated or contracted; the pulse is frequent or strong, or regular and of a natural quickness, though this is seldom the case. In most cases the cutaneous veins are swollen, and urine and fæces are discharged by some from time to time. The convulsions cease after 20 or 30 minutes, sometimes after a sigh, deep cry or howl, only slight and partial convulsions continuing in some cases, the limbs relax, the skin is covered with sweat; the breathing is slow, moaning and sometimes rattling. In some cases every stertorous expiration was suddenly interrupted by a valvular noise, as if the glottis were convulsively closed. The beats of the heart became irregularly quicker; the pulse was depressed and uncountable. After very violent paroxysms there appeared in one case copious hæmoptoe, in another, some time after, pneumonia. After a violent attack of epilepsy, the consciousness never returns completely, at any rate a slight delirium is always present, which can, however, be perceived only by the attentive observer. After one or several attacks of epilepsy coma or even carus sets in, which lasts for some hours or even days, is sometimes interrupted by renewed epileptic attacks, and is generally the deeper, the more violent the epileptic paroxysms. Any form of delirium may set in, after the paroxysms, or may alternate with them. In some patients we perceive after the paroxysms a staring stupid look widely-spread, protruded eyes, muttering, or sleeplessness with astonished look, incoherence of ideas, or even a kind of stupor with trembling limbs and confusion of ideas. If the paroxysms continue, the delirium becomes very violent. The attacks may occur at intervals of from some minutes to 6 or 7 days. There have been from one to 34 paroxysms in twenty-four hours.—*Catalepsy*: the patients seemed to be asleep, they did not seem to feel either pinching or burning, they allowed their limbs for one or two minutes to be placed in the strangest postures, which they abandoned after some trembling. In one case the trunk was stiff as wood. After having remained in this state for a quarter or half an hour, or for some hours, the scene changed entirely. Face, head, trunk, and limbs performed the most varied and very expressive motions, the eyes remaining closed, and the patients sometimes crying out and stuttering. It was now impossible to replace the limbs in the above-mentioned postures. Pinching was sensibly felt. One patient manifested a desire to drink, but spirted the beverage on those around him. These two conditions alternated for hours and days. After this the eyes suddenly opened, the patient asked for food and drink, muttered frequently, continuing the same idea only for a few minutes, but readily answered questions. Sometimes he was very much agitated, rose, scolded, beat and bit people, etc. On the following day this condition either disappeared entirely, or continued alternately with delirium and somnolence.—*Combination of epilepsy, delirium and coma*; the attack commences with delirium, which it is very difficult to recognise; in a few hours or days an epileptic attack sets in, after which the patient falls into a sort of stupor from which he wakes delirious, the delirium being more violent than before the convulsions. The attacks occur again on the same day, in the night or on the morning following, every attack being followed by increased stupor which is only occasionally interrupted by muttering in a half-waking state. If the epileptic attacks occur frequently,

the coma terminates in death. Recovery takes place in this way: the patient wakes from his stupor with a most violent desire for sleep, which leads to the restoration of health, (*T. d. Pl.*).—Diminution of the secretions, (*Voigtel*).—Cracking of the joints, (*Richt.*).

**CACHEXIA SATURNINA.**—Impoverished nutrition with continuance of the colic; the skin becomes rough, scaly, yellowish, the muscles become atrophied; other patients become bloated and are attacked with anasarca. Emaciation of the paralyzed parts, (*Richt.*). Considerable emaciation, the skin becoming dry, pale, clay-coloured, the limbs feel exhausted, weary and heavy, (*Richt.*).—Emaciation and consumption, (*Voigtel, Rammazzi*).—Dulness of the senses, (*Richt.*).—*Apoplexy*, (*Voigtel*).—*Jaundice*, (*Richt.*): during a paroxysm of excessive headache, without any change in the symptoms. In slighter degrees of jaundice, the skin is pale-yellow, or of a light ash-colour, in the highest degree of jaundice the skin is of a dingy yellow or clay-colour. This colour extends over the whole skin, but is most marked in the face. It is likewise seen on the conjunctiva where it is united to a bluish colour. The urine has a slightly-yellow shade, it does not leave a perceptible yellow tinge on linen, nor can a trace of the bilious pigment be discovered in the urine by means of nitric acid. The fæces are of a livid yellow, the serum has a light yellowish tinge, which is never greenish, (*T. d. Pl.*).—Edema of the face and feet, (*Br.*). Anasarca, (*Richt.*).—Consumption, affections of the chest, helminthiasis, cutaneous affections, itch are very rarely met with in workers in smelting establishments for silver ore, (*Sand.*).—The effects of lead are most marked in rough and foggy weather, (*Sand.*).

## II. PLUMBUM ACETICUM.

**PLUMB. ACET.**—Acetate of lead.

**AUTHORITIES.**—*LIFF*, London Med. Repos., 1827, Jan.

*MOYLE*, Froriep's Notices.

*SUNDELIN*, Mat. Med., II.

*SANDELIN*, Mat. Med., II.

*TROUSSEAU*, Froriep's Notices, III.

*WILLIAM LAIDLAW*, in Giacomini's Leçons sur la Mat. Méd., 1837.

*HOLDEN*, in Oppenh. Zeitschrift, 1844.

*BURTON*, Lond. Lancet, 1840.

*WEISMANN*, *T. PERCIVAL*, *TETLKEMIT*, *WIBMER* on Poisons, *MELION*, in Prager Zeitsch., and the homœopathic authorities in Neack and Trinks.

**Mind and Disposition.**—Melancholy with stupefaction, complete dulness of the senses and somnolence, (*Richt.*).—Lowness of spirits, (*Hick.*).—Cheerfulness.—Great oppressive anxiety, (*Bernt, Bramb., Jahn*).—Restlessness, (*Volpi*). Discouraged, weary of life, (*Jahn*).—Ennui, indolence, taciturnity. Weakness of memory. Absence of mind, delirium; nightly delirium with swollen eyes, (*Orf.*).—Furious delirium, rage, (*Jahn, Stoll*).—Mania, (*Wall*).

**Head.**—*Vertigo*, (*Stoll, Ts., Jahn*).—Vertigo on stooping or on looking up. Vertigo going off in the open air. Stupefaction and somnolence, (*Bramb.*).—Falling, (*Hernstadt*).—Heaviness and stupid feeling in the head, when standing. Heaviness, particularly in the occiput, (*Hg., Ts.*).—Feeling of heaviness in the forehead, early in the morning. Heaviness in the head from behind forwards. Pressure under the skull as from congestion of blood.—Tearing in the temples, alternating with tearing in the forehead, with heat and redness in the head, without any heat being perceptible externally.—*Stück* in the right frontal emi-

nence. Dull sticking pain in the right temporal region, which is also painful externally. Sticking and tearing in the upper region of the parietal bone. The hair, which was formerly dry, became greasy.—Falling out of the eyebrows and moustachios.

**Eyes.**—Itching in the canthus of the left eye, with pain in that part when rubbing it, (*Ts.*).—Tearing in the eyelids with drowsiness early in the morning. Twitching of the lids.—Frequent discharge of corrosive tears, contracting the skin, (*Thunb.*).—Heaviness in the eyes on moving them, and painful drawing in the inner muscle from before backwards, (*Hg.*).—Aching pain above the eyes when moving them, for several days. Sensation as if something had lodged under the eyelids, and as if the eyeball were too large, with exquisitely-painful pressure, (*Hg.*).—Darting tearing in the left eyeball in the forenoon. Violent stitch with burning under the left eyeball in the afternoon. Burning in the right eye as from snuff. Pressing of the blood in the eye, (*Ts.*).—Redness of the eyelids, (*Hb.*).—Inflammation of the eyes, (*Thunb.*).—Varicose distention of the vessels of the cornea, resembling a thick net and obscuring the sight, (*Schm.*).—Hypopyon, (*Schm.*).—Frightful distortion of the eyes, (*Volpi.*).—The pupil is at first contracted, afterwards dilated, immovable, paralyzed, (*Haase.*).—Frequent wiping of the eyes as if they were dim, (*Hg.*).—Obscuration of sight, (*Haase.*).—Constant mistiness of sight. Blindness, (*Haase, Jahn, etc.*).—Amaurosis, (*Haase, Jahn, Richt.*).

**Ears.**—Tearing and tension in the region of the right ear. Tearing in the ear. Fine stitch in the right lobule. Fleeting pains in the left meatus auditorius, (*Hg.*).—Boring in the right ear after dinner. Hardness of hearing, deafness, (*Haase.*).

**Nose.**—Pain in the tip of the nose, (*Hg.*).—Erysipelatous inflammation of the nose, (*Hg.*).—Vesicles in the reddened corner of the nose, filled with thick pus, which is discharged after slight pressure, (*Hg.*).—Cold nose for several days, (*Hg.*).—Horrid smell from the nose, (*Jahn.*).—The air in a room full of people is very unpleasant, occasioning a faint feeling and obscuration of sight, (*Hg.*). Painful tearing in the septum narium. Constant irritation of the Schneiderian membrane. Obstruction of the nose. *Fluent coryza.* Discharge of watery mucus. Tenacious mucus which is only discharged by the posterior nares.

**Face.**—Pale face, (*Wibmer, Jahn, etc.*). Bloated face, (*Tronch.*).—Pale or yellowish complexion, (*Orf.*).—Cadaverous complexion, (*Schm.*). The skin of the face is glistening and feels greasy, (*Hg.*). Flush of heat with redness in the face, sweat on the trunk, frequently in the afternoon. Frequent itching in the face. Fine stitches in the skin of the face here and there. Increased turgor of the face, (*Mel.*). Vesicles on the forehead and nose, (*Hg.*). Tearing in the jaws going off by friction.—Boring in the jaw and teeth.—Acute drawing in the flesh of the upper lip, (*Hb.*).—Swelling of the right side of the face with violent pains in the ears, particularly on swallowing saliva, (*Thunb.*).—Violent, loud motion of the lower jaw and frightful grinding of the teeth, (*Volp.*). Lock-jaw, (*Hirn.*).—Peeling off of the lips every day, without pain or dryness, (*Hg.*).

**Teeth.**—Brown or blue colour of the upper border of the gums, constant and first symptom of a lead-disease, (*Burt.*). Swelling of the gums about the roots of the teeth, painful, hard tubercles on the gums, (*Thunb.*).—Pale gums. A tooth becomes more hollow, fetid, friable and breaks, (*Hg.*). Fetid odour from the hollow teeth while eating, (*Hg.*). The teeth become covered with yellowish mucus, (*Thunb.*).

**Mouth.**—Dry mouth, (*Hg., Jahn, etc.*). Heat and burning in the mouth

and tongue. Difficulty of opening the mouth. *Impeded* speech and heavy tongue, (*Senn.*). The epithelium of the buccal cavity is white, (*Mel.*). Swelling of the gums and *ptyalism*, (*Wibm.*). Aphthæ in the mouth and pharynx, (*Richt.*). Ulcers in the mouth, particularly on the sides, with fetid smell; they afterwards turned yellow, (*Thunb.*).—Tenacious mucus in the mouth, early in the morning, (*Hg.*). Sourish, tenacious mucus and saliva, (*Hg., Thunb.*). Bluish, sweetish saliva, (*Jahn*). *Ptyalism*, particularly in the front part of the mouth, (*Hg., Thunb.*).—*Froth* in the mouth, (*Senn., Hg.*). Inflammation of the tongue, (*Senn.*). Burning pimples on the tip of the tongue, in the evening, suddenly. Dry tongue, (*Hohnb.*). White-coated tongue, (*Schm.*). Greenish and yellow-coated tongue, (*Stoll, Hg.*).—Dry, brown, cracked tongue, (*Haasc, Thunb.*).—Ugly, thick mucous coating on the tongue, (*Jahn.*).

**Pharynx and Œsophagus.**—Pressure in the nape of the neck, (*Werd.*).—Stiff neck, (*Werd.*).—Burning and stinging pain in the fauces, (*Schr.*).—Drawing in the pharynx, as if the Œsophagus would be torn off, while eating, (*Ts.*).—Creeping sensation in the Œsophagus, (*Stoll*). Sensation of *swelling* in the throat, when swallowing. Difficulty of swallowing, (*Hæck.*). The pharyngeal muscles are almost paralyzed, (*Heck.*). *Sensation as if a foreign body* had lodged in the throat: the sensation descends on swallowing, but rises again immediately, and frequently disappears for a time, attended with smell of sulphur in the right side of the fauces. *Sensation as if a small body were frequently rising in the throat*, (*Hg.*).—Globus hystericus, (*Stoll*).—Constriction and pullings in the throat and fauces, (*Schm., Ts.*).—Paralysis of the pharyngeal muscles and inability to swallow food, (*Schm.*).

**Appetite.**—Sweetish-styptic taste in the mouth, (*Werd.*).—*Metallic taste* in the mouth, (*Wibm.*).—*Sweetish* taste, (*Bramb., Bernt*).—Bitter taste, (*Stoll*).—Sulphurous and sour taste deep in the throat. *Want of appetite* and sleep, (*Laur.*). Feeling of hunger and nausea, in the evening, (*Ts.*).—Hunger even after a meal, (*Ts.*).—*Violent hunger*, (*Ts.*), in the evening, (*Hg.*).—Great desire for bread and cakes, at every hour of the day, (*Hg.*).—He relishes tobacco with particular delight, (*Hg.*).—*Thirst*, (*Hg., Jahn, etc.*). *Excessive thirst*, (*Hohnb.*).

**Stomach.**—*Eructions*, (*Tælk.*). Eructions with *taste of sugar* in the mouth, (*Orf.*). *Rising of air* from morning till evening, (*Ts.*). *Eructions having a strange taste*, (*Jahn*). Sweetish eruptions, (*Schm.*).—*Hiccough*, (*Diosc., etc.*). *Loathing*, (*Orf., etc.*).—*Nausea*, (*Wibm.*).—*Inclination to vomit*, (*Stoll, etc.*).—*Retching*, (*Schm.*). Empty retching, (*Sund.*).—Frequent expulsive gulping-up, (*Hg.*).—*Sour gulpings*.—Gulping-up of insipid or sweetish water, (*Hg.*).—*Vomiting*, (*Chr., etc.*). *Constant vomiting*, (*Trall., etc.*), with constipation, particularly when attended with sticking pains, (*Bernt*). Excessive vomiting which cannot be arrested, (*Hohnb.*). Sour, *bilious* vomiting, (*Tælk.*). Vomiting tasting like liquorice, (*Hohnb.*). Vomiting of a thick, viscid mass with yellow streaks like the yolk of an egg, (*H.*). Vomiting of a black substance, (*Richt.*). Vomiting of a yellowish, fetid substance, with colic, (*Orf.*). Vomiting of a substance like the acetate of copper, with a bilious, yellow mass, (*Stoll*). Bloody vomiting, (*Thunb.*). Irresistible vomiting mixed with fecal matter, (*Haasc*). Vomiting of fæces with violent colic and constipation, (*Thunb.*).—*Miserere*, (*Haase*). *Ætus*, (*Senn.*).—Malaise at the stomach without inclination to vomit. Frequent feeling of emptiness or as of fasting in the stomach, also particularly early in the morning in bed, going off after rising. *Heaviness* of the stomach, (*Weism.*).—*Pains in the stomach*, (*Wibm., etc.*). *Excessive pains in the stomach, also in the abdomen and loins*, attended with troublesome internal heat, (*Fern.*).—*Pressure at the stomach*,

(*Wibm.*, etc.). Pressure at the stomach as from a hundred-weight, (*Jahn*), as from overloading the stomach with indigestible food, attended with heaviness in the occiput, increased by moving the head, (*Ts.*). Dull, anxious pressure in the pit of the stomach, (*Hg.*).—*Contraction in the stomach*, (*Bramb.*).—Constrictive burning pains in the stomach and afterwards in the umbilical region, recurring at shorter or longer intervals, (*Stoll*).—*Burning at the stomach*, (*Volp.*). Burning, stinging pains in the stomach and œsophagus, (*Chr.*). Frequent dartings from the pit of the stomach to the back. Sort of boring pain from the pit of the stomach to the right side, going and coming. Intermitting pains at the stomach, (*Weism.*).—*Cardialgia*, (*Stockh.*), with vomiting and all the other symptoms of gastritis, (*Heck.*).—Suppuration of the stomach, (*Weism.*).

**Abdomen.**—*Stinging in the hypochondria*, relieved by rubbing.—Dull pains in the liver, (*Hg.*). Continuing darting pain in the region of the liver, (*Hg.*). Sticking pressure in the region of the liver, (*Hg.*).—Slight pain in the region of the spleen, (*Hb.*).—Pains in the præcordia, (*Weism.*). Dull and numb feeling in the abdomen, (*Hg.*).—*Pains in the abdomen*, (*Diosc.*, etc.). Intolerable pains in the abdomen, with uneasiness, mental derangement and fainting turns, (*Stockh.*). Wandering pains in the abdomen, (*Mægl.*). Pains in the abdomen increased by contact, (*Stoll*). *Pains in the umbilical region*, (*Senn.*). Pains with hardness and retraction of the abdomen, (*Orf.*). Pains in the abdomen with emaciation, (*Rüdl.*). *Pains in the bowels*, (*Hoffm.*, etc.). Abdominal pains with sensation of constriction, (*Sund.*).—Pressure in the abdomen, (*Wibm.*). Constant pressure at a small spot of the abdominal muscles, which seem to be protruded, (*Hg.*). Pressure with violent colic, contraction of the abdomen and constipation, (*Heck.*).—*Pinching in the epigastrium* as if something became detached and fell down, painless, with shifting of flatulence in the abdomen.—Gnawing colic, (*Back.*).—Violent burning and stinging pain in the umbilical region with violent thirst, eructations, vomiting, cold extremities and slow pulse, (*Tælk.*). Contraction across the middle of the hypogastrium when sitting bent. Constrictive pains, (*Haen.*). Contractive and boring pains in the umbilical region, (*Haen.*).—Colic, (*Hub.*).—*Pinching-tearing*, (*Streit.*). Pinching.—*Cutting*, with soft stool, (*Ts.*). Cutting as from flatulence, early in the morning, (*Ts.*).—*Sticking in the transverse colon*, (*Orf.*). Deep pricking below the umbilicus. Drawing from the side to the spinal column, as if the parts would be distended, (*Ts.*).—Sensation in the abdomen as of cold water, and then of heat, frequently. Heat and burning around the umbilicus, internally, with sense as of turning around in the umbilicus, sticking in the back and sensation as if somebody were lying upon it, attended with pains in the pit of the stomach. *Pains in the loins*, (*Orf.*, etc.).—*Stitches in the lumbar regions*, when laughing, going off by pressing on the parts.—Bruised pain in the abdominal muscles, more violent when feeling the parts, coughing or raising one's self.—Colic, returning periodically, (*Back.*). Colic, returning every 2 or 3 minutes. Colic with frightful pains, particularly around the umbilicus, (*Haase*). Colic intermitting 2 or 3 days, frequently 2 or 3 months, (*Orf.*). At times violent colic, at other times convulsions, (*Trouss.*), violent convulsions, trismus, rolling of the eyes and motion of the limbs, (*Orf.*), relieved by pressure, sometimes, however, aggravated by the least contact, (*Orf.*, etc.). Colic, very seldom accompanied with uncontrollable diarrhœa, (*Heck.*).—*Colica plumbea*. (*Tiss.*).—*Distention of the abdomen*, (*Volp.*).—*Hardness of the abdomen*, (*Hub.*).—The abdominal muscles become hard, (*H.*). The abdominal walls are drawn up, as if excavated, (*Wibm.*, etc.).—The umbilicus is drawn towards the spine as if adhering to it, (*Haase*, etc.). Spasmodic contraction of the bowels,

(*Back.*).—*Enteritis*, with lentescent fever and turbid, thick, reddish urine, (*Stock.*), with anguish, burning in the bowels, and general convulsions, (*Richt.*).—Nodosities in the abdomen which can be felt with the hands, (*Richt.*). Ulcers in the bowels, (*Senn.*).—Flatulent distention of the abdomen, (*Senn.*). Moving in the abdomen, (*Hg.*). *Gurgling* in the bowels. Audible rumbling in the abdomen with cutting pain.

**Stool.**—*Flatulence*, (*Hg.*, etc.). Ineffectual urging to emit flatulence. Burning or fetid flatulence.—Slow urging to stool, with slow discharge of tenacious fæces, (*Hg.*). Ineffectual urging to stool.—*Constipation*, with discharge of hard little balls. Constipation, with violent colic. Constipation, with paralysis of both hands. Irregular stool, (*Jahn.*). *Hard, slow stool*, (*Hb.*). Stool like sheep-dung, ash-gray. Whitish stool. *Yellowish* stool, afterwards soft and watery, (*Orf.*). *Lead-coloured* stool with vomiting of fæces. Liquid stool, afterwards small balls of the most pungent smell.—*Diarrhœa* with rumbling, without pain. Dysentery, bloody, with horrible cutting, violent eructations, fever, (*Fern.*).—Pressing pain at the rectum, from within outwards, (*Hb.*). Darting and burning pains in the rectum, perinæum, and neck of the bladder, (*Vering.*). Tenesmus, (*Stoll.*).—*Constriction and drawing up of the anus*, (*Haen.*). Prolapsus of the anus, (*Senn.*).—Disappearance of the hæmorrhoidal complaints, (*Hg.*).

**Urinary Organs.**—*Strangury*, (*Wibm.*). *Retention of urine*, (*Jahn.*), in the forenoon, going off in the afternoon. The urine is passed drop by drop, with difficulty, (*Tramb.*). Dysuria.—*Ishuria*, with inflammatory fever, (*Ver.*).—Tenesmus of the bladder, (*Stoll.*).—*Increased secretion of urine*, (*Haen.*). Involuntary emission of urine, (*Wibm.*). The urine looks natural, but watery, (*Stoll.*), reddish, fiery, (*Thunb.*). Turbid and frequently bloody urine, (*Wibm.*). Pain in the urethra, where it passes out of the bladder, (*Ts.*).—Retraction of the urethra, (*Stoll.*).

**Male Genital Organs.**—Drawing pain from the pubic region to the middle of the spine, (*Hb.*). Violent inflammatory swelling of the penis and scrotum, with fever, dysuria, costiveness, delirium, gangrene, death, (*Str.*). Slight jerkings in the spermatic chord, early in the morning, with stitches in the afternoon, in the region where it comes out of the abdomen, (*Hg.*). Strangulating pain in the left testicle, which sometimes seems to proceed from the spermatic chord, (*Hb.*). Tension about the testicles, (*Bernt.*).—Swelling of the testes, (*Hoffm.*). Occasional drawing up of the testes, (*Stoll.*). Soreness of the scrotum and thigh after sweat, (*Hg.*). *Painful swelling* of the testes, as if each testicle weighed a hundred weight, (*Baum.*).—Erections early in the morning, (*Ts.*).—Emission of semen during the morning sleep, with lascivious dreams, (*Ts.*).—Emission of semen during sleep, without being aware of it, with relaxed penis, after drinking wine; afterwards languor and slightly-painful erections; several nights in succession, (*Hg.*), scanty emission of semen during an embrace, (*Hb.*). Relaxation of the penis, (*Lind.*). Extinction of the sexual instinct, (*Fab.*). *Impotence*, (*Lind.*).

**Female Sexual Organs.**—Miscarriage and death, (*Vekoskr.*). Derangement of the menses, (*Foth.*) Suppression of the menses, (*Werd.*)

**Larynx.**—Roughness of the throat and voice, (*Haen.*), with a short hack.—*Dry mucus in the trachea*, with difficulty of detaching it, and whistling inspirations, (*Hb.*). Mucus in the throat like saliva, frothy, transparent, clotty, in yellow-green, tenacious lumps, which can be easily hawked up, (*Hg.*). Light cough, which is excited by dry mucus, early in the morning, (*Hb.*). Dry, convulsive cough, (*Haase.*). *Hæmoptoë*, (*Sund.*).

**Chest.**—*Difficulty of breathing*, (*Wibm.*, etc.), obliging one to get up at night

and to open the window. Short, anxious, panting, oppressed breathing, (*Orf.*, *etc.*). Weariness of the chest, (*Weism.*).—*Dyspnoea*, (*Sund. etc.*).—Sudden *oppression of the chest*, returning with increased violence at intervals, (*Stoll*), with anxiety. Impeded respiration, as from paralysis of the muscles of the larynx, (*Trous.*). *Asthma*, (*Jahn, etc.*). Constriction of the throat, (*Stoll*).—Suffocative catarrh, (*Senn.*).—Fetid breath, (*Senn.*).—*Pressure* on the chest; on the lower part of the sternum. Crampy pressure after motion. *Dull pressure* on the left chest, aggravated by breathing and laughing, or when lying after dinner, at which time he feels a sticking between the scapulae, which disappears suddenly, (*Hb.*). *Dull sticking*, with pressure, in the left chest, at intervals, (*Hg.*).—*Suppuration of the lungs*, (*Richt.*).—Twitching in the region of the heart. Stitch in the region of the heart during an inspiration; with anxiety, heat, and redness of the face. *Anguish about the heart*, with cold sweat.—Rushing of the blood in the region of the heart during a rapid walk. *Palpitation of the heart*.

**Back.**—Tearing from the right side of the neck to the shoulder. Drawing in the nape of the neck. *Tearing in the right scapula*, with sensation as from something alive in the scapula raising it. *Sticking in the scapulae*. *Sticking in the spinal column* and small of the back, going off by rubbing. Pressure in the region of the sacro-iliac symphysis. Itching on the os coccygis. *Sticking in the anterior portion of the hip*, less in walking, whenever he moves the right arm to the left side.

**Extremities.**—*Pains in the limbs*, intermitting, most violent at night, *drawing*; rheumatic; tearing; creeping on the bones, at intervals.—Languor and great debility.—Paralysis and *rigidity* of the extremities. Slight insensibility in the extremities. *Torpor* of the hands and feet. *Insensibility* and immobility of the extremities. *Complete and partial paralysis of the limbs*, (*Tiss., Haen, etc.*). At times cramp, at times paralysis of the limbs, (*Wibm.*). Spasmodic contraction of the limbs. (*Wibm.*). Violent spasms, (*Pere.*). *Contractions of the joints*, (*Henk., etc.*). Exostosis, (*Bramb.*). *Weariness and languor*.

**1. Upper Extremities.**—Bruised pain in the deltoid muscle, (*Hg.*). Burning stinging in the anterior portion of the shoulder.—*Fleeting tearing* in the right arm, in various parts of the lower surface of the arm, in the right ring and middle finger, towards the tips, going off after rubbing, but returning with more violence afterwards.—*Boring in the anterior portion of the upper arm*, with *tearing in the teeth* and sticking in the scapula.—*Twitching* above the left elbow, in the left thumb, and on the dorsum of the left hand.—*Itching* of the wrist-joint, with burning, and numb feeling for several hours after scratching. *Itching stinging between the thumb and index-finger*, or between the middle and ring-finger of the left hand.—Paleness, weakness, trembling, paralysis of the hand.—Pains in the left hand, with loss of mobility.—Inability to close the left hand, (*Il.*).—*Paralysis of both hands*, (*Troneh.*). Painful paralysis of the arms, (*Orf.*). *Trembling* of the hands, (*Trouch.*). Debility of the arm, with atrophy, after loss of sensation, (*Huberthy*).—Swollen, red spots on the fingers, (*Thunb.*)

**2. Lower Extremities.**—Seated pain in the knee, in the soles of the feet, and between the limbs, even in the foot, (*Thunb.*) *Fleeting pain* in the tibia, when walking. Painful feeling as if sprained, on the outer and anterior side of the tarsal joint, when stepping, early in the morning, (*Hb.*). Difficulty of pressing the feet to the floor, as if they were dead or of wood, (*Bramb.*). When stretching the limb in walking, he feels a pain at a small spot in the left thigh, as if a tendon would break, (*Hg.*). *Drawing* in the anterior portion of the hip-joint, when lying. Spasmodic *jerking* of the thighs, (*Weism.*). Fine burn-

ing stinging in the inner side of the left knee, when sitting, (*Hb.*), or in the thigh, when walking. Dull pain, deep-seated, in the knee, early in the morning on going up stairs. Strong *beating* at a small spot on the outer side of the right calf, when lying, (*Hb.*). Burning at a small spot in the thigh, (*Stoll.*). *The legs go to sleep*, (*Ts.*). Cramp-like contraction of the muscles of the sole of the left foot, during rest, relieved during motion, (*Ts.*). Spasmodic contraction of the thighs, (*Perc.*). Spasmodic shaking of the right thigh. *Weariness and languor* of the knees when walking. The extremities become cold, (*Talk.*). Stiffness of the legs, (*Wibm.*). Laming pain, or painful feeling of lameness in the thigh, knee, and tarsal joint, when going up stairs, (*Hb.*). *Complete paralysis of the lower extremities*, (*Reimh.*). *Stiffness of the knees*, (*Thunb.*). The foot is shorter by a few lines, with paralysis and atrophy of the foot, (*Bramb.*). *Swelling of the feet*, (*Jahn.*). Fetid sweat on the soles, (*Ts.*).

**Sleep.**—Yawning. Somnolence.—*Sleeplessness at night*, occasioned by the nightly exacerbation of the abdominal pains. Starting when on the point of going to sleep. *Dreams*, agreeable, terrifying, etc.

**Fever.**—Chilliness and coldness from morning till afternoon. Chilliness, which is worse towards evening, even near the warm stove, with dulness of the head, vertigo, thirst, redness in the face, soft, frequent pulse, heat in bed, sweat without thirst, confused dreams; with coated tongue on the morning following, dulness, pale face, and stitches in the head whenever he sets his foot down, (*Hg.*). *Warmth* in the whole body towards evening, increased at night, without any warmth being perceptible on the skin, and without febrile pulse, (*Stoll.*). *Fever*, with excessive thirst, (*Wibm.*). *Cold sweat*, (*Jahn.*). Viscid sweat. Pulse *rare, slow*, slow and hard, feeble, small and frequent; small, unequal and frequent; small, contracted, hard, intermitting, slow; quick, feeble, small, and intermitting; hard, full, feverish, quick; quite intermitting.

**Skin.**—Sensitiveness of the skin to the air, (*Hg.*). *Dryness of the skin* and mouth, (*Heck.*). Itching of the whole body, (*Jahn.*). Itching of the tendon which was usually without sensation. Gripping in the insensible dry herpes on the anterior surface of the tibia.—*Lead-colour of the whole body*, (*Jahn.*).—*Yellowish colour of the skin and white of the eye*, (*Jahn.*)—Bluish colour of the body and of the extremities, (*Nic.*). *Red pimples* on the chest, scaling off in 24 hours. Dark-brown spots over the whole body, (*Richt.*) Disgusting eruptions on the skin, (*Richt.*).—The mammae become sore, with discharge of serous water from the left breast, in the region of the areola, and with a hard tumour in the right breast, livid, with red streaks, with violent pains extending to the arm and discharging a thin, acrid pus when opened, (*Bramb.*). A small stab becomes inflamed, suppurates, and then heals rapidly. Burning in the ulcers as from fire, (*Laur.*). °Suppuration is arrested and ceases, (*Laur.*). A burn becomes excessively inflamed in consequence of the external application of lead, with swelling, itching vesicles full of a yellow fluid ichor, gangrene, delirium, constipation. *Gangrene* from the external application, (*Quesn.*). Slight swelling and sensitiveness of the submaxillary glands, when pressing upon them, (*Nagle.*).—Swelling of the sublingual and submaxillary glands, (*Thunb.*).

**General Symptoms.**—Indolence, exhaustion and weariness, at twilight, when lying, with perceptible throbbing of the pulse, heat in the face, tremulousness in the hands and vertigo; dulness of the head after sleep and bruised pain in the small of the back, (*Hg.*).—General debility and malaise, (*Laidl.*). Gradual emaciation and increasing debility, (*Wibm.*).—Paleness, emaciation, languor, and anguish about the heart, (*Talk.*). Flaccidity and paleness of the muscles, (*Jahn.*).—The muscular motions are impeded, (*Senn.*). Oppression of the chest. (*Wibm.*) *Restlessness*. *Anguish*, (*Wibm.*). General lowness of

spirits, (*Kerkh.*). Loss of voice and senses.—Rigidity, numbness, immobility, (*Wibm.*). Fainting turns. Apoplexy. Nervous apoplexy, (*Sund.*). Paralysis, partial and incomplete. Painful paralysis. Paralysis of the right side, (*Orf.*). General paralysis. Transitory paralysis. In many cases the spasmodic pains in the abdomen abate when paralysis sets in. Convulsions of single limbs. Slight convulsions. Violent convulsions. Spasmodic movements. General convulsions. Frequent and frightful convulsions attendant on the pains in the stomach, (*Orf.*). Convulsions returning at shorter and shorter intervals, (*Streitt.*). Five attacks of convulsions with loss of sense, (*Bramb.*).—Horrible convulsions, (*Volpi.*). Convulsions leaving paralysis of the limbs for some time, and a number of wens on the limbs, as if they were dotted with wens, (*Bramb.*). Four or five paroxysms of convulsions a day, with loss of consciousness for half an hour or an hour, (*Orf.*). Convulsions returning from time to time, with deep moaning towards the end, and pains in the limbs and epigastric region on waking. Convulsions, with frightful shrieks alternating with pain in the bowels, (*Trouss.*).—Epilepsy, (*Sund.*), followed by general paralysis, (*Richt.*), with excessive swelling of the tongue, protrusion of the tongue from the mouth, and wounding of the tongue by the teeth, (*Stoll.*). Trismus. Trismus with rigidity. Opisthotonos. Frightful neuralgia. Nutrition, and all the secretions, decrease more and more, in consequence of which the skin becomes dry and has a bad colour, (*Jahn.*). Complete emaciation of the completely-paralyzed limbs. Excessive emaciation, (*Haen.*). Consumption, (*Boerh.*). Atrophy, (*Stockh.*).—General cachexia and lentescent fever, (*Richt.*). Hectic fever. Gangrene. Leucophlegmasia. Dropsy. Swelling of the body. Jaundice. Frightful jaundice with excessive indurations in the bowels. Increased feeling of ease and diminished short-sightedness in the forenoon, during a walk in the open air, (*Hg.*).—Aggravation of the pains at night, convulsions, delirium, and diarrhoea, (*Orf.*).

#### PATHOLOGICAL ANATOMY.

*In animals* (dogs): Excessive emaciation. The stomach contained a slimy-bloody substance of a yellowish-brown colour. The mucous membrane is corroded, white, mostly in the region of the large curvature, dotted with small white points in the upper part of the stomach. Irregular spots of a cherry-brown colour, mingled with smaller dark-brown spots. The small dark-brown spots penetrated more deeply into the mucous membrane. The dark-brown substance was easily removed, leaving a cavity; underneath there was a circumscribed vivid redness, with congestion of the small vessels. The intestinal canal from the stomach to the cœcum contained a slimy-bloody substance; the mucous membrane was very red, overlaid with a bloody substance. The redness arose from a congestion of blood in the smallest vessels of the lowest layer of the mucous membrane, viz: the villous coat. The mucous membrane of the cœcum was red on the surface, and here and there only. The redness of the colon was less than that of the inferior portion of the ileum; the longitudinal folds were reddest. The blood in the body was coagulated, dark, the serum pretty copious, dark and slimy.—The lungs were perfectly dense, as if compressed, light-coloured and without blood, (*Mitscherlich.*).

*In men*: Compact state of the bones of the skull.—Considerable flatness of the convolutions of the brain (in men dying of poisoning by lead), (*Gris.*).—Cerebral substance pale, soft, deprived of blood, with a small quantity of fluid blood in the falxiform process. Extravasated blood on the surface of the brain, (*Christison.*). Brown, clear serum in the middle ventricle. Unusual softness of the cerebral substance, (*Baker.*).—Partial induration of the cerebral sub-

stance, (*Andral*).—Hypertrophy and induration of the hemispheres, with absence of blood, after *epilepsia saturnina*, (*Bull. de therap.*, VII.). Paleness of the plexus choroidei. The pineal gland was soft, without sand. Clear serum at the base of the skull. Partial and complete softening of the spinal marrow, which was transformed into a soft pap.—The thyroid body was pale and tenacious. The trachea contained a quantity of fluid mixed with mucous flocks, the mucous membrane of the trachea was pale. The pulmonary cells were generally adhering to each other, the free spaces containing several pounds of a brownish serum. The substance of the lungs was pale, tenacious, without blood, filled with a quantity of frothy serum; the pericardium contained two pounds of dark-brown serum mixed with hard flocks.—The serous coat of the heart, particularly of the pericardium, is lined with a layer of reddish-gray, fine-villous, meshy, firm, exuded lymph.—The heart is more than double its natural size. The wall of the left ventricle is more than an inch thick, is pale-brown, containing firm, pale, bloody lymph, with black-red, coagulated and other blood; the wall of the left auricle was firm.—The liver was brown-red, relaxed, the gall-bladder contained a light-yellow, fluid bile; the small lobe of the liver was inflamed.—The spleen was interstitially distended.—Pancreas relaxed.—Stomach contracted into the shape of a barrel, containing a small quantity of a brown turbid fluid; the mucous membrane of the stomach was considerably involuted, thick and tenacious. The stomach exhibited gangrenous spots here and there, the mucous membrane was corroded in some places. The bowels were considerably contracted, containing gray, yellowish faeces which were adhering to the walls. The bowels show partial contractions and dilatations, arising from paralysis of some portion of the muscular membrane. The mesenteric glands are in a flaccid condition.—The duodenum and jejunum seem involuted and inflamed, the whole colon is filled with scybala, the blood-vessels of the intestines are blue. Both kidneys have dwindled to one half their size; the surface of the cortical substance shows large degenerations, or granulations of the size of a millet-seed and slightly raised above the surface, of a dingy, yellowish white, very firm, tenacious; a deposit of a black-blue pigmentum was deposited here and there through the degenerated portion of the kidneys, with a few scattered cysts of the size of a pea, containing a brownish serum. The bladder was contracted, contained a few drops of turbid urine; in the abdominal cavity 6 pounds of a gray serum were discovered (in the case of an engraver, 30 years old, who had handled preparations of lead since his childhood, and had had 10 attacks of the lead-colic, the last attack 10 years ago). As consequences of a chronic poisoning by lead were discovered: shrinking and considerable contraction of the inner cavities, particularly of the stomach and bowels, hardness of the parenchymatous organs, which have become much smaller in consequence of a morbid contraction; great thinness and almost inorganic hardness of the muscles; complete shrivelling of the mucous and adipose tissues. A special examination of the neurilemma and the nervous substance is entirely wanting.

ANTIDOTES.—Nux v.

## CLINICAL OBSERVATIONS.

Dr. Williamson, the prover of this drug, proposes it in the following affections:—Congestions of internal organs, especially of the liver and spleen.—Congestion of the head, with derangement of vision.—Periodical diseases.—Sympathetic affections.—Disease of one organ interrupting the functions of another.—Hypochondriasis.—Indigestion.—Headache, from disorder of the digestive organs.—Diarrhœa.—Dysentery.—*Prolapsus ani*.—*Hæmorrhoids*.—Asthmatic complaints.—Colica piftonum.—Rheumatism. Rheumatic affections from the abuse of Merc.—Remittent fever. Intermittent fever.—Dropsies.—Verminous diseases.—Diseases with a *slow pulse*.—Pleurisy.—Cough.—*Heartburn*. *Waterbrash*.—*Cholera infantum*.—Diseases of children during dentition.

## SYMPTOMS.

**Head.**—Giddiness and dizziness, with the sensation of fulness over the eyes. Dulness and headache, with sleepiness in the morning. Momentary darts of pain in the forehead, obliging one to shut the eyes; attended with giddiness. Pain on the top of the head, when rising in the morning.—Pressing pain in the temples in the forenoon, with drawing in the eyes, as if strabismus would follow. Stunning headache through the temples, relieved by pressure. Morning headache with heat in the vertex. \*Delirium and loquacity during fever, with excessive thirst. \*Rolling of the head, during difficult dentition in children. \*Perspiration of the head during sleep, with coldness of the flesh while teething. Sudden pain in the forehead, with soreness of the throat, in the evening. Vertigo, while standing in the open air. Vertigo with inclination to fall forwards. Headache alternating with diarrhœa. Heavy dull pain in the forehead, with soreness over the seat of the pain. \*Morning headache with flushed face. Pain in the left frontal protuberance, aggravated in the afternoon.

**Eyes.**—Smarting of the eyes. Drawing sensation in the eyes, accompanying pain in the head.—Heaviness of the eyes, with occasional pains on the top of the head. Pain in the eyeballs, and in the temples, with heat, and throbbing of the temporal arteries.

**Teeth.**—\*Grinding of the teeth at night, especially with children during dentition. The teeth are covered with dried mucus, in the morning.

**Mouth.**—Copious salivation. \*Offensive odour from the mouth. \*Offensiveness of the breath at night, perceptible to the patient. The taste of fried liver in the mouth at night. Sourness of the mouth. Dryness of the mouth and tongue, on waking in the morning. \*White fur on the tongue with foul taste.

**Throat.**—Soreness in the left side of the throat, especially painful when swallowing liquids, and worse in the morning. *Dryness of the throat*. Soreness of the throat extending to the ears. \*Rattling of mucus in the throat. \*Goitre. \*Sore throat commencing on the right side, and then going to the left.

**Appetite.**—\*Voracious appetite. \*Satiety from a small quantity of food, followed by nausea and vomiting. \*Regurgitation of food. Indifference to

food. Loss of appetite. \*Putrid taste in the mouth. Desire for something sour. \*Moderate thirst during fever. Thirst towards evening. \*Diarrhoea immediately after eating or drinking.

**Stomach.**—\*Sourness of the stomach. \*Acid eructations. Acidity in the afternoon with an unpleasant sickly sensation in the stomach. \*Nausea and vomiting with fulness in the head. \*Vomiting of food an hour after a meal, with craving appetite immediately afterwards. \*Regurgitation of food. Extreme nausea, continuing for several hours. Vomiting of hot frothy mucus. \*Vomiting of food with putrid taste and odour. \*Heartburn. \*Waterbrash. Heat in the stomach. \*Belching of hot flatus which is very sour. Sensation of hollowness in the epigastrium. Throbbing in the epigastrium, followed by diarrhoea. \*Stitches in the epigastrium from coughing. \*Food turns sour soon after eating. \*Gastric affection attended by depression of spirits.

**Abdomen.**—\*Fullness in the right hypochondrium, with flatulence. Stitches in the right hypochondrium, worse while eating. Sensation of weight and dragging in the left hypochondrium, close under the ribs. \*Colic, with retraction of the abdominal muscles. Pain in the transverse colon, at three o'clock in the morning, followed by diarrhoea. Rumbling of flatus in the ascending colon. Pain in the ascending colon. Pain in the bowels at daylight in the morning, which is relieved by external warmth and by bending forwards whilst lying on the side, but is aggravated by lying on the back. The pain in the bowels at first is attended with coldness, which is followed by heat and warm perspiration. Sensation of heat in the bowels, accompanying the inclination to go to stool. Twisting pain in the right hypochondrium, with the sensation of heat in the part. \*Chronic hepatitis, with costiveness. \*Fullness, with pain and soreness in the right hypochondrium. Sensation of flatus in the left hypochondrium. Faintness, with the sensation of emptiness in the abdomen after stool. \*Cramp-like pain in the bowels, with retraction of the abdominal muscles, occurring at ten o'clock in the evening, and again at five in the morning, and continuing until nine. \*Sharp pain above the right groin, preventing motion, in the latter months of pregnancy.

**Bowels.**—\*Constipation, with flatulence and headache. \*Constipation, accompanying remittent fever. \*The faeces are *hard* and *dry*, and voided with difficulty. Diarrhoea early in the morning, which continues through the forenoon, followed by a natural stool in the evening. \*Chronic diarrhoea, worse in the morning. \*Extreme weakness and cutting pain in the intestines, after stool. Evacuations of green stools in the morning. From six to eight evacuations in a day. Diarrhoea immediately after eating or drinking. \*Faeces yellow or dark green. \*White slimy stools. \*Cholera infantum. \*Evacuations, consisting of darkish-yellow mucus which smells like carrion. \*Frequent chalk-like stools, which are very offensive, with gagging and excessive thirst in children. Copious evacuations, with blueness under the eyes. Painful diarrhoea, with screaming and grinding of the teeth, in children during dentition. Stools mucous-gelatinous small and unfrequent, with flatulence, and pain in the *region of the sacrum*. \*Hot, watery evacuations. \*Prothy mucous stools. \*Food passes the bowels in an undigested state. Evacuations in the morning, attended with strong urgings in the bowels, with heat and pain in the anus. Flashes of heat running up the back, after stool. Sensation at stool, as if the genital organs would fall out, in females. Too much bearing down at stool, as if from inactivity of the rectum. Secretion of mucus from the anus. Chronic diarrhoea, with prolapsus ani at every stool, in children.—\**Prolapsus ani, with diarrhoea* of six years' standing in an adult. \*Prolapsus ani of long standing. \*Descent of the rectum from a little exertion, immediately followed by stool, or a discharge of thick transparent mucus, sometimes of a yellow colour, and mixed with blood. \*The prolapsus

occurs most frequently in the morning.—\*Constant pain in the lumbar region, which is worse during evacuation, and particularly *after stool*.

**Urine.**—\*Enuresis. \*Involuntary discharge of urine during sleep. \*Diminished secretion of urine. \*Suppression of urine. Scanty urine, with frequent voidings. \*Frequent nocturnal urination, during pregnancy.

**Genitals.**—Sticking pain above the pubes, and in the course of the spermatic chords. \*Relaxed menstruation. \*Suppression of the menses in young females, with bearing down in the hypogastric and sacral regions, with pain from motion, which is relieved by lying down. \*Leucorrhœa; discharge of thick transparent mucus. \*Leucorrhœa, attended with constipation, and bearing down in the genital organs. \**Prolapsus uteri*. \*Symptoms of prolapsus uteri, continuing for several weeks after parturition, with rumbling of flatus in the region of the ascending colon. *Symptoms of prolapsus uteri, with pain in the sacrum, flatulence unfrequent, muco-gelatinous stools*. \*Pain in the regions of the ovaria, especially the right. \*Numb aching pain in the region of the left ovary, with heat running down the left thigh in the third month of pregnancy. \*Ability to lie comfortably only on the stomach, in the earlier months of pregnancy. \*Swelling of the labia during pregnancy. \*After-pains attended with heats and flatulency. After-pains, with strong bearing down.

**Larynx.**—\*Cough, accompanying remittent fever. \*Dry cough. \*Loose hacking cough. \**Hooping cough, attended with costiveness and loss of appetite*.

**Chest.**—Pains in the chest, increased by taking a deep inspiration. Snapping in the right lung, like breaking a thread, when taking a deep inspiration. Inclination to breathe deeply; sighing. Shortness of breath. Sensation in the chest, as if the heart were ascending to the throat. Sensation of suffocation, when first lying down at night.—*Palpitation of the heart*, from exertion or mental emotion. \*Palpitation of the heart, with a clucking sensation rising up to the throat, which obstructs respiration. Sticking pain in the region of the heart. \**Palpitation of the heart, from physical exertion, in persons subject to rumbling in the ascending colon, heavy sleep, and a feeling of fatigue on awaking in the morning, followed by drowsiness in the forenoon*.

**Trunk.**—Pain in the small of the back when walking or standing, with the sensation of the back bending inwards. Pain in the lumbar region, with the sensation of coldness, worse at night, and from motion. Pain in the loins increased by a misstep and walking over uneven ground. Pain between the shoulders with soreness, worse night and morning, and increased by motion. Pain under the right shoulder-blade. Stiffness of the nape, with soreness of the muscles of the neck and shoulders. Pain in the nape with soreness, increased by motion. Pain between the shoulders, in the morning.

**Upper Extremities.**—\*Rheumatism in the left forearm and fingers. Weakness of the wrists, with soreness to the touch.

**Lower Extremities.**—Pain and weakness in the left hip, like rheumatism from cold, increased by going up stairs. Pains in the thighs, legs and knees, worse from standing. Weakness of the joints, especially the knees. \*Slight paralytic weakness of the whole left side, of one year's duration. (In a girl 18 years of age.) Cracking in the knee-joints from motion. Heaviness and stiffness of the knees, as after a long walk. Stiffness on beginning to move. Aching of the limbs, worse at night. Pain in the left knee, leg, and foot. Sharp pain in the outer and upper portion of the left foot. Coldness of the feet. Perspiration of the feet, in the evening.

**Sleep.**—*Sleepiness in the day-time*, especially in the forenoon, with rumbling in the bowels. Restlessness in the fore part of the night. Sleepiness early in

the evening. Too heavy sleep at night. Distress after the first sleep in the evening. Rising up in bed during sleep, without waking. \*Restless sleep of children, with whimpering at night. Moaning in sleep, with eyelids half-closed. Drowsy and difficult to wake in the morning. *Unrefreshed by sleep*, on waking in the morning. \*A feeling of fatigue on waking in the morning.

**Fever.**—\*Chilliness while moving about during fever, and in the act of lying down, with perspiration immediately afterwards. \*Chilliness when first lying down in the evening, followed by fever and sleep, which is disturbed with talking, and imperfect wakings. \*Fever attended with constipation. \*Fever with incoherent talking. Intermittent fever, quotidian, *tertian* and *quartan*. \*Chill in the morning at seven o'clock, with pressing pains in both hypochondria, and dull aching pains in the knees and ankles, elbows and wrists. \*Backache before the chill. \*The shaking and a sensation of coldness continues for some time after the heat commences. \*Some thirst during the chill, but more through the heat. \*The patient is conscious during the chill, but cannot talk because he forgets the words he wishes to employ. \*Delirium and loquacity during the hot stage, with forgetfulness afterwards of all that passed. \*Violent pain in the head, with excessive thirst during the fever. \*Sleep during the perspiration. \*Loss of appetite in the apyrexia.

**Skin.**—\*Softness of the flesh, with debility in children. \*Moistness of the skin, with preternatural warmth. \*Sallowiness of the skin in children.

**General Symptoms.**—Sudden shocks of jerking pains.

**Characteristic Peculiarities.**—The symptoms generally, but especially the abdominal symptoms, are aggravated in the morning and better in the evening.

## 198. POTHOS FŒTIDUS.

POTH. FŒT.—*Ictodes fœtidum*.

### SYMPTOMS.

**Head.**—Headache, here and there, of short duration. Drawing from both sides of the forehead to the glabella, very violent in the region of the latter, as if drawn by a magnet.

**Face, Mouth, and Pharynx.**—The nose above the nasal bones is swollen and red, forming a saddle, painful when touched, particularly high up on the left side of the nose, the cartilaginous portion being cold and bloodless, with red spots on the cheeks resembling small pimples.—Violent sneezing, inducing a pain in the fauces, palate, pharynx, down to the stomach, and long-lasting after-pains in the region of the orifice of the stomach.—Swelling of the cervical and sub-maxillary glands.—Numb feeling in the tongue, inability to carry it to the teeth, red and sore on the edges and at the tip.—Burning from the fauces down through the chest.

**Appetite, Stomach, etc.**—Pain in the pit of the stomach on stepping firmly, as if something were breaking off. Sensation in walking as if the bowels were shaking.

**Stool, Urine, etc.**—Soft stool.—Painful voluptuous titillation around the corona glandis.

**Chest.**—Pain in the chest, with pain under the shoulders, which seems to be in connexion with burning in the pharynx. Aching pain on the sternum. Sudden feeling of anguish with oppression of breathing and sweat, after which he has an evacuation from the bowels, with relief of all the symptoms. Disposition to

take deep breath, with hollowness of the chest, afterwards with contraction of the chest and throat.

**Extremities.**—Bone-pain in the right border of the tibia.

## 199. PRUNUS SPINOSA.

### PRUN. SP.

#### CLINICAL OBSERVATIONS.

Prun. sp. has been successfully employed for the following affections:—Drop-sical affections, particularly anasæra, in consequence of chronic and lentescent diseases. General dropsy, consequent upon dropsy of the pericardium.—Loathing of food.—Diminution of the palpitation of the heart, in hypertrophy of the heart, attended with œdema of the feet. *Œdema pedum*, depending upon affections of the heart.—*Wahle* recommends it, moreover, for spasmodic affections of the bladder and affections of the respiratory organs.

#### SYMPTOMS.

**Mind and Disposition.**—Restlessness obliging one to move from one spot to another, with shortness of breath and oppression of the chest.—*Peevish mood*.

**Head.**—*Dizziness*, with heaviness of the head.—*Nervous pain in the occiput*, so violent that he loses his ideas.—*Pressure* from the right parietal bone to the occiput through the brain. Pressure in the right occiput, as if the parts were pressed against a sharp edge.—*Compressive pain*, as if the brain were compressed from all sides.—*Pressure under the skull*, as if pressed outwards with a plug. Pressure in the right parietal bone, increased by external pressure, or attended with dragging distensive pressing in the head, inducing a loss of ideas.—*Itching sore pain* from the left side of the occiput to the teeth. Aching sore pain in the sinciput, going off when thinking of the pain intently.—Painful dragging in the right temporal bone, extending to the ear, where the prover experiences otalgia.—*Flashing pain*, striking from the right temporal bone through the brain to the occiput. Darting shock through the right hemisphere of the brain. Paroxysms of sudden pain striking from before backwards.—Stinging in the skin of the occiput.

**Eyes, Ears, and Nose.**—Pain in the right eye as if torn asunder. Itching of the canthi and margins of the lids.—Dragging pain in the left ear. Pressing asunder in the right ear. Pressing asunder in the nose above the nasal bone. Frequent sneezing.

**Face and Teeth.**—Itching stinging on the malar bone.—Pinching in the right submaxillary gland.—Toothache as from cold water in the mouth. Indescribable pains in various teeth obliging one to press them together, which affords relief. *Nervous pain* in the last left lower molar tooth, as if it would be pulled out.—*Pain as if sprained* in the molar teeth, also particularly on introducing warm substances into the mouth. Pain as if the teeth were raised out of their sockets, wandering from one tooth to another.—Itching tingling in the front teeth and in the tip of the tongue.

**Mouth.**—Burning on the tongue only between meals. Pricking on the right side of the tip. White coating on the back part of the tongue.

**Appetite and Taste.**—Slimy taste in the mouth. Pappy taste after a meal.—Repletion after eating a few spoonfuls of soup.

**Stomach and Hypochondria.**—Fulness in the pit of the stomach, with shortness of breath, obliging one to stand still frequently in going up stairs.—*Painful pressure* in the region of the liver, worst when sitting. *Stitch* in the posterior and inferior lobe of the liver, on the right side, arresting the breathing in walking.

**Abdomen.**—Colic as after a cold.—*Pressure* in the right side of the abdomen at night, not allowing one to lie on that side. Pain in the right side of the abdomen, as if something would press through.—Aching pains in the right side of the abdomen as if single parts were squeezed in.—*Contractive pain* in the abdomen, not allowing one to lie on the back or sides. *Cramps* in the abdomen, obliging him to walk very cautiously and with a light step, on account of the urinary difficulties being aggravated by the least concussion. The cramps and the breathing are relieved by bending the trunk forwards.—*Cutting* across the abdomen as if diarrhoea would set in. *Dartings* from the right lumbar region to the umbilicus, arresting the breathing.—*Dropsical swelling of the abdomen*, with loss of appetite, scanty urine, and hard, knotty, difficult stool. °In a case of ascites, a quantity of fetid water is involuntarily passed by the rectum at night, with decrease of the swelling and the heaviness consequent upon it.—Incarceration of flatulence causing violent cramps in the abdomen. The flatulence presses on the bladder causing cramps in the region of the bladder, which oblige one to bend double.—Sticking in the inguinal region, going off by pressing on that part with the hands. Pressing in the right abdominal ring from within outwards, as if hernia would protrude.

**Stool and Anus.**—*Hard stool*, intermitting stool looking like the excrements of dogs, in small lumps, with stitches in the rectum, extorting cries.—\**Diarrhoea*, —with discharge of a quantity of faeces, preceded by cutting colic, in the case of a prover troubled with costiveness. Slimy diarrhoea succeeded by violent burning in the anus, as from a wound. °Diarrhoea with nausea and constant loathing of food.—Discharge of blood from the anus after hard stool.—Crampy bubbling in the rectum when sitting. Crampy pressure in the right side from below upwards, as from a body with edges.

**Urinary Organs.**—*Tenesmus of the bladder* almost every quarter of an hour. *Strangury*. Troublesome urging to urinate for hours, with burning biting in the bladder and urethra. Burning in the urethra, at every attempt to urinate, obliging one to bend double, without any urine being passed. *Pressing urging* whenever he wants to pass urine, the urging proceeding only as far as the glans, where it causes the most violent pains and cramps, sometimes attended with tenesmus of the rectum, and momentary alleviation of the pains in the bladder at the time when the urine passes into the bladder.—*Scanty emission of brown urine*. \**Has to press a long time before the urine makes its appearance*, °also with scanty emission and feeble stream (in the case of a drunkard). Thread-like stream, with urging to stool.—Has to rise frequently at night, with copious discharge (the opposite condition having existed previously).—*Spasms of the bladder*, not allowing any rest at night. Burning in the sphincter vesicae.—Burning biting in the urethra. Ulcerative pain in the urethra when touching it, so that he dares not touch it.

**Male Sexual Organs.**—The prepuce retreats behind the glans, with shrinking of the penis.—Pinching pain on the left side of the scrotum. Agreeable tickling under the scrotum.

**Female Sexual Organs.**—Painless throbbing in the parts. Constant titillating itching in the region of the ovaries, obliging one to scratch constantly, but not yielding to it.—*Menses* every fortnight, attended with pains in the back.—*Metrorrhagia*, the blood being watery and thin. *Discharge of blood*

*from the vagina every day*, for eight or ten weeks, becoming the more watery the longer it lasts.—*Leucorrhœa*, making the parts sore, and tinging the linen yellow.—Sticking in the mamma, on drawing deep breath, in every direction, and extending to the axilla.

**Larynx.**—Roughness of speech. Hoarseness and weakness of the organs of speech when talking, with pains in the chest so that she has to stop.—Soreness and scraping in the throat, or crawling, inducing a hacking. *Crawling* in the upper part of the larynx or in the fauces from below upwards, inducing a hacking cough. Cough occasioned by a tickling in the trachea which comes on when drawing breath. Cough occasioned by a tickling below the larynx, which is renewed by arresting the breath. Wheezing cough.

**Chest.**—Anxious and short breathing. Oppressed and difficult breathing, with anxiety about the heart. *Panting* breathing. *Frequent deep breathing*, owing to an anxious feeling of heaviness in the lower part of the chest. *The chest feels heavy and oppressed*. The oppression of the chest and the pains under the sternum seem to be connected with the fulness in the pit of the stomach and the distention of the abdomen. The breath is constantly arrested in the pit of the stomach.—The chest is very painful on drawing breath, with sensation as if pressed in. Sticking with pressure on drawing breath, impeding inspirations.—Pulling and rigid sensation in the left breast, worse on drawing breath. Stitches in the left side of the chest, independent of breathing.—Pain in the left outer side of the chest, as if the parts were pressed against a sharp edge. Pain of the pectoralis major when touching it, as if bruised. Sticking in the region of the posterior and inferior lower ribs, with pain as from subcutaneous ulceration on touching them.

**Back.**—*Pain in the small of the back*, when sitting. Stiffness of the back and small of the back as from a strain. Stitch from between the shoulders to the lumbar vertebræ, on drawing deep breath, arresting the breathing. Pain under the left scapula on stooping, as if a plug were pushed into the part.—Pressure in the nape of the neck and occiput on stooping. Aching-ulcerative pain in the left axillary glands. Feeling of swelling in the left axilla.

**Upper Limbs.**—Pressure from the top of the right shoulder to the deltoid muscle, not allowing one to raise the arm. Laming pain in the left shoulder-joint, extending across the breast.—Pinching in the right elbow-joint, with pressure during motion. Laming pain from the left elbow to the wrist-joint.—Rigid sensation in the left forearm, impeding the movement of the arm. Pain in the left forearm as from a blow. Cramp-like pressure at the right forearm, worse when seizing anything. Painful rigidity in the right forearm, scarcely allowing him to hold his pen. Darting pain in the left forearm, causing him to start. Pain on the right forearm as if burnt.—Cramp-like contractive pain in the right hand, extending to the tips of the fingers. Pain as if sprained in the right wrist-joint. Pain in the right wrist-joint as if a ganglion would form.—*Pulling* pain in the left fingers, extending to the arms and the pectoral muscles. Pressure between the right thumb and index-finger. Contractive pain in the second finger of the right hand. Drawing pain in the fourth finger of the right hand. Contusive pain in the left finger. Pain as if burnt on the little finger of the right hand. Itching of single fingers at their tips.—Pulling or crampy pain in the left thumb. Painful rigidity in the right thumb. Pain as if sprained in the left thumb. Pain as if sprained in the right thumb. Laming pain in the right thumb. Pinching pains in both thumbs.

**Lower Limbs.**—Pains in the hip, most violent in the forenoon, scarcely any after midnight. Sticking below the crest of the ilium, deep-seated, worse on bending the limb backwards. Feeling of weariness in the joints. Pain in the

lumbar vertebræ as from subcutaneous ulceration, very violent when lying, less during slight, and worse during strong, motion, in which case the pain extends to the hip-joint, with sensation in the joint as if the ligaments were too short, with inability to lie on either side. *Itching stitches or prickling itching on the buttocks and thighs* obliging him to scratch here and there, changing to a twitching when he does not scratch. Hot prickings on the buttocks and thighs. —Burning on the lower limbs, obliging him to pull off his boots. Painful lameness in the right lower limb, going from above downwards. Tension of the skin on the calves and thighs, on going up stairs, with sensation as if the parts were swollen.—Tearing in the middle of the thigh. Pinching in the upper part of the thigh. Tension about the left thigh. Pressure in the right thigh. Violent itching of the outer parts of the thigh, with pimples after scratching. —Pain as if sprained in the right knee, also coming on during rest and continuing during motion. Painful stiffness in the left knee-joint, in walking. Languor in both joints, when standing. Unsteadiness of the left joint, as if it would give way. Darting pain in the left knee. Pinching in the bend of the right knee. Pressure in the edges of the bones of the right knee. Sensation around the right knee as if warm vapour were rising alongside of it.—Pain in the left tibia as from blows. Pressure on the left calf as from a plug. Pain in the tendo-Achillis as if it would tear off. Pressure in the tendo Achillis which sometimes is of a pulsative nature.—*Pain as if sprained* in the left foot, in the tarsal joint or below the outer malleolus. Pain as from subcutaneous ulceration in the whole right sole.—Painful rigidity in the *left toes*. Prickings as with awls in the ball of the left big toe. Pain in the anterior joint of the big toe, as if pulled out.

**Sleep.**—*Drowsiness* after dinner.—Falls asleep late in the evening and wakes early in the morning. *Wakes quite early*. Sleeps for some hours, and then wakes without any sort of sleepiness.—Dreams and fancies. He dreams that he has a bil. He dreams that he is writing on a dirty table and on greasy paper.—Feels in the morning as if he had not slept enough, with pain in the bones and bruised feeling of the thighs.

**Fever.**—*Chilliness every evening*, obliging one to go to bed. Chilliness with disposition to stretch.—*Dry heat over the whole body*, with painfulness of the glans and redness of the prepuce. Burning heat, not on the arms, most violent on the genital organs, relieved by sweat and going off entirely in bed.—Sweat in the face, during sleep.

**General Symptoms.**—Stitches in single muscles.—Tottering gait, he staggers to and fro. Trembling through the whole body. Constant uneasiness, particularly in the lower limbs.—Itching stitches in different parts of the skin, at night, waking him, going off by scratching.

## 200. PULSATILLA.

PULS.—Pulsatilla nigricans, Anemone pratensis, Pasque-flower.—See HAHNEMANN'S Mat. Med. Pura, IV.

COMPARE WITH—Acon., Agar., Ambr., Am., Ani. mur., Ant., Angust., Arn., Ars., Asa f., Aur., Bell., Bov., Bry., Cale., Camph., Cann., Canth., Caps., Carb. v., Cham., Chin., Cic., C. c., C. ff., Colch., Con., Cupr., Cycl., Dig., Dros., Euphr., Fer., Graph., Hyos., Icn., Ipec., Kali., Lach., Led., Lyc., Mag. p. arct., Mang., Magn. mur. Menyan., Merc., Mezer., Moseh., Natr., Nitr. mur., Nitr. ac., Nux v., Oleand., Op., Par., Petrol., Phosph., Plat.,

Plumb., Ranunc., Ranunc. secler., Rheum, *Rhus tox.*, Ruta, *Sabad.*, Sabin., Sass., Scilla, *Sep.*, Selen., Sil., Spig., Spong., *Stann.*, Staph., Stram., *Sulph.*, *Sulph. ac.*, *Tartar.*, *Thuja*, *Valer.*, Verat., Zinc.—Puls. is frequently particularly suitable after Asa f., Antim., Aurum, Chin., Lach., Lye., Nitr. ac., *Rhus tox.*, *Sep.*, *Sulph.*, *Tartar.*, *Thuja*.—After Puls. are frequently suitable: Asa f., Bry., Nitr. ac., *Sep.*, *Thuja*.

ANTIDOTES.—Cham., Coff., Ign., Nux v., vinegar.—Puls. antidotes Agar., Ambr., Arg., Bell., Cham., Chin., Colch., Ferr., Ign., Lye., Merc., Plat., Ranunc., *Sabad.*, *Stann.*, *Sulph.*, *Sulph. ac.*, *Tartar.*

#### CLINICAL OBSERVATIONS.

According to *Noack* and *Trinks*, Puls. has been successfully employed in the following affections: Uneasy sleep; beating and throbbing in the left temple, muscæ volitantes, profuse perspiration about the head; slimy taste; white, furred tongue; dryness without thirst; difficulty of swallowing; fits of dizziness; unsteady gait; increased expectoration of mucus in the evening; frequent palpitation of the heart; tearing pains in the small of the back; formication in the arms; frequent empty eructations; loss of appetite; small contracted pulse; flushes of heat; diminished strength (in the case of a lady of 54 years). Epilepsy.—Internal suppuration.—Apoplexy from organic affection of the heart.—Dropsy. Chronic dropsy of the skin, belly and chest in a drunkard. Scrophulosis. Chlorosis with stat. pituit.—*Chlorosis* in the early stages (in its higher stages which originate in scrofula this remedy is not suitable). DISEASES OF THE WHOLE VENOUS SYSTEM. Passive congestion with turgor venarum. Affections of the mucous membranes both with and without fever, with increased excretions; *biennorrhæa*. RHEUMATIC PAINS; tearing, drawing, jerking pains in the limbs, with evening and night-exacerbation, and amelioration in the open air, with numbness and lameness, or with swelling of the suffering part.—Tearing darting pains in the limbs, in the left upper arm, and in the upper part of the thigh, greatest at night. Drawing sticking in one limb or another with chill and cold, or in frequent short paroxysms.—Stinging and feeling of cold in the suffering parts during changes of weather. Rigidity as if from a shortening of the sinews in single limbs.—Wandering pains which shift quickly from one part to another, also with swelling and redness of the joints. ACUTE and chronic rheumatism. Rheumatic complaints with atrophy of the limbs. Rheumatismus vagus, where the erysipelatous inflammation settles on single joints, and suddenly shifts from one joint to another, with moderate fever. Rheumatic pain of the head and limbs. Rheumatism of the joints.—Rheumatism with slight redness of the skin.—Rheumatismus acutus, drawing-tearing pains in the limbs making motion difficult, shifting to other parts and leaving a swelling of the suffering parts.—Rheumatismus acutus, jerking-tearing and drawing pains in the whole body, particularly in the muscles of the head and chest, with gastric symptoms and accelerated pulse.—*Arthritis acuta and chronica*. Arthritis; paroxysms of drawing in all the joints, particularly in the right knee, violent in the evening until midnight, then changing to stitches, with feeling of lameness in all the joints, tearing-drawing pain in the lower jaw, stiffness of the neck.—*Arthritis acuta*: gouty inflammation of the hands, knees, and joints of the foot, with erysipelatous inflammation of the feet, pituitous symptoms, shivering through the whole body, proceeding from the back; jactitation of the muscles; starting at night, want of sleep, red sediment in the urine, feebleness costiveness. *Arthritis vaga*.—Bruised pain and pain as from an internal ulcer on touching the parts. Pains and affections on one side.—Paroxysms of pain and other complaints, accompanied with chilliness. Asthma;

paleness of the face or trembling of the legs.—Violent pains generally cause an increase of the chilliness.—The complaints are increased or renewed in sitting after continuous motion; during rest whilst lying on the side or on the back—the complaints arising from lying on the back, are sometimes ameliorated by lying on the other side or on the painful part; those pains increased or renewed by lying on the side, are relieved by lying on the back—many complaints are ameliorated by motion, pressure, external warmth and open air, whilst others are increased by the same circumstances. Complaints which are worse in the evening, night, and before midnight.—Complaints which exacerbate early or after dinner.—Complaints which increase in violence every other day. Complaints arising from the open fresh air. Longing after the open air.—Bruised and broken feeling in the limbs.—Painful feeling of lameness in the joints, particularly in the evening.—Indolence and heaviness in the whole body. Tingling numbness of the limbs. Numbness of the limbs, with feverish condition, pressure in the pit of the stomach, &c.—Weariness.—Feebleness.—Weakness.—Trembling weakness.—Trembling with *tearing* and *drawing* pains in the limbs.—Convulsive paroxysmal trembling in the forearms and feet like St. Vitus's dance.—St. Vitus's dance.—Fainting fits with cadaverous paleness of the face.—Epileptic convulsions, (from suppression of the menses). Emaciation.—Biting and stinging itching, increased by warmth.—Measles, even from the beginning, with violent vascular fever.—Bad consequences from suppressed measles, and illness consequent thereupon. Promotes the eruption of the measles.—Metastasis of the measles especially in affections of the larynx, manifested by hoarseness. Prophylactic against *measles*. *Varicella*. Urticaria. ? Pustulous eruption, like *varicella*, after having eaten pork or fat duck or goose. Eruption like that caused by eating much bacon.—Erysipelas with burning heat and stinging on touching or moving the parts.—Zona. ?? Cracking of the skin on wetting it. Intertrigo from the abuse of chamomilla, in children, recommended by Gross.—Suppurating wounds.—Flat ulcers on the skin.—Ulcers with stinging and biting-burning pains, slight bleeding of the same, and itching shining redness and hardness of the parts around.—Cold swellings? *Varices*.—*Chilblains*, with bluish swelling, heat, burning or throbbing.—Gaping.—Inclination to sleep in the day-time.—Somnolence. Falling asleep late, with too early awakening.—Feverish somnolence, with restlessness and troublesome delirium, thirst, heat, dry tongue.—*Sleeplessness*, from restlessness, accelerated circulation, excessive crowding of thoughts. Nocturnal sleeplessness. Frequent waking at night with long-continued wakefulness, and drowsiness in the day-time.—Light, superficial, drowsy, restless sleep, full of dreams, with tossing about in bed, restlessness, intolerable heat, etc. Symptoms during sleep; tossing about, great restlessness, disposition to start, loud talking, jerking of single limbs, or of the whole body, crampy distortion of the mouth and rolling of the eyes.—*Exclamations, nightmare*.—Dreams causing one to start. Lively, *anxious* dreams. *Intermittent fever* for the most part consisting of *chilliness without thirst*, the heat follows attended with thirst, with simultaneous or subsequent perspiration, mostly commencing in the afternoon or evening and passing away toward morning. Symptoms during the chill: paleness of the face, dizziness, deafness, pains and heaviness of the head, anxiety, oppression on the breast, expectoration of mucus. During the *heat*: fits of anxiety, headache, red, bloated face, perspiration of the face, chilliness when uncovering one's self, lamentations, moaning and groaning, deep, uneasy sleep, quick, anxious breathing, nausea, diarrhoea.—During intermittent fever or in the apyrexia: headache, painful oppression on the chest, loose cough, drowsiness, bitter taste in the mouth, diarrhoea or costiveness.—Intermittent fever after china or

abuse of china.—Rare forms of intermittent fever.—Intermittent fevers after measles, with urticaria; first heat, then shiverings perspiration during the heat, after some hours the paroxysm occurs again, tongue furred white, no appetite, diarrhœa.—Tertian intermittent fever, with uncommon heaviness in the body, chilliness and sleepiness in the day-time.—Intermittent fever without chill, the paroxysms consisting of dry heat, and profuse sweat, dulness of the head, heavy and deep sleep, the paroxysms occur in the night.—Tertian intermittent fever, with dizziness and pain in the stomach during the apyrexia, accompanied with gastric derangement.—Quotidian fever with headache, cough, pain in the chest, bitter taste with a clean tongue.—Quotidian fever with nocturnal cough, pain in the chest and expectoration of mucus.—Quartana.—Quartan fevers with gastric derangement.—*Intermittent fever* recurring after the abuse of sulphate of quinine.—Quotidian fever in children.—Fever with gastric, bilious and pituitous symptoms.—Fever with pituitous-catharrhal affections, leucorrhœa in childhood.—Fever with nervous symptoms: loss of consciousness, drowsiness, violent delirium, wringing of hands, crying.—Typhoid fevers.—Typhus abdominalis: relaxed state of the body, little or no thirst, gastric symptoms, pale and yellow face, phlegmatic temperament, anxious disposition, ill-humour, bitter taste, tongue coated white or yellow, loss of appetite, vomiting of mucus, diarrhœic, slimy stools.—Great inclination to perspire during the day.—Partial sweat on one side.—Copious, offensive night and morning sweats.—Perspiration only on the face and scalp.—Hysteria with amenorrhœa, etc. Melancholy, morose disposition.—Melancholy with crying and fear of death.—Melancholia after metastasis of the milk and constant flow of red lochia.—Melancholia of a woman.—Great inclination to laugh or to cry.—Peevishness.—Great anxiety about one's business, domestic affairs and health.—Despair about the salvation of his soul, and constant praying.—Melancholia religiosa.—Excessive uneasiness, anxiety and fear, as if in the head, with sleeplessness, despair about the salvation of her soul, fear, constant praying; she is beside herself, with anguish (in a girl). Great apprehensive anxiety in the region of the heart and pit of the stomach, with palpitation of the heart obliging her to undress, or urging her to suicide, etc.—Fear of supernatural appearances in the evening and night, with disposition to fly or hide himself.—Derangement of the mind in a woman in the eighth month of pregnancy. Distorted features, cold, gloomy, distrustful, taciturn, reserved, morose, deprived of sleep, delirious at night, with visions, desire to escape, heat in the face, thirst (in conjunction with *Ischuria*).—Monomania, she imagines that she has been guilty of adultery.—*Vertigo*.—Headache from derangement of the stomach.—*Hemicrania*: beating and stinging in the left side of the forehead, morning and evening, relieved by pressure and in the open air, aggravated in a room, when lying, stooping, or when moving the eyelids; the attack is followed by violent pains in the stomach, with sour or bilious vomiting succeeded by pinching, crampy and contractive colicky pains, in the case of a girl of 8 years, with mild and gentle temper.—Headache all over, as if between screws, with vertigo, heaviness, great languor, alternate redness and paleness of the face, nausea, tingling in the pit of the stomach, constrictive sensation above the pit of the stomach, anguish and restlessness, dryness of the mouth without thirst, aversion to food, shuddering, feeble, scarcely-perceptible pulse.—Cephalalgia, ascending from the nape of the neck and becoming seated in the vertebræ, boring, sticking and tearing, frequently shifting to the infrascapular region, attended with vertigo, roaring in the ears, pressure in the eyes with lachrymation, sticking in the limbs, with chilliness and heat.—*Cephalalgia*, the paroxysms setting in every 24 hours, with sticking in the vertex and burning in the eyes, nausea, dryness of the mouth,

with sensation, during motion, as if the brain were falling out.—Acute and chronic inflammation of the eyelids, with redness, swelling and increased secretion of mucus and acrid tears.—Inflammation of the eyes with profuse lachrymation and secretion of mucus from the meibomian glands.—Inflammation of the eyelids, with biting and burning, dimness of sight, copious secretion of mucus and tears, stiffness of the lids.—Catarrhal inflammation of the eyelids with coryza, and profuse secretion from the meibomian glands.—Hordeolum.—Ophthalmia from suppression of gonorrhœa.—Ophthalmia during measles. Catarrhal ophthalmia: pressure and burning in the eyes, attended with inflammatory swelling of the eyelids, photophobia and lachrymation. Catarrhal inflammation of the conjunctiva or eyelids, with increased secretion of mucus. Catarrhal ophthalmia with gastric-bilious symptoms. Catarrhal ophthalmia with agglutination of the eyes. Rheumatic ophthalmia. Serofulous ophthalmia. Erethism of the eyes. Incipient cataract. Simple light-grey cataract, with catarrhal inflammatory affection of the eyes and eyelids.—Amblyopia: almost complete blindness of the left, and diminished vision of the right eye, with frequent lachrymation in the wind and light, dim cornea, whitish-grey pupil. *Momentary obscuration of sight*, and starlike halo around the candle-light; on looking at a thing at candle-light, painful sensations are experienced in the right eye.—*Amblyopia amaurotica* (in two cases).—Hemeralopia.—*Rheumatic otalgia* evening and night, with hardness of hearing, humming, painfulness of the region of the ear, sticking and tearing in the head, confusion and heaviness of the same.—*Otitis and inflammation of the external meatus auditorius*, with tearing, darting pains in the interior of the ear.—*Otalgia* of children, with subsequent otorrhœa.—Catarrhal inflammation of the middle mucous membrane of the ear, with hardness of hearing, cracking in the ear when chewing, (inflammatory affection of the Eustachian tube)—violent nightly pains in the ear, occasioned by an inflammation of the outer meatus auditorius.—*Otitis* with otorrhœa after suppression of the measles.—*Otitis* of the outer and inner ear with synochal fever.—*Internal otitis* with violent tearing and beating pains.†—*Periodical otitis*.—*Otorrhœa* consequent upon acute exanthemata. *Otorrhœa* or *blennorrhœa* of the drum. *Inflammatory purulent otorrhœa*, with violent stitches in the ear.—*Hardness of hearing* from suppression of the measles. *Hardness of hearing* consequent upon a catarrh of the head after cutting the hair, or consequent upon suppression of exanthemata, of the menses, or attended with dysmenorrhœa at the critical age. *Hardness of hearing* with dry coryza. *Deafness* succeeded by otorrhœa. *Catarrhal and nervous hardness of hearing*, (in many cases, *Trinks*).—*Epistaxis*.—*Epistaxis* in typhus.—*Illusions of the sense of smell*. *Loss of smell and taste*.—*Neuralgia of the facial nerve*.—*Toothache*: drawing gnawing, tearing in the upper and lower molares, both decayed and sound, most violent at night, extending to the eyes and temples, also tearing and jerking pains, attended with hemierania, aggravated by warmth, in individuals of gentle and patient temper, and with delaying catamenia.—*Drawing pains* in a decayed tooth, the drawing being felt as far as the temples, most violent at night.—*Tearing, sticking toothache*, at times on the right, at others on the left side, aggravated by warmth.—*Toothache* intermitting entirely in the open air and returning in the room.—*Toothache*: fine stinging in the gums, with a drawing-jerking sensation in the nerve of the tooth, as if violently put upon the stretch and then suddenly let loose again, attended with a sensation of chilliness and paleness of the face: the pain sets in more frequently towards

† *Trinks* remarks that in some cases of true internal otitis Puls. had no effect, and that the inflammation speedily yielded to *Merc. sol.*

evening than in the morning, is aggravated by the warmth of the room and bed, relieved by cool air, excited less frequently by mastication than by picking the affected tooth.—Paroxysms of sticking and digging pains, worse in the evening and at night, not bearing warmth.—Paroxysms of sticking toothache, affecting whole rows of teeth, increasing towards morning.—*Troublesome toothache*: beating, tearing, fine stinging; sensation of soreness in the gums which bled readily; the pains were relieved by chewing, attended with rush of blood to the face, sensation as of flea-bites in the head and face, pain as if the hair were pulled out, sensitiveness of the scalp to the touch, pains in the left eye as if it would fall out, aggravation of the pains in the evening and at night, and sometimes in the daytime, with exacerbation by excitement, talking, attended with weakness, anguish, disposition to constipation, spasmodic complaints about the abdomen previous to the catamenia, coldness of the hands and feet, pains in the limbs.—Toothache, which is aggravated and excited in the wind, or every time he eats, particularly when eating anything warm, in the afternoon, evening, and at night, in bed, and by warmth generally; it is relieved by cool air and cold water.—Rheumatic toothache, the pains being generally sticking, and affecting a decayed tooth at night.—Angina: sore throat with dark, varicose distention of the vessels, with aggravation of the pains in the evening and afternoon, redness of the palate, tonsils, and uvula. (*Trinks* remarks of this indication by *Hartmann* that it is derived from theory, not practice; I, *Hempel*, do not believe that *Pulsatilla* will do much good in idiopathic angina faucium of any kind).—Angina faucium with ulcerative pain during deglutition, and sensation as if he had to swallow over a tumour, with blue redness of the uvula and the *velum pendulum palati*.—Sore throat when swallowing saliva and liquids, not when swallowing solid food, attended with frontal headache, general languor, and suppression of the menses.—Sore throat after influenza.—Sore throat: pain as if every part of the throat were raw and sore, more so between the acts of deglutition, with swelling of the tonsils and *ptyalism*.—Varicose swelling of the vessels of the mouth and fauces, impeding deglutition, and occasioning aching pains in the throat.—Indigestions and recent saburral derangement, the food remaining undigested in the *primæ viæ*.—*Gastric derangement*: appetite, aversion to food, white yellow tongue, bad taste as if one would vomit, bad smell from the mouth, pressure in the stomach after eating, tearing in the head.—*Gastric derangement* with and without fever.—*Gastric typhus* with and without fever.—*Gastric-venous* conditions with fever.—Hiccough with suffocative symptoms.—Vomiting, pressure at the stomach, roaring in the head after overloading the stomach.—*Vomiting of food* after every meal, vomiting of mucus.—*Hæmatemesis*.—*Cardialgia*, aggravated early in the morning, in the evening, and after a meal, also attended with compressive pain.—Gripping and gripping tearing in the stomach.—Stitches in the pit of the stomach as from an abscess, on touching the part.—Pain in the stomach as from subcutaneous ulceration, with vomiting, after eating pork.—The action of the stomach is completely paralyzed, with complete loss of appetite and consequent emaciation (in the case of a boy who had swallowed an icicle).—Pressure in the stomach, aggravated by eating fat, attended with sour eructations and vomiting, alternate constipation and diarrhœa, scanty menstruation.—Pulsation in the epigastrie region.—Hepatitis, with darting and drawing-tensive pains. Chronic susceptibility to hepatitis, and derangement of the secretion of bile with looseness of the bowels.—Abdominal spasms.—Ascites with amenorrhœa, leucorrhœa, etc. (in conjunction with other remedies).—*Plethora abdominalis venosa*.—Diarrhœa consisting of bloody mucus, preceded by pinching and cutting. Diarrhœa with inflamed moist eyes. Diarrhœa, consisting of bloody mucus, corroding the anus, preceded by flatulence and cutting

around the umbilicus, also gastric symptoms. Mucous diarrhœa. Bilious dysentery with slimy evacuations.—*Retention of urine* (in a little child).—*Affections of the urinary organs*: Urine with slimy sediment and frequently painful micturition. Tenesmus of the bladder. Constant urging to urinate. Incontinence of urine from paralysis of the sphincter of the bladder after parturition, attended with leucorrhœa. Enuresis nocturna. *Hæmataria*, preceded by cutting in the abdomen, shrinking of the scrotum and penis, burning in the region of the orifice of the urethra, rumbling in the abdomen, drawing through the testes.—Pains in both kidneys during micturition, with bloody, slimy, and purulent urine.—Retention of urine, with difficult and painful micturition in typhus.—Urine which leaves a reddish tinge and smells like manure. Gonorrhœa. Restored the gonorrhœal discharge in a case of ophthalmia gonorrhœica, with amelioration of this affection.—*Tearing-drawing pains through the spermatie cord*, extending to the testes which were not swollen, particularly at night and in the evening, with gonorrhœa and burning urine.—Orchitis.—Inflammation and swelling of the testes from suppression of gonorrhœa. Orchitis from contusion. Hydrocele.—*Inflammation of the prostate gland*, with pain and swelling in the region of the neck of the bladder, intermittent stream and spasmodic contractive pain after micturition, extending to the thighs.—Dysmenorrhœa.—Dysmenorrhœa, violent spasms with ineffectual urging to stool, troublesome pressing on the genital organs.—Delaying menses.—Suppression of the menses in young girls, in consequence of cold.—Suppression of the menses with paleness of face, spasmodic tension in the chest after slight emotions, spasm in the chest, constant chilliness even in summer and when warmly clad.—*Amenorrhœa* with leucorrhœa, vertigo, throbbing headache, fulness and pressure in the stomach, drawing aching pain in the uterus, painful micturition.—*Amenorrhœa* in persons with lymphatic constitution.—*Amenorrhœa* with troublesome sensitiveness of the eyes. Irregular menstruation, with headache, palpitation of the heart, leucorrhœa and menostasia.—*Amenorrhœa*, which comes on spontaneously, without being occasioned by dyscrasia, particularly when attended with nervous debility and irritability.—Abdominal spasms: violent pressing from the abdomen to the rectum, with scanty diarrhœic stools, and vomiting a few hours after the appearance of the scanty menses, which is attended with chilliness and languor.—*Menstrual colic*: cutting in the abdomen, pressure on the bladder and cutting during micturition, attacks of vertigo, loss of appetite and taste, too short catamenia, with discharge of black, viscous blood.—*Menstrual colic*: excessively-painful stitches in the right groin, cutting pains in the uterine region during the catamenia, first with discharge of blackish, lumpy, afterwards of bright-red blood; after the catamenia the mucous leucorrhœa reappears.—*Menstrual colic*: violent pains in the small of the back, cutting and contraction in the abdomen.—*Complaints at the critical age*: hæmoptœ, particularly at night, with shortness of breath, sticking in the left side of the chest and cold feet; painful swelling of the abdomen with œdema of the legs, pains in the small of the back.—*Metrorrhagia*, particularly at the critical age, the discharge of blood being at times profuse, at others intermitting and mixed with clots of blood.—*Metrorrhagia* in the evening and night, most profuse in persons given to reveries.—Leucorrhœa during pregnancy.—*In pregnant females*: melancholy, toothache, gastric complaints, colic, flatulence, abdominal spasms, pressing in the hypochondria, incarceration of flatulence, cutting in the bowels.—Seated pain in the impregnated uterus. Painfulness at a small spot in the abdomen, during pregnancy, in the region where the placenta is inserted, the pains being of a pulling-stretching kind, particularly at night when lying on the side where the pain is; on touching the part an ulcerative pain is experienced. *Violent abdominal spasms* in a pregnant fe-

male, with strong, painful urging to urinate, more when sitting than during motion.—Labour-like pain in the abdomen, in a pregnant female, with violent chilliness, small pulse, alternate heat and paleness of the face, dim eyes, white-coated tongue, loss of appetite, slow stool, sticking in the chest, labour-like pains in the uterus, some discharges of blood from the vagina, nausea.—*Constant urging to urinate*, with drawing in the abdomen, in the case of a pregnant female.—Spasms of the bladder, in pregnant females.—False labour-pains or rheumatic pains of the uterus.—Excessive after-pains.—Suppression of the lochia, with a burning feeling of fulness in the parts.—Puerperal mania.—Too short labour-pains.—Spasmodic labour-pains.—Suppression of the secretion of milk.—Puerperal fever.—Swelling of the breasts from weaning.—Swelling of the mammae, with burning tension or painful stitches and discharge of a thin, acrid milk in girls who have not yet menstruated, also in boys.—Excessive secretion of milk in lying-in females.—Deficient labour-pains.—*Delaying and deficient labour-pains*.—Deficient labour-pains owing to the large size of the foetus. Rare, feeble labour-pains, with violent pains in the small of the back.—Excessive and too long-continued after-pains.—Pulsatilla is a valuable palliative in cancer of the womb, it ranks with *Scilla* and *Laurocerasus*, (according to *Rau*, also with *Rhus* and *Bell.*, according to *Hartmann*).—Chronic coryza, with green-yellow, purulent discharge, leucorrhœa and other complaints.—Affections of the mucous membrane of the bronchial passages, with increased secretion.—Catarrh of the lungs with frequent mucous expectoration.—Mucous phthisis.—*Catarrhal cough* with expectoration of a yellow, thick, clotty mucus, particularly in the morning, attended with hoarseness, dryness and painful soreness in the throat, burning pain in the chest as in consumption, dyspnœa, debility, emaciation, fever with burning heat, thirst and sweat; the cough commences in the evening, continues through the night; the cough is relieved by sitting up, it is a violently racking cough, attended with discharge of mucus, vomiting of food or bile; the cough arises from taking cold in consequence of drinking cold water. Catarrhal night-cough.—Violent, dry, catarrhal, spasmodic night-cough.—Dry, short, frequent cough, with feeling of dryness and tickling in the trachea.—Spasmodic cough, evening and night, from constant tickling in the trachea, with dryness in the same, pain in the chest, dyspnœa, oppressive anxiety in the chest, palpitation of the heart.—Concussive spasmodic cough, early in the morning and at night, with arrest of breathing, retching, vomituration and vomiting.—Whooping cough: violent paroxysms of dry cough at night, relieved by raising one's self in bed, attended with vomiting of mucus and food.—*Hæmoptœ*.—Pneumonia of children: very quick, short breathing, with cough which is frequently dry at first and afterwards becomes a little loose, accompanied with painful expression of countenance, very quick, small pulse, burning skin with copious sweat all over, subsultus tendinum, starting as if in affright, afterwards weeping, violent thirst with moist tongue, the stools are at times thin, at times they delay, frequent tossing about, bland delirium, anxiety, ill-humour, scanty red urine.—Neglected or chronic forms of pneumonia, with dull, aching, sore or ulcerative pains in the chest, with dryness and roughness in the chest, and tenacious mucus in that part.—Catarrhal, pneumonic-bilious conditions of the lighter kind.—*Typhoid pneumonia*, also in pneumonia from measles, chlorosis, pituitous habit, sudden suppression of the menses, from chronic catarrh; the disease runs on very slowly, and is attended with dull-aching sore pain, dryness and roughness, and tightness of the chest. Pulsatilla is likewise useful in bilious pneumonia.—Phthisicky condition.—*Dyspnœa* with spasms in the chest and abdomen, even unto suffocation, attended with death-like anguish, palpitation of the heart, cold hands and forehead, in consequence of suppression of the menses by a cold.—

Asthma in a child of one year, occasioned by the vapour of sulphur.—Nightly suffocative fits with cough and expectoration of mucus.—Affections of the heart, with anomalous menstruation, accompanied with affections of the trachea and bronchi.—Paroxysms of palpitation of the heart, with obscuration of sight and vanishing of the senses, trembling of the limbs, particularly when arising from fright, chagrin, joy, (in conjunction with Aconite).—*Affections of the right ventricle*: also with insufficiency of the bicuspid valve in consequence of endocarditis of the left ventricle, and excessive fulness and increased activity of the right ventricle.—*Ischias nervosum* Cotunni posticum, with atrophy of the limb, (in conjunction with silic. and calc.).—Acute rheumatism of the knee-joints with exudation.—Arthritic nightly pains in the lower limbs, with anasarca of those limbs.—Arthritic affections: tearing-sticking pains in the feet with inflammatory swelling of the tarsal and carpal joints.—Inflammation of the knee, with fleeting darting pains—Rheumatic swelling of the knee, with tearing and lancinating pains, particularly at night.—*Darting pains* in the knee, succeeded by a shining, white, homogeneous swelling of a doughy feel, with stiffness and immobility.—Contraction of the ham-strings.—Varices of the legs with drawing and tearing pains.—Hot dropsical swelling of both legs in consequence of the sudden suppression of an intermittent fever.—Chilblains on the toes with burning pains, and hot, blue-red swelling.

## SYMPTOMS.

**Mind and Disposition.**—\**Gloomy and melancholy.* °*Melancholy, with weeping, sadness, and apprehension of dying.* Sad and desponding from some disagreeable news. \**Silent mood*, °also as if deranged, with cold, sombre, strange look, sitting silently with folded hands. Moaning, without complaining about anything.—°*Disposed to weep or laugh.*—°*Despairs of his salvation and prays constantly.* \**Solicitude about his health.* \**He is full of care about his domestic affairs, early in the morning.* \**He is unable to think of his affairs, without grief, early in the morning.* The child moans and groans when it wants to be carried or to have an evacuation.—Towards evening he began to tremble; \**he was assailed with a fear of ghosts, four evenings in succession*; in the daytime he was likewise attacked with anguish, trembling, and a feeling of a flush of heat over the whole body, although hands and face were pale and cold. Morning-dream with anxiety; after waking the anguish continued, accompanied with apprehensions and discouragement, on account of an unfounded but disheartening vision of the fancy, (the same which he saw in his dream).—*Anxiety*; he has no rest, (for one hour). *Anguish*; thinks he will be ruined. \**Anguish in the region of the heart, even unto a desire for suicide*, -with a sensation in the pit of the stomach as if he would vomit. \**Anxiety, as if he would have an apoplectic fit*, -in the evening after lying down, with chilliness, noise in the ears like music, with jerking in the fingers of the right hand. *Tremulous anguish, as if death were near.* °*Fear of ghosts at night, with desire to hide one's-self and to escape.*—°*Anthropophobia.* °*Suspicion and distrust.* °*Timid, whining mood.* °*Mild and yielding.*—Uneasiness of mind, as if one did not do one's duty. Excessive *irresoluteuess*. He flees from work, is irresolute, beside himself, with panting breathing. He wants to do this or that kind of work, and when he is offered it to do he refuses.—\**The child wants now this, then that, even when good-humoured.*—Is *envious, grcedy*, would like to have everything to himself.—Aversion to labour, with ill-humour. \**Pecriness, which increases to tears* when he is interrupted in his business, (in the afternoon). Sullen mood, (after several hours). Cries a good deal, and feels greatly dissatisfied, early in the morning after waking. Ill-humour and discontent the whole day, without any cause. Gloomy, ill-humoured, chilly. \**Hypochondriac peevishness*; *finds*

*fault with everything that is said.* The child stretcheth its limbs from ill-humour. Excessively peevish in the evening, toward sunset; he does not like to answer any questions. °Disposed to feel sad and aggrieved internally. \**He is disgusted with everything.*—Her head feels so still, and the world around her seems to her so empty, that she imagines she is alone in the world; she did not wish to speak to anybody; as if everybody were a stranger to her. The things around him are not indifferent to him, but he does not wish to heed them. Does not take any pleasure in anything, but on the other hand is not displeased with anything. Exceedingly whimsical, and put out with everything, even with himself. (For the mental affections cured with Puls., see Clin. Observations.)

**Sensorium.**—°Insensibility, he knows not where he is, or what he is doing. *His head is full of ideas, but they change.* °*Delirium*, also violent, with loss of consciousness. °*Frightful visions*, with fear and desire to escape.—Hurriedness. Want of attention, is precipitate in his actions, does something different from what he intends. Has great trouble in finding the proper expressions while talking. He omits single letters when writing. °Imbecility. \**Intellectual labour fatigues him.* In the evening he is more disposed to employ his mind than at other times of the day.†—He is unable to divert his mind from an idea.—*Gloominess of the head*, with vanishing of ideas. Gloominess of the head with vertigo, and excited by motion. Painful gloominess on entering a warm room.—*Stupid feeling in the head*, with heaviness of the head. Stupid feeling as if from loss of memory. Stupid feeling with soreness of the eyes, or *bruised pain in the forehead*.—\**Confusion of the head*, \**with pain as after intoxication or watching*, —also with sensation in the whole body, as if one had not slept enough. The head feels as if it were a lantern. °Emptiness of the head with great indifference.—Paroxysms of intoxication after dinner, with vertigo and heat.—Reeling as if one would fall to one side. *Giddy staggering when walking*, particularly in the evening, also as if from intoxication, with heat in the head, and pale, but not hot, face.—\**Vertigo as if intoxicated.* Vertigo, as after turning for a long time in a circle, accompanied with nausea. °Vertigo on raising one's self in bed, early in the morning. °*Vertigo in the evening.* °*Vertigo on rising from a seat.* °Vertigo during a walk in the open air. °Vertigo after dinner. °Vertigo with obscuration of sight. °Vertigo with roaring in the ears. \*Aggravation of the vertigo by talking and meditating. Vertigo as if the blood were mounting to the head; rapping sensation in the head, with sensation of repeated and short diggings-up. Fits of vertigo, intoxication, heat. \**Vertigo, especially when sitting.* Vertigo early in the morning when rising, he is obliged to lie down again. Vertigo when walking in the open air,‡ going off by sitting. Turning sensation and stupid feeling in the head, only when sitting, and as if drowsy. Vertigo; he imagines he is not able to stand firmly, (in the first hours). Vertigo; he imagines he is not able to lay hold of a thing, (in the first hours). \**Sort of vertigo, when turning the eyes upward*, as if he would fall, or as if he were dancing. \*Vertigo when stooping, as if he would fall, as if intoxicated; afterwards disposition to vomit. \**Vertigo when stooping, scarcely permitting her to rise again.* \**When stooping, his head felt heavy, as if he were unable to raise it again.* Vertigo when walking and stooping, as if the head were too heavy, with a somewhat turning sensation, which was likewise felt when lying. \**Sensation in the head, when stooping, as if he would fall forward.* When walking he staggers as if giddy, without, however, being so, in the evening, (after three

† Curative effect.

‡ One of the alternate symptoms of Puls., occurring after its opposite, and less frequently; in this case the symptoms are diminished in the open air, or disappear entirely, and re-appear when sitting, or when in a state of rest.

days). Gloomy sensation in the head and vertigo, excited by motion. Is unable to carry the head erect, is obliged to lie down, and is nevertheless unable to remain in bed.† °*Apoplectic fit*, with loss of consciousness, blue redness and bloatedness of the face, loss of motion, violent beating of the heart, collapse of pulse, and rattling breathing.

**Head.**—Is unable to raise the head, or to carry it erect. *Heaviness of the head.* Heaviness in the head; he is unable to bear the glare of a light.‡—The head feels gloomy, and the forehead feels as if beaten in two.—Headache as if the forehead and temples would burst, early in the morning, in bed. \*Headache *when moving the eyes, deep in the orbits, as if the forehead would fall out and as if the frontal bone were too thin*, with a gloomy feeling in the head, in the evening. \**Hemicranii*, as if the brain would burst and as if the eyes would fall out. Headache on waking, and a little while after; the brain feels oppressed and dull, or as if torn, as it does after taking brandy. The head feels stupid, the eyes ache. The head feels stupid and heavy. *The head feels rather stupid, and the head aches as if the forehead felt bruised.*—Creeping pain in the forehead.—Bubbling sensation in the head, at night; he heard pulsations in the head distinctly. Headache, resembling pulsations in the brain. \**Beating headache*, about midnight. Beating in the forehead, when stooping, and when exerting the mind, disappearing on walking, in the evening. Beating headache, diminished by external pressure. °Stinging beating with rush of blood to the head.—*Aching pain in the head when stooping.* Aching pain in the whole forehead, only when walking. Aching pain in the occiput; with frequent heat and constant exhalation of the body.—Tearing headache in the left side of the occiput, early in the morning.—After lying down to sleep, he experiences a tearing headache in that side of the head on which he does not rest.—°*Tearing in one side of the head, also in the ear and teeth.* \*Jerking tearing, or drawing-darting tearing, also particularly in the temples, as if they would be torn asunder. Tearing with sticking, particularly in the temples.—Cutting headache.—Drawing headache in the occiput above the nape of the neck, early in the morning. Lachrymation of one eye, with drawing headache. °Drawing pain extending into the ear and teeth. Drawing pain with heaviness and creeping in the brain, attended with failure of sight and hearing, and succeeded by chilliness.—Tensive and drawing pain in the forehead, over the orbits, increased by raising the eyes. \*Headache: *the brain feels tight*, with a boring pain in the vertex. Pinching pain over the eyes, which becomes worse when looking at a thing intently. Constrictive pain in the temples.—Boring pain from within outward, with dull stitches.—Single, sharp shocks or jerks in the right hemisphere of the brain. *Stitches* from the occiput through the ears. Stitches in the occiput, worse when lying, passing off on raising the head. Stitches through the whole brain, after dinner, and continuing until bed-time, mingled with shuddering and fainting fits. Stitching in one side of the head. Stitches in the temples. Stitches through the forehead, from within, in the evening. Boring sticking with obscuration of sight, humming in the ears and vertigo. Humming in the head. Headache from time to time, as if a keenly-painful wind were rushing through the brain. Pulsative sensation in the brain, when walking, like the snapping of an electric spark.—*Headache*, on lying down to take the siesta, on the side on which he is not lying. °Headache ascending from the nape of the neck, where he feels a contractive sensation. Headache extending to the eyes, with pain of the eyes,

† A sort of mediate symptom between those symptoms which appear in the sitting position, and those which appear during motion.

‡ Alternate symptom of obscuration of sight.

pressure in them, and lachrymation. Headache, with desire to lay the head on one side. \**Headache as if from intoxication and watching.* \**Hemicrania*, -also with nausea and vomiting. \**Sticking hemicrania.* Frequent attacks of headache, aggravated by a walk in the open air. Headache in the evening, as if from dry coryza, succeeded by dry heat in bed, with excessive drowsiness, delirious fancies, and almost waking dreams. \**Headache, as if from overloading the stomach, or from eating fat meat.* °Headache from a cold. °Headache from abuse of Merc.—°Headache in the evening or early in the morning in bed, or at night. °Aggravation of the headache, mostly in the evening, and continuance of the headache through the night. °Amelioration of the headache by meditation or by compressing the head.

**Scalp.**—Drawing pain on the scalp, on rubbing the hand over the hair from before backwards.—Biting *itching* on the scalp. Small *tumours* on the hairy scalp, with ulcerative pain. Large pustule on the occiput, with tearing pain. Pimples on the forehead.—\*Sweat on the hairy scalp and face.

**Eyes.**—Pain in the eye as if scraped with a knife, moving from the head downwards. Violent tearing, boring and cutting in the eye.—\**Pressure in the eyes*: in the right eye, proceeding from the head, with pain in the head and discharge of a tear. Pressure in the left eye. Pressure in the internal canthus. Pressure in the eyes as if from heat. *Burning* pressure, particularly in the morning and evening, or as if from a little hair in the eye. \**Pressure as if from sand*, -particularly when reading.—\**Sticking* in the eyes when shaking the head, with discharge of a tear. °Pressure when looking in the light and particularly the light of the sun. Pressure in one or the other eye, with inability to bear the glare of a candle or to open the eyes wide.—*Itching* in the inner canthi after sunset, with pressure and prickling after rubbing. Pressure in the outer canthus, in the evening, with agglutination of the lids towards morning. Stinging itching. *Burning and itching* in the eyes, inducing rubbing. Itching gnawing and burning in the lids, in the evening. Biting sore pain in the inner canthus, in the evening.—\**Inflammation of the eyes* (for the varieties cured see Clin. Observ.). \**Inflammation of the margins of the lids, also with swelling*, -and with discharge of a tear towards morning. °*Inflammation of the meibomian glands.* Inflamed red spot in the whites, near the cornea. \**Redness and swelling of the lids.* \**Stye*, -also with inflammation of the white, at times in one, at times in another canthus, also with drawing tension in the stye on moving the facial muscles, and ulcerated nostrils. °*Trichiasis* on the upper lid.—°Obscuration of the cornea? °Cataract.—\**Dryness of the eyes* -with pressure as from a foreign body, early in the morning. Dryness of the right eye, in the evening, with dimness of sight, as if through mucus. Dryness of the *lids*, particularly when he is sleepy.—\**Lachrymation in the open air* -also with dimness of sight. \**Lachrymation* in cold air, -in the wind. *Blar-eyedness.* °Sharp, biting, corrosive tears.—Abscess in the canthus as if a fistula lachrymalis would form.—Agglutination of the lids in the morning, or of the canthi.—Twitching of the lids.—Bloatedness of the eyes, with sensation as if one were squinting.—The pupils at first contract, afterwards dilate.—\*Dimness of sight, as if through mist, particularly on rising from a seat, and on walking. Dimness of sight on waking, in the morning and after dinner, *as if something were adhering to the cornea, which can be wiped off.* °Dimness of sight on getting warm by exercise. Obscuration of sight, on rising in the morning. Paleness of sight.—Obscuration of sight, with inclination to vomit, and paleness of the face. Obscuration of sight as if from giddiness, on standing up or commencing to walk after sitting. Frequent paroxysms of obscuration of sight.—°Incipient amaurosis. °Hemeralopia. Diplopia. °Sees better at a

distance than formerly.†—Luminous vibrations before the eyes. \**Fiery circles* before the eyes, -increasing in size, towards noon, going off in the evening. Star-shaped halo around the flame of a candle.

**Ears.**—Pain in the ear as if something would press out. °*Otalgia*, also inflammatory. \**Darting* through the ears, -also tearing darting. Darting in the outer ear succeeded by heat. \**Stinging* in the ears, -also itching stinging. On blowing the nose, *air penetrates into the ear*, attended with a feeling of distention and stitches which dart towards the eye.—\**Hardness of hearing* as if the ears were stopped up. Hardness of hearing as if the ears were stopped up, with trembling and sweat on the back, returning every other hour. (For the kinds of deafness cured, see Clin. Obs.) Heat, redness and swelling of the outer ear, °also of the inner.—\**Pus flows out of the ears*, also after measles and other exanthematous diseases.—Itching deep in the ear. Itching in the right ear, afternoon and evening. Itching pricking in the internal ear. Painful glandular swelling between the antihelix and the articulation of the lower jaw. Scurfy eruption on the antihelix with a burning smarting pain, emitting water, accompanied with a glandular swelling lower down in the neck, painful to the touch.—Stinging in the parotid gland.—Cracking in the ear when moving the head or the body. *Rush of blood* to the organs of hearing. Heat and sweat of the outer ear.—Pulsative murmuring in the ear. Frequent buzzing in the ear. \*Noise in the ear as if caused by the wind or by the rushing of water, after four o'clock in the afternoon. Tremulous sounding in the ears, as when one strikes against an iron bar. Ringing in the ears, (from the fourth to the eighth hour). Chirping in the ears as of crickets, early in the morning when in bed.

**Nose.**—Pressure in the root of the nose. (Pain in the root of the nose when stooping, as if an ulcer would form). Sensation in the left nostril, as if an ulcer would form. *Ulceration of the external wing of the nose, emitting a watery humour.*—Darting pain in the nose. Smell in the nose, early in the morning, as of old coryza.—Illusion of smell; he imagined he was smelling coffee and tobacco, even in the open air.—\**Hemorrhage from the nose -with dry coryza.* Blows blood out of the nose early in the morning. Dry coryza, with ulcerated nostrils.—\*Green, fetid discharge from the nose.—Obstruction of the nose as in catarrh, in the evening when retiring; in the morning a thick, yellow, opaque mucus is blown out of the nose, as in old coryza.—Continual tickling in the nose. *Sneezing*, also in the evening when asleep. Sneezing early in the morning when in bed. *Coryza* also with loss of smell and taste.

**Face.**—\**Pale face.* °Yellowish complexion. °Alternate redness and paleness. °Red, bloated face during the febrile heat. °Puffed, blue-red face, during a fit of apoplexy. Twitching of the muscles and cheeks.—Warmth in the face, also to the prover only. \*Heat in the face, also particularly in the evening, -or at times with burning redness and subsequent paleness. Shuddering on one side of the face. \*Sweat in the face and on the hairy scalp.—Painful sensitiveness of the skin of the lips and face, as if sore, when touching it. Tightness of the face and of the fingers when touching anything, as if the parts would swell.—°Erysipelas in the face, with stinging and subsequent peeling off of the skin.—Red blotch in the region of the malar bone. Red, hard elevation in front of the right ear, with burning contractive pain.

**Jaws and Teeth.**—The epidermis peels off near the outer border of the lips, until the raw flesh becomes visible. The epidermis of the lips becomes cracked. Twitching in the lower lip for two days. The lower lip is swollen and cracks in the middle, with a tensive pain. Itching in the region of the

† Curative effect, after taking a large dose.

chin, especially in the evening.—(Drawing tearing pains in the lower jaw) † Contractive (astringent) pain in the jaws, as if occasioned by an acid, accompanied with shuddering and cold sweat in the face. Small painful glandular swelling between the articulation of the jaw and the antihelix. Pain of the submaxillary glands, on deglutition, as if they extended into the throat and were raw and sore. Boring or drawing tension in the submaxillary glands.—°Rheumatic toothache. °Toothache of pregnant females. °Toothache from cold, particularly in the spring, and generally attended with otalgia, hemicrania, chilliness, and pale face.—(Sticking beating toothache, at four or five o'clock in the afternoon, aggravated by cold water). \**The toothache comes on again every time he eats.* The toothache commenced at two o'clock in the night, and did not allow him to lay his head on a cold place in the bed; a sort of sticking-digging, first in the teeth of the lower, then of the upper jaw, shifting from one root to another, coming on again at noon. Stinging toothache relieved by eating. Stinging-gnawing toothache in the gums, especially towards evening, aggravated by the warmth of the bed, *relieved by exposing the tooth to the cold, open air, and removed by sleep in the evening.* Sticking pain in the posterior molar tooth, aggravated by opening the mouth, from two to six in the afternoon. \**Toothache comes on as soon as he takes anything warm in'to his mouth.* Drawing-jerking toothache, aggravated by drinking anything cold. Darting in the molares, with a slight swelling of the gums. (Darting toothache, especially early in the morning, *relieved by cold water, after having been warmed in the mouth, not increased by chewing, but excited by picking the teeth.*) Darting toothache, from six in the afternoon until eleven at night, preceded by heat in the head with thirst; the toothache is followed by sweat. \*Drawing toothache, as if the nerve were put upon the stretch and let loose again suddenly, °also with fine stitches in the gums.—°Gnawing drawing in the teeth.—Tearing toothache, °also sticking tearing.—°Digging or beating in decayed teeth, with drawing extending to the eye.—Pain in the teeth as if they would be pushed forward.—The tooth is painful when chewing or biting.—The toothache increases in the wind.‡ \*The teeth are loose early in the morning.—*The gums are painful as if sore.* The internal side of the gums is painful, as if corroded. Sensation of swelling on the posterior side of the gums, which, however, did not exist; he experienced a burning sensation in that region whenever he inserted anything warm or cold into his mouth.

**Mouth.**—*Bad smell from the mouth*, early in the morning, or also in the evening, in bed. *Putrid* smell early in the morning or also at night.—*Badly smelling mucous coating in the mouth* early on waking, also with dryness of the mouth and throat.—Dryness of the mouth, early in the morning, particularly of the tongue, or of the palate and lips at the same time, afterwards changing to tenacious mucus.—Accumulation of saliva in the mouth, as after drinking vinegar. Frequent discharge of watery saliva. Ptyalism, also with inclination to vomit. The saliva tastes sweet. The tongue feels broader than usual. \**The tongue is lined with a tenacious mucus as with a kind of fur.* White tongue, with bad taste in the mouth, early in the morning. Painful vesicle on one side

† The so-called tearing pains of Pulsatilla are generally a short-lasting, drawing tension, which always terminates in a darting analogous to tearing, somewhat as if a nerve were put upon the stretch, and then let loose again suddenly, causing a painful jerk. Hence the terms "single, tearing jerk," "drawing jerking," etc.

‡ The increase, or the appearance of the symptoms, in the cool, open air, is a rarer alternate effect than the appearance of the symptoms in warmth, especially the warm air in the room.

of the tip of the tongue. Sensation in the middle of the tongue as if it were burnt and insensible, even when the tongue is moist, at night and early in the morning. The tongue is parched, and coated grey. Pharynx: sore throat; stitches in the back part of the throat, between the acts of deglutition, none during deglutition, °or particularly during empty deglutition. Stinging sore throat. °Pressure and tension in the throat on swallowing. Sore throat: cutting pain in the throat. Sore throat: pain in the side of the palate when touching it, or when talking, as if there were a painful pimple with dilatation of the pupils, early in the morning. Painless sensation, as if the epiglottis were covered with tenacious mucus, or were swollen. Sore throat: *\*sensation on swallowing, as if the back part of the throat were narrower than usual or closed by swelling.* Sore throat: sensation as if the pharynx were swollen, now low down now high up. Sore throat: pain when swallowing, as if the submaxillary glands were protruding into the throat, and as if the protruding part were sore and raw. Sore throat, when swallowing the palate feels sore, as if raw. *The back part of the throat is painful as if it were raw,* accompanied with a drawing pain in the cervical muscles. Sore throat: rawness and sore feeling in the throat, between the acts of deglutition, and as if the throat were too dry, early in the morning. °Burning and cutting during deglutition. Sore throat: *scraping and raw sensation* in the throat, as after violent vomiting; he does not feel anything when swallowing; early in the morning the throat was dry. Sore throat: *\*when swallowing he feels as if the throat were swollen, and as if the trachea were rough.* °Pharyngitis (see Clin. Observ.).—Difficulty of swallowing, as if from paralysis of the muscles of deglutition. Choking pain in the pharynx, as from swallowing too large a morsel. Dry throat after midnight, or early in the morning.—Intolerable feeling of dryness in the throat, extending as far as the tip of the tongue (without any dryness being visible), with thirst; he is, however, unable to drink much, on account of a desire to vomit, which is excited by the drink. Early in the morning the mouth and throat feel dry, and are lined with an insipid flat-tasting mucus, with a fetid smell from the mouth, which he does not perceive himself.

**Taste and Appetite.**—*\*Slimy taste in the mouth, and inclination to vomit, early in the morning.* (Slimy, saltish-bitter taste in the mouth, early in the morning, not without appetite.) Taste as of putrid herbs in the back part of the throat. *\*Taste as of putrid meat in the mouth, with inclination to vomit, or especially early in the morning when hawking up.* Taste as of pus in the mouth occasionally, especially in the morning. Nauseating taste in the mouth, as one experiences before breakfast when rising early. *Empyreumatic (pungen!) taste in the mouth.* Earthy taste in the mouth, with inclination to vomit. Flat taste in the mouth, as if one had eaten earthy things. *Bitter beer has a nauseating sweetish taste.*—*\*Nauseating taste from smoking tobacco.* The tobacco has no taste when smoking, but does not cause any loathing, towards evening. Bitter taste in the mouth in the evening at six o'clock.† Bitter taste in the mouth early in the morning, going off after a meal. He has a constantly bitter, *\*bilious taste* in the mouth, especially after a meal. Bitter taste with desire for lemon juice. *\*Every kind of nourishment tastes better to him;* afterwards he feels chilly and a cold sweat breaks out. *Bitter taste in the mouth, in the evening,*

† Rarely [and at most only in the evening and morning] does Pulsatilla occasion a continually bitter taste in the mouth; the bitter taste which Pulsatilla occasions most frequently is either occasioned while drinking, or while eating and chewing, especially brown bread, or it makes its appearance after the beverage or food has been swallowed; this kind of bitter taste is an alternate symptom. The bitter and sour eructations are alternate symptoms, although both of them are primary effects.

*after drinking beer.* Aversion to milk, early in the morning, although it tasted well to him. Milk has no taste in the morning. The food she takes has an excessively salt taste to her (except brown bread); several hours after eating, a scraping, salt taste continues to ascend in her throat. Bitter taste in the mouth after taking coffee. Wine has a bitter taste. Aversion to butter; it has a bitter taste to him. Bread and meat have a bitter taste. Brown bread tastes bitter, not the other food. *\*Bread has a bitter taste while chewing it;* -the bitter taste disappears as soon as the bread is swallowed. Bitter taste in the mouth, a quarter of an hour after eating, the appetite being good. The taste in the mouth is somewhat bitter, especially early in the morning, and some time after a meal; the food, however, had a good taste. Bitter taste after vomiting. Beer has a bitter taste in the morning; it leaves a sour taste afterwards. Bread has a sourish taste; she finds it too dry. Sourish taste in the mouth after a meal.—*\*Loss of appetite, the taste being otherwise pure and natural.* Aversion to meat and stale bread. *Diminished taste of every kind of food.* Meat has no taste. Fresh meat has a putrid taste. He has some appetite, but bread, butter, and beer have little or no taste; stewed prunes are the only things which have a good taste to him. *\*He does not care about any warm food.* He only cares about butter, bread, and fruit. Want of appetite, on account of the food being tasteless, and the stomach feeling full.—Increased appetite in the evening.—Early in the morning when rising, a sort of gnawing sensation in the stomach, as one experiences after having suffered hunger, going off after eating. Gnawing sensation in the stomach like canine hunger. Canine hunger immediately, but passing off soon. *\*Desires food, but does not know what; does not relish anything he eats.—\*Is hungry, but has no desire for any particular kind of food.—\*Loss of thirst.* Desire for water, particularly in the evening. Desire for beer, particularly early in the morning, or with disagreeable taste of the beer. *Desire for spirituous drinks or tonics.* °Thirst, with putrid eructations. Thirst occasioned by an intolerable feeling of dryness from the throat to the tip of the tongue, in spite of which he is able to drink but little, because drink excites an inclination to vomit.—Nausea with inclination to vomit, which ascends in œsophagus and pharynx with a very disagreeable sensation. Bread and meat occasion an inclination to vomit. Intolerable nausea with inclination to vomit, without vomiting. Inclination to vomit, with chilliness. Nausea, with inclination to vomit, only in the throat, not when swallowing. Nausea, with inclination to vomit, when on the point of taking food. Smoking tobacco causes an inclination to vomit in persons who are used to tobacco. Excessive aversion to smoking. Nausea, with inclination to vomit when slumbering or sleeping, although he has an appetite even for brown bread. Nausea towards evening, after a walk in the open air, with salt or sour vomiting. *Sensation of nausea and inclination to vomit in the epigastric region,* especially after a meal. *Inclination to vomit, with grumbling and rumbling in the epigastric region.*—Vomiting of the food which had been taken a long time ago. Vomiting of food in the evening; afterwards bitter taste in the mouth and dullness of teeth. Nightly vomiting, with stitching drawing pains in the back in the direction of the scapulæ. Vomiting of a small quantity of food before midnight, almost without any nausea. *\*Short vomiting of bile.* Rumbling and movements in the abdomen, accompanied with pinching pain, and followed by the ascension of humid qualms in the throat. Nausea and inclination to vomit, with accumulation of mucus in the mouth, which soon subsides and gives way to sour taste. °Nausea and inclination to vomit, evening or night, or with tingling in the pit of the stomach.—*\*Waterbrash.—\*Salt or sour vomiting,* in the evening, after a walk in the open air, and with nausea. °Bitter-sour vom-

iting. °Bitter vomiting early in the morning. \*Vomiting of mucus, -also particularly in bed after supper, discharging with great exertions green, watery, and sour substances, causing a burning in the œsophagus. °Vomiting *after every meal*, -or long after the meal. °Hæmatemesis.—*Before the vomiting*: °Chilliness. °Stitches in the ear. °Pale face.—*After the vomiting*: Burning in the œsophagus. *Bitterness of mouth*. Loss of appetite.

**Gastric Symptoms.**—Irresistible heaviness at dinner.—*After a meal*: \*Eruptions *tasting of the ingesta*, also with subsequent inclination to vomit. °Pressure in the pit of the stomach. Pain in the stomach. °Heaviness of the head. °Stiffness of the neck. °Shortness of breath. Gulping up. \*Nausea, with disposition to vomit. \*Vomiting. °Vexed, melancholy mood. °Laughing and weeping.—(For the gastric derangements cured by Puls., see *Clin. Obs.*).—Nausea and qualmishness in the stomach after taking milk, early in the morning. °Pressure at the stomach after eating bread. Eructations after eating cake, tasting of old, rancid tallow. Sour eructations after taking coffee, or bitter taste early in the morning. Tension in the feet, at breakfast, from eating a little too much. Loud eructations. \*Frequent eructations, particularly after a meal. \*Frequent *eructations tasting of the ingesta*. Ineffectual eructations. \*Sour eructations, also particularly early in the morning. \*Bitter bilious *eructations*, also particularly in the evening. Eructations tasting of putrid meat, after a meal, with subsequent disposition to vomit, and putrid taste in the mouth.—Sensation as if a worm were creeping along the œsophagus.—*Rising of the food*, as if it would be vomited up again.—Gulping up of a bitter fluid. Gulping up of a sour substance, after drinking coffee. Gulping up of a watery substance, preceded by a sensation in the pit of the stomach, as if something were torn loose in that region, with pressure there during an eructation.—\*Hiccough, -with suffocative paroxysms.—Hiccough when smoking. Hiccough after drinking. Hiccough during the night's rest.—\*Nausea, -as if arising from great heat of the body. Nausea, as if one had drunk oil, with loathing. \*Nausea while eating, the food becoming repulsive.

**Stomach.**—Feeling of anxiety in the region of the stomach.—\*Pain in the pit of the stomach during an inspiration. °Pain on pressure. Pain after eating. Gnawing in the stomach as if hungry. Aching, afterwards darting pain in the pit of the stomach. Violent pressure in the pit of the stomach, early in the morning, mingled with inclination to vomit. Aching crampy or choking pain in the pit of the stomach, arresting the breathing, in the afternoon. *Aching-drawing pain in the pit of the stomach, early in the morning*, passing into the side of the chest as a sticking pain, and lastly into the back as a tearing. Sensation of weight in the stomach, as if a stone were lying there, early in the morning on waking. Pressure in the stomach and flatulent colic, immediately after supper, followed by nausea and inclination to vomit. Tension in the region of the stomach, in the forenoon, going off by motion. Tension from the pit of the stomach to the chest.—°Cardialgia, (see *Clin. Obs.*).—Jerks from the stomach to the throat with tensive pain in the throat, anxiety and a feeling of internal heat, which passes off after a meal.—Gripping-tearing in the stomach, early on rising, as after long fasting, going off after breakfast. Gripping in the pit of the stomach.—°Tingling in the pit of the stomach.—Stitches in the pit of the stomach when missing a step on an uneven pavement, etc. Beating in the region of the stomach. \*Perceptible pulsation in the pit of the stomach.—°*Gastritis?* *Hypochondria*. °Increase of pain in the hypochondria and pit of the stomach, during pregnancy. Darting and pricking in the infracostal region, as if there were an ulcer extending to the small of the back. Contractive and clawing sensation in the epigastric and

the hypochondriac regions, as if the flatulence became incarcerated in that region (especially after a meal); the sensation afterwards passes into the chest and arrests the breathing. Drawing-tensive pain in the hypochondria.—°Hepatitis? °Sticking in the region of the liver, also particularly when walking.—°Diaphragmitis.??

**Abdomen.**—°Colic, relieved by rest, aggravated by motion. Colic after drinking, particularly in the evening. Colic only when walking. Colic in the evening, also with rumbling in the abdomen.—Feeling of emptiness in the abdomen, as if all the viscera had been taken out. Fasting sensation, with pinching and bubbling as if something were fermenting. Colic as if diarrhoea would come on, with natural stool.—*Pressing* in the abdomen. Disagreeable sensation of oppressive tension in the abdomen, as if full, hard, as if neither stool nor flatulence could be passed, although both are passed, though slowly and with difficulty.—°Abdominal spasms, particularly in pregnant females.—*Tearing* in the abdomen. *Gripping*, deep in the left side, obliging one to bandage the abdomen firmly.—Pinching in the epigastrium. Pinching-sticking pains in the epigastric region, with flatulent colic, in the morning. Pinching in the whole abdomen. Pinching in the morning, with chilliness and heat. Cutting pinching in the hypogastrium with soft stool. Pinching attended with stitches that strike into the penis, frequent thin stools and violent desire for beer. Pinching with gripping, rumbling and diarrhoea.—Cutting colic above the umbilicus, as if diarrhoea would set in. Cutting colic during rest, after motion. Cutting colic as from flatulence, before supper. Cutting colic *every other evening*. Cutting colic deep in the abdomen, as if he would vomit, in the afternoon, after a meal, relieved by bending forward and going off in bed on bending double and going to sleep. *Cutting colic*, early in the morning, *with emission of flatulence*.—Sticking in the abdomen. *Continuous stitch* in the side, as from incarcerated flatulence.—°*Enteritis*.?—Abdominal congestion.?—Fulness in the abdomen, after a meal, with occasional colic and rumbling. Fulness after supper, as from flatulence.—*Distention* of the abdomen, after every meal. Hard distention of the abdomen, with a painful sensation of rigidity in the abdomen, and sensation as if the abdomen would burst (accompanied with swelling of the dorsa of the feet). Hard circular prominence around the umbilicus, painful when walking.—*Flatulent colic, directly after supper; painful rumbling of flatulence, particularly in the epigastric region*. °Flatulent colic of hysteric females. Colicky shifting of flatulence in the abdomen, in the evening after lying down. Shifting of flatulence from one part of the intestines to the other, with a loud rumbling, and with a more or less pinching sensation, especially in the evening when in bed. Loud rumbling in the abdomen, with frequent purging, and gripping and pinching in the abdomen. Repletion after a meal, and colic with rumbling from time to time. The wind is passed with cutting colic, in the morning. Fetid flatulence after a meal. Colic in the night: pressure in the abdomen, here and there, after midnight, as if flatulence had been incarcerated, with a feeling of heat over the whole body, without thirst; the emission of flatulence afforded no relief.—Pain in the abdominal walls as if bruised when gaping. Chilliness over the abdomen (extending as far as the lower part of the back). Pain in the abdominal muscles when sitting and coughing. \**Painful sensitiveness of the abdominal walls*—after a loose stool, accompanied with violent thirst; the abdomen could not be touched without suffering pain. Swelling of the abdominal walls with tensive pain. Titillating itching in and above the umbilicus, with pain after scratching.—Small pustules in the groins, with stinging pain.

**Stool.**—°Obstinate constipation. Daily stool, but *hard* (with pain in the

hæmorrhoidal tumours. °Alternate costiveness and diarrhœa. Difficult evacuation with painful *pressing* and pain in the back.† Difficult stool early in the morning, and two loose stools in the day. Frequent desire for stool, with livid complexion and faint feeling. *Frequent urging to stool as if diarrhœa would set in, occasionally.* No tenesmus either in the rectum or anus, but a constant desire in the more remote intestines, without any stool being passed. \**Frequent loose stool mixed with mucus.* \**Frequent passages of mere mucus,* every evacuation being preceded by colic. \**Evacuations consisting of nothing but loose mucus mixed with blood.* Discharge of fæces mixed with blood, early in the morning. \**Diarrhœa, one or two stools at night, green as bile ; every discharge being preceded by rumbling.*‡ *Diarrhœa, first green, then slimy. White stool, (for four days).* Stool like stirred eggs, preceded and succeeded by cutting, especially in the morning. \**Watery diarrhœa at night.* (The fæces are thin and as if pressed flat.) \**Diarrhœa with cutting in the abdomen.* \**Loose, acrid stool in the morning.* \**Slimy diarrhœa.* °*Diarrhœa after measles.* Diarrhœa with discharges of stool at night, during sleep, without being conscious of them. °*Dysenteric diarrhœa.*—During stool: °*shaking chill with goose-flesh.* \**Burning in the rectum.* °*Painful soreness of the rectum.* Drawing in the back.—*After stool : \*pain in the abdomen, also colicky pain, as from flatulence.* Chilliness in the small of the back, with pressure in the pit of the stomach. \**Soreness of the anus.* Pressure in the rectum. °*Stinging in the rectum.*—Tearing with pressure in the anus, when standing. Sticking in the rectum as from incarcerated flatulence. Smarting sore pain of the anus, between the nates, and of the varices.—Blind hæmorrhoids with itching in the evening. Blind hæmorrhoids with itching of the anus. (Flowing hæmorrhoids), discharge of blood from the anus. Hæmorrhoidal tumours with single itching stiches in the anus. Blind hæmorrhoids until nine o'clock in the evening, with sore pain in the anus, during both rest and motion. Painful, protruding blind hæmorrhoids. Blind hæmorrhoidal tumours, preceded by pain in the small of the back, early in the morning. Ailments from suppression of the piles.

**Urinary Organs.**—°*Retention of urine,* with redness and heat of the external region of the bladder, and with uneasiness and pain in the hypogastrium. Pain in the vesical region when touching it. Constrictive pain in the abdomen, extending as far as the bladder, with pressure as from a stone.—Continuous, dull stitch in the neck of the bladder, as if occasioned by incarcerated flatulence. Sharp (almost cutting) pressure on the neck of the bladder when walking in the open air, as if caused by flatulence, but without any desire to urinate. *Continual pressure on the bladder,* without desire to urinate, in the evening and night. Pressure on the bladder as if occasioned by flatulence, towards morning. Tenesmus of the bladder. °*Catarrh of the bladder.* Frequent, almost ineffectual urging to urinate, with cutting pain during micturition (cutting water). Pressing before micturition. °*Difficult emission of urine, drop by drop.*—°*Incontinence of urine.* °*Copious flow of urine.* Pressure on the bladder only when lying on the back, obliging him to pass urine. Burning in the region of the neck of the bladder, in the evening, as if he would urinate.—\**Frequent desire to urinate, °with drawing in the abdomen,* particularly in pregnant females. Enuresis nocturna. Involuntary micturition; *the urine passes off involuntarily when sitting and walking.* Copious micturition.§ Passes some urine involun-

† This and the six following symptoms are the most usual and principal kinds of evacuation occasioned by Pulsatilla.

‡ These kinds of nightly diarrhœa are characteristic of Pulsatilla, and there is scarcely a drug which occasions them as often.

§ Secondary or curative effect, succeeding a tenesmus of the bladder. The symptoms 437, 438. seem to be primary alternate symptoms of the above-mentioned tenesmus.

tarily, when coughing, or when emitting flatulence.—*\*Colourless watery urine.* Passes acrid mucus from the rectum while emitting a watery urine, and accompanied with a feeling of weakness in the loins. *\*The urine is red from time to time.* *Brown-red urine.* Dark-red urine without sediment. Brown urine. Urine with a ring of violet-coloured mucus on top, and a sandy sediment. (*\*Jelly-like sediment.*) Urine with violet-red sediment. Urine with red sediment. Urine with brick-coloured sediment.—*°Hæmaturia*, with purulent sediment and pains in the kidneys, or with burning in the region of the orifice of the urethra.—*After micturition*: *°Spasmodic pain* in the neck of the bladder, extending to the pelvis and thighs. Burning in the orifice of the urethra during and after micturition, the urine depositing a brick-dust sediment. Drawing pain in the urethra between the acts of micturition. Creeping pain with pressure in the orifice of the urethra, after micturition. Pressure and creeping in the glans after micturition. Sharp pressure in the urethra.—*Contraction of the urethra*, the stream becoming very thin. *\*Gonorrhœal discharge* from the urethra, —almost like semen, with burning immediately after micturition. Discharge of drops of blood in gonorrhœa. *°Bad effects* from suppression of gonorrhœa, (See *Clin. Obs.*).

**Genital Organs.**—Stinging next the sexual organs. Stitches from the abdomen into the penis. Stinging itching in the prepuce when sitting and lying, but not when walking, (in the evening). *Itching-smarting pain in the outer and inner prepuce.* Biting-itching under the prepuce near the glans.—Itching of the scrotum, early in the morning, in and out of bed. Swelling of the right side of the scrotum. Swelling of the scrotum.—*The scrotum hangs down very low.* *\*Tearing pain* in the testes. The right testicle is drawn up and swollen, the spermatic cord is swollen, with tensive pain, whilst the left testicle is *hanging down low.* *\*Drawing and drawing-tensive pains from the abdomen, through the spermatic cord into the testicles*, which hang low. *°Swelling of the testicles* after bruises and contusions. *°Burning of the testicles*, without swelling. *°Hydrocele.* *°Inflammation of the prostate gland*, (see *Clin. Obs.*).—*Excessive sexual desire*, almost like priapism, with violent desire for an embrace, and a number of continued painful erections. *\*Long-lasting erection in the morning after waking*, not without sexual desire. In the morning after waking, the sexual desire is excited. Itching irritation in the region of the vesiculæ seminales, early in the morning in bed exciting a desire for an emission, almost without erection, and without any amorous thoughts.—*\*Erections day and night.* *\*Frequent erections* with discharge of prostatic fluid. *Emission in the night.* *°Emission after onanism.* Two emissions in one night, without dreams, and next day an intolerable heaviness and laziness in the limbs. Discharge from the urethra of the colour and consistence of semen, with burning pain, especially immediately after micturition.

**Female Sexual Organs.**—Cutting pain in the os tinea. Drawing-pressing pain towards the uterus, with inclination to vomit every morning. Drawing-tensive pain in the abdomen, resembling labour-pains. Contractive pains on the left side of the uterus, resembling labour-pains, obliging her to bend forward. *°Uterine spasms, resembling labour-pains.* *°Inflammation of the uterus?* Burning stinging in the vagina and labiæ.—*\*Suppression of the menses*, (see *Clin. Obs.*). *\*Suppression of the menses with nausea and disposition to vomit*, —also without vomiting and with full appetite. Suppression of the menses with coldness of the body, chilliness and trembling of the feet. (For the menstrual irregularities cured by Puls. see *Clin. Obs.*).—*\*Too early menses*: *°Menses too long or too short* Profuse menses. *°Puls.* is suitable in cases of delaying menses —*Before the menses*: Chilliness, stretching and yawning. Heaviness in the abdomen, as of a stone. *°Pressing on the rectum like urging to stool.*

°Hepatic colic. °Abdominal spasms. °Colic with vomiting. °Waterbrash. °Vertigo and eructations. °Pressure in the bladder and rectum. °Cardialgia. Pleuritic stitches during and before the menses, excited by moving the arms. breathing and talking loud, and rendering the arm lame.—*During the menses*: Sticking in the chest during an inspiration. *Pain in the stomach*, oppression in the pit of the stomach, cardiacgia. Pressure in the abdomen and small of the back as from a stone, with disposition of the lower limbs to go to sleep when sitting, and attended with ineffectual urging to stool. Spasmodic, almost burning pains in the abdomen. Nocturnal nausea with discharge of water from the mouth. °*Chilliness and paleness of face*. Hemierania. Mental derangement. Obscuration of sight and aggravation of the symptoms in a warm room. Pain in the side, going off whenever sweat breaks out.—\**The blood is thick and black*, flowing by fits and starts. The blood flows only in the day-time when walking, not at night. The blood is viscid, clotty, *thick, dark*, or else pale and watery.—°*Metrorrhagia*, (see *Clin. Obs.*).—\**Leucorrhœa*, -burning. \**Thin, acrid leucorrhœa*. \**Milky leucorrhœa*, -also painless, or with swelling of the pudendum, or particularly after the menses. \**Discharge of thick, white mucus*, -particularly when lying, °or before and during the menses, with cutting in the abdomen.—(For the diseases incident to pregnancy and parturition, which have been cured with Puls., see *Cl. Obs.*).—*In lying-in females*: *Suppression of the lochia*, with burning feeling of fulness in the parts. °Puerperal fever.? Deficiency of milk.? °*Ailments from weaning*.—\**Swelling of the breasts*, -also with pressing tension in the breasts, as if milk would appear in them, °or with painful sticking and discharge of thin, acrid milk in girls who are not nubile. Itching of the nipples not going off by scratching.—*In new-born infants*: °Ophthalmia.? °*Chafing of the skin of infants*, particularly after previous abuse of chamomile.

**Larynx and Trachea.**—Scraping sensation in the region of the epiglottis, as is generally the case in hoarseness. \*Catarrhal huskiness of the chest, early in the morning after rising, with cough and expectoration °of tenacious white mucus, or of yellow, thick lumps, particularly early in the morning. Hoarseness, without being able to speak a loud word. \**Scraping and dryness in the throat*, causing two or three turns of cough. Tickling in the trachea, extending from the pit of the stomach to the epiglottis, exciting cough. When the child coughs, it seems to shake all over. Sensation, when coughing, as if the stomach would turn inside out, and as if he would vomit; the cough makes tears come out of his eyes. Coughs immediately after having taken a mouthful of food. (Cough excited by a contractive sensation in the larynx, especially after eating, with vomiting and bleeding at the nose.) Sensation in the throat, while coughing, as if it were irritated by the vapour of sulphur. Tickling in the region of the thyroid cartilage, occasioning a short cough. An inspiration occasions a desire to cough. °Cough excited by an accumulation of mucus and a tickling in the trachea. °Cough excited by yawning. Night-cough hindering sleep and causing exhaustion. Night-cough occasioning dryness of the throat. \**Dry night-cough, going off when sitting up in bed, returning when lying down again*. \**Continuous cough in the evening after lying down*. Cough, with pain in the chest. The child vomits after coughing. Night-cough, with stitches in the side. \**Violent cough, with difficult expectoration* of a small quantity of tenacious mucus, °with painful sticking in the chest and sides. (For various kinds of cough which have been cured with Puls., see *Clin. Obs.*) Hard cough towards evening. °Dry cough after every sleep. °Short cough as soon as he begins to feel warm in bed. Dry cough for half a day, followed by a continuous secretion of mucus in the anterior portion of the trachea for several days, which can

be thrown off by voluntary cough. \**Cough with expectoration of yellow mucus.* (The expectoration during the morning-cough has a disgusting salt taste.) \**Cough with a bitter expectoration.* The mucus which is thrown off in coughing has a biting-pungent taste, almost like the taste of tobacco-juice in a pipe (after some hours.) °Greenish expectoration. °Expectoration having a putrid taste.—\**Hæmoptœ.* \**Cough, with expectoration of pieces of dark, coagulated blood.* °Hæmoptœ at night, or until evening. \*Cough with purulent expectoration, hectic fever, and corroded, ulcerated lungs.—*During the cough:* shaking of the body, in an infant. \**Sensation as if the stomach would turn, unto vomiting,* with pressing out of tears. Sensation in the throat as from the vapour of sulphur. \*Pain in the chest. Pain in the side, also on rising. Painful weariness in the region of the short ribs, on both sides, such as generally sets in after a long fit of concussive cough. \**Stitches in the side.* Stitches in the shoulder. Sudden pain in the lower right arm, striking from above downwards. Stitches in the back. °Headache. °Shocks in the abdomen. °Pain in the small of the back. °Palpitation of the heart. Severe hacking, after cough in an infant.

**Chest.**—°Rattling breathing. Quick, short breathing. His chest is affected, and feels sore. Shortness of breath immediately after a meal, for a few hours. Want of breath when the air is drawn in through the nose, but not when drawn in through the mouth. (Dyspnœa when smoking his usual tobacco.) \*Dyspnœa and vertigo accompanied by weakness in the head, *when lying on the back*; all this disappears when sitting up.† °Dyspnœa at night in bed, as if the throat were constricted; or as if the smoke of sulphur had got into the throat. Dyspnœa, early in the morning, or low down in the chest, as if too full or tight. °Dyspnœa excited and aggravated by cold air. Asthma aggravated by exercise and by ascending an eminence. °Spasmodic asthma. °Evening asthma, particularly after a meal. °Oppression of the chest on walking fast. Sensation in the trachea as if pressed in from without and constricted, so that he was deprived of air a whole minute, in the evening when standing, without cough. Asthma in the evening, followed by slumber, after which he wakes with a suffocative fit, short cough or vomituration, aching in the forehead with tearing through the eyes, creeping on the tongue, cold feet, cold sweat in the face, and a good deal of rising from the stomach. °Suffocative fit with hicough. °Suffocative fit as from a spasm in the throat and chest. Spasmodic inspirations and expirations, passing into a suffocative sensation.—°Attacks of asthma Millari. ?—°Spasms of the chest, with short cough and suffocative paroxysms. \**Constriction across the chest.* Spasmodic sensation through the chest. Continual spasmodic tightness below the chest. When lying on the left side she complains of anxiety, quick palpitation of the heart, and want of breath. Spasmodically contractive sensation on the right side of the chest, with vascular erethism and internal warmth. Spasmodic pain across the chest. Cramp-pain first in the right, afterwards in the left side, lastly in the chest. °Pain in the side with cough, not allowing one to lie on the side. Sticking pain in the chest when moving the

† The symptoms which Pulsatilla excites in a recumbent posture, when sitting, when rising from a seat, when standing or walking, form as many primary alternate symptoms of different value. The symptoms excited in a recumbent posture, are generally calmed by sitting up, the reverse seldom occurs; the symptoms excited in a sitting posture, are frequently relieved or removed by motion, the reverse occurring but seldom. The act of rising causes so many more and so much more vehement symptoms the longer one had been seated; the symptoms which are felt after sitting down, are likewise so much more vehement the longer and more violent had been the previous exercise. Those alternate effects which occur most frequently, and which are most characteristic, have likewise the greatest curative power, when homœopathic to the disease.

body. \**Sticking in the side, only when lying*, particularly at night. °*Sticking in the chest, aggravated by drawing deep breath*. Stinging pain in the left side, after lying down, in the evening. Tearing and somewhat sticking pain in the side of the chest. Cutting pain in the chest here and there.—°*Typhoid pneumonia.*?—°*Paroxysms of burning in the chest*.—Dull stitches in the region of the heart, with continual pressure, anxiety impeding respiration, relieved by walking. (For the affections of the heart, cured by Puls., see Clin. Obs.). °*Heaviness, pressure and burning in the region of the heart*. (See Clin. Obs.). Anxious feeling in the chest, the pulse being quicker. Impeded respiration in the morning, owing to anxiety in the chest. *Congestion of blood* to the chest and heart, at night, with anxious dreams, for instance about being immured, and starting with an anxious cry. Pain in the middle of the sternum, as from an internal ulcer, with aching in the forehead, before midnight.† A small painful spot in the region of the sternum as if the expired air were striking against it. Drawing-tensive pain in the sternum. [Pressing and gnawing in the region of the sternum, extending as far as the region of the stomach.] Corrosive itching in the upper part of the sternum, not going off by scratching, in the evening. \**Pain of the chest as from bruises*. Jerking of the muscles, early after waking. Painful stiffness of the muscles of the chest, early after rising, when drawing deep breath and moving the chest. Sticking in the pectoralis major muscle, when raising the arm, evening and night, until morning. Pain of the ribs on grasping them. Compressive cutting, almost like stitching, in the region of one of the left lower ribs, when lying on the right side, going off when stretching one's self, or when lying on the painful side.

**Neck and Back.**—Aching pain in the small of the back as if weary, in the evening. Painful pressure from within outward, in the evening. Stiffness and pain when lying, as if from subcutaneous ulceration, or as if the parts were held by a tight band which refuses to yield. Pain when raising the upper part of the body and bending it backward, going off by stooping. Pain resembling labor pain, as if a band were drawn through the small of the back, drawing the parts together; this arrests her breathing, especially early in the morning. Pain as if dislocated, during motion. Pain when stooping forward, going off when raising the trunk and bending it backward. Pain as if bruised in the small of the back and knees, when lying in bed, going off when rising and walking about. Pain after sitting; he is scarcely able to rise or stoop. Pain as from stooping too long; the pain is felt most when standing or sitting, relieved by bending the body backward and by walking; accompanied with weariness in the feet which obliges one to sit down. Sticking pain in the small of the back and the abdomen, with cutting pains in the abdomen which arrest the breathing. Sticking in the small of the back; afterwards the pain extends into the abdomen, where it becomes cutting and sticking, and arrests the breathing; followed by a creeping, heaviness, and a drawing sensation in the head, accompanied with vanishing of sight and hearing; afterwards chilliness, as if he had cold water poured over him. The *back* is painful, and stiff as a board. Pain between the shoulders as if one had been stooping a long while and then rose again; going off by walking. Tearing pain in the back. Sticking pain in the back and across the chest. Stinging pain in the back. Painful pressure in the back from below upward. Itching in the back and above the loins. °*Interstitial distention and curvature of the dorsal vertebræ nearest the neck*. Aching pain in the fourth vertebra, especially after walking. Drawing-tensive pain in the loins.‡ Drawing pain from

† Pains here and there as from an internal ulcer, are especially peculiar to Puls.

‡ A sort of artificial ischias.

the loins to the pit of the stomach, where the pain becomes sticking during an inspiration. Sticking in the loins on stooping, early in the morning when in bed. Excoriating pain in the lumbar region and wrist, as if the parts were sore on the outside. Cracking in the *scapulæ*, when making the least motion, early in the morning. Crampy pain in the right *scapula*, when sitting. *Sticking pain* between the *scapulæ* during motion, arresting the breathing.† Sticking pain between the *scapulæ*, even during rest.‡ Stitches in the *scapulæ*, at night. Pain below the *scapulæ*, as if too heavy. Drawing-stinging pains in the *nape of the neck*, between the *scapulæ* and in the back. Pimples extending from the *scapulæ* to the middle of the back; itching continually, especially in the evening when undressing. *Sticking pain in the nape of the neck*. Drawing-tensive-pain in the *nape of the neck*. Rheumatic pain in the *nape of the neck*, with weariness of the feet. Sort of rheumatism in the *nape of the neck* in the afternoon; he had great difficulty in moving about. Pain in the *nape of the neck* as if the neck had been twisted over night. *Swelling* on the *nape of the neck*, extending as far as the earotids, and painful only when touched; but the pain is then very intense, as if the parts were ulcerated. Swelling on the right side of the neck, with sensation, when moving or touching the neck, as if the parts would tear or were tight, or as if there were an internal ulcer; this pain is not felt when swallowing. Itching-pimple on the side of the neck, the itching cannot be relieved by scratching. Painless cracking in the first cervical vertebra, when moving the head. Biting-itching on the side of the neck, after shaving, not going off by scratching, or rubbing, but becoming painful. Itching of the neck and cheeks in the day-time; scratching occasions pimples. Pimples on the neck below the chin, which are painful to the touch. Pain of the cervical glands.

**Upper Limbs.**—Pain in the *shoulder*, when attempting to raise the arm. [Stitches in the axilla when sitting.] Continuous tearing pain in the *shoulder-joint*, obliging one to bend the arm; it comes on in the morning when waking, and either disappears of itself or when resting on the painful arm. *Sticking rheumatic pain*, in the *shoulder-joint* in the morning, *when moving the arm, or when bending the head to one side*. A few stitches in the deltoid muscle of the right arm. Darting pain in the *shoulder-joint*. Bubbling sensation in the *shoulder-joint*. A bubbling, a sort of tremulous sensation on the right shoulder in the afternoon. Sensation of excessive weight in the *shoulder-joint*, and as if paralyzed when one attempts to raise the arm. Pain in the *shoulder-joint*, resembling a cramp-pain and heaviness. Pain as if sprained in the *shoulder-joint*, when bending the arm backward. \**Drawing pains*, coming on in short-lasting paroxysms, *extending from the shoulder to the wrist-joint*. Burning through the arm at night, beginning in the shoulder. Burning pain in the arm, in the evening, *with a feeling of dryness in the fingers*. Sensation of numbness in, and heaviness of, the arm when raising it, when holding anything with it, or doing any kind of work. The *upper arm* feels painful to the touch. The arm is painful during rest, as if the humerus were beaten in two in the middle; this pain extends into the thumb, and makes it useless. Tearing in the muscles of the upper arm, immediately. Drawing pain in the arm, even in rest, the whole night, from the shoulder to the fingers; these became insensible, without, however, becoming cold or pale. [When holding anything in the hand, the arm feels as if it would go to sleep.] Pain, as if bruised in the *elbow-joint*, when moving the arm, the pupils being dilated, early

† It is peculiar to Pulsatilla to cause asthma by exciting the parts not belonging to the respiratory apparatus.

‡ Alternate symptom of the one preceding.

in the morning. Pain of the elbow-joint when stretching the arm. Pain of the elbow-joint, when moving it. Corrosive itching of the tip of the elbow-joint, like itching and rubbing with wool. Small, not inflamed, tumours, above the elbow-joint, under the skin, painful when touching them. Heaviness of the arms, with tearing pain in the elbow-joint, when attempting to bend it, only in the day-time. *Tensive pain of the tendons of the elbow-joint when moving the arm.* Drawing-tearing pain in the bones of the lower arm, in repeated paroxysms, both in the day-time and evening. The veins of the lower arm are distended. Sensation of coldness in the arms, as if they would go to sleep. Jerking-tearing pain in the arms. Darting sensation in the forearm, in the direction of the wrist-joint, especially early in the morning after waking. Tearing-drawing pain in the arm, especially in the fingers at night. Drawing-tensive pain in the interior of the arm, extending as far as the wrist. Itching of the lower arm, especially of the dorsum of the hand, and between the fingers, obliging one to scratch, but without occasioning the formation of pimples. Rigidity of the right wrist-joint, even when not moving the hand. *Painful stiffness of the wrist-joint, when moving it, and as if the hand were sprained or strained.* Sweaty hands, early in the morning after rising. Pain, as if sprained or strained in the carpal bones, afterwards in the arm, in the evening, more perceptible during motion than in rest. Drawing pain in the thumb, with a sensation of stiffness during motion. Pain in the second joint of the thumb, when moving it, as if sprained or strained. Stiffness in the second joint of the thumb or knee, as if these joints were dislocated, and as if they would crack. Tension in the posterior joints of the fingers, early in the morning. Tearing pain in the extensor tendons of the fingers. Pimples between the fingers containing water, with a fine stinging pain, as from a splinter, when feeling them or when moving the fingers. °Itching chilblains on the fingers?—Pain of the index-finger on the side of the nail, as if a panaritium would form. The fingers go to sleep early in the morning. The fingers go to sleep at night.

**Lower Limbs.**—Simple pain in the *glutei muscles*, as if bruised, or as if from subcutaneous ulceration, after sitting. Pain in the *hip-joint*, when bending the back, at noon. Pressure in the left hip, and at the same time in the head, in the forenoon, going off during motion. Pain in the *hip-joint*, as if dislocated. °Coxalgia, also chronic.—°Jerking tearing of the lower limbs. \**Trembling of the lower limbs*, -in the morning, or particularly during the pains. Drawing and tension in the lower limbs, in the evening. Uneasiness in the left lower limb, at night, unless it is kept bent. Inability to move the affected lower limb, at night, on account of a bruised pain.—Visible, painless twitching of a few muscular fasciculi of the thigh, in the evening, in bed. Jerking, almost sore pain, from the hip-joint to the knee, early in the morning, in bed, disappearing on walking. Stitching pain in the anterior side of the left thigh, down to the knee, and extending from the right calf to the heel, not during motion. Violent pain in the muscles of the thigh and upper arm, as if they would be burst open. *Drawing pain, at night, in the muscles of the thighs, obliging him to move them; he cannot find ease in any position; feels sleepless, tosses about in his bed to and fro, even after the pain has disappeared, with coldness all over.* Sudden, transitory paralytic weakness in the thigh, when walking.† [Pain in the right thigh, resembling stiffness; when grasping it (or when touching it) the part aches, a sort of pricking being felt in it.]—Pain in the thighs, *as if bruised* in the bones; also when pressing on the part, the pain feels as if in the bones; she is unable to bend the knees or to kneel down; sensation as if

† Or rather when commencing to walk after having been seated a long while.

the bones would break. Bruised pain in the muscles and bones of the thighs. (Tension about the thighs, when walking and stooping).—Paralytic pain in the knees and heel, as after a long journey, at the commencement of a walk, after having been sitting on a chair. (Painful stiffness in the right knee, when walking, when stretching the limb). Excessive weariness of the legs, with trembling of the knees. \**Tearing pains in the knees, like jerks.* Tearing pain, extending from the knee to the hip, only when sitting, not when walking. Tearing and drawing pain in the knee. Tension in the bend of the knee (immediately). Tearing pain in the knee with swelling. (Pimples in the bend of the knee). Painless \**swelling of the knee.* °*Inflammatory, hot swelling* of the knee (particularly above the patella) with stinging. (Coldness in the knee at night, when covered with the bed-cover). A small spot on one side of the knee is painful as if bruised.—Cracking in the knees.—*Unsteadiness and weakness* of the knees; when walking his knees give way suddenly.—*The legs go to sleep* when rising from a seat. Paralytic pain of the legs on rising from a seat, going off when continuing to walk. Pain as if bruised in the outer region of the tibia. Simple pain of the legs. Pain in the leg when letting it hang down. Drawing pain in the leg, in the evening. Acute *drawing in the legs as far as the knees*, in the evening, with more chilliness than in the day-time, without any subsequent heat.† Drawing pain in the legs from the feet to the knees, as after a long walk; the pain abates in the morning, and finally disappears entirely. Sensation of coldness in the leg, although it has a natural warmth. *Heaviness* and drawing pain in the legs, less in the arms. *Heaviness of the legs in the day-time.* Towards evening the legs are insensible, but weary; they tremble in walking. Tremulous sensation in the legs and knees, in the evening, after lying down. Weariness of the legs. Weariness of the knees (not of the legs), on rising from a seat. Weakness of the legs, so that he is scarcely able to stand. Buzzing and moaning sensation in the legs, when standing, disappearing on walking. °Red, hot swelling of the legs and feet, after suppression of fever and ague. (Bleeding of the varices of the leg). The tibia is painful when touched. Pain as if bruised on the tibia, especially when raising the leg. Pain on the tibia, as if beaten with a stick, from afternoon till evening. Pimples on the leg, discharging a watery fluid, with a burning pain. Drawing on the inner side of the calves when sitting down, after a long walk. Visible twitching in one part of the right calf, early in the morning, in bed, not without some disagreeable sensation. The flesh on the legs is painful as if from subcutaneous ulceration, especially in the evening, after lying down; this pain is relieved by compressing the parts with the hands. Pain in the bones of the leg, as when pressure is made on an ulcerated spot, after having walked for some time, especially in the afternoon, relieved by pressing on the part, or by sitting down, but especially by a night's rest. °Drawing in the bones. Drawing-tensive pain in the calves. Tensive pain of the calves. Cramp of the leg, in the evening, after lying down, with chilliness. When walking, he feels a pain in the calves like cramp.—When walking, he feels a sudden pain in the *tarsal joint*, as if sprained. Tearing in the tarsal joint when moving the foot, early in the morning, with dilatation of the pupils. Tearing pains in the region of the malleolus internus, aggravated by walking. Tearing pain across the dorsum of the foot, extending as far as the heel, morning and evening. °Jerking in the region of the malleolus, when sitting, with sticking in walking.—Red and elevated spot on the dorsum of the foot, painful to the touch, with a prickling or somewhat stinging pain, as if an ulcer would form at that place. \**Swelling of the*

† Most of the pains of Pulsatilla are accompanied with chills, or at least chilliness.

*dorsum of the foot.* (Swelling of the dorsum of the foot with painful rigidity). °Erysipelatous, burning swelling of the dorsum of the foot, with stinging when touching or moving the part. Swelling of the feet above the malleoli, not below. \*Swelling of one foot, in the evening. \**Swelling of the feet.* *Hot feet.* \**Hot swelling of the feet, extending as far as the calves.* Constant burning and heat of the foot during rest, increased by walking. \**Red, hot swelling of the feet, with a tensive, burning pain, increasing to a stitching pain when standing.* °Edematous swelling of the feet, extending above the malleoli. Red, hot swelling of the feet, with itching creeping, as if frozen. Profuse sweat of the feet every morning in bed (secondary effect? after curing a swelling of the foot). Excessive sensitiveness and tingling in the foot, when first setting the foot on the floor in the morning, as if too full of blood. Tingling-stinging pain in the soles of the feet when standing, as if pithy, or as if gone to sleep. Numb pain in the ball of the big toe. Numb pain in the soles of the feet and the ball of the big toe, as after a high leap, and as if pithy, immediately on treading, after having been seated a long while; this pain gradually disappears by walking. The soles of the feet are painful, as if bruised. *Tearing pain in the soles of the feet above the knee,* and in the back. Single stitches in the soles of the feet and the tips of the toes, when at rest. When stepping, the soles feel ecchymozed, or as if ulcerated. Burning pain in the soles. Pain in the hollow of the foot when stepping, as if something had grown out, or as if there were an internal ulcer, with stitches, extending thence into the calves.—Boring pain in the *heel*, towards evening. Early in the morning, when in bed, he experiences a stinging in the heel, which passes off after rising. Burning-pricking pain in the ball of the heel,† with itching, as in frozen limbs. Boring-sticking pain in the heel. Cutting pain in the heel, in the evening, after having become warm in bed.—Tearing jerks or shocks (*ictus* in Latin) in the big toe. Pricking in the toes, especially in the big toe. Pain of the toes, as if the shoe had pinched him. Pain in the big toe, which increases in the evening, and disappears as soon as he lies down to sleep. *Itching tingling* in the toes, as in frozen limbs, in the evening. *In the evening, after having become warm in bed, he experiences in the ball of the little and second toes, a burning-pricking pain, accompanied with itching, gradually becoming excessive, as in frozen limbs.* Before midnight he experiences a painful, intolerable itching, and itching-stinging of the feet and toes, which feel as if inflamed; this itching seems to go through the whole body, and is especially felt close to the root of the nails; it is an itching resembling that of frozen toes, but leaves no painful pithy feeling in walking, as is the case when the feet are really frozen.

**Sleep.**—\**Yawning.*—\**Drowsiness in the day-time.* Constant drowsiness, with a number of dreams. Drowsiness at dinner. Irresistible drowsiness in the afternoon. Drowsiness at an unusual hour, either late in the morning or early in the evening. Is unable to keep off sleep in the evening, without, however, feeling tired. °*Feverish somnolence*, with uneasiness and anxious fancies day and night.—*Falls asleep late in the evening*, waking early in the morning without being able to fall asleep again. *Sleeplessness, also with excessive restlessness*, or as from vascular excitement. \**Sleep prevented by ideas crowding upon one, evening and night.* Does not fall asleep before midnight, and is then only able to sleep when sitting or with his head bent forward or sideways.—\**Frequent waking at night, remaining awake a long time, with drowsiness in the day-time.* *Waking before midnight*, with a number of dreams; she did not sleep quietly until after two o'clock, and felt so tired in the morning that

† The pricking pains of Puls. are generally burning-pricking.

she could have slept the whole morning. Wakes every three hours and is then wide awake. Wakes after having slept an hour and a half, and remains awake until early in the morning, turning constantly from side to side.—*Light sleep*, with sensation, on waking, as if he had not slept at all. Restless, stupifying sleep, with tossing about. Long slumber, full of *faucies* and dreams. \**Restless sleep*, with tossing about in bed, as from excessive warmth, -or with throwing off of the bed-cover on account of the heat, and with warmth in the palms of the hands.—*Symptoms at night in bed*: Drawing from above downwards, to the feet (immediately after lying down). *Ailments when lying on one or the other side*, particularly spasmodic symptoms, hæmorrhoidal pain at the anus, headache as if the skull would burst, pains in the joints, tightness of the chest, anxiety, etc., on which account he prefers, at night and early in the morning, a recumbent posture with his limbs drawn up. Waking on account of a feeling of heat. *Intolerable dry or burning heat*, with restlessness. Intolerable itching (after lying down). °Great restlessness and tossing about. Malaise in bed, relieved by getting up. *Waking with inability* to collect one's senses, as if frightened and stupified. Anguish on waking, as if he had committed some evil deed. Anguish (in the evening after lying down) with ideas crowding upon his mind and rush of blood to the head obliging him to get up. Fixed idea, for instance, about a tune, disturbing his sleep before midnight.—*Symptoms during sleep*: *Lying on his back*, with his arms above his head, or with his hands laid crosswise over the abdomen and the lower limbs drawn up. Snoring inspirations through the nose (during the evening, sleep when sitting). *Moving the body to and fro*. Sitting up in bed, staring at every body and ordering the "man to be driven away." \**Liability to start*. Jerks in the arm with starting. Screaming, and starting as if in affright at a black dog, cat, bees, which he wants people to chase away. *Loud prating*, also particularly before midnight, of important things which he says had happened to him, or incoherent talking in a slumber full of dreams. *Jerking of the limbs or the whole body*, also particularly on falling asleep (even after dinner). \**Spasmodic distortion of the mouth*, in a child, with opening of the eyes, distortion, and then again closing of the eyes accompanied with twitching of the fingers. °*Crying out*. °*Nightmare*. Slight general sweat after midnight, during a stupifying slumber with vivid dreams.—\**Sleep full of dreams*. Confused dreams. *Vivid dreams* about the affairs of the day, or of *one and the same* object (the whole night) and with uninterrupted exertions of thought. \**Lascivious dreams* evening and morning, almost without sexual excitement. Vexatious dreams about quarrelling. °*Anxious dreams*. \**Frightful dreams* obliging him to raise himself in bed. Frightful dreams with starting as from a fall. Dreams full of fright and loathing. He dreams that he is to be beaten, or that some misfortune has happened, with loud crying and moaning which continues even after waking, in consequence of the vividness of the dream. *On waking*: Sensitiveness of the hearing, the words sounding too strongly and shrill.—*Early in the morning, in bed*: Pain of the limbs and particularly the joints, constantly obliging one to extend the limbs, with heat of the whole body. Languor, which increases in proportion the longer he lies in bed, so that he wants to remain in bed longer or to fall asleep again.—Malaise through the whole body, early after rising, going off by motion.

**Fever.**—\**Coldness*, -with paleness and sweat over the whole body. Coldness of the hands and feet, which are like dead.—\**Shuddering* -in frequent paroxysms, as if sweat would break out. Shuddering, the hair standing on end, with anguish and oppression. Shuddering along the back from below upwards, the whole day. Shuddering from the back to the hypochondria, and on the anterior portion of the arms and thighs, with coldness of the limbs and sen-

sation as if they would go to sleep, at four o'clock in the afternoon. Creeping shuddering over the arms, with heat of the cheeks and sensation as if the air in the room were too hot.—Chilliness and a chilly feeling internally; constant sensation as if one would feel chilly even in the warm room, morning and evening. Chilliness early in the morning on rising. In the afternoon the upper part of the body felt warm, the lower part chilly internally, without any coldness being perceptible to the hand. Chilliness, in the evening, all over; he felt cold without shuddering. Chilliness towards evening, only on the thighs, which felt cold to the hand, whereas legs and feet remained warm. Chilliness, the whole evening before going to bed, even while walking. Quickly-passing chilliness after dinner. Chilliness after dinner, in the epigastric region, and over the upper arms. Chilliness in the evening after lying down; a short attack of heat after lying down. *Feeling of chilliness with trembling, returning in a few minutes, followed by little heat, without sweat.* Chilliness in the room in the evening. Chilliness in the warm room toward evening, or sensation as if he were cold, mingled with a feeling of heat.—*Fever*: Chilliness the whole day, and three flushes of heat in the face. Chilliness, with occasional flushes of warmth, afterwards increased warmth in the face and the rest of the body.† Chilliness without thirst; thirst during the hot stage. In the evening, after lying down in bed, he is attacked with heat immediately, without thirst or sweat; the sweat broke out between two and five o'clock in the morning, accompanied with thirst, and increasing after every drink he took. Chilliness in the evening, followed by heat which was rather external than internal, with weariness and debility; at night the heat was only felt internally, and became entirely dry until five o'clock in the morning, without sweat; this was followed by a confused feeling in the head, and in a few hours by a bloody expectoration from the chest, which afterwards became liver-coloured. Repeated shuddering in the afternoon; in the evening a general, burning heat set in, with a violent thirst; starting as in affright, which prevented sleep; pains resembling severe, raging labor-pains, with painfulness of the whole body which made her unable to turn in bed, and watery diarrhœa. He feels hot, and nevertheless wants to be covered; he licks his lips, but does not drink; he moans and groans. Great chilliness and external coldness in the evening, without shuddering or thirst; in the morning he has a feeling of heat as if sweat would break out (which does not break out, however), without thirst and without any external heat, but with hot hands, and unwillingness to be uncovered. Violent chilliness, followed by a mixed sensation of internal heat and shuddering; afterwards a general, burning heat with very quick pulse and hurried breathing, as if suffering mortal anguish. Shaking and chilliness, followed by general heat and sweat, with drawing-jerking pains in the bones of the extremities. Chilliness with hot ears and hands, every afternoon at one o'clock. Chilliness, followed by heat of the head and hands, perceptible to himself and others, with a slow, full pulse. Thirst at two o'clock in the afternoon; at four, chilliness without thirst, with coldness of the face and hands, with anxiety and oppression of the chest; after this he lies down and feels a drawing pain in the back extending to the occiput, and thence to the temples and vertex; after the lapse of three hours his body feels hot without thirst; the skin is burning, with large drops of sweat in the face, sleepiness

† The Pulsat. fever and ague is generally characterized by the thirst occurring only during the hot stage, rarely after the hot stage, or before the chilly stage. There is no thirst when there is merely a feeling of heat without any heat being perceptible to the hand. An alternate symptom of this mere feeling of heat is a feeling of heat mingled with a feeling of cold. There are a few more alternate symptoms belonging to this latter symptom; but they are rare, and therefore of little avail in pract.co.

without any real sleep, and great restlessness; next morning the whole body was covered with sweat.—°*Intermittent fevers*: °quotidian, tertian, quartan. °Intermittent fever, generally consisting of chilliness without thirst, followed by heat with thirst, accompanied or succeeded by sweat. °The fever generally sets in or exacerbates in the *evening or afternoon*, remits towards morning. \*The chilliness is generally accompanied with paleness of face, vertigo, stupefaction, *painfulness and heaviness of the head, anxiety and oppression of the chest*, or °vomiting of mucus. °*During the heat*: \*paroxysms of anguish, \*headache with red, bloated face, \*sweat in the face, \*chilliness when taking off the cover of the bed, -lamenting and moaning, °deep or restless sleep, °hurried and anxious breathing, °disposition to vomit, °diarrhœic stools. °*The fever generally, or the pyrexia, is characterized by headache, painful oppression of the chest, moist cough, somnolence, bitterness of mouth, diarrhœa or constipation.* °Intermittent fever after abuse of Quinine or China.—°Desire for water during the heat. Desire for water in the evening. Thirst for beer; nevertheless it has a disagreeable taste. Violent thirst after the disappearance of the heat, especially for beer, with white tongue. Thirst, especially in the morning, and for beer (a. a few hours). Desire for spirituous drinks. He wants something strong and stimulating.—°Internal heat with moderate thirst in the afternoon. \*Heat at night, and chilliness (shuddering) when turning in bed. Burning on the chest and between the scapulæ, at six o'clock in the afternoon, accompanied with chilliness of the thighs and legs, without thirst. Heat, followed by shuddering. She feels too hot with her clothes on and too chilly without them. First heat, afterwards violent chilliness. \*Dry heat of the whole body at night and early in the morning. Dry heat of the body, in the evening, with distended veins and burning hands, with desire to lay them on cool places. One hand feels hot, the other cold. On one side of the body the hand and foot are cold and red, on the other they are hot, in the evening and at night.† Hands and feet are hot. Sudden heat and redness of the cheeks, with warm sweat on the forehead, especially in the evening; the heat in the face is accompanied and succeeded by shuddering on the back and over the arms, without goose-flesh, and by a boring headache, from within outward, with dull stitches; mingled with paroxysms of anguish. Redness of the right cheek, with violent burning of the cheek, especially in the open air; accompanied with heat of the right hand, shuddering of the whole body, cloudiness of the head, resembling intoxication, and ill-humour, with inclination to take every thing in bad part. Sudden heat with a good deal of sweat in the face, trembling of the limbs, and obscuration of sight, as if one would faint. *Flushes of heat.* \*Heat of the whole face in the evening. Sudden redness of the face, with shuddering of the feet and anxious trembling. Heat in the afternoon, for one hour, in the whole body. Heat of the whole body except the hands, which are rather cool, with aching-pain above the orbits and an anxious moaning. Anxious heat over the whole body, the hands however being more burning than the rest of the body, with tearing pain in the occiput. Sensation as if a very hot air blew upon him, which gives him a headache. *He cannot bear any external warm'h; his veins are distended.* Heat, early in the morning, when in bed, with sensation as if sweat would break out.—°Acute fevers. °Mucous fevers. °Gastric fevers. °Bilious fevers. °Typhoid fevers, also with loss of consciousness, delirium, weeping, and wringing of hands, somnolence. °Hectic fevers?—\*Pulse quick and small. Feeble and slow pulse. The pulse is feeble and almost collapsed.

\* This redness, even of the cold parts, shows that Puls. has the power to cause distention and swelling of the veins even when there is no heat; in some instances, which are not mentioned here, Puls. has even produced varices.

—*Disposition to sweat in the day-time.* Disposition to sweat early in the morning. Sweat, the whole night, accompanied with stupifying slumber full of talk, and with desire for beer, or with cramp in the hands and arms. Sweat during the morning-sleep, going off after waking. Slight, general sweat. Copious \**morning-sweat*. Sweat on the right side of the face. Sweat only on the right side of the body. Sweat only on the left side of the body.

**Skin.**—\**Biting itching* here and there, °also like formication. Itching of the dorsum of the foot and between the breasts, early in the morning in bed. Itching-stinging sensation in the skin, resembling flea-bites.—Burning itching over the whole body, before midnight, when getting warm in bed, becoming more violent by scratching; this prevents his night-sleep; not much in the daytime, and only after having become heated by a walk, or when rubbing the skin; no eruption is visible.—Red, hot spots on the body, like nettlerash, with biting pain. °Zona? °Measles and their secondary ailments, or bad consequences from suppression of measles. °Eruption resembling *varicella*, after eating pork and fat things.—°Erysipelas, also with swelling, hardness, burning heat, and stinging when touching or moving the part.—°Cracking of the skin on wetting it. Sore pain on touching the affected part.—Boils here and there.—°Flat putrid ulcers. °Carious ulcers. The ulcer inclines to bleed. Severe stinging-biting pain in the ulcer, with itching all around. Burning biting in the region of the scurf (belonging to the ulcer), early in the morning, in bed, accompanied with a dry cough. Burning as from hot coal, early in the morning, on the side of and directly over the ulcer of the foot, for two minutes. Tickling itching below the ulcer of the foot. Excessive itching around the ulcer, as if it would heal. Stitches are experienced in the ulcer which concuss the whole body, whilst the parts around the ulcer are merely affected with stinging pains, which afterwards change to a burning. Stitches in recent wounds in the evening. In the ulcer of one foot stitches are experienced shooting from below upwards; in the ulcer of the other foot he feels a burning. A biting is experienced in the ulcer of the foot shortly before bandaging it, morning and evening. The redness around the ulcer becomes hard and shining. The cicatrix of an old burn is painful to the touch. Increase of pain in the ulcer, when on the point of eating. °Suppurating wound.—°Swelling of the limbs with stinging limbs or with a feeling of numbness. °Dropsical swellings.—°Jaundice?—Chlorosis?—°Varices?—°Chilblains, with blue-red swelling, heat and burning, or throbbing.

**General Symptoms.**—°Pulsatilla is especially adapted to ailments of the female sex, or to individuals with a gentle, good-naturedly mischievous disposition, who easily laugh or weep, with phlegmatic temper and inclination to melancholy, lymphatic constitution, pale face, blue eyes and blond hair, freckles, disposition to catarrh, leucorrhœa or other kinds of blennorrhœa.—°Chronic ailments arising from the abuse of sulphur water, quinine, chamomile, mercury. °Ailments from the use of pork, fat pastry, or other fat. °Bad effects from the abuse of wine. °Bad effects arising from fright or mortification. °Ailments arising from taking cold by exposure to wet, or by placing the feet in water, etc.—°Consequences of bruises and contusions.—°Ulceration of internal parts.—°Rheumatic and arthritic affections, °also with swelling. °Articular rheumatism. °Erratic gout. °Serofulous affections and rickets, also with atrophy. °Curvature of bones. \*Passive congestion with distention of the veins. \*Bleunorrhœa.—\*Pains of the extremities, (tearing, drawing, or jerking) in the muscles, with aggravation of the pains at night or in the evening in bed, amelioration in the open air, °attended with numbness and paralytic weakness, or with swelling of the affected parts.—\*Drawing tearing in one or the other limb, °also with

chilliness and coldness, or in frequent, repeated attacks. Stinging drawing in the limbs, particularly the joints, which feel painful as if bruised when touched. Darting pain in the left side. Jerking drawing in the muscles, as if pulled by a string. °Stinging and feeling of coldness in the affected parts, when a change of weather sets in. °Rigidity in single limbs, as if the tendons were contracted. \**Erratic pains, rapidly shifting from one part to another, also with swelling and redness in the joints.* \**Pain as if bruised or from subcutaneous ulceration on touching the part.* \**Pains and ailments of one side of the body.* \**Attacks of pain and o'her ailments with chilliness, asthma, paleness of face, or also with trembling of the lower limbs.* °The more violent the pains, the greater the chilliness.—\**Ailments from the open air, with dread of the open air.* Desire for the open air, although while in it, eolic and disposition to vomit increase.—Great languor after a walk after dinner, from the least cause, with an almost irresistible drowsiness, which increases in proportion as he makes efforts to remain awake.—*Excessive debility and bruised feeling of the limbs.* *Painful feeling of lameness in the ligaments*, also particularly in the evening at twilight, with chilliness and drawing in the limbs as previous to the setting in of a paroxysm of fever and ague. Rigid immobility in the body. Indolence with constant disposition to be sitting and lying. Disposition to stretch. Great disposition to extend the limbs, when sitting, in the daytime. *Heaviness of the whole body*, also excessive, with chilliness in the arms and lower limbs.—Excessively disagreeable sensation in the body, almost driving one to despair, not allowing him to sleep or to have any rest. Troublesome beating of the arteries through the whole body, mostly perceptible when touching the parts.—*Tingling sensation, and as if gone to sleep*, in the parts on which he had been lying, on waking. Tingling sensation, and as if gone to sleep in the fore arms, hands, and legs, when lying still, relieved by motion.—*Excessive weariness* from a short walk. Excessive weariness of the legs on rising, after having been sitting for some time. *Languor* of the whole body, obliging one to lie down. Is unable to walk even a few minutes, on account of languor, and has to sleep frequently for hours in the daytime. *Weakness* and relaxation of the limbs, without weariness, early in the morning, on rising. *Tremulous weakness.* The weakness and weariness occasioned by Pulsatilla, are generally characterized by heaviness.—Trembling of all the limbs, *with tearing pains*, particularly in the left arm and foot. \**Anxious feeling of trembling*,—with drawings in the limbs and the whole body, or with aggravation of the pains when sitting or lying, and with amelioration by motion. Trembling of the hands and feet during motion. Anxiety in the afternoon, with trembling of the hands, which are marked with red spots, but not hot.—°*Fainting turns, with cadaverous paleness of the face.*—°*Epileptic convulsions* (after suppression of the menses), with violent tossing of the limbs, followed by relaxation of the limbs, disposition to vomit, and eructations.—°*Emaciation.*

**Characteristic Peculiarities.**—The pains are aggravated or excited *when sitting*, after long exercise ; \**on rising*, a ter having been seated for a long time ; *during rest, particularly when lying on one side, or on the back ; the pains which come on when lying on the back, sometimes are relieved by turning to the one or the other side, or by lying on the affected side ; the pains which are excited or aggravated by lying on the side, are relieved by lying on the back ; a number of pains are relieved by motion, walking, pressure, external warmth, and open air*, whereas other pains are aggravated under those circumstances ; the pains are generally worst *in the evening, at night, or before midnight ; some of the pains are aggravated or come on early in the morning, or after dinner.* \*The symptoms appear with particular violence every other evening.

PATHOLOGICAL ANATOMY.

(*In animals, dog*).—Death after two hours. After opening the body, which was done immediately after the death of the animal, the heart continued to contract for ten minutes; the blood in the heart was blackish and fluid. The lungs were somewhat denser than usual, crepitated but little, and became somewhat submerged in water. The stomach was very much distended by the food, and contained a viscid, greenish fluid. One-third of the mucous membrane of the stomach adjoining the pylorus, had a cherry-red colour. The rest of the stomach was dark-red, and dotted with black spots, which seemed to be somewhat prominent, and contained venous, black blood. The muscular coat seemed to be little altered. The rectum was inflamed, dotted with red spots, and contained greenish excrements. (*Orfila*.)

201. RANUNCULUS.

1. RANUNCULUS BULBOSUS.

RAN. BULB.—See STAFF's Addit. to the Mat. Med.

COMPARE WITH—Ars., Bry., Merc. sol., Nux v., Puls., Ran. secl., Rhus tox., Sabad., Sep., Staphys., Sulph.

ANTIDOTES.—Bry., Camph., Puls., Rhus. Arrack and wine do not interrupt the action of Ranunc.; on the contrary, the pains, particularly those of the head, are aggravated.

CLINICAL OBSERVATIONS.

*Ran. bulb* has been successfully employed in the following affections: neuralgia from irritatio spinalis, particularly in two cases of neuralgia intercostalis.—*Pemphigus neonatorum*, where the vesicles were two, three or four inches in size, after the desiccation of which the infants looked as if excoriated.—*Scabies pustulosa*.—Herpes universalis. Herpes of the fingers and palms of the hands.

SYMPTOMS.

**Mind and Disposition.**—Vexed and inclining to be angry; quarrels and scolds when the slightest cause is offered. *Ill-humoured, and disposed to quarrel and scold* the first forenoon; in the evening he is desponding, apprehensive, sensitive, discontented; on the second day he again inclines to be provoked by the innocent jests of his friends, etc.; this continues for several days, and recurs frequently during the action of Ran. (The objects of his feelings, for instance chagrin, occupy his mind long after the occurrence has taken place; one sees that he is thinking of those things, he talks to himself, gesticulates in his anger.) Fearfulness in the evening, she does not want to remain alone, she is afraid she will be haunted by ghosts.

**Sensorium.**—*Vanishing of thought*, when reflecting, he stares at one point for a long while: he knows not where he is. Obtuseness of the senses, for weeks, as long as the herpes lasted, nothing made a strong impression upon him; even his painful herpes did not affect him as vividly as it ought to have done, and he finds it difficult to furnish an exact description of it from beginning to end. *Vertigo* while walking. Vertigo, as if he would fall, on leaving the room and going into the air. Sudden attack of vertigo in the occiput, when walking, as if he would fall, followed by violent tearing in the right temple. *Dizziness in the head, making it difficult to think*. Dizziness of the head and sensation as if

the head would be *enlarged and distended*. Head and body feel quite weak the whole forenoon.

**Head.**—Headache, with anxiety and weakness when eating, in the region where the right malar and temporal bones unite, at noon. Pain in the occiput, after slight chagrin, early in the morning. Headache, over the right eye, with disposition to weep and mental oppression, which seemed to emanate from the chest, in the evening, on the third day. Headache, over the right eye, *aggravated by lying, relieved by walking and standing*, with heat in the face and cold hands. Headache, over the right eye (frontal cavity?), thence pressing downward into the nose, with vertigo as if he would fall forward, and beating in the right frontal eminence, the whole day until evening, (in a female liable to similar attacks). Heaviness of the head. The head feels distended. Violent tearing in the evening, first in the left side of the occiput, as far as the nape of the neck, afterwards along the left lower jaw from behind forward. Tearing in the vertex, when writing, while standing. Violent tearing in the right temple, preceded by vertigo in the occiput. Pain in the vertex, as if the parts would be pressed asunder, in the evening, when entering the room on coming out of the open air, accompanied with pressure in the eyeball near the outer canthus. Pain in the sinciput, in the afternoon, as if filled with blood. Drawing pressure in the upper part of the frontal bone and in front of the forehead, with sensation as if the hairs of the sinciput were standing on end, *shortly after supper*. Acute stitches in the left temple, but only in the outer parts; after they had disappeared he felt stitches in the left ear, and tearing in the left side of the occiput. Drawing, sticking pain in the occiput.—Aching pain at a small spot, where the left temporal bone unites with the parietal, (before dinner). Pain in the region where the right malar and temporal bones unite. Upon entering the room when coming out of the open air, he suddenly experiences an aching pain in both temples and in the nape of the neck, with vertigo, apparently deep in the brain (evening). Pain in the temples, drawing and pressure, in the evening while walking, with feverish restlessness and difficulty of breathing. Occasional subdued, soft beats, not like pulsations, but at longer intervals, in the left side of the occiput. Transitory (beating?) pain, while sitting, in the right side of the occiput, with great debility. Congestion of blood to the head, especially in the vertex, when walking in the open air.—Passing feeling of dizziness in the forehead, followed immediately by transitory pressure in that part. Warmth about the forehead, in the evening when writing, with sensation as if sweat would break out in that region. Pressure in both frontal eminences, when entering the room from the open air, early in the morning. *Pressing pain in the forehead, from within outward*, afternoon. Pressing pain in the forehead and eyeballs, early in the morning, when in bed, *abating after rising*, whereas the pain in the chest increased. Sore pain of the hairy scalp in the forehead, in the afternoon, not when touched. Burning prickings in the outer and right side of the hairy scalp, accompanied with a sensation as if the blood were rushing to the brain (without any heat being felt on the outside), and incipient obtuseness of the head (vanishing of thought). Crawling and creeping in the hairy scalp, in the evening, in bed (from the vapour while preparing the juice).

**Nose.**—Pressure in the region of the root of the nose (when seating himself).

**Face and Teeth.**—Great dry heat in the face, with bright redness of the cheeks, the feet being icy cold; during the heat, they felt chilly; the mouth is dry, viscid, so that she is scarcely able to speak, at 8 o'clock in the evening. Heat in the face in the evening, and redness, with internal chilliness. Creeping in the face, especially about the chin and nose. *Spasmodic paralytic sensation* in the upper and lower jaw, after lying down, in the evening.

**Spasms of the Lips.**—Stitches† near the right corner of the mouth.—Pain in the right molares, as if pressed asunder by a foreign body, (a knife).

**Eyes.**—Smarting in the eyes, as from smoke, in the evening. Smarting in the eyes, nose, and fauces; the eyes run and are very painful, so that he has to stop using them for half an hour, because he is unable to see anything; the whites are slightly inflamed, the mucus runs in torrents from the nose, the fauces are painful as if sore, during an inspiration, less during deglutition.‡ Smarting and feeling of soreness in the outer canthus of the right eye. Sore smarting in the interior of the right eye.§ Sensation of burning soreness in the right lower eyelid. Swelling and redness of the left outer canthus, with painful soreness. Itching of the eyes in the room, she had to rub them, with constant stretching and yawning, afterwards eructations. *Pressure in the eyes*, as if a hair had got in, going off by rubbing. Painful pressure in the region of the right eyebrow exteriorly, while making a moderate mental effort. Pressure as with a dull point in the right eyeball from above downward. *Violent pressing pains in the eyeballs, at times in one, at times in another.* Pressure in the eyeballs for several days. Slight pressure on and in both eyeballs, as if they would be pressed out, with slight sensation of vertigo in the forehead. Point in the eyeballs, when moving them. Pressure in the eyeballs, especially in the left. Painfulness of the right eyeball. Immobility of the pupils, soon after. Mist before the eyes, immediately.

† Is perhaps the *Ranunculus bulb.* capable of exciting *Risus Sardonicus*? or is this symptom peculiar to *Ranunculus sceler.*? *Risus Sardonicus* is one of the principal symptoms in cases of poisoning with *Ranunculus sceler.*, which is the reason that some (Delachamp) believe it to be the herba *Sardoa* of the ancients, whereas others (Sprengel, Hist. Rei Herb., and Haller) believe the *Enanthe Crocata* to be that herb.

Symptoms 45–61, see note to *Ranunculus acris*.

‡ From preparing the juice. According to Krapf, Plenck, Orfila, the deleterious action, (hence also the curative action) of *Ranunculus bulb.* depends upon local inflammation and the sympathetic affection of the nervous system.

§ This symptom, and other similar symptoms, arose from preparing the juice, the acrid vapour touching the parts. But these symptoms are not merely local symptoms. All those symptoms arose likewise from the internal use of the juice after it had been so much diluted with water that the acidity of the juice could neither be perceived by the taste, nor by the tact externally, hence the cause was purely dynamic; even many of those symptoms which the above named authors consider as sympathetic symptoms, for instance, the symptoms of the brain, temperament, eyes, chest, where no local contact had taken place, came on much sooner than the symptoms of the pharynx, the œsophagus and stomach, organs which were immediately touched by the drug. Except the blisters and the redness produced by many locally-applied drugs (for instance, *Cantharides*, *Mezereum*, etc.), it may be said perhaps that there exists no local symptom of any drug which cannot be realized by its internal use, although much more slowly; whereas it is on the other hand very often the case that drugs which are applied locally, cause a number of internal and external phenomena in distant organs and parts of the body. Thus we see psoric ulcers and chancres, together with other characteristic symptoms, occasioned by the internal as well as the external use of sulphur and mercury; I have seen a number of the characteristic symptoms of lead occasioned by a plaster of the acetate of lead, etc. It seems as if there were as few local remedies, as there are local diseases, for the so-called local symptoms are nothing else than their specific action which becomes manifest in whatever mode the remedies may be applied, with this difference, that the local application occasions symptoms with more certainty and rapidity in the place where the drug is applied than its internal use is capable of doing, which requires long circuitous routes to realize the same definite phenomenon within the same external limits. Nevertheless, although the remedy may seem to act more rapidly upon a definite spot when applied externally; this external application is not always advisable, not even in cases where the remedy is the precise homœopathic specific, for this reason, that it is well known that the infection of the organism by the skin is not perceived upon the skin until the internal disease has pervaded the organism, and the action of the drug upon the skin is too rapid to have the necessary influence upon the internal disease. This is shown by the unhappy results of the external treatment of chancres and the itch.

**Ears.**—Cramp-feeling in the inner and outer left ear in the evening. *Sticking in the right ear, in the region of the tympanum.* Stitches through the right ear extending into the right parietal bone, in the evening. Stitches in the left ear, in the evening. Pressure above the root of the nose. *Creeping*, wandering from the tip of the nose to the root and to the right eyebrow, or *painful creeping* in the nose, also like pressure, with frequent blowing of the nose, during which blood is discharged. *Obstruction of the nose*, in the evening, with sore pain extending high up in the nose, or particularly with painful soreness of the right nostril, in a room, going off in the open air. *Sore nose*, also red and swollen, with tension in the nose, and a number of scurfs, almost only on the right nostril, attended with constant dryness. Nightly discharge of tenacious mucus from the nose, (from the vapour).

**Mouth, Pharynx, and Œsophagus.**—Stitches near the right corner of the mouth. *Scraping-burning sensation in the region of the right portion of the velum.* White-coated tongue. Scraping-burning sensation in the throat, increased during an inspiration and by the smoke of tobacco. Increased secretion of mucus in the throat, the whole afternoon, he had to hawk frequently; also for several evenings. Roughness and tenacious mucus in the throat. Spasmodic feeling in the pharynx and Œsophagus, from below upwards. Frequent accumulation of water in the mouth. Accumulation of white saliva, tasting like copper.

**Taste.**—Flat taste in the mouth. Bitterish, pungent taste in the mouth, while eating dry food, and after having done eating, the food having its natural taste. Bitter-sour taste in the mouth, half an hour before dinner, afterwards the food has a natural taste. Sweetish taste on the tip of the tongue, with accumulation of water.—Increased thirst in the afternoon, for several days.

**Gastric Symptoms.**—Frequent eructations and great hunger before dinner, still he eats less than usual. Empty rising. Frequent eructations before breakfast, after taking the drug. *Frequent eructations* in the evening. Hicough. Spasmodic hicough. *Nausea in the afternoon, sometimes with headache.* Nausea in the evening, especially when smoking tobacco as usual, relieved by eating. The day after drinking a glass of wine he has headache in the forehead and constant nausea, pressure in the upper part of the chest, and stitches in the left side of the chest. Nausea and eructations towards noon. Nausea, drowsiness. Quickly-passing nausea.

**Stomach.**—*Violent burning in the region of the cardiac orifice of the stomach*, with great anxiety about the heart † Burning-sore pressure in the pit of the stomach. Painful soreness in the pit of the stomach when touched. *Pressure in the pit of the stomach.* Pressure on both sides of the xiphoid cartilage, as it were on the cartilages of the ribs, most violent and painful on the right side. Feeling of hunger and rumbling in the stomach early in the morning.

**Abdomen.**—*Pain in both hypochondria, accompanied with painfulness of that region when touched.* In the evening both hypochondria and the lowest ribs in the chest feel painful as if bruised. *Pain in the morning, as if bruised, or as if one had been lying in a wrong position, in the region of the lowest true rib in the left side.* Pain as if bruised in the region of the short ribs, with pain in the back, lassitude, ill-humour. *Painful soreness under the short ribs of the left side, especially when moving the trunk, for several days.* Jerking (violent pulsating) in the region of the left short ribs at night, also several times in the day-time. Periodical pulsations in the left hypochondrium. *Pressure deep in the region of the liver*, when standing, increasing by pressure. Sticking pressure in the region of the liver, arresting the breathing, with stitches and pressure

† In four persons who had eaten the root of the Ranunc. bulb. boiled in chicken-broth.

on the top of the right shoulder, when walking, after sitting.—*After dinner he feels a pinching below the umbilicus*, with sensation as if the bowels would fall out: the pinching spread to the side of the abdomen, in the shape of a drawing-aching pain; it then rose to the pit of the stomach. *Immediately after dinner he feels violent stitches from the left lumbar region through the abdomen, especially below the umbilicus and towards the right groin*. *Immediately after supper* he feels a sore pain and stitches in the left side of the chest. Jerking in the abdomen and arm. *The whole day he feels a subdued pinching colic, sometimes alternating with pain in the chest*. *When walking he feels constantly a subdued colic in the whole track of the intestines, they are painful when pressing upon the integuments of the abdomen*. When pressing with the abdomen against the sharp edge of a table, the intestines feel painful as if from subcutaneous ulceration, followed by a colicky pinching below the umbilicus. Sensitiveness of the intestines when walking, and dull pain. Slight movements and grumbling in the abdomen, in the evening when lying down. Colic and rumbling in the abdomen in the evening after lying down. Violent colic, drawing and pinching, below and around the umbilicus, in the evening, while going to bed and moving about. Violent pinching in the umbilical region, while walking, at noon. Colic around the umbilicus, whence a coldness ascends her back and arms. Pain, deep in the hypogastrium. Now concealed, now sharp colic and pinching, with some burning sore feeling below the umbilicus, sometimes accompanied with stitches in the side of the abdomen; at the same time the intestines are painful, as if from subcutaneous ulceration, when pressing with the hand on the abdomen. About two hours after supper, he feels a pinching deep in the hypogastrium, for several evenings in succession. Pinching in the hypogastrium, followed by emission of flatulence. Pinching in the hypogastrium, shortly after a meal. Stitches in the left side of the abdomen, in the forenoon, when walking. Violent stitches near the anterior superior spinous process of the ileum in the groin, when walking. Stitches in the right lumbar region when walking, with a slight burning sensation. When stretching the body, he feels a pain from the spinous process of the right ileum to the groin. During the pinching in the abdomen, both groins and the pit of the stomach are painful when touched. Frequent emission of fetid flatulence.

**Stool.**—*The alvine evacuations take place more frequently and easily*. Two evacuations a day for many days. *After several urgings he has a hard stool in the morning, and a natural one in the afternoon, for several days*. Colic, followed by an evacuation. The stools which had been soft heretofore, became hard and more scanty, dark-brown. Stools very hard and painless, although apparently larger in size than the anus. Stools delay and are hard. The stools delay and are very hard (in one who had regular and soft evacuations). Stitches in the anus. (Profusely-flowing hæmorrhoids.)

**Genital Organs.**—Frequent erections towards morning, and dizziness in the head. Emissions towards morning. Increase of leucorrhœa; having been mild at first, it now became acrid and corrosive.

**Chest.**—The pain in the chest is accompanied with some cough. Pressure in the chest and shortness of breath when walking on level ground, but no oppression of breathing when going up hill. Heavy, short breathing in the evening, *he has to take deep breath frequently*, with burning and fine stitches in the left chest. *Oppression of the chest, with much weeping*, in the evening, and sore pain in the eyes, especially the right. *Oppressive sensation in the chest, as after deep chagrin*; *he had to take deep breath frequently*, continuing the whole evening. Oppression of the chest when walking and going up hill. Pain and oppression of the chest, shortly after taking the drug. Restless sleep, with

violent aching of the chest and oppression. Light pressure on the left chest, passing off. *Pain in the chest and restless nights, continuing for weeks. Violent pains in the chest the whole forenoon.* After dinner he feels a violent beating in the chest, as if caused by congestion of blood, with inclination to lie down; *Pain in the whole chest; early in the morning on rising he feels a sort of rheumatic pain and as from subcutaneous ulceration, when moving the trunk ever so little.* Pain in the left chest, a few hours in the morning, none during the day. *Pain in the chest, as soon as he wakes in the morning, as if the parts were bruised, with stitches in the left side above the nipple, in a space of the size of a hand, worse during contact and motion, every day for eight days.* Pain in the left chest, in the morning, in the region of the pectoralis major near the axilla, worse during motion. Violent pressure and pain as if bruised, over the whole left chest, immediately after rising in the morning; every movement of the chest causes pain; the pain spreads over the whole chest, with shortness of breath; he is unable to speak long sentences on account of his want of breath. Violent sticking pain on the side of the left nipple, near the axilla, in the morning when rising; he dares not move his arm or raise it, *he dares not even raise the trunk lest he should scream with pain;* he has to sit or stand stooping with head and chest forward to the left side. Sharp pressure in the upper part of the left chest. Pain in the chest in the evening, pressure on the upper and left side of the chest, complicated with stitches, the breathing is painful, even contact is painful. In the forenoon, when walking or standing, he feels a pain as if bruised, or as from subcutaneous ulceration in the region of the left true ribs, accompanied with mild stitches. *Sticking pain in the left chest and as if from subcutaneous ulceration, increased by motion and by turning the trunk;* it continues the whole afternoon and evening with scarcely an interruption; in the evening an aching pain is felt in the right scapula. *Constant pain in the chest the whole afternoon, mostly in the left side, and partly as if in the pectoralis major,* where a rheumatic pain is felt on turning the body, and as if from subcutaneous ulceration; at first the pain is felt externally, afterwards the pain seems to recede to the internal and posterior surface of the sternum and the pit of the stomach; the pain frequently disappears and an aching pain as from subcutaneous ulceration is felt below the liver in the right lumbar region; the pain is frequently preceded by a bitter pungent taste in the mouth, and a necessity to hawk. Stitches in the left chest, when talking, in the forenoon. *Violent, fine stitches in the middle of the chest, in front, during an inspiration, in the forenoon.* Sticking in the side of the sternum, towards the left side, with sensation as if bruised, while going up hill. Stitches in the interior of the left chest, when walking in the open air, in the region of the nipple; the stitches disappear after some walking, after which a pain is felt below the last true rib in the right side of the abdomen (splenic stitch?). Early in the morning, while walking, he feels a sticking in the region of the fifth and sixth true ribs of the left side, with great sensitiveness of that spot to the touch, and great debility. Single stitches in the right chest. *Violent sticking pains in the whole of the right chest, early in the morning during a walk in the open air.* Sticking pain in the right chest, in the region of the fifth and sixth ribs, in the forenoon. Violent sticking in the right side of the chest, in the region of the fifth and seventh ribs, arresting the breathing, with stitches and pressure on the right shoulder, while walking, after having been seated. Violent stitches, the whole day in the right and less frequently in the left chest; in the evening a pressure is felt in the middle of the sternum. Pains in the chest, stitches in the right chest and pressure in the middle of the chest, continuing uninterruptedly almost the whole day, with painful inspiration. The pain extends from the left into the right chest, the sticking pain being felt in

both sides of the chest at the same time; however he is able to take deep breath while bending forward. Painfulness of the left chest, the whole day, worse in the evening, with quantities of tenacious mucus in the throat. Violent pressure in the middle of and in the left chest in the evening, for several hours, with increase of phlegm in the throat. Violent aching pain in the middle of the chest, in the evening while writing. Nausea in the evening, pressure on the sternum, and laboured breathing; he fetches breath frequently and sometimes very deep, as if he could not take in a sufficient quantity of air. Beating in the sternum. When stooping, he feels a pressure on the lower half of the sternum, in the region of the xyphoid cartilage; when raising the trunk again, he feels a beating in that place, which disappears soon, after which the place is painful to the touch. The pressure on the lower part of the sternum spreads, in the space of the size of a hand, towards the right side of the chest and the pit of the stomach; the pit and sternum are painful to the touch and even when stooping; the whole of the outer chest becomes so painful that even the buttoning of the coat gives him pain; this continues for three hours without interruption, in the first six hours. In the evening, when walking or standing, in the open air and in the room, he experiences a *pressure and tightness across the lower part of the chest*, with fine stitches, which seem to be felt in the outer parts of the chest at first, but nevertheless extend deep into the chest, now in the right, then in the left chest, *increased by moving, stooping, or taking an inspiration*. Pressing and pushing in the lowest part of the right chest, towards the liver, in the forenoon. Pain of the whole chest, in the evening when in bed, especially in the left side; he is not able to lie on either side, owing to the painfulness of the outer parts of the chest; accompanied with anxiety, tightness of breathing, accelerated pulse. *Pressing pain in the outer parts of the chest*. Pressing-dragging pain in the chest, for many days; it is rather external, and only aggravates the breathing when walking. Unusual chilliness of the outer parts of the chest, when walking in the open air.

**Back.**—*Early in the morning* he feels a pain in the small of the back, and a laziness through the whole body, after having had a restless night, disturbed with dreams and seminal emissions. *Pain in the back early in the morning* when rising. Pain in the back, lassitude and pain as if bruised in the region of the short ribs, with ill humour. Pain, as if bruised, in the back and in the hypochondriac region, especially perceptible *during motion*, for many days. Stitches in the right scapula, *early in the morning when waking*. Sticking between the scapulae, early in the morning, in the region of the third and fourth dorsal vertebrae. Rheumatic pain between the scapulae *early in the morning on waking*. Aching pain in the nape of the neck; a slight blow on the nape causes a pain in the forehead and in the parietal bone. Rheumatic pain in the nape of the neck (evening), which could be felt in the left shoulder, early in the morning.

**Upper Limbs.**—Stitches and pressure on the right shoulder.—Jerking of the arms. Jerking in the abdomen and arm. Violent inflammation about the arm, with fever and delirium, followed by gangrene of the arm.—*Jerking pain in the right upper arm*. Rheumatic pain in both elbow and shoulder-joints, early in the morning. While writing *he feels sudden tearings*, (stitches, jerkings?) *in the right forearm*, and between the thumb and *index-finger*.—Violent stitches dart through the forearm; some time after they are likewise felt in the left thumb.—Visible spasmodic contraction of the skin and muscles in the region of the styloid process of the ulna of the left arm.—Frequent and violent itching of the forearm, which he frequently had had in his healthy days, especially at night.—Tearing in the left wrist-joint, extending along the dorsum of the hand.—She has cold hands the whole day. The hands tremble while thread-

ing a needle. *Jactitation* of parts of muscles of the hands. Jerking of the left hand, while lying quiet. *Dull itching in the palm of the hand.* Stinging itching in the palm of the right hand. Burning itching of the palm of the left hand, passing off soon. Itching of several parts of the hands, sometimes slight and passing off soon, with redness.—*Frequent tingling in single parts of the fingers.*—Tearing in the ball of the left thumb; the place is afterwards sensitive to the touch. Pain under the nail of the right index-finger, as if a splinter had been thrust in there, and had produced suppuration. *Tingling in the skin of the fingers.* Inflammation of the arm, from the finger to the shoulder.† In the first quarter of an hour, the pounded bulbs, when applied to the fingers, cause an itching of the same, which is always followed by a blister, even if the skin be not changed. On applying a piece of the bulb between the fingers, a burning was experienced after the lapse of two minutes, which soon ceased after the removal of the bulb; after the lapse of two hours the place became red, and in ten hours a blister was formed, emitting a thin, yellowish and burning fluid in large quantity. *Vesicles on the fingers, especially those of the right hand, as if caused by burns or a vesicatory (of the size of a hazel-nut and still larger);* after being opened with a pin so that the skin of the blister was preserved, they emitted for eight days a yellowish lymph, with burning pains, the bright red skin shining through the blister (from the skin being touched by the juice while expressing it). After the blisters on the fingers had been healed a fortnight, and the new skin which had been excoriated, had likewise healed again, small, deep, transparent, dark-blue, slightly-elevated blisters of the size of an ordinary pin's head were formed (as if the pores had become raised in the shape of small, blue, transparent vesicles); they were crowded together in oval-shaped groups of the size of a shilling, *with intolerable burning-itching* (as is felt in the spots caused by nettles on the skin, which the vesicles resembled); when the vesicles were opened, they emitted a dark-yellow lymph, and afterwards became covered with a *herpetic, horny scurf*, itching intolerably, and emitting a clear fluid when scratched, or even of itself.‡ After the horny scurf which had formed after the vesicles had been scratched open, had crumbled away of itself within eight or ten days, new blue vesicles appeared again, with intolerable burning itching, inducing frequent scratching; the scratching brought on a *shining-red, loose swelling of the fingers* (they felt like sheep-skin) *with inflammation*, and intolerable burning-stinging itching. On applying hart's grease to the swollen fingers, to suppress the itching, *the horny scurf no longer formed, but, in places of the size of a shilling, crowded groups of small holes of the size of a pin's head (as if they were the pores) formed, § emitting a yellow lymph in the shape of drops of sweat and changing to small, flat, spreading and difficultly-curable ulcers, with corroded sharp borders and intolerable burning-stinging itching, depriving*

† From blossoms and leaves laid upon warts, which had been cut off until they bled, but were not removed in spite of all that.

‡ These dark-blue vesicles reappeared periodically even for six months, the former healing up and new ones forming in their places.

§ The affection of the fingers described above, came on a fortnight after the vesicles on the fingers caused by the juice while expressing it, had healed; first the affection appeared on the index and middle fingers, which had been covered with vesicles by being touched by the juice, and afterwards it spread from finger to finger, and from hand to hand, although no vesicles had existed on these parts. Rhus and Bryonia were the best antidotes, Sulphur and Staph. made the affection worse. Drs. Schweikert and Hauboldt, guided by these facts, have healed herpes on the fingers and in the palm of the hand by giving the Ranunculus bulb. internally, and causing at the same time the herpes to be washed externally with a drop of the tincture diluted in water.

*him of rest for weeks, day and night.* Ulcers on the fingers, penetrating down to the flexor-tendons.†

**Lower Limbs.**—Drawing pain in the right hip, when walking in the evening. Painful drawing in the posterior and internal sides of both thighs down to the calves, especially perceptible in the region of the inner hamstring, in the afternoon while sitting.—While walking, in the evening, he feels a cramp-like tearing in the outer side of the right thigh, from the centre downwards, skipping the bends of the knees and commencing again in the calves.—Tearing boring in the middle of the left thigh, early in the morning, in bed, and afterwards when standing. Tearing in the internal side of both knees, when walking. Violent itching in the internal side of the knee and in the tarsal joint, in the evening. Weakness in the bends of the knees, they give way involuntarily. Cracking in the patella when going up hill, as if it would become sprained.—Tension in the right tendo-Achillis when walking.—Stiffness in the right tarsal joint and the whole of the right leg, with vertigo deep in the brain, when walking in the open air. Violent and constant pain in the tarsal joint, in the evening when rising from a seat. Tearing in the left tarsal joint, in the evening when sitting.—Pain in the tarsal joint up to the middle region of the tibia, as if the tendons were too short when walking.—Drawing-aching continuous pain in the dorsum of the right foot. Cramp in the dorsum of the foot when walking, suddenly, in the articulations of all the toes, as if he had sprained them in making a false step. Stitches in the dorsum of the left foot when sitting.—Cold feeling in the big toe, in the evening, as if a current of air were rushing through. Violent stitches in the fourth toe of the left foot, when entering the room and coming out of the open air. Stitches in the backs of the toes, in the evening. Stinging pain in the toes when walking. Feeling of soreness and stitches between the toes. Sore pain and stitches in the tips of the toes in the evening. *Pulsative stitches in the left heel, when standing, in the afternoon.* Acute pain of the heels for two evenings, as if the boots were pinching him, which he had taken off, however.

**Sleep.**—Irresistible desire for sleep two afternoons. Great drowsiness in the evening, he falls asleep over his work; nevertheless he is unable to sleep several hours after having gone to bed. Great drowsiness in the afternoon; he sleeps three hours after dinner three days.—*Falls asleep late in the evening and wakes several times at night, not from any pain, but because he is not sleepy.* Falls asleep late in the evening, is not sleepy, is unable to lie on the right side, wakes early. Falls asleep late in the evening, and wakes early, with a vaporous exhalation from the skin. Lies awake several hours in the evening although he was very tired, owing to an intolerable itching of the thighs, and internal uneasiness, his skin is moist, he rises four times to urinate, although he had taken but the usual quantity of liquid in the evening.—*Disturbed sleep at night.* Very restless sleep, with increase of pain in the chest and heat. Frequent waking at night, he remains awake a long while, owing to want of sleep and anxiety in the chest. Restless sleep with seminal emission, with pain in the small of the back in the morning, and laziness the whole day. Restless nights, unrefreshing sleep with frequent flushes of heat. Sleep before midnight; remains afterwards wide awake until five o'clock in the morning, when he fell into a sleep full of dreams. Nocturnal emissions and slight erections at night. Vivid dreams, such as that he is swimming, etc. Anxious dreams, that he is near drowning, etc. Voluptuous dreams at night, without seminal emission. Wakes earlier than usual and is wider awake.

† In a child which was cured of fever and ague with subsequent dropsy and hydrocele by applying the Ranunc. bulb. to the wrist.

**Fever.**—*An hour after dinner* in the warm room, chills creep over his body, the hairs stand on end, shuddering across the scapulae, hands and thighs, and shortly after pinching in the hypogastrium, with stitches resembling pushes, which dart towards the hypochondriac region. *Chilliness after dinner*, with cold tips of the fingers and hot face. Frequent chilliness after dinner for two hours, with goose-flesh on the calf and forearm.—*Chilliness after dinner* with cold hands and hot face. After supper chilliness over the shoulders, upper arms, and thighs. Chilliness for two hours in the evening, with general external coldness of the body. She felt chilly all over, her teeth chattered and she shook; with heat in the face, dryness and phlegm in the mucus; this lasts an hour, in the open, not cold air, (the chilliness was less in the room.)—Heat in the face in the evening, especially on the right side, with cold hands, quick pulse and eructations. Heat in the face in the evening, with burning of the ears, especially on the right side, with cold hands and general uncomfortableness. Heat in the face in the evening, and redness with internal chilliness. Pulse full and strong, seventy-two beats. The pulse is accelerated towards evening, eighty-five—ninety beats, and rather hard. Small, hard pulse.

**Skin.**—Prickings, terminating in itching, in various parts of the skin, in the upper arm, thigh, etc. (See *Extremities*.) °Horny and other excrescences. °*Herpes over the whole body.*

**General Symptoms.**—(Dread of labour; he has to make a great effort to bring himself to note down the observations which he had gathered.) Uneasiness proceeding out of the body.—Anxiety, headache, fainting.—*The whole body feels bruised*, especially in the hypochondriac regions. Great weakness the whole day, his head feels as if he had not slept enough, although he performs his occupations with ease if he chooses. In the morning, while writing and standing, he feels so weak all of a sudden that he comes near falling.—Tired and broken down the whole day he would like to sleep all the time.—Great heaviness and lassitude in the whole body, in the forenoon. *Great weakness in his lower limbs in the forenoon when walking.* Weak and debilitated during an afternoon walk, trembling of the limbs. Lassitude, ill-humour with pain in the back and pain as if bruised in the region of the short ribs. Trembling of the limbs, when he has the least cause for chagrin. Jerks through the whole body, in the evening when lying down to sleep. Frequent turns of sudden weakness, in the afternoon when sitting down; they seem to proceed from the head; he feels as if his senses would vanish.—Violent epilepsy.†

**Characteristic Peculiarities.**—The pains (particularly in the trunk and limbs) are excited or aggravated by *contact*, motion, stretching, changing the position of the body. Many pains arise from a change of the external temperature, from cold to warm, or vice versa, or morning and evening, or after dinner.

† In paroxysms; in a student, also in a captain who was first seized with headache from inhaling the smoke of the plant which was burnt in a censer with other herbs; afterwards, after thrusting his nose several times in the censer, he was attacked with epilepsy for the first time in his life; it returned in two weeks, passed into cachexia, nodous gout, headache, and ended with death.

2. RANUNCULUS SCELERATUS.

COMPARE WITH—Clem.,? Merc.,? Puls., Ran. bulb., Rhus.

ANTIDOTES.—Puls.—Wine and coffee antidote the action of Ran. only partially.

SYMPTOMS.

**Mind and Disposition.**—Laziness, want of disposition to perform any mental labour, morning.—Sad mood, grief, evening.

**Head.**—Vertigo, when sitting. Vanishing of thought, giddiness. Heaviness and sensation of fulness in the whole head. His head feels distended from within and enlarged. Contraction in the hairy scalp. His head feels as if in a vice. His head feels dull, especially in the morning, after the characteristic uneasiness in the afternoon. Dull pain in the occiput, the whole of the head feeling painful externally. Drawing crampy pressure across the vertex. Stitches with drawing, in the skin of the vertex. Painful pressure in the region of the vertex as with a dull instrument. Burning pain in the region of the vertex, continuing a few minutes. *Long-continuing, dull, aching-gnawing pain in the left vertex, seated in one point.* Jerking in the head, in the region of the vertex. *Pain like a suddenly-coming and speedily-disappearing gnawing, at one spot of the vertex.* Boring pain behind the right ear. Gnawing, with pressure in the right temple. Stitches in the left temple. Pressing in the temples from within outwards. Continual pressing above the temples from without inward. Sense of fulness in the forehead, also from the vapour of the juice. Itching of the hairy scalp, immediately. Biting over the whole hairy scalp. (Hard blotches above the temples, which do not suppurate).

**Face and Eyes.**—*Slight drawing and feeling of coldness above the right eyebrows, down the cheeks as far as the corners of the mouth, for half an hour, evening.* Feeling of coldness in the face. Sensation as if the face were covered with cobweb. *Tremulous sensation around the corners of the mouth and the lower lip, preceding the vomiting, but without any inclination to vomit.* Profuse lachrymation, while pressing the juice out. Lachrymation at night. *Slight smarting in the corners of the eyes and recurring periodically for many days.* Burning of the margins of the eyes. Violent smarting in the eyes, while expressing the juice. Stinging smarting in the outer canthus of the right eye. Injected state of the conjunctiva, from the vapour of the juice. *Painful pressure in the eyeballs*, the whole day, after expressing the juice. *Pressure in the eyeballs*, shortly after taking the drug, recurring periodically for many days (for hours). Pain of the eyeballs *when moving them quickly.* Hard blotch below the left eyebrows, which does not suppurate.

**Ears.**—Boring and drawing in the left outer meatus auditorius. *Otalgia of the right ear, with aching pain in the head and drawing in all the teeth.* Continued drawing along the right outer meatus auditorius. Stitches in the right ear. Stitches in front of the right ear. Long stitches in the right meatus auditorius externus.

**Nose.**—Pricking in the outer parts of the tip of the nose. Tingling and smarting in the nose, from the vapour of the juice. Frequent sneezing. Excessive secretion of watery mucus.

**Teeth and Jaws.**—Drawing pain in the upper left molar tooth. *Painful drawing in the upper right molar teeth.* Drawing pains in the molar teeth, the whole afternoon and evening. Tearing pains in the lower right molar tooth. Stinging gnawing in the foreteeth. Quickly-passing jerking in the incisores.

*Stinging drawing in all the teeth.* The teeth are sensitive the whole day. *Drawing and jerking in all the teeth.* Dull teeth, and afterwards stinging pains in the same. Pain, swelling, redness, and bleeding of the gums (from the herb in the mouth).

**Mouth.**—Violent burning at the tip of the tongue, while chewing the fresh herb. Shootings in the tip of the tongue. Smarting at the tip of the tongue. *Symptoms from introducing portions of the plant into the mouth:* obstinate pains, burning, redness, inflammation of the tongue. Peeling off of the cuticle of the tongue, and cracking of the tongue. Ptyalism. While expressing the juice, a large quantity of frothy mucus accumulates in the mouth, obliging him to spit frequently. Ptyalism. Excessive dryness of the mouth, at night.

**Taste, Appetite, and Gastric Symptoms.**—White-coated tongue and sweetish taste in the mouth, in the morning, for several days. Want of appetite, evening. Little appetite at dinner, followed by a turn of nausea. *Frequent empty eructations*, immediately after taking the drug, returning for many days before breakfast. *Frequent eructations tasting of the ingesta after a meal.* Rancid, sour eructations, evening.—Hiccough.—Turn of nausea, while expressing the juice. Nausea, especially after midnight. Desire to vomit, returning periodically in the morning.—Heartburn.

**Pharynx and Œsophagus.**—Smarting in the region of the palate and fauces, while expressing the juice. Stinging pains in the parts of the soft palate. Smarting drawing pain in the region of the palate. Burning in the pharynx. *Stitches in the tonsils, swelling of the tonsils with shooting stitches in the same.* Contractive sensation in the throat, frequently before breakfast, increased by eating bread. Scraping in the throat, immediately. Strangulating sensation in the throat, at night.

**Stomach and Abdomen.**—Tension in the pit of the stomach, while expressing the juice. *Pressure and sensation of fulness in the pit of the stomach, increased by external pressure, most violent in the morning.* Stitches in the pit of the stomach, causing an acute pain. Stitches in the skin of the pit of the stomach. *Burning soreness behind the xyphoid cartilage.* Troublesome sensation of fulness in the stomach. Constriction of the stomach. *Stitches in the hepatic region.* Continual pressure as from a dull instrument below the right false ribs, increased by a deep inspiration. Acute stitches in the region of the gall-bladder. *Long stitches in the region of the spleen, worse during a deep inspiration.* Rumbling and pinching in the abdomen, immediately. Cutting in the intestines, at night. *Screwing pressure behind the umbilicus*, at night. *Sensation as if a plug had lodged behind the umbilicus*, especially in the morning, for several days. The abdominal walls are painful. *Sudden violent jerks in the lumbar region during a walk in the open air, arresting the breathing.* Continual pressure in the right lumbar region. Aching pain in the groins.

**Stool.**—Delaying stool. Three watery evacuations in rapid succession. Frequent loose stools, the same days. Liquid and very fœtid stools for three or four days. *Frequent urging and loose stools for several days.* *Frequent sensation as if diarrhœa would set in*, whereas a natural evacuation takes place.—Titillating burning in the region of the anus.

**Genital Organs.**—Sudden stitches in the fore part of the glans. Drawing pains in the penis. Smarting about the scrotum. Seminal emission without any lascivious dreams, after midnight.

**Respiratory Organs.**—Dry and hacking cough, rarely, and without an effort. Tight and deep breathing. Sensation of great weakness in the chest, for several days.—Oppression of the chest, immediately, and continuing the

whole day. *The whole chest feels weak and bruised*; several evenings.—Frequent involuntary sighing.—Frequent but subdued stitches in the right chest. *Painful sticking in the right chest, not increased by inspirations.* Continued dull sticking in the left chest and below the false ribs.—*Stitches in the region of the heart. Violent contracting pinching pain in the chest behind the right nipple,* several evenings in succession. Sticking contracting pinching in the region of the heart, causing tightness of breath, at night. *Violent continued gnawing behind the lowest portion of the sternum, arresting the breathing. Long frequent stitches behind the xyphoid cartilage, in a space of the size of the palm of the hand.*—Continued sticking in the skin of the pit of the throat. *Great sensitiveness of the integuments of the chest.* Painful drawings in the pectoral muscles. Frequent stitches in the pectoral muscles. Itching stinging below the right nipple. Very painful compressive pinching around the left nipple. *External painfulness of the sternum*; pressure on the sternum causes painful stitches through the chest. Prickling and formication in the outer parts of the chest and back.

**Back.**—Pain in the small of the back as if bruised. Paralytic pains in the small of the back. Aching pain between the scapulæ. Drawing in the region of the right shoulder. Stitches in the left shoulder. Compressive drawing in the region of the scapulæ.

**Upper Limbs.**—Stinging itching in some parts of the upper arms.—Paralytic drawing in the forearm, immediately.—Stitches in the forearm. *Long-continuing boring sticking along the whole of the left forearm to the tip of the index-finger, where it is most violent.* Stinging burning at one spot in the forearm.—Gnawing in the right elbow-joint. Long stitch in the elbow.—Frequent stitches in the dorsum of the hand.—*Continued gnawing in the palm of the left hand.* Passing drawing-sticking in the ball of the right hand.—Drawing with pressure in the metacarpal bones of the right hand. Boring in the metacarpal bones of the thumbs.—Burning of the skin of the fingers from being touched by the juice.—Swelling of the fingers.—Titillating sensation in the skin between the fingers. Fine itching in the skin between the fingers of the right hand.—Aching pain in the right middle-finger.—Violent long stitch between the left middle and index-fingers. Gnawing and boring in the phalangeal bones of the right fingers. Darting in the bones of the left index-finger. Gnawing in the last phalanx of the left ring finger. Sticking boring in the last phalanges of the index-fingers. Fleeting stitches in the tips of the ring and index-fingers, with gnawing in the bones of the same.

**Lower Limbs.**—Drawing-gnawing pressure in the right lower limb. Itching of the legs, not relieved by scratching, evening. Biting in the bends of the knees. Gnawing and boring pains in the right knee.—Painful drawing with pressure along the leg. Stinging burning at a small spot on the calf. Jaetitation of the muscles of the right calf.—Gnawing in the region of the outer malleolus of the right foot.—Prickling and furious smarting of the dorsum of the right foot. Itching stinging of the dorsum of the left foot. Stinging boring in the ball of the right foot. Gnawing in the region of the ball of the left foot.—Gnawing pains in the left heel. Itching prickling in the right heel. Gnawing in the ball of the right big toe. Painfulness and stitches in the corn of the ball of the right foot. Intolerable burning in that corn. Sticking-boring pains along the whole sole of the right foot. Itching and furious smarting of the sole of either foot. *Sudden stitches in the forepart of the right big toe, as if a needle were thrust in deep, recurring at short intervals. Sudden stitches in the right big toe, passing into a burning. Boring and gnawing in the right big*

*toe.* Tingling and jerking in the left big toe. Itching stitches in the toes of the left foot. Intolerable itching and prickling in the feet.

**Sleep.**—He wakes after midnight with great thirst, and heat of the whole body. *Half-slumber after midnight, frightful, anxious dreams about dead bodies, serpents, battles, etc. ; constant tossing about in the bed.* Restless sleep after midnight, many nights in succession. He passed the whole night in this state of half sleep and waking, with imperfect consciousness; he was not sleepy in the morning. *He wakes after midnight the third, fourth and fifth nights, is wide awake and remains so for a long time.*

**Fever.**—Heat in the head and face, in the evening when entering the room on coming out of the open air. *Fever: He wakes after midnight many nights in succession with heat over the whole body and violent thirst; the pulse is full, soft, accelerated, eighty beats; afterwards sweat over the whole body, especially on the forehead.* Dry skin and dry mouth without thirst, at night. *Chilliness while eating.*

**Skin.**—*When applied externally:* Itching, pain, burning, redness of the skin. Vesicles upon the skin, emitting a thin, acrid, yellowish ichor. Obstinate ulcers.

**General Symptoms.**—*Itching, boring, biting, tingling, gnawing, in various parts of the body, now here, then there, especially towards evening.* Sleeplessness from three o'clock in the morning, the first nights, accompanied with anxiety, uncommon debility, gloomy, thoughtless brooding of the mind; his limbs feel bruised; in the morning the mind feels worn out; he's not able to fix his thoughts upon one subject.

#### SYMPTOMS OBSERVED ON ANIMALS.

a.) *On horned cattle.*

*Cold fire* (as it is called by the German shepherds), the cattle declining to eat, they tremble and shiver, the abdominal veins become distended (Schreber, III., p. 71).

b.) *On a dog, from two ounces of the juice introduced into the stomach.*

1. No symptoms after the first trial.

2. A few days after the second experiment.

*The dog became anxious, howled, tossed about, bent double, was very restless at night.*

Having been killed with an axe, the stomach was found contracted, inflamed in several parts, red, with erosions on the inner surface, the papillae being very prominent; swelling, pale redness and contraction of the pylorus.

### 3. RANUNCULUS REPENS.

(From the vapour in preparing the juice.)

Smarting in the eyes, while preparing the juice, and even two days after. Profuse lachrymation. In the evening, in bed, he experiences a sensation in the forehead and the region of the hairs, as if a May-bug was crawling about; less when sitting up. In the evening, in bed, he experiences a beating in the region of the os saerum, resembling a strong and full pulsation. (In the evening, in bed, he dreams while yet awake, that he is in a large city and sees well-dressed people, masquerades, Turks, etc.) Wide awake and feeling extremely well in the morning, although he slept but a few hours.

SYMPTOMS OBSERVED ON A FLOCK OF SHEEP.

Several fell down as if struck by lightning, the eyes rolled, the breathing was hurried and aggravated; some reeled, and died with their heads bent towards the left groin. Depletions were injurious. The mucous membrane of the eyes was injected, the mouth dry, the abdomen was slightly distended, ruminations ceased. Some of them raised themselves, reeled, fell down again, bleated pitifully; most of the sheep were in profound coma. Sulphuric ether in milk gave much relief. Great weakness of the feet remained behind. (Med. Gaz.)

4. RANUNCULUS ACRIS.

*a. On men* (applied to the temple): Headache, intolerable heat and fainting; (applied to the joints): soreness of the joints, obstinate ulcers. Both feet, as far as the knees, looked burnt, red, hot, covered with blisters here and there, attended with fever and intolerable pains; several places became gangrenous on the third day, accompanied with trembling and fainting on raising himself, restlessness, small quick pulse and very red face; on the eleventh day the fever was broken, sweat and critical urine made their appearance, and the wounds began to improve (in the case of a female of 20 years, from applying a decoction of the leaves to the legs).—Burning pains and spasms in the œsophagus, griping in the abdomen (from two drops of the expressed juice). Violent irritation of the salivary glands, excoriation and parched condition of the tongue, pain of the teeth and sensitiveness and bleeding of the gums (from chewing the leaves).

*b. On dogs* (from five ounces of the juice introduced into the stomach of a small dog): Efforts to vomit; a. 1 h. Symptoms of debility and insensibility, during which death occurred; a. 2 h.

*Post Mortem Examination.*—Redness of the mucous membrane of the stomach in various parts; the rest of the intestinal canal was sound; the eyes contained a quantity of fluid blood, and showed several livid spots of hard texture.†

(From two drachms of watery extract, obtained by boiling the *Ranunc. acris*, and applied to the cellular tissue of the internal side of the leg of a dog): *Debility. Death in twelve hours.*

*Post Mortem Examination.*—The place was inflamed, swollen, infiltrated, the inflammation spread as far as the abdominal muscles, the heart contained coagulated blood, the lungs were red and congested with blood.

5. RANUNCULUS FLAMMULA.‡

Inflammation and gangrene of the arm, down to the tendons and bones (in the case of a female, from applying the plant to the wrist).

(According to Gmelin) (in horses, from eating the herb): Distention of the abdomen. Inflammation and gangrene of the abdominal organs.

NOTE BY FRANZ:—† Compare the eye-symptoms of *Ranunc. bulb.* It seems to me that it is peculiar to several acid drugs to occasion an effusion of blood into the eye. From *Clematis erecta* I have seen sanguinous spots and afterwards drops of blood in the eyes, both in myself and in another person, on the third day after taking the drug.

‡ It is said that the *Ranunculus flammula* is only hurtful to horses when eaten in excessive quantities, but that it promotes digestion when eaten moderately (Dic. des Scienc. Med.).

## 202. RAPHANUS SATIVUS.

RAPH.—Radish.—See REVUE CRIT. ET RÉTROSPECT DE LA MAT. MED. SPEC., 1840.

ANTIDOTES.—To drink a quantity of water.—Milk and water increase the pains in the abdomen.

## SYMPTOMS.

**Head, etc.**—Dulness of the head, early on waking, with dull pain in the forehead. Vertigo, with dimness of sight. Pressure above the eyes, with difficulty of sight, going off after vomiting. Pressure above the root of the nose. Sticking on the vertex.—Edema of the lower lids. Dilatation of the pupils. The sight of a short-sighted person is somewhat improved. Tearing and sticking in the left ear, apparently in the bone. °*Hardness of hearing?* Itching of the left concha which is painful when touched.—°*Stoppage of the nose.*—Red face and gloomy countenance. Disfigured countenance, with pointed nose and yellow cheeks, or with deep-seated eyes and livid complexion. Pale face, with expression of anguish and great suffering. Tearing in the right malar bone.—Hardness and swelling of the submaxillary glands. Sticking pain in the left molares.

**Mouth, etc.**—°*Thick white coating* of the tongue. Pale and blue-red tongue with a deep furrow and pale-red points in the middle (during recovery).—°*Heat and burning in the throat*, particularly in the tonsils, with sticking. Swelling, redness and soreness of the tonsils. *Accumulation of mucus* in the throat. White, tenacious mucus in the throat, after heavy sleep, with some soreness.—°*Flat taste.* °*Bitter taste.* Taste as of pepper.—No appetite, with great desire for boiled milk. °*Violent thirst.*—Rising of air from the stomach, having a putrid smell.—Constant paroxysms of nausea, as if she would faint, she is not able to lie down and has to sit up in spite of great weakness.—°*Constant desire to vomit*—with vanishing of sight and hearing. Gulping up of a sour, colourless liquid. *Frequent vomiting of food and white mucus*, with oppression of the chest, heaving of the stomach, and coldness. °*Vomiting of bile and mucus.* Vomiting of a green, bitter liquid, then of water. Every vomiting is preceded by shuddering over the back and arms. °*Morbus niger?* *Miscere?*

**Stomach, etc.**—°Pains in the stomach, obliging him to eat all the time. Sticking and pricking in the stomach and pit of the stomach.—Sticking in the region of the liver, also with pressure and soreness.—Pinching around the umbilicus, with sticking and pressure on the right side. Violent cutting and sticking around the umbilicus, after breakfast. Feeling of heat in the abdomen, particularly around the umbilicus. Burning over the umbilicus. Distention of the abdomen, succeeded by pinching as if stool would come on. *Gurgling in the abdomen*, particularly at night or previous to the vomiting. °*No emission of flatulence either by the mouth or rectum for a long time* (characteristic). °*Ascites.* °*Frequent, liquid, copious stools*, passing out with great force, yellow-brown, or brown and frothy, (characteristic). °*Chronic diarrhoea*, green, liquid, with mucus and blood.—Undigested diarrhoeic stools.—°*Copious micturition.* The urine makes its appearance some time after the desire to urinate is felt. Dingy-yellow urine, with yeast-like sediment. °*Turbid urine.* °*Stone?* Burning in the urethra during micturition. Drawing and tearing in the testicles, followed by a similar sensation in the sole of the right foot.

**Larynx, Chest and Extremities.**—Cough, with mucus in the throat. °*Spasmodic asthma?*—Pain in the chest, particularly when eating and coughing, less when drinking, the pain being of an aching and sticking character, extending from the pit of the stomach to the throat-pit and frequently to the back. Heat on the right outer chest. *Violent quick beating* of the heart.—Itching burning in the back. Tearing in the loins when stooping. Prickling in the right axilla. Trembling of the limbs.—Sticking in the left elbow-joint, apparently in the bone. Weakness, tearing and prickling close above the right wrist-joint.—Feeling of lameness in the left lower limb when lying. Coldness of the knees and feet, with drowsiness, dulness of the head, dull pain in the forehead, and vomituration. Cramp in the calves, at night, in bed. Tearing in the border of the right foot. Stinging and prickling in the sole of the right foot. *Redness and swelling* of the right heel, with violent pinching when pressing the foot to the floor, and afterwards formation of a blister filled with a clear reddish fluid, which passes off after rising.

**General Symptoms.**—\**Great weakness and languor*, -also with bruised feeling in all the limbs. Visible emaciation.—Fleeting burning, here and there. The whole body smells of horse-radish.—Somnolence the whole day, with scolding during sleep. Restless slumber with frequent waking, headache, nausea, and pinching around the umbilicus. No sleep from eleven till two o'clock, followed by restless sleep, dulness of the head and coldness of the knees and feet. Wakes at three o'clock at night, with shuddering over the back and arms. *Profuse sweat* during sleep, or low muttering as if talking to his friends. *Feverish shuddering over the back and the posterior surface of the arms*, particularly after drinking cold water. Frequent febrile shudderings with heat in the head and warmth all over the skin. \**Internal heat after the shuddering*, -or alternation of shuddering and heat. *Coldness*, in the evening, in bed, with weakness of the joints, particularly the elbow-joints, followed by profuse night-sweat. Internal coldness, with warmth and moisture of the skin. Is constantly complaining of coldness, although the skin feels burning. The sweat and breath smell of the medicine.—Pulse small, bounding and rather hard.—\**Full of anguish, -with dread of death, which was supposed near, and induces her to send for a minister.*

## 203. RATANHIA.

RAT.—See HARTLAUB and TRINKS, Mat. Med., Vol. IV.

### CLINICAL OBSERVATIONS.

*Rummel* has cured with Ratanhia an obstinate and long-lasting twitching of the eyelids, impeding sight. *Nenning* has cured with it a troublesome diarrhoea of one year's standing. Ratanhia promises to be useful in atonic hemorrhage.

### SYMPTOMS.

**Mind and Disposition.**—Quarrelsome and ill-humoured; vexed mood.

**Sensorium and Head.**—The head feels dull, as if intoxicated.—*Fleeting tearing* in the forehead. Tearing in the vertex, followed by painful fine stitches in the vertex at short intervals. Tearing in the left temple. Painful tearing and burning on the vertex, also at night, relieved in the open air, during the menses. Pain-like tearing from the occiput to the vertex. Fine tearings, generally in the left side of the head. Tearing or stitch in the head, on moving it,

or when drawing a deep breath.—*Sticking* in the middle of the forehead on stooping. Painful sticking in the head, here and there, in the evening. Fine *stitches* in the right side of the forehead. Dull, deep stitches in the vertex. Sharp stitch high up in the right side of the head, after which the part feels bruised. Pointed stitch in the left side of the head, on sitting down.—Headache, as if the head were in a vice, continuing for a long time. Pain in the middle of the forehead, on straining at stool, as if the brain would fall out. Pain as if the head would burst.—*Drawing* behind the right side of the forehead, in walking.—Fine twitching deep in the brain. Tearing twitching from the nape of the neck to the vertex, when walking. Twitching at a small spot on the outer parts of the right temple. *Bruised pain* in the left parietal bone, frequently recurring. Bruised pain at small spots, here and there, in the head.—*Digging-up* in the brain, in the right side, relieved in the open air.—Heat in the whole head, with heaviness of the head, and perceptible heat on the forehead.

**Eyes.**—Inflammation of the whites, with sensation as if a burning pellicle were forming towards the centre of the eye. Agglutination of the lids after waking. Lachrymation after waking. *Twitching* in the right eye, in the right upper lid. Burning and contractive sensation in the eyes. Biting in the right eye, early in the morning. Fine tearing in the inner canthus of the right eye, in the evening. Fine stinging in the left upper eyelid, in the evening. Sensation in the right eye as if in a vice, or as if the motion of the eye were prevented by some obstacle, although the eye can be easily moved. *Twitching* in the right lower eyelid, for two hours, with weakness of sight. Twitching in the inner canthus of the right eye, with sensation after the twitching as if the lid were pressed upwards, impeding vision.—*Dim-sightedness* on looking at distant objects, as if seeing through a gauze. Sensation as of a white speck before the eyes, impeding sight, in the evening by candle-light, with constant urging to wipe the eyes, and amelioration after wiping.

**Ears.**—Tearing in the ear. Violent stitch in the right ear. Sensation as if an insect were creeping in the ear. Ringing in the ear, on waking at midnight. Chirping in the right ear.

**Nose and Face.**—Feeling of swelling in the right nostril. The left nostril is somewhat inflamed and scurfy. Pimples in the right nostril, changing to scurfs. Violent itching in the nose, about the nostrils and at the tip of the nose. Burning in the nostrils. Violent sneezing. Dryness of the nose. Fulness and stoppage of the nose. Dry coryza with complete stoppage of the nostrils. Violent bleeding of the nose three times a day, for five days in succession. Violent tearing in the left malar bone, in the evening. Tearing in the left lower jaw and teeth. Frequent piercing tearing in front of the right ear. Tearing in the left mastoid process from below upwards. Tearing at a small spot on the inner surface of the lip. Two pointed stitches over the outer canthus of the right eye. Sensation as if the parts over the mouth, on the right side, were covered with cobweb. Several small vesicles in the vermilion border of the upper lip, burning when touched.

**Teeth.**—Spot on the gums, which is painful as if torn. On sucking the gums, sour blood exudes. *Tearing*, at times in the lower, at others in the upper molares of the right side, at times also in front of the right ear, deep in the bone, in the evening. Digging pain in some of the lower molares, in the evening. Shooting pain in the molares, with feeling of cold proceeding from those teeth, evening and morning. Violent pain in an incisor, in the evening after lying down, the pain being partly a beating, partly a shooting pain, disturbing sleep the whole night, continuing the whole of the next day, aggravated by chewing. Beating in one of the upper roots. Beating pain in the upper

left incisor, and frequent bleeding of the teeth. The molares feel elongated, with sensation as if coldness rushed out of the teeth. The left upper incisor feels elongated and is painful to the touch.

**Mouth.**—The tongue feels tight, as if swollen. Burning itching at the tip of the tongue. Burning as from fire at the tip of the tongue. *Accumulation of tasteless water in the mouth.* Flat taste in the mouth, early, in bed.

**Pharynx and Œsophagus.**—Sore throat, more during empty deglutition than when swallowing large pieces. Pointed stitch in the throat from time to time, during and after deglutition. Painful spasmodic contraction in the throat, during which he is unable to speak a loud word.

**Appetite and Stomach.**—Constant desire to eat. No appetite.—Violent hiccough, which causes a pain in the stomach. Eructations after dinner, empty, or tasting of the ingesta. Vomiting of water, preceded by loathing. Bloatingness of the stomach, before dinner, going off after emission of flatulence. Shifting of flatulence and rumbling in the stomach, after dinner. Pinching pain about the stomach. Constrictive pain in the stomach and cutting in the abdomen, going off by eructations. Ulcerative pain in the region of the stomach. Heat and burning in the stomach. Sudden sense of turning in the pit of the stomach, twice in succession. Fine painful stitches on the left side of the pit of the stomach. Pain over the pit of the stomach, as if cut to pieces; afterwards the pain is felt in the stomach, and is aggravated by deep breathing. Pain under the left breast, near the pit of the stomach, consisting of beating, burning, cutting, and an ulcerative sensation, relieved by pressing on the part and going off by motion.

**Abdomen.**—Violent sticking, repeatedly, in the right subcostal region, in the evening. Sticking in the left subcostal region. Sticking in the groins, in the afternoon, when sitting. Pointed sticking, at times in the left ribs, at others in the small of the back, in the region of the hips, etc. Violent stitch in the region of the left ribs, at dinner. Burning stitch in the region of the lowest ribs, near the back, when pressing the foot to the ground. Stinging burning and cutting under the left breast, along a rib, in the evening. Drawing in the umbilical region, with a feeling of coldness in that region. Frequent twitching around the umbilicus, in the afternoon. Burning and twitching in the abdomen, early in the morning. Pinching in the sides of the abdomen. Frequent painful pinching in the hypogastrium, with itching in the skin of that region, early in the morning. Pinching in both groins, going off after emission of flatulence, on waking. Contractive pain at a small spot in the groin. Crampy or contractive pain in the right groin, in the evening. Grumbling in the epigastrium, in the afternoon. Motion as of a living body, first in the right, then in the left side of the abdomen. Shifting of flatulence in the abdomen, as after taking a cathartic. Distention of the abdomen, with constant urging to stool and frequent emission of flatulence, in the afternoon.

**Stool.**—Hard stool, with straining.—Sudden and strong urging to stool. Urging feelings in the small of the back, as if stool would come on. Ineffectual urging to stool. Soft stool preceded by pinching. Hard stool followed by one diarrhœic stool. Liquid stool early after rising. Yellow diarrhœic stool, with burning at the anus as from fire. Scanty diarrhœic stool, three times a day, preceded by cutting and rumbling in the abdomen. Liquid stool, five times, preceded by violent pains in the abdomen. Pain in the abdomen during the stool, which takes place frequently. Rumbling in the whole abdomen, followed by two diarrhœic stools, the last stool being accompanied by a few drops of clear blood without pain. Three diarrhœic stools, with discharge of a few drops of blood, accompanied by pressing in the groins and rumbling in the abdomen.—

Protrusion of the varices after hard stool with straining, and violent pressing in the rectum.—Burning at the anus before and during the diarrhœic stool.

**Urinary Organs.**—Burning at the root of the penis, during micturition. Frequent urging to urinate, only a few drops being passed each time. Copious micturition, also at night.—Watery urine. Scanty urine, soon depositing a sediment, and becoming turbid.

**Male Sexual Organs.**—(Increase of an existing chronic gonorrhœa.) Itching of the scrotum, not passing off after scratching.

**Female Sexual Organs.**—Discharge of blood, four days after the menses. *The menses are two days too early*, and more scanty than usual. The menses are three days too early, with pain in the abdomen. Too early menses by five days. Pain in the small of the back during the menses. Leucorrhœa. Pressing in both groins from above downward, as if the menses would make their appearance, followed by discharge of mucus from the vagina.

**Larynx.**—Fœtid breath. Frequent titillation in the larynx, inducing cough. Dry cough, with difficult expectoration of hard mucus.

**Chest.**—Congestion of blood to, and heat in, the chest, with difficult respiration. Ulcerative pain in the chest during and after the cough. Violent pressure on the chest, as from a stone, during a slight exertion, with shortness of breath, obliging one to rest in order to fetch breath. Painful constrictive sensation from both sides of the chest. Fleeting cutting pain at the upper part of the sternum, repeatedly. Dull stitch in the right side of the chest, shortly after dinner. Sticking in the chest, in front of the left axilla, as from a pointed body, worse during an expiration, less during an inspiration, in the afternoon.—Sharp stitch in the sternum over the xiphoid cartilage, with sensation as if a sticking instrument remained in that spot. Sharp stitch in the sternum, as with a knife, arresting the breathing at every step in going down stairs. Dull sticking on the right ribs as from a foreign body, in the afternoon. Several fine stitches under the left breast, along the ribs. Pointed sticking in the region of the heart, rather externally. Twitching in the skin, under the left axilla.

**Back.**—*Pain as if bruised* in the whole spine, going off after rising. Twitching in the region of the hips and small of the back. Several dull stitches from the spine to the pit of the stomach. Drawing and tensive pain along the whole spine, as if in the marrow, proceeding from the nape of the neck, after dinner. Several intermittent stitches in the inner border of the right scapula.—Violent drawing and tension in the left side of the neck, in the evening when standing. Tearing, sticking and contractive sensation in the left side of the neck. Fine tearing in the left side of the neck. Violent tearing in the nape of the neck, in walking, extending to the forehead, with heaviness of the head. Feeling of stiffness in the nape of the neck, on turning the head, gradually disappearing by moving the neck violently. Sticking and drawing above the left clavicle, as if the skin would be drawn in, in the evening.

**Upper Extremities.**—Tearing in the shoulders. Violent tearing from the right shoulder to the wrist-joint. Violent tearing above and below the left elbow, less when the arm is hanging down, worse on bending the arm. Tearing in both upper arms from the shoulders to the elbows. Tearing from the left forearm to the posterior joint of the ring-finger, apparently in the bone. Violent tearing in the right wrist-joint. Fine tearing in the fleshy part of the left forearm, as far as the wrist-joint. Jerking tearing in the dorsum of the right hand. Jerking tearing in both thumbs, alternately. Violent tearing and sticking in the right wrist-joint, behind the ball of the thumb. Tearing between the left thumb and index-finger. Painful drawing together, as with a string, two inches above and two inches below the right elbow, with dread of extending the arm, although

the pain was relieved by doing so. Crampy drawing together in the bend of the right elbow, on keeping the arm bent, always disappearing on stretching it. Burning stitch in the bend of the right elbow, followed soon after by a short, sudden, creeping chill. Burning stitch in the fleshy part of the left forearm, followed by tension. Contraction and feeling as if gone to sleep in the right middle and ring-fingers, rendering it difficult to stretch the parts, in the evening. Painful contraction of the middle and ring-fingers of the right hand, going off by rubbing, but returning frequently. Sharp stitch from the middle to the tip of the thumb. Itching of the forearm, with pimples after scratching, which soon disappear. Itching of the ball of the right thumb, inducing one to scratch. Coldness of the fingers, preventing one from working, in the morning.

**Lower Extremities.**—Rapid twitching in the middle of the right thigh, early in the morning. Twitching in both calves. Twitching in the right foot.—Tremulous sensation in the right thigh, in the evening.—Tension in the flesh above the right knee, when standing. Tensive burning in the thigh and leg, on rising from a seat, in the evening. Tearing in the hips. Tearing from the hip to the knee. Intolerable tearing in the posterior part of the thigh, on crossing the thighs. Tearing from the middle of the right thigh to the knee, when sitting, going off after rising from the seat. Tearing in the right knee, when sitting. Tearing in the right tibia. Violent tearing in the lower extremity of the right leg. Tearing in the calves, during rest and motion. Tearing in the tendons of the right calf, evening and morning, only when sitting. Tearing in the tendons behind the outer ankle of the right foot, when standing. *Tearing pain in the tendons of the right foot.* Tearing in the dorsum of the right foot. Stinging and burning tearing in the left big toe. Fine tearing in the first three toes, from behind forwards. Tearing from the left tendo-Achillis upwards, followed by a few stitches deep in the right knee, when standing, relieved by sitting.—Fine stinging at a small spot on the right thigh, accompanied by tearing in the left side of the head. Burning stitches, at times over the right knee, at times in the right upper arm, or in the small of the back. Burning stitch in the inner border of the sole of the left foot, extorting an exclamation. Pointed stitch in the bend of the right knee, on rising from a seat.—Drawing in the legs. Drawing in the calves, in the evening.—Intermittent contraction above the heels, apparently in the tendons, in the evening, not preventing one from walking.—Itching in the anterior surface of the thighs, in the evening, going off by rubbing. Itching in the bends of the knees, in the evening, with burning after scratching. Titillating voluptuous itching in the sole of the left foot. Titillation of the heels and soles of the feet.—Creeping under the skin of the right knee, alternating with stinging and tearing in that part.—Pain as if sprained in the anterior joint of the right big toe, when sitting, going off by motion.—Great heaviness and weariness in the inner side of the thighs. Weariness and heaviness around the right thigh, when sitting, going off after rising and walking about. Great debility of the legs, after rising from bed and in the afternoon. Feeling of heat as from glowing coal, at the outer ankle of the left foot.

**Sleep.**—Violent yawning, in the evening, without drowsiness. Indolent and sleepy, early in the morning and after dinner, with yawning. Restless sleep, with frequent waking. Waking at two o'clock in the night, with trembling, oppressive anxiety and fear, causing him to start up. Waking at one o'clock in the night, with sweat, thirst, and dryness of the mouth. Waking at one o'clock at night, with nausea, retching and vomiting of the ingesta, followed by sleep until three o'clock, when great nausea, with rumbling and constriction again set in, and only disappeared in the open air. Starting soon after going to sleep, several nights.—Dreams about serpents, sick people, and waking with sweat and

thirst. Dreams about earthquakes, etc. Dreams about funerals, death of a friend, etc. Dreams full of anger, quarrel and chagrin.

**Fever.**—Frequent shuddering in the evening. Constant chilliness, also in the warm room, in the afternoon and night. Coldness and chilly shaking early in the morning, going off by sitting near the hot stove. Chilliness for half an hour, in the evening, going off in bed, followed by sweat until midnight. Chilly shuddering over the whole body, in the evening, continuing in bed. General chilliness in the evening, with burning of the hands and feet and external heat, followed by sweat in bed until midnight. Profuse sweat at night.

**Skin.**—Itching with small glandular swellings on the occiput. Itching with pimples between the shoulders, burning after scratching. Itching with small red spots in the region of the stomach.—Vesicles under the border of the lower lip. Two blotches on the right temple. Small blotch on the inner surface of the right lower lip. Large tubercle, like a boil, on the left lip, itching a good deal. Boil on the sole of the right foot, terminating in suppuration.

**General Symptoms.**—Sore pain, sometimes mingled with a fine stitch, at times on the chest, at others on the shoulders and other parts.—Languor and prostration, with uneasiness in the whole body. Hemorrhages.

## 204. RHEUM.

**RHEUM.**—Rhabarbarum, Rhubarb.—See HAHNEMANN'S *Mat. Med.*, IV.

**COMPARE WITH.**—Ars., Cham., Coff., Ipec., Merc. sol., Puls.

**ANTIDOTES.**—Camph., Cham., Coff.

### CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

Rhubarb has only been employed for derangements of the intestinal canal, in children and full-grown persons, arising from improper alimentation, colds, and generally accompanied with excessive acidity in the primæ viæ, cutting colic, disturbance of the night's rest by starting, moaning, weeping, slight convulsions, etc. *Nightly complain's*, particularly of children; snoring inspirations; stretching the hands above the head, restlessness, moaning, crying, peevish mood, bending of the head backwards, tossing about, convulsive drawing in the fingers, facial muscles and eyelids; delirium, etc., weeping, crying, wanting this or that thing, and asking for it with vehemence, all those symptoms being occasioned by a disordered condition of the bowels. Nightly crying and tossing about of infants, probably owing to colic.—*Sour, flat, slimy taste.*—Bitter taste of food.—Pinching and cutting pains in the bowels, with flatulence, with or without diarrhœa.—*Fæcal diarrhœa* in children and full-grown individuals, preceded by a constrictive pinching in the abdomen and pressing upon the rectum.—Diarrhœa in children of nine months, the stools consisting of a granular, light-coloured substance mixed with mucus.—Diarrhœa of children from acidity in the primæ viæ.—Copious diarrhœa, with vomiting and great debility.—Papescent, sour-smelling diarrhœa, particularly in children, with frequent ineffectual urging upon the rectum.—Diarrhœa of lying-in females.

### SYMPTOMS.

**Mind and Disposition.**—Taciturnity, nothing moves him. *Taciturn and indolent.* Peevish, silent, brooding to himself. Gloomy mood, is unable to con-

tinue the same occupation long at a time. Moaning, anxious. \*The child asks for many things with violence and tears.—°Anguish, as if threatened with death.

**Sensorium.**—Inability to collect one's senses, as if half asleep. Delirium.—Cloudiness of the sinciput, with drawing. The head feels stupid as after intoxication. Gloominess of the head, with bloated eyes, afterwards pressure over one eye with dilatation of the pupils.—*Vertigo*, particularly when standing, as if he would fall to one side.

**Head.**—Headache extending as far as the occiput, afterwards the pain becomes tearing.—Dull, tight, dizzy sort of headache, extending over the whole brain and being worse on the top of the head and in the temples.—Stupifying headache, as if the parts in the head were turned out of their places, more during motion than when stooping.—*Heaviness* in the head, with an oppressive heat ascending to the head. Sensation of heaviness in the head and intermittent tearing in the same (while walking).—Sensation when stooping as if the brain moved.—Creeping in the temporal region.—Drawing pain deep in the head behind the frontal eminences. Pulsative, crampy headache, now in the left, now in the right temporal bone and on the head.—Aching pain across the whole sinciput. Aching pain in the right side of the head, especially on the head and in the temples.—Dull, beating headache in the sinciput, especially when standing. Beating headache. Hammering sensation in the head, which seemed to proceed from the abdomen. Slight stitches above the temples.—The frontal muscles incline to contract into wrinkles.

**Eyes.**—Aching and burning sensation in the margin of the upper eyelid.—The eyes feel weak; they become painful when looking at a thing for a long time; with a pressure in the eyes as if weary.—Corrosive pain in the left eye before going to sleep, as if dirt, dust, or an insect had got in, with lachrymation. Lachrymation in the open air.—Beating pain in the eyes.—Pressure on the eyelids even when they are closed. Drawing in the eyelids. The pupils are more or less contracted, accompanied with an internal restlessness, for sixteen hours.

**Nose and Ears.**—A sort of dragging with some itching in the left ear, which obliges him to insert the finger into the ear. Pressure in the meatus auditorius as if pressed upon with a finger.—Sometimes a beating is felt in the ears, especially when stooping while writing.—Roaring in the right ear, with sensation in that ear as if the tympanum were relaxed, with dull hearing (as if the hearing were on the point of becoming obstructed); the roaring and the relaxation of the tympanum abated (the hearing became restored) whenever he swallowed with a certain force, only momentarily, for the symptoms returned immediately. Snapping as of electric sparks and clucking in the ear and in the muscles of the side of the neck, which could be felt with the hand.—Warmth around the nose.—Drawing, a sort of stupifying pain along the root of the nose, causing a creeping in the tip of the nose.

**Face, Jaws and Teeth.**—Pale cheeks, or paleness of one cheek, with redness of the other. Tension in the skin of the face. The frontal muscles incline to contract into wrinkles. \*Convulsive twitching of the facial muscles, corners of the mouth and eyelids. Itching rash on the forehead and arms. Cool sweat in the face, particularly about the mouth and nose. Drawing, expanding sensation in the right lower jaw extending as far as the right temple. Digging-up pain in the hollow teeth, which feel elongated and loose. Pain in the left molar and front teeth, which is accompanied with a sensation of coldness, and occasions an accumulation of saliva in the mouth.

**Appetite and Gastric Symptoms.**—*Sour taste* in mouth. Aliments, even sweet, taste bitter, but not when merely put into the mouth.—Want of appe-

tite.—Hunger, but no appetite. Great appetite, but the food, although one relishes it in the beginning, soon becomes repugnant. *Desire for various things*, accompanied with aversion to certain other things, for instance, greasy, fat things; *however, he cannot eat much of the things he likes, because they become repugnant immediately*. He does not relish his food, and it soon becomes repugnant to him, although he has a good appetite.—Coffee is repugnant to him unless very sweet.—The abdomen is distended after a meal. Urging to stool after a meal. Nausea in the region of the stomach. Feeling as if one would vomit. Qualmishness. Nausea, colic. *Sensation of nausea in the abdomen*.

**Mouth, Pharynx, Œsophagus, Stomach and Abdomen.**—Dryness of the mouth, which feels dry to him, without any desire for drink.—Astringent sensation in the pharynx. The sensibility of the tongue and the sense of taste disappear the whole day.† *Repletion in the stomach as if he had eaten too much*; this is sometimes followed by drowsiness. Contractive sensation in the stomach, accompanied with nausea. Stitch on the left side of and in the pit of the stomach. Violent beating and painless clucking in the pit of the stomach at regular intervals.—*Distention of the abdomen*. Pressure in the region of the spleen.—Pressure in the intestines, on taking an inspiration, as if full of fluid.—Rumbling in the abdomen.—Cutting colic shortly, (1-4 hour,) after dinner; he has to bend double when sitting, in order to find relief; it is worse when standing. Colic before and during stool, abating after stool. The emission of wind is preceded by pinching colic. Pinching in the abdomen,‡ he feels a strong urging to stool in the large intestine; but he is unable to accomplish anything; the rectum is inactive. —Flatulency in the abdomen, which seems to rise towards the chest, and to cause a pressure and tension here and there. Dull, strangulating cutting across the abdomen. Single painful cuttings in the abdomen without stool. Pressure in the umbilical region, immediately. Pressure in the umbilical region, as if the intestines would be pressed out. *Cutting in the umbilical region*. (The cutting in the abdomen is increased by the eating of a few plums.) Colic, bloatedness of the abdomen. *Cutting drawing in the left loin below the short ribs, and anteriorly on the left side of the hypogastrium directly above the os pubis; digging-up sensation in the intestines*. (Sharp) *cutting in the left loin*. Tension in the left side of the hypogastrium, directly over the os pubis, after a meal. Pressure in the region of the os pubis, as if a strong pressure were made with the tip of the thumb. *Violent cutting in the region of the lumbar vertebræ, as if it occurred in the substance of the vertebræ, increased by an evacuation*.—Twitching in the abdominal muscles. Expanding bubbling (plucking) in the abdominal muscles, as if one could hear it.—Painful pressure in the abdominal ring when walking, as if hernia would protrude.—Fine, frequent, itching stitches in the right inguinal gland.

**Stool.**—Ineffectual urging to stool, with pinching in the abdomen, and inaction of the rectum. \**Tenesmus*.—Stool, the first part of which is hard, the second liquid. Stool, first loose, then hard; preceded and accompanied by violent cutting. \**Diarrhæic stools, consisting of fæces and mucus*. Discharges of grayish mucus by the rectum. °Diarrhœa of lying-in females. °Frequent diarrhœa, with vomiting and great debility.—*Papescent, sour-smelling stool*;

† From chewing the stems and leaves.

‡ The primary effect of rhubarb appears to be a colicky, sometimes ineffectual urging, the stools being bad fæcal matter. The evacuations occasioned by rhubarb consisting of fæces, the drug cannot be employed in dysentery, (although the colicky pains are alike), for this additional reason, that there is no correspondence between the other symptoms of rhubarb and those of dysentery.

*one shudders while the evacuation is taking place, and after the evacuation a renewed urging and pinching in the bowels (constriction) set in. Frequent urging to stool, which results in a loose, papescent, fatid evacuation, with colic, and tenesmus immediately after the evacuation—in spite of his efforts nothing is passed, although he feels an urging—another evacuation taking place a little while after; after rising from stool, the urging, which had subsided gradually, becomes more and more violent, the pain in the abdomen which accompanied the evacuation increases likewise.—Increased urging to stool when moving about. A sort of tenesmus of the rectum. Painful sensation in the region of the anus, as is felt after a diarrhœa of long duration.*

**Urinary and Genital Organs.**—Weakness of the bladder; he had to press hard when urinating, otherwise the urine would not have been voided entirely. Pressure on the bladder. Burning in the kidneys and bladder.—Red-yellow urine, as in jaundice and acute fevers. The urine is light yellow, with a greenish tinge. Burning urine. Frequent emission of a large quantity of urine.—Pain in the nipples as from flatulenee. Stitches in both nipples. Yellow, bitter milk in nursing females.—°Diarrhœa of infants. °Difficult dentition.

**Respiratory Organs.**—Dry cough in the evening. Cough with expectoration of mucus, for five minutes. *Dull, quick stitches under the last rib, during an expiration and inspiration, continuing for a long while. Single stitches in the chest.—Oppression of the chest.—Crackling rising as of little vesicles, first in the left, afterwards also in the right pectoral muscles, continuous, and perceptible to his own ears.—Compression of the chest. Dyspnœa; when taking a deep inspiration the chest does not yield sufficiently, as if a weight were oppressing the chest directly under the throat. Painful pressure across the sternum, occasioning a sensation as if the thoracic cavity were narrower than before; sometimes single stitches are felt instead of the pressure.—Burning pain on the left side of the sternum.*

**Back and Extremities.**—Stiffness of the small of the back and hips; he is unable to walk erect. Pressure as with a finger in the region where the head and nape of the neck unite. UPPER LIMBS: single stitches in the arms. Jerking sensation in the right elbow. Jerking in the arms and hands early in the morning, also in the rest of the body, two days in succession. Bubbling sensation in the elbow-joint, during rest and motion. Tearing in the upper arms and the finger-joints. Tearing in the forearms.—The muscles of the forearm feel contracted, accompanied with a tremulous motion of the hands. Sensation in the lower surface of the forearm as if it were going to sleep. Distended veins of the hands. The palm of the hand feels hot to him and others. Cold sweat in the hollow of the hands, whereas the dorsum of the hand and the rest of the body are warm. Sweat in the palm of the hand while the hands are closed. Tearing from the thumb to the little finger across the hand. Lancinating pain in the thumb. LOWER LIMBS: *weariness of the thighs, as after an excessive effort. Twitching of single parts of muscles on the posterior surface of the thighs, especially when the muscles are put upon the stretch, when sitting and when drawing up the knees in a recumbent posture; the twitching is perceptible to the eye, and can be felt with the hand. The lower limbs go to sleep when laid across one another.—Tensive aching pain in the bend of the left knee, extending down to the heel. Bubbling sensation in the bend of the knee, as if it could be heard. Painless bubbling in the bend of the knee, extending as far as the heel. Stiffness of the knee, which is painful during motion. Painful weariness in the bend of the left knee when standing, with a drawing sensation from above downward. Tensive weariness in the bend of the right knee. Stitch in the left knee when walking. Bubbling in the leg, from above downward, ac-*

accompanied with sticking. Early in the morning, after rising, the left tarsal joint feels sprained, and is painful when stepping on the foot. Tearing and sticking pain across the instep. Stinging-itching in the hollow of the foot. Bubbling-snapping sensation in the ball of the left big toe. Stinging-itching of the root of the little toe, almost as one experiences in a frozen toe. Sticking in the left foot in the edge of the sole, behind the little toe. Burning paroxysmal pain between the internal malleolus and the tendo-Achillis, as if it were touched from time to time by an incandescent coal.

**Sleep.**—Drowsiness.—Before falling asleep, he raises his hands involuntarily above his head.—In his sleep he fancies that he is walking about, half dreaming, half waking. *Snoring inspirations during sleep.* He extends his hands above his head when sleeping. He is restless when sleeping; he moans and bends his head backward. *The child tosses about at night, cries several times, and says tremblingly that there are men.—\*The child is pale; she grumbles in her sleep as if she were quarrelling, and has convulsive drawings in the fingers, facial muscles and eyelids.* Dreams about vexatious, mortifying things. Anxious dreams about dead relatives. Vivid, sad and anxious dreams.—He is delirious in his evening-sleep, and walks about in his bedroom with his eyes closed, without talking, and feels very hot.—It takes her a long time, after waking, to become conscious of herself.—*After sleeping*: he feels a heaviness in his whole body. His eyes are agglutinated. The mouth is lined with foetid mucus. He has a putrid taste in his mouth. His breath has a foetid smell. He has a pressure in the pit of the stomach, spreading over the sternum during an inspiration, and changing to a pain as if bruised. Early in the morning, after sleeping, he feels lazy, and has a violent, crampy, tensive headache across the whole anterior half of the head.

**Fever.**—He shudders without being cold externally. One cheek is occasionally pale, while the other is red, or both are pale. The cheeks feel hot to him and others. Alternation of chilliness and heat for only two minutes; she felt weary and anxious, and everything was repugnant to her, even those things which were dearest to her. *He feels hot all over without being thirsty.* His hands and feet feel hot, without his arms and thighs feeling so, the face being cool. She is hot and restless.—*Cool sweat in the face, especially around the mouth and nose.* He sweats on the forehead and hairy scalp, even after making a little exertion. The sweat tinges the linen yellow.

**General Symptoms.**—*He feels a simple pain in all his joints when moving them. The limbs on which he is lying go to sleep. Heaviness in the whole body as when one wakes from a deep sleep.* Debility of the whole body when walking.—Debility of the whole body.—The whole body feels heavy as if one had not slept enough.

## 205. RHODODENDRON.

RHODOD.—Rhododendron chrysanthum.—Yellow rose of Siberia.—See STAFF'S Additions to the Mat. Med.

COMPARE WITH—Ac. phosph., Clemat., Chin., Dule., Led., Merc., Nux v., Puls., Rhus tox., Seneg., Sulph., Thuja, Zinc.

ANTIDOTES.—Camph., Clem., Rhus.

### CLINICAL OBSERVATIONS.

According to Noack and Trinks, Rhododendron has been successfully employed in the following diseases: Acute gout, the paroxysms being particularly excited

by rough weather, with aggravation of the pains during rest.—Drawing and tearing pains in the joints and limbs, most violent at night and during rest, leaving a feeling of stiffness and lameness in the joints.—Chronic indurations.—Complaints arising from abuse of Merc.—Typhus with rheumatic tearing in the limbs, vertigo, headache, fever with little thirst, stinging in the abdominal muscles.—Paralytic condition of the limbs, with violent drawing, pinching, stinging, so that he was unable to move, stand or walk, with nightly aggravation of the pains.—Arthritic toothache, particularly at night, equally aggravated by cold and warm drinks, somewhat relieved by external warmth.—Toothache, always returning in the spring and fall during a rough east wind, (a dry wind in Germany,) continuing for several weeks; the pain was boring, seated in one tooth, which felt as if in a vice, with darting extending to the ear; the pain was increased by contact; it sometimes abated a little, was worse at night, relieved by external warmth, aggravated by cold drink, and still more by drawing in cold air; warm drinks did not increase the pain. Nux v. and Merc. gave relief for a short time only. Three doses of Rhod. removed the pain entirely.—Hydrocele in the case of a boy, of the size of a hen's egg.—Hard swelling of the scrotum of the size of a hen's egg, preceded by inflammation of the scrotum.—Stiffness in the nape of the neck with tearing pains extending over the back, and aggravated by rest and in bed.—Violent pains in the small of the back, followed in the evening by drawing, pressing pains in the right testicle, which is swollen, with aggravation of the pains when standing, which sometimes extend into the abdomen and occasion a tension in the right abdominal ring.—Heaviness and stiffness of the lower limbs, consequent upon arthritis gonorrhoeica.—Feeling of weakness in the arms, with tingling as if gone to sleep, these pains being worse in cold and rough weather.—Tearing pains at a small spot in the upper arm, thence extending to the nape of the neck and back, from which parts the pain seems to shift suddenly to the legs, where a sticking is experienced; the heels are very painful; walking is difficult; sensation as if the feet had to drag heavy bullets; the pains are worse during rest and changing weather.—Tearing-drawing pains, first in the right wrist-joint, afterwards in the dorsum of the right hand.—Tearing pains in the upper limbs, with ankylosis of the joints.—Tearing pains in the limbs, particularly in the right foot and forearm, most violent at night.—White swelling of the knee, with violent nightly tearing in the right knee and leg, most violent during rest.—Periodical tearing pains in the lower limbs, in the region of the hip-joints, in stormy weather, most violent during rest and at night; the joints of the fingers sometimes swell and are painful.—Violent tearing pains from the posterior surface of the right thigh down to the foot, with formication; the pains are aggravated during rest; they are worse in the forenoon, and the limb is then stiffer.—Violent drawing, digging-up pains in the left os innominatum, extending periodically to the middle of the thigh, intolerable during rest, attended with chronic blennorrhoea of the urethra, swelling of the left testicle, and drawing pains in the spermatic chord.—Sticking pains in the tarsal and knee-joints, with tension in the lower limbs when walking, sensation as if the feet and legs had gone to sleep, aggravated by rest.—Violent, tearing pains in the limbs, with swelling and redness of single joints, right knee, elbow-joints, finger joints, most violent at night and in the morning, with tension and stiffness in the joints; subsequently to mercurial treatment.

#### SYMPTOMS.

**Mind and Disposition.**—*Frightful visions.*—Fits of anxiety. Mental derangement. A sort of delirium.—Indifferent, phlegmatic mood, neither affected by pleasant nor unpleasant impressions. Peevish without any apparent cause.

Gloomy mood, indifferent. Aversion to everything, especially to serious occupations.

**Sensorium.**—Vertigo. Vertigo and sleep. Vertigo, as if one would fall to and fro, such as is occasioned by sharp tobacco. Vertigo when sitting; after a quarter of an hour. Vertigo, as if the head would fall backward more and more, with anguish, when lying in bed; shortly after an inspiration. Vertigo when lying in bed; decreasing after a few minutes, and on the second evening, giddy, vertiginous sensation when writing, disappearing by motion in the open air.—Stupefaction. Obscuration of the senses. Giddiness. *Intoxication.* A sort of intoxication and loss of sense. Affects the head like brandy. Reeling sensation in the head, as if intoxicated, immediately. Makes the head feel wild and confused. Reeling sensation in the brain; his brain feels as if surrounded with a fog. While talking he easily forgets what he is talking about. Forgetfulness and sudden disappearance of all thoughts; he omits words in writing composition. Obscuration of the head, with want of attention.—*Dulness of the head*, immediately after rising. Dulness of the head, with drawing in the eyes, increased in the open air. Dulness and heaviness of the sinciput, immediately after rising. The head feels dull, wild and confused, as after intoxication. The head feels as if he had been revelling the whole night. The head feels wild and confused, with drowsiness, or with pressure in the fore part of the head. Early in the morning, on waking, the head feels dull, the nose is obstructed, and he perceives a humming in his ears. Dizziness and dulness in the forehead.

**Head.**—Headache early in the morning, in bed, which almost deprives him of his senses, decreasing after rising. Excessive headache, as if the whole brain were oppressed with a weight of lead; early in the morning, on the third day. The whole brain is painful, as if it were pressed too hard against the skull. Headache as if a catarrh were about to set in. Dull headache, in the evening.—Burning stitch through the head. Shootings in the left half of the head. Short, violent stitches in the left temporal region. Quickly-passing, dull sticking pains in the left half of the head. Sticking headache, particularly in the part near the forehead.—Beating headache. Beating sensation in the left frontal region. Beating pain in the right half of the head.—Violent drawing, tearing pain in the forehead, in the direction of the temples and eyes, especially when moving about in the room. Dulness of the sinciput; when moving the head, a pain is experienced in the forehead. Violent drawing in the left part of the os frontis, followed shortly after by a cold, suddenly-passing shuddering across the face. Fine, drawing tearing, close to the os frontis; it feels like a dragging and pressure, and is increased by drinking wine.—Painful pressure in the left frontal bone, as if with the thumb. Aching pain in the forehead.—Intense pain in the region of the right frontal bone, with pressure from within outward. Beating pain in the forehead, with pressure as if everything in the head would come out there, going off during rest. *Aching pain in the left half of the forehead, spreading towards the left temporal region, continuous, increased by the use of wine.*—Aching on the vertex. Dulness of the head, especially of the frontal region, with aching pain in the left temporal region; the pain and dulness are alleviated for a short time by laying the head on the table; both disappear by exercise in the open air. Hard, painful pressure in the left temporal region, as if in the outer surface of the bone. Painful pressure in the temple from without inward. Aching pains in the left temple. Aching drawing pain under the left temporal bone.—*Tearing boring pain in the left temporal region.*—Pain under the left temporal bone, pressing from within outward. Drawing pain under the right temporal bone, with pressure from within outward. Pressure in the temporal bones. Aching pain deep in the right side of the

occiput, with paroxysmal drawing from below upward. Dull pressure deep in the occiput, in the evening.—Tension in the left portion of the frontal bone. Tension with pressure in the front part of the forehead.—Dull pain in the occiput, early in the morning on the second day. Violent pain in the right half of the occiput, as if a foreign body had been forced in in that part.—Aching sore pain in the right hemisphere of the brain and cerebellum, when sitting. Aching sore pain in the left hemisphere of the brain, when lying, going off by sitting up.—Racking sensation in the head when walking, as if the brain were shaken from all sides, especially from above.

**Scalp.**—Contusive pain at a small spot on the right side of the outer parts of the occiput, with alternate drawing in the direction of the ear. The scalp is painful to the touch. Painfulness of the vertex, as if from subcutaneous ulceration.—Violent itching of the hairy scalp. Shortly-passing biting in various parts of the head. Itching of the hairy scalp, obliging one to scratch; scratching changes the itching to a burning, in the first evenings, but decreasing from day to day.—Cold tingling in the temporal region.—Pustules on the forehead.

**Eyes.**—Drawing from the left half of the face into the left eye, leaving a pressure behind in the eye, after half an hour. Burning and prickling under the right eye in the cheek, and returning occasionally for many months. Pimples on the left side over the outer part of the eyebrow and under the right corner of the mouth; painful when touched. Dull, drawing pain over the left eye. Sticking pain with pressure all around the margin of the left orbit, with spasmodic contraction of the left eyelids. Sticking pain in the right eyeball, as with a red-hot needle, darting from within outwards.—Itching pinching sensation in the skin of the right eyebrow. Pinching pain in the skin of the forehead over the right eyebrow.—Swollen eyelids which easily become red.—Twitching of the right upper eyelid, after nine hours. Frequent twitching of the left upper eyelid, for some time.—Suppuration of the eyelids, at night. Dampness of the eyes, and agglutination of the lids.—Lachrymation, also in the open, raw air.—Painful pressure in the internal right canthus, as from a grain of sand.—Burning and pressure in the inner canthi, early in the morning, with increased secretion of gum in those canthi. Slight burning and pressure in the eyes. Dry burning in the eyes.†—Burning in the eyes when looking at the light of day, shortly before rising from bed. Burning in the eyes when looking intently at an object. Burning and feeling of dryness in the eyes, especially in the evening. Burning pain in the eyes; when writing or reading he has a feeling of heat in his eyes. Periodical burning in the eyes, without the eyes being inflamed, early in the morning on the first day. The right eye is affected with a burning pain, and the sight of that eye seems to be dim; in the evening when reading.—Itching of the eyes.—Periodical smarting pain in the right eye.—Contraction of the pupil.—When reading and writing the eyes feel somewhat weak. Sensation as of a gauze before the eyes, second day.

**Ears.**—Humming and ringing before the ears: soon after taking the drug, and on the second evening while lying in bed. Constant buzzing in the ears, and a sensation as if water were rushing into them; strong sounds re-echo for a long time after. Buzzing in the left ear the whole forenoon, which is most distinct when whistling. Sensation in the left ear, as if a worm were creeping about in it.—Darting pain in the left ear and in the left temporal region.—Beating sensation in the left ear.—Shooting stitches in the left ear.—Tickling in the left external meatus auditorius, changed to a pain by boring with the

† Observed from ten drops of the tincture in a girl of twenty years, whose menses had been suppressed for six months past, and who was suffering with tightness of the chest, heaviness and drawing in the limbs in consequence; she recovered perfectly a few weeks after taking the Rhododendron.

finger, for hours. *Violent otalgia in the right outer ear, commencing in the morning, and continuing the whole day.* Pain in the right ear, as if the ear would be pressed asunder. Stitches in the right ear, slow and pressing, from within outwards.—Tearing sensation in the right ear and all around.—Periodical boring or drawing pain in and around the ears.—A suddenly-passing itching in the region behind the left ear, extending down to the nape of the neck.

**Nose.**—Itching of the nose. Itching and creeping in the nose.—A bright-red spot on the nose, sensitive to the touch, and lasting for several days.—Pinching in the skin of the dorsum of the nose.—Moderate bleeding from the left nostril, after half an hour.—Troublesome dryness of the nose, after eight hours. Obstruction of the nose early in the morning, the first days. *Obstruction of the left half of the nose, near the root of the nose, worst in the morning before rising; during the day the obstruction of the left nostril alternates with that of the right, but the nose is never obstructed entirely; less in the open air; immediately after taking the drug; continually.* *The left nasal cavity was obstructed near the root, with sore pain in the right cavity, accompanied with a sensation of accumulation of mucus in the open air.* Obstruction of the left nostril, early in the morning; several mornings in succession.—Increase of nasal mucus, while one or the other nasal cavity was obstructed near the root of the nose. Increased secretion of mucus in the nose, as if a catarrh would set in. Increased secretion of mucus in the nose, in open air, the first days. The smell and taste are altered; all things smell and taste alike.—Violent fluent coryza, with headache and roughness of the throat.

**Face.**—Prickling biting in the cheek for several days, coming suddenly and passing off soon.—Pimples over the right eyebrow and near the corner of the mouth.—Dry and burning lips. Pimples around the left corner of the mouth. Vesicles on the internal surface of the lower lip and on the inferior surface of the tongue, with biting when eating. Drawing stitches from the left submaxillary gland towards the cheek.

**Jaws and Teeth.**—Quickly-passing pain in single teeth, recurring especially in damp weather, and when the air is greatly charged with electricity. *Occasional grumbling and tearing in the first four anterior molar teeth, for a short time; now in the upper, then in the lower jaw: now on the right, then on the left side.*—Drawing in the left molar teeth; recurring on the first day and afterwards several times.—Dull sticking pain in the hollow tooth of the left upper jaw. Drawing and pricking pain in one of the left molar teeth; it does not bear contact. Tearing sharp aching pain in the upper molar teeth, increased by warm food, and by staying in a warm room; towards evening, on the first day. Tearing in a hollow tooth.—Prickling and biting in the foreteeth. Violent, drawing pain in the teeth of the right lower jaw, disappearing by eating. *Toothache: the approach of a thunder-storm, or of cloudy, windy weather, is always preceded by a pain which partakes of the character of drawing, aching (and cutting); the thunder-storm sets in in one or two, the cloudy and rainy weather several hours after the toothache.* The pain commenced in the ear, or at any rate was in relation with a pain in the ear.—The whole night he had a pain in the left lower jaw and teeth, accompanied with otalgia. The right side of the head was affected in a similar manner, but less violently. Pressure seemed now to relieve, then to increase the pain; the warmth of the bed had no influence on the pain.—Continuous, not very troublesome itching of the gums, obliging one to rub them frequently. Aching pain, as if swollen and sore, between the gums of the right lower jaw and the cheek.

**Mouth, Pharynx and Œsophagus.**—On one side of the root of the tongue and gums, he has a painful, somewhat swollen spot in the mouth. Contractive sensation along the left Stenonian duct. The tongue has a greenish coating, with

bitter taste in the mouth. Burning on the tongue, during an inspiration. Prickling sensation on the tongue. Increase of saliva, which has a sourish taste, early in the morning. Accumulation of saliva in the mouth, after two hours. *Great dryness of the whole buccal cavity*, after half an hour. Contracts the fauces, and has a burning taste. Burning in the fauces, with constrictive feeling in those parts. Simple pain in the posterior surface of the throat, during the deglutition of food, on the first day, in the evening. Burning, and a feeling of heat in the posterior part of the mouth, as if catarrh would set in. Stitches in the uvula, after one hour. *Scraping and scratching sensation in the fauces, sensation as if those parts were lined with mucus*. Roughness in the throat, early in the morning. Burning in the throat and palate, after eating bread.

**Taste.**—All things taste alike, the first days. Flat, bitter taste, after one hour. Putrid, bitter taste on the posterior part of the tongue, after 24 hours. Straw-taste in the mouth, the whole day. Sourish taste in the mouth. Sourish, saltish taste in the mouth, with nausea, on swallowing saliva, early in the morning, the first and second day. Troublesome thirst.

**Gastric Symptoms and Appetite.**—Eruptions, also *empty* and tasteless rising of oppressive wind after dinner, causing a burning through the whole chest, which extended as far as the dorsal vertebræ. Gulping up of a rancid fluid, occasioning a scraping sensation in the throat. Gulping up of a small quantity of a bitter-tasting moisture. *He is easily satiated*, and feels very weak after having satiated himself. Pressure at the stomach, after drinking cold water. Loss of appetite. Uncomfortable feeling after a meal.—Nausea. Nausea, accumulation of water in the mouth, and inclination to vomit. Nausea on stooping, diminished by an eructation, shortly after taking the drug. Nausea, with pressure in the pit and region of the stomach, after 24 hours. Nausea, with accumulation of water in the mouth, after half an hour. Nausea, as if one had taken an emetic, with urging to stool. Nausea while walking; he has to remain seated, and experiences a feeling of qualmishness at the stomach.—Vomiting (from large doses). Vomiting of a green, bitter substance. Vomiting, after taking anything fluid, especially cold water, which weakens the effect of the drug.

**Stomach.**—Unpleasant creeping sensation in the region of the stomach, after one hour. An unusual, gnawing sensation (sensation of hunger) in the region of the stomach, before a meal. *Troublesome pressure in the pit and stomach*, the first days. Aching pain in the pit of the stomach when stooping, and when pressing the hand into that part. Sharp pressure in the pit of the stomach, an hour after dinner. Continual aching pain in the pit of the stomach, before, during, and after dinner, after one hour. Pressure and cramp-like drawing, deep in the pit of the stomach, one hour after dinner. Contractive pressure in the pit of the stomach, with tightness of breathing, several evenings, during a walk. Aching, crampy pain in the pit of the stomach, sometimes spreading to both hypochondria and impeding respiration. Continuous aching pain deep in the pit of the stomach, accompanied with alternate drawing and dull sticking along the region where the short ribs unite, frequently increasing to oppression of breathing, with anguish and heat in the face, especially in the afternoon, when standing. Pinching in the pit of the stomach.

**Abdomen.**—Superficial pain in this or that part of the scrobiculus cordis, or the region of the short ribs, especially on the left side; the pain is now a fine, now a dull stitching, accompanied with pressure. Hypochondria. Periodical crampy pain under the short ribs. *Quickly-passing dull pain, extending from the chest to the left hypochondrium, almost like splenic stitches, when walking fast*. Violent stitches in the region of the spleen, arresting the breathing, in the evening, during rest. Sticking pain in the right hypochondrium, in the

evening. Pressing and drawing pain under the short ribs, early in the morning, with a feeling of repletion in the pit of the stomach, and oppression of breathing. Seated pain in the left hypochondrium, with tension when stooping. Pain in the hypochondria, as if from incarcerated wind. ABDOMEN. Pinching pain, after supper, across the epigastrium. Cutting, afterwards aching pain, in the epigastrium, after a meal. Pressure in the epigastrium, after dinner.—Paroxysmal drawing-aching pain in the epigastrium, with nausea. Pinching in the umbilical region, after a meal, and weight and indolent feeling in the abdomen, not as if filled with nourishment. The usual breakfast causes a disagreeable feeling of repletion in the abdomen, relieved by eructations. Slight digging-up sensation in the abdomen, with a feeling of repletion in the same.—Pinching colic. Pinching in the abdomen, followed by loose stool, after half an hour. Pinching pains in the right side of the abdomen, after one hour.—Single, piercing stitches in the abdomen.—Feeling of repletion, heaviness, and distention in the abdomen, especially early in the morning, in bed, and in the evening, with rumbling in the bowels, empty eructations and emissions of foetid flatulence, continuing for some time. Sensation of repletion and bloatedness in the abdomen, without the abdomen being really puffed up, relieved by rising of air and emission of flatulence.—Painful distention of the abdomen. *Rumbling and grumbling* in the abdomen. Copious flatulence occasions various pains in the abdomen, now in one, then in another part; they are diminished or removed entirely by emission of foetid flatulence. Incarceration of flatulence, early in the morning.—Aching pain in the left lumbar region. Drawing, from the left groin into the left thigh. Intermittent sticking above the crest of the left ilium, from without inwards. Drawing pain in the right abdominal ring, also in the left, but feebler, with tension in the ring when walking.—The abdominal integuments are painful, as if he had received several blows on them.

**Stool.**—Costiveness. Delaying stool, (secondary effect). Papescient stool, occurring 20 hours after the regular time. The fæces are not hard, but their expulsion is accompanied with much straining, with a sensation in the anus as if the contractile power of the anus were diminished, for several days.—Sudden desire for stool, but only some flatulence is emitted after straining. Ineffectual urging to stool several times a day.—Occasional diarrhœa. Diarrhœa, directly after a meal. Diarrhœa, stool spurts out as if constantly accompanied with flatulence. Food and drink cause diarrhœa without colic. Diarrhœa, a sort of henteria. Diarrhœa as soon as he rises from bed. Fruit occasions diarrhœa and a feeling of weakness in the stomach. Feeling of qualmsiness as if diarrhœa would set in. The disposition to diarrhœa returns in damp weather.—The stools look fermented. Brown, papescient stool. Papescient stool at the regular periods, the latter portion of the stool being somewhat loose and leaving a smarting sensation in the rectum. Loose stool, but sluggish, *going off only* after straining. Loose and yellowish stool, but sluggish, expelled with much straining, and insufficient, with sensation as if some fæces remained behind. Desire for stool, as if diarrhœa would set in; nevertheless, the natural stool is passed with much straining. Tenesmus, with papescient stool, for some days. Stool is succeeded by a feeling of emptiness, followed by pinching in the abdomen.—Beating pain in the anus. Spasmodic pain in the rectum, as if flatulence had become incarcerated. Sticking pain in the rectum, extending as far as under the ribs. Crawling in the anus, as if from ascarides. Biting pain in the anus, accompanied with eking out of a small quantity of moisture. Violent drawing, from the rectum to the genital organs. /

**Male Genital Organs.**—Burning sore pain between the genital organs and thighs, especially when walking, the first days. Beating pain in the glans, in the

evening on the first day. Pinching, jerking pain in the glans, both during rest and motion, after four hours. Itching, crawling behind the prepuce. *Itching and increase of sweat about the scrotum.* The scrotum shrinks easily, especially when walking or standing, or when the air becomes cool ever so little, for many days. *The testes are somewhat drawn up, swollen and painful,* for many days. *Contusive pain in the testes, with alternate drawing;* more or less now in one, then in the other testicle, for many days. *The testes, especially the epididymis, are intensely painful to the touch, for many days.* Violent, painful drawing in the hard, somewhat swollen testes, extending as far as the abdomen and thigh, especially on the right side. Creeping-pain in the testes.† Sticking pain in the right testis. Violent stitching in the right testicle, as if contused violently, in the evening while sitting; the pain disappeared in walking, but returned immediately upon sitting down. Drawing-sticking pain in the right testicle and spermatic cord, disappearing by motion. Sometimes the pain was pricking, commencing in the right testicle and spreading in zigzag along the perinæum towards the anus, lasting some seconds, and being so violent that it arrested the breathing. The swelling of the testicle, which had been painless heretofore, enlarged to the size of a hen's egg, especially the left testicle, with stitching and tearing pains in both testicles, which were short, but violent, (a homœopathic aggravation). °The swelling of the testicle, which had existed for years, decreased more and more until the testes acquired their natural size, after fourteen days. (Curative effect.) °Swelling of the right testis, with drawing pressing, relieved by lying with the limbs drawn up, worse when standing, attended with tension in the right abdominal ring. °Swelling of the left testis, after suppression of gonorrhœa and chordee, or with blennorrhœa from the urethra, with drawing from the testis to the spermatic cord and down into the thigh, where the pain becomes intolerable when lying quietly, preventing sitting and lying.—°Hydrocele. The erections are preceded by a creeping sensation from the perinæum to the penis.—Want of the usual morning erections, continuing for many days. *Profuse emission, with amorous dreams, five nights.* Emission of semen in sound sleep, in the middle of the night, with subsequent erections. After an embrace he had lascivious dreams, with an emission of semen, and long-continued erections. Aversion to an embrace with want of erection, the first days. Increase of the sexual instinct, the erections coming on very easily.

**Urinary Organs.**—Frequent desire to urinate. Desire to urinate, with drawing in the region of the bladder and the groins, in the forenoon. *Scanty, or profuse emission of urine.*—Brown-red urine, having an offensive smell.—*The somewhat increased pale urine has an offensive, acrid odour.* The urine is clear, with a greenish tinge. Burning in the urethra before and during micturition. (A few drops flow out after urinating, occasioning a burning pain in the urethra, and a shuddering through the whole body.)—Stitches in the urethra, after micturition, or in the evening (in the orifice). Twitching in the orifice. Pain in the urethra as from subcutaneous ulceration, or as if ecchymozed, at night.

**Female Genital Organs.**—The menses, which had ceased two days ago, re-appear for a short time. The menses occurred too early by several days. The menses, which had been suppressed for six months, appear, accompanied with febrile motions, and continual headache. The menses, which had been suppressed for six months, re-appear again for two days, with intermissions.‡

**Larynx and Trachea.**—Great dryness in the trachea, early in the morn-

† This symptom has been observed in a young man, who suffered with excessive nightly emissions, but whose health was otherwise good, after taking one-teenth of a grain of the powder of Rhod. chrys., triturated in the usual manner.

‡ See note to page 24.

ing. Scraping sensation in the throat, sensation as if a tenacious mucus were adhering to the trachea, which he is unable to cough up, during a walk. He hawks up a quantity of white and tenacious mucus. Several attacks of dry cough, excited by tickling in the trachea. Titillation in the throat, exciting cough. Dry cough, early in the morning. Fatiguing, dry cough, morning and night. Dry cough, from roughness in the throat, early in the morning. Scraping, dry cough, in the evening. Scraping cough, accompanied with expectoration of mucus, disturbing sleep, continuing for several days. Dry cough, with increased tightness of the chest and roughness in the throat. In diseases of the chest, the cough becomes more easy, and the expectoration of mucus loose.

**Chest.**—Scraping, rough feeling in the chest, with heaviness, obliging him to hawk frequently. Aching pain in the chest, with tight breathing. Extremely violent, aching pain deep in the chest, arresting the breathing, in the afternoon. Painful *sticking* in the left side below the ribs, the stitches extending in the direction of the dorsal vertebræ, during rest. Sticking pain in the middle of the left chest, he feels the pain as far as the scapula, and it is increased by motion. Pain in the middle of left chest, resembling cuttings, increased by turning the upper part of the body from the left to the right side. Crampy pain through the chest. Fine, tearing pain in the region of the lower extremity of the sternum. Oppressive, burning pain in the chest, below the ribs, with anxiety, not impeding respiration, after forty-four hours.—*Contractive pain* in the chest.—Constriction of the chest. Suppressed breathing, suffocative sensation.—Oppression of the chest during sleep, a sort of nightmare. *Oppression of the chest.* Oppression of the chest, and pain in the chest when stooping, or when sitting bent. Oppression of the chest, as if the sternum were pressed upon. Oppression of the chest, as if the chest were constricted, rather externally.—Oppression of the chest, caused by a tensive feeling in the pectoral muscles; in the evening, on the first day.—Violent congestions of the chest, returning for two days, with more or less violence. The respiration is accelerated by an anxious, undulating sensation, (rushing of blood), from the abdomen. Rushing of the blood in the chest and region of the heart.—The beat of the heart is stronger and more perceptible. Pain in the muscles of the chest, increased by contact. The whole thorax feels sprained and bruised, the first days. Periodical pinching pain in the outer chest, especially in the noon, during motion. Beating, paralytic pains along the left clavicle.

**Small of the Back.**—Pain, also while sitting. *Aching pain* in the small of the back, and back. Aching pain, with anxiety, going off by motion. Pain, as if sprained. Pain becoming intolerable by stooping. Pain resembling a fine, drawing tearing, as if close to the bone. The small of the back is painful when sitting, as if the back had been bent too long, and as if one had been lying on it too long. Pain in the small of the back, as if bruised, increased during rest, especially violent in rainy weather.—Several large pustules on the back and shoulders. Shocks in the side, across the lower part of the spinal column, or rather, single, continuous impressions, as with a dull point. Aching pain on the left side of the lumbar vertebræ, during rest. Shuddering sensation in the region of the lumbar vertebræ, while sitting. Rheumatic drawing pain in the left scapula.—Pain in the left scapula, early in the morning, when turning, as if sprained and rheumatic. Rheumatic pain between the scapulæ, hindering motion. Pain in the back, shoulders, and arms, early in the morning when in bed, digging-up, drawing, disturbing sleep, accompanied with a bruised pain of the whole body. When bending to the right side and backward, he feels as if some one were plunging a knife through the left chest and back. Violent aching-drawing pain in the right side of the back, more in the region of the scapula, waking him from

the morning-sleep, and going off gradually by turning to the other side. Tensive pain in the anterior cervical muscles, at noon. Tensive pain in the left cervical muscles, even during rest. Painful sensation, as if the outer neck would swell, after six hours. Tensive, rheumatic pain in the right outer side of the neck, with drawing, extending as far as behind the ear. Drawing pain in the right side of the neck, towards the shoulder. Stiffness of the nape of the neck, early in the morning, in bed. Rheumatic pain, with stiffness, in the nape of the neck, early in the morning. Pain in the posterior cervical muscles. Pain in the nape of the neck, as if it had become rigid.

**Superior Extremities.**—Tearing pain in the shoulder, early in the morning, in bed. Violent tearing in the right shoulder, for several evenings, in bed, and disturbing the night's rest. Violent beating and drawing pain in the right shoulder-joint. Boring, beating pain in the right shoulder-joint. Paralytic rheumatic pain in the right shoulder, on which he rests, sometimes extending below the elbow, and going off by turning to the other side. Dull pain in the left shoulder-joint, continuing the whole day. Violent tearing-boring pain in the left shoulder-joint, the arm going to sleep, and with a prickling sensation in the tips of the fingers, returning for several days.

**Lower Extremities.**—*Pain in the right hip, as if sprained*, also when walking. Digging-up pain in the right hip when lying on it in the evening. Some painful stitches in the region of the narrow part of the left thigh, both during rest and motion.—Quickly-passing pains in the lower limbs, (also in the fingers,) rather of a dull kind, a hard pressure from above downward. The lower limbs refuse to remain steady, he feels all the time as if he ought to sit down. Occasional contusive pain in some of the muscles of the lower limbs, when sitting in the evening. Weakness and heaviness in the whole right lower limb. Early in the morning, after rising, his thighs and legs do not feel refreshed, especially the left, he feels as if he had taken a long walk the day before. Pain in the muscles of the lower limbs as if contused, when sitting. °Tearing in the lower limbs, also particularly in the hip-joints, worse during rest and in stormy weather, also at night. °Tearing from the thigh to the foot, worse during rest, with formication in the limb, and going to sleep of the foot when sitting, the limb being stiffer in the forenoon; he has to get up early on account of the pain.—Feeling of coldness, with goose-skin, in small portions of the lower limbs. Acute drawing in the right thigh. Feeling of coldness and rigidity in the thighs, when rising from his seat, in the evening. Weariness of the muscles of the right thigh, when walking. *Heaviness in the thighs*, when commencing to walk, relieved by continued walking. Itching of the inner surfaces of the thighs. Sore feeling of the thighs, near the genital organs. Lacerations in the outer side of the left thigh, when at rest. Tensive pain in the inner surface of the right thigh. Several dark red spots on the inner side of the right thigh, occasioning a sore pain when walking. Feeling of a burning soreness between the thighs and the perinæum. Small, red blotches on the inner surface of the thighs.—Fine tearing, deep in the knee-joints, apparently close to the bone, during rest and when bending the knee. Pain in the right knee-joint, as if the part were sore internally, or as if he had received a blow on the inner surface of the knee-pan. Fine tearing in the region of the right knee, disappearing during motion. Tensive pain, as if sprained, in the right knee when bending it during rough weather. Drawing in the right knee, when at rest. Drawing, afterwards tearing pains in the right knee-joint, continuing for several hours at night in bed. Jerking sensation in the right knee. Cold, undulating sensation above the knee, extending as far as the point of the knee. Drawing in the bend of the knees, when walking. The knees threaten to break, after the siesta; at the same time he is indifferent and low-spirited. °Cold swelling of

the right knee, with raging pain extending to the leg, in bed and during rest. ° *White swelling of the knee*, with intolerable tearing extending to the leg, particularly during rest, disturbing the night's rest.—Drawing along the anterior surface of the legs. Painful weariness in the tibiae, as if he had taken a long walk the day previous. Tearing pains in the right tibiae. Fine tearing in the left tibia, commencing in the knee, as if in the periosteum. Boring, beating pain in the right tibia. Tearing drawing in the right leg. Uneasiness in the left leg, as if he had walked a good deal and had tired himself out, in the evening. Rigid feeling in the left leg, accompanied with a sort of concealed tingling in the leg. ° Constant sensation as if gone to sleep, also in the feet, with sticking in the knees and tarsal joints, tension in the limbs when walking, and aggravation of the pains when sitting still and when rising from bed. *Formication* in the left leg. *Edematous swelling* of the legs and feet, increasing considerably when performing an unusual exertion, especially of the right leg, continuing for several weeks.—Pain in the tendo-Achillis when stepping.—Acute drawing pains deep in the malleolus externus, extending along the leg, especially when at rest, in rough weather. Tearing in the right foot, especially in the outer malleolus. Prickling in the right foot and hand when walking, as when the parts go to sleep. Sharp crampy pains in the tarsal joints. Tingling in the left foot, as if it had gone to sleep. Troublesome tingling in the feet, especially in the balls and heels. Pains in the toes, balls and hollow of the feet, as from chronic chilblains. Small painful spot in the sole of the right foot, as from a corn. A sudden stitch darts through the left heel. Dull pain in the right heel. The outer border of the right big toe is excessively painful during rest. Sticking pain in the corn, at night, in bed. Shooting stitches in the corns. Drawing, digging-up pain in the joints of the upper limbs, especially the left, when at rest. Heaviness, and tremulous, paralytic weakness of the right arm, when at rest, diminished by motion. Fine drawing and jerking in the right arm and in the left hand. Sticking pain in the right arm. Sensation in the left arm, as if the blood ceased to circulate, with weakness and heaviness in the arm, especially when at rest. Spasmodic, contractive pain in the left arm, with a paralytic feeling in the same, so that it can be lifted only with great trouble. Feeling of heaviness and weakness in the left arm, as after an excessive effort, disappearing by moving the arm. Considerable feeling of weakness in the right arm, with prickling in the tips of the fingers. Drawing pain in the whole right arm, especially when at rest, in rough weather. Quickly-passing, dull sticking pains in the whole left arm. ° *Weakness in both arms*, with tingling as if gone to sleep, particularly in the warmth of the bed, or in cold and rough weather.—Pain in the muscles of the upper arm, as after an excessive exertion. Pulsation in the upper arm. Fine tearing, as if in the periosteum of the right arm and elbow-joint, and only when at rest. Pain as if the right arm were dislocated, so that it is very difficult for him to hold anything in his hand, continuing the whole day. Drawing in the left upper arm, the whole arm feeling weak. Drawing pain along the right upper arm. Violent aching pain, as if seated in the periosteum, on the inner side of the left upper arm. Sharp stitches deep out of the left upper arm.—Fine tearing close to the bone, commencing in the right elbow-joint, and extending upward and downward on the posterior surface of the arm. Drawing in the elbow-joints. Pinching pain in the tip of the elbow. Painless pustules on the right forearm. Tearing in the right forearm. Darting pain in the left forearm. Tearing in the left forearm, at night, when in bed. Weak and paralytic feeling in the left forearm. Sensation in the forearm, as if the blood ceased to circulate, the veins of the hand being very much distended, a pleasant warmth spreading through the hands and a pricking sensation being

experienced in single fingers, as if they had gone to sleep, especially during rest, and at different periods.—Pain in the wrist-joints, as if sprained, with increase of warmth. *Digging-up, a drawing pain in the wrist-joints*, with increased warmth in the hands, especially when at rest, and afterwards at different periods, during rough weather. Pain in the wrist-joints, *as if sprained*, during and after motion. Crampy pain in the right wrist-joint, and as if sprained. Pain, as if sprained in the right wrist-joint, impeding motion, increased during rest, in rough weather. Shooting stitches in the right wrist-joint, in the evening. Violent tearing pain in the left wrist-joint, when walking in the open air. Drawing pain in the left wrist-joint, and in the right leg. Intensely-painful drawing and digging-up in the left wrist-joint, in the evening when at rest. Constant pain in the left wrist-joint, moving towards the hand, with difficulty of motion. Painful weariness in the left wrist-joint, only during rest. Painful sensation at a small spot on the metacarpal bones, as if an exostosis would form.—Puffiness of the hands. °Swelling, with drawing tearing, first in the joint, afterwards in the dorsum of the hand. Tremor of the hands, during rest and motion. Sensation of loss of strength, and heaviness in the hands, accompanied with frequent drawing in small spots of the bones of the hand. Paroxysmal tearing in the right hand, in the evening. Paroxysmal twitching and tearing in the outer side of the right hand, in the direction of the little finger, in the evening hours. Burning stich in the right hand. Violent tearing pain in the right hand, especially in the thumb and index-finger in the evening. Drawing pain in single carpal and phalangeal bones. Sudden formication in single fingers or other parts of the hands and feet. Itching sensation in the fingers of the left hand, obliging him to scratch, followed by burning, which goes off again by washing the part with cold water. Continuous darting pain in the fingers of the left hand, especially in the little finger. Continual formication in the right thumb, also during motion. Fine, sharp stitches in the index-finger of the left hand, in the evening when in bed. Jerking in the left index-finger, in the evening hours. *Itching of the middle and ring-fingers of the left hand, with erysipelatous redness of those parts*. Pain under the nail of the right index-finger, as if he had received a violent blow on that part, continuing the whole day. Coldness of the three middle fingers of the right hand. Darting pain in the left phalangeal bones. He is roused from his nightly sleep by a continuous painful itching between the index and middle fingers of the left hand in rough weather. Continuous digging-up pain in the second joint of the right index-finger, with a feeling of tension in the joint when moving it, in the afternoon, in rough weather. Paralytic pain in the left thumb. Pain, as if sprained, in the joint of the left thumb, continuing for several days. Aching sensation in the metacarpal bone of the left index-finger. Numb feeling, afterwards formication in the little finger of the right hand. Violent pain in the middle joint of the little finger of the left hand, impeding motion.

**Sleep.**—Frequent yawning without weariness.—Great drowsiness in the daytime, and deep night-sleep during the first nights, afterwards the reverse of these symptoms takes place.—*Great drowsiness* with burning in the eyes, in the afternoon. On lying down, in the evening, he falls into a deep sleep immediately. Deep calm sleep, the first hours; towards morning he wakes frequently and tosses about.—Early in the morning he wakes at a certain period for several mornings in succession, as if he were called, and is afterwards unable to fall asleep again. Wakes early in the morning, after which his sleep is restless.—Contrary to his habit he lies on his back, the legs across one another. He feels most comfortable in bed, with his limbs drawn up.—Restless sleep. Uneasiness in the lower limbs, obliging him to turn from side to side all night. Tremulousness of the limbs at night. Restless sleep, disturbed with dreams,

the first nights. Sleep full of dreams; feels more weary on rising than he did on lying down. Anxious dreams, he dreams about fire, 12 nights. He dreams about fire, remaining indifferent. Vivid, lascivious dreams towards morning. In the morning in bed, all his limbs are affected, he stretches himself all the time, and turns from side to side.

**Fever.**—Cold feet. Icy-cold feet in a warm room, especially in the evening; they do not get warm in bed, and frequently disturb sleep. Chilliness of the whole body, especially early in the morning, in bed. He feels chilly the whole day, the least current of air makes him feel chilly. A feeling of coldness is experienced along the thigh, commencing at the left knee, the hands being warm, forenoon.—Paroxysm of fever at six o'clock in the evening. Great heat about the head, with cold feet and absence of thirst, intolerable headache, with pressure from within outward, burning in the eyes, dryness in the nose, and a burning-hot sensation in the nose, when taking an inspiration, feeling of debility and a bruised pain in all the limbs, and weariness of the mind; he passed a restless, almost sleepless night, owing to vivid dreams and dry heat of the body; towards morning he slumbered a little; during his slumber a general sweat broke out, which alleviated his sufferings; this paroxysm of fever returned the two following evenings, but in a lesser degree. Febrile heat, with violent thirst.—Alternation of chilliness and heat, headache, drawing in the limbs, and appearance of the menses, which had been suppressed for the last six months; fourth day.† Feeling of warmth and anxiety in the upper part of his body, as soon as he enters the room on coming out of the open air. Pleasant feeling of warmth over the whole body, in a few minutes. General feeling of warmth and slight sweat over the whole body, after one hour. Warmth in the face and on the body, down to the thighs. Increased feeling of warmth of the hands, they feeling cold generally, after three hours. *Frequent increase of warmth of the hands, even in the cold air*, the first days. The hands, especially the tips of the fingers, feel hot, accompanied with visible sweat, after half an hour. Paroxysmal burning heat in the face, evening.—Sweat of the lower limbs in bed, towards morning. Fetid, increased sweat in the axillæ, the first hours. Profuse sweat, first night. Sweat, frequently accompanied with itching and formication in the skin, the sweat is said to smell of spice frequently. Profuse sweat, and moist skin in the day. When walking in the open air he sweats easily, and feels tired.—Slow pulse. Diminishes the number of pulsations. Immediately after taking the drug, the pulse becomes feeble, small and slow.

**Skin.**—Itching and gnawing in different parts of the body, for several evenings, when going to sleep. Itching of the skin. Prickling of the skin, here and there. Dropsical swellings. \*The joints affected by gout become red, swollen and painful. Itching and pains of all sorts in the body.

**General Symptoms.**—(For the rheumatic affections which have been cured with Rhodod., see *Clin. Obs.*). Drawing paralytic pain, now in one, then in the other finger, now in the metacarpus, then in the forearm. Tearing in different parts, especially in the left elbow and also in the affected limb. Creeping sensation in the limbs, causing an uneasiness in the same, especially in the arms during rest, which obliges him to move them, at different periods, especially in rough weather. \**Erratic tearing pains* in the limbs. The limbs go to sleep easily. Burning formication, prickling in the limbs. Unceasing creeping in the affected parts. Formication in the limbs which had been affected with gout, in a few hours.—*Insensibility* of the affected parts. *Insensibility* and paralysis of the limbs.—Increase of the pains in the limbs. Creeping sensation in the affected

† See Note on page 637.

parts. Disagreeable sensation in the affected parts. Disagreeable sensation in the affected parts, accompanied with a sensation as if a worm were creeping through them. Slight drawing and jerking sensation in the whole body, now here, then there, but especially in the joints, returning at indefinite periods, and continuing upwards of a fortnight. Drawing as if in the marrow, worse in bad weather. Painful sensitiveness in windy and cold weather, for several days. Disagreeable general feeling of weakness. Great weariness and bruised feeling of the whole body. Vacillating gait, as if he had been sick a long while. A short walk fatigues him a good deal, and makes all his limbs feel bruised. (General weakness.) Sensation in the whole body, as if he had strained every part.—Convulsions.

**Characteristic Peculiarities.**—*The pains in the limbs are especially felt in the forearm and leg down to the fingers and toes; they soon pass off, and resemble a cramp-like drawing. \*Almost all the pains re-appear at the approach of rough weather, or of a thunder-storm. The pains in the limbs appear to be seated in the bones or skin, they affect only small spots and re-appear when the weather changes. Many symptoms appear in the morning.*

## 206. RHUS RADICANS.

**RHUS RAD.**—Poison Ivy, Poison Vine.† *Duration of Action*, from five to seven weeks, in some cases.

**COMPARE WITH**—*Rhus tox.*, and most of the remedies which are analogous to the latter. *Rhus rad.* has acted well after *Ant. erud.*, *Ain.*, *B.ll.*, *B.y.*, *Lach.*, *Nux v.*, *Op.*, and *Sulph.*

**ANTIDOTES.**—*Bry.*, *Camph.*, *Coff.*, *Merc.*, *Puls.*, *Sulph.* *Infusion of coffee taken as a drink, interrupts its curative action.*

The following are some of the particular *effects* of *Rhus rad.* which have been removed by these antidotes.—*Bry.* has removed the sensation of fulness in the scalp—the rheumatic pains in the chest, increased by inspiration—the palpitation at night in bed, with pain in the chest and dyspnoea—and the painless rigidity of the neck. *Merc.* has removed the sore feeling of the tip of the tongue. *Puls.*, the toothache in the evening. *Sulph.*, the semilateral pain on the upper and left part of the forehead, in the evening; and the pain in the left chest, opposite the middle of the left lung, especially in the evening in bed, and at night.

† This medicine has been proved and the symptoms arranged by Dr. B. F. Joslin, with the co-operation of Drs. S. B. Barlow, E. Bayard, R. M. Bolles, B. F. Bowers, R. A. Snow, J. Taylor, W. Williamson, and C. Wright. A few symptoms are from Drs. Bate and Horsfield.

In the following article, the long dash is employed to separate symptoms observed at different times or by different provers. None but concomitant symptoms are connected by the words “and” or “with,” or placed in the same group between consecutive dashes, unless some intimation of their disconnection is given by the expressions employed. The distinctions of type refer to the number of provers by whom the symptoms have been verified. No symptom is italicised, unless experienced by two or three provers. The small capitals denote twice as many concurrent provers, and the larger capitals three times as many as were required for italics. The distinctions of type and the grouping of concomitants increase the value of the symptoms, though at some sacrifice of superficial regularity.

The following is believed to be the first published pathogenesis of this Climbing *Rhus*, except so far as its symptoms may have been mingled with those of the shrub *Toxicodendron*, which, in medical and botanical properties, it closely resembles. For the distinction between the two plants, see “Note,” at the end of this article.

## CLINICAL OBSERVATIONS.

*Melancholy and discouragement.*—*Vertigo.*—Cerebral congestion.—Fulness in the head.—*CEPHALALGIA.*—*Rheumatic headache.*—Headache with vertigo.—Throbbing headache.—Aching of the forehead.—Headache with numbness of the extremities.—*Pain in the head with pain in the neck.*—Ophthalmia.—Blepharitis, with burning and itching in the eyelids and canthi.—Parotitis after scarlatina, with œdematous swelling of the hands.—*Habitual sneezing.*—Coryza.—Toothache in a carious tooth, with inflammation of the periosteum and adjacent gum.—Dryness of the mouth.—Saliva white, dense, viscid, and frothy.—Yellow coat on the tongue.—*Inflammation of the anterior extremity of the tongue.*—Ulceration and redness of the point of the tongue, and sensation as if the tongue had been burned.—Vesicles and redness at the point of the tongue.—*Erysipelas of the face.*—Herpes oris.—Stomacace.—*Angina.*—Œsophagitis.—*Dysphagia.*—*Flatulence.*—Neuralgia of the stomach.—Dull chronic pain in the left hypochondrium.—Constriction at the hypochondria.—Colic.—Shootings in the abdomen, especially in the umbilical region.—Constipation.—Diarrhœa, stools frothy, mucous and yellow.—Cystitis.—Nocturnal seminal emissions.—Affections after parturition.—Tendency to aphonia.—*Influenza.*—Bronchitis.—*Cough with excoriation in the chest.*—Cough, dry and short, excited by tickling in the chest, the open air and deep inspiration, and attended with a sensation of excoriation in the chest.—*Rheumatism of the chest;* the pain in the pectoral muscles is aggravated when the patient is seated, especially in a stooping posture.—Pain in the chest from gastric irritation.—*Palpitation of the heart.*—Spinal weakness.—Lumbago.—*Rheumatism of the back.*—*Rheumatism of the neck, the pains increased by moving and by pressing the part.*—*Semilateral rheumatism of the neck with pain, rigidity, and tenderness to pressure,* and constant contraction of the cervical muscles of the affected side.—Chronic partial paralysis of the left arm and hand, the arm pulseless and nearly useless, and affected with numbness, prickings, and occasional severe pains.—*Erysipelas of the forearm,* with swelling, redness, great sensibility to the touch, and burning pain.—Erysipelas of the forearm, developed by a sulphur bath.—Chronic rheumatism of the left upper arm.—*Inflammation of the hand in consequence of external injury.*—*Rheumatism of the legs.*—*Rheumatic pains in the region of the ilium.*—Lameness of the knee from contusion.—Chronic nocturnal itching of the legs below the knees.—Erysipelas of the foot.—Insomnia.—INTERMITTENT FEVER.—Quartan intermittent, commencing in the evening with heat, then heat with perspiration; tongue coated yellow, tip reddish; pains in legs and small of back during the fever; sleep during the fever; debility after the fever.—Double tertian, chills predominant.—*Fever with debility.*—*Quotidian intermittent fever,* chills commencing every day at one o'clock, increased by movement, and attended with pain in the bones, and followed by heat intermixed with chills.—Quotidian intermittent commencing between nine and ten in the morning.—Remittent fever at the close of the catamenia; chills in the morning, followed by much perspiration, with moderate heat; pains in the limbs in the afternoon; tongue red at the tip; diarrhœa.—*Typhoid fever,* frequent pulse; pains in the limbs; vertigo on rising; thick brown coat on the tongue and redness at the tip.—Typhoid fever; saliva consisting of a white, dense and viscid froth; urine depositing a pink-coloured sediment at the edge of the surface; trembling and jerking of the hands.—Typhoid fever with rheumatism of the neck.—*Typhus fever.*—Fever; small, feeble, and frequent pulse; angina, and pains in the head, neck and back.—Fever, chills followed by universal heat, with dryness of the skin.—Fever in consequence of a burn; pulse frequent;

skin hot and dry ; headache, and disagreeable taste.—Watery vesicles.—Itching and dry-scabbing eruptions.—Superficial erysipelatous eruptions.—*Itching eruptions on the legs* and arms.—Itching eruptions on different parts, especially the ankles, appearing chiefly in winter.—Lichen urticosus; the itching of the red and elevated eruptions increases at night.—*Erysipelas*.—Excoriation after walking.—*Sprains*.—*Inflammation of fibrous tissues*, especially from *mechanical injuries*.—RHEUMATISM.—*Predisposition to rheumatic attacks*.—Rheumatism, with stiffness of the joints of the inferior extremities on rising.—*Rheumatism of the chest*, with pain in the chest when seated.—*In mechanical injuries, where stretching or expansion of the affected part has taken place*, or where similar sensations exist.—Easy taking of colds.—Neuralgie sufferings.—*Symptoms threatening trismus, and resulting from wounds of the hand or fingers*.—Debility.—Paralysis of the extremities.

The above relates to observed curative effects.—*We may infer from the pathogenesis, that Rhus rad. DESERVES ATTENTION also IN THE FOLLOWING AFFECTIONS:* Hypochondriasis.—Cephalalgia.—Cerebral congestion, threatening apoplexy.—Obscuration of sight.—*Ptyalism*.—*Sufferings from drinking cold water, or from external exposure to it*.—*Dyspepsia*, and various symptoms of *gastric derangement*.—*Flatulent colic*.—Lead colic? with paralysis of the limbs.—Some cases of *diarrhœa*, with heaviness of the legs.—*Intestinal hemorrhages*, especially *anal*.—*Enuresis*.—DIABETES and *Dysuria*.—*Urethritis*.—*Gonorrhœa*.—Seminal weakness.—Impotence.—*Leucorrhœa*—*Catamenia profuse*—*Rheumatic pains in the left side of the chest, especially when near the nipple*.—Rheumatism of the heart.—*Psoric and other eruptions*.—Contusions, or wounds, followed by inflammation and pain.—*Injuries of fibrous tissues, especially of tendons or ligaments*.—Burns and scalds.—*Scald of the tongue or mouth*.—*Paralysis*.—Neuralgie affections.—*Rheumatismus vagus*.—*Rheumatic pains in the neck, arms or loins*.—*Erratic pains*.—Semilateral affections.—Pains which occur in succession, on parts transversely or diagonally opposite.—*Partial palsy of the limbs*.—*Rheumatic paralysis of the shoulders, arms, chest, and muscles of respiration, with faintness and dyspnoea*.

#### SYMPTOMS.

**Affective Faculties and Disposition.**—*Melancholy*.—\**Mental depression*.—*Mental apathy*.—*Unusual irritability of disposition*.—*Depression of spirits in the afternoon or evening*.—Religious melancholy.—Mental and physical indolence in the evening.—*Peevish humour*.—Does not wish to speak or be spoken to.—Desire for solitude.—Aversion to society, yet with bursts of pleasantry and sarcasm when roused.—Mental indolence and apathy, with tendency to omit words when speaking.—*Discouragement, anxiety, and apprehension about the future*.—Great indisposition to mental exertion, with dread of business, and inability to fix the attention.—Great depression, discouragement, and dissatisfaction with the world, or with his condition, sometimes attended with sleepiness by day and desire to lie down.—This is followed, after some weeks, by great and long-continued calmness and serenity of mind, freedom from inquietude or anxiety about the future.—Discouragement and impatience. Disposition to criticise and to utter reproaches, in the morning and evening. Disposition critical, combative and imperious, in the morning.—Extreme peevishness, and impatience.—\**Great DISCOURAGEMENT*.—Disposition to *ensoriousness in the morning*, followed by depression in the afternoon.—*Mental indolence*—Mind heavy and listless, with inclination to close the eyes and doze. Diminished resolution and firmness of purpose.—Easily discouraged.—Easily overcome with difficulties.—°*Apprehension that the disease will be fatal*.

**Sensorium and Intellect.**—Inability to fix the attention. **INAPTITUDE TO MENTAL LABOUR.**—Intellectual labour performed with some difficulty in the afternoon.—Intellectual labour difficult in the evening.—Familiar places appear strange to him, when travelling, in the evening.—Weakness of memory.—Mental dulness and indisposition to conversation.—Obtuseness of the head in the evening, with feeling in the stomach as if from indigestion.—Cerebral congestion.—After about eighteen days, writing and study fatigue the mind less than usual.—\***VERTIGO.**—Vertigo referred to the lower part of the forehead.—Vertigo with fear of falling forward, while riding.—\*Vertigo on walking.—°Vertigo on rising and after stooping.—Swimming in the top of the head when stooping or rising up, with cloudiness of the eyes.—During the afternoon, dizziness, with severe pain in the stomach.—Confusion in the head every evening on first lying down.—*Confusion of head.*—Confused sensation through the head, as if it commenced above the left ear, also a sensation of fulness, as if the ears were stopped.—*Momentary loss of consciousness.*—Momentary suspension of all the mental faculties, occurring when in the erect posture. When consciousness returns, he finds himself beginning to fall.—*The head feels too large.*—\*The head feels as if it were too large when lying down. This sensation goes off when she rises up.—\*It appears to her as if she could feel the head swelling out.

**Head.**—\**Heaviness of the head.*—\***FULNESS IN THE HEAD.**—Fulness in the forehead.—Fulness in the forehead, with pain in it and in the occiput.—**SEMI-LATERAL PAIN IN THE TEMPLE.**—Semilateral pain at the occiput.—*Semilateral pain at the eyebrow*—**PAIN ABOVE THE EYES.**—\***PAIN OVER ONE EYE.**—Shootings in the head.—Pain at the left eyebrow.—Pain over the right eye.—*Dull pain in the occiput.*—Pressure in the head.—*Remittent pain in the head.*—Occasional pain in the left temple.—*Pain in the right temple.*—Pain over the right eye and in the right temple in the evening.—Darting pain through the temple.—Feeling of *upward pressure* or crowding upward *at the occiput.*—Superficial pain at the inferior occipital ridge, increased on exerting the muscles whose tendons are there inserted.—Pain in the occiput on awaking in the night, or morning.—Pain at the mastoid process behind the left ear, at three in the afternoon.—Dull pain at the occiput and forehead in the morning and evening, increased by intellectual labour, in the evening, and attended with a rasping sound at the occiput whenever the scalp is moved by the occipito-frontalis muscles, in the evening.—Semilateral pain at the right side of the occiput.—\***Dull and continued PAIN IN THE FOREHEAD.**—Semilateral pain in the occiput and temple.—\**Pain above the left eye.*—Sharp pain in both temples and over the orbital plates.—Remittent, semilateral pain in the right temple, increased by shaking the head, especially at the instant, and especially when the head is moved suddenly in the opposite direction, so as to cause the brain to strike against the cranium. Throbbing at the same part after one hour.—Violent and \**unceasing pain across the forehead*, and on the top of the head, for five hours.—Headache followed by griping pains in the bowels.—Pain at the right mastoid process in the morning in bed.—*Headache with nausea.*—Severe and protracted headache, preceded and at first accompanied by nausea, in the afternoon.—*Dull pain in the forehead in the forenoon.*—*Quotidian periodical headache.*—Quotidian headache in the afternoon, commencing between twelve and two, ceasing about four or five o'clock.—*Quotidian, periodical headache in the afternoon.*—*Headache about ten o'clock in the evening.*—Severe pain across the forehead from six till seven in the evening.—*Dull aching in the whole head*, on waking in the morning.—Pain in the left side of the forehead.—Pressive pain in the left side of the occiput.—Dull headache in the forenoon.—Pressive

pain in the right hemisphere of the cerebellum, after intellectual labour, in the forenoon.—Pain over the right eye, after intellectual labour in the forenoon.—Pain at the right hemisphere of the cerebellum, and over the right eye at the superciliary ridge.—Feeling of unsteadiness in the head.—Headache in the forenoon, with sleepiness.—Dull pain in the forehead, temples and occiput, in the morning.—Pain in the right temple, in the morning and evening.—Pain at the right superciliary ridge, for several days.—*Pain at the left eyebrow.*—Transient burning, semilateral pain, in the temple, just above the zygoma, and in the occiput of the same side, in the night at three o'clock.—Remittent and intermittent pains immediately above the superciliary ridges over both eyes, attended with depression of spirits, indisposition to conversation, and weakness of the legs. These symptoms occur during the forenoon, diminish during the afternoon, and return in the evening.—Head feels heavy and dull, especially the forehead, with heaviness of the eyes and disposition to sleep.—Burning pain just above the left superciliary ridge, immediately after washing the hands and rinsing the mouth with cold water, at nine in the evening.—Severe stinging, like the sting of a bee, in the centre of the left eyebrow.—Pain over the left eyebrow, with depression of spirits, yawning and lachrymation.—Pain over the right eye and in the upper part of the occiput, right side.—Fulness and dull pain in the forehead, especially in the region of causality, with impatient desire to accomplish several kinds of business, chiefly intellectual.—Pain simultaneously over the right eyebrow and in the region of the right hemisphere of the cerebellum.—Sharp pain over the left eyebrow, extending to the occiput.—Dull pain in the forehead, temples and occiput during a great portion of the time for ten days, with dyspepsia, low spirits, and imperfect sleep.—*Dull pain in the whole head*, commencing in the anterior part.—°Pain in the top of the head in the morning.—Transient, but severe, semilateral headache from intellectual labour, late in the evening: the pain midway between the left eyebrow and the middle of the organ of causality, followed by cough on lying down at midnight.—Headache along the coronal suture when exposed to dampness in the evening.—Penetrating pain along the coronal suture.—Penetrating pain in the right temple at noon.—Shivering and trembling sensation in the occiput and through the whole extent of the spine, followed by feeling of intoxication, with nausea and restless feeling referred to the occiput.—\*Shooting pains by spells through the head.—\*The headache is worse and the pains are sharper when lying down.—\*All the head symptoms get better after rising.—*Darting pains in the head.*—Darting pain through the forehead.—Semilateral pain at the junction of the right temple and forehead.—*Pain in the forehead and left temple.*—Semilateral pain at the left angle of the forehead and in the left temple.—Pain in the fore part of the head from exercise.—Darting pains at the top of the head at noon.—\*PAIN IN THE HEAD AND NAPE OF THE NECK.—Shocks of pain in the head.—Sudden shocks of acute pain running from near the ear upward and forward to the right temple.—*Dull aching in the occiput.*—\**Pain in the occiput and neck.*—Dull aching in the occiput and nape of the neck, aggravated on bending the head forward.—Pain in the forehead and left temple, increased by turns, passing over the forehead from left to right, like a wave, with occasional sharp shocks through the forehead.—*Feeling as if the crown of the head were rising up.*—Pain in the top of the head, as if it would open, and the brain jump out.—Headache in the occiput, with feeling of weakness in the head, and of inability to make much exertion of body or mind.—Severe headache, with nausea, vomiting, and pain in the stomach.—Pricking in the left temple.—Headache increased by movement and stooping.—Compressing pain in the left parietal bone.—Pain in the head, with feeling of fatigue from writing.—\**Throbbing*

*in the head.*—*Heat of the head.*—Heat in the head, as if it were stimulated with wine.—Sensation of heat as if from some stimulating application at the left eyebrow, followed by pain, about ten in the evening.—*Heat in the head, with headache.*—Heat, pain, and throbbing of the head.—Heat and stinging in the back part of the head.—Heat at the top of the head, with pinching pain at and above the root of the nose.

**Scalp.**—*Itching of the scalp.*—*Itching of the scalp in the evening.*—Itching in the anterior part of the hairy scalp, when walking in the open air.—*Eruptions on the scalp.*—*Elevations on the scalp like mosquito bites, at length becoming covered with scabs*; they itch, and, after combing the head, are burning, smarting, and sensitive.—Tenderness of the scalp, on combing the hair.—The action of the occipital portion of the occipito-frontalis muscle heard and felt; the sound like that of wind among the leaves of distant trees, the sensation like that of a cap on the occiput.

**Eyes.**—Pain in the right eyeball.—Pressive pain at the inner canthus of the left eye, and the left side of the root of the nose, in the morning at half-past nine o'clock.—Burning, with stinging-pricking in the inner canthus of the left eye.—Burning in the left eyelids, with lachrymation from the left eye.—Sensation of jerking near the inner canthus of the right eye.—Pain in the eyes on opening them.—Heaviness and pain over the eyes.—Heaviness of the eyes, with difficulty in keeping the lids open, and sleepiness.—Feeling of unsteadiness in the eyes, with slight fine pains like needles sticking in the eyeballs.—Smarting of the eyelids.—*Itching of the eyelids.*—ITCHING AT THE INNER CANTHUS, often *in the evening.*—Prickings of the lower lid near the inner canthus of the left eye.—*Stinging pain at the inner canthus of the left eye.*—Heaviness of the eyes.—*Jerking of the eyelids.*—Smarting of the eyes and lids.—Quivering and trembling of the left upper eyelid.—Violent itching in the inner canthus of the right eye, at seven o'clock in the evening.—Itching at the inner canthi of both eyes.—Itching at the inner canthus of one or both eyes, about six o'clock in the evening.—\*Itching in the eyelid.—Itching in the eyelids in the evening.—\**Burning in the eyeballs.*—\*Heat and itching of the eyes.—Itching of the right eyelid.—*Smarting itching of the eyelids.*—\**Sensation of heat in the eyelid.*—Heat with smarting itching of the edges of the eyelids.—Burning in the inner canthus of the right eye, in the evening, sometimes in the morning.—Feeling of coldness in both eyes, as well in the eyeballs as in the lids.—Conjunctivitis on rising in the morning, with painful sensibility to light, continuing through the day.—Congestive inflammation of the conjunctiva of the right eye, extending to the lids and inner canthus, with smarting and itching as if lime-dust were in the eye.—\**Redness and swelling of the eyelids, with itching and burning.*—*Sensibility of the right external canthus on pressure, and on closing the lids.*—*Sensation of fulness of the eyelid.*—Pain and sense of fulness of the left under eyelid, (without swelling), as if erysipelas were about to commence.—Edematous swelling of the eyelids with smarting.—Swelling of the lower eyelids in the morning.—*Swelling of the lower eyelids, without redness, in the morning.*—LACHRYMATION.—Gluings of the eyelids at night.—Photophobia on waking in the morning, with difficulty in keeping the eyes open and seeing during a few moments.—*Confusion of sight.*—Great confusion of sight, lasting for one hour, and attended with an appearance of irregular lines having a wavering motion. The confusion and spectra appear more in the right half of the field of vision.—Obscurity of vision continuing half an hour.—Imperfect hemiopia of both eyes, with an appearance of wavering zigzag lines in the right inferior portion of the field of vision.—Dimness of sight by candle-light.

**Ears.**—Hard and sensitive line within the rim of the left ear.—Burning sen-

sation on the rim of the left ear.—Pain in the right ear on yawning, at six in the afternoon.—*Pain in one ear.*—Pricking in the left ear.—Smart shock of pain running from the angle of the right jaw to the right ear.—Heat and swelling of the right ear, resembling erysipelas.—Heat and itching in the left external ear.—Small boil in the ear.—*Sensation as if the beating of the heart or arteries were heard in the ear.*—Sound as of falling water in the left ear.—*Noises in one ear, oftener the left.*—Sound in the left ear like that of a cascade, or of a heavy shower of rain striking the ground.—*Sound in the ears like that of water rushing at regular intervals, as if pulsations of the arteries.*—Sensation as if the beating of the heart or arteries were heard in the left ear.—Sounds synchronous with the pulse in the ear, especially the right, when on the pillow.—°Parotitis after scarlatina, with œdematous swelling of the hands.

**Nose.**—Itching in the left nostril, with urgency to rub the part.—Tieklng in the left nostril and the tip of the nose.—Soreness of the *alæ nasi*, as if pustules were forming.—Heat of the nose, as if from hot air passing through it.—Itching in the nostrils.—Pricking in the nose.—*Scab in the nostril.*—Scab on the septum nasi.—*Mucus collecting in the posterior nares*, and simultaneously in the throat.—Pressive pain at the left side of the root of the nose, and at the inner canthus of the left eye in the morning.—Median edge of the right nostril inflamed, without coryza, but with tough, irritable, and inflamed pimples at its upper extremity. These become incrustated on the day after their appearance.—Excoriation of the right nostril, at the lower part of the septum.—Eruption in the nostril.—°*Epistaxis.*—°*Bleeding from the nose in the morning.*—*Dryness of the nostrils.*—Obstruction of the nostrils, especially in the morning.—°*SNEEZING.*—°Frequent sneezing.—Sneezing from tingling in the nostrils.—Repeated sneezing with fluent coryza.—°*Fluent coryza.*—Severe fluent coryza, discharge watery; burning and smarting pain in the nostrils, with pain in the occiput and the forehead, especially above the nose.—Semilateral fluent coryza; mucus from the left nostril.—Sharp defluxion from the nose. Breath in passing the nostrils feels hot.—*Fluent coryza, discharge of mucus*, commencing suddenly in the afternoon.—*Fluent and burning coryza with copious discharge* of serum or mucus, and attended with headache.—*Fluent coryza in the evening.*—Watery coryza, with burning and smarting of the nostrils and pain in the nostrils and above the nose.

**Face.**—°Complexion pale and yellow.—PAIN IN THE LEFT SIDE OF THE FACE.—*Pain in the left side of the lower jaw.*—Pain in the left side of the face and upper part of the left side of the forehead.—°Pain at the left maxillary joint on moving the jaw.—*Crampy pain in one of the masseters.*—Crampy pain in the left maxillary muscles.—*Itching in the face.*—*Pricking in the face.*—Stinging on the left cheek, and in the sole of the right foot.—*Pricking in the lip.*—Pricking in the left side of both lips.—Pricking in the chin and left cheek.—*Furunculi, pustules, pimples or vesicles on the face.*—Skin of the face rough.—Sensation of heat in the face.—*Redness of the face, in the afternoon.*—Aching and stiffness at the angles of the jaw.—Burning-itching of the face and desire to rub it.—°*Burning in the face, with redness and itching.*—Burning-pricking as if from a spark on the upper lip, when walking in the open air in the evening.—°**ERYSIPELAS OF THE FACE.**—Itching, swelling and redness of the face.—Erysipelas in the face, below the left eye, three times.—Erysipelatous redness, burning and smarting of the left side of the face, with itching and pricking of the back; the affection of the face sometimes commencing immediately after going to stool in the morning, the faces being thin and brown.—°Dryness of the lips.—Exfoliation of the cuticle of the lower lip.—°Blackish incrustation on the external red portion of the lower lip.—Lower lip peculiarly

sensible to titillation by the friction of the protruded tongue.—Swelling of the right cheek and upper lip.—*Pimples upon the face and forehead.*—Painful pimple on the left temple, which threatens suppuration, but goes away without it.—Large tubercular pimple deep-seated, tough, and irritable to the touch, on the upper lip, opposite the alveolar process, and near the root of the left posterior bicuspid tooth, remaining with but little change for several days.—A similar one on the upper lip opposite the left cuspidatus tooth.—Itching in the face, especially in the beard and whiskers.—Itching of the chin.—Excoriated, smarting and burning spot below the nose, having a serous discharge and becoming scabby.—*Large red pimple on the cheek.*—Pustule on the lower lip, at the junction of the skin and mucous membrane, disappearing after some days by absorption.—Vesicles on the lower lip.—*A large pimple on the left cheek* near the nose, from which water oozed; when it dried away a rough spot remained on the skin.—Eruptions on the upper lip, first consisting of small flat vesicles in clusters; the part afterwards becoming encrusted.—Small unsuppurating furuncle on the eyebrow and between the chin and lip.—*Boil on the face which does not mature.*—*Eruption near and at the angle of the mouth.*—Eruption near the left angle of the mouth.—A few small blisters on the face.—A glutinous fluid somewhat resembling varnish, oozes from the eruption on the face.—When the eruption of the face dries, the cuticle peels off like bran.—Eruption of small granules across the forehead, which soon run into each other, producing a thickening of the skin, with a granulated surface.—Pricking eruption of the face, extending to the ears.—Eruption on the right side of the face below the angle of the mouth; on first coming out, it looked like the sting of nettles, afterwards it presented a thickened state of the skin, with an appearance like barber's itch.

**Teeth.**—Darting pain in the carious teeth.—Dull pain in the sockets of all the teeth.—*Transient throbbing in the tooth.*—Repeated attacks of transient, throbbing toothache.—Pressure and throbbing in a carious stump, in the evening, after taking a glass of wine.—Pressure in the same before one p. m. after tasting wine.—Severe shocks of semilateral pain in the upper and lower teeth, on taking warm drink, (weak black tea).—*Pain in carious roots in the upper jaw.* Toothache commencing in the roots of an old stump in the left upper jaw, extending to two or three neighbouring molar teeth, the jaw-bone and side of the face, to the ear and to the lower jaw on the same side.—Toothache attended with flow of saliva.—*Toothache in the evening.*—Toothache on the right side of the lower jaw at each forcible inhalation of cold air, in the evening.—*Pain in the socket of a carious tooth, pain and swelling of the adjacent gum.*—*The gums bleed readily.*—Bleeding of the gums especially on rinsing the mouth.—*Inflammation of the gums.*—*Gum-boil.*—Soreness of the gums with feeling as if the mouth had been scalded.—*Tenderness and swelling near the roots of the painful teeth.*—Hard tumour near the extremity of the root of a carious tooth without any superficial inflammation.

**Mouth.**—*Air feels unusually cold to the mouth.*—*Feeling as if the mouth had been scalded.*—°Breath fetid.—°Dryness of the mouth.—INCREASE OF SALIVA.—Salivation when expectorating.—°Saliva, a white, dense and viscid froth.—MUCH SALIVATION.—Sore feeling of the palate.—Sore feeling at and about the velum palati, felt during empty deglutition, but not when drinking water.—The whole mouth and throat feels as if scalded with hot tea.—°Ulcers inside of the mouth, below the cheek and inside of the lips.—Burning and smarting of the tongue with increase of saliva.—Tongue dry, with a disagreeable taste in the mouth in the morning.—*Mucus on the tongue in the morning.*—Tongue thickly coated.—Thin whitish coat on the edges of the tongue, and rough, reddish, dry and soluble coat on the remainder of the

upper surface, on rising in the morning.—\**Yellow coat on the tongue.*—*Yellow coat on the tongue, in the morning.*—Tongue coated dark brown.—Dark-brown, mucous coat on the tongue, in the morning.—Loose, reddish-brown coat on the tongue, on rising in the morning.—**PRICKING IN THE TONGUE.** **BURNING IN THE TONGUE.**—**SORE FEELING OF THE TONGUE.**—\*Dryness of the tongue.—Biting of the tongue, like the biting of Arum m. when chewed. **THE TONGUE FEELS AS IF IT WERE BURNED OR SCALDED.**—The tongue feels quite sore at the root and on the right side.—Many **AFFECTIONS OF ANTERIOR PARTS OF THE TONGUE**, at different times.—\***REDNESS OF THE ANTERIOR EXTREMITY OF THE TONGUE.**—\**Redness of the anterior margin of the tongue.*—Metallic taste at the anterior extremity of the tongue, with sensation of soreness at the anterior margin.—Cutting or stinging at the *right portion of the anterior edge of the tongue.*—Burning-cutting at the right portion of the anterior edge of the tongue, as if it were scalded accompanied by an increased flow of saliva.—Many **AFFECTIONS OF THE TIP OF THE TONGUE**, at different times.—\***REDNESS OF THE TIP OF THE TONGUE.**—Sensation of warmth and itching at the tip of the tongue.—*Pricking at the apex of the tongue, within a few minutes, after a high dilution.*—Sensation of pungency at the apex of the tongue five minutes after taking a few globules of the 30th.—Burning-pricking at the tip of the tongue, after 1½ minutes, followed by the same sensation at the roof of the mouth, and increase of saliva, after three minutes, after the 50th.—Stinging-pricking at the tip of the tongue, two minutes after a few globules of the 50th.—\***TONGUE FEELS SORE AT THE TIP.**—*Tip of the tongue feels as if it had been burned or touched with caustic.*—*Redness with sensation of excoriation at the tip of the tongue.*—Tip of the tongue red and warm.—Tip of the tongue very red, with raw, biting feelings.—Pricking and tingling in the end of the tongue.—°*Excoriation with vesicles at the tip of the tongue.*—°Vesicles with redness at the tip of the tongue.—Acrid burning at the root of the tongue.—*Roughness of the tongue* near the anterior or posterior extremity.—*The abnormal sensations in the tongue are often among the earliest symptoms,* even when high attenuations, in the form of dry powder or aqueous solution have been employed, and when these have not been directly applied to that part of the tongue in which their action is manifested.—*Pricking in the palate.*—Burning-pricking in the palate, then increase of saliva, then pain in the pit of the stomach. Sore feeling of the palate.

**Throat.**—*Pricking in the throat.*—*Constriction and irritation in the throat.* Pricking and stinging in the throat.—*Roughness in the throat.*—*Burning in the throat.*—Smarting in the throat.—*Sensation of dryness and heat in the throat.* Burning in the œsophagus in the forenoon.—Pain and burning in the œsophagus.—**SENSATION OF EXCORIATION IN THE THROAT**—Sensation of swelling, of fulness and of rawness in the throat, requiring deglutition. Feverish heat and setting in of soreness of the throat, after a feeling of constriction and dryness of the throat.—Uvula, fauces and velum palati. red and dry, with feeling of warmth in the parts.—Slight sense of suffocation in the throat with heat. Throat hot, sore, red, swollen and painful for many days, with painful deglutition.—Hot and raw feeling of the throat.—*Redness of the fauces.*—Inflammation of the throat.—*Soreness at the root of the tongue.*—°*The tonsils, especially the right one, swollen, red and partly covered with slough-like membrane.*—\***PAINFUL DEGLUTITION.**—\*Deglutition more painful on the right side.—*Inclination to swallow.*—Sharp pains when swallowing, especially when drinking warm tea.—Sore feeling in the throat on swallowing, with hoarseness.—Feeling of soreness, hardness and contraction of the throat, during degluti-

tion.—°Sensation as if from a foreign body in the throat.—Mucus in the throat and posterior nares.—\*Dryness of the throat.

**Appetite and Taste.**—\*Disagreeable taste in the mouth.—*Bitter taste.* Bitter taste in the mouth in the morning, with bleeding of the gums.—*Disagreeable taste in the mouth,* in the morning on awaking. Metallic taste.—The mouth tastes too fresh.—*Loss of appetite.*—\**Appetite deficient.*—Indifference to all kinds of food.—A sensation in the stomach like hunger.—Disgust for water when drinking it.—The idea of drinking a watery solution, though tasteless, gives nausea.—°Thirst at night.

**Gastric Symptoms.**—\**Empty eructations.*—*Tasteless eructations.*—Eructations in the morning.—Eructation, attended with shooting in the right portion of the epigastric region and in the right axilla, at 1 p. m.—Belching of tasteless water with regurgitation of some food.—Flatulency and tasteless eructation after tea, with uneasiness at the stomach.—Eructation of food, two or three hours after dinner.—*Burning in the stomach,* sometimes preceded by burning in the throat.—Uneasiness in the epigastrium, with flow of saliva and feeling as if an attack of waterbrash were coming on.—**NAUSEA.**—Nausea with faintness followed by general chilliness with perspiration.—Nausea soon accompanied by headache.—Nausea all day, without any desire to eat or drink.—Nausea commencing after two minutes, and after a short interruption continuing several hours till afternoon, attended with symptoms in the following order; viz: empty eructations; pain in the chest on inspiration; pain in the right shoulder especially during repose; shooting in the stomach; and chills, especially in the back.—Vomiting of about a pint of tasteless water, with retching and pain in the stomach.

**Stomach.**—\***PAIN IN THE STOMACH.**—Pain in the stomach at night. Severe pain in the stomach with dizziness in the head.—Gripping pain in the stomach.—Pain in the stomach in the morning.—Constant inclination to bend forwards to relieve the pain in the stomach.—Pain in the pit of the stomach.—(Dull pain at the base of the chest like gastralgia, constant for a few hours, relieved by fasting.)—Pains in the stomach and abdomen with disagreeable taste in the mouth, in the evening.—°Pain in the stomach after meals.—Weakness and oppression in the stomach.—Sinking feeling at the stomach, with salivation.—Sensation of fulness in the stomach.—\*Pressure and fulness in the epigastrium, relieved by eructations.—Distress in the stomach like a heavy weight, mitigated by eating.—Sensation of oppression in the pit of the stomach, in the evening.—Cramping pain in the stomach.—\*Severe pains in the stomach, at intervals, extending to the chest.—Strong heavy pains in the stomach and anterior part of the chest, extending from both parts through to the back, increased by cold drink (milk) in the morning.—°Periodical attacks of sharp tearing pains in the stomach, extending to the sides of the chest, the shoulders and nape of the neck.—*Shootings in the stomach.*—*Sensibility of the stomach to pressure.*—Stomach painful to the touch, cannot bear pressure even of the clothes.—Soreness of the stomach with pain when striking upon the epigastrium.

**Hypochondria.**—°Constriction of the hypochondria.—Severe shocks of pain at both hypochondria and through the diaphragm, on coughing.—*Pain in the region of the liver.*—Sharp lancinating pains in the right hypochondrium, at each inspiration, in the morning.—\**Pain in the left hypochondrium.*—°Habitual dull pain in the left hypochondrium.—Pain in the left hypochondriac region with sensation as if something adhered to the lower ribs.—*Pain in the right side of the abdomen.*

**Abdomen.**—Pain at or near the ascending colon.—Flatulence with pain in the

hypogastrium.—Transient pain in the region of the ascending colon, on rising up after stool, in the morning.—Accumulation of flatus, with severe pain in the abdomen in the region of the ascending colon. This pain is increased by gradual pressure, and still more by sudden pressure or percussion, and is often more severe at some distance from the part pressed or struck than at the part itself. *Pathological inference*: Painful distension of the muscular coat of the ascending colon by means of gas; the tension and muscular pain being momentarily increased by sudden pressure or percussion over that or the surrounding parts.—Severe pains just above the umbilicus, with slight nausea and sensations as if a diarrhoea were about to commence. Fœtid flatus expelled immediately after the subsidence of these paroxysms of colic.—*Gripping after rising in the morning, followed by discharge* of fæces or of flatus.—Colic after exposing the head to falling snow.—Heaviness in the abdomen, with painfulness from turning when lying.—Pain bearing or pressing down towards the hypogastric region.—Constipation with sense of dragging and falling in the abdomen.—Severe, gripping pains in the upper part of the abdomen at intervals during three hours, ceased before evening, returned next morning on rising.—Twisting colic pain.—*Sharp pains in the abdomen*.—Sharp gripping pains with looseness.—*Colic pain in the lower part of the abdomen*.—*Colic followed by loose stool* or frequent evacuations. Gripping pain in the bowels at noon, followed by two stools in quick succession.—*Shootings in the abdomen in the afternoon or evening*.—Shootings in the abdomen after drinking cold water.—*Pain in the umbilical region*, with soreness on bending.—Shootings at and near the umbilicus.—Shootings in narrow streaks from the abdomen to the anus, commencing in the umbilical region.—In the evening, sharp darting pains in the right side of the abdomen.—*Colic, compelling them to flex the trunk in the morning*.—Twisting colicky pain succeeded by a loose stool.—\*Flatulence °with borborygmus.—Abdomen much distended with incarcerated flatulency.—Offensive wind with a mouldy odour discharged from the anus.—Shootings in the groin.—Soreness in the right groin with lameness increased by walking, also after sitting and attempting to raise the leg.

**Stool and Anus.**—\*Constipation.—Constipation, with depression of spirits, mental inactivity and headache.—*Urgency to stool*.—*Three stools, each forenoon*.—Costiveness, stool once in three or four days, large, hard, and evacuated with much effort.—*Brown stools*.—Loose and brown stools.—Dark brown stools.—Stool greenish brown.—Dark brown stool with proclivitas ani.—*Light colored stools*.—*Pale-yellow stools*.—The stool is thin and dark brown in mass, but gives to paper a light brownish-yellow stain. *Slimy stools*.—Loose, pappy, slimy, sour-smelling stools.—Stools watery and slimy.—**BLOOD WITH THE STOOLS.**—*Blood with the diarrhoeic stools*.—Bright blood with the stool.—Stools slightly streaked with blood.—Stool thin and tinged with blood.—Blood from the anus after the stool.—Dark brown stool preceded by constipation.—**EVACUATIONS TOO FREQUENT.**—\*DIARRHŒA, the evacuation sometimes preceded by lassitude.—Dysenteric diarrhoea preceded by lassitude and feeling of unsteadiness in the head.—Looseness of the bowels; each stool is preceded by a sense of weakness and exhaustion.—*Bowels moved twice a day*.—*Soft stools*.—\*Diarrhoea with frothy, slimy and yellow stools.—Painful burning in the anus, soon attended with burning in the penis near its anterior extremity.—Fæces partly gelatinous.—*Evacuation preceded by pain in the abdomen*.—Diarrhoea with pap-like stools and colicky pains.—Diarrhoea in the morning, preceded by gripping at the umbilicus, and attended with bitter and acid eructations.—*Evacuation painless*.—Evacuation painless, but urgent.—Evacuation preceded and attended by pain along the whole ulnar edge of the left forearm, more severe in the middle.—

Pale-yellow stools preceded by urgency and griping.—Diarrhœa with burning in the anus after evacuation.—Loose stool with burning smarting in the anus during evacuation.—Loose dark brown stool, preceded by pain in the symphysis pubis, and attended with *burning in the anus* and procidentia ani.—Diarrhœa with a sinking, faintish sensation before each discharge.—Redness, burning and smarting of the face, commencing during evacuation.—Griping pain in the morning on rising from bed, followed by two stools with an interval of half an hour.—*Evacuation painless*, but urgent.—Soreness of the anus on one spot on the left side.—Shootings in the anus, instantly followed by shootings at the umbilicus, soon after in the stomach and then behind the sternum.—Procidentia recti.—*Itching at the anus*, also when walking.—Pressing down at the anus with a dull aching pain in the rectum.—Intolerable itching and burning at the anus.—Itching about the anus at night.—Pain in the rectum when urinating.—Transient pain in the rectum.—Irritation and sensation of heat in the rectum after urination.—Tingling pains, (as if from vibrations as rapid as those of low notes,) felt almost simultaneously in the rectum and the left hip, when lying on the left side, in the morning.—Smarting and burning in the anus, during and after an evacuation.—Pricking-itching in the anus, repeatedly restored by walking and removed by rest, in the afternoon.—*Soreness, feeling of excoriation*, redness, moisture, and *great smarting* about the anus and *between the nates* after walking.

**Urinary Organs.**—\*FREQUENT URINATION.—Frequent disposition to urinate, arising from a sensation as if there were a little urine in the urethra.—INCREASED SECRETION AND DISCHARGE OF URINE.—*Urination profuse during the night*.—\*Frequent and small discharges of urine.—°Pressure on the bladder, with difficult urination, frequent and painful desire to urinate, the urine being small in quantity.—Increased secretion of urine, with irritation in the urethra during urination.—*Increased secretion of urine at night*.—Increased secretion of urine, with coldness of the feet and legs.—*Frequent and copious urination*.—Increased secretion of urine, with frequent urination and slight tenesmus of the bladder—*Urine less than usual*; heat in the urethra during urination.—Frequent small discharge of red urine, with burning in the fossa navicularis.—\**Urine red and discharged in small quantities*.—\**Deep red urine*.—°Pink-coloured sediment.—*Heat in the urethra during urination*.—Heat, irritation or pain in the urethra or rectum during urination after dinner, at different hours of the afternoon till half-past six.—Cutting and burning in the anterior portion of the urethra, during and after urination. Last portions of the urine milky. Urination followed by irritation and sensation of heat in the rectum, at half-past three in the afternoon. Three hours afterwards cutting, burning and smarting in the anterior portion of the urethra during urination, and severe burning and smarting pain in it after urination, with irritation and heat in the rectum.—Pain in the rectum when urinating, about three in the afternoon.—Cutting in the urethra when urinating, at five o'clock in the afternoon.—\*Pressure on the vesica.

**Sexual Organs.**—Dull aching pain in the penis.—*Miliary eruption on the back of the penis*, with stinging and itching.—The penis is bloated, swelled up, a sort of false erection as in syphilis.—*Itching of the scrotum*.—\*Inflammation of the scrotum.—°Scrotum inflamed and irritated by walking.—Itching and pricking of the left side of the scrotum, at night on going to bed, and in the morning on washing the part; relieved by washing.—Itching, swelling and redness of the scrotum and prepuce.—*Vesicles on the scrotum*.—*Diminished sexual desire*.—Erections during sleep at night without amorous dreams or feelings.—°Nocturnal seminal emissions.—Pricking at the mons veneris and outer side of the labia and in the inguina.

—Catamenia profuse.—°Uterine pain, referred to the small of the back, brought on by mental anxiety, six days after parturition, with melancholy, despair and distrust of Providence.

**Larynx and Trachea.**—\*Influenza.—°Weakness of the voice.—°Is fatigued by speaking.—*Feeling of soreness of the larynx.*—*Bronchial catarrh*, with sore scraping in the throat.—Inflammation of the larynx descending from the fauces, with heat, soreness and sense of suffocation.—*Acute bronchitis.*—Soreness extending from the throat downward through the chest, with weight, cough with expectoration of frothy mucus of a saltish taste; after seven days, more free expectoration of thick, yellowish, insipid, mucopurulent sputa.—\**Dry cough, often short.*—°Dry cough in the morning, with soreness of the throat.—\*Cough from irritation in the chest.—*Short cough from tickling and irritation behind the upper half of the sternum*, after sleeping.—Short, dry cough, excited by tickling behind the upper half of the sternum, when sitting inclined forwards.—\*Pain in the chest when coughing.—\*Hacking cough excited by tickling in the chest, —by the open air and by deep inspiration, and attended by a feeling of excoriation in the chest.—Impelled to cough or hem, as if to remove something from the throat which produces a choking sensation.—\*Cough from tickling in the throat.—*Cough from tickling in the throat-pit.* Short cough excited by tickling in the throat-pit, with expectoration of mucus from that part of the trachea.—°Cough on movement.—Cough on lying down, at midnight, preceded by tickling in the throat and behind the sternum. Cough in the evening from tickling in the throat and throat-pit and behind the upper part of the sternum.

**Chest.**—Dyspnœa after walking in a current of air.—PAIN IN THE CHEST NEAR THE NIPPLE.—DULL PAINS IN THE LEFT SIDE OF THE CHEST.—Aching heavy or pressive PAINS IN THE REGION OF THE HEART.—Pain behind the sternum, in the night, pretty severe, but subsiding within a minute.—\*Pain in the chest at night.—Awoke in the night with pain in the left side of the chest one or two inches upward and outward from the nipple.—Pain in the right side of the chest, a little above the nipple.—Pain in the left side of the chest, a little below the nipple.—\**Pain in the chest when inclined forwards.*—Dull pain in the left mammary region, when sitting inclined forwards.—Repeated PAINS IN THE LEFT SIDE OF THE CHEST.—*Pain in the right side of the chest.*—Pain of the left side of the chest and scapula, soon extending to the shoulder-joint.—Pain in the left side of the chest, midway between the sternum and the angle of the ribs, soon extending to the shoulder and upper arm.—Heavy pinching pain in the left side of the chest, in the region of the heart.—Aching pain in the lower part of the sternum, with oppression.—\*Pain in the chest, more when at rest.—Dull pain in the left side of the chest, when lying down in the evening.—Dull pain anterior to the middle of the left lung.—°Chronic rheumatic pain in the chest, worse when the patient was seated, especially in a stooping posture. The pain returned in two months, soon after the use of black coffee, and was again removed by *Rhus rad.*—Pain in the right side of the chest about the middle of the ribs from four to six in the afternoon, preceded by headache.—Pressure at the sternum, a little to the left of the centre, in the evening.—Pressive pain in the chest, two inches to the right of the centre of the sternum.—Pressive pain in the right side of the chest, and simultaneously in the region of the left quadratus lumborum muscle.—Feeling of lumeness in the muscles of the chest.—*Sensation of excoriation in the chest behind the sternum.*—Pain of the left chest and scapula, soon extending to the shoulder-joint.—Drawing, crampy pains of the chest.—\*Pain in the chest, commencing in the stomach.—Severe pressing pain in the stomach extending to the anterior part of the chest, then to the back, increased by a cold drink.—°Stinging-tearing pain in the sides of the chest,

commencing in the stomach, and extending first to the left side of the chest, then to the right.—Dull pain in the left side of the chest, which changed into sharp pain.—\*Pain in the chest when walking.—Sharp stitch-like pain in the precordial region, when walking in the forenoon.—In the forenoon when walking, sharp pain in the left side of the chest, feeling as if it extended to the throat.—Shooting in the left side of the chest.—Shooting pain near the middle of the right side of the chest, when lying on that side.—*Pain in the chest, worse on movement.*—*Pain in the chest, increased by deep inspiration.*—Painful stitches in the right side of the chest, extending to the neck, aggravated by motion and deep inspiration.—Drawing and stitching pain, extending from the left side of the chest near the nipple, through to the left scapula, aggravated by coughing, sneezing, yawning, etc.—*Shooting pains in one side of the chest.*—PAIN IN THE CHEST, WORSE ON INSPIRATION.—Extremely severe stitches at the third rib, about three inches to the left of the mesian plane, the pains so severely aggravated by inspiration, as to render an ordinary inspiration impracticable for some minutes. These commenced on sitting, about six o'clock in the afternoon, at the close of a meal at which ice-water was the principal drink.—Shock of pain in the chest.—*Sensation of heat in the chest.*—Burning in the chest and throat, as if in the oesophagus.—A transient burning and pressive pain at the middle of the lower side of the left clavicle, and in the stomach on swallowing moderately cold water.—Burning and pressive pain and sensation of excoriation behind the upper half of the sternum, with short cough excited by tickling at the same part, in the evening.—Stinging pain near the left nipple, in the evening, with abnormal sensibility of the skin of the chest to pressure.—Aching pains about the heart, and occasionally sudden shootings.—*Palpitation of the heart in the evening.*—\*Palpitation of the heart, with a sensation of fulness in the head.—After walking up-stairs, in the evening, palpitation of the heart, with sensation of fulness in the forehead, and pain in the forehead and occiput.—Severe palpitation at midnight, in bed, with pulse hard, small, and very frequent (120), with dyspnœa, pain in the chest, and feeling of painless rigidity of the neck and of fulness in the scalp.—°Palpitation of the heart, increased by sitting still.—Palpitation of the heart, not perceived when walking.—Tough, unsuppurating pimple on the chest, one inch above the left nipple.—Tubercular pimple, large, deep-seated and irritable to the touch, on the left side of the chest, two inches above the nipple; it is so tough that scratching does not readily break it, but produces redness, burning and smarting in it and the surrounding skin.—Suppurating pimple on the chest in the left mammary region, in the morning.—Large red spots on the chest, just beneath the clavicles.—Itching about the sternal extremities of both clavicles.—\**Sensibility of the chest to pressure.*—\*Sensibility of the sternal integuments to pressure.—Pain at the middle of the sternum, with sensation of superficial soreness there on pressure.—Stinging in the chest below the right nipple, with itching on the front part of the chest, on the back, and the skin in various parts of the body, in the morning in bed, at four o'clock.

**Spinal Regions.**—Shivering and trembling sensation through the whole extent of the spine and in the occiput.—°Spinal weakness.—\*PAIN IN THE LOINS, also on moving the part, especially at first.—\*Aching in the loins when lying in bed at night.—Pain in the loin when lying on the opposite side.—Pain in the left loin above sacro-iliac symphysis, when lying on the right side, repeatedly removed by lying on the affected side.—Pain in the right loin above the ilium, when lying on the left side, always removed by lying on the affected side.—Constant pain above the posterior part of the right ilium, extending forward to a point above the anterior part at each inspiration, which also increases its intensity.—°Aching in the lumbar spinal region and ilia, when lying down at night.—Rigidity and pain

of the right loin, as if wrenched by severe lifting; felt more on rising and beginning to walk, than after walking for some time.—Pain in the loins at eight, a. m., most in the right, and on motion.—Pain in the region of the left quadratus lumborum muscle with nausea, simultaneously with pain in the right side of the chest.—Pain in the region of the right quadratus lumborum, on rising from the recumbent posture; immediately followed by pain in the calf of the left leg, at each step: in the afternoon at half-past two o'clock, during cold and rainy weather.—Pain in the left renal region, in the evening, at half-past ten o'clock, increased after lying down at midnight.—Rheumatic, burning and semi-acute pain in the side, between the spine of the ilium and the ribs, in the evening.—*Pain and rigidity in the posterior lumbar region.*—When standing erect he feels as if he could not stoop, but on trying he finds he can do it without much pain. The pain in his back is very much increased by pulling off his boots in the evening: worse when first lying down in the evening.—Pain in the back felt when bending backwards.—*Backache at ten o'clock in the evening.*—\*Aching pain through the back in the region of the kidneys, attended with a sense of weariness and languor with stiffness.—\*Pain in the dorsal spinal region, worse in bed.—Aching pressive pain in the back, increased by cold drink, and preceded by and attended with pain in the stomach and chest.—°Drawing in the dorsal spine on stooping.—°Backache worse in the morning, and in bed.—*Pain between the shoulders.*—*Pain in the back below the scapula, in the evening.*—Severe, protracted and somewhat burning pain in the back, near the lower angle of the right scapula, a little within it, coming on when walking at ten o'clock in the evening, but continuing after the end of the walk, and subsequently extending up along the inner edge of the scapula, increased by empty eructations, by deep inspiration and by coughing.—*Chills in the back.*—Chills in the back, and slight shiverings, especially when coming near a fire.—Pains in the back, loins, and left eyeball, about noon.—Pain slightly burning in the back, with burning in the throat and chest, as if in the œsophagus.—Weakness of the back with lameness. The back becomes fatigued in walking.—*Itching on the back, especially between the shoulders.*—Itching in the back, and at the anterior part of the chest, in the morning, at eight o'clock.—Itching on the back between the shoulders.—Biting on the back, as if from bed-bugs.—Pricking-itching at the upper part of the right side of the back, after drinking cool water.—Tickling between the scapulae.—*Pains in the scapulae.*—Burning pains in the scapulae, worse in the evening in bed.—Pain under the right scapula.—Pain at the lower angle of the right scapula, when beginning to pull with the arm.—Repeated pains at the right scapular joint, especially at the lower extremity of the scapula, whenever the shoulder is elevated or depressed.—Severe, remittent, aching pain at the lower angle of the right scapula, when at rest, lying on the opposite side, in bed at night.—Pain from the left scapula across to the right, and then through the right side of the chest.—Rigidity and pain in some of the muscles of the neck, after lying for some time in a position which required their protracted action in an extended state.—Severe cramp-like pain in the right sterno-mastoid muscle, at and near its insertion behind the ear, occurring on rising and attempting to straighten the neck, after lying on the right side with the head much elevated.—\**Rigidity of the neck.*—\**Side of the neck sensitive to pressure.*—\*Rigidity of the neck, with a frequent and small pulse.—°Rigidity of the neck, with pain in it, increased at night, and by attempts to move it and by coughing or laughing.—°The pains in the neck frequently extend into the shoulder.—\**Muscles of the neck pained by movement and sensitive to pressure.*—Stinging prickings at the lower part of the neck and upper part of the back, after drinking water.—Stinging-prickings in the lower part of the neck, especially over the sterno-

mastoid muscles, after drinking water, on different days at six o'clock in the afternoon, when walking.—Tenderness on pressure at the sides of the neck and at the greater transverse ridge of the os occipitis, with cramp-like pain in some of the muscles of the neck when exerting them; followed by pain in the left upper arm, shooting in the anus, and severe and repeated cramp-like pains in the right masseter muscle.—Shooting in the right axilla.

**Superior Extremities.**—*Severe pain in the right shoulder in the evening.*—Pain at the top of the left shoulder in the morning.—Pain in the left shoulder at the deltoid muscle when exerting it.—*Pain at the acromion, about eight o'clock in the evening.*—*Pain at the right acromion process.*—*Rheumatic pain in the left shoulder and arm.*—Sore pain in the right shoulder-joint, on waking early in the morning, made worse by lying upon it, but relieved by lying with the right arm over his head.—The pain in the right shoulder grew worse in the afternoon, and by evening it had become almost intolerable.—Pain in the right shoulder when walking at six in the afternoon.—Transient pain in the right shoulder.—Somewhat severe rheumatic pain in the back part of the right shoulder and of the upper arm for several minutes, at rest and still more when moving the parts, in the evening in bed.—*Pain in the deltoid muscle.*—Fixed rheumatic pain for several days in the left shoulder and upper arm, as far down as the insertion of the deltoid; remissions frequent during the day, but less frequent at night, not affected by motion.—Burning pain in the deltoid, worse in the evening in bed.—Sensation of grating and crepitation in the shoulder-joint, on moving the arm.—Burning pain in the left shoulder, when walking, at one p. m.—Pain in the left shoulder, when riding in the forenoon.—Bruised feeling of the muscles of the right shoulder after being moderately pressed by clothing.—Heaviness of the left arm and hand with pricking in the palm and fingers.—Frequent pains for nearly two hours, occurring successively in various parts of the superior extremities, commencing at half-past six p. m., immediately after supper.—°After the apparent healing of the bite of a rat at the extremity of the forefinger of the left hand, pain of the whole limb, worse at night, redness of the back of the hand, sensibility of the limb to pressure along the route of the lymphatics, and pain at the left maxillary joint on moving the jaw.—Erratic pains in the upper extremities between the joints, remaining in one place only a few seconds. Drawing, aching and shooting in the arms, wrists, hands and fingers.—Pain at the radial edge of the right forearm, and immediately pretty severe pain at the anterior side of the right upper arm, then passing to the shoulder.—Pain in the shoulder, then immediately in the upper arm.—The pains in the shoulder and upper arm slightly nauseating.—Pain at the left acromion, followed immediately by pain at the inner and back side of the left upper arm, about eight, p. m.—°Numbness and feeling of deadness of the arms and hands at night.—*Numbness of the arms with pricking in the fingers.*—Feeling of great fatigue in the hands and arms.—Pain in the left upper arm commencing immediately after lying down, on the right side, about noon.—\*Rheumatic pain in the left upper arm, °increased by movement, especially backwards, and attended with weakness of the part.—Semi-acute pain about at the middle of the os brachii.—PAIN IN THE LEFT UPPER ARM.—Pain in the left upper arm, as if the muscles or tendons were unduly strained, when the arm is carried by them far upwards and backwards.—Sharp drawing pain in the left upper arm and in the radial side of the forearm.—Very severe shock of pain in the anterior and middle part of the left humerus.—*Pain in the right upper arm*—*Pain at the left biceps muscle.*—Cramp in the right upper arm.—Pain at the middle of the right upper arm.—Pain in the region of the right biceps, the arm being at rest.—Burning pains in the biceps of both arms, more severe in the night in bed, worse in the left and sometimes

confined to it.—*Pain in the elbow, especially the left.*—Pain in the left elbow on drinking ice water.—Aching pain in the left elbow-joint.—Aching pain in the right elbow-joint.—Sudden attack of sore, rheumatic pain about the left elbow-joint, more especially in the flexor muscles of the hand, the part very painful to pressure and on moving it.—Twinges in the left elbow.—Rigidity of the left elbow, on beginning to move it in the morning, ameliorated by a continuance of the exercise.—Tubercular pimple, large, deep-seated and tough, at the hollow of the right elbow.—*Pain in the left forearm.*—*Pain at the ulnar edge of the right forearm.*—Pain at the ulnar side of the right forearm.—Deep-seated aching of the left forearm.—Pain at the middle of the ulnar side of the left forearm.—Pain at the middle of the left radius.—Pain in the middle of the left ulna.—Darting like electric shocks from the elbow to the little finger.—Severe pains on the ulnar side of the left forearm, afterwards running along on the same side from the elbow to the extremity of the little finger.—*Pain on the ulnar side moving from the elbow to the little finger.*—Numbness of the forearm, hand and fingers.—Pain at the left ulna, at the middle of its palmar side.—Sensation of warmth and pain at the ulnar edge of the right forearm, followed immediately by pain in the right shoulder.—Pustules on the lower part of the forearm, one on the radial edge, an inch above the wrist-joint, another on the palmar side, two inches above the wrist-joint.—Pain at the radial edge of the right forearm, followed by pain at the ulnar edge of the right metacarpus.—**ACHING OF THE WRIST.**—*Aching of the wrists during exertion of the fingers.*—*Pain in the right wrist.*—Pain in the right wrist when writing.—Severe tired aching of the wrists and hands.—Hard aching of the left wrist and forearm.—Pretty strong and steady pain in the left wrist, increased by grasping, in the afternoon at four o'clock.—Pain at the back of the left carpus, followed immediately by pain on the palmar side of the left forearm, one and a half inches above the wrist-joint.—Violent itching of both wrists, about daylight in the morning in bed.—Pricking, biting and burning, granulated eruption on the inside of both wrists and both ancles.—*Vesicles on the wrists.*—Itching vesicles, resembling those of scabies, on the palmar surface of both wrists and of the lower part of the arms, most on the palmar-ulnar side of the right wrist.—Vesicle on the right wrist, below the lower head of the ulnar.—*Aching in the left wrist.*—Pain at the back of the wrist.—*Pain at the ulnar edge of the metacarpus.*—Pain in the ulnar edge of the right metacarpus, in the morning at 6¼ o'clock.—Pain at the ulnar edge of the right metacarpus, when at rest in bed in the evening; mitigated by movement.—Pain at the ulnar edge of the left metacarpus, subsequently extended to the wrist and arm.—Pain at the ulnar edge of the left metacarpus, immediately succeeding a slighter pain at the corresponding part of the right hand, at 2 p. m.—Pain at the ulnar edge of the left metacarpus, immediately followed by pain at the corresponding part of the right hand; the same succession of symptoms repeated about twenty minutes afterward, at 7½ o'clock p. m.—Pressing fulness in the hands.—Pains in the metacarpal bones of the left hand.—Pain on the dorsal side of the first metacarpal bone of the right hand, in the evening at seven o'clock, after supper.—Pain at the dorsal side of the metacarpal bone corresponding to the right ring-finger, extending subsequently to the wrist.—\**Numbness of the hands and fingers.*—*Tingling numbness of both hands.*—Numbness with burning and tingling of the hand and fingers, more on the palmar surface and in the thumb and forefinger, worse in the pendent position.—Stings in the hands and fingers.—Pricking in the palm and fingers of the left hand.—Burning in the palms of the hands.—°Coldness of the hands.—*Swelling of the hands.*—\**Inflammation of the hand, with heat, redness and swelling.*—Heat, throbbing, redness and shining of the hands, with swelling and stiffness.—°*Inflammation of the hand from exter-*

*nal injury.*—°Inflammation of the hand extending from a burn on the fingers. —°Burning and heat of the left hand, heat in the arm and sensibility in the bend of the elbow and in the axilla, with yellow coat and red anterior edge of the tongue, all after a gunshot wound in the hand a week previous.—Swelling of the hands in the afternoon, worse for holding the reins and riding in the sun.—Small, immature boil, with erysipelatous inflammation on the entire back of the hand, with smarting, burning pain.—Hard, tubercular and itching eruption on the dorsum of the right hand, between the thumb and first metacarpal bone. This soon healed, but left a smooth, indurated and slightly-elevated spot for a month or two, and a distinct whitish scar still remains at the spot after nine months.—*Vesicles on the hands.*—Vesicles with inflamed base, on the more hairy parts of the right hand, little finger and wrist.—Pimple, large, deep-seated and sensitive, among the most thickly-set hairs of the dorsum of the left hand, over the smallest metacarpal bone.—Stinging on the dorsum of the hand near the smallest metacarpal bone.—Small watery blisters on the backs of the hands.—The eruption extends over the backs of both hands.—The eruption of the back of the hands looks like measles.—*Pain in one or more of the phalanges of the fingers*, oftener near the middle.—Pain in the phalanges of several fingers of the left hand.—Pain in the first joint of the forefinger of the right hand.—Pain at the middle of the upper phalanx of the right ring-finger immediately after supper.—Pain at the dorsal side of the upper phalanx of the right ring-finger.—Pain in the dorsal side of the middle phalanx of the right thumb.—Pain at the dorsal side of the middle phalanx of the right ring-finger.—Awoke with a burning and remittent, osteocopous pain, throughout the middle phalanx of the right little finger, in the morning at 5½ o'clock.—Pain in the middle phalanx of the right little finger, followed by pain in the region of the left kidney, in the evening at 10½ o'clock.—Pain at the phalanges of several fingers, about midway between the joints.—*Pain at the finger-joints.*—Pain at the middle joint of the left forefinger, then at its metacarpal joint.—Pain in the middle joint of the right ring-finger.—Pain in the third phalanx of a left finger, followed by pain in the third phalanx of a left toe.—Pain at the nail of the left ring-finger.—The affections are principally on the dorsal and more hairy parts of the hand and fingers, seldom on the palmar surface.—*Sharp pain in the finger.*—Sharp pain in the middle phalanx of the second finger of the left hand.—Sharp pain in the forefinger of the right hand, followed by stinging pain in the thumb of the same hand.—*Darting pains in one or more fingers.*—Sharp transient pains in the left ring-finger, darting from the metacarpal articulation to the tip.—*Pain in one or more fingers in the afternoon.*—In the afternoon, rheumatic pain in the fingers of the left hand.—Severe shocks of pain in the right little finger on the side next its fellow.—Darting pains in the fingers as from needles, also tingling numbness.—*Tingling in the fingers.*—Tingling in the ends of the fingers.—\**Pricking in the fingers.*—*Pricking in the thumb.*—Pricking in the fingers of the right hand.—Stinging on the knuckles of the right hand.—Pricking in the end of the right thumb.—Shooting-burning pain in the ball of the right ring-finger.—Stinging-pricking on the dorsal surface of the upper phalanx of the thumb.—Aching of the phalanges, with fulness, heat and redness.—Itching, unsuppurating eruption on the fingers.—Abortive pustule at the root of the right thumb nail.—Vesicular eruption between the fingers of the right hand, very much resembling *psora* (made its first appearance at four o'clock in the afternoon); it itches violently, and is worse after rubbing.—Vesicular eruption between the fingers of the left hand.—Circumscribed induration on the ball of the left thumb, going away after about a month by the peeling off of the thickened cuticle.—\**Sufferings from wounding a finger.*—Swelling, heat and much suffering of a finger, after a wound in

it.—Slight scratches on fingers suppurate.—°After a wound of a finger, inflammation extends up the arm; pain at the maxillary joint on moving the jaw.

**Inferior Extremities.**—\**Pain in the hip.*—Rheumatic pains from the hips and nates to the legs inclusive.—°*Pain in the hip and legs.*—Lameness in the left hip with pain there on walking.—Lameness of the left hip, during the first part of a walk in the forenoon, between ten and eleven o'clock.—Lameness in the left hip, at five o'clock in the afternoon.—Pain in the left hip whenever the trunk is bent to the right.—Pain and weakness in the left hip on beginning to walk.—\**Aching pain with soreness along the crest of the right ilium over the hip and down the front part of the thigh; worse from motion.*—Tingling pain in the left hip, extending from the rectum, when lying on the left side, in the morning, about six o'clock.—Pain simultaneously behind the right sacro-iliac symphysis and in the left shoulder.—Pain at the left tuber ischii after rising from a seat.—Limping walk, in the afternoon, with pain above the left sacro-iliac symphysis about six o'clock.—*Inflammation and excoriation of the inside of the nates.*—*Cutaneous inflammation*, redness and feeling of *excoriation at the inner side of the left of the nates*, commencing in the evening, after a walk of no unusual length, and continuing till next morning; on the next afternoon, it affected *both nates*.—Large tubercular pimples with bases deep-seated, and prominent parts irritable to the touch, situated on the inner side of the nates, sometimes on the sides of the os coccygis.—*Feeling of weakness, heaviness, and instability of the lower limbs, when walking.*—In the evening, *weakness and rigidity of the inferior extremities*, and indisposition to walk fast; on the next evening unusual agility and disposition to walk fast.—The sufferings are mitigated or disappear on movement and when walking.—*Pain in the left thigh*, when walking.—Pain in the left thigh in the forenoon.—Pain in the anterior and inner and sometimes posterior part of the left thigh when walking.—Pain at the anterior part of the left thigh, along the whole course of the rectus femoris muscle, during its action in throwing the leg forward at each step, worse during the earlier portion of each walk, in the afternoon. Long walking removes the lameness for the time.—*Sensibility of the anterior muscles of the thighs*, especially of the left thigh, continuing for several days.—Eight days afterwards *the anterior part of the right thigh* is exclusively affected, the rectus cruris muscle, *feeling as if bruised*, very sore on pressure, for two days.—*Shootings in the left thigh.*—Shootings in the external side of the left thigh, at and below the trochanter major, several times in the evening.—Shooting pain in the left thigh from the hip to the knee.—Shootings in the long muscles.—Sharp pain along the anterior inner side of the left thigh, and just above the patella, felt at the commencement of a walk at noon.—*Pain in the region of the sartorius.*—Shocks of pain in the sartorius above the right knee.—Pricking in the thigh, at the middle of the anterior part, in the evening, near six o'clock.—*Eruption on the thigh.*—Itching vesicular eruption on the posterior surface of the left thigh.—*Weakness of the knees.*—*Weakness of the knees and legs.*—\*Lameness at the knee °occasioned by contusion at the external condyle of the os femoris.—\***PAIN IN ONE KNEE.**—*Pain in the knees.*—Pain in the right knee with numbness of the limb.—Pain in the knee-joints with heaviness of the right leg in the evening.—Aching in the knees and ankles.—Pain at the tendon just above the left patella on walking, especially at the commencement of a walk.—**PAIN AT THE INSIDE OF THE KNEE near the patella, on moving the joint.**—Pain at the outer edge of the left patella, felt at each step on going up stairs in the evening, after sitting for some time.—*Rheumatic pain in the inner and lower edge of the patella*, extending into the knee-joint, aggravated by motion.—Pain at the inside of the head of the left tibia, on sitting after

walking.—Severe pain, as if from a sprain, at the insertion of the ligament of the patella into the tibia, coming on suddenly on rising from a seat, and, with tenderness of the part, remaining a few minutes.—Severe pain just below the outer side of the head of the left tibia, a few minutes after a cold drink.—Pain in the left knee on beginning to walk down stairs, after sitting.—Pain at the outside of the left knee.—Severe pain immediately above the right knee-joint *inside* of the upper extremity of the patella, on rising from a seat.—Pain at the insertion of the ligament of the left patella at the commencement of a walk.—Stinging pain at the head of the left fibula, felt immediately after drinking ice water, followed by pain at the same part when stepping.—Shooting pain on the inside of the right knee and on the top and outside of the right foot.—Pricking in the right knee.—Eruption on the inside of the left knee.—\*THE LEGS FEEL WEAK.—Weakness of the legs in the morning with depression of spirits.—Weakness of the legs in the afternoon, at five o'clock.—Weakness of the legs in the forenoon.—*Weakness and heaviness of the legs when walking.*—Legs weak and slow in obeying the will in walking, in the evening.—Weakness and heaviness of the legs, at and below the knees, especially posteriorly, at four o'clock in the afternoon.—Weakness of the legs, which diminishes by continuing the walk, but again returns on commencing a walk after resting.—*Aching of the legs.*—Pain in the lower part of the legs in the afternoon and evening.—Dull aching and sensation of weakness in the legs and ankles.—*Tiresome aching of the legs.*—°Pain as if in the bones, like rheumatism.—Tired aching of both legs, better when walking, worse when sitting in a room or riding in a carriage.—*Pain of the upper, interior and anterior portion of the left tibia.*—Pain at the head of the left tibia, anterior and inner part, in the evening at eight o'clock.—*Pain in the left tibialis anticus*, when lying in bed at six in the morning.—Pain in the right tibialis anticus, when lying in bed at night at eleven o'clock.—\*PAIN IN THE CALF OF THE LEG often when walking.—\**Pain at the junction of the calf with the tendo-Achillis.*—Pain in the calf of the left leg, mitigated by movement.—Pain at the upper-inner part of the left calf, when walking in the evening after resting.—*Pain at the lower part of the calf*, during the earlier part of a walk, whenever the heel is raised by the action of the muscles of the calf.—*Pain at the upper extremity of the tendo-Achillis when walking.*—Pain immediately above the upper extremity of the tendo-Achillis, when walking.—Rigidity and weakness at the upper part of the tendons of Achilles of both legs; walking gives slight pain there.—Restlessness of the legs.—Drawing pains of the legs.—*Cramp in the leg.*—Cramps in the calves of the legs at ten in the forenoon.—Cramping pain in the calf of the left leg at its junction with the tendo-Achillis.—*Cramp in the leg on extending it.*—*Cramp in the calf of one leg when lying in bed.*—Cramp in the calf of the right leg on extending it in the morning in bed.—Cramps in the calf of the left leg at night.—Sharp pains in the legs and soles of the feet.—Sharp drawing pain in the calves of the legs.—Shooting pains of the legs.—Stinging in the anterior-outer part of the leg.—Deep-seated pricking in the legs.—\*Numbness and sense of torpor of the legs.—°Numbness and paralytic weakness of the legs at night, with sense of deadness and want of feeling in the limbs.—ITCHING OF THE LEGS.—*Violent itching of the legs and ankles in the evening.*—Itching in the calf of the left leg, when walking in the afternoon, at four o'clock.—THE ITCHING OF THE LEGS IS MORE ESPECIALLY IN THE LOWER HALF, BETWEEN THE MIDDLE AND THE ANKLE.—Severe itching of the ankles and lower halves of the legs in the evening, worse at ten o'clock.—Severe and almost intolerable itching of the legs and feet, especially the lower half of each leg, the ankle, instep and upper part of the foot; rubbing produces severe burning and smarting.—Vesicles on the legs and feet.—*Red eruption encircling the*

*lower part of the legs.*—An eruption like a red band, three inches in breadth, around the legs just below the calf.—Burning and smarting eruption on the instep and lower portion of the leg, with burning, smarting and redness, on the upper side of the foot in the metatarsal region.—PAINS AT THE ANKLES sometimes severe.—*Pain at the ou'er malleolus.*—Pain immediately behind the outer malleolus of the left ankle.—*Pain in the ankles in the evening.*—Deep-seated pain in the outer malleolus when pressed, between eight and nine in the evening.—Severe pain in the ankles in the evening.—Aching in the knees and ankles. \*PAIN IN ONE ANKLE.—Sudden attacks of pain in the outer malleolus of the left ankle.—\**Pain in the right ankle.*—\*The right ankle feels as if it were breaking.—Rheumatic pains in the legs and especially in the ankles, worse toward evening, felt through the night, and again worse in the morning, unnoticed whilst and after walking, attended with uneasiness and desire to move about.—\*Pain and lameness of the right ankle.—°Great pain and lameness of the right ankle from a sprain several weeks before; °the pain at times extended to the knee, severe pain when walking, a sensation of weakness as if the foot could not be used.—Pain in the anterior part of the left ankle.—Pain and lameness in the right ankle, on commencing a walk, shifting to the hip, and going entirely off on continuing to walk.—Weakness in the ankles.—Stinging at the anterior part of the right ankle-joint, in the evening at ten o'clock.—\**Swelling with pain of the right ankle.*—°Great pain and lameness with some swelling of the right ankle.—\*Swelling and soreness of the right ankle and foot; worse in the morning, diminishes in the middle of the day, and gets worse again in the evening.—Itching of the eruption on the right ankle.—*Pain in the top of the right foot*, sometimes in that of both feet.—°Lameness, weakness and aching of the feet and ankle-joints, after walking.—*Pain in the right foot.*—*Pain in the sole of the right foot.*—Sharp drawing pains in the soles of the feet, with heat.—*Pain in the sole of the right foot in the morning.*—Pain in the sole of the right foot as if it were drawn up.—Aching of the sole of the right foot in the morning in bed about six o'clock.—PAIN IN THE SOLE OF ONE FOOT, at night. Aching of the ball of the right foot in the morning in bed.—In the night, burning pain, for one or two minutes, in the anterior ridge of the right sole.—*Drawing pains in the feet.*—*Drawing pain in the sole of one foot.*—Awoke at night in bed by severe twinges and drawings in the sole of the left foot, extending to the toes, with cramps of the toes.—*Sharp pain in the right foot.*—Sharp pain on the top of the right foot.—*Sharp stinging in the foot.*—*Shooting pains in one foot.*—Shooting-stings in the right foot.—When walking, shooting-stings in the right foot, followed by occasional stings in the feet and toes.—*Stinging in one foot.*—Stinging of the left instep.—*Pain in the left heel.*—Aching at the base of the left heel in the morning in bed.—Sharp stinging pain in the left heel, while walking.—\**Coldness of the feet.*—*Unusual coldness of the feet*, with slight numbness.—*Heat of the feet.*—Heat of the feet with sensation as of sweating of the feet.—Burning-itching on the top of the right foot, with swelling of the veins.—Burning in the top of the left foot.—*Burning in the top of both feet*, with stinging in the ends of the toes.—*Burning and itching on the top of the left foot*, with itching about the ankles.—Vesicles on the feet.—Tingling numbness of the feet and toes.—°Redness of the top of the foot with internal soreness pain on stepping or moving the part.—Pain between the joints of the toes.—Pain in the posterior phalanx of the fourth toe of the left foot, felt on beginning to walk in the morning and on pressure.—*Stinging in one or more toes.*—Stinging pains in the toes of the right foot.—Stinging pains in the little toe of the left foot.—Stinging in the upper part of the fourth toe of the left foot in the evening at ten o'clock.—Stinging in the upper part of the posterior pha-

lanx of the fourth toe of the right foot, in the evening in bed.—Pain in the ball of the great toe of the left foot, followed by burning pain in its posterior phalanx. Inflammation, with redness and smarting pain, at the posterior joint of the right great toe.—Numbness of the two larger toes of the right foot, with feeling as if there were a bag of cotton between those toes. This feeling lasted several days.

**Sleep.**—*Frequent yawning.*—Yawning in the evening.—\**Sleepiness in the day-time.*—Sleepiness during the day and evening.—Sleepiness in the forenoon, with headache.—*Excessive sleepiness early in the evening; to keep awake almost impossible* from eight to nine o'clock.—Sleepiness and yawnings, with indisposition to mental and bodily labour in the forenoon.—*Inclination to lie down.*—\***SLEEP IMPERFECT.**—\**Sleepless at night.*—*Dreamy, unrefreshing sleep.*—**OCCASIONAL WAKING AT NIGHT.**—\**Sleep disturbed, frequent waking.*—Repeated waking during the latter part of the night.—*Restless sleep* through the night.—Jactitation and tossing during sleep.—Uncommonly sound sleep which continues late in the morning.—In the night when asleep, incubus with inability to move, and sensation of pressure on the right upper portion of the chest, with superstitious fear connected with the supposed vicinity and agency of some invisible, sly, and malicious being. Subsequently, after waking, a pressive pain at the left clavicle.—\**Seminal emissions during sleep at night.*—*Erections during sleep at night, with seminal emissions.*—*Sleep disturbed by dreams,* and followed by dull pain in the occiput, forehead and temples, on waking in the morning.—Disposition to sleeplessness, and sleep disturbed by dreams.—*Dreams of horses.*—*Dreams anxious.*—Dreams amorous and voluptuous.—*Dreams of dangers.*—*Frightful dreams.*—Dreams at last changing suddenly to a frightful character, which occasioned waking in the night.—Dreams of travelling through woods in the night, and of being in danger from many horses.—Awoke by a dream of an effort to rescue a companion from imminent danger from ruffians.—*Fantastie dreams.*—Dreams of sportive and other pursuits of persons, and of persons moving in the horizontal posture, and of robbers and mysterious persons.—Anxious dreams with occasional waking at night; dreams of travelling in pathless places, and of a friend getting separated and lost.—Dreamed of travelling with another man in pathless fields, and of being in danger of being kicked by a horse.—Dreams of an enemy's cavalry, sickness, and bad news of friends.—Horrible dreams of enemies, dangers by fire, attacks of furious dogs, serpents, etc.—*Fear on waking.*—*Anxious, uneasy sleep, with frightful dreams,* on awaking from which the mind could scarcely be pacified.—Feeling of danger after the dreams.—Waked in the morning by a gentle and imaginary voice, addressing him with some allusion to sleep.—Sudden waking with a start and slight fear.—*Pain felt on waking.*—Pressive pain at the left clavicle on waking.—Sudden waking with a pain in the sole of the right foot.—Awoke for several successive nights with numb pain and pricking in the legs, deep-seated as if in the bones.—Awoke with cramp in the calf of the left leg, at night.

**Fever.**—\***CHILLS,** *-general or partial, especially in the back.*—Chilliness in the back, with weakness of the legs, desire to lie down, and shootings in the abdomen, at noon.—In the evening, slight chilliness, especially in the back.—General chills.—Chills partial, affecting the upper parts of the body.—Chilliness and trembling sensation, both affecting the whole posterior part of the body, from the occiput to the heels inclusive, followed after some minutes by general shiverings.—Chills increased on going into a warm room, diminished in the cool air.—\**Coldness of the extremities.*—Coldness, with aching of the limbs.—Shivering succeeded by slight heat.—Shivering succeeded by thirst and a slight degree of

heat.—Chills at evening, with fever reaching through the night.—\*Chills and fever, with thirst slight.—*Coldness of the extremities*, with heat and bloatedness of the face and head.—Chills during perspiration.—°Chills in the day-time, thirst at night.—\*FEVER.—°Inflammatory fever.—°INTERMITTENT FEVER.—°*Quotidian intermittent fever*, chills between nine and ten in the forenoon, followed by heat, with frequent pulse.—°Quotidian intermittent, chills commencing every day at one o'clock in the afternoon, increased by movement, and attended with pain in the bones, and followed by heat intermixed with chills, the fever sometimes attended with sharp pains in the abdomen.—°Double tertian, chills predominant, pain in the forehead during the chill, thick paste-like greyish-white coat on the posterior part of the tongue, redness of the anterior part.—°*Fever with prains in the legs*.—°Intermittent fever, quartan, commencing in the evening with heat, followed by heat with perspiration, yellow coat and reddish tip of tongue, neck tender on the left side; during the fever, sleep and pains in the legs and small of the back; after the fever, debility.—\*Remittent fever.—Fever remittent, going off with moderate sweating.—°Remittent fever at the close of the catamenia, chills in the morning followed by much perspiration with moderate heat, pains in the limbs in the afternoon, tongue red at the tip, diarrhoea.—°*Fever with debility*.—°Nervous fever.—°*Typhoid fever*.—°Typhoid fever, frequent pulse, pains in the limbs, vertigo on rising, thick brown coat on the tongue and redness at the tip.—°Typhoid fever, saliva consisting of a white, dense, and extremely viscid froth, urine depositing a pink-coloured sediment at the edge of the surface of the liquid; trembling and jerking of the hands.—°Typhoid fever, with rheumatism of the neck.—°*Typhus fever in an early stage*.—°Fever in consequence of a burn, frequent pulse, hot and dry skin, headache increased by movement and stooping, disagreeable taste in the mouth.—°Fever, small and frequent and feeble pulse, angina, pains in the head, neck, and back.—°Fever with slough-like appearance on the tonsil, throbbings in the head, cough, and burning of the eyes and cheeks.—\**Universal heat with dryness of the skin*.—\*PULSE FREQUENT.—Pulse slow, especially when lying down.—°Pulse feeble, frequent, and small.—\*Pulse frequent and small, with rigidity of the neck.—°*Easy perspiration*.—Constant perspiration, with a sticky feeling.—°Perspiration from the least exercise.—°Easy perspiration with dryness of the mouth, yet without thirst.

**Skin.**—The skin is stiff, and moves as if there were a fluid effused beneath it.—General feeling of heat in the skin.—Heat at night.—ITCHING OF THE SKIN IN VARIOUS PARTS.—°*Itching of the skin, morning and evening*.—°*Itching worse in the evening*.—Stinging itching sensation as if from flea-bites over the skin.—A crawling sensation over the skin in spots.—Heat and itching of the skin in various parts.—General itching of the skin, soon after taking the medicine.—Itching worse in the evening, particularly immediately after going to bed.—Itching in various parts of the trunk, face and head.—ITCHING OFTEN IN WARM WEATHER.—°PRICKINGS OR STINGINGS IN VARIOUS PARTS OF THE SKIN.—°*Stinging like the bites of fleas in various parts of the skin*.—°*Itching, tickling, and pricking of the skin*.—°*Pricking oftener in warm weather*.—°Prickings in various parts, as if from electric sparks.—°Pricking simultaneously in the knees, hands, right elbow, right cheek, and right nostril.—°Pricking in the left heel, left ankle, and left side, all at the same time, followed by an uneasy sensation through the day, causing her to rub one limb and then another, in order to be comfortable.—°*Itching transiently relieved by rubbing*.—Itching and pricking in various places on the arms and legs, relieved by rubbing.—CUTANEOUS ERUPTIONS WITH ITCHING, burning and pricking.—\*Hard, red, and itching eruptions.—°Hard, red and itching blotches

on the extremities, face, eyelids and neck, with a raised and swollen appearance of the surrounding parts, the itching increased by heat and at night.—*Red, inflamed, tuberculous elevations of the skin, or large pimples, tough, deep-seated, and irritable to the touch, the smaller ones disappearing without suppuration, the larger ones suppurating slowly and imperfectly.*—Tubercular pimples, large and tough, their bases deeply seated in the skin, their prominent parts highly sensitive to the touch.—The eruptions are generally much larger and much less superficial than itch vesicles, and never discharge unless broken by external force.

—\***VESICULAR ERUPTIONS.**—°Eruption of watery pimples, in children, itching, bleeding and scabbing after being scratched, occurring on the arms, face, and legs.—Red, elevated eruptions, becoming more and more vesicular.—*Vesicles or pustules which finally disappear without rupture of the cuticle.*—Vesicular eruption with innumerable small points.—A sort of dry itch, that is, hard, wart-shaped blotches, which crowd upon one another and form groups of elevations.—*Itching eruption in warm weather.*—*The pricking stinging of the eruption feels like that of the prickly heat.*—*The fluid passes out of the vesicles without bursting the cuticle.*—The eruption is most prominent about the face and larger joints, especially the elbows, wrists, knees and ankles.—The eruption is attended with pricking, biting and burning, with constant and almost irresistible inclination to rub it, although there is very little itching. It is somewhat relieved by rubbing gently, but immediately afterwards it becomes worse.—*When the itching begins, there is almost an irresistible inclination to rub, or scratch the part, which, however, only increases the itching and burning, until it becomes painful and produces a sensation of sickness, and a glow over the whole body, and also increases the swelling and makes the eruption more prominent, like the sting of wasps or nettles.* Cold water applied externally gives some temporary relief.—Intolerable itching, with burning and pricking in the morning about daylight, in every part where the eruption has appeared.—The eruption pricks and burns very much when drinking any thing warm.—The eruption itches worse in the evening, at midnight, and about daylight in the morning. A spell of itching can be excited at any time by rubbing the eruption.—Return of the pricking and itching at four o'clock in the afternoon.—The desquamation which follows the eruption resembles that which takes place after scarlatina.—The itching and burning of the eruption are made worse by rubbing or scratching, and the eruption can be brought out in parts where it did not exist before, by scratching.—\**Erysipelas.*—Erysipelas during hot weather.—Heat and redness of the skin.—*Small and imperfect furunculi.*—*The skin becomes considerably inflamed after a small wound.*—Slight scratches readily fester.—°Inflammation extending from a gunshot wound.—*Burning sensation in a part of a mucous membrane.*—*Swelling of the lymphatic glands.*—°Inflammation along the route of lymphatic vessels.

**General Symptoms.**—\***RHEUMATIC PAINS.**—\***SEMILATERAL RHEUMATIC PAIN,** with rigidity, sensibility, °and contraction of the affected muscles, the pain increased at night, and by moving the part.—\***WANDERING PAINS.** SOMETIMES ON ONE SIDE, SOMETIMES ON THE OTHER.—Stinging, tearing, sharp pains.—Aching in the joints.—*Sensation of crepitation at a joint on moving it.*—Aching pain and lameness, especially of the extremities.—Limbs readily sprained.—*Sensation of trembling.*—Jerking, trembling or shaking, and paralytic weakness of the extremities, especially at night.—°Coldness of the extremities.—Fatigue from walking.—\**Excessive debility.*—\*General debility in the morning.—\**General languor, with inclination to lie down.*—Diminished ability to exercise the body or mind.—*Disinclination to physical or mental labour.*—Bodily torpor.—Dread of bodily and mental exertion.—Physical apathy.

—Lassitude, with disposition to stretch.—Yawning lachrymation and stretching in the afternoon, followed by general debility, with weakness and rigidity of the inferior extremities, in the evening.—*Restless nights*.—Day-sleepiness, with frequent yawnings and chilliness.—Numbness of the limbs, especially at night.

**Characteristics, Sphere, and Conditions.**—*This remedy appears to act especially upon the brain, the muscles, tendons, skin, and mucous membranes.*—PAINS often SEMILATERAL.—PAINS IN VARIOUS and often in remote PARTS IN SUCCESSION.—*Pains where tendons are connected with the muscles or bones, especially during the action of the muscles.*—*Stiffness of the joints.*—The symptoms often occur successively in parts either transversely or diagonally opposite.—PAINS IN MUSCLES DURING THE EARLY PART OF THE TIME IN WHICH THEY ARE EXERTED, DISAPPEARING AFTER LONG-CONTINUED ACTION. —\**The pain and soreness are worse in the morning when beginning to move.*—Pains when lying on the opposite side.—The sufferings are sometimes mitigated by movement and walking, sometimes by rest and when lying down.—*Many of the pains are relieved while walking in the open air, and when the mind is fully occupied; worse when beginning to move, from the agitation of laughing, and in the house.*—*Many sufferings after drinking cold water.* Languor on rising in the morning at seven o'clock.—Many sufferings occur between four and seven in the afternoon, especially about six o'clock.—Exacerbations or new symptoms often occur in the evening or morning.—*Some symptoms are increased in the evening and at night.*—*Sufferings aggravated by change of weather.*—Many symptoms occur on a sudden depression of atmospheric temperature.—Drowsiness, pains, and other symptoms on the approach of a storm.—Pains during rainy weather.

NOTE.—*Rhus Radicans* and *Rhus Toxicodendron* are considered by some botanists as varieties of the same species, but by a majority of them as distinct species. The trunk of the Radicans is from five to forty feet in height, and is furnished with an immense number of dark reddish-brown radicles or root-like fibres, which enable it to adhere to trees and other objects, and be thus supported like a kind of vine. The Toxicodendron is a low, self-supporting shrub, only two or three feet in height. When the radicans grows where it meets with no object suitable for its support, its height is only four, five or six feet, and its branches frequently recumbent. In a dry soil, the branches may not be recumbent, and the stunted radicans with few or no radicles, be mistaken for a toxicodendron, from which, however, it is even then distinguishable by the crookedness or obliquity of its trunk. As to the leaves, both plants are trifoliate, but the leaflets of the radicans are generally entire at their margins, and smooth and glabrous on both surfaces, whilst those of the toxicodendron are generally toothed or lobed, and their inferior surface pubescent.

Until the precise relation which the radicans and toxicodendron sustain to each other, in their medical properties, has been rigorously determined, no specimens of them should be collected, either for pathogenetic or curative purposes, except from wild and almost full-grown plants, and from those which possess several of the botanical peculiarities in a high degree, not only to prevent the possibility of confounding them, but to determine the extreme points of difference in their medical properties. For example, it would be desirable to select a toxicodendron at least twelve or fifteen years of age, and under three feet in height, having a trunk perfectly straight, erect, and free from rootlets, with leaves pubescent beneath, and decidedly serrate, toothed or lobed. The writer

deems it proper to acknowledge, that his description of the toxicodendron has been taken chiefly from books, and confined mainly to those points on which there is a general agreement among the numerous authorities consulted. The radicans leaves which he collected for trial, and from whose juice by far the greater portion of the above symptoms were obtained, were from a female plant growing spontaneously in a fertile and somewhat humid soil, and in a situation exposed to the sun. It had a trunk about twenty feet in height and two inches in diameter, numerous radicles, and leaves entire, and smooth on both surfaces. It was in flower at the time, June 18, 1846.

Without considering whether Hahnemann allowed these two kinds of rhus to be used indiscriminately, or what proportion, if any, of his symptoms, might have been from the radicans proper, it is a sufficient reason for publishing separately the above symptoms of this American vine, that the botanical differences between the two plants afford ground for at least a suspicion of a difference in their medical properties. It would be incompatible with the strictness of homœopathic science, to rely solely on botanical analogy, or on a general correspondence between the effects. Moreover, in these provings, the radicans has evinced great power, and several properties not hitherto discovered in the toxicodendron. Jahr evidently considers his toxicodendron symptoms as obtained from the toxicodendron proper. He remarks in his Pharmacopœia, that "many authors agree in saying, that the *Rhus radicans* has absolutely the same properties as the *Rhus toxicodendron*; but as this assertion, true as to the general facts, is not sufficiently proved as to the details which homœopathy requires, we must be careful not to mistake the two plants." He alludes to "the leaves of the *Rhus tox.*," as the kind to be collected "for homœopathic use." This—though also an American plant—appears to be more generally known in Europe than the radicans, as it is said to have been long since introduced and cultivated as an ornamental shrub, and to have been the kind of rhus most generally used in medicine.

## 207. RHUS TOXICODENDRON.

RHUS TOX.—Poison Oak.—HAHNEMANN's Mat. Med., IV.

COMPARE WITH—*Am. carb.*, *Arn.*, *Ars.*, *Bell.*, *Bry.*, *Calc.*, *Caust.*, *Chin.*, *Clem.*, *Cocc.*, *Coff.*, *Con.*, *Dulc.*, *Lach.*, *Lcd.*, *Lyc.*, *Nitr. ac.*, *Nux r.*, *Phosph.*, *Phosph. ac.*, *Plat.*, *Puls.*, *Ranunc.*, *Rhod.*, *Samb.*, *Scp.*, *Sil.*, *Sulph.*, *Verat.*, *Zinc.*—*Rhus tox.* is particularly suitable after *Arn.*, *Bry.*, *Calc. c.*, *Con.*, *Phosph.*, *Phosph. ac.*, *Puls.*, *Sulph.*

ANTIDOTES.—*Bry.*, *Camph.*, *Coff.*, *Sulph.*—*Rhus tox.* antidotes *Bry.*, *Ranunc.*, *Rhodod.*, *Tart. stib.*

### CLINICAL OBSERVATIONS.

According to Noack and Trinks, *Rhus tox.* has been successfully employed in the following affections: Catarrhal affections from exposing the perspiring skin to wet.—*Bad consequences from getting wet by a sudden shower of rain, or from bathing in cold water.*—Rheumatic and arthritic affections with and without swelling.—Acute rheumatism.—Arthritic pains in the limbs.—Bad effects from contusions, straining of tendons and ligaments, straining and distorting of single muscles.—Straining of tendons, even if attended with swelling and great pain of the affected parts.—*Spavin of horses.* in blood-spavin, dry or bone-spavin, particularly in the first stage with swelling of the hip-joint, increased

feeling of warmth.—Secondary syphilis.—Hydrargyrosis.—Tophus.—Pains as if bruised, in single parts, or sensation as if the flesh had been detached by blows or were rubbed to and fro over the bones.—Paralysis of the extremities.—Opisthotonos.—Chorea sancti Viti.—Hemiplegia after apoplexy (in conjunction with Cocc.).—Scarlet-rash with intense fever; Rhus is said to abbreviate the course of the disease (*Kreusler*; *Trinks*, on the contrary, observes that he has never seen Rhus have that effect; in one case, where the disease had passed into the stupid stage, the typhoid symptoms were removed by Rhus, after which the fever went through its ordinary course).—Erysipelas neonatorum (alternation with Bell.; *Trinks* pronounces the use of Bell. unnecessary).—Scarlatina miliaris, with dark redness of the skin which was covered with innumerable vesicles containing a yellowish moisture; the skin felt as if covered with a viscous liquid, and looked as if handfuls of mustard-seed had been thrown on it, attended with burning heat, great thirst, sopor, starting as if in affright, restlessness, painful, ineffectual desire to urinate, constipation.—Erysipelas erraticum of a child.—Erysipelas pustulosum.—Erysipelas bullosum faciei.—Erysipelas bullosum of the face and head.—Erysipelas bullosum of the face with telangiectasia.—Erysipelas bullosum breve et fugax with anasarca.—Carbuncle.—*Malignant blister*: inflammatory redness and swelling with increasing burning and stinging pains, after which blisters are formed, or one large blister containing a yellow substance; in a few days, the blister becomes dark and blackish, and leaves deeply-penetrating, gray-looking ulcers.—Morbus maculosus Werlhofii and purpura hæmorrhagica.—Urticaria.—Urticaria with burning itching.—*Variola*.—Burning-itching eruptions with erysipelatous inflammation of the parts, with formation of pustules, which are at first filled with lymph, afterwards become yellow, run into each other and form scurfs.—Herpes on the forearms and dorsum of the hands: itching burning under the light-yellow scurfs which rest upon a rose-coloured, elevated, prominent base.—Eruption consisting of vesicles which afterwards form crusts, attended with burning and swelling on the hands, forearms, feet and legs.—Pustulous eruption on a rough base (on the thigh), with itching burning.—*Chronic pemphigus*.—Humid, suppurating, burning-itching herpes, which afterwards are covered with crusts.—Cancerous eruption on the skin, with swelling of the parts and burning-itching pain.—Warts.—Leucophlegmasia after scarlatina.—Quotidian fever, the paroxysm setting in at night, with violent trembling of the heart, oppression, crampy feeling and throbbing in the præcordia.—Double-tertian fever.—Tertian with urticaria.—Phlebitis.—Typhus gastricus.—Typhus versatilis after the cholera.—Typhus versatilis when on the point of passing into the stupid stage.—Idiopathic typhus.—Catarrhal typhus.—Typhus with violent tearing pains in the limbs.—Epidemic typhus.—Hospital typhus.—Abdominal typhus.—*Abdominal typhus* in every stage of the disease: heat in the head, drawing and stiffness in the nape of the neck and back with sticking, diarrhœa followed by griping; white tongue, disposition to vomit or mucous vomiting, vertigo, dulness of the head; at a later period copious watery stools of which the patient is not conscious, bleeding at the nose and petechiæ.—Chronic petechiæ with great prostration of strength in feeble individuals.—*Nervous vertigo*, particularly in old people.—Nervous apoplexy of old people, after Arn. and Phosph.).—Sanguineous apoplexy (recommended by Dr. Schubert!!).—Hemiplegia. Paralysis and apoplexy.—Incipient paralysis of the upper and lower extremities.—Cephalalgia.—Hemierania with violent ophthalmia.—Hemierania, the pain being tearing-sticking, with dulness of the head.—Periodical aching in the occiput, excited by chagrin or exercise in the open air.—Acute hydrocephalus.—Rheumatic, inflammatory cerebral affections of children.—Bloody tumor of neonatorum.—*Moist tineæ*

*capitis*.—Dry herpes on the head.—Traumatic ophthalmia.—Ophthalmia neonatorum (in a child six months old!!), with swelling of the eyelids and interstitial distention of the conjunctiva.—Ophthalmia neonatorum with great swelling, redness and profuse secretion of mucus from the lids, in the case of a scrofulous child.—Inflammation of the eyes and lids, lachrymation, suppuration of the eyes, and œdematous swelling of the parts around.—Scrofulous ophthalmia.—Scrofulous ophthalmia with phlyctenæ and tinea favosa.—Scrofulous ophthalmia with photophobia.—*Adventitious growths of the cornea*.—Amaurosis.—Otagia.—Parotitis.—Epidemic parotitis.—Parotitis after scarlatina.—*Chronic swelling and induration of the parotid gland*, where new inflammatory symptoms and swellings are, from time to time, perceived.—*Humid herpes in the face*.—*Red, dry herpes of the face*, going and coming, with a smooth clear skin underneath.—Herpes of the face with dry crusts and scales on a humid base, and the surrounding parts being likewise moist (Rhus alternated with Ranunc. bulb. and Graph.).—Crusta lactea.—Crusta serpigiosa.—Pimple-shaped, crusty eruptions in the face.—Acne rosacea on the forehead, nose, and around the mouth.—Nocturnal epistaxis.—Rheumatic and arthritic toothache with sore pain, particularly when the pains are tearing or aggravated by warmth.—Nightly tearing pains in the teeth.—Tearing-sticking pains in sound and decayed teeth, communicating to the adjoining parts. Fœtid smell from decayed teeth.—Enteritis and peritonitis.—Incarcerated hernia with typhoid inflammatory condition, paralytic condition of the intestinal canal and tympanitis.—Volvulus.—Soft diarrhœic stool mixed with mucus and blood.—Nocturnal diarrhœa with violent colic.—Diarrhœa, even with bloody evacuation and violent colic.—*Mucous and bloody dysentery*.—Dysentery with nocturnal involuntary evacuations.—Incontinence of urine, particularly in dysentery.—Incontinence of urine with paralytic affection of the inferior extremities, in the case of a pregnant female.—œdema of the prepuce in children.—*Erysipelas of the scrotum, in the case of a new-born infant*.—*Suppression of the menses from getting wet suddenly*. Menostasia.—Puerperal fever, particularly when the nerves of the female are irritated, or when the symptoms are aggravated by a little chagrin, or when such a cause brings on bloody and generally coagulated lochia after the blood had ceased to appear. (According to *Trinks*, all the important indications for the use of Rhus tox. in puerperal fever are entirely omitted in the above recommendation.)—Violent sneezing after the influenza.—Glanders of horses.—*Cough with expectoration of bright-red blood*. Violent dry cough racking the whole body, particularly violent at night, with hoarseness, difficult breathing, loss of smell, and taste.—*Bloody cough with tightness of the chest, stitches in the chest, erysipelatous swelling of the dorsum of the right hand, causing a burning pain, and ulcers arising from a blister*.—Catarrh of the mucous membrane of the pharynx, œsophagus and bronchia, with expectoration of mucus.—Typhoid pneumonia: burning heat with starting as if in affright, bland delirium, little sleep, starting up from the bed, brownish, parched, rough, dry tongue, difficulty of speech, difficult expectoration, constant stitches with anxious oppression of the chest, which is particularly felt when in an inconvenient position; Rhus is particularly indicated in the erysipelatous form of typhoid pneumonia, less in the venous, the former of which is frequently accompanied with loss of voice.—Inflammatory affections of the chest, with fever and typhoid symptoms.—Sticking and tensive pains in the outer and inner parts of the side of the chest, with trembling and beating of the heart, creeping and feeling of lameness in the left arm.—*Affections of the heart*: valvular diseases with consequent derangement of the functions of the heart, particularly when the valves are insufficient and the auricles contracted.—Chronic rheumatic pains: pain in the small of the back with tearing pains in

both feet, proceeding from the lumbar region, aggravated by rest and the warmth of the bed, relieved by motion, with coldness and a feeling of numbness of the left foot.—Painful bony swelling in the small of the back, with dislocation and curvature of the vertebræ, tonic spasm of the posterior cervical muscles, paralysis of the feet (reported by Dr. *Aegidi*. *Trinks* ridicules this by calling it a very miraculous cure!!).—Rheumatic pains in the deltoid muscle of the right arm without fever, with feeling of stiffness, inability to move the arm to the head, tearing pains in the side of the neck and stiffness, most violent at night.—Intolerable tingling with violent throbbing and hammering pains in the arms, extending to the occiput and temple, aggravated by rest.—Paralysis of the arm, with coldness and insensibility, in consequence of cerebral apoplexy.—Inflammation and ichorous suppuration of the hands after external injury.—Warts on the hands and fingers, in many cases.—*Coxalgia scrophulosa*: limping, with intense pain in the hip-joint, which is increased by pressing on the trochanter major and alternates with pain in the knee, attended with shortening of the leg.—Coxarthrocace in the first stage, also in the second stage.—Spontaneous luxation, with formation of abscess in the groin.—Ischias (in conjunction with Sulph.).—Tearing and sticking in the feet, violent during rest and when touching the parts, with febrile motion.—Stiffness and stitches in the knee-joint when moving the limb, in consequence of a dislocation of the patella.—Inflammation and swelling, tearing-sticking pains and ichorous suppuration of the right knee-joint, with fever, sleeplessness, etc.—Painless paralysis of the feet in the case of a man whom Hahnemann had treated unsuccessfully for three years; he took the tincture of *Rhus tox.* in increasing doses, and took four ounces of the drug, until his cure was completed, without experiencing any bad effects whatsoever from the medicine.—Painless paralysis of both feet with inability to move them, to walk or to stand, in the case of a girl of 14 years; the girl was entirely cured by consuming two ounces of the tincture in increasing doses, and has been perfectly well for the last two years.—Paralysis of the feet from a fall on the back.—Pains, as if sprained, in the hip, knee and tarsal joints.—Acute rheumatism of the knees, with exudation.—Erysipelas pustulosum of the legs.—Gangrenous ulcers at the roots of the toes, with burning-itching vesicular eruption over the whole body, with febrile motions.—*Chilblains*.—*Rhus* may be employed externally to ecchymozed parts, to chronic exudations, particularly in the knee-joints and synovial membranes, and to the morbid growths occasioned in those parts by external violence.

## NOTE BY DR. NEIDHARD.

The disease in which I have most frequently made use of *Rhus*, is rheumatism characterized by the following symptoms: it is a form of rheumatism which is most common in our climate: rigidity, paralytic weakness in the joints, with stinging pain along the tendons and muscles. Swelling and redness on or near the joints. Rheumatism of the hip-joint and wrist seems to be most effectually controlled by its action. THE GREATEST RIGIDITY AND PAIN IS EXPERIENCED ON FIRST MOVING THE JOINTS AFTER REST, AND ON WAKING UP IN THE MORNING. After the joints are moved for a while, the pain is lessened. This symptom is mentioned by *Jahr*. Its paramount importance has been evidenced to me by numerous cures. *Jahr* lays, however, more stress on the symptoms *aggravated by rest*. More than 60 cases might be detailed in this place, where rheumatic affections, characterized by the above symptoms, were removed in the shortest time by *Rhus tox.*, 3 to 30. In several of these cases other homœopathic remedies had been prescribed in vain.

## SYMPTOMS.

**Mind and Disposition.**—Impatient and vexed about every trifle; she does not like to be spoken to often. Out of humour. Averse to every kind of work, even ever so little. Her ailments are excited or increased by the slightest annoyance, for instance, discharge of lumps of blood after the menses had ceased, etc. Sad; weeps without knowing why.—Involuntary weeping without feeling in a weeping mood, with rumbling in the abdomen. Desponding; he would like to weep. \*Sadness, inducing a love of solitude.—Melancholy and anxious as if she apprehended a misfortune, or as if she were alone, in dead solitude and silence, or as if she had taken leave of a friend, worst in the room, relieved by walking in the open air.—Dryness in the throat, with fits of frightful anxiety and mental uneasiness. Anxious and tremulous (from 10th to 27th day). Debility, with anxiety as if he would die, more after than before midnight. Desires to die, without feeling sad. Dread of men during her despondency.—Anxiety: she had to hold on to something when sitting, because she thought she could not sit unsupported, on account of the pain (bruised and drawing sensation in the limbs). Anguish of heart, more in the afternoon than forenoon; she felt so anxious half the night that she did not sleep, and sweated all the time. Internal uneasiness, which prevented her from sitting still; she had to move to and fro on her chair, all her limbs being in a state of perpetual motion. Restless mood, anxiety and apprehensiveness, accompanied with constant paroxysms of sudden and painful uneasiness about the heart (in the pit of the stomach), and heavy breathing. Ill-humoured, desponding.—Full of sad thoughts, anxious and fearful, which induce debility, and oblige her to lie down for hours, to gather strength. \**He imagines that an enemy means to poison him.* °Dread of the future and want of confidence in himself, with anxious apprehension on account of his children and business. °When on the point of falling asleep, he starts in affright about a trifle, as if it would cause him the greatest misfortune. Inexpressible anguish, with pressure at the heart and tearing in the small of the back. She was unable to sleep from three o'clock in the morning; she rose anxious, restless, and debilitated, and trembled constantly, especially in the knees (with sweat on the back). During her anxiety she feels a confused movement under her chest, oppressing her so much that she breathes heavily and deeply, which gives her relief; the pulse is alternately slow and fast.\* *Anxiety and apprehensiveness at twilight*, towards evening, as if he ought to kill himself, for one hour. She was assailed with sad thoughts, which gave her fear and made her tremble. She could not dispel her disagreeable thoughts.

**Sensorium.**—He has a perfect control over his ideas, and is able to pursue any train of ideas at his pleasure, without being disturbed with intercurrent thoughts, with calm, slow breathing.† *Absence of mind*, as if absorbed in thought, nevertheless there is an absence of ideas. Absence of mind as from swimming of the eyes, with frequent disappearance of the objects. Absence of mind: for instance, if he intends writing 12, he puts down one and forgets putting down 2, or, if he holds anything in his hands, he has to think of what the thing really is. Absence of mind during a walk after dinner.—\**Mental derangement*, he fancies that he has to die. °Illusions of the fancy and visions. °*Delirium*, also chattering delirium.—\**Languor of the mind*, is unable to hold an idea, feels almost stupid. Thinking and talking are difficult for him, or are repugnant to him. Slow train of ideas.—Is unable to recollect the things which have just past. Finds it difficult to recollect things, even those which

† Curative effect.

are most familiar; his recollections are very clear when he has no feverish chilliness.—*Weakness of the head*: on turning the head she is without consciousness, and, after stooping, she is unable to raise her head again. When sitting, he feels stupid as if intoxicated; on rising from his seat he feels giddy as if he would fall forwards or backwards. The head is gloomy and stupid. Confusion of the head. Stupefaction and weakness of the head.—*Dulness of the head*, as if intoxicated, early in the morning. Painful dulness of the head, as if stupified, with humming in the head. Dulness of the head, with indisposition to attend to any literary labour. Violent vertigo when lying down, with fear that he will die. Vertigo; everything turned with her, especially when standing or walking, also (but less) when sitting, not at all when lying. Reeling and tottering sensation in the body, without feeling giddy in the head. Sensation, when walking in the open air, as if something were turning in the head, still he does not feel giddy. Giddy when walking, as if she would fall forward. \*Dizzy when rising from bed; he is scarcely able to keep himself on his legs. When walking, he feels so dizzy that he scarcely sees the men who are standing before him.—Vertigo after walking or stooping, not otherwise.

**Head.**—Aching through the forehead. Aching in the occiput, going off by bending the head backward. °Aching in the occipital protuberances, as if from derangement of the stomach. °Headache immediately after a meal. °Headache from drinking beer. Headache in the forehead on moving the arms, as if pressure were made with a dull point. Headache on ascending an eminence, as if her head would become deranged; she feels every step she takes, in her head. °Headache obliging him to lie down, coming on again after the least chagrin and the least exercise in the open air. Reeling, with headache affecting the whole head; when writing he lost his thoughts and memory, and was unable to collect himself. Obtuse feeling on the head, pressure in the right temple, and a pressure directly over and behind the right orbit, as from a weight. Headache as if the eyes would be pressed out of their sockets, with yawning and chilliness, without thirst.—When stooping he feels as if he could not raise himself again; the nape of the neck feels embarrassed; when stooping he feels as if a quantity of blood were rushing to his brain. Constant heaviness in the head; when stooping he feels as if a weight were settling down the forehead, and would draw the head down, the face becoming hot at the same time. Headache behind the left eye, with pressure from behind forward. The head feels so heavy that she has to hold it straight in order to diminish the load which is pressing down the forehead. The head feels heavy and gloomy on turning the eyes; the eyeball itself is painful. Painful heaviness in the temples, pressing from above downward.—Headache as if the brain were compressed from temple to temple.—Heat in the head, with dry lips and thirst, followed by a violent headache, as if the forehead would be pressed asunder, with great heaviness in the forehead, especially when coming into the room out of the open air, or on waking from the siesta; the headache disappears as soon as she lies down in the evening.—Burning pressure in the region of the right temporal bone. Pressure in the right temple, radiating from below upward, in the evening in bed, worst during rest; in order to be relieved he had now to sit down, then to leave his bed.—Tearing in the head to and fro, worse when stooping; from five o'clock in the afternoon until bedtime. Headache, with drawing in the occiput and temples, with pressure in the eyes; it is so violent early in the morning that he has to leave his bed. Tearing in the upper part of the head, shortly after a meal; at the same place the head feels sore to the touch; sometimes the whole head is affected by the pain. On waking and opening his eyes he is attacked with a violent headache, first in the forehead behind the eyes, as if the brain would be torn to pieces, as after an

intoxication by brandy, and made worse by moving the eyes; afterwards in the occiput, as if the cerebellum were bruised; a pressing from within outward is felt in the temples.—Headache in the left side and occiput, as if the parts were sore, (extending as far as the teeth). Occasional shaking sensation in the brain. Wavering sensation in the brain, when walking. Sensation when shaking the head, as if the brain were loose and were striking against the skull.—Stitches in the head from within outwards. A few fine violent stitches in the right temple from without inward. Single stitch in the head, above the eye, from within outward, while eating, and continuing for four minutes; followed by nausea and fulness; a warm sensation ascending into the head. °Stitches day and night, extending to the ears, the root of the nose and the malar bones, with painfulness of the teeth. Fine beating in the right side of the head.—Burning in the head and a fine beating or pecking headache. Burning pain, sometimes in the occiput, sometimes in the forehead. Burning-creeping sensation in the forehead. He feels the pulse in the occiput. Her head feels too full and heavy (with ringing in the ears), occasionally accompanied with stitches in the left temple from within outward.—Painful creeping in the head, a sort of digging as with a needle, a fine prickling digging. A sort of creeping headache after a walk in the open air. Single jerks in the occiput, in the afternoon.

**Scalp.**—*Creeping in one part of the occiput, in the afternoon, as if an abscess would form.* Creeping in the scalp. Pain contracting the scalp as if she were pulled by the hair; nevertheless, the head is not painful to the touch. The hairy scalp is very painful to the touch, and when moving the hairs backwards. The head is painful to the touch, like a boil.—Corrosive itching of the hairy scalp of the forehead, face, and around the mouth; rash-like pimples make their appearance.—Pressure and drawing in the left side of the hairy scalp from below upward.—Tearing pain in the right temple. Simple tearing across the hairy scalp, externally. Creeping and crawling over the forehead and nose when sitting erect, going off on stooping.—Swelling of the head, attended with swelling of the face, neck, and even chest.—°*Tinea capitis.* °Periodical *tinea capitis*, every year. °*Tinea capitis*, eating away the hair, with nightly itching and pus, sometimes of a greenish colour or with crusts. °Small, soft tubercles on the hairy scalp.

**Eyes.**—\*The eyeball feels sore when turning the eye or when pressing upon it; he is scarcely able to turn the eye. Bruised pain in the orbital bone.—*Pressure* in the eye as if from dust. Painful pressure in the eyes.—Pressure in the eye, when exerting the sight. Pressure in the left eye, as if inflamed; the internal canthus is red, and filled with gum in the evening. Aching and contractive pain in the eyes, evening. Burning pressure in the eye, from evening until morning; going off in the morning after rising. In the morning the sclerotica is red, with a burning pressure in the eye; the eyes felt as if protruding from their sockets.—Biting in the inner surface of the lower eyelids. In the cold air the eyelids are made sore by saltish, acrid tears. The eyelids feel dry, especially in the inner canthus. In the evening the eyelids feel heavy, stiff and rigid, as if paralyzed, and as if he found it difficult to move the lids.—Twitching and contractive sensation in the lids. Cutting in the eyes, with difficulty of opening the lids, in the morning. Stitches under the eye.—°Burning of the eyes.—Feeling of swelling in the inner canthus of the right eye.—Feeling of swelling on the upper lid, with pressure, going off in the open air.—°*Ophthalmia*, °*arthritic*, °*serofulous*, -with swelling, closing the eyes.—\**Inflammation of the lids.* Redness of the whites, early in the morning, with burning pressure and sensation as if the eyes would protrude. \**Agglutination* of the eyes, in the morning, they are red.

*\*Swelling of the lids.* Red, hard swelling, like a sty, on the lower lid of the left eye, towards the inner canthus, with an itching pain, for six days. The eyelids are dry and are constantly closed as if he were drowsy, in the evening. Twitching and feeling of dryness in the eyelids, during a febrile chill. Sensation as if the right inner canthus were swollen. Biting sensation in the right eye, as from an acid.—*\*Lachrymation with burning pain in the evening.* °Lachrymation with oedematous swelling around the eyes. Bleareyedness.—°Photophobia, in serofulous persons.—The objects look pale. Sensation of a gauze before the eyes. °Incipient amaurosis.

**Ears.**—*Otalgia.* Painful beating in the internal ear at night. Sudden drawing pain in the ear, as if a thread were drawn through it. Tearing behind the left ear. (Whizzing in the ear.) Piping in the ears, as of young mice. (Titillating creeping in the ears, as of something living; she had to insert her finger.) Tingling in the right ear, when walking. Two violent reports in the left ear in short succession, as if the tympanum were bursting, when on the point of going to sleep in taking the siesta, in a recumbent posture; he started in affright at every report, but soon went to sleep again. Swelling of the ears and lobules. °Discharge of bloody pus, with hardness of hearing. *\*Parotitis*, °also after scarlatina.

**Nose.**—Tension under the right nostril. Sore feeling at the nostrils. Herpetic eruption around the mouth and nose; sometimes causing a darting and burning-itching pain. Feeling of hardness and swelling under the nose, going off when feeling the part. The tip of the nose is red and painful to the touch, as if it would ulcerate. *Crusty eruption near the left wing of the nose and below the nose.* *Burning sensation below the left nostril, making the air which comes out feel hot; this symptom goes off in the open air.* *\*Bleeding of the nose.* *\*Frequent bleeding of the nose, almost only when stooping.* *\*Bleeding of the nose, at night.* *Bleeding of the nose early in the morning.* *Bleeding of the nose on hawking.*—Frequent and violent sneezing, *almost spasmodic.*—°Dryness of the nose. *\*Stoppage of the nose* (worse in the room, relieved in the open air). Discharge of a quantity of mucus from the nose, early after rising, without coryza.

**Face.**—*\*Pale face.* Sickly appearance, with sunken cheeks, blue margins around the eyes and pointed nose. The face is disfigured and distorted, the left side looks shorter, the right side looks elongated. *\*Red face*; °also with burning heat, -or sweat. °Cold sweat on the face.—*\*Swelling of the face*, particularly of the eyelids and lobules of the ears. Swelling of the face, occasioning a rigid feeling. Swelling of the face and hands, so violent that he was not able to open his eyes. Pale swelling with burning, closing of the lids and lachrymation, followed by an eruption of vesicles filled with a yellowish liquid, which burst; lastly, the swelling peeled off. Violent burning or itching of the swollen face, lids and lobules.—*\*Erysipelatous inflammation of the face.* *\*Erysipelatous inflammation of the face, with swelling, -also on the neck.* *\*Vesicular erysipelas.* °Erysipelatous inflammation of the face with tense-aching sticking and burning tingling.—Drawing and tearing in the eyebrows and malar bones. Pressure and sticking in the region of the malar bone. Drawing through the left cheek, from the forehead into the jaw-bone, through muscles and teeth. Burning cramp in the right cheek, *as if ulcerated*, the skin of the cheek being hot and rough as if an eruption would make its appearance, obliging him to rise from bed, with much thirst. Pricking in the right cheek. Cutting at one point of the cheek, followed by itching and stinging, which goes off after scratching. Cutting contraction in the right cheek, or burning contraction with pressure in the upper molares.—°Chronic eruptions in the face, *suppurating.* *\*Herpetic eruptions,*

—also particularly around the mouth and nose, sometimes attended with twitching and burning itching. Pustule in the fold of the cheek, with pricking when touched. Burning vesicles around the mouth and nostril. °*Acne rosacea* around the mouth and chin. °*Crusta lactea* with thick crusts and secretion of a foetid, bloody ichor.—\*The lips are dry and parched, covered with a reddish, brown crust °Black lips. Pinching point in the lower lip, early in the morning, with sensation as if it were bleeding. Pimple on the lower lip, below the vermilion border, in the white skin. Clusters of pimples, which are filled with a watery fluid when first forming; they are near the corners of the mouth, on the border of the lower lip, feel sore when touched, and, when not touched, a smarting sensation, as if occasioned by salt, is experienced in them.—Pimples on the sides of the chin, the tips whereof become filled with pus; when touching them a pain is experienced in them as if a sharp edge were pressed into them, accompanied with a burning which is continuous.

**Jaws and Teeth.**—*Pain in the region of the articulation of the jaw, close to the ear, which feels like a cramp, during rest and when moving the parts;* the pain is diminished by a strong pressure on the articulation, and by eating warm things. Pain in the articulation of the jaw, as if bruised, or as if it would break, when moving it. Pain in the articulation of the jaws, as if they would become dislocated, during a spasmodic yawning in the evening. Cracking in the joint, when moving the jaw to and fro (in the morning). Cracking in the ear (in the articulation of the jaw) during every movement of the jaw. Sensation in the lower jaw, as if the gums were squeezed from both sides, with a sensation of decaying flesh in the mouth. Aching and digging-up pain in the submaxillary gland, even when not moving it. Swelling of the submaxillary glands; deglutition causes a pricking in the glands. Pressure in the outer gums of the lower molares, and at the same time on the shoulder, and in the region of the left clavicle. Dull pressure in the lower molares and near the shoulder in the left clavicle. Toothache in the right upper teeth, as if pulled into their cavities by the roots. Toothache in the lower molares; sharp pressure and a dull pain, with a musty smell in the mouth. Sensation between the right teeth, as if a tenacious body were between them.—Single dartings, in the evening, from the temple to both jaws and rows of teeth, debilitating him entirely, and accompanied with a bruised pain in the left temple; he yawned, but he was unable to go to sleep immediately, lest the pain should return. Slow sticking and at the same time darting pain in the cuspidatus, in the evening. Darting toothache at night, at ten o'clock; the dartings struck into the head, *and were relieved by pressing on the parts with a cold hand.* Darting in the nerves of the roots of the hollow teeth. Darting in the nerve of the tooth, from below upward, palliated by laying a cold hand on the part.—Cutting toothache, as when a wound is inflicted. Intolerable burning sore pain in the gums, as far as the roots of the molar teeth, at half-past two o'clock in the night; the pain obliges him to sit up in bed, with a feeling of heat in the body and especially about the head, with sweat on the forehead. Cutting beating pain in that portion of the palate where the teeth terminate, as if from ulceration; contact occasions a pricking as in an ulcer. °Tearing toothache, at night, in all the teeth. °Tearing toothache, aggravated in the open air. °Rheumatic arthritic toothache, relived by warmth.—Pressure in the inner gums of the foreteeth, and in the periosteum of the teeth, shifting to and fro.—The teeth feel loose, with painful tingling in the teeth from time to time, as when a part goes to sleep. Painful tingling in the tooth, resembling a digging as with a needle; a fine prickling digging. The teeth are painful when chewing, as if they were elongated and loose; still they are not painful when touched, and do not vacillate. Toothache (in the evening),

first in the hollow tooth, which became looser and elongated, afterwards also in the other teeth, in which partly a prickling, partly a creeping was experienced. The foreteeth are loose and feel painful when touched by warm or cold drink. Pain of the foreteeth, when touched by the tongue. Visible vacillation of the first two molar teeth, the two cuspidati, and *the four lower incisores*, with a creeping pain in the gums, also between the acts of mastication. Great looseness, vacillation of the lower four incisores; the gums stand off from those teeth; they can be separated from the teeth, and touched without feeling any pain, except when the teeth themselves feel painful.

**Mouth.**—<sup>o</sup>Fœtid smell from decayed teeth. \*Feeling of dryness (<sup>o</sup>or also dryness of the mouth with violent thirst, which is not even quenched by drinking). *Accumulation of water in the mouth; he has to spit frequently.* Internal inclination to spit, as if he had much saliva in his mouth. *The saliva flows out of his mouth, while taking a siesta in a sitting posture.* Salt mucus in the mouth, in the morning in bed. He has to spit out a quantity of saliva and mucus the whole day; at the same time something sour rises from the stomach into the mouth. <sup>o</sup>Nightly discharge of yellow or bloody saliva from the mouth. Frequent hawking of mucus in the morning. She hawks a good deal, only in the morning; the more she rinses her mouth, the more the mucus in her throat increases. The mucus on the tongue has a salt taste. \**The tongue is not coated, but very dry*, which occasions a desire to drink. Feeling of dryness at the tip of the tongue (without any dryness being visible); he thinks that that is the cause of his thirst. <sup>o</sup>Parched, red or brown tongue. Sensation as if the tongue were covered with a skin. Thirst occasioned by a feeling of dryness in the mouth; it remains in spite of drinking, in the afternoon and after midnight.

**Pharynx and Œsophagus.**—Feeling of swelling in the throat, accompanied with a bruised pain, when talking or when keeping the throat quiet; when swallowing he feels a pain as from a swelling, with pressure, and accompanied with a stitch as if something pointed had been stuck in. Stitch when swallowing and yawning, as if she had swallowed a pin. Severe stitches in the throat, in the region of the epiglottis, dull at the commencement, and sharp at the termination; they are only felt between the acts of deglutition, and pass off while swallowing. Stinging in the throat during deglutition when the throat is dry, with pressure when the throat is moist.

**Appetite and Taste.**—Sharp, bitter-sour taste in the mouth. Coppery taste in the mouth and a scraping sensation extending deep into the throat. Putrid taste in the mouth, early in the morning after waking and after a meal, without any bad smell from the mouth. Greasy taste in the mouth; the food, however, has a natural taste. In the forenoon he has a taste in the mouth as of putrid meat; aliments, however, have a natural taste (the putrid taste did not return after a meal). Putrid, slimy taste in the mouth, she has to spit a good deal. Flat taste. \**His mouth feels bitter the whole day; food too has a bitter taste.* Bitterness in the mouth, which disappears after eating. *Bread has a bitter taste*, or tastes dry, rough and scraping. (Sour things taste bitter to her.) Sourish taste in the mouth after taking milk. \*Complete loss of appetite -with much saliva in the mouth, tasting flat and slimy. No appetite in the palate and throat, with emptiness of the stomach and canine hunger, disappearing after sitting. Eats little, is satiated immediately, also with sensation as if the chest were weak, in consequence of the hunger. No appetite for tobacco, but no aversion to it. From time to time one feels a shuddering as from nausea over the whole body, without any sensation of chilliness. She has no appetite, but food has a natural taste; she has a putrid taste in the mouth after swallowing a mouthful. Repletion in the region under the sternum, with a sensation as if the appetite had

gone for ever. \**Complete loss of appetite for any kind of food*; he does not relish anything solid or fluid, nor tobacco. She ate without having any desire for food, although she relished her food. Although she relishes her food, yet she has no appetite for it, and her stomach always feels full. The breakfast will not go down, owing to a feeling of repletion.—Beating in the back part of the throat.—°Sensation as if something were detaching itself in the throat. °Violent burning in the throat after drinking brandy. Feeling of roughness and soreness in the left tonsil when swallowing.—Every time he swallows liquid, part of it gets into the larynx as if the epiglottis were inactive or paralyzed, with a feeling of dryness in the back part of the throat. °Difficulty of swallowing solid food, as if the pharynx and œsophagus were contracted.—Feeling of dryness in the throat. \*Dryness of the throat with thirst.—*Tenacious mucus* in the throat, which can be hawked up, but leaves a feeling of roughness. Frequent *hawking of mucus*, sometimes only in the morning, the worse the more she rinses her mouth. \**Bread, and food generally, are repugnant to him*. Aversion to meat and broth for several days.—Aversion to coffee. After drinking wine he feels full, detests the wine, with heaviness of the head.—Desire for cold milk, he swallows it greedily. Frequent sudden desire for dainty things.—Hunger early in the morning, with indifference to food at dinner, although he relishes his food. Hunger when sitting, with heaviness of the abdomen, which feels quite empty.—*Canine hunger*, with emptiness in the stomach and loss of appetite in the palate and throat, going off after sitting. A sort of canine hunger; nevertheless he has a sort of soap-taste in the mouth; everything he takes has a straw-taste and causes eructations; the appetite disappears after taking the least quantity of food, and he feels replete.

**Gastric Symptoms.**—Creeping in the stomach and horrid eructations, which only abated in the recumbent posture, but returned whenever he raised himself. Empty eructations after eating or drinking. Violent empty eructations in the evening, followed immediately after by hiccough which had no taste of any kind. Frequent eructations, also tasting of the ingesta. Burning eructations.—Giddy and faint shortly after a meal. Drawing toothache in a sound tooth, shortly after dinner. Anxiety in the abdomen with flatulence, mostly after a meal. Sudden weakness in the head and vertigo (when standing) as if he would fall forward. Headache immediately after a meal (tension in the whole sinciput). (Cough immediately after a meal.) Weary immediately after a meal. *Excessive sleepiness immediately after a meal*. Excessive distention of the abdomen immediately after a meal. Repletion after a moderate meal, with strong appetite. Headache after drinking beer. Sensation of heat in the head after drinking beer. Shuddering, especially after a meal. Pressure at the stomach after a meal, for several hours, as if occasioned by indigestible food. Pinching in the epigastric region, after eating or drinking. Shuddering and nausea over the whole body, from time to time. Nausea after eating and drinking. Nausea and accumulation of saliva in the mouth after eating and after drinking coffee. Early after rising, he feels warm and qualmish as if he would vomit; the nausea disappears after lying down again. She frequently raises herself in the night in her sleep, and gags as if she would vomit, but does not vomit. Accumulation of saliva in the mouth early in the morning, with a desire to vomit; still she feels hungry. He felt qualmish and nauseated after rising from bed, as if in the chest. Nausea as if in the throat. Nausea in the chest with canine hunger; the nausea disappears after satisfying the hunger. Nausea in the stomach and qualmishness in the chest, which became worse when stooping. *Risings from the stomach, which became incarcerated in the right chest*. Drawing with pressure, from below upward, in the left hypochondrium, with

anxiety and nausea in the chest. Nausea early in the morning after rising, with a sort of anguish, which gradually goes off in the open air. Nausea which was somewhat relieved after eating, but which returned again, with hunger without appetite.—°Waterbrash.—°Sudden vomiting when eating.

**Stomach.**—\**Pressure in the pit of the stomach, as if swollen*, impeding respiration (in the evening). Pressure in the pit of the stomach, as if he had swallowed too large a morsel. *Sensation as of a lump in the stomach, after a meal*, particularly when standing. Frequent risings, in the evening, from the pit of the stomach to the throat-pit, almost arresting the breathing.—\**Oppression in the stomach toward evening, as if the parts in the pit of the stomach were drawn together*. Contractive pain on the right side toward the stomach. A sort of erampy feeling in the pit of the stomach, as if too full and tight.—\**Violent throbbing below the pit of the stomach*.—*Stitches from the right side towards the stomach*. Sticking pain with pressure in the region of the stomach (impeding a deep inspiration). Sticking pain in the pit of the stomach. Simple sticking in the pit of the stomach, near the right hypochondrium. Pain in the stomach.—Painful pinching below the diaphragm, over the stomach; afterwards the pinching is felt in the stomach itself. Pinching in the pit of the stomach, extending thence rapidly into the hypogastrium, where it is felt at a small place. °Uleerative pain in the pit of the stomach. °Sensation in the stomach, when stooping or making a wrong step, as if something became detached.—Cold feeling in the stomach.

**Abdomen.**—Pressing in the hypochondria from below upward, with anxiety as if death were approaching, when sitting bent.—°Violent colic, particularly at night, aggravated by eating and drinking, also with bloody stools. Colic: sensation as if a heavy lump were lying in the abdomen. No colic when lying down, but the abdomen is painful when sitting, as if pressed upon. Aching pain at a small spot in the abdomen, as if wind had become incarcerated, only when moving and turning the body considerably, for instance, when going up stairs; not when feeling the part. Pressing in the abdomen, as if the intestines were raised towards the heart, when sitting. A pressing in the left side below the ribs. Spasmodic pains in the right side of the abdomen, early in the morning, when taking a little cold, accompanied with a moaning, desponding, disconsolate mood. Cutting in the abdomen, afterwards sticking in the right side of the abdomen. Cutting on the left side of the navel during an inspiration. Colic composed of cutting, tearing, and pinching, affecting the whole of the intestines, without much flatulence or distention of the abdomen, worse during motion, but gradually improving during rest. Cutting in the middle of the abdomen, before noon, at the same time she was frequently obliged to go to stool, the discharge looking natural; the pain abated by bending the body double; it increased by motion.—Burning in the abdomen and thirst.—Cramp-like drawing in the umbilical region. Drawing from the umbilicus to the pubis. Drawing pain in the left side of the abdomen during an inspiration.—Pinching in the umbilical region on the right side, with a chilly creeping over the upper arms. Pinching in the abdomen while sitting, with oppression ascending from below upward. Pinching in the right side under the ribs, soon extending to the umbilical region, as if he had worms, when sitting. Pinching in the abdomen, in the fore noon, when walking in the open air, accompanied with incarcerated flatulence, which is not passed in sufficient quantity. An almost jerking pinching in different parts of the abdomen. Excessive pinching in the abdomen, during a natural evacuation. Distention of the abdomen in the umbilical region, with violent pinching.—Digging-up pain in the right side of the abdomen. Digging-up and writhing colic as if a worm were creeping about in the abdomen.—Shooting from

the umbilicus toward the region of the heart, as if an arrow were flying through the part, repeated at every beat of the pulse.—Sticking above the umbilicus.—Contusive pain below the umbilicus.—When walking, the interior of the abdomen feels lax, and he feels a shaking in it at every step.—Visible contraction in the middle of the abdomen, across the umbilicus, the abdomen feeling hard, distended and rigid along that line. Contraction and pain in the abdomen, obliging her to walk bent.—°Sensation as if something would tear off in the abdomen.—\*Excessive distention of the abdomen after a meal. Distention of the umbilical region with flatulence, after a meal. \*Painful distention, with colic, after a meal, as from incarcerated flatulence. Distention the whole day, with fermentation. Sensation when raising himself after stooping, as if the abdomen were bloated, with a warm feeling in the chest.—Cracking and rumbling in the abdomen, with shocks in the direction of the mons veneris. Fulness and fermentation in the abdomen, with hunger, all passing off after a meal. The flatulence occasions a jerking in the abdomen. Easy emission of a quantity of wind, which seems to form in the rectum. Frequent flatulence in the abdomen, which he does not pass, in the evening.—Rumbling flatulence and pinching in the abdomen, without any flatulence being emitted.—Early in the morning, after rising, the abdomen was affected with an ulcerative pain when extending the body, and the abdominal integuments felt as if too short. Drawing sensation, with pressure in the right side of the abdomen, and a feeling in the abdominal integuments, when sitting, as if covered with cobweb. °Scarlet redness of the abdomen.—Pressing on the mons veneris. Sensation in the mons veneris, as if distended, when walking in the open air.—Drawing, across the region of the abdominal ring, when sitting.—Tension, with sticking in the left groin.—Sensation in the left groin, as if one portion of the contents (hernia) had protruded. Pressure in the right groin as if hernia would come on. Heaviness in the left groin, when walking, as if a tumor were hanging down. Pressure in the right groin, from within outward, accompanied with canine hunger and rumbling in the abdomen. Contraction in the groin.—Pain in the inguinal glands, at night, in bed, on turning, or when moving, or raising himself.—Red, sore places, from blisters that burst.

**Stool.**—°Alternate constipation and diarrhœa. Frequent urging with little stool. \**Constant tenesmus*, with nausea and tearing in the intestines; the urging sometimes was ineffectual, sometimes resulted merely in a watery discharge. Severe pinching and digging-up in the abdomen, accompanied with sudden expulsion of frequent stools, mingled with flatulence, excessively fœtid, first thick, afterwards watery. The colic abates after the evacuation, but soon returns again with a renewed desire for stool. Diarrhœa, several stools an hour, for 60 hours. \*Stools, mixed with blood. \*Red and yellow stool, mixed with mucus, jelly-like and fluid. Sudden, loose, yellow, frothy stools, without almost any smell, and without being preceded by colic; the first drops are passed involuntarily, as if the sphincter were paralyzed. Coherent, but loose, white-yellowish stools. Four natural stools at short intervals (after a few hours). Seven diarrhœic stools, like jelly, streaked, white and yellow, without colic. Three or four watery stools, with a quantity of flatulence. Diarrhœa. (Several loose stools a day, followed by tenesmus.) Diarrhœa; every evacuation being preceded by pinching. \*Stirred-up stool. \*Stirred diarrhœic stool. °Nightly diarrhœa with colic, disappearing after stool, or with headache and pains in all the limbs.—\*Involuntary stool, °also at night. (White stool, neither too loose nor too hard.)—Burning in the rectum before every stool. The child cries previous to stool; it is quiet after the evacuation.—Sore, blind hæmorrhoids, protruding after every stool. Soreness in the anus between the stools. Labour-like

drawing toward the uterus, when standing. Drawing in the back from above downward, with tension and pressing in the rectum, as if everything would come out there. Creeping in the rectum as of ascarides (after a few hours.) Itching, deep in the rectum. Itching pain in the anus, as if occasioned by hæmorrhoids.

**Urinary Organs.**—°Retention of urine. °Dysuria with discharge of drops of bloody urine, attended with tenesmus.—°Diminished urination, in spite of drinking. He has to urinate every minute in day-time. Profuse emission of urine. He urinates three times at night.—°Incontinence of urine, particularly during rest when it is passed involuntarily. Hot urine. Dark urine. The urine is turbid while being emitted. Dark urine, which soon becomes turbid. White, turbid urine, which became more so as the emission continued, so that the last drops looked like flocks. The urine looks like water, with a snow-white sediment.—(The stream of the urine was double.)—Burning pain in the region of the root of the urethra, during micturition. Stitches in the bladder on both sides, when a desire to urinate is coming on.—He cruetates whenever he urinates.—Pricking in the fore part of the urethra during and after micturition, more during rest.

**Male Genital Organs.**—Rigidity and swelling of the parts. Tympanitic swelling of the scrotum, with much itching. Horrid eruption on the genital organs, closing of the urethra by swelling. Humid eruption on the scrotum, and swelling of the prepuce and glans. Swelling of the glans, early in the morning when rising, with simple pain when touching it, accompanied with biting in the urethra, during and after micturition. Humid vesicle on the glans. Blister on the glans, which bursts. Stinging itching of the inner surface of the prepuce. Red spots on the inner side of the prepuce, near the frænulum. Swelling of the prepuce, close to where it unites with the glans. The prepuce is darker than usual. Spots near the frænulum.—The scrotum feels like the skin of a hog. The scrotum becomes thicker and harder, with intolerable itching, particularly towards the perinæum. Microscopic rash on the scrotum, with moisture on the scrotum where it touches the thigh, and in the region of the perinæum. Dark scarlet-redness proceeding from the scrotum, and forming streaks in the middle of the thighs.—Violent erections towards morning, with frequent desire to urinate. Irresistible desire for emission. Profuse nocturnal emissions.

**Female Sexual Organs.**—Violent labour pains, as if the menses would suddenly make their appearance, in the hypogastrium (immediately, for four hours). Sticking in the vagina, not increased by contact. Pain in the vagina as if sore, in the evening, shortly after touching it. Sore pain in the vagina in the evening, without touching it, two evenings in succession.—Discharge of blood from the womb (menses). Some discharge of blood from the womb, without pain, in a pregnant female, about new moon. In a female somewhat advanced in years the menses stopped suddenly on the third day, without another drop of blood.—°*Metrorrhagia*, with coagula of blood and labour-like pains.—°The lochia again became bloody.? Puerperal fever.? Phlegmasia alba dolens.? Ailments from suppression of the milk, or from weaning.?—Itching of the breast, particularly in the evening in bed (of the nipples). Vanishing of the milk also with burning heat over the whole body. The menses, which had ceased for a long time, re-appear profusely. The menstrual discharge causes a violent biting pain in the pudendum. °Vitiating and diminished discharge of lochia, with shootings upwards in the vagina, with a bursting feeling in the head, especially from the fourth to the seventh day after delivery.—°Discharge of offensive black water from the vagina two weeks after delivery. °Repeated attacks of milk leg. °Heavy numb pain four weeks after delivery, along the bones of the right leg, from the knee to the foot, as if the leg had been asleep.—Painful distention of the mammae from the first flow of milk after delivery.—°Soreness and swelling of the mammae from cold or external violence during lactation.—Rhus 30, in al-

ternation with Graph. 30, other symptoms agreeing, has been very successful in the treatment of inflammation of the mammae during lactation.

**Larynx and Trachea.**—Hoarseness deep in the trachea. Seraping, rough feeling in the larynx, causing hoarseness. Roughness in the throat and trachea, as if the chest were raw and sore. Ascension of a hot vapour from the throat (the lungs). Sensation in the throat-pit as if the trachea were stopped up and constricted, passing off for a short time only by eating and drinking. Frequent tickling in the air-passages, as if he would cough, impeding respiration, and going off after moderate exercise.—°*Grippe*.—Sensation of coldness in the throat during an expiration, as if a cold breath were rushing out. Roughness of the throat, inducing a short and hacking cough. Cough and coryza, with expectoration. Short, anxious, painful cough, frequently waking him before midnight, with very short breathing. Titillating cough especially in the evening, causing dryness in the throat. Cough, with a disagreeable tension across the chest. Panting cough, with concussion in the head. The cough racks the whole chest, as if every part in the chest were loose. Pain in the stomach when coughing. (Vomiting of the ingesta when coughing, in the evening, °also in bed and particularly when lying on the back.) Sweat all over when coughing. When coughing she feels a taste of blood in her mouth, without, however, coughing up any blood. Stitches in the left side of the chest when coughing. The cough torments him a good deal at night. Dry cough before midnight, which occasioned a sticking in one of the loins. Cough at three o'clock in the morning, worst after waking. Cough especially violent after waking. (Cough, especially in the morning, with black, viscid expectoration.) °Cough with expectoration of bright-red blood and qualmish feeling in the chest. °Chronic hæmoptoe.

**Chest.**—Shortness of breath, particularly at stool, or in the evening, with tension across the chest and weakness in all the limbs. The breathing becomes heavy after a short walk.—\**Tightness of breath*—from nausea under the short ribs, °or also from pressure and painfulness in the pit of the stomach.—\**Oppression* of the chest. Oppression of the chest as after violent weeping. Nightly oppression of the chest, with sticking, particularly in taking breath. \*Anxious oppression as if she were unable to draw breath. °Oppression as if the breath stopped in the pit of the stomach. Is unable to sit, has to take deep breath as if she would *suffocate*, particularly after a meal. *Constriction* of the chest, he feels qualmish.—*Weakness* of the chest, with difficulty of speech, after a walk in the open air.—Fulness in the chest, with hunger without appetite. Pressing and pushing in the left chest, not far from the pit of the stomach, when sitting bent.—Pain of the chest, early in bed, as if the sternum would be pressed in, going off after rising. *Contractive sensation* in the sternum, with sticking jerks in the part.—°*Stitch* in the chest when sneezing and drawing breath. Frequent sticking in the side, particularly during a walk in the open air. Sticking in the left side, when talking and drawing deep breath, or in the evening until midnight. Deep stitch on both sides of the sternum, when sitting bent. Violent pulsative stitches over the heart, obliging him to cry out, in the evening, in bed.—Boring in the left side, in the evening, in bed.—Disagreeable feeling of heat in the chest, during a walk in the open air.—Violent palpitation of the heart, when sitting still, so that the body was moved by every beat. Weakness of the heart, like tremor. °Sticking in the region of the heart, with painful lameness and numbness of the left arm.—Drawing on the left chest, from above downwards, externally. Lancination from the left chest to the left side of the abdomen (in the evening). Boring sticking in one of the lower ribs when standing. Numb feeling in the chest, (and in the upper molares). *Swelling* and painfulness of the left side, from the axilla below the ribs. Pimples on the right chest, to the middle of the back; they feel sore and excoriated, with fine stitches from within outwards.

**Back.**—When sitting, the small of the back feels painful, as after stooping and bending the back. \**Pain in the small of the back, as if bruised*, when lying on it quietly, or when sitting still; he does not feel the pain when moving about; ° it is relieved by lying on a hard couch. Stitching jerks in the small of the back (when walking). Stiffness of the small of the back, painful during motion. Pain in the small of the back, when touching the parts, as if the flesh had been beaten loose. (When walking or standing he feels a sort of tearing from the hip to the knee.) When lying on one side, his hip aches, and when lying on the back, the small of the back aches. When standing or bending backwards, he feels a pressure in the small of the back as with a sharp edge. Burning point in the small of the back, towards the right side. Heaviness and pressure in the small of the back, as if a blow had been received upon it, when sitting. Drawing-darting sticking, as with a nail, in the os coccygis. °Painful bony swelling in the small of the back.—Sticking in the back when stooping (evening). Stitches in the back, with pressure, more when walking than when sitting; also when stooping, but more when raising himself again. Drawing pain in the back in the evening; he had to sit straight. Drawing pain in the back when sitting, disappearing when walking. Constrictive pain in the muscles of the back when sitting, diminished by leaning backward, increased by bending forward.—°Pain as if sprained in the back and shoulders. °Creeping coldness in the back. °Curvature of the dorsal vertebræ.—Tensive cutting across the scapulæ. Rumbling jerking and contractive sensation in some parts of the left scapula and over the right knee. Pain on the left scapula as if strong pressure were made upon it with the finger. Contraction of the skin on the left scapula. Jerking in the side near the left scapula, when sitting. Pressure under the left scapula in the side of the back, seeming to come from below. Drawing and pressure under the left scapula, oppressing the breathing.—Pressure on the right scapula. Rheumatic pain between the scapulæ, relieved by warmth, aggravated by cold. Tearing between the shoulders, drawing them near to each other.—His neck aches during motion, as if stiff and rigid. Pain in the nape of the neck as from a heavy load, preventing him from lying down. Itching pricking, like flea-bites, in the nape of the neck. °Pain as if sprained in the nape of the neck and shoulders. Pressure in the posterior cervical muscles when bending the head forward. Pressure in the upper part of the nape of the neck; the place feels numb. Drawing across one side of the nape of the neck, when stooping. Rheumatic stiffness in the nape of the neck. Stiffness of the whole neck, obliging her to complain of pain in the nape of the neck whenever she attempts to move her head. Itching of the neck and forearms.

**Upper Extremities.**—Swelling of the axillary glands, painful even when not touched.—Sticking in the shoulder when lying, ceasing during motion. Pressure on the left shoulder. Tearing in the joint and upper parts of the scapula. °Tearing and burning in the shoulder, with lameness of the arm, particularly during cold weather, rest, and in bed.—Jerking sensation in the left arm. Violently tearing pain in the arm, most violent during rest. Sensation from the shoulder to the hand, as if something were rolling down; the sensation is neither warm nor cold. *Burning prickings in the arm, below the axilla.* Drawing in the left arm, when raising it, from below the axilla to the middle of the upper arm. Sensation as if hot water were running through the arms. Tremor of the arm when exerting it moderately. Drawing stitches in the arms, commencing in the shoulders. °Paralysis of the arm, with coldness and insensibility. Pain and swelling of the arm. \*Erysipelatous swelling of the arm. Burning and itching pustules on the arms and hands. °Bony swelling on the arm, with burning and ichorous ulcers.—Boring stitches in the *upper arm*, when standing.

Tearing in both upper arms; worse when working; she then has to let her arms hang down; they are more painful under the bed-cover, and the bone aches when feeling it. Prickings in the left upper arm. *Violent stitch in the right upper arm, as if from without.* Tension in the left upper arm in the open air. Painless beating in the left elbow.—Drawing and tearing from the elbow to the wrist-joint. Tension in the elbow-joint, when stretching the arm; she had difficulty in lifting the arm. Jerking tearing in the elbow and wrist-joints, relieved by motion. Cramp-like drawing in the left elbow-joint, when moving it. Burning-itching pain in the left elbow, going off after scratching. Digging-up pain in the bone of the left forearm when moving it, and jerking in the right carpus; the whole forearm feels stiff. Debility and stiffness of the forearm and fingers when moving them. Coldness of the forearms. Corrosive burning in the right forearm. Sensation of debility in the upper part of the right forearm during motion, and pain in the carpus, as if sprained, when seizing anything. The left forearm is painful as if bruised. Sensation in the skin of the left forearm as if rubbed with a woollen cloth, or as if it had been scraped with a knife, accompanied with a cold sensation in the arm.—Sprained sensation on the left carpus, when bending it. Lancination in the left carpus. Drawing pain in the palm of the right hand. Cold sensation in the carpus, which has the natural warmth to the feel, as if a cold wind were blowing upon it. \*The dorsum of the hand smarts and is hot; the skin is hard, rough and stiff. In the evening the hands and face are swollen and hot. (Bubbling for several hours in the right hand between the thumb and the index-finger.) Hard pimples on the hand, with stinging corrosive itching. Small vesicles on the right hand, first between the fingers, then on the whole hand, resembling Willar's vesicles, except that the swelling is greater. Inflamed blotch on the middle joint of the ring-finger, with itching-burning pain, sometimes passing over into a slow stitch; cannot be removed by friction and scratching. Pimples on the inner side of the carpus and on the cheeks, which resemble itch, affected with burning itching, and smarting when scratched. (Pinching on the dorsum of the fingers, on the outer parts of the arms and on the occiput.) (Spasmodic contraction of the fingers.) In the morning the index and middle fingers of one hand feel as if gone to sleep. Burning in the flesh between the thumb and left index-finger. Involuntary painless jerking inward of both thumbs, only when laying the hand on something, for instance, on the table. *Tearing in the joints of all the fingers.* Creeping and gnawing on the metacarpal joints of the second and third fingers of the left hand. Stitching in the back of the index-finger, in a tendon. Stinging pain in the fingers.—Sensation in the tips of the fingers (in the warm room) as if they were filled with too much blood, the dorsa of the hands being cold. Creeping in the tips of the fingers as if they had gone to sleep. Sensation in the left index-finger, as one feels after it has gone to sleep.—°Warts on the hands and fingers.

**Lower Extremities.**—Aching pain in both hip-joints at every step, and a paralytic feeling in the anterior muscles of the thighs. °Coxalgia, (see Clin. Obs.). Red, hot spot on the right hip, affected with a burning pain. Drawing pain in the right buttock, directly below the small of the back, going off by pressing on the part. Cramp-like contraction in the right buttock. Cramp-like pain in the left buttock when standing. Cramp in the left buttock and thigh. Tension in the groin near the left hip, when sitting, as if there were not skin enough. Tension in the left hip-joint when sitting.—Heaviness and weariness of the lower limbs. °Paralysis of the lower limbs. Stiffness of the lower limbs, particularly of the knees and feet, he has to stagger constantly in walking, (forenoon). °*Pain as if sprained* in the joints.—Jerking in the thigh, with tremor of the knees. Stitches in the thigh from within outwards. Boring stitches in the

thigh when standing. Occasional drawing pain in the thigh, obliging her to bend double, when rising from a seat and when standing, but not when sitting. Jerking tearing in the right thigh, a little above the knee. Tension in the left thigh, proceeding from the joint. Drawing and tearing in the right groin, extending along the thigh. Tearing pain in the outer part of the middle of the thigh when sitting, going off during motion. Sensation in the upper part of the right thigh, internally, towards the groin, as is felt in the fingers when stretching them apart, with the wrist-joint being either strained or sprained. Tension in the posterior side of the thigh when crossing the limbs. Bruised and drawing pain in the right thigh. Cramp-like pressure when sitting, in one part of the right thigh below the groin. Burning point in the inner side of the right thigh, near the scrotum. When sitting down after a walk, he feels a buzzing sensation in the knees and bends of the knees. Drawing and tearing from the knee to the tarsal joint. Drawing pain in the knee.—Stitching in the side of the knee when walking. Violent itching in the region of the tendons of the hamstrings, in the evening when pulling off the stockings; scratching causes pain. The bends of the knees and the calves feel heavy as a hundred-weight; he can scarcely drag his feet. Tension in the knee, as if too short. Cramp-like pressure in the left tibia when bending the knee; afterward burning. *Coldness in the region of the left tibia.* Pressure on the right tibia, which is followed by burning. Fine pricking in the outer parts of the leg. Stinging itching in the left calf. Drawing in the right calf, internally, which makes the leg uneasy. Sensation as if the skin of the calf were too tight, with stinging in the skin when sitting, disappearing during motion. Cramp-like drawing in the left calf, extending as far as the bend of the knee. Sticking as with a knife in the left tarsal joint, from without inward. Drawing in the right tarsal joint. The legs feel very weak in the afternoon when walking in the open air; he was scarcely able to drag them, they felt so heavy and bruised; after having sat an hour, the weariness had disappeared. Paralytic drawing in the leg when sitting. Great inclination to stretch the leg, early in bed. Tension in the calves when walking, and as if the hamstrings were too short. Jerking in the calves. Heaviness and tension in the legs, when sitting; when walking, he merely feels weary. Painful weariness in the legs when sitting, going off by walking. Heaviness in the legs extending from above the knee to the lower tarsal joint, making it difficult for her to stand; this heaviness diminishes when walking, and is not felt when sitting. His legs feel weak only when sitting, as if the blood were rushing to the feet. Weariness of the legs, so that she is not well able to ascend a height, as if she had been running too fast.—*Cramp in the calf after midnight, when lying in bed, and when sitting after a walk; the cramp disappears by bending the knee.* Cramp in the calf when sitting, going off immediately after rising or commencing to move (immediately). Stitch in the tendons of the hamstrings directly above the calf, during fatiguing motion, when rising from a seat, and when touching the parts. (Clucking sensation in the outer side of the calf, lasting several hours.) Lancination in the parts covering the tibiae, anteriorly, accompanied with debility and weariness. When rising from a seat she feels a stitch across the knee. Sudden pain for half an hour in the affected leg, toward evening: a general slight beating and ereeping, accompanied with a cramp-like pain (somewhat as is felt in a panaritium, during rest, but increased by motion; worst when touching the part; it disappeared suddenly). Pain in the tibiae; a sort of groaning in them at night when laying one leg over the other; she had to move them frequently to and fro, which prevented her from sleeping. Red, burning spots and streaks on the inner side of both knees, with small vesicles which soon dried up. Crawling on the inner side of the right knee, with tension of the

tendons. Tension with stretching of the tendons on the inner side of the right knee, causing an uneasiness in the leg. Tension in the left knee-joint, when rising from a seat. Drawing in the bend of the right knee, when bending it. Tearing in the knee and the tarsal joint, more during rest.—Stitching below the right knee. Stitching during a walk, first in the left, then in the right knee. Beating in the dorsum of the foot.—Burning stitches and sensation of heat in the dorsum of the right foot. Tingling in the feet early in the morning when lying in bed (and after rising). Deadness of the right foot; it felt as if made of wood. Itching in the region of the outer malleolus of the left foot and above the dorsum of the foot. \**Swelling of the feet*, painless when touched, in the evening. °*Inflammatory swelling of the feet, erysipelatous*, sometimes with pustules and rash on the dorsum of the foot. Sticking as with knives in the lower part of the tendo-Achillis, worse when touched and after lying down. Stitch in the inner malleolus of the right foot, when rising from a seat. Cramp-like stitching in the tarsal joint, in the region of the malleolus. Early in the morning, when rising, the foot feels sprained, (sweaty feet). Pain in the sole of the right foot, near the ball, as if an increasingly-strong pressure were constantly made upon the painful spot. Tension and pressing in the sole of the foot. When stepping, the heels ache and feel pithy. Stitches in the heel when stepping. Drawing in the heel of the left foot, from below upward, accompanied with burning. Feeling of heat in the left foot. Stitching in the left heel, when sitting, after a walk in the open air. Spasmodic contraction in the inner side of the bottom of the foot, abating when stretching the foot or bending it upward. Stinging itching in the ball of the big toe of the left foot. Drawing-aching pain in the big toe of the right foot, with a sensation of warmth. Fine stinging in the left big toe. Fine stinging in the fourth toe of the left foot. Short burning pricking between the small and the great toe, in the evening when walking and also at night when in bed. Stitching in the affected ball of the big toe, in paroxysms, as is felt in an abscess which bursts; a beating is felt in the evening. °Stitch from the big toe to the middle of the left breast, when standing. Stitch in the right big toe. The chilblains break out again, four months and a half too early, with burning itching in the chilblains, in the afternoon and evening; when not scratching, he feels a pricking in the chilblains, obliging him to scratch; blotches come on after scratching. Burning sore pain in the corn, from the pressure of the shoe. Pain in both heels when first pressing the foot to the floor, as if he were walking on needles. (Small, red, round blotches on the balls of the toes.)

**Sleep.**—Inclines to sleep, when sitting down after a walk. A good deal of yawning in the morning, as if sleepy; also in the evening. *Violent and spasmodic yawning*,† occasioning a pain in the articulation of the jaw, which is near being dislocated, in the morning, and at any other period. Wants to lie down all the time; drowsiness in the day-time, anxiety, restlessness, sadness, dry lips. Drowsiness in the day-time; she feels very sleepy in the morning when rising. Restlessness during the siesta; he moves his hands to and fro when sleeping, and plays with his fingers and hands. He feels nauseated when sitting up. Inclines to lie down, feels weary and debilitated; does not feel rested enough when sitting. Does not want to get up in the morning. Feels drowsy in the evening at six o'clock, suddenly, and to such an extent, that she is not able to undress herself; paralyzed in all her limbs.—Somnolence, full of laborious, interrupted

† The muscles of mastication, in this cramp, seem to obtain a spasmodic preponderating action, which is sometimes so violent that the lower jaw has to be held with the hand, lest it should be drawn down too low. This same symptom is produced by Ign. and the north-pole of the magnet.

dreams. °Somnolence with snoring, muttering and grasping at flocks.—*Sleeplessness before midnight*, with or without sweat.—Sleeplessness until midnight, without heat; he was simply sleepless. Sleeplessness for four whole nights; he was unable to remain in bed.—He has no sleep at night, he sweats as soon as he lies down, without thirst, but leaving him no rest.—\*Restless sleep—with tossing about and throwing off the cover of the bed. Restless slumber before midnight, full of anxious, disagreeable notions and fancies. Is unable to sleep after three o'clock, and, if he does sleep, he has vivid dreams, and feels, on waking, as if he had not slept at all.—Symptoms at night in bed: °sad thoughts preventing sleep; painful cramp, first in one, then in the other leg, in the forenoon, which cannot be removed by bending or stretching the limb, nor by pressing the foot against the foot of the bed, for half an hour. Feels so wakeful and hot in the evening, that he is unable to sleep; no thirst, feels chilly when uncovering himself, his blood was agitated, his arteries throb, sensation in his eyes as if thick clouds were passing before him; after midnight he becomes quiet and sleeps well. She feels nauseated in the evening, when lying down; she has no rest in bed, and has to turn from side to side all the time. Jerking in that part of the head on which he is resting. She is frequently waked by an unpleasant bitter taste, with a dry feeling in the mouth. Thirst without desire for drink, the mouth feeling slimy. Violent pressure at the stomach, preventing sleep for a long while. Starting, when on the point of falling asleep, as if he dropped something of importance. As soon as he was near falling asleep, he had anxious dreams about his affairs. Short breath. He cannot lie in any position, except on his back. Sensation as if something were pressing him out of bed. Great anxiety, he cannot remain in bed. Disagreeable feeling of heat over the whole body, without thirst. No sound sleep after midnight; she has a burning sensation over her body, obliging her to toss from side to side, without thirst, accompanied with dreams full of anxious agitation. Violent colic in the night. Is waked about midnight by a violent pinching, digging-up pain in the abdomen, with a sensation of weariness and emptiness in the pit of the stomach, and quickly-passing desire to vomit. Anxiety at night; he would like to leave his bed and call for help, on account of an indescribably-disagreeable feeling. Wakes from his sleep with convulsive, irregular movements of the limbs. Complains of an excessive headache, which seems to come from a sensation in the limbs as if they were violently distended. Nausea in the chest and stomach in the evening, going off after going to sleep. During sleep: sleeps with an open mouth. Short breath. Light and sniffling expirations, the inspirations are inaudible. Loud weeping. Loud talking about his affairs, wants to throw away everything, and asks for this and that. Starting every quarter of an hour, before midnight. Starting (on falling asleep) as if she dropped something of importance. Motion of the hands and playing with the fingers, during the siesta.—*Dreams about things which had been done or spoken of in the evening. He dreams that the plans which had been conceived the day before had been realized, in connection with the things which had suggested the plans.* \*Frightful dreams, such as that the world is going to be consumed by fire, with palpitation of the heart on waking. Dreams about fire.—Wakes early out of humour. Dizzy on waking in the morning.

**Fever.**—Feeling of coldness in the limbs; for instance, as when a finger becomes dead, or when a limb is about to go sleep, or as is felt in the interior of a limb when a paroxysm of fever and ague sets in; no coldness is perceptible to the hand. °Feeling of coldness at every motion. *Extreme coldness of the hands and feet, the whole day. He is very sensitive to the cold, open air; it affects the skin painfully; however, he is not averse to the open air.* Icy-cold feet, in the evening when in bed; they cannot be got warm; the rest of the body

being warm. She is attacked with shuddering as soon as she leaves the stove. Shuddering in the back (immediately). He cannot get warm when walking in the cold air, although he may be covered ever so much; he shakes with chilliness in the open air, with violent thirst, and the lips being glued together by mucus, Chilliness, with dry lips and less thirst than hunger. Shaking and chilliness when entering a warm room from the open air, without thirst. Chilliness in the room towards evening; she had a cold creeping all over. Chilliness (immediately). Chilliness about five o'clock in the evening, with shaking, in the room, with beating toothache and accumulation of saliva in the mouth, without thirst; the shaking and chilliness are still worse in the open air; afterwards the shaking and chilliness continue in the warm room, even near the hot stove, with violent thirst, the ptyalism ceasing; the chilliness ceases only in bed, the thirst remaining; this is followed by a stupid sleep, as if the head had been dull and confused; the thirst exists yet in the morning, and the dulness of the head likewise, but this passes off after rising. Chilliness towards evening; he had to lie down and to cover himself; after this he became warmer. At seven o'clock in the evening, he feels chilly and cold to himself externally, without shuddering, but did not feel cold to others, nor does he feel cold internally; he is able to drink cold water without being troubled from it; immediately after lying down he feels hot externally, which does not permit him to be uncovered; no thirst; with watery mouth and dry lips; afterwards, about midnight, while he is in a state of half slumber, a general exhalation sets in, increasing to a sweat after midnight, first in the face, then on the hairy scalp and neck, down to the chest. Chilliness in the open air, without thirst. °The chilliness, with the paroxysms of pain and other concomitant symptoms, generally sets in in the evening.—Shuddering and heat at the same time over the whole body, after a walk in the open air, without thirst, also some warm sweat over the whole skin; the palms of the hands sweat most. She feels too hot internally, the whole day, and chilly externally; nevertheless her skin feels naturally warm to the hand, and she has no very great thirst; coffee increases the internal heat. Pineching chilliness in the feet and between the shoulders; and a quarter of an hour after a good deal of external heat and burning pain on the left arm and in the left side of the upper part of the body, with redness of the cheeks. Chilliness and heat in the evening; her face felt to her very hot; nevertheless the cheeks were pale and cold, but the breath which came out of the mouth was very hot; two evenings in succession. Her face looks red, and she experiences a burning heat in the skin; to others her skin has a moderate temperature. \**Evening-fever with diarrhœa*; -chilliness at eight o'clock in the evening, followed by dry heat and thirst, and cuttings in the abdomen and diarrhœa, for several hours, in bed; afterwards sleep; diarrhœa again in the morning. Evening fever with diarrhœa (second paroxysm); chilliness through all the limbs, for one hour, after six o'clock in the evening, without thirst; followed by dry heat, after which came heat with profuse sweat and thirst, three hours in all; mucous diarrhœa with violent cuttings in the abdomen, followed by tenesmus, and by a pressing from both temples towards the centre of the head, with congestion of blood and heat in the head. Fever: drowsiness, weariness and yawning (in the forenoon); when walking, he felt inclined to sleep, with anxiety; afterwards an evacuation with cutting, followed by excessive heat in the whole body (at ten o'clock in the forenoon), without thirst; sensation as if warm water were poured over him, during which he felt an occasional shuddering; *or sensation as if his blood were coursing hot through the vessels*, and too violently through the head; and as if the head were pressed down, obliging him to stoop, with beating headache; chilliness at seven o'clock in the evening, *as if cold water were poured over him*, or as if the blood coursed too rapidly through the vessels; after lying down and

covering himself he was attacked with heat immediately ; at night he felt a kind of drawing in the dorsal spine, between the shoulders and in the limbs, as if he ought to stretch himself constantly ; sweat in the morning. Fever : towards noon he is attacked with a febrile coldness in all his limbs, with violent headache and vertigo (somewhat relieved by a walk) ; again chilliness toward evening ; he has to lie down ; he is unable to sleep at night ; he is in a constant state of giddiness and sweat. Fever ; (at five o'clock) in the afternoon he feels a stretching in all his limbs, a shuddering over the whole body, with much thirst, cold hands, and redness and heat in the face ; he feels a shuddering in the evening in bed ; in the morning his whole body is covered with a moisture, accompanied with a pressing in the temples. Chilliness in the feet and between the scapulæ ; soon after heat on the left side and in the left arm (immediately). Fever : (at six o'clock) in the afternoon the body feels warm, with internal and external heat of the head, and shuddering over the body, without thirst ; accompanied with stretching, drawing and debility in the limbs, and headache as if the head felt dull and the sides of the occiput were pressed together ; accompanied with violent cough, short breath, and pain in the throat, as if the tonsils were swollen ; towards morning the whole body was covered with a slight moisture. Warmth in the face and fingers, with chills in the scapulæ, without thirst. Slight chills, followed by slight warmth, after lying down in the evening, without thirst — \*Quotidian fevers. °Tertian fevers. \*Compound tertian fevers, -also with jaundice. °Generally the chilliness and coldness set in first, with secondary symptoms, afterwards heat with thirst (and with sweat), or first chilliness with thirst, then general warmth with chilliness at every motion, then sweat. °Alternation of coldness and paleness, and heat and redness of the face. °During or after the fever : twitchings, tingling in the ears, hardness of hearing, dry coryza, sleeplessness with uneasiness and tossing about, nettlerash, gastric derangement, thirst at night. During the chilliness : °pains in the limbs, headache, vertigo, inclination to vomit.—The left side of the body felt hot and the right side cold, without chilliness. Chilliness about the head and back, the fore part of the body felt hot. Occasional cold shuddering during the sweat, at night, in bed, the shuddering being accompanied with cramps in the abdomen. Inclines to vomit, with heat of the head and hands, and chilliness of the rest of the body ; afterwards chilliness all over during the inclination to vomit. She feels hot to herself and others, the veins being distended, and accompanied with a weakness obliging her to lean backward, with violent thirst, also frequently at night ; next day shuddering over the upper part of the body, especially the arms. Heat in the forehead, in the evening, and in the whole head ; the heat is not felt so much on the outside. Extreme heat in the hands with dull headache, in the evening. (He is attacked with heat, when sitting.) When returning home from a walk in the open air, he is attacked with heat and sweat over the whole body. Violent burning in the skin, with twitching tremulousness of the skin, and a general sweat at night ; a violent paroxysm of cough sets in as soon as he stretches the hand from under the cover. He is attacked with warmth when walking in the cold, open air, and is covered with sweat all over. °Flushes of heat with sweat, proceeding from the umbilical region, and suddenly alternating with chilliness.—\*Feverish thirst -even early in the morning. Violent feverish thirst. Thirst for many nights (from two to five o'clock), followed by perspiration. \*Great desire for water or beer.—Pulse : quick. Slow and irregular pulse.—Fever of various kinds (see Clin. Obs.).—°Sweat during the pains. °Sweat when sitting, frequently with violent trembling. Sweat over the whole body, except the face, which is, however, hot (after noon). Slight sweat over the whole body early in the morning when in bed, except the head. Slight vaporous ex-

halation from the skin, in the day-time, he wants to be covered. \**General sweat*, also *in the face*. °Constant sweat, the skin is moist and the hair is wet.—\**Night-sweat*, -particularly around the neck. Sweat before midnight. °Sweat with itching rash. Slight sweat the whole night. Acrid-smelling exhalation from the skin, without the skin being wet.—Profuse morning sweats. Sweat on both thighs every morning. Sour-smelling morning sweats, with cold, sweaty cheeks. Sweat over the whole body, without smell or debility, during sleep, from three to four o'clock in the morning.

**Skin.**—Itching on the head. Itching of the whole body, particularly of the hairy parts, hairy scalp and genital organs. Burning itching, here and there. °Erysipelatous inflammation (also *zona*).—°Petechial spots, also with great debility, even unto complete loss of strength. *Black spots* on the part which has been touched by the juice. Red spots of the size of lentils, with small vesicles in the middle.—The part of the skin which has been touched by the juice becomes tough and hard like leather, also with peeling off of the hardened parts.—Nettle-rash. \**Small burning vesicles*, with redness of skin on the whole body, except on the hairy scalp, the palms of the hands and soles of the feet. \**Burning itching eruptions*, -particularly on the scrotum, prepuce, eyelids and eyes (arms and loins), with swelling of the parts, and small *yellowish vesicles* which ran into each other and became moist, the larger ones terminating in suppuration with red areolæ, the smaller ones drying up more rapidly, and sealing off in a few days. *Confluent vesicles*, most of them containing a *milky or watery fluid*, with peeling off of the skin in three days. *Pustules* on the hands and forearms, which burst and emit a clear moisture. *Black pustules*, with inflammation and itching, rapidly spreading over the whole body.—°*Herpetetic eruptions*, alternating with pains in the chest and dysenteric stools. Scurfs over the body.—°Rhagades. °*Warts*, disfiguring the whole skin, or particularly on the hands and fingers. °*Panaritias*. °*Hangnails*.—Ulcers as if gangrenous, from small vesicles, attended with violent fever.—*In the ulcers*: tingling. Smarting, as if from salt, only at night, waking him frequently, and in the day-time, re-appearing when walking in the open air. Burning biting, with weeping and meaning. Pain as if bruised. Sticking in the region of the scurf, early on waking. Burning of the affected part. Painful uneasiness in the affected part, which induces him to moan, while seated.—The wound becomes inflamed, and is covered with little vesicles. Swelling of the hands and feet. °Red, shining swelling, with stinging sore pain when touched. °*Glandular swellings* (also indurated?). °Swelling of bones. °*Caries of bones?* °*Jaundice*.

Dr. Neidhard, of Philadelphia, has favoured us with the following case of poisoning by *Rhus tox.*, the symptoms of which we will record in their connection as they occurred.

#### POISONING BY RHUS TOXICODENDRON.†

(Ten days after preparing some tincture of *Rhus tox.*, I experienced the following symptoms of its poisoning.)

*First day.*—Small vesicular tubercles, like the bites of insects, show themselves in the joints of the hands, feet, particularly around the inside of the ankles.

*In the evening, excessive, almost intolerable itching at the same time, with a kind of voluptuous feeling in the skin, followed by a burning after the skin had been scratched to bleeding.* Scratching aggravates the itching and burning.

† A young lady, *Miss R.*, used for some days daily frictions with the leaves of *Rhus* on the arm, breast, etc., until a slight redness appeared. For fourteen days afterwards she omitted to do so, when the eruption broke out over the whole body.

*Second to fifth day.*—Swelling and redness of the upper and lower lids of the right eye and all around it, to such an extent, that I could only see with difficulty. A similar swelling around the left eye, but to a smaller extent. The itching is less violent in the eyes than in the other parts of the body. Tubercles appeared in different parts of the body. The itching always worse in the evening. Vesicles and tubercles appeared also on the knees, hip and shoulder-joints; this action on the joints was a characteristic symptom.

On the fifth day the skin began to peel off and the itching diminished in violence. On the inside of the ankles, where the itching was most severe, dark-brown marks have remained to this day, now five years. For several years, the same month (July), a slight return of the itching was experienced. But the most remarkable effect of Rhus was the evident propagation of the poisoning from one person to another. During the most aggravated state of the poisoning in my own person, five women and two men, who were either in the same room, or had come in contact with me, complained to me of symptoms, which, after the most careful scrutiny, I was compelled to ascribe to the influence of Rhus, although these persons had never been exposed to its influence, except through me. Some were more, others less affected by it. Antidotes: a decoction of cort. sassafras taken repeatedly, on the third day diminished the itching in some measure. Its main action was to bring out the eruption on the skin. Camph., Bell., Bry., had very little influence. The greatest relief I received was from the Merc. Precip. Rubr. in small doses, employed externally as well as inwardly.

**General Symptoms.**—°Affections of the *ligaments, tendons and synovial membranes*. °Deficient plasticity of the blood, with disposition of the organic activity to become extinct, even unto paralysis. °*Rheumatic or arthritic affections*, also with swelling. °Scrofulous and rachitic affections. °Glandular swellings and indurations. °Ailments arising from cold bathing, particularly *convulsions*. °Paralysis. °Ailments arising from suppression of the measles. °*Nervous inflammations* of internal organs. °*Rheumatic tension, drawing and tearing in the limbs*, most violent *during rest* or *in the cold season*, or at night in bed, frequently attended with numbness and insensibility of the affected part after moving it. \**Tearing drawing, in the evening, while sitting*, -going off when walking. Cramp and rigidity as from contraction of the tendons, in various parts. Contraction of single parts. \**Sticking in the joints*, during rest. °Tensive sticking, with stiffness, worse on rising from a seat and in the open air. Sticking in small places of the extremities, worse on lying down. \**Tingling pains*, particularly in the affected parts, -or more especially in the face, spine and sternum. *Anxious pains in affected parts, with moaning*, when sitting. Drawing in all the limbs, when lying. \**Bruised pains* in single parts, or sensation as if the flesh had been detached from the bones by blows. Pressure with drawing in the periosteum, as if the bone were scraped. °*Sensation in internal organs as if something were being torn off*. \**Pains as if sprained*. °Liability to strain parts. °*Bad consequences from straining or spraining parts*. \**Semilateral complaints*. \**The parts on which one is lying, go to sleep*, -particularly the arm. °Numbness of single parts, with tingling and insensibility.—\**Stiffness of the limbs* -on first moving the limb after rest. Stiffness on rising from a seat. Stiffness on going down stairs, disappearing by walking on level ground. Stiffness of the left arm and lower limb, which are somewhat contracted. *Sense of immobility*, after a walk in the open air, with pain in the feet, going off when sitting.—\**Lameness* in all the joints, worst on rising from a seat after having been seated for some time. Lameness in all the limbs, during and after a walk in the open air, with stiffness, and sensation as if the nape of the neck were oppressed with a hundred-weight. \**Complete paralysis*. °Hemi-

plegia. \**Paralysis of the lower limbs*, with dragging, slow, difficult walk. *Tingling* in the paralyzed parts.—Tremulous sensation in the upper and lower limbs, also during rest. Tremulousness and hasty grasping with the hands. Tremor of the limbs, after some exertion. Staggering and inability to stand erect, early on rising. Instability of the limbs, preventing one from standing firmly, during the chilliness.—\**Twitchings of the limbs and muscles*. °Convulsions arising from bathing in cold water. °Tetanus, opisthotonos. °Chorea?—*Weariness* of the lower limbs. Weariness, worst when sitting, less when walking, with stiffness of the limbs on rising.—\**Great languor of the whole body*. Languor of the lower limbs, most violent during rest. Languor of the limbs and body, with bruised feeling and sensation as if one had been up all night. \**Languor with constant disposition to be sitting or lying*. Languor with sensation as if the bones were aching. \**Wants to be lying all the time*, is not sufficiently rested by sitting. Does not want to get up in the morning and to dress himself. \**Is unable to remain out of bed*. Feels nauseated while sitting up.—\**Great debility*. *Sudden paroxysms of fainting*, at nine o'clock in the evening, with full consciousness, does not feel the beats of the heart, is more cold than warm, feels quite light internally, but is scarcely able to walk.—Extreme *mobility* and vivacity, for a whole afternoon. (Alternate effect?).—*Great sensitiveness to the open air*, °even when warm. *Cold air* is painful to the skin. Ill-humoured in the open air, came near falling asleep in the open air.

**Characteristic Peculiarities.**—\*The pains come on or are worse *during rest*, or at night, or on entering a room from the open air, °or in cold weather. The pains in the joints are worse in the open air. Early, in bed, *only those limbs and joints on which he is not lying*, feel painful as if bruised.

## 208. RHUS VERNIX.

RHUS VER.—Varnish-tree, Poison-ash, Poison-oak.

(The following symptoms were observed by Dr. Bute, on himself and wife, from expressing the juice of the plant.)

### SYMPTOMS.

Intolerable heaviness of the head. Excessive *swelling of the forehead*, so that this part of the head is quite prominent. Feeling of heaviness of the swelling on the forehead on going up stairs.

Redness of the eyes. Darkness before the eyes, on looking at a thing. Dimness of sight when reading. Sensitiveness to the light, early on waking.

Groups of vesicles behind the ear.

Redness of the face here and there, the redness remaining even while pressing upon the part with the finger. *Swelling of the face*, also with redness of the eyes, or particularly on the left side, or also with red spots and blotches, accompanied with constant itching and with burning after rubbing. Sense of heaviness in the swelling on the face. Pain as if burnt on the lips, or sensation as of sand.

Sore pain in the left side of the throat when swallowing.

Immediate appearance of the menses, the time for which had come, in lumps like pieces of flesh.

*Sudden violent stitches through the lungs*, causing him to start and rousing him from sleep.

Rheumatic pains in the left shoulder, and elbow-joints, worse during motion.

Violent itching in the palms of the hands, or *itching blotches* deep under the skin. *Hard, elevated blotches* on the hands, with watery vesicles on them, with violent itching. *Groups of watery vesicles on the fingers*.—Pain as if sprained in the right hip (removed by Nitr. ac.). Cramp on the dorsum of the foot, or in the right malleolus, as if seized by a hand in those parts.

Shuddering along the back from below upwards, without coldness, but with gooseflesh. Renewal of the shuddering whenever he thinks of the leaves of the poison-ash.

Dreams of murder and accidents.

**Skin.**—Itching, suddenly commencing at times in one, at times in another part, and continuing in the afternoon. Violent, corrosive itching in various parts, as after mosquito-bites. The itching is worse after midnight and early in the morning. Groups of watery vesicles on various parts, particularly the fingers, first itching, then burning and sore. Elevated red blotches, particularly on the face, neck and chest.

## 209. RUTA GRAVEOLENS.

RUTA.—See HAHNEMANN's Mat. Med. Pura, IV.

COMPARE WITH—*Acon.*, *Asa f.*, *Bell.*, *Bry.*, *Ign.*, *Led.*, *Merc.*, *Nux v.*, *Puls.*, *Rhus*, *Sec. e.*, *Sil.*, *Staph.*, *Sulph.*, *Thuj.*, *Verat.*

ANTIDOTES —Camph.

### CLINICAL OBSERVATIONS.

In local injuries Ruta may be employed externally as well as internally. Dr. *Aegidi* has used it with success in injuries and rheumatic paralysis of the tarsal and carpal joints; *Rummel* in fistulous ulcers of the left carpal joint. It has likewise been successfully employed in amblyopia amaurotica and amaurosis.

### SYMPTOMS.

**Mind and Disposition.**—Frequent attacks of anxiety, with apprehensions and desponding thoughts. Indifference. She is not disposed to do anything; she does not feel comfortable. He feels low-spirited in the afternoon and the whole evening; he indulges *melancholy, sad thoughts*, and feels weary of life. Anxiety the whole day, as if he had done something evil; when the door was opened he feared they came to take him to prison. Peevish and out of humour if things do not go according to his wishes. Irresolute, not disposed to do anything. Inclines to be angry. Inclines to contradict. Out of humour and distrustful the whole day; he did not trust his best friend, and imagined he was deceived. Good-humoured (curative effect).

**Sensorium.**—Slow train of ideas. Frequent absence of thought; things which have become quite familiar to him are done by him quite mechanically at an improper period.—Gloominess of the head, a sort of inability to collect one's consciousness.—Dulness of the head. Sensation in the head and body as if he had not slept enough. Sudden attack of vertigo when sitting; everything turns with her in a circle; afterwards her cheeks glow. Violent vertigo when walking in the open air; he came near falling to the right side. Violent vertigo, early in the morning when rising from bed; he came near falling forward.

**Head.**—*Heaviness* in the head, mostly in the forehead, as if a weight were lying in the forehead.—Headache after dinner, a sort of pressure on the whole

brain, with great nervousness, and restlessness in the whole body, which does not allow him to sit down. Painful pressure on the whole brain, in the morning after rising. *Painful pressure in the sinciput, at regular intervals, like the beats in music.* Pressure in the forehead, over the root of the nose. Stupifying headache with nausea, especially in the right side of the forehead, with a feeling of heat in the face.—Drawing headache in the right side of the forehead. Peeking headache, in one side of the occiput.—Intermittent, boring stitches in the right side of the forehead (when sitting). *Stitching-drawing pain extending from the frontal to the temporal bone.*—Heat in the head, with feverish uneasiness of the whole body, in the evening.—Dulness of the brain in the forehead, with a beating pain in the forehead, in the evening before going to bed, worse in the morning on waking from a sound sleep.

**Scalp.**—Sticking drawing in the vertex, externally. Tensive-drawing pain as after a blow or shock, in the sides of the head, externally.—Itching and soreness of the hairy scalp, directly behind the left ear; the place was painful to the touch; the itching and soreness disappeared after scratching. *Corrosive itching* of the whole hairy scalp, especially of the left side and the occiput, abating after much scratching, but returning constantly. Gnawing pain with pressure, on the forehead.—Dull tearing in the temporal bones.—*Pain as from a fall, extending from the temporal bones to the occiput, in the pericranium.*—Burning compressive pain, on the head, externally, causing stupefaction.—Two little ulcers on the hairy scalp, one on the left side and one towards the nape of the neck, occasioning a corrosive itching, which obliged him to scratch all the time, and returned frequently. Tearing in the outer region of the right parietal bone, going off in the evening; afterwards a tumour was discovered at the same place of the size of a walnut, which is painful when touched as if there were subcutaneous ulceration, going off in a few days. First a violent pain, sticking and tearing in the hairy scalp, after which a tumour forms in that place of the size of a dollar, and half an inch high, which was first painful to the touch.—Sweat on the vertex (immediately).—Humid scurfs on the scalp.—Erysipelas on the forehead.†

**Eyes.**—°Pains of the eyes from exerting them too much. Sensation in the eyes as if he had exerted them too much by reading.—Slight, aching pain in the right eye, with obscuration of vision, as after having looked too long a time at an object incommoding the eyes.—Feeling of heat and sensation as of fire in the eyes, with soreness, when reading at candle-light. *Burning under the left eye.*—*Itching of the inner canthi and the margins of the lower eyelids, increasing to a smarting biting by scratching; at the same time the eye fills with tears.*—Pressure on the upper wall of the orbits, with tearing in the ball. Pressure on the inner surface of the left eye, *\*with considerable lachrymation in the open air.* Pressure in both eyeballs, accompanied with spasm of the lower eyelids, which draws them partly upwards and partly towards the inner canthus, the latter most, for some days. *Spasm of the lower eyelids, the tarsal cartilage moves to and fro; when this abates, water runs out of both eyes for an hour and a half.* Spasmodic movement to and fro of the orbicularis muscle.—Involuntary staring at one and the same object, *with contraction of the pupils.*—Sensation as if shadows were hovering before his eyes. Sensation as if there were not sufficient light before his eyes.—°Specks on the cornea.—*Muscae volitantes.*—*\*Weakness of the eyes, as from too much reading.*—°Red halo around the candle-light.—*\*Incipient amaurosis* °particularly from exerting the eyes too much by reading or fine work, with mistiness of sight and complete darkness at a distance.

† From gathering the herb.

**Ears and Nose.**—On shaking the head, he experiences a sensation in his ear as if something were rolling to and fro. *Sensation in the ear as if a piece of blunt wood were moved over its walls, a sort of scraping with pressure.* Pain about the ears as if violent pressure were made upon them. Titillating, hot pressure in the ears, becoming worse by inserting the finger.—Itching stitches in the right inner ear.—*Contusive pain in the cartilages of the ears.*—*Pain as from a shock or fall, below the mastoid process.*—Sharp pressure in the root of the nose.—Pain in the upper part of the nose as if a plug were bored through it in a transverse direction, occasioning a scratching and pressure; this sensation does not pass off by blowing the nose or by inserting the finger into it.—Slight sweat on the dorsum of the nose; the nose and cheeks are warmer than usual, the face being but slightly red, without thirst.—\*Bleeding of the nose, also with pressure in the root of the nose.

**Face and Teeth.**—Numb pain in the facial bones as from a blow, as far as the jaws and teeth. Pinching in the left cheek. Gnawing-arthritic pain in both cheeks. Cramp-like tearing in the malar bone, with stupefying pressure in the forehead.—Itching and gnawing in the face and cheeks.—Erysipelas in the forehead. Pimples on the lips (from applying the vinegar of Ruta).—°Aene rosacea (in conjunction with *Rhus*).—Digging pain in the lower teeth.—The inner side of the right upper gums is sore and swollen, with stinging pains, which are most violent when touched.

**Mouth, Pharynx, etc.**—The mouth feels sometimes dry and viscid. Feeling of soreness and pressure in the region of the *velum pendulum palati*, when swallowing, but not otherwise. Sore throat as from a lump on swallowing.—Spasm of the tongue with difficulty of speech.

**Taste, Appetite and Gastric Symptoms.**—The aliments she eats have a taste as of wood, they taste dry and flat.—Desire for cold water in the afternoon. Unqueneable desire for cold water in the afternoon; he drinks much and often without being incommoded by it.—Eruetations (immediately). Empty risings. Eruetations tasting of the ingesta, after a meal.—He has an appetite; but as soon as he eats, he experiences a tensive oppression in the epigastrium and chest, as if replete with food. She has an appetite as usual; but as soon as she begins to eat, she feels an aversion to everything.—*Frequent hiccough* with some nausea (while smoking the usual tobacco).—Inclination to vomit when stooping. A sort of nausea in the pit of the stomach, with desire for stool, decreasing momentarily by emission of flatulence. °Sudden nausea while eating, with vomiting of the ingesta.—\*Pinching in the stomach after eating bread and butter.

**Stomach and Abdomen.**—Lancination in the pit of the stomach. Prieking in the pit of the stomach. Gnawing oppression in the pit of the stomach, night and morning.—Oppression in the region of the liver, near the pit of the stomach, exciting an uneasiness.—Burning gnawing in the stomach. Emptiness and gnawing in the stomach, as if he had not taken any food for a long time.—*Aching gnawing pain in the region of the liver.* Fine, painful beating, or a peeking sensation, under the left short ribs. Pain under the left short ribs, increasing when pressing on the part, and arresting the breathing, when waking at night. °Painful swelling of the spleen.—Corrosive burning in the left region of the abdomen.—Coldness in the umbilical region, and sensation as if something became detached in that part.—Severe stitches in the abdominal muscles, in the pit of the umbilicus, obliging him to draw in the abdomen. Lancination from below the umbilicus towards the *mons veneris*, during an expiration, arresting the breathing; she does not feel anything when pressing hard on the parts.—Scraping and gnawing in the umbilical region, mixed with nausea. °Colic as from worms in children.—Cutting-pinching, as from incarcerated flatulence.

Pinching and aching pain in the abdomen, with a feeling of uneasiness as after a cold.—Tensive pressing in the whole abdomen from the umbilicus to the hypogastrium, at night, as if the menses would make their appearance; the pain increases when pressing on the part.—Agreeable coolness in the abdomen and chest.—Heat in the abdomen and chest.—Drawing pressure in the region of the kidneys along the loins, when sitting.—Bruised pain in the loins, with oppressive tension in the opposite parts of the hypogastrium, only when sitting, but not when walking or standing. A digging-up bruised sensation in the lumbar region directly over the small of the back, when sitting after a long walk; the pain continues for some time when walking, and then disappears gradually; it returns when standing or sitting.—Rumbling in the abdomen. Fœtid flatulence. Easy emission of flatulence. Emission of flatulence as if stool would come on. *Lancinations in the rectum when sitting. Tearing in the rectum and in the urethra, between the acts of micturition.*

**Stool.**—Scanty, hard stool, almost like sheep's dung. *Difficult expulsion of stool in the first twenty-four hours, as if from a want of peristaltic motion in the rectum*; the fœces being of large size.—Constant desire for stool, although the fœces are more loose than usual; the urging continues after the evacuation. Two loose stools after sensation of nausea in the rectum, the stools being expelled with great difficulty owing to a sort of rigidity and inactivity of the rectum. °Mucous diarrhœa alternating with constipation.—*\*Frequent urging to stool, with protrusion of the rectum,* °also during stool, soft or hard; —a considerable quantity of flatulence is emitted whenever the urging takes place; the rectum protruded when stooping ever so little, and especially when squatting; the falling of the rectum continued the following days, and, although the rectum was easily pushed up again without pain, it fell out again immediately for several days.—Tearing, or lancinating tearing in the rectum and urethra.

**Urinary Organs.**—Pressure in the region of the neck of the bladder, as if the neck closed, with pain, shortly after micturition. The quantity of urine he emits is very inconsiderable; *\*but after micturition he feels a pressing in the bladder* without any more urine being emitted (on the second and third days). Immediately after micturition she feels at every step as if the bladder were filled and were moved up and down; not when sitting. Excessive urging as if she could not retain the urine, although she emitted only a drop; during and after micturition she feels a painful burning in the genital organs, and the urging continues for a long time; the urging was felt only in the morning before day-break. °Involuntary emission of urine at night, in bed, and in the day-time during motion. °Frequent urging with discharge of green urine. °Frequent nocturnal enuresis.—°Gravel.

**Genital Organs.**—Increased sexual desire. Nocturnal emissions, without dreams.—°Menses too early and profuse, °irregular, °feble and only two days, followed by mild leucorrhœa.—Metrorrhagia?. Miscarriage?. °Sterility?.—°Corrosive leucorrhœa, after suppression of the menses.

**Larynx and Chest.**—Pain in the region of the larynx, as from a bruise or contusion. Hacking cough, waking him at midnight, with seraping in the chest, and sensation as if the stomach would turn, as if vomiting would set in. Violent cough, in the evening in bed, with copious expectoration of tenacious mucus. °Expectoration of thick, yellow mucus, attended with a feeling of weakness in the chest. °Ulceration of the lungs, after mechanical injuries.—Dyspnoea, from oppressive fulness in the chest.—Agreeable coolness in the chest.—Gnawing, corrosive drawing in the left chest. *Gnawing in the left chest. Gnawing pain in the right side of the chest, accompanied with a somewhat corrosive and burning sensation.*—Strong compression of the lower part of the chest in the region

of the last false ribs, at night; he dreams that some one is seizing him round the body violently, and that he wakes in consequence.—Pressure in the region of the sternum, which seems both internal and external. Hard pressure in the region of the sixth true rib, more violent during an expiration and contact.—Dull shock in the left chest.—Sharp stitches between the left nipple and axilla, more violent during an inspiration. Sticking pain in the interior of the left nipple, more violent during an inspiration. Stitches in the chest and arrest of breathing, which causes great anxiety, when going up stairs. Stitches in the sternum during every movement. Oppressive sticking in the sternum, when sitting, both during an inspiration and expiration.—Fine cutting, which extends from the throat into the chest, especially into the region of the clavicle and the axilla, where it stops; the cutting is felt when walking, and becomes worse as one walks faster.—°Anxious palpitation of the heart.—Tremulous bubbling in the region of the last true ribs of the right side. Intermittent gnawing or pecking in the region of one of the costal cartilages, at night, over the xiphoid cartilage.—°A spot on the sternum is painful when touched.

**Back.**—Pain extending from the os coccygis to the os sacrum, *as if caused by a fall or bruise.* °Stitches in the small of the back, only when walking or stooping, or only when sitting, going off by pressure and by lying on the back. Hard pressure in the region of the left lower surface of the os sacrum.—Pain in the lumbar vertebræ, as if bruised, also with digging and oppressive tightness in the abdomen.—Painful darting in the dorsal spine, opposite the pit of the stomach; this becomes worse by pressing on the part, in which case a pain is felt under the last short ribs extending into the abdomen afterwards, and arresting the breathing. The dorsal spine is painful as if bruised, when sitting or walking; this pain arrests the breathing. Hard pressure on the left side close to the os innominatum, not far from the dorsal spine. Intermittent painful beating in the back, directly over the left os innominatum, going off when pressing on the parts, and re-appearing afterwards. Beating in the region of the posterior border of the left os innominatum (after a long walk, extending across the hip over the anterior surface of the thigh, down to the knee, and disappearing when pressing on the os innominatum). Intermittent beating in the anterior spinous process of the left os innominatum. Stitches in the dorsal spine when sitting, accompanied with sudden attacks of anxiety. Drawing-aching pain in the right side of the dorsal spine, opposite the liver; the pain being especially severe during an inspiration. Pain as from a fall, in the dorsal vertebræ, during motion and rest. Drawing pain in the dorsal spine, as if bruised, frequently arresting the breathing.—Bruised pain in the left side of the back when sitting, disappearing again when standing or walking. Pain as if bruised in the dorsal spine, and paralytic weakness in the small of the back. Bruised pain along the dorsal spine when sitting, especially on the left side.—Pressure in the interior region of the right scapula. Stinging itching between the scapulæ; it did not go off by rubbing (immediately). Drawing-sticking pain in the apex of the scapula, when moving it, obliging him to let the arm hang at once. Drawing pain in the scapula, arresting the breathing.—Drawing in the nape of the neck.

**Upper Limbs.**—Intense pain, as if sprained, in the shoulder-joints; these pains abate somewhat by raising the upper arm and by drawing it, but they return immediately by letting the arm hang down, or by laying it upon anything.—Pain in the right axilla as from a burning-biting ulcer.—Fine deep stitches changing to a corrosive itching, with redness and heat of the skin of the arms. Dull tearing in the long bones.—Crampy drawing in the biceps muscle of the upper arm.—Painful jerks in the upper arms, beginning in the centre; when the pain reaches the elbow it is felt all along the arm as far as the tips of the fingers,

the bones feeling too narrow; accompanied with weariness and heaviness of the lower limbs.—Coolness in the interior of the arms.—*Itching of the left upper arm, inducing a desire to scratch.*—Hard pressure in the right elbow-joint, more violent when stretching the arm. Pain in the left elbow-joint, as from a shock, with weakness in the arm. Dull tearing pain in the right elbow-joint, and the adjoining parts, extending to the lower extremity of the humerus; when stretching the arm, the pain is changed to a sort of painful pressure.—The ulna feels bruised. Crampy tearing in the left forearm. Paralytic pressure in the outer side of the right forearm. Painful drawing with pressure, in the middle of the anterior surface of the right forearm.—Tearing, with pressure in the right wrist-joint, more violent when moving it with force.—Weakness of the hands and feet. Distention of the veins of the hand, after a meal. Stinging titillation in the palm of the left hand. Erysipelas of the hands, from gathering the plant. Pain in the left wrist-joint, as if broken, even during rest. *Pain in the bones of the wrist-joints, and of the dorsa of the hands, as if bruised, during rest and motion.* °Painfulness of the wrists on lifting anything. °Pain as if sprained, and stitches in the wrist-joints.—°Numbness and tingling in the hands, after exerting them. Crampy pain across the right hand. Painful drawing, with pressure, in the posterior joint of the last two fingers at night. Pains in the fingers, during rest, as if bruised, or contused. Tearing in the left middle finger, especially the middle joint, and the middle phalanx. Drawing, with pressure, in the middle joint of the three right middle fingers.—°Contraction of the fingers.

**Lower Limbs.**—*Pain in the bones around the hips, as from a bruise or fall (during motion).* *He is unable to bend double; all his joints are painful, and the haunch-bones feel bruised. When feeling the affected parts, especially the haunch-bones and tibiae, they are painful as if bruised.*—Uncasiness and heaviness of the lower limbs. °Weariness and weakness after walking.—Pain in the posterior spinous process of the ilium, even when sitting, as if something would press out there, decreasing when the parts are pressed upon. Burning, sharp pressure, in the upper bend of the right thigh. Pain in the middle of the femora, as if bruised (during motion). *The whole anterior surface of the thighs feels bruised and is painful to the touch. When stretching the lower limbs ever so little, the thighs are painful in the middle, as if bruised.* The bruised pain in the thighs continues two days, so that he is scarcely able to walk. Pressure in the middle of the outer side of the right thigh. *Bruised feeling in the posterior part of the thigh and above the knee (during motion).* He is unable to walk directly after sitting and rising; he tumbles back upon his chair; the bones feel as if broken; the thighs give way from weakness and pain. Violent contractive and cramp-like drawing from the middle of the thigh to the hip-joint and thence to the small of the back. *When walking he staggers from side to side; the legs do not support him; the thighs feel debilitated, and are unable to hold out.*—Burning pain in the upper and inner side of the thigh, only when sitting or when waking, and on one's back.—Hard pressure in the upper inner surface of the left leg. Hard pressure in the middle of the outer side of the left leg.—The knees give way when rising from a seat and commencing to walk. Paralytic heaviness in the knees; he is obliged to change the position of his legs; he feels relieved after a walk. *He finds it difficult to go either up stairs or down stairs; his knees give way.* Cramp-like contraction of the bends of the knees when rising from a seat. Tremulousness in the knees, with lassitude of the legs. Tremulous heaviness of the legs. *He cannot step firmly, lest the bones in the legs should ache, accompanied with a feeling of heat.* Dull stitches dart slowly along the tibia, commencing in the dorsum of the foot.—Cold feeling on the inner side of the leg, from the soles of the feet to the knees, without

shuddering, as if the parts had gone to sleep.—*Beating and hacking pain in the anterior side of the left tarsal joint, as if from an ulcer. Burning and corrosive pain of the bones in the feet, during rest.* Burning sensation under the malleolus externus, when standing. Sticking pain, with pressure, when sitting, first in the left then in the right heel. Burning tearing in the left big toe, especially when making pressure from without. Burning pains in the toes, as from a bruise or contusion, as if a foreign body had been thrust into the parts. Cramp-like fine stinging in the little toe of the right foot, when sitting, which became more intense when moving the toes. Painful drawing in the toes. Painful pressure in the sole of the left foot, when sitting. Hot, pricking titillation in the sole of the foot.

**Sleep.**—*Yawning and stretching of the hands.* Imperfect yawning, several times. She fell into a deep and sound sleep as soon as she lay down in the evening.—Excessive drowsiness after a meal; he fell asleep when reading; it was a sleep with half consciousness; when touched ever so lightly he woke with a cry of terror.—Restlessness at night: she wakes frequently, experiencing a nausea, and a painful turning in the umbilical region; a sensation as if water would accumulate in her mouth, sometimes rises up to the pit of the throat. He is excessively restless, tosses from side to side, wakes every hour, and has great difficulty in falling asleep again. Restless sleep, with vexatious dreams. *Frequent waking at night, as if the time for rising had come.—Vivid, confused dreams.*

**Fever.**—Shuddering of the whole body; even while near the warm stove; hands and feet are cold to the touch, the face being warm interiorly and exteriorly, and the head feeling dull as in catarrhal fever, with violent thirst, which disappears after drinking. Chilliness and coldness of the whole body. A cold creeping on one side of the head and face. *Coldness descending along the vertebral column.* Chilly shuddering, especially in the back and over the chest, at short intervals. Cold sensation in the back, ascending and descending. Chilliness, or rather shaking chills, over the whole back, with goose-skin, accompanied with yawning and stretching. Internal chilliness; she is unable to get warm (before the proving she had this sensation regularly previous to the appearance of the menses).—Heat in the face, interiorly and exteriorly, with redness. °Frequent flushes of heat. Heat over the whole body in the afternoon, with febrile uneasiness and anxiety as if he would die, arresting his breathing; he is especially troubled with great heat in the face, without thirst, accompanied with white coating of the tongue and a feeling of rough dryness on the same. Great restlessness three evenings in succession, with headache and febrile heat. Increase of warmth in the feet.—After walking in the open air, she perspired over the whole body. Cold sweat in the face in the morning, in bed, with redness of the cheeks.

**Skin.**—Itching over the whole body, on rising from bed, relieved by scratching.—Draws blisters when applied to the skin. °*Chafing of the skin*, when riding on horseback, or in children when walking.—°Inflamed ulcers.—°Warts.—°Anasarca.—°*Contusions and injuries* of the bones and periosteum.

**General Symptoms.**—°Ailments from mechanical injuries. \*Bone-pains, burning and gnawing, in the periosteum. \**Pains as after a fall, bruise or contusion*, in the limbs, joints or bones. Cramp-like tearing with pressure, now in the upper, now in the lower, limbs, during rest and motion. When lying, all the parts on which he is lying are painful, as if bruised, even in bed. He feels tired and lazy, only when sitting; he does not feel so after having walked awhile. *His lower limbs feel so restless and heavy that he cannot keep them still; he turns constantly from side to side.*—Great debility. Great weariness and heavi-

ness in the whole body after dinner; she was so sleepy that she had to close her eyes; she felt better in the open air. He feels very tired after a short walk; his limbs feel bruised; his loins and the small of his back ache; but he feels the pain only when sitting; he feels relieved when rising and walking about. Tiredness in the limbs when sitting; when keeping his hands on his knees they felt so comfortable that he did not like to remove them from that position. Lassitude and heaviness in the whole body.—He feels crowded in every part of his body, oppressing the breathing.

**Characteristic Peculiarities.**—°*The pains in the limbs are aggravated during rest, particularly when sitting, relieved by motion.* °The pains are worse in damp and cold weather.

## 210. SABADILLA.

SABAD.—Semen Sabadillæ, Veratrum Sabadilla, Alder-buckthorn, Berry-bearing alder. See STAFF'S *Additions*.

COMPARE WITH—Bell., Hyos., Ign., Lye., Merc., Natr. mur., Nux v., Phosph., Puls., Rhus tox., Sep., Staph., Sulph., Verat.

ANTIDOTES.—Camph., Puls.

### CLINICAL OBSERVATIONS.

According to *Noack* and *Trinks*, the following affections have been cured with Sabadilla: *Intermittent fever*, with thirst between the chilliness and heat, chilliness with nausea as if one would vomit, alternating with paroxysms of flushes of heat, attended with great heat in the face and hands, no thirst either in the hot or chilly stage.—*Intermittent fevers* always setting in at the same hour, with thirst between the chilly and hot stages. *Intermittent fevers*: the chilliness sets in with nausea, returns frequently, sometimes alternates with flushes of heat; the heat is more perceptible in the face and on the hands than on the rest of the body; no thirst either during the chilly or hot stage. *Quotidian fever*: chilliness at four o'clock every afternoon, followed by sleep for four hours, from which he awoke with sweat and thirst, in the case of a boy of four years who had gone through a gastric fever. *Quotidian fever*, setting in regularly with moderate chilliness, succeeded by thirst, heat with headache. *Obstinate quartan fevers*. Worm fever.—Chronic sore throat.—*Tænia* in the case of a plethoric young man: redness of the face, hemicrania with drawing extending to the shoulder, convulsive tossing of one side, involuntary rotations of the arm of that side, with discharge of tænia. *Tænia*: spasms, speechlessness, with other symptoms depending upon the presence of the worm.—*Grippe* with inflammatory affection of the organs of the chest, with chilliness and external coldness. *Grippe*: excessive drowsiness, chilliness, shuddering, goose-flesh, lachrymation, redness of the eyelids, pressure of the eyes on looking upwards, aching pain in the forehead, sore tongue with thick and yellow coating, difficulty of swallowing, bitter taste in the mouth, nausea, dryness of the mouth, loss of appetite, rumbling in the abdomen with deficient stool, sometimes discharge of brown, fermented, diarrhœic stool, yellowish, turbid urine, cough with vomiting, headache and sticking in the vertex, pain in the stomach, dull cough with bloody expectoration, painful lameness of the limbs, particularly the knee-joints, aggravation of the pains by cold, or towards noon and evening, heat of the face with chilliness and coldness of the limbs, shuddering, dry skin, restless sleep disturbed with dreams.

—Pleuritis without inflammatory fever, without thirst; the patient complains more of coldness, with occasional attacks of heat (*Staff*).—According to *Noack* and *Trinks*, this is no true pleuritis.—The tincture of Sabad. is employed externally to remove crab-lice.

## SYMPTOMS.

**Mind and Disposition.**—*Cheerful disposition*, which was not natural to her. —*Gloomy mood* soon after taking the drug, as if he were the greatest criminal, for twenty-five minutes.—Vexed at every trifle.—He imagines all sorts of strange things about his own body: for instance, that his body has shrunk like that of a dead person, that his stomach is corroded, that the scrotum is swollen; he knows that all those notions are imaginary, nevertheless he imagines that he sees the things in reality.—Not disposed to work.—Absorbed in reverie the whole day.—*\*Anxious restlessness.* °Great anguish. He starts at the least noise. Vexed, inclined to be vehement, out of humour. Rage. Thinking is troublesome and gives him a headache; except this, she has a particular disposition to laugh at everything; afterwards she feels indifferent, almost apathetic. The mind seems to be excited, almost strained, whereas the heart is cold; in a few days the mind becomes duller and slower, the heart is more easily moved.

**Sensorium.**—Vertigo as if *everything were turning*, especially when rising from a seat. Vertigo as if he would faint, with obscuration of sight. Vertigo, as if one would fall. Vertigo early in the morning after rising, greater when sitting than when walking or standing; his head felt stupid. Vertigo when going to bed, so that he had to hold himself, continuing for five days. He had to rest his head on the table, the whole forenoon until after dinner, in order to keep off the vertigo; accompanied with constant nausea, without vomiting. Stupefaction of the head without vertigo or real headache.—Gloominess of the head. His head feels dull and heavy, as if he were obliged to hold it all the time; for several days. Sensation as if the head were taken with vertigo, with a little aching pain, shortly after taking the drug, continuing an hour and a half. Dizziness, as after a slight intoxication, without vertigo or pain, continuing for two days.

**Head.**—Aching in the vertex; it ascends from the skin of the forehead, where a sort of whirling motion is experienced; after the second day. *Painful pressure in the right temple from within outward.* Pressure in the head with heaviness, so that he is scarcely able to lift it; immediately after taking the drug, for half an hour. Dull, aching pain in the sinciput, diminished by pressing with the palm of the hand against the forehead.—*Tensive pain in the forehead, with pressure.* *Stupifying, oppressive sensation in the forehead, producing a reeling sensation*, which obliges him to stagger from side to side, as if he were drunk. Headache, as if a thread were drawn from the middle of the forehead to the occiput above the temples, leaving a burning sensation behind. Headache, as if the head were violently squeezed from all sides.—Headache, as if occasioned by strong pressure, extending from both temples towards the vertex, and thence to the lowest part of the occiput. Headache, as if some one were pushing from the upper part of the occiput through the brain and forehead.—Painful pressure in the head, as if the whole head would be pressed asunder. Pressure in the occiput from behind forward, with a reeling sensation. Slight painful pressure in the forehead above the left eye, afterwards also in the temple. Painful pressure in the right hemisphere, extending as far as the molares of the left lower jaw. Painful pressure with dizziness in the sinciput and temples, with occasional painful stitches in the back, followed by a drawing sensation.—Painful pressure in both temples, continuing for one hour. *Pain-*

*ful pressure toward the right temporal bone.* Itching with pressure in the head, most violent in the forehead. Painful pressure from above downward, in the left temple near the ear.—Painful heaviness, first in the right side, afterwards in the forehead, whence it extends more and more towards the left side, and finally affects the whole head continuously; increases during motion, when it becomes a sort of vertigo. Constant headache, or sort of tension; on the first day it was only felt in the forehead; on the day following in the whole head; less violent when staring at a thing or reflecting upon a thing. Dull sensation in the forehead, as if it had received a blow; not exactly a pain, whilst the limbs feel heavy. Slight jerking headache, first on the right, then on the left side, over the forehead.—Single stitches in the outer parts of the left temporal region. Sticking in the temples, especially in the right side.—Headache, especially after every walk; when returning into the room she is attacked with a turning screwing pain, commencing in the right side of the head, affecting both temples very sensibly, and extending over the whole head after going to bed; recurring every day.—*Headache occasioned by continued attention.*—Pulsative headache in the right side of the forehead; afterwards more in the upper part; it continued for three-quarters of an hour; after which lapse of time it decreased gradually, but the head remained painful the whole day.—Sticking headache, especially in the forehead. Pain in the left side of the occiput, as if a wound were strongly pressed upon.—Confused headache, with burning and itching of the scalp; this feeling of heat extends over the surface of the whole body.—Pains in the head, in the evening when reading, as if single parts of the brain were pressed against sharp corners.—Heat in the head and face, as if he had drank much wine, not perceptible to the hand. Increased warmth in the forehead, followed in a few minutes by coldness in the hairy scalp; even the hairs felt cold to the hand, as if cold water had been poured over the head.

**Scalp.**—Pressure on the left temple. Tension of the scalp, particularly during the fever. *Stinging in the scalp*, particularly on the forehead and temples. Lancinations in the left side of the forehead. Pricking in the forehead, when he gets warm and goes up stairs. *Burning pain on the hairy scalp.* Corrosive, burning point on the vertex. Burning tingling over the eyebrows.—*Itching of the hairy scalp*, inducing scratching until he bleeds. Itching on the vertex as from vermin.

**Face.**—*Heat in the face*, after drinking wine, the first days. Heat and stinging itching in the face, here and there, towards evening.—Redness of the face and hands. Flush of heat in the face; his cheeks are red and burn. *Redness of the face and heat, without the heat being felt by him.*—Violent itching in the left cheek; specks in the face, like herpes, disappearing only in a few days.—Burning of the lips as if scalded. Burning, itching, tingling and prickling of the lips. Tensive sore pain of the upper lip, as if drawn together with a fine string, and upward, early in bed, with real soreness on touching them with the teeth.—Pain of the lower jaw on touching it, as from swelling of glands. Chattering of the articulations of both jaws, as if loose, particularly of the right, on opening the mouth and drawing the jaw backwards.

**Eyes.**—Painful drawing from below upwards, in the interior of the right eye and in the temple.—Pressure in the eyeballs, especially when looking upward; less when looking down. Gum in the outer canthi, about noon.—Blue rings around the eyes, for many days.—Redness of the margins of the eyelids, and sensation in the eyes as if an inflammation would take place. Burning sensation in the left eye, as if something corrosive had got into it; intermitting and returning after a few pulsations.—Dim-sightedness with vertigo.—\**Lachrymation*, when walking in the open air, when looking at bright light, when coughing or

yawning; for several days. Lachrymation as soon as the least pain is experienced in some other part of the body, for instance, the hand. Blackness before the eyes.

**Ears.**—Burning itching in the interior of the lobules, without any external redness or heat.—Burning sensation in the outer parts of the right ear, without any redness being perceived, accompanied with a burning of the left temple, continuing for an hour. Pressing pain in the exterior of the ear.—Violent sticking in the left ear, and right lobule.—Otalgia and snapping as of electric sparks in the ears.—*Humming and buzzing about the ears*, and sometimes a sensation as if something heavy were falling upon the floor and burst, after which the ringing in the ears continues for a long while. Sensation as if the ear were obstructed by something. Report in the ear; humming in the ear when the air presses into it, shortly before dinner.—Painful boring behind the left ear in the parotid glands, the lower jaw and submaxillary glands. Burning-prickling sensation behind the ear. Small pimples behind the right ear.

**Nose.**—The smell of garlic is intolerable to him.—Contractive, biting sensation in the nose, as if occasioned by mustard. Itching tingling in the nose. *Bleeding from the nose, profusely, twice.*—Violent sneezing from time to time, conussing the abdomen; followed by lachrymation. Occasional sneezing, accompanied with sticking contractive headache over the eyes and red margins of the eyelids, as in catarrh, which, however, does not make its appearance.—Dryness and sensitiveness in the upper part of the nose. Fine *whizzing* in one nostril during an inspiration, the other nostril is obstructed. Obstruction of one or the other nostril; the air has to be forced out with a sniffing noise, and is drawn in with great force, with dull snoring, for several days. Copious, thin, whitish, transparent nasal mucus, sometimes coming out in large lumps, when blowing ever so slightly, without catarrh, for several days; afterwards he has to blow his nose frequently, discharging a viscid, yellow-greenish mucus.—°Fluent coryza, with disfigured countenance and dulness of the head.

**Jaws and Teeth.**—*Beating and jerking in the muscles of the left upper jaw.* The lower jaws, when touched, are painful like swollen glands, for several days. Drawing in the jaws and teeth. Frequent painful jerking in the gums, in paroxysms, every day. Sticking pain in one of the right lower molares, extending into the submaxillary glands. Sticking pain in one of the anterior left lower molares, extending towards the ear, continuing a few minutes. °Cessation of the toothache in the left lower row. A carious molar tooth becomes more hollow, six weeks after taking the drug, one-fourth of the tooth breaks off suddenly without pain. Subdued beating and drawing in the teeth, not continuing, generally during a walk. Small stitches from above downwards in the upper teeth of the right side.

**Mouth.**—Intermittent aching pain in the internal side of the left cheek, where the teeth come in contact with each other, not altered by contact. Stinging sensation, with disagreeable bitterness and repulsive sweetness at the tip of the tongue, in the lips and the gums. *Burning at the tip of the tongue*, continuing twenty minutes. Burning pain through the right side of the tip of the tongue, followed immediately after by violent spitting, and a taste as of unripe fruit. \**The tongue feels sore*, and as if full of blisters. The tip of the tongue and the buccal cavity felt sore and scalded. Pinching dull stitches in the tip of the tongue, more on the right side, intermitting and recurring.—\**The tongue is coated, mostly yellowish, especially* in the middle and posteriorly, for several days. The tongue is coated white, the tip is bluish, the gums are bluish likewise.—°Dryness of the mouth, without thirst.—Accumulation of saliva and nausea, with a little retching, immediately, for eight minutes. Accumulation of saliva, causing an astringent sensation in the mouth, as if full of metal. Burn-

ing of the tip of the tongue with great soreness of the throat, increased by swallowing saliva, and leaving a burning sensation when drinking, immediately, for one hour.

**Pharynx and Œsophagus.**—Burning in the fauces, and about the uvula, with pungent taste; he had to spit a good deal. Sore throat when swallowing. The throat feels swollen. He is constantly obliged to swallow; with pain in the mouth, and behind the larynx, as if something were lodged there, accompanied with scratching roughness; he hawks constantly, especially in the morning, afterwards the whole day, also when eating; more after eating. Roughness of the throat, he has to hawk all the time. Scraping sensation in the fauces, with dryness and difficult deglutition. Swelling of the uvula.—Burning and pressure in the throat, during and between the acts of deglutition; the interior of the throat feels swollen. The throat feels as if the neck were constricted with a string. Scraping and painful sensation in the throat. Scraping in the throat, immediately after taking the drug, as if one had swallowed something acid, with dryness in the region of the posterior nares. Scraping in the throat; when swallowing he feels as if the uvula were resting on the tongue; the flat sensation in the throat obliges him to hawk, which causes a sweet, flat-tasting mucus to come up. Burning and pressure in the throat, during empty deglutition, as if a plug had lodged in the throat. Sensation as if a soft body had lodged in the throat, especially during deglutition. Dryness in the throat when swallowing. Sticking sensation in the throat, occasioned by tightness and sharp scraping; he has to hawk, in order to breathe freely. Tensive crampy sensation in the parotid gland, with increased secretion of saliva on the side of the gland.—Burning-crawling, stinging sensation in the palate. *Constrictive sensation* deep in the throat, as if the fauces were constricted, as after swallowing an astringent drink. Phlegm in the throat, before breakfast. Sensation as if vapour were rising in the throat, with bitterness, almost like heartburn.—°*Œsophagitis*?

**Taste and Appetite.**—Bitterish-sourish taste rising from the œsophagus into the posterior part of the mouth immediately after taking the drug, accompanied with a dull burning in the chest. Repulsive, burning-sweetish taste in the mouth, aggravated by smoking (which he is in the habit of doing), but going off by eating. Flat, bitter taste in the mouth. *Bitter taste in the mouth*, from the throat up to the nose, for three hours, going off after a meal, immediately. Sweet taste in the mouth, as if he had chewed liquorice. Loss of taste and appetite. °No appetite, everything he eats tastes of the drug; but as soon as he swallows one mouthful the food has again its natural taste. Aversion to food, continuing until the next meal. Aversion to food and coffee; he eats, but without an appetite.—Thirst, which can only be quenched for a short while. Desire for cold water, especially towards evening. Desire for beer and milk. Increase of thirst; he has to drink cold water in the morning, contrary to his custom. Ravenous desire for sweet things, honey and dishes made of flour, alternating with aversion to meat, wine or sour things. Canine hunger in the evening, after having been without an appetite the whole day. He eats his warm breakfast with great avidity, for several mornings in succession.

**Gastric Symptoms.**—Eruptions, partly tasting of the drug, partly having a bitter and pungent taste. Frequent painful eructations, which frequently ascend only as far as the middle of the chest, as if the air had to press through the orifice of the stomach with great trouble. Sour eructations, rarely continuing for days. Empty eructations with a feeling of shuddering over the body. Frequent eructations, having a rancid taste. A kind of heartburn, heat being felt in the abdomen, extending through the stomach and as far as the mouth, accompanied with considerable pyalism, the saliva appearing to be as hot as the heat in the abdomen, but it is not. Hiccough, several times.—Nausea while eating,

several times. Nausea, waterbrash, and vomiting. Nausea before dinner, ceasing after dinner. Nausea, sensation of anxiety, and as if he would vomit, immediately after a meal. Nausea, relieved somewhat by bitter eructations. Feeling of nausea and pain with weakness. She feels as if she would fall, and is obliged to sit down. He feels qualmish and nauseated; with tasteless eructations, after which the qualmishness terminates. *Nausea and desire to vomit; he spits up insipid water all the time.* Constant desire to vomit. Nausea and gulping up of bitter mucus, leaving a greasy substance behind, as if he had eaten tallow. Nausea with retching, without vomiting, followed by vertigo unto falling, after which he experiences a pressing headache, continuing for fifteen minutes. Desire to vomit as soon as she sees boiled food, for three hours. Nausea with bitter taste on the tongue; the food he takes has a good taste, immediately. Nausea with retching; there was no vomiting, but a cough came on which increased the retching, immediately. Qualmish, uncomfortable, cold sensation in the stomach.—°Vomiting of ascarides.

**Stomach.**—Feeling of *emptiness* in the stomach. Sensation as if the stomach were being turned inside out, directly below the pit of the stomach. *Below the pit of the stomach he experiences a pain, on pressure, as one feels when pressing on a sore part, especially during an inspiration.* Slight burning immediately after taking the medicine, gradually rising from the stomach to the pharynx, and becoming so violent in half an hour, that he requested help, saying that the burning was like that of a burning coal; passed off gradually in half an hour. Horrid burning in the stomach, immediately after waking; she thought the burning would come through the throat, and that she would suffocate; her breathing was oppressed; she thought she felt relieved by compressing the chest with her two hands, but it was not the case. Slight pressure in the stomach, with sensation as if bloated. Internal, slight painful digging-up above the pit of the stomach, on the left side; the place is painful for several days when touching it. Warm feeling in the right hypochondrium not far from the pit of the stomach, soon after taking the drug. Dull sticking pain on the left side, on one side of the pit of the stomach. Warm sensation in the præcordia. *Burning in the stomach and along the whole œsophagus,* immediately, continuing for ten minutes, and then gradually decreasing. *Corrosive burning pain in the stomach.* *Sudden oppression of breathing, in the pit of the stomach, with anxiety.*—°Gastritis?

**Abdomen.**—Digging-up in the right lobe of the liver extending as far as the left, accompanied with paroxysms of painful drawing; when pressing on the part, a pain is experienced as in an old sore; at the same time a similar digging-up is experienced in the forehead, abating when pressing upon it. Painless warmth in the region of the stomach and liver, internally. Burning pains in the abdomen. Sticking in the right side, especially in the region of the liver. Sensation as if the region of the liver were scraped with the back of a knife.—Dull sticking pressure in the left side of the abdomen, as if there were a sore. Pinching stitch behind the heart towards the left side, deep-seated, worse during an inspiration. In the afternoon, while sitting, he is suddenly attacked with a violent, stitch-like pain in the right side below the last rib, resembling splenic stitches; accompanied with lachrymation; he rises and twists himself in every direction to alleviate the pain, when the pain suddenly attacks the left side, and it seems as if both pains met in the middle of the abdomen; he sits down again without knowing it, stretches himself, bends the back forward, presses his hands in his sides, after which the pain disappears after having lasted twenty minutes in all. Pain in the stomach and abdomen, as from a stone, with digging-up in the abdomen. *Cutting in the abdomen as with knives.* Burning in the abdo-

men. Shuddering in the abdomen. *Sensation in the abdomen as if a ball of thread were moving and turning through it.* Painful boring in the hypogastrium, especially in one place of the right hip. *Colic, which causes one to shudder, with violent urging to stool, with imperceptible discharge.* Warmth through the abdomen, and desire for stool, without being able to effect a passage, immediately after taking the drug. Burning in the abdomen and rectum, coming on after every stool, and continuing an hour after every evacuation. Burning sensation around the umbilicus for about four days. *Rumbling in the abdomen, emission of an immense quantity of flatulence, followed immediately after by urging to stool and an evacuation, which was followed by a second in half an hour.* Loud rumbling in the abdomen, as if it contained something living; however, no flatulence was emitted; continuing for two hours. Loud rumbling in the abdomen, and loose evacuation in five minutes; another violent rumbling in ten minutes, followed by a copious loose evacuation. A good deal of rumbling in the abdomen, with pinching in the region of the bladder, accompanied with a few deep-seated stitches in the same; continuing for an hour. *Rumbling in the abdomen, as if empty.* Pinching pressure in the middle of the epigastrium, interiorly, at a place between the pit of the stomach and the vertebræ; the pressure is intermitting about five minutes. Intermittent, slow, dull stitches in the left lumbar region. Stitches in the left side of the abdomen, when sitting. Spasmodic contraction of the abdominal muscles of the left side, with burning pain; he bent double on the left side. Abdomen, hands and chest are covered with red spots, becoming redder in the open air, of the size of a pin's head, but not elevated.

**Stool.**—Violent urging to stool; he has to strain more than usual, passes but little and loose stool, followed by increased toothache; five and seven hours after having taken a strong dose. Slightly progressive urging to stool, accompanied with jerking drawing in the pubic region, as if proceeding from the spermatic cords, and extending as far as the hollow between the thigh and scrotum; afterwards noiseless emission of short flatus, followed by a shuddering across the back. Slippery and liquid stool, mixed with blood and mucus.—Diarrhœa; the stool looks fermented and brown. Several stools a day after a large dose; no stool for four days after taking a small dose. Violent urging to stool, with noise like the croaking of frogs; he had to sit a long while; after this an immense quantity of flatulence was passed, followed by an enormous evacuation, which was soon followed by a second evacuation mixed with blood; from this moment he felt a sort of burning pain in the abdomen which lasted about eight days, decreased gradually after that time, and left an itching behind, which yielded to rubbing, and changed to a slight burning. A sort of pinching sensation around the umbilicus, followed by a copious evacuation, which was soon followed by another; in a quarter of an hour he emitted a quantity of fetid flatulence. No stool for several days; the first portion of the stool is harder, requiring much pressing at first, scanty. The stool delays in proportion as he increases the dose. No stool for five days; he felt one strong urging, but it disappeared as soon as he sat down; three days after taking the last dose he had stool, which required strong pressing.—Dull pains in the anus and abdomen, continuing for five hours. Burning pain in the anus for six days, she imagined she had a burning coal in that region.—Itching of the anus; violent burning after scratching, for five days. Itching of the anus, alternating with titillation of the nasal wings and the meatus auditorius externus. Violent titillation in the rectum, as from ascarides. Quickly-passing pinching tearing in the rectum, immediately.—*°Tænia.*

**Urinary Organs.**—Increase of urine mixed with blood.—Burning in the

urethra, between the acts of micturition, with urging to urinate. The urine becomes thick and turbid, like loam-water. Little urine, although he drinks more than usual. Scalding in the urethra, when urinating.—Dragging sensation as far as the tip of the urethra, when urinating. Constant desire to urinate, towards evening; she emits only a few drops, after which the urging is most violent, accompanied with drawing in the urethra from before backward; the urging is accompanied with violent burning in the urethra. (This troublesome symptom was soon removed by a small dose of *Puls.*).

**Male Genital Organs.**—Drawing, beating, sticking intermittent pain in the penis, towards the tip. Slow, whirling tingling movement in the testes, the whole day; sometimes a fine humming comes from the thighs into the testes, after which the whirling commences again, and with more violence. Subdued contusive pain in the left testicle, going and coming, towards evening. Has no sexual desire for five days; after which he is scarcely able to dispel his voluptuous fancies, the penis remaining relaxed. Amorous caresses disgust him. Painful erection, with some chordee in the morning, without sexual desire. Lascivious dreams in the morning, with scanty emission of semen and relaxed penis; he knows that he is dreaming; followed by painful erection and extreme lassitude; feels easier on getting into the open air.

**Female Sexual Organs.**—Decrease of the menses, which were just flowing; they re-appeared at irregular periods, more or less profusely. The menses appear one day after the time, more profusely than usual, and flow one day longer than usual; three or four days before they appeared, she felt a painful bearing down, as if they would come on.

**Larynx and Chest.**—Wheezing in the larynx, during an inspiration, when lying on the back. Hoarseness. He hawks up bright-red blood, coming from the posterior nares. Short cough, a few light turns, with lachrymation. Violent cough immediately after taking the drug. Nightly dry cough, which leaves him no rest; he feels hot and sweats. Short dry cough, produced by a scraping in the throat. °Cough as soon as he lies down. °Deep dull cough with bloody expectoration. °Vomiting when coughing, with sticking in the vertex, and pains in the stomach.—°*Grippe*. Tightness in the pit of the stomach and the chest, especially during an inspiration. Short, difficult breathing, especially in the afternoon. Oppression of the chest when sitting or lying, as if a heavy stone were lying on the chest. Great oppression of the chest; he imagines he will fall, accompanied with anguish about the heart, continuing a full half-hour. Shortness of breath the whole day. Shortness of breath, dry and hacking cough, cardialgia. °His chest feels free and easy; he feels well all over, (secondary effect). °The breathing is easier than usual (in a person who was generally suffering with shortness of breath, secondary effect). Strong, painful pressure in the middle of the chest. *Burning* in the right side of the chest, as if he had swallowed hot water. Burning pain in the left side of the chest. Pricking *borings* from within outward in the right side of the chest, during an expiration (when sitting), and disappearing soon during slight motion. *Sticking* in the right side of the chest, between the third and fourth ribs. Several fine prickings above the xiphoid cartilage. Sticking in the fore part of the middle of the right side of the chest, during an inspiration and when coughing; he is waked by the pain several times at night; he is unable to lie on that side, has to lie on the back; has cough with expectoration, frequently returning at night. Stitches in the left side of the chest. Sticking in the right side below the short ribs, continuing for ten minutes, increased by a deep inspiration. Sticking in the left side, at first more frequent in the upper, then in the lower part, in the region of the short ribs; worse when coughing and taking a deep inspiration. Sweat on the chest

towards evening, after walking, and in the axilla; violent itching about the nipple.—Palpitation of the heart, and sensation as if all the arteries in the body were beating.—Prickings in the right chest, during an expiration.

**Back.**—Violent pain in the small of the back, in the region of the left sacro-iliac symphysis, when bending double. Pain in the small of the back, with chilliness. Pain in the upper border of the os ilium, not far from the superior spinous process, relieved by walking and pressing on it, aggravated by sitting. Simple pain in the whole back, as from weariness, more intense, however, going and coming at short intervals, for some time in the forenoon and afternoon; it comes on while walking; movement avails nothing; but it yields when he sits down, bends backward, and leans firmly against anything.—Stitches in the right side of the back, in rapid succession. Bruising pains in the spine, when sitting. Pain in the nape of the neck, when moving. Burning-tingling, stinging sensation between the scapulæ. Pain from the right shoulder into the chest, *as if the circulation of the blood were arrested by a tight bandage*; the pain is not relieved by opening the dress; it lasts the whole day, almost uninterruptedly, is increased by cold and in the open air; sometimes the pain is felt in the left shoulder.

**Upper Limbs.**—Convulsions of the arms. Aching in the muscles of the upper arm, when moving the arm. Tosses the right arm upward with a sudden and painful jerk. Intermittent pinching in the flesh of the right upper arm. Aching pain below the elbow-joint, when bending the arm. Painful drawing in the right elbow-joint. Spasmodic jerking in the elbow. Red spots on the left arm, occasionally red tips, not elevated, occasioning merely a hot sensation, not itching, and remaining in the open air. Small, burning-itching pimples on both forearms. Stitches in the muscles of the left forearm from within outward, going off when touching the arm ever so lightly. Aching pain in the muscles of the right forearm, near the wrist-joint, only during motion. Red, elevated streak across the left forearm. Darting pain on the inner side of the forearm, more towards the hand. Sudden cramp in the right hand, he is unable to grasp anything. Yellow spots on the fingers. The hands are very dry, all the time of the proving. The right wrist-joint is painfully affected, constantly, but most during motion. Beating tearing in the interior of the metacarpus, in the upper part of the side of the little finger. Tearing in the middle finger of the left hand. Beating pain in the right middle finger, as if in the bone. Itching fleeting tearing in the left ring-finger. The skin peels off on the sides of the finger-nails in several places. Paralytic drawing, painful rigidity in the thumb and index of the left hand. Painful darting in the right thumb, aggravated by suddenly pressing on the part. Redness of one hand and red spots upon it. Both hands seem to be dotted with small red spots, the left more than the right. Raging pain in the fingers and toes, awaking him from sleep and obliging him to scratch, which causes a violent burning. Stitches in the right hand. A kind of itch between the fingers of the right hand, which itches considerably, but only at night when in bed; nothing could be seen in the day-time. The skin on the hands becomes dry and rough, in the forenoon; it becomes smooth again in the afternoon. Trembling in the right hand when writing, as from weakness. Cramp in the right hand, especially the fingers, so violent that the hand becomes quite stiff, and the fingers are quite crooked, and cannot be held during that time. Trembling of the arms and hands. Violent trembling of the left hand when lifting or holding anything, as if it had become apoplectic. Tingling prickings in the right thumb towards the index-finger, when writing. Fine burning stitch in the tips of the left fingers; afterwards glowing heat in those parts, the other parts of the hands being quite cold. Sticking in the right index-finger.—

Cramp-like painless contraction of the left little and ring-fingers, during rest. Aching pain in the left index-finger, going off by motion.

**Lower Limbs.**—Aching pain in the left hip, when sitting. Painful pressure in the right hip-joint, especially sensitive when lying on it.—Intermittent jerking-sticking pain in the internal surface of the right thigh, near the genital organs. Intermittent stitches in the muscles of the right thigh, when sitting. *Stinging sensation in both thighs at the same time.* Violent pains in both thighs, as if they had been compressed, abating somewhat while the limbs are stretched, increasing during motion, but abating again by continuing to move. Bruising pain in the anterior muscles of the thighs, when walking, worse when touching the parts. White *blister* with a red border and burning pain in the right knee. A few stitches in the outer parts of the left knee, when sitting. Sticking in the right knee. Burning of the knees. Tearing in the right side of the knee, whenever she sets her foot down. The knees feel weary, as if they would give way. Drawing with pressure in the outer side of the left knee-joint. Violent, tearing-tensive pain in the calves, shortly after midnight, in bed, going off almost entirely after rising; eight mornings in succession. Tension in the right calf, when walking. Weariness in the legs. Pinching with pressure along the right tibia, when walking. Erysipelatous inflammation on the right tibia, with violent burning pain.—*Heaviness in the feet.* Excessive sweat of the soles of his feet. The feet are somewhat swollen and very painful when walking; she would like to walk on soft ground; she feels every little stone, and can scarcely get along. Swelling of the feet, most violent in the morning, for a fortnight. Tension in the feet. Painful pressure in the sole of the left foot, when standing. Pricklings in the toes. Cold feet.

**Sleep.**—Frequent *yawning*, with lachrymation. She is constantly obliged to stretch herself, with cracking in the shoulders and back.—Constant desire to sleep; also in the day-time. Excessive drowsiness; she sleeps as soon as she sits down, and is like one dead. *Drowsiness which closed his eyes.* Contrary to his habit he sleeps in the afternoon, and feels extremely peevish on being disturbed in his sleep.—*Restless night* with an aching pain in the right thigh, and the right upper arm. *\*Restless sleep;* dreams a good deal. *\*Unrefreshing sleep.* Towards evening he generally feels unwell; he lies down and falls asleep; during the sleep his mind seems to be worried by all sorts of strange thoughts; his sensations are quite weak; no images in his dream, the first days. Ideas crowding upon his mind in the evening prevent him from going to sleep, several evenings.—Pulsation all over, in the evening, before falling asleep.—Excessive itching all over, at night, in bed; scratching occasions a violent burning. Violent itching of the hands and feet, for three nights in succession, as if she had the itch. In the evening, when half dreaming in bed, he has strange thoughts, as if they existed out of him, and were more important than he, and as if he could not drive them away, the first days. *His night-sleep is disturbed with dreams.* Confused dreams. His sleep is disturbed by frightful restless dreams; he wakes frequently, and then feels an icy coldness, with a feeling of internal heat and cold sweat. Vivid dream, with great details about his helping other people and making them glad.—In the morning he starts up from his sleep as if in affright. Lassitude in the forenoon, while sitting down, until he falls asleep; he is disturbed after three-quarters of an hour, and starts up as if in affright, whereas he generally woke very calmly and easily; afterwards his head feels heavy; (after a large dose).

**Fever.**—Small, spasmodic pulse and coldness of the limbs. Chilliness without thirst, and without subsequent heat. Febrile shivering through the whole body. Chilliness with goose-skin and moderate thirst. Chilliness the whole

day. Chilliness all over, followed by a kind of warmth, and as if a creeping would set in, especially in the thighs. He is shaken and waked from sleep by a momentary chill, at eleven o'clock at night; he feels warm without sweating, with fine pricklings in the forehead. Shivering over the back; he feels chilly through the whole body. Frequently-recurring paroxysms of shuddering, passing off quickly, without being immediately followed by heat or thirst; after that he feels hot suddenly, especially in the face; he feels as if hot breath were coming out of his mouth and nose, and as if it made the adjoining parts warm, without thirst, and the whole body feeling comfortable, and the head bright; the paroxysms of shuddering recur eight or ten times at short intervals; the paroxysms of heat are less frequent, but they last longer.—*Burning heat* in the face, with chilliness over the body, especially in the extremities. Violent chilliness at five o'clock in the afternoon; coldness over the back, as if cold water were poured over it; his teeth chatter with internal coldness; the coldness is somewhat relieved by the warm stove; it lasts full two hours, and then ceases gradually; after that he feels warm all over, and some sweat breaks out at last, especially on the forehead; the lower limbs are simply warm, with thirst; the warmth and the sweat last three-quarters of an hour at most; in the following night he experiences a stitching in the chest, and cough. *Fever*: chilliness in the evening; when in bed, he is seized with a violent chill and shaking; half an hour after he feels alternately hot and cold, for half an hour; afterwards he feels oppressed as by sultry weather, and he sweats so profusely that he is obliged to change his shirt, although that makes him feel chilly. *Fever*: flushes of heat the whole day; more in the forenoon, alternating with chilliness. *Febrile condition*; he feels sick, anxious, starts easily, his breath is short and hot, he trembles; there is orgasm of the blood; irresistible desire to sleep, with yawning; icy-cold shuddering without shaking; constant nausea.—*Intermittent fever*. *Chilliness or external coldness with shaking of the limbs, with little or no thirst, followed by heat with little thirst and accompanied or followed by sweat*. *Quotidian, tertian or quartan fevers* occurring at a regular hour, attended with loss of appetite, oppressive bloatedness of the stomach, pain in the chest, cough, debility, and thirst between the chilly and hot stages. *During the chilliness*: pain of the upper ribs, dry, spasmodic cough and tearing in all the limbs and bones. *During the hot stage*: delirium, yawning and stretching. *Sleep during the sweat*. *After the fever* the limbs feel bruised without any other complaint. *Heat* only at night, and in the morning after rising; more internally; only the hands, forehead, lips and cheeks feel hot to the hand; the hands are always dry and rough; the mouth is dry and sticky; moderate thirst, but a desire for succulent food; no sweat; for two weeks, every day, the same. *Burning heat* in the face to him and others, with redness and heat of the forehead, without thirst. Sudden burning heat of the cheeks, with cold forehead, without thirst. Heat in the head, which is not felt externally, with internal chilliness. Alternation of burning internal heat and cold feeling externally.—Profuse sweat about the head and face, which was hot to the hand, the whole body being cold.

**Skin.**—Considerable prickings under the skin all over, continuing for many days, especially about the fingers and toes. Burning creeping sensation about the body, here and there. Feeling of heat and painfulness of the skin, particularly in the face, more felt when stooping, relieved by washing with cold water, after which a tension is experienced. Flying stitches here and there, particularly in the fingers and toes. *Red spots* and streaks, more distinct in the cold.

**General Symptoms.**—*Painful drawing in all the limbs* and heaviness in the feet so that walking becomes troublesome to her. Drawing through all the limbs and sensation as if paralyzed. Pain in the limbs, especially the lower; a pecu-

liarily-painful drawing in the middle of the bone, obliging one to stretch the limbs; relieved during rest; the limb feels stiff and heavy during motion; the pain is especially felt in the joints and continues for many days. Creeping sensation in the limbs.—Cracking in the joints during motion.—Intense but transitory pain as of bruises, in various parts of the body.—Drawing pains in the right thigh and leg; continuing for eight days. Sensitiveness to cold. Shuddering over the whole body, immediately after taking the drug; continuing for ten minutes.—Immediately after taking the drug he felt a violent burning in the tip of the tongue, in the throat and abdomen, with violent rumbling in the latter, followed in five minutes by an evacuation mixed with blood, and accompanied with burning of the anus; after this he felt weak and slumbered for about a quarter of an hour; upon waking he felt extremely well and comfortable.—*Intense pain in all the bones, especially the joints, as if the interior of the bones were scraped and cut with a sharp knife*, especially in the right arm; uninterrupted boring the whole day, more or less violent, increased by contact, relieved for a short time by moving the arm very rapidly, continuing for some time in warmth and at night. Beating, dull stiches in several parts of the body, almost like pressure, and sometimes pinching, intermitting several times, returning after four or seven beats of the pulse, and continuing in this fashion for a while in various places, rarely in the same place, for instance in the cheek, tip of the tongue, epigastrium, groin, penis, lower arm, metacarpal bone of the little finger; the first days.—Tremulous sensation and trembling in the upper and lower limbs. A sort of slight jerking, once only, of the upper lip, then of the hands, fingers, or thighs, especially of the left side, and always from right to left; the first days, then after the lapse of five days, and then again after several weeks. Convulsions resulting in death, from the powder being placed upon the head of a child.—Stretching of the arms.—Weakness of the whole body, as if he would become very sick. Sudden extreme weariness, her eyes close involuntarily. *Weariness in the limbs*, he sweats when making an exertion; he also sweats at night, in bed, which he never did before. Great weariness and heaviness in all the limbs, especially the joints. Relaxation of the whole body. Lassitude for several days. Violent trembling of the body, especially on the third day. Heaviness, with lassitude in the whole body; feels relieved by lying down, for three days. He feels so weak that he came near falling all the time. Paralytic weariness in all the limbs, late in the evening. In the morning, when waking, he feels more weary than before; all her body feels painful, as if she had been resting on blocks of wood. After a short walk he was suddenly attacked in the street with an uncommon weariness and with dulness of the head, as if he had taken liquor; his eyes closed; he was almost unable to get up stairs. His limbs, especially the knees, feel bruised; also when sitting. She felt tired and broken down, so that she wanted to lie down and sleep all the time; for two days. She feels bruised all over; would like to lie down all the time. Weariness and heaviness in all the limbs, especially the feet; she frequently lets her arms hang down, as if they had no strength. *Continuous heaviness in all the limbs, obliging one to lie down, the whole day, but especially in the last hours of the forenoon and towards evening*. Staggering motion, the first days; afterwards he thinks that he performs his movements with more grace than ever.

**Characteristic Peculiarities.**—Most of the primary effects of large doses last five days; in one prover many of the symptoms returned after the second five days, and then disappeared for weeks. Many of the pains are first felt on the right, afterwards on the left side, for instance, headache, pain in the side, pain in the limbs. He feels more comfortable in a recumbent posture, than when standing or walking. The pains which Sabadilla causes in the joints,

seemed to be especially violent in the last hours of the forenoon, particularly the weakness and drowsiness. Cold increases the pains.

ANTIDOTES.—Camph., Puls.?

### CLINICAL OBSERVATIONS.

According to *Noack* and *Trinks*, Sabina has been successfully employed in the following affections: Acute and chronic gout.—Caries.—Beating toothache with sensation as if the tooth would burst, throbbing of all the arteries, with profuse discharge of blood, even between the menses, arthritic pain in the feet, etc.—Painful congestions of the uterus.—Menstrual colic: violent labour-like drawing and pressing from the back and small of the back to the uterus, down the thighs.—Menstrual difficulties with discharge of florid blood.—Suppression of the menses.—Menorrhagia after miscarriage.—Excessive debilitating menses with abdominal spasms.—Arterial metrorrhagia. Discharge of coagulated lumps of black blood, for 11 weeks, with tearing pains in the head and left half of the face, with great languor.—Loss of fluid, bright-red blood, with labour-like pains extending to the groin or thigh.—Metrorrhagia with miscarriage: almost uninterrupted discharge of blood in the third month of pregnancy, the blood being at times red and liquid, at others blackish and viscous, with troublesome feeling of soreness in the epigastric region, particularly when sitting or stooping.—Metrorrhagia after miscarriage: discharge of coagulated lumps of dark-blackish blood, mixed with thin watery blood, occasionally attended with slight pressure over the pubic bones and pressing downwards towards the genital organs, great general debility, emaciation, pale complexion, vertigo.—Painless loss of dark-red blood shortly before delivery.—Metrorrhagia during and after parturition.—Metrorrhagia after parturition, with descension and retroversion of the uterus.—Sabin. prevents miscarriage, particularly in the third and fourth months. Sabin. has prevented miscarriage where labour-pains and loss of blood had already taken place.—Sabin. facilitates the expulsion of the placenta if the labour-pains do not set in till very late in consequence of transverse positions of the fœtus.—Pains, after delivery, from the side of the abdomen to the groin, after the menses.—Leucorrhœa with suppression of the menses.—Podagra: inflammatory fever, swelling and redness of the ball of the toe, great painfulness to the touch, tearing pain during rest, inability to step.—Sabin. is very useful as an external remedy, when applied to humid condylomata for which Thuj. did not prove a specific; in that case it may be applied in the shape of a powder.

### SYMPTOMS.

**Mind and Disposition.**—He is desponding and hypochondriac. Nervous irritability: music was intolerable; with aching pain in the occiput, feeling of weakness, debility, and inclination to sweat, especially on the back; these symptoms disappeared in half an hour, when taking exercise in the open air; one hour after taking the drug. Ill-humour, with sensation in the body as if he had taken cold.—Not disposed to talk.—Great anxiety, as if threatened with some acci-

dent.—Indifferent to a jest. Indifferent, unsollicitous, but not dissatisfied; after several days.—Vexed; she weeps aloud. Out of humour, several days; she is not disposed to speak; she is desponding, joyless, with a sense of debility in all her limbs.

**Sensorium.**—*Vertigo*, as if he would fall forward. Vertigo, with stupefaction. Continual vertigo, with mist before the eyes. Violent vertigo, even when sitting, with great weakness, as if he would fall, and as if his eyes would close. Dizziness with rushing of the blood and heat in the head.—*Weakness of memory*, cannot recollect what he has been doing in the day-time.

**Head.**—*Pressure and dulness in the head, especially the forehead*, as one experiences after an intoxication. Dulness of the whole head, especially the forehead, towards the nose, where a sort of drawing is felt, with sensation in the left nostril as if blood would flow out. Oppressive heaviness in the head, as if she had taken a quantity of spirits, the whole forenoon. Oppressive and painful heaviness in the whole head, continuing until she goes to bed. Pressure under the vertex, at dinner. Sudden pressure in the left frontal eminence from without inwards. Sticking pain through the brain, with pressure. Painful pressure in the left frontal eminence, affecting the eyeball, which feels compressed. Sensation of pressure in the forehead, it stupifies him. Tearing with pressure in the right frontal eminence. Feeling of heaviness and pressure in the left side of the head; shooting stitches sometimes dart through the left hemisphere. Sticking with pressure sticking into the left hemisphere. Aching pain in the right sinciput. *Painful sensation in the right frontal eminence and right temple, as if the parts were pressed asunder; it comes suddenly, disappears again gradually, and recurs frequently.* Painful drawing in the left temple when closing the eyes, accompanied with a painful pressure on the left upper eyelid. Painful pressing sensation in the right temple, from within outwards. Headache early in the morning, as if the mastoid processes were approached to each other. Dull pressure on both sides of the occiput. Pressing heaviness in the occiput, acutely painful, and relieved by strongly pressing the part upon a hard cushion. Painful pressing sensation in the right occiput, coming and disappearing gradually. Sensation in the left side of the occiput, as if a sharp wind were rushing into it; after this the sensation changes to a boring pain with pressure. Heaviness of the occiput and nape of the neck, descending along the whole of the back down to the small of the back. Aching pain in the region of the left temporal bone, from within outwards. Aching pain in the region of the right and left temporal bones. Sensation in the right temple, as if a heavy weight were *pressing from without inward*, a painful stinging being frequently felt in the left frontal eminence, coming and going rapidly. *Pressing pain* in the whole head, from within outward, resembling a wind which rushes in speedily and disappears again slowly.—*Digging-up, boring headache.* Boring pain behind the right frontal eminence, in the coronal suture.—*Drawing pain*, first in the forehead, afterwards in the occiput. Painless drawing from the right temple to the forehead.—*Smorting stabbing pain*, as if a knife were plunged several times into the right frontal eminence, deep into the brain.—*Tearing* in the right hemisphere from the occiput to the forehead.—*Beating headache* with heaviness and stupefaction.

**Scalp.**—The forehead is painful when moved, she was scarcely able to draw it into wrinkles, there was a pain as if the scalp had grown fast to the skull.—Tearing pain, with pressure, in the outer parts of the left occipital bone, as far as the left side of the frontal bone, in a curved direction across the left temporal bone, more violent when touched. The vertex is sensitive to the touch, and when touched, an aching pain is felt in the head.

**Eyes.**—Blue margins around the eyes. Tensive pain in the eyes; sensation when looking up, as if the internal and inferior muscles were too short.—Vibrating sensation, and as if clouds were rising before the eyes, going off in the open air.—Feeling of heat in the eyes.—Twitching in the upper eyelid.—Pain in the eyes, and discharge of smarting water.—*Pricklings* below the cartilage of the lower lid.—Tearing with pressure in the left eyebrow.

**Ears.**—Hardness of hearing. Pinching deep in the ear. Tearing in the left ear, almost like otalgia.—Burning sensation in the border of the left ear and lobule, which looks a little redder than the other, but without being warmer to the hand. Stitches behind the ear, also during rest. Pressure above the right ear externally.

**Face.**—Pimple on the cheek and temple, near the mouth, sore of itself, but more so when touched. Pale face with eyes without lustre, as in a person who is recovering from a heavy illness, an hour after taking the drug, and continuing for several days. Paralytic pain in the region of the right malar bone. Red areola on the cheeks and nasal wings, somewhat swollen and painful when pressing upon it.—Aching in the region of the left malar bone, increased by contact.—Stitches from the lower jaw to the malar bone.

**Jaws and Teeth.**—Aching-drawing pain in the angle of the right lower jaw in the muscles of mastication, increased by contact. Dull sticking pain in the left side of the lower jaw. Pain at a small spot behind the angle of the lower jaw when touching it and pressing upwards. Single dartings through the left lower jaw, into the hollow tooth, when walking in the open air, after a meal. Pimples, containing a hard lump, between the chin and the lower lip; after expressing their contents, they form small ulcers, which last several days. *Tearing pain in the region of the roots of the molares, near the gums.*—Toothache, excited by scarcely anything but chewing; it commenced in a hollow tooth, and afterwards spread among the other teeth; lasting five or six minutes. Dulness of the foreteeth. Drawing pain in all the teeth. Drawing in the root of a hollow tooth, when drinking and eating either cold or warm things, and when breathing through the opened mouth. Pain in the lower row of teeth, when eating or chewing, but especially afterwards, as if the gums were swollen, and as if the teeth were elongated and loose. *Toothache evening and night, which wakes him, as if the tooth would be shattered; a sort of pressing from within outward, relieved after rising, aggravated by drinking and smoking; he was unable to bear the warmth of the bed; two evenings in succession.* °Also with beating.—Gum-boil on a front tooth. Swelling of the *gums* on a hollow tooth, early in the morning when waking, whitish, painful to the touch; accompanied with heaviness in the tooth and jaw.

**Mouth, Pharynx and Œsophagus.**—Increased secretion of saliva. The saliva is quite white and turns to froth in speaking.—White and brownish coating of the tongue, with flat taste. Every morning the tongue is covered with a thick yellow coating, especially posteriorly. Fine *pricking* in the tip of the tongue. Scraping sensation in the palate and uvula, increased by swallowing saliva. Dull stitches in the throat, during rest. Contractive and pricking pain in the throat from before backwards, between the acts of deglutition. Strangling sensation, with pressure, in the left side of the throat, between the acts of deglutition. Dryness of the throat, with drawing pain. Sore pain in the throat, during deglutition, in the afternoon. Pressure in the throat, when swallowing saliva. *Sensation of swelling in the throat, as if he had to swallow over a foreign body.*

**Taste, Appetite and Gastric Symptoms.**—Sanguineous and greasy taste in the mouth, the saliva was reddish. Putrid smell from the mouth, offensive to

herself. Nasty taste in the mouth and throat, especially when hawking up mucus, which tastes like old catarrhal mucus. Bitter taste in the mouth. The food, milk and coffee, tastes bitter. Bitter taste in the mouth, after taking milk. Desire for milk. Loss of appetite; food has a natural taste, but he is immediately satiated. Acidity in the stomach after every meal; occasional hiccough, then heartburn, the first days. Desire for acid things, especially for lemonade. Frequent empty eructations. Eructations, accompanied with nausea, immediately, also afterwards. Frequent eructations tasting of the medicine.—Heartburn.—Nausea and feeling of fulness. Nausea with cough. Nausea and desire to vomit. Accumulation of saliva in the mouth. Accumulation of water in the mouth, with frequent yawning. Desire to vomit, early in the morning, in bed, going off after rising. Retching, immediately after taking the drug. Vomiting of bile. Nausea, and vomiting of the food which he had taken the day before; the milk which was thrown up looks stirred, and tastes sour. Continual vomiting (the gall bladder had burst).

**Stomach.**—Oppressive feeling in the pit of the stomach, independent of inspiration and expiration.—The region of the stomach is bloated and distended. Painful, anxious, oppressive sensation in the region of the pylorus, very acute on making a hard pressure, especially before a meal. Sensation as if the stomach were too full, as if she had eaten too much, with rumbling in the abdomen.—Severe stitches from the pit of the stomach through to the back. Pressure in the pit of the stomach, afterwards stitches. Pinching with pressure in the right side near the pit of the stomach, at a small spot. Painful pressure in the region of the stomach; when pressing on the part, he feels a pain, externally, as if a blow had been struck in that region. Aching pain in the region of the stomach and liver. Sensation in the region of the stomach, when sitting bent, as if it were distended with air, which causes a troublesome pressure in those parts, which is sometimes relieved by an empty eructation; when remaining in that position for a time, the sensation becomes very painful and descends lower into the left side of the abdomen; it disappears entirely when sitting erect.—Feeling of warmth and burning in the stomach, in the region of the cardia; desire to eructate, and eructations tasting of the medicine; soon after, frequent tasteless eructations; the burning in the stomach diminishes after every eructation.

**Abdomen.**—A kind of bubbling in the region of the border of the short ribs, in the angle below the pit of the stomach, as if the cartilages would be bent from within outwards, and as if the cartilages and muscles were raised; this bubbling sensation causes a kind of anxiety, and obliges him to sit up. *Writhing and pinching in the abdomen, in the umbilical region*, frequently recurring with increasing violence and with a sensation as if vomiting would come on, without nausea. Painful drawing in the right side of the abdomen towards the genital organs. Colic, as if he had taken cold, and as if diarrhœa would come on, ceasing after passing flatulence. Itching pain above the umbilicus. Severe *stitches* in the hypogastrium from without inwards; in the evening when lying in bed. Aching, intermittent pains in the right renal region. Compressive pain in the left iliac region. Contractive pain in the region of the uterus. Inflammation of the bowels. Cutting in the bowels with rumbling in the side of the abdomen. Pain as if the bowels became constricted. Pushing, almost paralytic pain in the sphincter of the anus; a kind of urging almost the whole day, without any evacuation; a long time after he has to go to stool, the first part of the evacuation being quick and liquid, the second portion slow and hard.—Indescribable uneasiness in the lumbar vertebræ; dragging sensation from behind forward (resembling weak labour-pains).—Excessive distention of the abdomen.

Rumbling in the abdomen.—Bruised pain of the abdominal muscles, in the evening, in bed.

**Stool.**—The stool intermits, sometimes a day; afterwards, after much pressing, he has several papaceous evacuations towards evening. The stools become harder and painful; afterwards discharge of blood from the anus, which is painful to pressure. Painless diarrhoea, with rumbling, for four days. Diarrhoea, with emission of much flatulence. Pains in the rectum during stool, which pass off easily. Liquid, slimy, and frequent stools. Discharge of bloody mucus from the anus. Biting-sore stinging, at stool, in the anus. Stitches in the anus and in the front part of the thighs when walking. Hæmorrhoidal tumors especially painful in the morning.

**Urinary Organs.**—Retention of urine with burning, and emission drop by drop. Intermitting, almost painful desire to urinate. Irresistible desire to urinate. *Copious emission of urine.* Increased emission of a dark-yellow urine. Fleeting burning pains in the vesical region. Frequent emission of a quantity of urine, for eight days, from the first day; also at night; the urine is turbid when coming out. Smarting in the urethra, during micturition. Violent desire to urinate, but little urine being passed; afterwards she felt as if she would pass more. The whole urethra is painful and inflamed, with purulent gonorrhoea, for 14, 21 days, (from introducing the leaves into the urethra).

**Genital Organs.**—Dull stitches with pressure from the glans through the whole penis. Violent stinging itching in the glans early in the morning. Visible swelling on the dorsum of the penis not far from the glans, the skin over it being movable; the swelling feels like cartilage, is flat towards the median line, having a sharp, pad-shaped border, is painless even when pressed upon; the swelling becomes harder during an erection, it becomes more manifest and is felt more distinctly by the hand, and a peculiar dull, tensive sensation is perceived in the swelling at that time, for eight weeks. The figwarts become sensitive to pain. *Burning sore pain of the figwarts and glans,* more violent when touching them. The frænulum is swollen and too rigid. Painfulness of the foreskin, he is not able to draw it back. Pain in the region of the frænulum, in paroxysms. Dark redness of the glans. Contusive pain in the right testicle. Tensive sensation, with pressure, in the left testicle, frequently recurring. Increased sexual desire; slight excitement brings on violent and continuous erections, with aversion to an embrace.—Drawing pains with pressure in the right spermatic cord.

**Female Sexual Organs.**—Increases the desire for an embrace in females, and the pleasurable excitement. Irresistible desire for an embrace. Drawing pressure in the hypogastrium towards the genital organs, as if the menses would make their appearance. Painful feeling of oppressive heaviness in the abdomen, more violent when pressing upon it, as she feels on the first day of her period. Painful drawing in the small of the back, especially when bending backward, as she feels previous to her menses. Severe stitches in the vagina, deep, from before backwards. *The menses appear without pain, but are three or four times more profuse than usual; she passed clots of blood after rising.* The os tincæ is open, the blood looks red, the discharge being profuse and at intervals, especially during motion. °The menses, which generally came too soon, now came on eight days after the time. (Curative effect, but the dose being too strong, the re-action continued still at the period when the menses should have appeared.) The menses, which generally appeared four or five days before the time, appeared only for a couple of hours, and looked watery; on the next day pure blood appeared, but only for a couple of hours, and so on for four days. (Curative effect, inasmuch as the blood was generally bright-red, and was passed in large quantities; the scantiness of the discharge was probably owing to the

large size of the dose, she had taken six drops; the next period was quite regular). The menses continue for nine days, very profusely. Violent menstruation, twenty-six hours after the regular menses, with violent colic and labour-pains; the blood was partly fluid, partly lumpy; there was less discharge of red urine with strangury, and discharge of a slimy fluid from the vagina. Hemorrhage from the uterus, at the period of the menses.—°Hemorrhage after parturition. °Hemorrhage after miscarriage. \**Miscarriage, metrorrhagia*.—Swelling of the breasts. Pressure or stinging in the nipples. Tingling in the nipples. Leucorrhœa, *with itching of the pudendum*. Milky leucorrhœa, occasioning an itching. °Leucorrhœa after suppression of the menses. °Permanent disappearance of leucorrhœa of a starch-like consistence, yellowish, ichorous, fœtid, and of painful discharges of blood which occurred every fortnight, resembling serum, fœtid.

**Larynx.**—*Crawling and tickling in the larynx, exciting a cough, with slimy expectoration*, sometimes the cough is dry. Frequent hawking of mucus, early in the morning, the phlegm is loose, but does not come up; some phlegm is all the time in the throat, occasioning a hawking from time to time. Fulness in the chest, with cough. Dry and hawking cough, and titillation in the larynx; expectoration streaked with blood on the day following. Hæmoptysis.

**Chest.**—Painless shortness of breath, during rest and motion. Asthma, increasing unto arrest of breathing.—Pressure, rushing into the chest like a wind; the chest feels dilated, and, nevertheless, momentarily oppressed. Slight oppression of the chest, with desire to take a deep inspiration, which seems to relieve the oppression; after a while, when the deep inspirations are difficult to take, they occasion a stitch on the left side behind the conjoint cartilages of the short ribs, superficial (from chewing the berries). Shooting stitches in the left chest. Burning stitches in the left chest. Cutting in the chest, above the pit of the stomach.—Continual sore stinging pain in the xiphoid cartilage, increased by a deep inspiration and contact, less during rest. *Tensive pain, with pressure, in the middle of the sternum, increased neither by expirations nor inspirations*. Spasmodic painful pressure in the fore part of the chest, above the pit of the stomach, extending across the chest like a band, and increasing by an inspiration; after a long walk. Aching pain in the whole extent of the sternum, increased by an inspiration; *sensation as if the sternum encroached upon the chest* and were curved from without inwards. The sternum is painful to the touch. Painless trembling in the chest, behind the right side of the sternum, frequently through the day; tremulous motion, sounding like a hollow rattling (crackling) or snapping, as of electric sparks. Painful dull stitches under the handle of the sternum, on the left side. The beating of the heart is increased, more violent, alternating with pulsations throughout the abdomen, but neither in the head nor limbs; accompanied with drowsiness, without his being able to go to sleep. The beats of the heart are stronger, sometimes more rapid, fuller, and felt over a larger space; weaker after the siesta. Burning, with pressure, in the lower false ribs of the right side. *Intermittent stitches in the clavicle*. Sharp stitches in the region of the last true ribs of the right side, towards the sternum, only during an inspiration. Prickings in the left side, posteriorly, in the region of the last two false ribs. Creeping over the back, commencing in the nape of the neck. When stooping, a stitch darts into the small of the back, and there remained a violent tension, as if the parts would be torn; he had to remain bent for some time; afterwards, when in bed, he felt a violent chill without thirst. Paralytic pain in the small of the back; he would like to stretch, bending backwards is pleasant to him. *Drawing pains in the small of the back, extending into the pubic region*. Paralytic pains in the small of the back, especially on the left side. Constant pain in the small of the back, obliging him to

draw the back in, when he feels a voluptuous pain in the same. Tearing pain with pressure in the region of the psoas muscles and the lowest dorsal vertebræ, also in the adjacent parts of the ribs, especially when bending the body.—Sharp stitches in the region of the dorsal vertebræ, increased during an inspiration. Stitching pain in the dorsal vertebræ.—Aching pain in the soft parts directly over the border of the left scapula, during rest; it disappears in the evening, during motion. Paralytic, pressing pain in the muscles of the left scapula, with a burning sensation in these parts, gradually extending over the left side of the thorax; not influenced either by rest or motion. Pressure below the left scapula, at a small spot, not perceptible when moving the arm.—Rheumatic drawing in the cervical muscles.—Drawing in the neck. Tearing in the cervical muscles, also with pressure. Bruised pain, also in the vertebræ. Pressure in the left cervical muscles.

**Upper Limbs.**—*Pain as if sprained in the right shoulder-joint*, also without motion. Pressure in the shoulder-joints. Drawing sensation with pressure in the left shoulder. Tearing pain in the left axilla and above the left nipple, increased by contact. Rheumatic pain in the left shoulder-joint. Paralytic drawing in the head of the left humerus, with a feeling of weakness in the same, during motion. Drawing paralytic pain through the left arm, from the head of the humerus to the elbow. Weak feeling in the whole left arm, but not lasting.—Humming feeling of weakness in the left forearm. Stitch from the shoulder to the tip of the elbow, and at the same time a stitch from the wrist-joint to the tip of the elbow, like an electric darting. Aching pain in the muscles of the upper arm, interiorly, increased by contact. *Paralytic tearing along the upper arm, as far as the hand. Stinging in both upper arms from without inward, near the elbow-joint.* Paralytic pain in the left arm, around the elbow-joint and in it, worse when leaning the arm upon anything. A few days after the paralytic pain in the elbow-joint had disappeared, some pimples broke out: elevation of the skin without redness, areola, violently itching, especially at the tip; a scurf forms after scratching the pimple; goes off in five days. *Painful pressure in both upper arms, near the elbow-joint, from without inward, more violent when touching or moving the parts. Sticking pain in the olecranon process of either arm.—Aching pain in the right ulna, increased by motion or contact.*—Heaviness and bruised feeling in both forearms when bending them inwards, and a feeling of anxiety, obliging him to change the position of the arms frequently, in order to obtain relief, (after an embrace). Sticking in the left elbow-joint, externally, not felt when moving the joint. Drawing-tearing, with pressure, from the middle of the right carpal bones as far as the wrist. Many sudden prickings in the forearm, when sitting. Sensation in the palm of the left hand, as if it would become spasmodically constricted. Weakness in the hands when writing; he was unable to hold his pen; accompanied with chilliness. Spasmodic contractive pain in the palm of the left hand; on stretching it, it contracts again involuntarily; the pains are greater when stretching the hand than when bending it. Pain as if sprained in the left wrist-joint, which increased more and more, so that he was unable to move his hand after the lapse of a few days (from pulling the plant through the hand). Stiffness of the left wrist-joint, with some luxation-pain; in a few days the pain changed to a tearing, sticking and distention of the joint, the prover weeping constantly, and being beside herself; she had to move the affected hand from side to side with the healthy one, or had to keep it straight; the hand could not be left hanging. (Aconitum removed the pain.) Drawing pain in the left metacarpal bone. Tearing pain in the right carpal bones. Burning tearing in the third metacarpal bone of the left hand.—Drawing pain in the flat hand as far as through the fingers. Painful drawing in the metacarpal bone of the right index-finger. Lancinating pain in the muscles

of the left index and middle fingers. Tearing in the joints of the fingers of either hand. Paralytic tearing in the left index-finger. The ring-finger goes to sleep. Sticking pain in the tip of the left thumb. Tearing pain in the second and third joints of the little, and in the third joint of the fourth finger of the right hand. Burning lacerations in the muscles of the first joint of the fourth finger of the right hand. Drawing tearing in the fourth finger of the right hand. Tearing in the knuckle of the left metacarpal bone of the little finger.

**Lower Limbs.**—Smarting as of a wound in and around the right hip-joint; worse when turning and moving the thigh, disappearing after a time by sitting and lying. Aching pain in the region of the right hip. Dull stitches in the region of the left hip, only during an inspiration. Pain in the right hip-joint, early when rising; she was at first scarcely able to stand; the pain disappeared after walking about. Ulcer on the upper part of the nates, painful and stinging. Pushing and drawing in the thighs and knees. Tensive-tearing pain, when walking, in the anterior surface of the left thigh, obliging him to limp. Sudden painful pressure, striking rapidly from the middle of the thigh to the knee, where it is most violent, and then disappears while seating himself. Intermittent stitches in the internal surface of the thigh. Rheumatic pains in the left thigh, then down the left tibia, and thence into the left forearm, during rest. His thighs feel bruised and painful on the anterior surface, in the middle; he does not feel the pain when stopping up, only when walking on level ground, and when descending; when sitting and drawing the legs up, he experiences a tension and pain in the thighs when touching them. He is unable to squat, from a tensive pain in the extensor muscles of the thighs, as if they were too short. Tension in the internal muscles of the thigh, several days. Paralytic pain in the left thigh, above the knee, internally, but not as if in the bone, moving from below upwards, going and coming; also once in the radius above the left wrist-joint. Painful pressure in the middle of the thighs from without inwards. Burning pain in the outer parts of the thigh, inferiorly and internally. Tearing pain close above the left knee, in the soft parts. Itching of the thighs at night, appeased by scratching. Violent itching of one spot on the right thigh, below the middle, early in the morning; after scratching the part, the skin is found excoriated, with burning pain and water oozing out; it remains so for three days, and then only becomes covered with a thick scurf, which lasts about eight days; itching in the border of the scurf: when this border is scratched off, there is much and ready bleeding; afterwards a sensitive, red, cicatrized skin remains for a long while, which is painful to pressure; there are similar spots on the left ear, superiorly and interiorly.—Lancination below the knee, in the tibia. Stitch from the lower part of the tibia towards the toe, in the evening, in bed.—Painful tensive pressure in the dorsum of the tibia, above the tarsal joint (when sitting). An ulcer which he had on the tibia, and which had the appearance of lard, increased, the suppuration increasing likewise; it became painful, and then healed in a fortnight perfectly and permanently (curative effect).—Dull drawing to and fro in the left calf, down to the malleoli. Itching in the left calf, not relieved by scratching. Itching now in the left, now in the right calf, he had to scratch violently; pimples make their appearance in the scratched places, occasioning a smarting pain. A small spot on the left leg, internally, which had been scratched open, looks unclean and ulcerated; this ulcer is painful on the second morning, and itches; the scurf is scratched off; this leaves an impure base; small areola in the evening, but always painful; this areola is redder every morning, and the ulcer is painful without being touched; in the evening the areola is paler, and painful only when pressed upon; disappears after ceasing to take the drug.—Tingling, drawing tearing with occasional darting stitches in the lowest part of

the tendo-Achillis, during rest, disappearing by moving and stretching the sole of the foot. Painful feeling of heaviness in the right foot, a hand's breadth above the malleolus, and extending downwards. Tearing in the dorsum of the foot aggravated by feeling it. *Tearing pain with pressure in the metacarpus of both feet.* Crampy pains in the right tendo-Achillis; afterwards the pains become tearing. Burning tearing pain in the hollow of the right foot, during rest. Sensation of groaning-sticking pressure in the external side of the hollow of the right foot, when sitting. Tearing pain in the metacarpal bones of the little and fourth toes of the left foot. Prickings in the big toe. Painful stitches in the ball of the left big toe. Titillating fleeting stitches in the ball of the left big toe, shaking the whole body like slight electrical shocks, when sitting. Burning pain in the left fourth toe. Arthritic pain in the big toe of the right foot; it is red, shining, swollen, with violent boring-sticking pains; she was unable to move either foot or toe; nor was she able to bear the least pressure upon it, stocking or bed-cover (this continued several days); afterwards this pain got into the right wrist-joint, the hand was stiff, and the same pains were felt in it; she was not able to grasp the least thing with it; afterwards the pain passed from the right to the left hand. Tearing in the anterior joints of the right toes. *Painful drawing in the joints of the right toes, becoming more violent during a walk.*—Intermittent aching pain below the heel, in the commencement of the sole of the left foot (when sitting). Severe dull stitches at night, under the right heel. Disagreeable itching, as if mixed with fine stitches, obliging one to scratch, and afterwards burning, almost as is felt in frozen feet. *Sharp stitches in the left and right heels, from within outwards.* Sweat on the feet, extending above the malleoli, early in the morning, in bed. Icy-cold feet.

**Sleep.**—Restless-ness and anxiety in the evening when in bed, with chills and goose-flesh; this prevents her falling asleep. Restless sleep, with confused dreams, frequent waking, after which he has to toss about a long while before he goes to sleep again. Constant dreams, full of invention and mental exertion. Restless sleep, and dreams about a number of things which he had begun but not completed. Dreams towards morning, with reflection and mental exertions. Restless sleep, with orgasm of the blood, heat and profuse sweat. He tosses about in bed at night, says a great many common-place things in his sleep, and sniffs aloud when taking an inspiration. Prefers lying on the left side at night. Dreams in the morning that men are killed by falling from a height. Anxious dreams which wake him frequently; sleep is especially impeded towards morning. She dreams that she is disputing with some one; this wakes her in tears.

**Fever.**—Frequent shudderings all over, and extending across the hairy scalp, in the evening before going to bed. Chilliness the whole day. One chill after the other in the evening, on lying down. Cold feeling in the right limb, as if it were standing in cold water. Shuddering over the whole body; her eyes saw black; afterwards she felt drowsy. Shuddering with goose-flesh, it does not continue long, but returns frequently.—Intolerable burning heat in the whole body, with great restless-ness; he has to change the position of his limbs all the time, without any perceptible heat or thirst, after dinner. Heat in the face, with icy-cold hands and feet. Constant flushes of heat in the face, with frequent chilliness over the rest of the body.—Fever, especially towards evening; first chilliness, afterwards heat in the whole body, and profuse sweat in the subsequent night. Night-sweats, several nights.

**General Symptoms.**—Lancinations in all the joints, with sensation as if they were swollen, accompanied with drawing stitches through the long bones. Cracking of the joints. Burning sensation in the affected part, in that portion of it which is touched. Aching-burning pain in the swollen periosteum. Paralytic

pain in the joints, especially after an exertion. Rheumatic pains. Her legs feel as if they would break, she had to sit down frequently and rest herself; accompanied with drowsiness and yawning; she felt weak, with trembling of the arms and of the whole body. Pulsative sensation in almost all the arteries, almost like jerking. Dull drawing pain in the bones of the upper and lower limbs, commencing in the middle and spreading as far as the joints, where the pain was felt for a long while more violently and continuously, both during rest and motion, while in the room; disappearing in the open air. *Heaviness and laziness in the body, obliging him to lie down.* General sick feeling, as if he had been dancing and revelling several nights, with whimsical mood. General uncomfortableness, without his being able to state what and where he suffers. She feels weary and weak in all her limbs, with great despondency. He feels hot after walking in the open air. A short walk tires him so much that he has to lie down. Excessive weariness; he wakes after midnight, and is unable to fall asleep again; he is obliged to stretch his legs and draw them up again alternately, to lay them hither and thither. In the evening, when in bed, his blood is excessively agitated; he is obliged to change his position all the time, and is unable to fall asleep.

**Characteristic Peculiarities.**—All the symptoms cease as soon as he goes into the open air; they re-commence as soon as he enters the room.

#### PATHOLOGICAL ANATOMY.

*In dogs.*—The mucous membrane of the stomach is not very red, but inflamed; a small ulcer in the neighbourhood of the pylorus. The inner coat of the intestines, covered with a shiny bilious coating, was not much changed, except in the rectum, where a few red spots were seen (Orfila).

*In cats.*—Bladder contracted, shrivelled, dotted with black and sanguineous spots, and filled with a bloody coagulum. While yet alive, the cat had pytalism, with anguish, frequent emission of urine and bloody urine for one hour (from one drachm of oleum sabinæ, Hillefeld).

*In men.*—Bursting of the gall-bladder, with effusion of bile into the abdominal cavity, the contents of which were inflamed (after miscarriage).

## 212. SAMBUCUS.

SAMB. N.—Elder.—See HAHNEMANN'S Mat. Med., IV.

COMPARE WITH—Acon., Bell., Chin., Ipec., Hep. s., Lye., Puls., Rhus tox., Scill., Spong., Stram., Sulph.

ANTIDOTES.—Ars., Camph.

#### CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

Anasarea with affections of the chest. Samb. removed the water, but it accumulated again very rapidly.—*Intermittent fever*, with excessive sweats, particularly at night.—Obstinate intermittent fever, with profuse exhausting sweats during the apyrexia.—Dry coryza.—Dry coryza of infants.—Angina membranacea.—Croup with sopor, stertorous breathing and wheezing with open mouth and the head drawn backwards; the child starts up, kicks about, is on the point of suffocating, turns black and blue in the face, after which cough with rattling breathing set in again; suffocation and paralysis of the lungs appeared unavoidable. Acon., Spong., Hep. s., a vesicatory, Cupr. sulph. in the shape of an emetic, had been employed in vain, and the disease had progressed until the

fourth day. Two doses of Samb. saved the child's life.—Deep, hollow, rough cough, like croup-cough, with fever.—Cough with copious expectoration of a saltish and sweetish mucus, aching pains in the chest, hectic fever.—Catarrh in children.—Whooping cough.—Suffocative catarrh.—Asthma Millari.—Cough with profuse saltish expectoration, emaciation, dyspnoea, oedema of the feet.—Phthisis consummata.—Angina pectoris.

#### SYMPTOMS.

**Mind and Disposition.**—*Great tendency to start; he starts at things which he sees constantly around him.—Continual ill-humour; everything affects him unpleasantly.*

**Sensorium and Head.**—Periodical delirium, sees frightful things on the wall. *Dizziness*; cloudiness of the head, for some minutes. Early in the morning, when moving about, his head feels giddy, accompanied with a tensive sensation, as if the head were full of water.—Lancination through the left half of the occiput, frequently recurring and continuing for a long time; between the attacks he feels a dull sensation in those parts. Tearing and aching pain in the upper part of the forehead, spreading, as it were, like rays towards the eye (after two days). Aching and tearing pain in the head when stooping, extending across the left temple, close to the bone. Tearing in the temple, more particularly close to the head, occurring in single paroxysms, which pass off very quickly. Pressing in the whole head, in all directions, from within outwards. Pressure in the temples from within outwards. Aching pain in the forehead, and a sudden, painful jerk through the brain from one side to the other. Aching, stupifying pain in the head, as is felt during a cold in the head. Aching, stupifying pain in the head, as is caused by intoxication. Digging-up pain in the vertex.—Itching of the forehead, going off by rubbing.

**Ears, Eyes and Nose.**—At first the pupils are very much contracted, afterwards very much dilated.—Sensation as of a light flush, as one experiences in blushing, rising as high as the face. Heavy and pressing sensation in the tip of the nose, as if it would bleed. Itching of the dorsum of the nose, with a slight pithy feeling in the skin of the nose. *Sharp stitches in the interior of the right ear, accompanied with a cramp pain in that ear.* °*Stoppage of the nose, with accumulation of thick, tenacious mucus in the nose.*

**Face and Teeth.**—\**Bluish and bloated face.* °Pale, livid face. Circumscribed redness of the cheeks. °Red spots here and there, with burning.—Tension in the left cheek, with a gnawing pressure in the region of the upper jaw-bone. Tensive pain, as if the cheek were swollen, and numbness of the cheek. Painless, suppurating pimple on the left side of the lower lip, with a reddish areola.—Tearing toothache in the left row, up to the eye, with a feeling of swelling in the cheek.

**Mouth, Pharynx, Oesophagus.—Gastric Symptoms.**—Great dryness of the palate, without thirst.—Thirst, without relishing the drink.—Vomiting of mucus and bile, after taking milk.—Hiccough during and after a meal.—Sensation of incipient nausea in and below the pit of the stomach.—Short stitches close below the stomach, increased by external pressure (when sitting).—Feeling of dull pressure in the region of the stomach. Rumbling in the abdomen. *Pinching in the abdomen, with emission of flatulence, as if occasioned by a cold.* Pain in the abdomen, as if the bowels were bruised. Pinching pain in the abdomen, when leaning against a sharp edge. Pressure in the abdomen, with nausea, whenever he presses it against anything. Stitches in the obliquus externus, when sitting or standing. Spasmodic tearing in the abdominal muscles, especially when moving them, in the evening when lying. Fine pinching in

the abdominal muscles of the right side, below the short ribs. Fine tearing in the left side of the abdomen. Sticking in the left side of the abdomen, above the hip; single, rather dull prickings, regular as the pulse, for a quarter of an hour; now increasing, then decreasing. *Cutting* in the outer parts of the hypochondria, also pinching cutting, particularly on moving the trunk.

**Urinary and Genital Organs.**—Frequent desire to urinate, with scanty emission. Frequent desire to urinate, with copious emission. Desire to urinate at night. Frequent emission of a bright-yellow urine. Thin stream. Itching of the orifice of the urethra. °*Swelling of the scrotum*. Involuntary emission of semen, after midnight.—°Profuse menses, °like metrorrhagia.

**Larynx and Chest.**—Hoarseness, occasioned by a quantity of viscid, tenacious mucus in the larynx. °Tracheitis? °Angina membranacea? Cough, (see Clin. Obs.). \**Violent dyspnœa*. \**Suffocative paroxysm*, like Asthma Millari, after midnight, (on waking from a slumber, with the eyes and mouth half open, wheezing in the chest, bluish bloatedness of the face and hands, heat without thirst, and weeping when the attack sets in,) and stitches in the left side of the chest below the nipple. Oppression and pressure behind the sternum, and pressure in the pit and region of the stomach, with nausea and a feeling of debility. Cutting, pinching in the region of the last false ribs, towards the dorsal spine. Sharp, intermittent cutting in front, in the region of the third false rib, especially when moving the trunk. Sudden clutching, internally, in both sides of the chest, in the region of the fourth true rib.—°*Angina pectoris*.

**Back.**—Drawing pressure in the *small of the back*, extending as far as the muscles covering the inner surface of the os ilium, when standing. Cutting shocks in the os sacrum, most violent when bending forward, with a tensive pain. *Aching pain in the middle of the spine, not disappearing by any motion, and continuing for a long while.*—Pulsative throbbing sticking under the right scapula, when sitting. Cutting stitches in the region of the scapulæ, during rest. Sharp stitches from within outward, in the region of the right scapula, interiorly; most violent during rest.—Oppressive heaviness in the nape of the neck, with painful motion of the head. Cutting stitches in both sides of the neck, particularly when moving it.

**Upper Extremities.**—Fine pinching in the axilla. Fine stitches in the middle of the upper arm, in the inner side. When he leans on the upper arm, it feels as if it would break. Paralytic heaviness in the elbow-joints.—Drawing pain in the carpal bones, and extending along the ulna, during rest. Sharp stitches in the spinous process of the ulna. Cutting stitches in both wrist-joints, regular as the pulse; the stitches are somewhat relieved by moving the parts.

**Lower Extremities.**—Tearing pain above the hip-joint, all around, only when walking. Crampy drawing in the posterior and superior part of the thigh, when walking, in the region where the gluteus maximus is inserted. Drawing-sticking sensation in the upper part of the anterior muscles of the right thigh, during rest. Stinging itching of the inner side of both thighs; when rubbing the thighs the stinging becomes a burning.—The hamstrings are put upon the stretch, and feel as if too short, so that standing becomes troublesome to him. Violent itching of the patella, with a rough and scraping sensation, as if an eruption would break out. Sensation of weariness in the legs, with sensation as if cold air blew upon them; both symptoms are felt only when standing. Sharp piercing stitches in the inner side of the tibiæ, somewhat relieved by motion. When standing, the middle of the right tibia feels dead, cold, and as if gone to sleep. In the evening, when in bed, he feels a tearing pain in the external malleolus of the right foot, and in the anterior tibial muscles. Œdema of the feet.

**Sleep.**—Restless sleep, relieved by sitting up in bed, with sensation as if the pains were moving downwards. °Slumbering with the eyes and mouth half open. Frequent waking, as if wakeful. \*Starting from sleep, with anxiety, trembling, and shortness of breath unto suffocation. Vivid dreams, which he is unable to recollect. Laseivious dreams, with emission.

**Fever.**—The pulse becomes slower, and falls from 70 to 60. The pulse became slower by ten beats, but more full. Repeated attacks of slight shuddering. Slight chilliness, the face being warmer than usual. *Chill over the whole body, with stinging crawling, now in one, then in another place, with remarkable coldness of the hands and feet; in the lower limbs the shuddering extends especially from the knees downwards.* Chilliness over the whole body, especially the hands and feet; they are cold to the touch, although the latter had been wrapped up very warm. The hands are eold. Creeping in the fingers, which are quite cold. The feet are icy-cold, the rest of the body being naturally warm.—*Burning sensation in the face, the body being moderately warm, and the feet icy-cold, without thirst.* Warm feeling about the head and neck; the face and the rest of the body are also warmer to the touch than usual, but without thirst. Frequent flushes of heat in the afternoon, with great heat in the face; half an hour after, sweat breaks out in the face. \**Intolerable dry heat all over the body, with dread of uncovering himself, -also with fear as if he would be attacked with colic if he uncovered himself.* Heat of the body, without thirst, shortly after lying down.—Pulse slower and fuller, or quicker.—Profuse sweat after midnight, but not about the head. On waking, he is covered with sweat all over, two nights in succession. Profuse sweat without thirst, from evening till after midnight, all over, and also in the face.—Intermittent fever.—(See Clin. Obs.)

**General Symptoms.**—When sitting, he is suddenly attacked with a painful drawing in every part of the surface of the body. His hands tremble when writing. General rushing of the blood, in the evening, in bed, with tremulous sensation in the body.—Great heat all over, when walking. Most of the pains come on during rest, and go off during motion; only a few painful symptoms are occasioned by motion.—Dropsical swelling (from the external application). °Emaciation. °Dropsical swelling of the whole body.

## 213. SANGUINARIA CANADENSIS.

SANG. CAN.—Indian puceon, Blood-root, Red-root.—See TRANSACTIONS OF AMER. INST. of HOM., I.

### CLINICAL OBSERVATIONS.

Dr. Bute has found it useful in the following affections: Vertigo by quickly turning the head, or by looking upward.—Distention of the temporal veins, which were painfully sensitive to the touch.—Feeling of soreness on small spots on the head, especially in the temples.—Several cases of angina, especially a form of pharyngitis.—Hæmorrhoids.—A female who had distention of abdomen in the evening, and flatulent discharges, per vaginam, from the os uteri, which was constantly open, at the same time a pain passing in rays from the nape of the neck into the head.—In a lady; coldness of the feet in the afternoons, at the same time the tongue was painful and sore upon being touched, like a boil; and there was stiffness of the knee and finger-joints.—Burning of the palms of the hands and soles of the feet, compelling him to throw the bed clothes off the feet, for

the purpose of cooling them. In many cases of affections of ladies in the climacteric years.—Burning of the hands and feet at night.—Burning of the ears, with a redness of one cheek.—In a man of scrofulous habit; after taking cold, coryza, then rawness of the throat, then pain in the breast, with cough and expectoration, and finally diarrhoea.—Pain in the breast, with periodic cough.—Tormenting cough and expectoration, with circumscribed redness of the cheeks.—In an unmarried lady of thirty years of age; constant severe cough, without expectoration, with pain in the breast, and circumscribed redness of the cheeks. A dose removed the cough for an hour, and many repeated doses perfectly removed the disease.—In a lady; pain in the left hypochondrium, which was rendered worse by coughing, but was better from being pressed, and by lying towards the left side; very copious urination at night.—In a man; for some years very frequent attacks of burning and pressure in the breast, which alternated with a bruise-like pain in the thigh, but never appearing in both places at the same time. The affection of the breast always ended with the feeling as if hot water were poured from the chest into the abdomen, which was followed by diarrhoeic stools. Many kinds of arthritic and rheumatic pains; pain in the inner side of the right thigh, like rheumatism, etc.—Rheumatic pain in the right arm and shoulder, worse at night in bed, so that the arm could not be raised; of a year's duration, perfectly cured.—In a case of gout, with very considerable tumefaction of the joints of all the extremities, obvious displacement of the right shoulder and shoulder-blade, cramp in the nape of the neck and in the larynx, and bad taste in the mouth, the Sanguinaria was of great service.—Several cases of pain in the back.—Pain in the loins, caused suddenly by lifting.—Ulceration at the roots of all the nails of both hands, in a young man, who had just arrived from a long sea voyage.—General itching in the skin, with a disposition to nettle-rash, preceded by nausea.—It appears to be an important remedy in scarlatina.

#### SYMPTOMS.

**Mind and Disposition.**—Extreme moroseness. Anxiety before the vomiting, and before the delirium, which is caused by the seed.

**Sensorium.**—Vertigo, with singing in the ears, flatulent eructation, and then tickling in the throat which excites cough. (Immediately after taking it.) Frequent vertigo and diminished vision before vomiting, after large doses. Vertigo with nausea, long continuing with debility, with headache. \*Vertigo on quickly turning the head, and looking upward.

**Head.**—Confused and dull feeling in the head, which became better after eructation. Determination of blood to the head, with whizzing in the ears and a transitory feeling of heat; then a sensation as if vomiting was about to take place, but instead of this there succeeded slight cutting drawings in the abdomen, and then a stool.—Heaviness in the head.—Pressing drawing in the forehead.—Pain of a short duration in the right side of the forehead, like a pressing, only whilst standing still, better whilst walking; at the same time a pain deep in the left ear.—Headache as if the forehead would split, with chill and with burning in the stomach. A pain occurs suddenly in the interior angle of the right eye, and thence to the forehead.—About five o'clock in the evening a severe quick-darting pain in the forehead and temple on the right side, which continued for about five minutes; this pain re-appeared in the evening about seven o'clock; about eleven o'clock at night a sudden pain through the forehead like an electric stroke of short duration.—A slowly-shooting pain in the forehead. Periodic stitches in the left temple.—Pain in all the upper part of the head. In the abdomen, pain, like fulness, in the fore part of the head.—Pressing in the upper part of the head, in the region of the anterior fontanelle, disappears

whilst walking.—Boiling pain above, in the fore part of the head.—Severe pain above, on all the left side of the head, especially in the eye; at the same time similar pain in the left foot.—Nausea, disposition to vomit without being able to do so; then headache with rheumatic pains and stiffness in the limbs and neck.—Beating headache and bitter vomiting. Headache in the evening, with tickling in the throat.—Headache, with chill. Headache, with nausea and chill, then flying heat from the head to the stomach.—Headache, with vertigo and pain in the ear.—The headache occurs paroxysmally.—\*Pains in the head, in spots, soreness, especially in the temples.—\*Pains in the head, in rays drawing upward from the neck.—\*Severe pains in the head, with nausea and vomiting, frequently with bilious vomiting, in attacks with hebdomadal or longer intervals, from very different inducements, commonly beginning in the morning, increasing in violence through the day, only diminished by lying quiet, and when possible by sleep; North American sick headache.—Feeling as if the head is drawn forward.—Soreness of the scalp, on being touched. Feeling of looseness of the scalp on the right side. Sensation of looseness and drawing in one side of the scalp, on raising the eyes.—\*Distention of the veins in the temples, perceptible on touching.

**Face.**—Feeling of fulness in the face. Distention of the veins of the face, with excessive redness, and a feeling of stiffness.—Severe burning, heat and redness of the face. \*A red cheek, with burning in the ears. \*Redness of the cheeks, with cough.—Paleness of the face, with disposition to vomit.—\*Cheeks and hands livid, in typhoid pneumonia.—Twitching of the cheeks, towards the eyes.

**Eyes.**—Pain in the right eye.—Pressing pain in the left eye.—Stitch in the upper eyelid.—Watery and burning of the right eye, which is painful on being touched, then coryza. Feeling as if the eyes were affected by acid vapour.—In the afternoon dimness of the eyes, and a feeling as if hairs were in them. Very great glimmering before the eyes.—Diminished power of vision.—Dilatation of the pupils, by the seeds.

**Ears.**—Beating under the ears, at irregular intervals, frequently only a couple of strokes.—\*Burning of the ears, with redness of the cheeks.—Pains in the ears, with headache. Pain in the left ear during the pain in the forehead.—Singing in the ears with vertigo. Humming in the ears, with determination of blood.—Slow stitches in the left ear. Beating humming in the left ear. In the neighbourhood of a smithy he feels every hammer stroke painfully, in the right ear. A crackling in the right ear, when he draws his fingers lightly over his right cheek; on the left side this is not the case.

**Nose.**—Heat in the nose.—\*Nasal polypus.—\*Loss of smell. Smell in the nose like roasted onions. Dislike to the smell of syrup.—Much sneezing.—Fluid coryza, with frequent sneezing. Severe fluid coryza in the right nostril. Watery, acrid coryza, which renders the nose sore. Copious watering of the right eye; the eye painful, especially on being touched; and soon afterwards there occurred a copious watery discharge from the right nostril; in the evening two diarrhoeic stools, and then all the symptoms disappeared.—Fluid coryza, alternating with stoppage of the nose.—\*Influenza. \*Coryza, rawness in the throat, pain in the breast, cough, and finally diarrhoea.

**Jaws.**—Stiffness in the jaws.—Pain in the upper teeth. Pain in a hollow tooth, especially when touched by the food. Toothache, from picking the teeth. Pain in one or more of the incisor teeth, and in a carious molar tooth. Shooting and thrilling pain in a carious molar of the upper jaw, which passes away gradually in that form of pain which is often termed a grumbling toothache. On awaking, toothache in an upper carious tooth, on the right side, at the same time

headache on the same side. The toothache is made worse by cold water, (also by drinking hot things,) and better by drinking warm drink. Pain in a carious molar after cold drinking, two mornings in succession.—Looseness of the teeth. Salivation and looseness of the teeth; he supposes himself able to take them all out.

**Pharynx, etc.**—Feeling of dryness in the throat, not diminished by drinking.—Heat in the throat, alleviated by the inspiration of cool air.—A transitory, but marked sensation in the fauces, as if he had swallowed something acrimonious.—Burning in the fauces, after eating sweet things. Burning in the œsophagus.—A feeling in the throat, as if it were swollen up, and would suffocate him, with pain in the throat on swallowing, and with aphonia. In the evening a pain with a *feeling of swelling in the throat*, worse on the right side, and *most perceptible on swallowing*. \*Angina, in several cases, particularly a species of pharyngitis. \*Ulcerated sore throat.

**Mouth.**—*Feeling of dryness of the lips*. A prickling sensation on the tongue, and roof of the mouth, as after chewing mezereum, but slighter. Crawling on the point of the tongue, after which a sharp feeling extends itself over the whole tongue, in the morning on awaking. Prickling on the point of the tongue. Tongue as if burned. A feeling of dryness and rawness as after acid things, begins on the right side of the tongue and spreads over the whole tongue, mornings on awaking. \*Tongue sore, pains like a boil. Stitches on the left side of the tongue. White-coated tongue with loss of appetite.—Loss of appetite with uncertain cravings.—\*Increases the appetite.—Loss of smell and taste.—A piece of sugar-cake tastes bitter, followed by burning in the fauces.—Fatty taste in the mouth. Slimy taste in the mouth.—Disinclination for butter, which leaves a disagreeable after-taste. Dislike to the odour of syrup.—Craving for piquant food.

**Stomach.**—Pressing in the stomach.—Soreness in the epigastrium aggravated by eating. Feeling of warmth and heat in the stomach. Burning in the stomach, from large doses. Burning in the stomach, with headache.—Jerking in the region of the stomach, as if from something alive. \*Strengthens the stomach. Soon after eating, a feeling of emptiness in the stomach. \*Inflammation of the stomach.

**Gastric Symptoms.**—Severe nausea from large doses. Nausea as if vomiting would succeed. Nausea after eating. Nausea which is not diminished by vomiting. Loss of appetite and periodic nausea. Nausea by stooping. *Nausea with much spitting*. Long-continued nausea with chill. Nausea without vomiting, then headache. Nausea with the headache, with chill and heat. Nausea before the nettle-rash.—Heartburn and nausea.—Regurgitation and disposition to vomit.—Flatulent eructation. Spasmodic eructation of flatus. Hiccough, whilst smoking tobacco. Frequent flatulent eructation of unpleasant odour, with disposition to vomit, and paleness of the face. After the eructation of flatus, the dullness of the head is better.—Vomiting. Before vomiting, great anxiety. Before vomiting, slight pressure to stool. Vomiting of bitter water. Bitter vomiting, with the headache. Vomiting, with craving to eat, in order to quiet the nausea. Vomiting worms. Vomiting and diarrhœa. Whilst vomiting, and afterwards, great weakness.

**Abdomen.**—Severe and continual pain in the hypochondria; vertigo and debility. \*Pain in the left hypochondrium, worse by coughing, better by pressure, and lying on the left side. Diseases of the liver. Torpor and atony of the liver.—Inflammation of the abdominal viscera.—Hot streamings from the breast towards the liver. Beating in the abdomen. Cramp in the abdomen, which passes from one place to another.—Sensation as if hot water were poured from

the breast into the abdomen, followed by diarrhœa.—\*Flatulent distension of the abdomen in the evenings, with escape of flatus from the vagina.—Discharges of flatus upward and downward, by raising himself on account of the cough, which then ceases.—\*Indurations in the abdomen.—Paroxysmal pain in the abdomen.—Slight cutting drawings in the abdomen.—\*Colic, with torpor of the liver.—At night, digging pain in the abdomen, with pain in the sacrum. An hour after taking it, severe cutting pain in the bowels, followed by a single watery stool. In the morning, colicky pain in the upper part of the abdomen, and then a diarrhœic stool.

**Stool.**—Pressure to stool, without evacuation, with the sensation of a mass in the lower part of the rectum; this sensation recurred frequently during the day, without stool. Ineffectual pressure to stool, then vomiting. Urging to stool, *with great discharge of flatus*.—Frequent discharges of very offensive flatus; in the evening a hard stool. Flatulent discharge, followed by a small stool, with relief of the sensation of pressure to stool. Diarrhœic stools, with great flatulence. After cutting pains, stool. After severe pains, stool like water. \*With the diarrhœa, termination of the coryza and catarrh. \*Diarrhœa terminated the attack of pains in the breast. \*Dysentery. The food passes away undigested in the stool. Frequent natural stools, five times in the day. Two small, but not fluid stools. The first days the stools are more laxative and frequent, afterwards rather costive.—\*Hæmorrhoids. A twisting pain on the left side above the groin, equi-distant from the symphysis pubis, and the crest of the ilium; worse whilst sitting, standing, or bending towards the right side, increased by pressure; better whilst walking erect; afterwards this pain passed towards the hip, around and upward, till it reached posteriorly on the short ribs, and remained peculiarly sensible by bending to the right.

**Urinary Organs.**—\*Frequent and copious nocturnal urination.—Seminal emissions during sleep, two nights in succession, after which he feels very well. \*Gonorrhœa.

**Female Sexual Organs.**—Abdominal pains, as if the menses would appear.—It at times aids menstruation. The menses appear a week too early, with a discharge of black blood.—Abortion, on account of too strong operation on the uterus. Causes uterine hæmorrhage.—\*Amenorrhœa.—\*Escape of flatus from the vagina, with dilatation of the os uteri.—\*Climacteric disorders.—The menses appear at the proper time, but still much more freely than at other times, with less pain and weakness in the sacrum, but with pain in the right side of the head and forehead, and a feeling as if the eyes would be pressed out of the head, worse on the right side.

**Larynx.**—\*Chronic dryness in the throat, and sensation of swelling in the larynx, and expectoration of thick mucus. Aphonia with swelling in the throat.—Frequent slight cough, especially whilst eating. Many evenings after lying down, a slight cough from *tickling in the throat*. A dry cough, awakening him from sleep, which did not cease until he sat up in bed, and flatus was discharged both upwards and downwards. \*Continual severe cough, without expectoration, with pain in the breast, and circumscribed redness of the cheeks. \*Tormenting cough, with expectoration; and circumscribed redness of the cheeks. \*Feels stronger and freer in the breast in the mornings, and in the afternoon and in the evening the customary dyspnoea does not appear. A hot burning streaming in the right breast, begins under the right arm and clavicle, and draws itself downwards towards the region of the liver. Acute stitches in the right breast in the region of the nipple.—\*Pulmonary consumption.—\*Cough with coryza, then diarrhœa.—\*Croup. Whooping cough.

**Chest.**—\*Hydrothorax.—\*Asthma.—\*Pneumonia.—\*Typhoid pneumonia,

with very difficult respiration, cheeks and hands livid, pulse full, soft, vibrating and easily compressed. \*Diseases of the lungs. \**Pain in the breast*, with periodic cough. \**Pain in the breast*, with cough and expectoration. \**Pain in the breast*, with dry cough.—\*Burning and pressing in the breast, then heat through the abdomen and diarrhoea.—Slowly-shooting pain in the right side of the chest about the seventh rib. Acute stitch in the right breast. Slowly-shooting pain in the left side of the chest, near the axilla. Stitches from the lower part of the left breast to the shoulder.—Pressing pain in the region of the heart.—Pressing pain in the chest and back. Stitches in the left side in the region of the short ribs, by moving and turning the body.—Constant pressure and heaviness in the whole of the upper part of the chest, with difficulty of breathing. Slowly-shooting pain under the sternum.—Numb pain the whole length of the left scapula, along its inner edge, which is also increased by breathing.—Palpitation of the heart.—Stitches in both breasts. Severe soreness under the right nipple, aggravated by being touched. The nipples are sore and painful.

**Back.**—Pain in the nape of the neck. Soreness on the nape of the neck on being touched. Pain in the left side of the nape of the neck. Pain in the right side of the neck, as if sprained. Stiffness in the nape of the neck.—Pain in the back. Pain in the sacrum and bowels. \*Pain in the sacrum from lifting. Pain in the sacrum which is alleviated by bending forward. Rheumatic pains in the nape of the neck, shoulders and arms.

**Superior Extremities.**—Severe pain in the left shoulder, in the evenings. Pain under the shoulder-blade with chill. Pains from the left breast to the shoulder. Rheumatic pain in the right shoulder, worse in the forenoon, when she has retained the arm for a long time in the same position, drawing itself downwards to the elbow. Pain on the top of the right shoulder. Sudden rheumatic pains in the shoulder-joint. In the upper part of the shoulder-joint severe pain at every motion.—\*Rheumatic pain in the right arm and shoulder, worse at night in bed; cannot raise the arm. \*Pain in the right shoulder, and in the upper part of the right arm, worse at night on turning in bed. Rheumatic pains in the arms and hands. Rheumatic pains in the right forearm in the evening.—Severe pain in the hand, with aching in the arm when lying warm and quiet in bed; it is also often felt in the left foot, now above, then in the instep, and then in the toes. In the right palm near the index-finger, a severe pain as from a boil.—\*Burning of the palms. Redness of the hands and severe burning. \*Lividity of the hands in pneumonia. Numb pain in ball of the right thumb. Cutting pain on the second joint of the left middle finger. Sticking in the point of the right small finger. Stiffness of the finger joints. Pain as from a boil at the root of the right thumb-nail, then in the left, from this to all the fingers, one after another from the thumb to the small finger, alike on both hands. \*Ulceration at the roots of the nails, on all the fingers of both hands.

**Inferior Extremities.**—Rheumatic pain in the left hip. Pain as from a bruise in the left hip-joint, whilst walking, but worse on rising from a seat. \*A rheumatic pain on the inside of the right thigh.—\*A bruise-like pain in the thigh, alternating with burning and pressure in the breast.—Stiffness of the knees. Stiffness and tightness in the bend and sides of the knees.—Cramp and pain in the calf of the left leg. Drawing in the calves and into the instep, worse right than left.—Sticking pain in the right ankle. Continual stitches under the right exterior ankle-bone as from the sting of a bee. Pain in the left foot with headache, and during the pain in the right arm. Sticking as from a needle in the instep, in the morning in bed, and in the afternoon coldness of the feet.—Burning in the soles of the feet, and in the palms of the hands, forenoon. Burn-

ing of the soles of the feet, worse at night. \*Burning of the hands and feet, at night.—Pain in the corns. Great weakness of the limbs, with pains in the sacrum, whilst walking.

**Sleep.**—Sleeplessness at night.—He awakens at night with affright, as if he would fall.—Dreams two nights in succession of sailing on the sea. Dreams, of a frightful and disagreeable character.—He awakens earlier than common.

**Fever.**—In the evening in bed, chill and shivering in the back. Shaking chill, with pain under the shoulder-blade on motion. Chill, with the headache. Chill and nausea.—Transient feeling of heat before the regurgitation. Heat flying from the head to the stomach. \*Sensation as if hot water was poured from the breast into the abdomen. Burning heat, rapidly alternating with chill and shivering.—Fever and delirium, from the seed.—Abates irritative hardness and frequency of the pulse, also heat and dryness of the skin. Pulsation through the whole body. A gradual increase in the force and fulness of the pulse; from moderate doses. The pulse rendered more frequent, by large emetic doses. Quickened circulation, with the vomiting. The frequency of the pulse diminished by the nausea. The frequency of the pulse diminished by small doses. Strength and frequency of the pulse extremely reduced, with irregularity, and with insensibility, coldness, etc., from very large doses. \*Brings the pulse from 112 to 80. \*Pulse full, soft, and easily compressed, in pneumonia. Suppression of the pulse, with fainting, from large doses.

**Skin.**—Heat and dryness of the skin. Increased itching of an old tubercle, like eruption on the skin. \*Itching and nettle-rash before the nausea. \*Warts. \*Old, indolent ulcers; ill-conditioned ulcers with callous borders and ichorous discharge. \*Nasal polypi; fungous excreescences, etc. \*Jaundice.

**General Symptoms.**—Rheumatic pains in the limbs. \*Acute, inflammatory, and arthritic rheumatism. \*(Acute swelling of the joints of the extremities.) Stiffness of the limbs and rheumatic pains, with headache. Pain in those places where the bones are least covered with flesh, but not in the joints; on touching the painful part, the pain immediately vanished and appeared in some other part.—Great weakness. Great prostration of muscular strength, by large doses. Extreme weakness and debility in the limbs, whilst walking in the open air. Debility with vertigo and pain in the hypochondria. Great weakness, with the vomiting. Great weakness with suppression of the pulse, also with irregular pulse. Weakness and palpitation of the heart. \*Is tonic in diseases of the lungs. A quickly-diffused and transient, but at the same time a very peculiar nervous thrill, which is often extended to the minutest extremity. A slowly-shooting pain with long-continued thrill, ending in a grumbling aching, in a carious molar tooth of the upper jaw. Fainting weakness. General sensitiveness and weakness. Torpor and languor, from the seeds. \*Paralysis of the right side of fourteen years' duration, cured by the tincture in the dose of a small tea-spoonful every three or four days. Convulsive rigidity of the limbs.

## 214. SASSAPARILLA.

SASS.—See HAHNEMAN'S Chronic Diseases, V.

COMPARE WITH—Am., Cham., Clem., Cocc., Merc., Puls., Ran., Sep., Sil., Sulph.

ANTIDOTE.—Camph.?

### CLINICAL OBSERVATIONS.

The following affections have been treated with Sassaparilla: Hydrargyrosis.

—Chronic gout with scanty secretion of urine.—Erysipelas fugax in children.—Chronic rash.—*Crusta lactea*.—Herpes nasalis.—Gravel. Stone in the bladder.

## SYMPTOMS.

**Mind and Disposition.**—*Desponding*.—Weeping moed and ill-humoured, in the forenoon. The mind is very much affected by the pains; the mind feels oppressed and the heart gloomy; he feels unhappy, and groans involuntarily.—Dread of labour, awkward. Not disposed to work, peevish, and hot in the face, (immediately). Peevish, but inclined to work.—*Silent ill-humour*. A fly on the wall vexes him, he is exceedingly ill-humoured. Out of humour, and is unable to forget what made him ill-humoured.—*Easily offended*.—Disposed to work, in the afternoon. More cheerful than usual.

**Sensorium.**—Absence of mind. Inability to perform mental labor.—Gloominess of the head, with trouble from flatulence. Dulness of the head, when sitting a long while, with fog before the eyes, paralytic weariness of the limbs, obstruction of the nose, and gloomy mind; the head always became easy again towards evening. Dulness and stupid feeling of the head, the whole forenoon; in the afternoon out of humour.—Weakness of the head, as after a fever.—*Vertigo*: when standing near the window, he suddenly fell with his back on the floor, without consciousness; the throat was swollen, sour eructations before and after the fit; the chest afterwards felt oppressed, and at night a violent sweat broke out. Vertigo when sitting or walking; the head inclines forward.

**Head.**—Headache, a sort of pressure as from a heavy load in the head. *Pressure in the left side of the forehead*. Pressure in the forehead and occiput. Pressure in the left side of the head, especially in the temple, during rest and motion. Aching pain, especially in the sinciput, slowly increasing and decreasing. Pressing pain in the forehead. Pressure and heaviness around the whole forehead, forenoon and after dinner. *Pressure with frequent stitches* in the left side of the head, in the morning. Pressure in the right frontal eminence, with fine stitches, slowly rising. Strong pressure in the right temple, with drawing stitches from the occiput to the forehead. Violent pressure and sticking in the vertex, on the right side. Violent pressure, and afterwards sticking in the left frontal eminence. Sticking pain, with pressure, in the region of the temporal bone, increased by contact.—Sensation as if both sides of the head were between screws.—Cramp-like headache on one side, commencing with obscuration of sight and luminous vibrations before the eyes; he is like one without consciousness, has to lie down, is unable to speak, inasmuch as every word he utters occasions a sort of concussion in the head.—Tearing in the whole frontal region, sometimes deep in the brain. Tearing, with a sort of pressure, in the whole left side of the head.—Lancinations in the left vertex. Lancinations in the region of the temporal bone. Sticking pain in the left occiput. Stitches extending from the right temple into the lower teeth. Dull stitches in the left side of the head, down to the nape of the neck. Violent stitches in the forehead going off in the open air. Acute, fine stitches in the middle of the forehead. Piercing sticking in the left frontal eminence, in the evening. Violent lancinations, with pressure, in the right side of the head, so violent that they make him shudder.—Beating headache, in the evening; worse at night, with violent nausea and sour vomiting. Beating in the right frontal region, while walking in the air.—Humming in the head, sensation in the head, as of the wind blowing into one's ear.

**Scalp.**—Pressure and cuttings in the outer parts of the head. Tearing in the head, with pressure, in different parts, increased by motion and walking. Drawing, with pressure, in the region of the right temporal bone and cartilage of the ear. Sticking drawing from the right mastoid process to the left frontal

eminence. Sticking drawing in the region of the right parietal and temporal bones. Dull sticking in the left frontal eminence. Pulsative stitches in the forehead. Burning, dull stitches in the region of the left temporal bone.—The pains about the head are made worse by touching the head and by walking.—Falling off of the hair and sensitiveness of the scalp when combing the hair.—Itching of the scalp, posteriorly.

**Eyes.**—Pain of the eyes when looking at something by candle-light. In the morning the eyes are affected by whatever she looks at.—Pressure in the eyeball, in the evening, while reading, the paper reflecting a red light.—Sticking in the eyes, as if they contained dust or sand. Sticking in the eye, when closing the lids, and violent pain when pressing on the closed eyes, accompanied with a broad, red streak from the cornea towards the outer canthus; the inner canthi look blue and puffy, and the right canthus is somewhat swollen.—Continual burning in the eyelids, sometimes alternating with aching pain. Violent burning and agglutination of the eyes, in the morning when waking.—Infamed, dry eyelids. Lachrymation; agglutination in the morning.—Twitchings in the right upper eyelid.—Dilatation of the pupils.—*Dim-sightedness, as if seeing through a fog*, or as if the eye were covered with a gauze.

**Ear.**—Violent pressure in the ear, extending into the temple, where a pressing sensation is experienced.—Contractive sensation in the right ear. Painful contraction in the right outer ear.—Tearing with pressure in the cartilage of the right ear and the outer meatus auditorius.—Ulcerative pain deep in the left ear and around the forepart of the same.—Violent, dull sticking, deep in the right ear. Dull sticking in the root of the right mastoid process, going off by pressure.—Violent itching in the left outer meatus auditorius.—Drawing and visible pullings in the lobules.—Scurf on the lobule, first burning, then itching.—Frequent tearing in the posterior side of the left ear, from below upwards, in the afternoon. Sticking below and in front of the left ear, in the morning.—Tingling in the left ear.—Inflammation and swelling of a gland below the right ear, passing into suppuration.

**Nose.**—Prickings in the tip of the nose.—Itching eruption under the nose, as if caused by an acid discharge. Itching of the left side of the nose and around the eyes. Eruption in the left nostril.—*Bleeding* of the nose, with sensation as of small bubbles bursting inside of it. Bleeding from the right nostril. *Dry coryza* without sneezing, no air through the nose.

**Face.**—Short-lasting heat in the face, with sweat on the forehead and heat on the chest and back, accompanied with prickings from within outwards, most frequent and violent in the neck.—Drawing lacerations in the muscles of mastication of the right side; they seemed to have become convulsively contracted.—Stiffness and tension in the muscles of mastication and the articulations of the jaws, when moving them.—Contusive pain in the face in the lower borders of both orbits, in the morning after waking, but only when pressing on the parts.—Fine stinging itching in the face and scalp, and around the neck and shoulders, with a feeling of great warmth in these parts, the itching being immediately experienced in some other place when removed by scratching.—Pale-red, a little elevated, rough spots on the forehead, of the size of lentils, without itching. Itching pimple on the cheek, spreading inflammation far around, with violent burning, forming a thick large scurf, and causing tearing pains in the open air. Pustules in the face, without sensation. Itching pimples on the chin. Itching pimples on the sides of the chin, becoming shortly filled with pus. Clear vesicle on the right side of the lower lip. Herpes on the upper lip, with pain as if pricked by a number of pins.

**Jaws and Teeth.**—Pain of the jaws as if broken. Pricking pain, with

pressure, in the lower and inner border of the right lower jaw, but only when touching it, and when bending the head backwards.—*Toolhache* of the right side, with creeping in the roots of the teeth; the pain ceases after picking the teeth until blood comes out; in the evening.—Tearing in the teeth, from a cold draught of air or cold drink.—Lancination in the gums and the root of the last right lower molar tooth. Swelling and soreness of the gums of the inner side of the lower jaw.

**Mouth, Pharynx, Œsophagus.**—Stitches in the tongue.—Tongue coated white, in the morning, taste natural. Aphthæ on the tongue and in the palate.—Tenacious mucus in the mouth, and throat. Constant hawking up of mucus, in the morning.—Drawing pain, with pressure, in the soft palate.—*Dryness* in the throat and stinging during deglutition, in the morning.—Pain in the right side of the throat, as if a barley-bristle had lodged there, extending upward through the ear, and causing a stinging pain during deglutition.—Cramp-like pressing in the throat, at night. Constrictive sensation in the throat and chest, with difficult respiration.

**Appetite and Taste.**—Sweet taste in the mouth, for several days. Bitter taste. Bad herby taste. Metallic taste. Flat, sweetish taste. Bad, sour and slimy taste in the throat, in the morning, like leaven.—No appetite or hunger, the food had too little taste for him, and after eating he felt in his stomach as if he had not eaten anything; the stomach seemed to be insensible. The taste of tobacco is entirely changed.—No thirst, contrary to his habit.

**Gastric Symptoms.**—Constant, imperfect eructations. Bitter-sour eructations, after rising, with bitter taste in the mouth. Bitter eructations after drinking and eating soup. Continual sour eructations. *Gulping* up of a bitter-sour liquid.—Constant nausea. Nausea when thinking of the food which he had taken. Nausea in the throat, owing to the rising of a disagreeable vapour into the mouth, with dulness of the head. Great nausea in the morning, unto vomiting, with taste as of herbs in the mouth. Nausea and faintness after dinner.—When he eats ever so little, his stomach, nevertheless, becomes very much distended, as if he had eaten a good deal.

**Stomach.**—*Aching pain* in the pit of the stomach, below the xiphoid cartilage, increased by contact.—Frequent cramp-like sensations in the pit of the stomach. Constriction in the stomach, with nausea, going off at night.—Heat in the stomach.

**Abdomen.**—Pain in the left hypochondrium as if bruised, with beating. Stitching in the left side of the abdomen. Contractive pain of the intestines, afterwards violent rumbling round the umbilicus, or in the direction of the chest, or again downwards as if diarrhœa would come on.—Frequent crampy feelings in the abdomen.—*Emptiness* and hollowness in the abdomen, shortly after breakfast.—Violent *pinching* in the abdomen, and afterwards painful contraction of the sphincter ani.—Aching pain in the left side of the abdomen.—Drawing in the abdomen, with pressure, as after a cold.—Painful pressure from without inwards and pinching in the left side of the abdomen at a small spot, aggravated only by deep breathing.—Sticking in either the right or left side of the abdomen.—Heat or coldness in the abdomen.—Rumbling and empty feeling in the abdomen. Emission of flatulence upwards and downwards. Fœtid flatulence.—Pinching in the left groin.

**Stool.**—Urging, but no stool. °Obstinate constipation, with violent urging to urinate.—*Great desire* with contraction of the intestines and excessive pressure from above downwards, as if the bowels would be pressed out, for some minutes; after this, some stool is passed, with violent tearing and cutting in the rectum, and this is again followed by desire for stool, as if the rectum would be

pressed out, so that he is scarcely able to sit still on account of the pain.—Feeling of inactivity in the intestines.—Violent and constant urging; nevertheless the stool is very scanty and soft, passing only with great difficulty through the rectum, which feels as if contracted.—*Hard stool* on the first day; on the second day no stool at all; on the third day, the first part of the stool was hard, the latter soft.—Copious soft stool. Soft stool with tenesmus in the rectum.—Fainting fit during stool in the evening. °Discharge of blood at stool. Corrosion in the rectum during the diarrhœic stool.—He is waked from his nightly sleep by a sore pain in the rectum, which passes into a burning itching, continuing the whole day.—Ulcer at the *anus*, of the size of a nut, covered with a black blister, which speedily bursts, causing pain and emitting pus.

**Urinary Organs.**—*Frequent desire to urinate, with scanty emission*, the urine being clear and red.—*Tenesmus of the bladder*, with cutting pain during micturition. Pressure on the bladder the whole day, but scanty emission. *Severe tenesmus as in gravel*, with emission of white, acrid, turbid matter, with mucus.—Micturition with burning, once a day. Frequent micturition and more copious every day.—*Quantity of pale urine*, depositing a sediment. *Two or three micturitions a night*, emitting a quantity of urine each time.—The urine is passed *without any sensation* in the urinary organs.—Gravel?—Stone?—Burning during micturition, with emission of oblong flocks. Burning in the whole urethra, at every micturition. Scraping sensation in the urethra during micturition.—Painful constriction of the bladder, without tenesmus.—After micturition he feels a burning and itching-tearing pain from the glans to the root of the penis. Sharp cutting stitches in the urethra.—Discharge of yellow pus from the urethra, with redness and inflammation of the glans and fever in the evening, with shivering.

**Male Genital Organs.**—*Intolerable stench* about the genital organs.—Herpes on the foreskin.—Emission, (the first night). Painful emissions almost every night, with lascivious dreams.—Inclination for an embrace, for several days, with frequent emissions.

**Female Sexual Organs.**—*Delaying menses*. Scanty and acrid menses, with burning of the inner sides of the thighs. Itching eruption on the forehead *previous to the menses*, for three days, burning and becoming moist after rubbing.—Soreness of the bend of the right hip and desire to urinate *on the appearance of the menses*. Frequent pinching in the abdomen *during the menses*. Gripping in the pit of the stomach in the direction of the small of the back, during the menses.—°*Mucous leucorrhœa* when walking.—The nipples are flaccid, insensible. Itching around the nipples.

**Larynx.**—Coryza and cough. Violent cough in the day-time, produced by a titillating ulcerative sensation in the fauces. Dry cough with burning in the nose when coughing.

**Chest.**—Fœtid breath. Oppression of breathing. Painful constriction in the chest, frequently alternating with sudden expansion. Pain during a deep inspiration, as if something, attached to the back, prevented it. Pressure in the region of the sternum, worse when touching it.—Stitching in either side of the chest. Violent stitches in the region of the left ribs, in the evening when sitting. Stitches in the middle of the chest, near the sternum, uninfluenced by breathing. Stitches in the right chest, uninfluenced by breathing. Stitching pain in the left side of the chest, when walking.—Tensive pain in the outer parts of the chest, as if too short, when raising the chest and when walking erect.—Frequent palpitation of the heart, by day. Almost continual palpitation of the heart, with some anxiety.

**Back.**—Pain in the *small of the back*, extending towards the genital organs

around both sides of the pelvis, worst at night and during motion. Tensive pain during the slightest motion, from the small of the back across the left hip, hindering walking. Formication in the small of the back.—Small violent stitches in the back between the scapulae. Stitches, sometimes lacerations, near the spinal column, from the right scapula to the last false rib, increased during an inspiration, and arresting the breathing when taking deep breath. Pain in the back, increasing to violent pressure when stooping, less when at rest, but being felt as a stitch whenever turning the body.—Stitching with pressure, in the cervical muscles, increased by contact and motion. Tension in the nape of the neck, with stitches when moving the head. Tearing in the nape of the neck, and thence across the vertex to the right side of the forehead. Violent, continual, drawing stitches in the right cervical muscles, from the clavicle to the os hyoides. Painful stitches with pressure in the xiphoid cartilage, uninfluenced by deglutition. Swelling of the right side of the neck, with pain when touched.

**Upper Extremities.**—Tearing in either arm, from the shoulder to the hands. Paralytic pain in the right shoulder-joint. Pulsative stitching pain in the outer part of the shoulder-joint. Dull stitches in the upper and fore part of the region of the humerus.—Pain in the elbow as if a tendon had been strained, when turning the arm inward rapidly. Paralytic weariness in the elbow-joints.—Paralytic tearing in the forearm, near the elbow-joint, worse during rest than motion. Tearing with pressure in the region of the ulna, sometimes extending to the metacarpus. Stitches with pressure in the muscles covering the ulnae. Drawing lacerations in the inner side of the right forearm. Lacerations above the left wrist-joint, from below upwards.—Tearing behind the wrist-joint, superiorly, with drawing lacerations towards the finger.—The hand is painful, although not swollen. Pain as if sprained in the right wrist-joint, extending towards the fourth finger. Tearing in the left wrist-joint.—Stitching, with pressure, in the metacarpal bone of the right index-finger, intermitting for two days. Cold hands, towards the tips of the fingers, for eight days. Itching in the dorsum of the hand and fingers. Feeling of stiffness, burning and itching of the hands, less when moving them. Blister on the right wrist-joint, itching, afterwards burning. Stitching with pressure in the muscles of the left thumb, both when at rest and in motion. Small stitches in the posterior joint of the right little finger. Innumerable prickings in the first joint of the thumb; the place is afterwards painful to the touch. Pain as from subcutaneous ulceration in the tips of the fingers, when pressing them upon something, or the pain is as when salt gets into a wound. Drawing tearing in the bones of the fourth right finger, increased by moving the joints. The fingers go to sleep. Inflammation of the thumb, beating and burning, worst at night. Herpes on the hands. Sweaty hands. *Rhagades* in the thumb. Itching pustules on the fingers and on other parts of the body.

**Lower Extremities.**—Stitching with pressure, in the region of the right iliac bone, in every position of the body. Paralytic, weary and bruised feeling in the hip-joints: she has to sit down, although this does not afford relief.—Heaviness, with pressure, in the left thigh, when sitting or walking, without pain. Dull pressure on the right thigh, a little above the knee-joint, when sitting. Pressure on the inner side of the left thigh, near the knee-joint.—Tearing with pressure in the upper side of the thigh, near the knee-joint, from below upward, and from within outward. Stitching, with pressure, in the left thigh, near the patella.—Single, acute fine stitches in the inner side of the knee. Swelling and stiffness of the knee, with stitching pain, so violent that he was scarcely able to move the knee sideways. Tearing in the knees and legs.—Stiffness of the right leg, as if the bend of the knee and calf were contracted. Cramp along the tibia,

down to toes. Red, herpetic spots on the calves, itching violently.—Intense pain of the soles. Violent tearing in the left sole, after midnight, from the heel to the toes, followed by violent itching; after scratching the parts, he feels a violent stitch through the heel, extending to the dorsum of the foot. Itching drawing in the sole. Painful drawing in the dorsum of the left foot, increasing to a jerking. Prickings above the left outer malleolus. Stitching throbbing, with painful pressure, in the inner side of the right sole, and afterwards in the whole sole, when sitting. Tensive feeling in the muscles and toes of the left foot, as if the toes would be drawn inward, in the morning. Tensive feeling in the right heel, as if swollen. Swelling and redness of the right tarsus, with pain, increasing in the afternoon. Cracking in the tarsal joints, at every motion. *Swelling of the feet.* Cold feet. Pressure of the toes under the nails, as if swollen. Drawing tearing in the big toe of the right foot.

**Sleep.**—Frequent yawning.—*Drowsiness.*—Starting up, as from a report.—*Restless* sleep, with inclination to an embrace. emission, and jerking in both forearms. Restless sleep, with dreams about accidents.—Is unable to sleep before midnight, owing to restlessness in his body and uncommon mobility of all his limbs.—Frightful dreams in a deep sleep. Dreams about horrid things, for instance big spiders. Dream of dead persons, ghosts, vexation, business. Lascivious dreams.—Profuse sweat in the joints, at night when waking. When waking he finds himself on his back, for many nights.

**Fever.**—Frequent chilliness of the arms, thighs, back and abdomen. Feverish coldness, frequently, in the day-time, with blue nails and loss of all animal heat in arms and legs. Internal chilliness and drowsiness. Shuddering over the whole body, from below upwards. Chilliness and coldness of the whole body, even when sitting near the stove, face and chest being unusually warm. Chilliness in bed. Chilliness in the morning, sweat and warmth in the afternoon.—Heat in the whole body, for a short while. Heat in the evening one hour previous to going to sleep; orgasm of the blood, throbbing of the heart and sweat on the forehead; two evenings in succession.—Constant feverishness of the whole body.—°Sweat on the forehead, in the evening, in bed.

**Skin.**—Itching of various parts of the body. Itching of the forearm, the inner side of the knee, over the bend of the knee, especially in the evening when in bed. Stinging itching over the whole body, in the evening and morning. Burning itching over the whole body, with chills, worst before and after going to bed. Burning itching of the abdomen and thighs.—Red pimples of the size of a pin's head, dry, on the back and thighs, itching only when exposed to warmth. *Blotches as from nettles*, on the neck, chest, eyelids, hands, and the whole body, intolerably itching and stinging, and burning violently after rubbing them. *Rash*, whenever he goes out of a warm room into the cold air. *Herpes* on every part of the body. A number of small warts. The pustules, when scratched open, form ulcers suppurating for a long time. Small pustules on the right side of the nose, on the dorsum of the right foot, on the left buttock, sometimes stinging when touched.—°Shrivelled skin.—°Ulcers from abuse of mercury.—Big and hot swellings.

**General Symptoms.**—°*Arthritic and rheumatic* complaints, with diminished secretion of urine, or after suppression of gonorrhœa, or after taking cold in water.—*Tearing in almost all the joints and limbs* Drawing pains in the scapulæ and lower limbs. Sudden drawing pains in various parts of the body and about the head. Nausea after breakfast, with sour eructations; when standing near the open window, he became giddy, lost his consciousness, fell on his back, and after having been lifted up and having recovered his senses, he felt a great tightness across the chest.—Great weakness, especially of the lower limbs, also

during the menses.—°Languid feeling in the hands and feet.—Trembling of the hands and feet, with tearing in the forehead and pinching in the abdomen.—Emaciation.

## 215. SCROPHULARIA NODOSA.

SCROPII. N.—Common brown-wort.—See ARCHIV, XVII.

Dulness of the head, as after a copious meal. Vertigo in the vertex, when standing. Pain in the forehead, early in the morning. Headache above the eyebrows when walking. Painfulness of the eyeball. Pulsative sticking in the right brow. Tingling in the ears. Agreeable warmth of the cheeks. Accumulation of sweetish water at a small spot on the tongue. Thick tenacious mucus in the throat, early in the morning, having a bad taste. Scraping taste, with great weakness and stiffness of the knee-joints. Sensation as if a soft body or a lump of mucus had lodged in the throat, with nausea, viscous taste above the throat-pit. Colic above the umbilicus. Pinching in the front part of the abdomen. Dragging and stitching in the urethra. Frequent emission of little urine, in the afternoon. Constriction through the chest. Violent pinching sticking in the region of the last true rib of the right side, in walking. Buzzing sensation in the arms and hands. Crampy drawing and sticking in the muscles of the palm of the left hand.

## 216. SECALE CORNUTUM.

SEC. C.—Ergot.—See NOACK and TRINKS' Handbuch, etc.

COMPARE WITH—ARN., ARS., CAMPH., IG., LAUREO., *Plumb.*, *Rhus tox.*, Sol. nig., Verat.

ANTIDOTES.—Camph., Sol. nig.

### CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

Neuralgic affections of the voluntary muscles, the genitals and skin.—Passive congestion of the head, chest and abdomen, characterized by atony and torpor, and ailments arising from such congestions.—Acute and chronic chorea.—Spasms after fright.—Tetanus.—Epilepsy. Sort of epileptic spasms which come on at night during sleep without her being conscious of them, leaving, on waking, a sense of great debility, languor and weariness, and constant heaviness of the head, attended with constipation, heaviness in the hypogastrium, formation in the limbs, in the case of a female who had been attacked with metritis during her confinement, attended with long-lasting leucorrhœa.—Eclampsia of parturient females. Trembling of the limbs. Apoplexy.—Profuse venous hemorrhage, with atony of the parts, from the nose, tongue, palate, lungs, stomach, kidneys.—Dry gangrene, first affecting the extremities, then every part of the body, and even the bones.—Mydriasis, with insensibility of the pupil to the light. Amblyopia amaurotica. Amaurosis.—Difficulty of hearing.—Affections of hearing arising from venous congestion.—Bleeding at the nose.—Dentition with great prostration and debility, vomiting of the ingesta, stirred stool, great desire to drink, pale face, faint and hollow eyes, dry heat with quick pulse, restless-

ness and loss of sleep.—Hæmatemesis with excessive debility.—Melæna: vomiting of black coagulated blood, with pains in the region of the stomach and spleen, slow stool.—Cardialgia with plethora abdominalis.—Softening of the stomach.—Seated burning pains in the spleen and right lumbar region, with constipation and cholera-like pains in the abdomen.—Frequent colic with pain in the small of the back, tearing in the thighs, eructations and vomiting.—Colic with plethora abdominalis. Colica plumbea.—Diarrhœa with slimy coating of the tongue, pappy taste, rumbling in the abdomen.—Diarrhœa in the case of a child, watery discharge with mucus, gastric derangement. Chronic diarrhœa of infants brought up without the breast, who were much reduced in consequence of the disorder. Painless, exhausting diarrhœa, the food passing off undigested, with watery yellow and green evacuations, emission of a quantity of flatulence, paralytic condition of the sphincter ani. Obstinate diarrhœa with great prostration.—Colliquative diarrhœa.—*Asiatic and sporadic cholera*.—Cholera with painful cramps in the limbs, in the respiratory muscles and abdomen.—Diarrhœa after the cholera: after the vomiting ceases the evacuations do not assume a bilious tinge, even when the pains in the limbs are still present.—Cholera: if, after the vital re-action has set in, the watery evacuations still continue.—Acute cholerine, with vertigo, anguish, cramp and drawing in the calves, rumbling in the abdomen, nausea, brownish diarrhœic stools, or real colourless, flocculent cholera stools with sudden debility, coldness of the extremities.—Diarrhœa soon after a meal, with labour-like pains in the abdomen and tenesmus, discharge of thin, yellow, slimy masses.—Pot-belliedness after parturition.—Passive hemorrhage from the anus.—Paralytic ischuria.—Incontinence of urine.—Menstrual colic (particularly with labour-like pains from the small of the back to the uterus, with tenesmus and pressure on the bladder and rectum, cutting colic, before and during the menses. Menstrual colic: paleness of the face, coldness of the limbs, cold sweat, small, subdued pulse, tearing or at times cutting pains in the rectum.—Menostasia with erethism of the circulation.—Profuse menstruation of feeble girls, setting in with spasms.—Metrorrhagia, with red fluid blood.—Metrorrhagia, the blood having an excessively fœtid smell, with sallow face, general debility, insensibility, feverish pulse. Passive metrorrhagia in feeble, cachectic, badly-nourished persons, particularly when the weakness is not caused by previous loss of fluids, attended with the tingling in the limbs and great prostration.—Passive metrorrhagia with venous congestion, and fully-developed hæmorrhoidal affection, attended with discharge of lumps of dark blood, which is increased and excited by every movement; accompanied with extreme torpor, and threatening paralysis.—Metrorrhagia with distention of the uterus.—Metrorrhagia after parturition.—Leucorrhœa depending upon weakness of the vagina and uterus.—Polypus in the womb.—Metritis puerperalis.—Threatening miscarriage: discharge of blood with labour-like pains in the third and fourth months.—Inordinate labour-pains. Complete cessation of the labour-pains.—Deficiency of labour-pains.—Spasmodic labour-pains.—Deficiency of the after-pains.—The after-pains last too long, and are painful.—Attachment of the placenta.—Distention of the uterus with discharge of blood.—Descensus uteri.—Putrescentia uteri.—Hydrometra.—Sec. may be employed for the expulsion of moles, polypi, and other adventitious growths in the uterus.—Hæmoptœ.—Suffocative catarrh.—Asthma from venous congestion.—Asthmatic phenomena; debility and striking slowness of the beats of the heart and pulse.—Spasmodic palpitation of the heart.—Organic affections of the heart: dilatation with atrophy of the walls.—Cramp of the calf, in pregnant females.—Cramp in the calves and soles, disturbing the night's rest, impeding every movement, particularly in pregnant females.

## CLINICAL REMARKS ON "SECALE CORNUTUM," BY GEO. W. COOK.

In order to secure a uniform effect from "Sec. cor.," care must be taken to gather it from the field when the grain is fully ripe, but not harvested. The largest portion sold by druggists is picked out from the rye when it is in market and in bins. I am convinced from a long experience in its preparation and use in practice, that this is an important consideration to be attended to; the heat generated by packing in the grain-mow or in the grain-bin has a deteriorating effect upon the medicinal properties of this medicine. I have used it in decoction; saturated tincture and hydro-alcoholic fluid extract. In either of the above forms, if due regard is paid to the gathering, as above directed, it may be depended upon as more certain, uniform, and energetic over a certain class of organs than any other article of the "materia medica." The uterus is more especially within the sphere of its action. When given to the "parturient female" (a decoction of two drachms of the powder to a half-pint of boiling water, and one table-spoonful of this given every five minutes), it uniformly produces, after about the third dose, a violent pressing, forcing pain, which only ceases with the entire expulsion from the gravid-uterus of its entire contents, unless it be given when the presentation is unnatural, or there is great rigidity of the soft parts. It should by no means be given, if either of the latter conditions exist, because the child may become pressed so severely and steadily, as to endanger its life; and the ergot expending its power upon the uterus, its action may be transferred to the nervous centres, and congestion of the brain, followed by vertigo, delirium, convulsions, insensibility and coldness of the extremities ensue. The accoucheur should be fully satisfied that the os uteri is amply dilated, the presentation natural, and that nothing but pain is requisite to effect the delivery, before he administers ergot. By exercising this care, *ergot* is as safe as any powerful drug of the "materia medica," and in lingering labours, where there is atony and great sluggishness, many lives, of both mothers and children, may be saved by the well-timed administration of it. Personal observation, during a full obstetric practice of many years, enables me to speak with much confidence on this subject. The effect upon the *uterus* is manifest some time after its contents are expelled; it may be easily felt firmly contracted, just within the brim of the pelvis, like a hard ball, and with very little hemorrhage, either external or internal. Taking the hint from this latter fact, after administering ergot, I was induced to give it for arresting alarming floodings, and the uniform success attending it, has so strengthened my confidence in its specific power over the muscular fibres of the womb, in producing their contraction, and thus arresting the hemorrhage at its source, that all those unscientific external means which attack the stream at a remote distance from its source, such as elevating the hips, plugging the vagina with ice, or injecting ice-water, sink into utter insignificance.

## CLINICAL NOTE BY DR. NEIDHARD, OF PHILADELPHIA.

°Large reddish-brown spots and wrinkles all over the body, with itching.

The subjoined *Pathogenetic effects* of *Secale* have been compiled from the following authorities: *Trinks' Annals of Hom. Clin.* vol. III; *Ntn.—Nolten*; *Tbe.—Taube*; *Bur.—Brunner*; *Hg.—Hennig*; *Owd.—Oswald*; *Reht.—Richter*; *Whas.—Weghas*; *Schbr.—Schreiber*; *Se.—Seric*; *Evs.—Evers*; *Otze.—Oeltze*; *D-yg.—Dreyssig*; *Wichn.—Wichmann*; *Mred.—Marcard*; *Ju.—Jahn*; *L-é.—Linné*; *H-se.—Haase*; *Mllr.—Muller*; *S-no.—Salerne*; *L-ge.—Lange*; *R-ld.—Roemhild*; *Kl.—Keil*; *Hall.—Haller*; *N-l.—Noel*; *Cord.—Cordier*; *L-sr.—Lorinser*; *Rstn.—Rosenstein*; *Bud.—Budæus*; *B-d.—Burkhard*; *U-lr.—Uensler*; *Rd.—Read*; *Perr.—Perrault*; *Hbrk.—Haberkorn*. *Thom. #### PATHOGENETIC EFFECTS.

**Mind and Disposition.**—Excessive cheerfulness and unnatural wakefulness.—Lowness of spirits. Excessive lowness of spirits and loss of strength, excessive feeling of illness.—\**Melancholy*. Increasing discouragement. Continual discouragement and fearfulness. Excessive sadness. Change of mood: sadness was changed to joyfulness, mirthfulness, imbecile foolishness, cheerfulness to sadness and dulness.—\**Anguish*. Great and oppressive anxiety. °Dread of death.—Obstinaey.

**Sensorium.**—Difficulty of thinking or talking. Decrease, dulness and complete vanishing of the senses.—Indifference to everything.—Stupor with dilatation of the pupils. Chronic stupor. Stupor with prostration. Great dulness of the senses. Forgetfulness, imbecility. Loss of consciousness and sensibility. Consciousness continues until his last breath; he seems even to feel somewhat better shortly before his death.—Craziness.—Slight attacks of craziness.—Mania, with violence.—*Rage*. Rage, he wants to kill those around him, and says he would do it if the spasms did not prevent him.—Illusion of the senses.—Deliria blanda.—Mental derangement and delirium bordering on mania; every patient was in a rage, and could only be restrained with great difficulty; in a few hours copious vomiting set in, followed by continual deep sleep; a violent vertigo, as in intoxicated persons, remained, with sensation of languor and prostration.—Vertigo. Constantly-increasing vertigo. Vertigo, (from grinding corn which was mixed with Secale). Vertigo and stupefaction. Vertigo which sometimes lasted days or weeks. Vertigo and heaviness of the head. Stupefaction and confusion of the head. Stupefaction and insensibility. Congestion of blood to the head. Intoxication. Reeling and inability to stand erect. Dulness of the head, with cloudiness of hearing and sight. Peculiar feeling of lightness in the head, particularly in the occiput.

**Head.**—Headache. Dull pain in the occiput. Hemierania, on the left side.—Sweat on the forehead. Corrosive sensation on the head. Sensation as if pulled about by the hair.

**Eyes.**—Swelling of the eyelids. Pressure in the ball of the eye.—The pupil is very much contracted, in the case of a girl of eight years. Spasmodic contraction of the pupils. The pupil was extremely dilated. Spasmodic contortion of the eyes. Frightful contortion of the eyes, the pupil being contracted and sometimes entirely closed. The eyes roll about in their sockets. Wild, confused eyes. The eyes stare, he grows blind. *Diplopia*. He sees things double and threefold. Squinting.—Luminous vibrations before the eyes. Gauze before the eyes. Great obscuration of sight. Mistiness and spots before the eyes. Scintillations.

**Ears.**—Hardness of hearing.—*Humming and roaring in the ears*.

**Face.**—Wretched complexion. The face is sunken and pale. Sallow com-

plexion; the eyes are sunken. Pale cheeks. Facies hippocratica. Yellowish complexion. Unpleasant distortion of the features. Increased warmth and redness of the face. Redness of the face, thirst, and slight delirium, in children. Dark-red face. Ugly spots in the face.—Swelling of the face and abdomen.—Trismus.

**Mouth.**—The mouth is spasmodically distorted or closed. The patient bites his tongue frequently. The tongue is frequently torn by the most violent convulsions. Painful *tingling* in the tongue, the tip of which was spasmodically turned. Convulsions or swelling of the tongue, stifling the voice, and occasioning a constant flow of saliva.—Thin whitish coating of the tongue. Yellowish-white, dry, thick, viscid coating of the tongue.—Considerable dryness of the mouth and nose, which is not relieved by drinking water. Discoloured, brown, and finally black tongue. Foam at the mouth, which looks like light blood, or has a yellow or greenish tinge. Increased secretion of saliva. Accumulation of a quantity of clear fluid in the mouth. Accumulation of a quantity of sour liquid in the mouth. Ptyalism. A frothy or bloody saliva sometimes flowed over the lips.—Grinding with the teeth.—Speech and motion are slow and feeble, as if the organs destined to execute either, only performed their functions, after resistance on their parts had been overcome. A sort of paralysis of the tongue, on which account she is only able to lisp. Her voice is feeble and inaudible. The patient mutters a number of inarticulate words between his teeth. Inability to speak distinctly. Difficult, stuttering speech.

**Nose.**—*Bleeding of the nose.*—Profuse flow of water from the nose; the Schneiderian membrane appeared to be very much irritated, there was a sort of coryza, and great difficulty of breathing through the nose, with injected condition of the vessels of the conjunctiva; lips and eyelids became swollen as from the sting of a bee, and assumed a livid appearance; deglutition was almost impossible, the voice was very feeble, the jaws were immovable, all the nerves were painful, and the head felt so empty that she was scarcely able to think of “yes” or “no.”

**Pharynx.**—Intolerable tingling in the throat. Dryness of the throat. Violent burning in the fauces.

**Appetite.**—Flat, disagreeable taste in the mouth. Bitter, spoiled taste.—*Aversion to food.* Peculiar sensation in the mouth as from continued smoking. Unquenchable thirst. Thirst and dryness of the throat.—Increased appetite. The patients eat a good deal without the food being properly assimilated. Extreme appetite, particularly for sour things. Canine hunger. Bulimy. Canine hunger and weakness of mind, for a long time. (Secondary effect.?)

**Gastric Symptoms and Stomach.**—Eructations. Violent sour eructations. Frequent, tasteless eructations, spreading an extremely offensive, pungent, putrid smell to the distance of three paces, although the patient did not perceive it.—Feeling of emptiness in the stomach.—*Heartburn.*—Nausea.—*Vomiting.* Vomiting of mucus, lumbrici or ascarides. Vomiting affords relief. Vomiting of sour substances, or of a tenacious mucus. Vomiting of black bile, or of bile in a state of degeneration. Violent vomiting, sometimes a tenacious bilious mucus being brought up, which affords relief. Vomiting without much effort and not diminishing the appetite. Constant retching, with vomiting of a crude, bilious substance which is very badly mixed. Constant retching and pressure in the pit of the stomach. Constant pain, oppression and pressure in the pit of the stomach, with constant, ineffectual disposition to vomit; the patients asked constantly for drink and to have their limbs stretched. Painful sensation in the præcordia. Cardialgia. Disagreeable pressure in the stomach, which increased until the breathing was impeded, attended with a peculiar desire for

food. Slight cardialgia with heartburn. Constriction in the epigastrium. Sensation of warmth and excited action in the region of the stomach. Heat and burning in the pit of the stomach. Gangrene of the stomach, lungs and liver, preceded by inflammation.

**Abdomen.**—*Hepatitis*, terminating in gangrene.—\*Violent colic, also *convulsive*, or with pain in the small of the back and thighs, eructations and vomiting. °Cutting and tearing in the abdomen.—*Great feeling of coldness in the back and abdomen.*—\**Burning in the abdomen*, °particularly in the region of the spleen and loins, a seated pain. *Distention of the abdomen*, with hardness, tension and pain on touching the parts.—°Rumbling in the abdomen.

**Stool.**—Constipation, with frequent ineffectual urging.—\**Painful diarrhœa*, with great prostration. Putrid and fœtid, colliquative diarrhœa. °*Watery, mucous diarrhœa*. °Brown, badly-coloured diarrhœa. \**Involuntary diarrhœa*. °Diarrhœa after the cholera, particularly in children. Discharge of ascarides, in children.—Cholera-like paroxysm.—Sudden, striking change of features, with deep-sunken eyeballs surrounded with blue margins, constant nausea and vomiting after taking the least food, frequent diarrhœa with watery, slimy evacuations, shrivelled skin which feels cool to the hand, inexpressible feeling of anxiety and burning in the pit of the stomach, hoarse hollow voice, suppression of urine, cramp in the calves, paralysis of the upper extremities, scarcely-perceptible pulse, unquenchable thirst.

**Urinary Organs.**—°Suppression of urine.—Difficult urination, with constant urging in the bladder.—Burning in the urethra during micturition.—Frequent desire to urinate, not without exertion.—The urine has a copious, thick, red sediment, tinging the chamber.—The urine flowed seldom, came out in drops, without relief. Discharge of a small quantity of watery clear urine. *Watery urine.*—Hemorrhage from the urethra.

**Male Genital Organs.**—Violent drawing in the spermatic cord, so that the testicles appeared to be drawn to the inguinal ring.

**Female Sexual Organs.**—Suppression of the menses (in married females).—\**The menses are too profuse*, °and too long, also with violent spasms. All the symptoms are worse previous to the menses. \**Congestion of blood to the uterus*. \**Metrorrhagia* (see Clin. Obs.).—°Moles? °Polypus in the uterus? °Swelling and wens on the os tincæ, which is half opened. °*Metritis* (see Clin. Obs.). °Cancer and gangrene of the uterus? *Affections of pregnant and parturient females* (see Clin. Obs.).—Strictures of the uterus and hydrocephalus of the fœtus. Miscarriage was neither caused in pregnant females nor animals, when raphania (ergotism) was fully developed.—Excessive uterine contractions, so that the uterus seemed to burst.—Suppression of the lochia.

**Chest.**—Occasional expectoration of blood on making a violent effort to breathe.—Dyspnœa.—Oppression of the chest. Asthma. Slow breathing, thirteen inspirations a minute. Anxious and difficult respiration. Moaning. Suppression of the itch, which occasioned a violent asthma, disappearing on the re-appearance of the itch.—Spasm of the pleura, accompanied with suffocative catarrh, speechlessness and subsultus tendinum.—Violent palpitation of the heart with contracted and frequently intermittent pulse. Spasmodic throbbing of the heart. The beats of the heart are diminished from 10 to 15 a minute, one hour after the exhibition of Secale.

**Back.**—Stiffness of the nape of the neck.

**Extremities.**—Weariness of the limbs. Weariness and numbness of the extremities. *Weakness of the extremities.*—Great languor, at times more in the upper, at others more in the lower extremities. Violent pains in the limbs. Pains in the limbs which return every ten to twenty minutes, with slowly-pro-

gressing contractions. Spasmodic pains in the limbs. Spasmodic, horrid pains in the feet and hands, wandering from one place to another and extorting constant moans from the patient. *Drawing or tearing pains* in the limbs or joints, accompanied with a creeping sensation, particularly in the extremities. Tearing pains and an intolerable creeping sensation in the extremities, pains in the head and back, anxieties and a sort of insensibility in the arms and feet. Jerking pains in the limbs and gums. Burning in the hands and feet. Sensation as of fire in the hands and feet. Distortion of the hands and feet. Contraction of the hands and feet, fingers and toes, which could not be prevented even by force. Periodical sudden contraction of the limbs, with tensive pains. The extremities are violently contracted and stretched again, the patient being extremely desirous, though unable, to stop the spasms. *Spasms and convulsions of the extremities*, or alternately in the upper and lower limbs. Spasmodic stiffness of the hands and feet. Slight trembling of the limbs. *Trembling of the limbs*, with pains, continuing a few days, violent trembling in the moved limbs and even tongue on making an exertion. *Formication in the hands and feet*. Numbness, insensibility and coldness of the limbs. *Rigidity of the limbs*. The limbs became cold, pale and shrivelled as if they had been lying in warm water for a long time. *Paralysis of the limbs*. *Gangrene of the limbs*, the limbs becoming suddenly cold and lead-coloured, and losing all sensibility. *Gangrenous deadness and falling off of the limbs*. Pain, accompanied with slight swelling without inflammation, followed by coldness, blue colour, gangrene and deadness of the limbs. Swelling of the hands and feet, with black, suppurating blisters as if burnt.

**Upper Extremities.**—*Tingling* and insensibility down to the forearm. Tingling in the tips of the fingers as if something alive were creeping under the skin, or as if the fingers had gone to sleep from compression of the arms. Violent pains in the tips of the fingers and partial swellings on the arms; this condition resulted in the loss of the end of a finger.—Numbness of the hands, so that she is unable to use her fingers.—The tips of the fingers are exceedingly sensitive.—The patients have great difficulty in moving their hands to the mouth, the fingers are bent backwards and the eyes are distorted. The whole hand is drawn in, so that several bones of the carpus were pressed outwards, even the whole forearm suffered by the spasm, forearm and hands were brought nearer to the chest: the pains were relieved by endeavouring to straighten the contracted part. Ergotism and tetanic spasm of the upper limbs, the forearms forming an acute angle with the upper arms and being directed towards the chest, the thumbs clenched, the tips of the remaining fingers somewhat curved and firmly drawn to each other; the hands from the wrists to the fingers are fixedly directed to the chest.—Violent contraction of the fingers.—The fingers are violently drawn towards the palm of the hand; the pains are relieved by forcibly straightening the fingers, which, however, contract again immediately. In many persons, particularly in children, the spasms in the fingers lasted for many months, incapacitating them from attending to any kind of work.—After the first relapse a watery, soft, painful swelling on the wrist-joints remains behind for many months.—*Numbness of the fingers, tips of the fingers.*

**Lower Extremities.**—Indolence of the lower extremities. Languor and pains in the lower extremities. Difficult, staggering gait. Complete inability to walk, although the patient seemed stronger than he was, with a peculiar unfitness to perform light movements with the limbs or hands.—Pains in the hips.—Contraction of the lower limbs, on which account the patients stagger. The patients can only walk on the tips of the toes, owing to the spasmodic contraction of the lower limbs. Violent, periodical spasm of one calf. Tetanic spasm of

the toes.—Formication of the lower limbs.—Tingling sensation in the anterior portion of the thighs and calves, as if gone to sleep.—Swelling of the feet. Dropsical swelling of the feet.—Gangrene of the feet up to the knees. Gangrene of the lower limb and spontaneous dropping off of the same.

**Sleep.**—Painful stretching.—*Drowsiness*, like sopor.—*Stupor*, for days.—°Somnolence with delirium and starting.—°Sleeplessness, restlessness and dry heat.—*Restless night-sleep*, with heavy dreams.—Languid and exhausted after the sleep.

**Fever.**—*Disagreeable feeling of coldness in the back and abdomen*, also like shuddering, likewise in the extremities. Sudden chilly creeping. *Violent chilliness*, also with shaking.—*Fever*: first *violent chilliness*, afterwards *burning heat with unquenchable thirst*, the heat being particularly felt in the interior, attended with anxiety which deprives one of the understanding.—°Dry heat, with quick pulse, restlessness and loss of sleep.—*The pulse remains natural even during the most violent convulsions*. The pulse is feverish, small, contracted. °Small and suppressed pulse. *Slow, small and intermittent pulse*. The pulse is at times slow and full, at others small and tight. Spasmodic, small, accelerated and frequently intermittent pulse.—Sweat from the head to the pit of the stomach. \*Cold sweat, -also viscid.

**Skin.**—*The skin is dry and brittle*. Withering, dry. *The skin all over looks lead-coloured*, the parts becoming shrivelled and insensible, and not emitting even a drop of blood on being cut into. *Peeling off of the skin, particularly of the affected parts or of the whole body*.—Burning of the skin as if a spark of fire had fallen upon it. *Formication*, particularly in the extremities and neck, or in the *fingers and toes*, or in the tongue, where it is particularly painful. *Creeping under the skin, all over*. Drawing and creeping, increasing to spasms, with contraction of the limbs and profuse sweats. °Rash on chest and back. *Boils*. Spots on the feet, resembling flea-bites. *Petechiæ*. Large ecchymoses. Bloody blisters on the extremities, becoming gangrenous. Black, suppurating blisters. *Tumours* on the neck, discharging a yellow pus, with burning. Emphysematous swellings.

**General Symptoms.**—*ERGOTISMUS, RAPIHANIA, MORBUS CEREALIS* appears in two different forms, *ergotismus gangrænosus* characterized by degeneration of the blood, and *ergotismus convulsivus*, where the nervous system is principally affected.

1. *Ergotismus gangrænosus (necrosis ustilaginea epidemica)*, the more frequent form, commences almost always with a feeling of weariness in the lower extremities, followed by deep, lancinating pains which become worse during the night and gradually extend over the arms, shoulders and thighs; great cold sometimes relieves those pains. Afterwards the skin of the limbs becomes blue and cold (in birds the crest, ears, bill and tail) with sensation as if those parts had gone to sleep, with loss of sensibility and mobility. Phlyctænæ form under the skin, the skin becomes violet, livid, black, with tumors on various parts; whole limbs burst, bleed, discharge a quantity of fetid ichor, become gangrenous, and wither. At first the pulse is accelerated, then it becomes slower, with difficulty of breathing. Death sometimes sets in only a few weeks after the destruction of the limb. Some had a dull, stupid look, with yellow colour of the skin, distended, hard abdomen, and excessive emaciation. The venous blood was viscous and flowed with difficulty; the patients whose mortified limbs had been amputated, died more rapidly.

2. *Ergotismus convulsivus (convulsio ustilaginæ)*. Dulness of the head, increased warmth and redness of the face, alternating with chills, headache, vertigo, stupefaction, disposition to sleep, diplopia, dilatation of the pupils, languor, stiff-

ness of the muscles, debility of the limbs particularly the lower, staggering, tremulous gait, alternate contractions of various muscles, particularly of the extremities and face, the pulse and beats of the heart are at first accelerated and full, and afterwards become feeble, irregular, even slow; the breathing is irregular and accelerated; formication, trembling in the ends of the extremities; pressure in the præcordial region, violent cardialgia, feeling of coldness in the back and abdomen; the trembling and creeping pass into violent burning pains and spasms, so that the joints appear as if dislocated, the spasms being even of an epileptic and tetanic kind and alternating with stiffness and loss of mobility; finally the extremities become paralyzed and contracted; the spasms are attended with violent retching, thirst, alternation of loss of appetite and canine hunger, continual pain and pressure in the region of the stomach, constipation or discharge of fetid, burnt excrements alternating with diarrhœa; vertigo, loss of the senses and consciousness; small, slow, scarcely perceptible, frequently-intermittent pulse, involuntary emission of urine. Death or recovery took place in two or twelve weeks; those who recovered, suffered for a long time afterwards with weakness of the extremities, a sort of stiffness, with dulness of intellect. Almost all those who had had epileptic fits, died; those who did die, experienced at the moment of death a sensation as if their extremities were paralyzed; they seemed to be struck with apoplexy (*Scribn. Burghart*).—Amid a feeling of anguish, languor, vertigo and a peculiar coldness in the whole body, the patient experienced a stinging, pricking pain, with formication, in the hands; soon after the arms were seized with a similar sensation; the arms were spasmodically contracted in the elbow-joints, and remained so for half an hour; after this, the paroxysm ceased, except the languor and formication in the hands. In the first three days the paroxysms occurred only a few times, but after this period they became more frequent and violent. Soon after the same symptoms were perceived in the feet and in the whole of the lower extremities, a similar drawing and pricking being perceived in the facial muscles, which were contracted, with staring eyes. The contracted extremities, having been forcibly straightened, contracted again soon after. At the same time the patients experienced a contraction of the abdominal muscles, as if, according to the expression of the patients, a board were pressed against the abdomen; the recti muscles were put upon the stretch. On the sixth day of the attack, children became nauseated, and they vomited a green bitter mucus and had diarrhœic stools; afterwards the stool became slow and took place every two or three days only. There was a succession of colicky pains, violent spasms of the bladder, retention of urine with frequent urging to urinate. During the cessation of the spasms the limbs remained still rigid for a long time. On the twelfth and fourteenth days of the paroxysm the children fell into a state of stupor, in which they remained for a long time and from which it was extremely difficult to rouse them, they heard with difficulty, tossed about anxiously, were slightly delirious, and complained stammeringly of great anguish, languor, vertigo, dulness and dull pain in the occiput, with painful feelings in the extremities; when raised on their feet, they were scarcely able to stand, trembled and soon fell down. The face was generally pale, the head cool, the limbs almost cold. Congestion of blood to the head was perceived only during the most violent paroxysms of spasm. The pulse was small, spasmodically contracted, frequent. At first the appetite was slight, afterwards morbidly excited. On the twelfth day an itch-like rash made its appearance on the skin, with itching; panaritium in the fifth week. All the patients remained for a long time afterwards affected with trembling and great weakness (in the case of a whole family, from eating bread containing Secale). Intermittent fever and raphania co-existed in the same patient and ran their course together.

3. *Ergotismus neonatorum*. General livid appearance of the skin, emaciation, dry and withered skin, blue lips, diminished secretion, general rigidity of the muscular system, which causes the stiffness of the body and extremities and the contraction of the fingers in those infants that are born dead, and a curious alternation of spasms and paralysis in those that are born alive. After the breathing has commenced, convulsions set in which frequently last forty-eight hours; these are followed by a condition resembling paralysis, mingled with occasional convulsions of the facial muscles and extremities, by continued squinting, inability to suck, and difficulty of swallowing (from large doses given during parturition, *Beathy, Ramsbothom*). Considerable diminution of the beats of the heart after the lapse of fifteen minutes or half an hour, then they became irregular, the sounds intermit and finally are scarcely any longer perceived, (*Hardy*).—Apparent death, (*Lorenz*).—Erratic pains in the whole body, particularly the back and small of the back. Obstinate periodical pains. *Moaning of the infants from pain*. *Sensation of creeping insects in the skin of the whole body*. *Creeping* in the tips of the fingers, hands, neck and several other parts. *Formication* in the arms, lower limbs and face.—*Subsultus* or tremulous motion of single muscular fibres and of entire muscles, in the face, on the hands, etc.—Painful stretching.—Various twitching motions of the voluntary muscles. Slight twitchings and visible movements under the skin.—*Convulsions* slight at first and then becoming frightful and permanent, the patients being even unable to separate the fingers or to move them towards each other. Violent convulsions are preceded by the creeping sensation and are attended with excessive pain; during these spasms the muscles are constantly trembling, and the spasms which were at first clonic, gradually increased to tonic and real tetanic spasms.—The extremities become quite rigid, the patients have an irresistible desire to overcome the spasmodic contractions or extensions of the muscles.—Violent convulsions of the extremities, several times a day; during the remission the fingers remain numb and frequently contracted.—Curious distortions and contortions of the limbs, alternate contractions and extensions, clonic spasms alternating in some parts with tonic.—*Epileptic spasms*. *Epilepsy in children*.—Sudden vertigo and blindness, the patients were entirely deprived of their senses, fell down, and had to endure the most violent contractions of the joints, convulsions, trembling, violent, ineffectual retching; the elbows were pressed to the chest, the wrist-joints were bent, the fingers clenched, the heels were drawn upwards towards the tendo-Achillis, the toes were drawn under the soles of the feet, the joints could not even be straightened by two strong men.—*Tetanus*, *emprostotonos*, *opisthotonos*, risus sardonicus and rage. Cold sweat during the paroxysms. In some the spasm set in at any hour of the day; in others it continued for three days without remission and then became fatal. The most violent spasms appeared to recur periodically, with premonitory symptoms. The most violent spasms generally set in at night, and gradually abated towards noon without a crisis, so that the patients were able to return to their work at that hour; the sweat accompanying the spasm, seemed to be caused by the anguish and pains. After the spasm the limbs of many remained distorted, the pupils dilated, they lost their understanding, became crazy, imbecile, or they retained a certain insensibility, remained solitary and taciturn, stared at those who addressed them, as if their questions had not been understood; others were as if paralyzed, were neither able to stand nor walk.—A violent emotion brought on a new paroxysm.—*Long-continued indolence*, followed by stupefaction, coldness, insensibility of the limbs and finally gangrene.—*Great general languor*.—*Rapid sinking of strength*.—*Rapid emaciation*.—Emaciation as by a slow poison. Complete prostration of the assimilative functions.—Insensibility and

paralysis of the parts affected with spasms.—Insensibility, numbness, rigidity and immobility of the extremities.—The patients were rigid, insensible, had yet some mobility and suffered with violent pains which were considerably increased by warm air or by the warmth of the bed; the pains were somewhat relieved in the cold, but then a distressing feeling of coldness in the whole body set in in their stead.—The vital forces are gradually exhausted, paralysis sets in, the skin of the affected parts peels off, blisters on the whole skin make their appearance, the fingers and toes become gangrenous, drop off, the stools become liquid, are passed involuntarily and without the patient being conscious of it, death takes place by gangrene or apoplexy.—*True anthracis* on the extremities, which become rapidly gangrenous.—*Gangrene*, dry, cold; hot gangrene, the flesh being eaten off the bones. The fingers or toes first become discoloured, then gangrenous; the local gangrene soon becomes general, penetrates to the bones, and causes whole limbs to drop off even while the patient is still living.—Gangrene of the nose, fingers, hands, arms, feet, tibiae and thighs. Some lose their gangrened fingers and toes without pain and without being conscious of it, the parts being found in the gloves or stockings. The gangrened part becomes black and drops off.—Hemorrhage takes place sometimes upon the limbs dropping off. The patient did not feel the least pain when the gangrened limb was pricked or cut into, the mobility of the limb was not entirely destroyed.

#### PATHOLOGICAL ANATOMY.

The bodies become rapidly decomposed after death, and emit an offensive, cadaverous smell.—Eight hours after death the limbs were as rigid and as much contracted as during the spasm, the face was yellowish and bloated, the eyes sunken, the skin of the abdomen had a greenish tinge owing to the decomposition having commenced. A fetid mucus was discharged from the mouth and nose; there were ecchymoses on the back, chest, neck. The omentum was slightly torn and soft, the intestines were yellow, the liver hard and turgid with blood. The stomach contained a frothy, bilious water and a lumbricus which was in a state of partial decomposition. The gall-bladder, which was extremely dilated, was filled with a light-green, watery bile. The spleen was darker than usual and contained more blood; the urinary bladder and even the ureters were filled with a watery inodorous urine even unto bursting; the heart and the large vessels were empty, the lungs were turgid with blood, likewise the arteries and membranes of the brain; the vessels of the dura mater were empty, the plexus choroidei were already in a state of decomposition (in the case of a boy of fourteen years).—The intestines and other membranes were covered with brown spots, swellings and blisters, which were filled with a whey-like pus.

## 217. SELENIUM.

SELEN.—See ARCHIV, XII., 3.

COMPARE WITH—Agnus c., Ambr., Bry., Carb. a., Graph., Ign., Lach., Mere., Nitr. ac., Puls., Rhus. t., Ruta.

ANTIDOTES.—Ign., Puls.—Chin. aggravates the pains.

#### CLINICAL REMARKS.

Guided by the symptoms, Dr. *Hering* gave Selen. in complaints incident to old age, both in males and females, particularly at the critical age, in gastric and nervous headache, chronic affections of the liver, hard stool, urinary difficulties,

mucous consumption, ulcers on the legs, and other psoric ailments. It is especially useful in secondary gonorrhœa and weakness of the sexual organs.

Selen. has generally proved curative when the following symptoms prevailed: violent sticking pain over the left eye, obliging one to lie down, with sensitiveness of the outer head, melancholy, and profuse micturition; accumulation of mucus in the mouth and fauces after sleep; burning during micturition; he can always squeeze some moisture out of the urethra; secondary gonorrhœa; purulent, milky secondary gonorrhœa became clearer, less, or ceased altogether; re-appearance of the menses in the case of a female of 40 years, which had remained suppressed after a severe illness; night-cough attending ulcers on the legs; great sensitiveness to a current of air; liability to sweat in walking and during the siesta; flat ulcers on the legs.—According to (t), Selen. promotes the alvine evacuations of sick persons.—Dr. *Neidhard* has cured several cases of gonorrhœa with Selen.; after the inflammatory symptoms had passed off, the discharge remained yellow, thick, and copious, particularly in scrofulous subjects predisposed for pulmonary consumption.—According to Dr. *Chapman*, a twitching at night when falling asleep ceased after taking the first trituration, although it had lasted for years; the relief was, however, only temporary.—Selen. has been successfully employed for a chronic complete obstruction of the nose, and in many cases of itching of the nose.—Dr. Paul Wolf has given it with success for great nervous debility after typhus, particularly when the sensations of the patient spread from above downwards.

Not only the more important pathogenetic symptoms of Selen., but also those symptoms which have been observed on sick people, have been confirmed in practice.

#### SYMPTOMS.

**Mind and Disposition.**—Rage and cruelty in his dreams, as if he were an hyena. Dread of society; he does not want to see his patient.—Great talkativeness when excited.—Is so exhausted by mental labour, that he is scarcely able to think for some days.—Complete inability to perform any kind of labour. Very forgetful, particularly in his affairs; but he recollects everything during a nap.—A kind of stuttering, he pronounces words wrong by substituting one syllable for another, and is on that account unable to pronounce various words. Vertigo particularly on rising from a seat, on raising himself in bed, on moving about, on rising from a seat, so that he apprehends he will fall. Paroxysms of vertigo, with fainting, most violent one hour after breakfast and dinner. Everything turns, so that he is obliged to close his eyes. Attacks of sickness, with pale, disturbed face, frequent breaking out of profuse sweat as if from anguish, followed by vomiting of the ingesta, then of insipid, and lastly sourish water; accompanied with a desire for cold water, which is vomited up again; hiccough, eructation, excessive bodily and mental debility; pressure on the forehead as with a hand; sticking in front of the chest as from incarcerated flatulence. The emission of flatulence is relieved.

**Head.**—Dulness of the head, particularly in the evening. Headache every afternoon.—Single fleeting tearings deep in the head.—Pressure in the forehead or pressure in the occiput, with vertigo on rising or moving.—Dull stitches in the forehead, temples and eyes, on entering a warm room out of the cold air.—Great heaviness in the occiput, now and then, with undulating sensation in the brain, blowing in the ears, jerking and pressure in the eyeballs.—Headache after drinking *lemonade*, wine, and sometimes after tea, not after any other beverage. Painfulness of the scalp, here and there, as if the hair would be pulled out.—Falling out of the hair on combing the head.

**Eyes.**—Falling out of the hair of the eyebrows.—Pains deep in the orbits. Dull pressure in the left eye, with lachrymation.—Stinging, twitching, pressure in the eyeballs, during the headache.—Spasmodic twitching of the left eyeball.—Itching of the margin of the eyelids inducing friction, pressure as from a grain of sand, and small vesicles (which were likewise observed in the region of the eyebrows).—Twitching of the eyelids, with indistinct sight. Increased short-sightedness.

**Ears.**—Pimples behind the left ear, with sensation as if a pellicle were stretched over the ear; this sensation passes off only momentarily on shaking the ear with the inserted finger.—Distant buzzing in the left ear, in the evening.—Beating in the right ear, during the toothache.—Blowing in the ears during the headache.

**Nose.**—*Itching in the nose.* Itching of the borders of the wings of the nose. Pain of the septum, as if a pimple would form. Sudden, short-lasting, fluent coryza.—Fluent coryza every evening.—Clots of jelly-like nasal mucus, mixed with small yellow lumps, or yellow and thick mucus.—Stoppage of the nose with dryness of the throat, oppression of breathing and fever.

**Face.**—Twitching of the facial muscles. The skin of the face feels greasy. Inflammation and suppuration of the comedones near the nose.—Cracking from above downwards of the middle of the inner surface of the upper lip.

**Teeth.**—Toothache as when a tooth decays; he has to pick the tooth until blood makes its appearance. A decayed tooth on the left side is painful as if it would be pulled out, attended with a feeling of coldness extending to the cheek, relieved in the open air and by taking cold water into his mouth, also by eating, drinking, smoking; aggravated in the evening, in bed, until the pain becomes a raging and throbbing pain and extends to the jaws, temples and eyes.—Boring in the molars.—Tearing in the lower jaw.

**Mouth.**—In the morning the tongue is coated with a thick, white, or purulent mucus, (the teeth being covered with mucus and creaking on being rubbed with the fingers). Burning sensation on the tip of the tongue, which wakes him.—Pains in the region of the root of the tongue. As the discharge of mucus from the nose and the posterior nares increases, the expectoration from the fauces and larynx decreases.—Tickling and scraping in the throat inducing hawking (not coughing).—Hawking up of mucus which is mixed with a little blood.—Violent, disagreeable feeling of dryness in the throat, particularly in the evening, when the throat feels parched.

**Appetite.—Gastric Symptoms.**—Increased appetite, hunger.—Hunger at night on getting up, with diminished appetite in the morning.—Hunger early in the morning.—A good deal of thirst in the evening.—Desire for *brandy*, particularly late in the evening (in one who never took any).—Aversion to salt things, afterwards desire for them.—Repulsively-sweetish taste on the lips when smoking tobacco. Hiccough and eructation when smoking before dinner.—Cardialgia.—Pressure as if cardiacgia would set in. Has to lie down after eating, but is unable to go to sleep, *on account of feeling the beating of the pulse through the whole body, and particularly the abdomen.*

**Abdomen.**—Pains below the ribs of the right side, extending to the renal region, particularly on drawing breath; the whole region is sensitive to pressure. Red itching rash in the region of the liver, in front and in the side.—Violent sticking between the spinous process of the left ilium and the umbilicus, when walking, so that he is scarcely able to stir.—Cutting colic, terminating in the emission of a single flatus, evening and night.—Flatulence is emitted more easily.

**Stool.**—Has not the usual morning evacuation.—Stool hard, and so impacted, that it has to be removed by mechanical aid.—The *fæces* contain threads

of faecal matter like hair.—Some blood after hard stool. Mucus after difficult stool.—Papaceous stool with tenesmus, attended with a sensation in the anus as after a very hard stool.

**Urinary Organs.**—Dripping of urine after micturition, particularly after an evacuation from the bowels.—Little dark urine. *Red urine in the evening.* The urine has a strong violet odour.—Red, sandy, coarse-grained sediment. Brick-dust sediment.—Frequent micturition at night. Involuntary dripping of urine in walking.—Sensation at the orifice of the urethra, as if a smarting drop would press out.—Dragging sensation along the urethra, with sensation as if a drop of urine were squeezing through.—When sitting, and also when walking, a drop of viscous, transparent fluid presses out of the urethra, occasioning a peculiarly-disagreeable sensation; the same sensation is experienced shortly before and after stool.

**Genital Organs.**—Sweat in the pubic and hypogastric regions. Itching of the scrotum. Darting pain in the right testicle, in the evening.—Erections with much itching in the urethra.—No erection in the evening, notwithstanding he was excited. Erection in the morning without sexual desire. Diminution of the sexual desire. Impotence, with sexual desire. Slow, imperfect erection. The semen was emitted too early, but there was a long-continued thrill.—Emission of semen, during sleep, at night, without his being conscious of it. The semen is thin and inodorous. Weak and ill-humoured after an embrace.—The menses delay eight days.

**Larynx and Trachea.**—Huskiness of the voice, particularly in commencing to sing, he has to hawk frequently. He hawks up transparent lumps every morning, to which a little blood adheres frequently.—Slight cough in the morning, which is however felt through the whole chest. The cough is followed by an expectoration of lumps of mucus with blood. Cough deep out of the chest. He frequently draws deep breath, as if he were moaning.—Feeling of fulness in the chest and region of the heart, as if some change were taking place. Oppressed breathing with stoppage of the nose, dryness of the throat, thirst, cough, sleeplessness, and constant alternation of heat and cold. Oppressed breathing and stitches in the side, in the open air. Stitches in the left side of the chest, first at night, then in the evening, then morning and evening.—Pains in the chest as if raw, at night when lying, particularly in the left side, then in the small of the back, then here and there. Pain in the middle of the chest, on raising the arms and on making pressure.

**Back.**—Painless lameness of the small of the back, in the morning.—Stiffness of the nape of the neck and cervical muscles, impeding the turning of the head, accompanied with tearing in the left side of the trunk and head.—Painful gland on the left side of the neck, particularly when pressing upon it, accompanied with tearing pains along the neck. Drawing-sticking pressure in the left side of the nape of the neck, extending to the eye, which discharges tears; in paroxysms of half an hour.—Fleeting tearing through the left side of the neck, accompanied with a similar sensation in the posterior side of the left thigh.

**Extremities.**—*Tearing in the hands*, with cracking in the wrist-joint at night. Twitching in the ulnar side of the left hand.—*Emaciation of the hands.*—Cracking of the knee on bending it, when lying.—Cramp in the calves, soles, near the malleoli, in the flexor-tendons and in the big toe, in the evening when lying. Cramp in the soles, in the morning and at night, on moving in a recumbent posture.—Violent pricking in the corns.

**General Symptoms.**—Stiffness and cramp in all the limbs. Pains in all the limbs as from a cold. The least current of air is intolerable to him. He is frequently obliged, when sitting and working, to cease suddenly and to lie down, on

account of all his strength leaving him suddenly.—Striking emaciation, particularly of the face, hands, cheeks and calves.—Irresistible desire to lie down and sleep; has to lie down in the day-time during the hottest part of the day, but is only able to doze.

**Sleep.**—He sleeps soundly the whole forenoon.—Is very sleepy at nine o'clock in the evening, has to lie down and falls asleep immediately. Drowsy early in the evening, slumber with frequent waking; wide awake in the middle of the night, and sleepy again after reading. *Sound sleep towards morning.* He remains awake until late in the evening. Falls asleep later than usual, and wakes earlier. Remains awake from three o'clock in the morning, without feeling any inconvenience. *Wakes* early, always at the same hour, even when going to bed late. From a deep siesta which is disturbed with dreams, he wakes regularly at the moment when he has to go out to make his visits.—He thinks during his slumber of the things he had forgotten when waking.—Starting of the whole body, in the evening, on going to sleep.—Sleep disturbed with a number of dreams which he is unable to recollect. Dreams about distant persons. Dreams about visiting, travelling, an embrace, and wakes with erections. Dreams full of calculations, dispute, malicious cruelty.—Every little noise wakes him.—After the siesta the mouth is filled with tenacious saliva.—He wakes in the morning and afternoon with great dryness of the mouth, fauces and pharynx, drinks a good deal, after which sweat breaks out.—On waking he feels at first lazy and is unable to collect his senses; is much brighter after washing himself.

**Fever.**—Ill-humoured, drowsy and indolent, with frequent yawning and stretching of the arms.—Drowsy with yawning, languor, disposition to vomit, drawing in the occiput, ringing in the ears and dulness of hearing.—On some parts of the body, right side, hepatic region, chest, abdomen, and loins, a glow is felt as if proceeding from a hot furnace, more externally and more perceptible to the hand than felt internally, although he feels hot; particularly after a meal, after the siesta, also when lying in a cool room.—Sweat during and after the heat. Sweat during the siesta. Slight sweat on going out, also in the forenoon.—The sweat on the chest and in the axillæ leaves whitish stiff spots on the linen.

**Skin.**—Biting in the skin, all over, particularly in the palms of the hand. Frequent tingling at small spots as from a particle of dust, particularly around the mouth, on the cheeks, chin, obliging one to scratch hard, and going off afterwards. Itching of the margin of the wings of the nose, and of the inner side of the wrist, between the fingers, *at small spots*, also of the feet, in the evening. Itching around and below the malleoli, between the tendo-Achillis and the malleoli.—Pain as if a pimple would form between the eyebrows, on the septum of the nose. Small pimples below the ear. Itching pimples on the back, hands. Vesicles on the buttock, resembling itch-vesicles.—Rash in the region of the liver and on the forearms. Itching smarting pimples between the thighs and scrotum. Itching on the balls of the fingers; after scratching, a white spot with a red areola makes its appearance.—Insensible blotch in the skin, on the right tendo-Achillis.—Blotch in the skin, on the left calf; he has to scratch it until the part becomes sore; the place remains humid for a long time. A spot over the malleolus, which had been scratched open, remains humid for some days, and is very sensitive after it has healed.—Sore and painful hang-nails on several fingers.—The ischia become sore from sitting.—A painless flat pimple with a pustule on it, ulcerates. Blister on the middle-joint of the second toe of the left foot, which is rubbed open.

**Characteristic Peculiarities.**—All his pains are worse after sleep, to which he is greatly inclined.

ANTIDOTES.—*Arn.*, *Bell.*, *Bry.*, *Camph.*

## CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

Bites of poisonous animals.—Increased secretion of mucus from the eyelids.—Iridonecrosis: lentil-sized, violet-coloured ecchymosis towards the lower part of the iris, with diminished irritability, disturbed vision and lancinating pains around the eyes, remaining after chronic ophthalmia.—Speck on the cornea.—Improvement of degenerations of the cornea resembling pannus.—Sen. promotes the absorption of the broken cataract.—Diminution of a considerable dimness in consequence of an interstitial distention of the cornea of either eye.—Amelioration of cataract.—Burning in the urethra and its orifice, before and after micturition, the urine being mixed with slimy fibres, frequent micturition day and night.—Grippe: continual titillation and burning in the fauces and larynx, preventing a recumbent position and inducing a fear of suffocation.—Frequent cough, early in the morning, with difficult expectoration, which was mixed with blood on making violent efforts to expectorate, was generally thick and yellow, with wheezing breathing, pain as from concussion in the whole chest when coughing, difficulty of lying on the side, oppression of the chest, sweat in the morning, loss of appetite, languor, drawing in the limbs.—Short, dry cough after spitting blood, racking pain in the chest on drawing deep breath and sneezing, dull pushes in the forehead when coughing, sweetish taste in the throat rising from below upwards, dull stitches under the short ribs, rather hard pulse.—Cough with expectoration of tenacious mucus, yellow and bloody expectoration, with wheezing in the chest.—Catarrhal fever, spasmodic cough attended with expectoration of a quantity of mucus.—Increased secretion of mucus in the lungs after inflammatory or catarrhal affections.—Extremely copious, transparent, tenacious and yellow expectoration, after peripneumonia.—Frequent violent cough, with expectoration of tenacious mucus, after typhus.—Pneumonia after the removal of the inflammatory symptoms, if the patient complains of aching, pressing pains during respiration, and the cough is rather dry than moist.—Violent stinging pains in the right subcostal region, increased by breathing and motion, extending to the region of the shoulders, and obliging him to bend double in walking or taking a deep breath, occasioning tightness of breath, and rendering it difficult to lie on the right side.—*Peripneumonia*: oppression of the chest, he has to sit up all the time, suppression of the expectoration with rattling in the chest; pulse small, wiry, cold sweat all over, (a large dose afforded relief\*).—*Pneumonia*, venous form, in a patient, with pituitous and phlegmatic constitution, when the mucous membrane or the lungs is principally affected, when the tenacious mucus occasions a burning and drawing in the chest, and the expectoration, which is difficult during rest, gets worse (the circulation having previously been quieted by *Acon.*).—Hydrothorax after scarlatina.—Hydrothorax, in the case of a patient who was affected with a chronic malady of the chest.—Incipient paralysis of the lungs, in the case of a child; the breathing is very laborious and short, at times rattling, at others wheezing, as if the bronchi were filled with mucus, the thorax being almost entirely quiet.

\* *Aconite* was more specifically indicated.—HEMPEL.

SYMPTOMS.

**Mind and Disposition.**—Attacks of anxiety. Feeling of anxiety, with accelerated breathing. Anxiety and vertigo (from large doses). Frightful anxiety. —Melancholy mood. Hypochondriac mood and irritable.—Phlegmatic, inclines to quarrel and offend.—Cheerful but irritable, and becoming easily vehement when excited. Cheerful and childishly playful; a slight cause provokes his anger. —He recollects suddenly, without any cause, insignificant regions which he had seen long ago, and which had never made a deep impression upon him.

**Sensorium and Head.**—*Vertigo*, in large doses, (Sundelin). Vertigo, with roaring in the ears; shortly after taking the drug. Slight vertigo before the eyes, shortly after. Vertigo in the head, continuing for moments, as if the blood ceased to flow, and as if the ideas were arrested.—Reeling sensation in the head.—Disagreeable sensation of emptiness in the head. Confused feeling in the head. Dizziness with flat taste in the mouth.—*Dulness* of the head. Dulness of the head, with pressure and dulness of the eyes.—Violent beating headache with pressure in the eyes, diminished appetite, bruised feeling and general feeling of malaise.—Boring stitches in the head.—Heaviness of the whole head, continuing six hours.—A sort of aching pain in the head, in the sinciput and occiput, not increased by contact; this headache came on every day, and was especially felt when sitting in a warm room; it was accompanied with a pressure in the eyes, which did not bear contact; on the fifth day nausea supervened after dinner, with inclination to vomit; the pain seemed to be relieved by leaning the head quietly on the arm; exercise in the open air afforded the greatest relief; accompanied with a slight sensation as if diarrhoea would set in, which, however, was not the case; after the nausea had passed off, after the lapse of  $1\frac{1}{4}$  hours, a peculiar though not unpleasant sensation was felt in the parotid gland, and a simple pain in the pit of the stomach, rather than the outer parts thereof. Aching, *stupifying pain* in the occiput, toward evening. Pressure in the temples in the forenoon, toward the forehead. Sensation of pressure in the forehead. Dull sensation in the right half of the forehead, like pressure. Violent aching, beating pain in the forehead, in the evening of the first day. Painful drawing in the forehead, several times.—Pressing pain in the forehead and in the orbits, after dinner, especially in the left side of the head; relieved in the open air. Fleeting tearing pain in the right half of the forehead. Tearing and drawing pains in the temples, extending down the face.—Violent rush of blood to the head, when stooping, especially to the eyeballs, where a painful pressure is experienced.—*Simple pain in the occiput*, afterwards extending to the temples, and finally affecting the whole head.—The headache is relieved by cold.—Itching of the hairy scalp. Shuddering over the hairy scalp, shortly after.

**Eyes.**—(For the affections of the eyes which have been cured with Sen., see Clin. Obs.)—Bloated eyelids. Swelling, burning and pressure of the eyelids, without much redness. Both lids of the right eye are *inflamed and swollen*, especially toward the inner canthus, with painful pressure. Swelling of the eyelids. *Pimple* (hordeolum) on the margin of the right lower eyelid. Vesicle of the size of a pin's head on the margin of the left upper eyelid, occasioning a troublesome pressure in the eye; on being opened, the vesicle discharged a clear fluid, and the pressure disappeared. Considerable *creeping* in the eyelids, with sensation as if sand had got into them. *Burning pain* in the margins of the eyelids, early in the morning on the second and third days. Slight burning in the lids when writing. Pressure in the right upper eyelid, towards the inner canthus. Pulsation in the right lower eyelid. The lower eyelids are *spasmodically drawn* towards the nose, for several days. Jerking in the eyelids. Con-

stant *twitching* in the right outer canthus. Secretion of a *quantity of mucus* in the Meibomian glands. Secretion of a quantity of hard tenacious mucus in the canthi during the night. \*Early in the morning *the eyelashes are full of hard mucus*. An almost constant twitching and jerking in the lower eyelids causes lachrymation. *Drawing* in the eyes, passing into a cooling sensation and leaving tears behind. *Slight lachrymation*, and sensation as if filaments were hanging before the eyes, especially in the right eye, in the open air. Some lachrymation in the open air. When looking at an object intently or permanently the eyes tremble and run.—Painful *pressure* in and over the orbits. Painful pressure in the eye, as if the eye would be pressed out of the socket; passes off in half a minute, leaving a dull feeling behind. Pressing in the eyes.—*Drawing* in the eyeballs with diminution of sight. Drawing and pressure in the eyeballs, with diminution of sight. Considerable *pressure in the eyeballs*, now in the right, then in the left. Pressure in the eyes when stooping, as if a fluid were pressing into the eyeballs and dilating them; the first days. Sharp pressure at the bottom of the left eyeball. Pressure in the eyes, in the evening, at candle-light.—*Burning and pressure* in the eyes; towards evening.—*Burning* in the eyes when reading or writing. *Dryness* of the eyes, with sensation as if the eyeballs were too large for the orbits.—Considerable dryness and smarting pain, as from soap, in the eyes.—*Tensive sensation* in the eyes, with too great sensitiveness of the eyes to the light.—He *stares* at one object; sensation as if it were difficult to move the pupils.—*Illusions of sight*.—*Shadows* before the eyes. The objects look shadowy.—*Impeded vision*, as if *dazzled by a glaring light*. While reading, the eyes feel dazzled; this makes the reading difficult.—When walking towards the setting sun, he imagined he saw another smaller sun hover below the other, assuming a somewhat oval shape when looking down, and disappearing when turning the head backward, or when closing the eyes.—At noon she saw several times a shining spot on the wall when looking at it sideways; it disappeared when looking at the wall in a straight line.—*Dulness of the eyes*, with slight burning and lachrymation. Dulness of the eyes when reading; they run when exerting them too much. Extreme sensitiveness of the eyes to the light.—Dimness of sight and *luminous vibrations before the eyes when reading*, obliging one to wipe them often; this wiping increases the former symptoms.—Contraction and difficult motion of the pupils, the first days.

**Ears.**—Dull pain in the right ear. Sensation of painful pressure in the right ear when chewing.—*Feeling of warmth* in the right ear.—A cooling sensation frequently pervades the left ear.—*Slight humming* in the ears, which feel as if stopped.—Painful *sensitiveness* of the sense of hearing, even when hearing sounds which ordinarily seemed agreeable.

**Nose.**—*Itching* in the nose.—Troublesome *dryness* of the Schneiderian membrane. Great dryness of the nasal fossæ, with a discharge of a few drops of blood from the same.—Smell before the nose, as of a malignant ulcer.—Sneezing, so violent that the head becomes heavy and dizzy, followed by discharge of a quantity of thin, watery mucus.

**Face, Jaws and Teeth.**—Feeling of warmth in the left half of the face. Paralytic feeling in the left half of the face. Burning vesicles, itching when touched, on the upper lip near the nose and corner of the mouth.—Simple pain in single teeth and in the jaws.—The lower foreteeth are extremely sensitive to cold and damp air, when inspired through the mouth.—Slight digging-up in the upper left molares.

**Mouth.**—Tensive sensation which had shifted from the palate to the articular fossæ of the lower jaw.—Smarting, burning sensation in the region of the

palate, as if the skin had become detached. *Dryness of the mouth*; an hour after, increased secretion of saliva. Dryness of the mouth and throat, with accumulation of tenacious mucus in the throat. Excessive dryness in the mouth and larynx early in the morning and forenoon, for many days.—*Slight prickling and stinging* in the mouth, with accumulation of saliva.—*Viscid saliva* in the mouth. *Increase of saliva* in the mouth, also with contractive sensation in the mouth. When smoking he spits more than usually, the saliva is quite watery. *Ptyalism*.—*Putrid smell* fr in the mouth.—*White-coated tongue*. Yellowish-white coating of the tongue, the first days. *Slimy tongue* early in the morning, and unpleasant slimy taste in the mouth. *Slight burning sensation* in the tip of the tongue. *Creeping* under the tongue. The middle of the tongue is dry, without coating.

**Pharynx and Œsophagus.**—Sensation of a constrictive irritation in the fauces. Astringent acidity affecting the mouth, and especially the uvula. Disagreeable scraping on the posterior part of the tongue and in the throat, with frequent accumulation of saliva in the mouth.—The whole of the mouth and fauces is burnt, so that only mild or liquid papaceous food can be taken.—Expectoration of white mucus, which is easily thrown off by a little hawking. Tenacious mucus in the fauces early in the morning.—*Dryness* in the fauces with shootings, especially in the uvula. Increased secretion of mucus in the throat, inducing a short and hacking cough; continuing for three weeks. Increased secretion of mucus in the trachea, which he is constantly obliged to hawk up. Tenacious mucus in the larynx, inducing a frequent hawking, which results in the discharge of small lumps of mucus. Early in the morning, he frequently hawks up lumps of gray mucus, accompanied with an irritation in the larynx, inducing a short and hacking cough. Secretion of a whitish, tenacious mucus in the throat.—*Inflammatory swelling* of the fauces, especially the uvula.—*Burning sensation* in the fauces. *Burning, scraping sensation* in the throat, obliging him to swallow frequently; shortly after taking the medicine.—*Pressure* in the throat when swallowing the food.

**Taste and Appetite.**—Flat taste in the mouth, early in the morning; the first days. Nauseating sweetish taste in the mouth, several days. Bad taste, and a peculiar grumbling in the stomach. Metallic taste. Taste as of urine, immediately after taking the drug. Diminished taste.—Increased thirst; the first days. Thirst with dryness of the palate. A good deal of thirst, with roughness and dryness in the fauces.—*Loss of appetite*.

**Gastric Symptoms.**—Inclination to eructations. Eructations several times. Rising of air. Deranged digestion and vomiting. Nausea, caused by small doses. Nausea in the stomach. Nausea after dinner, with inclination to vomit. Great nausea with retching. Retching, after small doses. Retching and vomiting, with discharge of a quantity of watery mucus. *Vomiting and purging*, from strong doses. Vomiting and anxiety.

**Stomach.**—Painful and repulsive sensations in the stomach.—Feeling of *emptiness* in the stomach. *Qualmish feeling* in the stomach, with accumulation of water in the mouth.—Aching, almost spasmodic pain in the stomach; the first night, returning for several nights.—Disagreeable *pressure* at the stomach, the whole day. Disagreeable, oppressive sensation in the stomach.—*Burning* in the stomach, lastly retching and vomiting. Warm feeling in the stomach, the first hours. Considerable burning in the stomach and bowels. Violent burning and pressure in the stomach, from small doses. Considerable burning in the stomach, passing into a fatiguing retching and vomiting of a quantity of watery mucus.

**Abdomen.**—Boring pain in the left *hypochondrium*; in the evening, on the

first day.—Sensation of *gnawing hunger* below the pit of the stomach. Feeling of pressure in the pit of the stomach. After supper, he experiences a painful, digging-up pressure below the pit of the stomach, with malaise in the whole body. Pressure in the pit of the stomach and umbilical region.—Gnawing sensation in the *epigastrium*, before a meal, although he has no appetite. Rumbling in the left side of the *epigastrium*. Digging-up pain in the *epigastrium*, with disposition to flatulence and sudden outbreaks of ill-humour, evening. Warmth and oppression in the *epigastrium*, during an inspiration. Some cutting in the *epigastrium*; the first hours. Colicky pains in the *epigastrie* region, towards noon. Motions and rumbling in the abdomen; at times, the first hours. Shifting, boring pain in the umbilical region. The aching pains in the umbilical region make their appearance in the afternoon, increasing in the evening, especially during rest; the first days.—Pressing in the *abdomen*, soon after emission of flatulence. Colicky pains in the abdomen, with inclination to stool. Violent cutting from the abdomen to the pit of the stomach; the first hours.—Rumbling in the intestines. Loud rumbling and pinching in the left side of the abdomen. Severe pinching in the abdomen, ceasing after some liquid stools. Sudden pressure in the right side of the abdomen and chest, in the evening when sitting. Colic during dinner.—Drawing sensation as from a foreign body, between the abdominal integuments on the right side, when walking.

**Stool.**—The stool delays eight hours; the first days. Rare, scanty, hard stools; the first days. Hard, scanty stools, followed by pressing in the rectum. Difficult stool, the fæces being too dry and of too large a size. Costive until the ninth day.—Slight indication of diarrhœa, which, however, did not take place. Increased stool, ninth and tenth days. *Papescent stool*, with grumbling in the abdomen and emission of flatulence. Increasing papescent and loose stools at irregular periods. Two or three easy papescent stools (seemed to be a secondary effect from a large dose). Increased, even watery stools.—Beating pressure in the region of the anus after stool. Itching between the nates, obliging one to scratch and abating afterwards.

**Genital and Urinary Organs.**—Diminished secretion of urine; first days.—Increased and more frequent secretion of urine. The urine is passed more frequently, but less at a time, and is of a lighter colour. The urine, which is emitted frequently, retains for a long time a foamy appearance (as of soap-bubbles, from large doses, in the case of a patient whose chest was affected). Increased secretion of urine, accompanied with a sensation of pressure in the urethra. Frequent emission of a urine with a greenish tinge, depositing a cloudy sediment, although the patient drank but little. Every time he drinks, he passes an increased quantity of urine, for several weeks. Copious secretion of urine. Senega increases the secretion of urine and sweat. Increased secretion of urine and slight burning when urinating.—Involuntary emission of urine during sleep. Involuntary emission of urine, while dreaming (he did not pass any urine before retiring). \**At first the urine is mixed with mucous filaments*; after it had cooled, it became entirely thick and cloudy. The urine becomes turbid and cloudy immediately after emitting it. As soon as the urine which had been emitted in the morning, cooled, it deposited a thick sediment, the lower layer of which was yellow-red, the upper consisting of yellow flocks. The orange-coloured clear urine becomes turbid when standing, and deposits on the inner walls of the chamber a white sediment. The urine becomes turbid when standing, and deposits a reddish sediment mixed with mucous flocks; from the eighth day. °Burning in the urethra before and after micturition. Slight burning in the glans when urinating; the first days. Pressure and burning when urinating, in the evening, the fourth and sixth days. Shootings along the

urethra after the emission of a dark yellow urine; early in the morning on the second day. Burning early in the morning, in urinating, with sensation as if the urine had first to open a passage through the urethra.

**Male Genital Organs.**—Tickling of the prepuce and glans. Paroxysmal cramp-pain in the region of the glans—Painful *erections*, with increase of sexual desire, the first two days.—Diminution of the sexual desire, afterwards.

**Larynx, Trachea.**—Seraping and dry sensation in the throat, making it difficult for him to talk and obliging him to cough. Roughness in the throat almost bordering on hoarseness, in the forenoon. Roughness and dryness in the throat, with dry cough. Great dryness in the throat, impeding speech. Seraping in the throat and on the back part of the tongue, with accumulation of saliva (immediately). Titillating, seraping feeling in the throat. Raw feeling in the throat when clearing it.—Sudden hoarseness when reading aloud. Constant inclination to clear the throat, and to swallow the saliva. *Cough* with expectoration of tenacious mucus. Dry cough when pounding the root. Dry cough with concussion of the whole chest; shortly after taking the medicine. Dry cough, with oppression of the chest and roughness in the throat; on the first day, evening. Disagreeable, long-continuing cough. An irritation in the larynx excites a dry cough, several times; shortly after taking the medicine. Painless cough without expectoration. A sudden tickling in the larynx excites a cough. *Titillation in the larynx* exciting a short and hacking cough; the first days. Frequent short and hacking cough, occasioned by an increased secretion of mucus in the larynx, especially in the open air and when walking rather fast (in the forenoon). *\*Increased short and hacking cough in the open air*; continuing for about three weeks. (For the kinds of cough which have been cured with Senega, see Cl. Obs.)

**Chest.**—Frequent and deep inspirations.—Oppressions, from large doses. Sensation of stagnation in the upper part of the lungs, especially during a rapid walk. Oppression of the chest at different times, *especially during rest*, the first days, also with stitches under the left short ribs. Short breathing and oppression of the chest when going up stairs. The chest feels too tight. Tightness and oppression of the chest, soon after taking the drug. Oppressive sensation in the left side of the chest, increasing almost to an aching pain. Oppression of the chest, with slight shooting pains through the chest in the direction of the scapula, returning the first ten days at indefinite periods, especially in the open air and during a walk. Tightness and dull pressure in the chest. Certain movements, especially stooping, cause a pain in the chest, as if it were too tight; there is a disposition to expand the chest by frequent stretching; this leaves considerable soreness in the chest behind.—Sudden, violent pain in the chest at a small spot of the right side, when walking. Pain in the chest for about a quarter of an hour, in the afternoon, after smoking.—Pain under the right scapula, when coughing or drawing deep breath, as if the chest would fly to pieces.—*Tensive sensation* in the lower half of the chest, during an inspiration.—*Aching pain in the chest*, at indefinite periods, especially during rest, for some weeks. *Violent aching pain in the chest at night when waking*; the first days. Sensation of pressure below the sternum, returning several times a day. Slight pressure below the sternum, when sitting erect. Strong pressure in the middle of the chest, below the sternum, when sitting; this pressure increases, and descends towards the præcordial region. Violent aching pain across the whole chest, especially in the left chest, whence the pain seems to proceed.—A somewhat *aching boring* pain in the whole left chest, especially in the region of the heart, where it becomes seated and whence it radiates towards the left axilla. Boring-aching pain in the whole lower half of the chest, especially above the

region of the heart.—Beating pressure at a small place below the short ribs; generally on the right side, during an inspiration.—When bending the head forward, he feels a violent pressure under the upper part of the sternum, gradually passing into a violent colic.—Pressure on the chest increases the pain in the same.—Violent compression of the upper part of the chest, especially during rest. Compression of the chest, from both sides towards the front, towards evening. Pain in the chest as if forcibly compressed.—*Violent pressing pain* in the chest, from within outward. Violent pressing, aching pain in the middle of the chest, increased during rest. Hard pressing aching in both sides of the lower part of the chest, when sitting. Violent hard pressing aching in the chest. Pinching and hard pressing aching in the chest. Crampy pain in different parts of the chest. Crampy pain in the left chest, increased by lying on the right side. Considerable cramp-pain in the chest, especially in the left, with restlessness and anxiousness, during rest. Crampy pain and pulsations in the left chest; in the afternoon. Crampy pain in the upper part of the right chest, with dull stitches.—Shifting pains in the chest. Shifting, sometimes burning pain in the chest.—Burning drawing deep in the chest. Drawing, extending from the chest to the axillæ.—*Tingling* in small parts of the chest (rather superficially, as if in the pleura). Crawling in the chest. Tightness and crawling in the upper part of the chest. Twitching and crawling in the upper part of the chest, especially during rest. Shifting twitching in various parts of the chest. Pricking and crawling in the lower part of the chest.—Shooting stitches in the chest, during an inspiration and rest. Slight pricking in the middle of the chest, abating immediately by one deep inspiration. Severe stitches, deep-seated, at a small spot of the left chest, increased by cough and various motions. Some sharp stitches through the left chest. *\*Dull stitches in the left chest, especially when sitting, or lying.* °Stitches through the chest, to the back. Dull stitches in the middle of the chest, at intervals. *\*Dull stitches under the short ribs of the left side.* Dull stitches at first, afterwards violent oppression in the chest, with great debility in the lower extremities, sweat and nausea (almost fainting), when walking in the open air. Pricking at a small spot of the left chest, when walking. Shifting, dull sticking pains in the chest, with tightness of the chest, difficult breathing, frequent shuddering over the back, and occasional pains about the head here and there. *\*Dull stitches and burning pain in the left chest, when lying on the right side.—Burning* in the chest. *\*Violent burning pain in the left chest, when sitting, evening.* Intense burning pain, accompanied with frequent stitches, in the upper part of the left chest, increased during rest. Burning pain at a small spot of the left chest, with disagreeable mood, afternoon. Burning sensation under the sternum, extending as far as the back. Burning pain with dull stitches at a small spot of the left chest, during rest, (frequently, the first days). Violent burning pain in the left chest, when lying on the left side, evening. Burning pain in the left chest, with great anxiety in the chest, evening.—*Sore pain* in the left chest. Sore pain between the third and fourth ribs, increased by pressing upon it, or increased to a sticking pain. Sore pain and stitches in the left chest, at a small spot, evening. Burning sore pain under the sternum, especially during motion and a very deep inspiration. *\*When sneezing, he experiences an extremely violent sore pain in the chest as if it would fly to pieces,* —although the sneezing does him good and relieves the chest. Strong pulsations and sore pain in the chest, when bending the chest forwards, with vertigo when bending it backwards. When stepping hard or when running, the chest is racked violently as if the inside were sore all over. When stepping hard, or when walking fast, or running, he experiences a violent pulling sore pain through the chest, from the

fore to the back part (as if in the mediastinum), making those movements difficult, for several weeks.—Violent pain when conussing the chest, through the middle of the chest, especially along the dorsal vertebræ.—During the pain in the chest, the breathing is not very much affected; the pains are generally more violent during rest, and appear to be superficial, in the pleura.—Congestion of blood to the chest, perceptible by strong pulsations in the chest. Orgasm of the blood in the chest, with dull stitches in the chest.—Orgasm of the blood and creeping in the chest; when at rest, towards evening. Considerable orgasm of the blood in the chest, almost causing fainting, when sitting. Orgasm of the blood and oppression in the chest, with flushes of heat in the face, and frequent pulse, in the afternoon. Slight boring, aching pain in the region of the heart, which seems to be more on the outside. Light pressure in the region of the heart, with oppression and difficult breathing when walking. Violent boring pain in the region of the heart. Aching pain in the region of the heart during a deep inspiration. Violent beating of the heart, shaking the whole chest.—General sensitiveness, or simple pain of the walls of the thorax, especially when touching them; it is felt less during a deep inspiration. The front part of the thorax is painful to the touch and during an inspiration; early in the morning, after 24 hours.

**Back.**—Violent burning and itching under the skin of the whole back, but especially between the scapulæ.—Slight pressure in the region of the os sacrum.—Aching, painful feeling under the left shoulder-blade, at indefinite periods, but more frequently in the evening, and only when sitting, continuing some weeks. Drawing, aching pain along the base of the left scapula. Pressing pain between the scapulæ, especially when stepping hard, or when performing other movements, conussing the chest.

**Upper Limbs.**—Paralytic pain and drawing from the elbow to the little finger (left side), as if one had knocked the part violently against something. Paralytic drawing in the left arm, from above downward. Titillation and prickling in the palms of the hands. Stitches in the palm of the left hand. Pain as if sprained in the right wrist-joint. Painful drawing in the metacarpal bones of the left thumb and in the finger-joints.

**Lower Limbs.**—Painful sensation in the hip, knee, and tarsal joints, as after a long journey on foot. Bruised pain in the glutei muscles and thighs. Bruised pain in the muscles of the left thigh, with debility of the whole body, and mental indolence. When turning the thigh, while standing, he experienced a pain in the hip-joint, as if sprained.—Intense pain in a little pimple, when touched ever so lightly.—Tensive pain in the joints, especially the knee and tarsal joints.—Violent itching of the legs, obliging him to scratch; this causes a burning, especially in the evening, when in bed. Weariness of the lower limbs. Great weariness in the feet, especially in the forenoon.

**Sleep.**—Weariness and frequent yawning; the first six days.—Great drowsiness in the evening; the first days.—Inclination to vomit during the siesta; first day. Anxious starting and jerking in the upper arm, during the siesta.—*Sound stupifying sleep*, after lying down; the first days. Sound sleep, full of dreams, with confusion in the head on waking.—*Restless sleep* with frequent starting. Restless tossing about in sleep. Restless interrupted sleep, owing to oppression of the chest. Restless sleep at night, and frequent waking, on account of dull stitches in the chest, and tightness of the same; the first fourteen days. Restless sleep, full of dreams. Restless sleep at night, with dreams of which he has no recollection after waking; the first nights. The sleep is disturbed several nights in succession by an aching, almost cramp-pain in the stomach.

**Fever.**—Chilliness with weakness in the feet.—Febrile motions; shuddering over the back, heat in the face, weak, burning eyes, beating headache, difficult breathing, stitches in the chest, general bruised feeling of the body, and frequent pulse.—Diaphoresis. The skin became warmer and moister.—The *pulse* is rather hard and accelerated. Hard, frequent pulse; shortly after taking the drug. Unequal, soft pulse.

**General Symptoms.**—General feeling of *debility*, especially of the lower limbs. Lassitude and slight trembling of the lower extremities. Feeling of debility, even unto nausea. Great debility, with stretching of the limbs, confusion, heaviness and beating in the head. Bodily and mental debility. Languor, when walking in the open air; afternoon.

## 219. SENNA.

SENN.—See HAHNEMANN'S Organon and Lexicon for Pharmacutists.

### SYMPTOMS.

**Head.**—Headache on stooping, as if the head would be pressed down.—Pain in the nape of the neck on raising the head.—The corners of the mouth are covered with burning vesicles.

**Stomach, Abdomen and Stool.**—Loss of appetite.—Thirst.—Empty, or watery eructations, having a bad taste.—Loathing and nausea, as if one would vomit.—*Colicky pains* (particularly in little children)—Feeling of coldness in the abdomen, with emptiness and sickness of the stomach.—Rumbling and fermentation in the abdomen, with emission of foetid flatulence.—*Diarrhæic stools*, followed by tenesmus and burning at the anus.—Heat, pinching in the abdomen, spasmodic incarceration of flatulence, painful colic from incarceration of flatulence.—Feeling of warmth in the stomach, pinching in the bowels, flatulence, and yellow stools, no constipation after the diarrhœa.

**General Symptoms.**—*Rushes of blood*, particularly at night, disturbing sleep.—Sleeplessness, with cries and restless turning, (particularly in the case of infants).

## 220. SEPIA.

SEP.—Juice of the cuttle-fish.—See HAHNEMANN'S Chronic Diseases, V.

### CLINICAL OBSERVATIONS.

According to *Noack* and *Trinks*, the following affections have been cured with *Sepia*: bad effects and chronic pains from violent straining of the ligaments and tendons.—Painful affections of females, particularly affections of the head, irregular and painful menstruation.—Diseases of the venous system.—

Beating in the body, with oppressive anxiety and vertiginous stupefaction, as if she were floating on the ground, (in the case of a woman of 51 years, whose menses had become irregular and scanty).—Dropsy of drunkards.—*Lepra Americana*, with ulceration of the ankles, (together with other remedies).—Humid, itching, burning tetter. *Herpes siccus*, (*Lepra Batemanni*). Ring-worm. Red herpes of the genital organs. Herpes with violent itching and thick crusts, (in scrofulous children). Dry, scaling, also humid and violently itching herpes. (Sepia is one of our most important remedies in cutaneous eruptions.)—*Scabies*, (particularly after Sulphur).—*Scabies humida*: large pustules filled with pus unto bursting, covering the elbows and knee-joints, but most profusely the wrist-joints, between the fingers and the palm of the hand, where they ran into each other and formed ulcers, the epidermis peeled off in patches; single pustules were discovered on the abdomen, nape of the neck and back, (Sepia 6, one drop every other day, effected a cure in 21 days).—Scurfy eruption on the forearms and hands in consequence of suppressed itch.—Dry, itch-like eruption over the whole body, particularly in the joints, after the itch had been suppressed with an ointment.—Yellow spots, beneath which the skin, after the peeling off of the epidermis, looks red and moist, around the neck and on the upper part of the chest, (in full-grown girls, after many doses).—Hepatic spots.—Warts on the hands and fingers.—Warts on the fingers; they first became painful and red and then dropped off.—Deep, painful ulcer between the index and middle fingers, with swelling of the hand.—Ulcers of the feet, with varicose enlargement of the veins, peeling off of the skin around the ulcers, nocturnal stinging and burning of the ulcers which secrete an acrid ichor and bleed readily.—Varicose, flat, unclean, excessively-painful ulcers on the dorsum of the foot and around the ankles.—Flat ulcers around the tarsal joint, in old females.—*Intermittent fever*, with thirst, during the chilly stage.—Chilliness every afternoon, with thirst and loss of strength, in the case of a man of 45 years, who had been affected with diarrhoea for a long time.—Lentescient fever of scrofulous children.—Profuse morning-sweats.—Affections of the mind.—Melancholy mood.—Hysterismus.—Chronic pain in the forehead, sticking, extorting cries.—Headache and vertigo, with suppression of the menses.—Periodically returning, tearing and lancinating headache in the right side, (in the case of a pregnant female).—Beating and lancinating pains in the head.—Continual headache, attended with an eruption of lentil-sized blotches over the whole body, particularly in the face, with violent itching.—Frontal headache with dullness of the head, in drunkards.—*Megrim*.—Constant tearing in the head with attacks of nausea.—Blepharoptosis.—Inflammation and swelling of the eyelids, with lachrymation, photophobia, and luminous vibrations.—Scrofulous ophthalmia.—Keratocoele occasioned by scrofulous ophthalmia.—Chalazion.—Hordocolum.—Frequent bleeding at the nose.—Greenish discharge from the nose.—Prosopalgia and toothache of pregnant females. Toothache which is aggravated by warm things. Tearing in the jaws and teeth. Tearing in decayed teeth, in pregnant females. Beating toothache, particularly of pregnant females. Toothache at different periods of the day, more or less violent, but continuous, in the case of a pregnant female.—*Tubercle* on the lip of a man of 30 years, increasing to the size of a bean, having sometimes a cartilaginous appearance, sometimes bleeding, and resembling a schirrus very much, with a broad base.—Removes the disposition to frequently-recurring angina of the throat. *Chronic angina*: inveterate sore throat with dark redness of the fauces, attended with the more or less distinct sensation of a lump in the throat, particularly during deglutition, with constrictive sensation in the throat.—Derangement of the digestive organs in pregnant females, characterized by aversion to bread, vomiting

of the ingesta.—*Pyrosis*.—*Pain in the stomach*: pressure in the region of the stomach with feeling of anguish, nausea and vomiting of a white substance, dullness of the head and delaying stool.—Incipient organic affections of the stomach, indurations manifested by periodical aching pains after every meal, dyspnoea, vomiting of mucus, etc.—Constant aching pain in the pit of the stomach, with anxiety and palpitation of the heart, she wants to eructate but is unable; if she attempts to take deep breath, she yawns; the pain is attended with a feeling of heat, extends through to the back, and is worse after every meal; accompanied with pinching, stitches, sore feeling and shootings in the chest, particularly in the front part of the chest, which impede speech and deep breathing; the stool is hard, delaying, sweat breaks out after the least exercise; the urine is brown, with sediment; a good deal of thirst, great languor and emaciation, (in the case of a regularly-menstruating girl, with florid complexion, every day one teaspoonful of a solution of one drop of Sepia X in one ounce of distilled water).—Repletion and oppression, anxiety in the pit of the stomach, stitches in the left side of the chest; pains between the scapulæ, constipation, weakness and sweat on walking, (in the case of a female who suffered with chronic cough in consequence of a cold, which returned in spring and fall).—Chronic derangement of the intestinal canal, from overloading it.—Paroxysms every day, as if something alive were writhing or twisting about in the region of the stomach, griping-tearing and movement in the region of the stomach, sensation as if something were ascending in the throat, her tongue became stiff, momentary speechlessness set in, and she sat rigid like a statue; appetite slight, abdomen distended, stool irregular and difficult, scanty menses lasting only a few hours and setting in with abdominal spasms.—Constant aching pain in the right side of the abdomen, extending, when violent, to the chest and back, with oppression of breathing, (in a woman of 43 years, who had borne eight children and had had one miscarriage).—Cramp, commencing in the spleen and extending to the chest, with want of breath, palpitation of the heart and contraction of the fingers, followed by prickling and pain in the tips of the fingers.—Tearing, contractive pains in the whole abdomen, extending to the muscles of the chest, nape of the neck and right lower limb, loss of appetite, difficult stool.—Diarrhœa of children, brown and going off without being conscious of it.—Constipation.—Discharge of blood from the anus, after stool, or empty urging, frequently, with discharge of blood, (in the case of a girl of eight years).—*Excessive nocturnal emissions*.—Chronic gonorrhœa improved a good deal. Secondary gonorrhœa, (in conjunction with nitric acid).—Pain in the abdomen, and urging to stool during the menses.—*Menstruatio spastica*: the appearance of the menses is preceded by an involuntary spasmodic stretching of the limbs, which is very fatiguing and lasts until morning, attended with a feeling of heat and sleeplessness; the menses set in three or four days before the time, are scanty, and flow for three or four days with interruption, are attended with loss of appetite, loathing of food, nausea, obstinate constipation; on the first day she experiences spasms in the abdomen which are not very painful, the menses are preceded and succeeded by fluor albus; irregular paroxysms of palpitation of the heart and oppression of breathing; bulimia after the menses.—*Amenorrhœa*.—Irregular menses, scanty and too short, with plethora abdominalis.—Constant discharge of blood from the vagina, for several months, with pain in the right groin; if the latter was violent the former increased likewise, (in a female of 52 years).—Chronic metrorrhagia with plethora abdominalis; the metrorrhagia can be excited again by the least cause.—Disposition to miscarriage.—According to *Reissig*, Sepia is a specific preventive of miscarriage in the fifth and seventh months of pregnancy, when symptoms of plethora abdominalis and stagnation

of the circulation are present: pressure in the chest, fulness and congestion of blood to the head and lungs, heaviness of the abdomen, the movements of the fœtus become weaker and finally cease altogether, varicose make their appearance, with great irritability and great disposition to faint (*Sepia* 6 and 12).—Dislocations of the uterus.—Indurations of the uterus.—Copious leucorrhœa.—Acrid, corrosive leucorrhœa.—Soreness of the nipples. Soreness and bleeding of the nipples in nursing females.—Frequent dry cough, causing stitches in the front part of the chest.—Cough mostly at night, with white expectoration and pain in the throat.—Dry chronic cough, with difficult, blood-streaked expectoration.—Moist cough in persons who are affected with it frequently and long. Cough, particularly in the morning, and when lying on the left side, with difficult white expectoration which seems to proceed from a deep-seated spot on the right side in the front part of the chest, where a pain is experienced like pressure.—Diminishes whooping-cough, and the accompanying fever and thirst.—Pneumonia of young and old people: stitches in the side with heaviness in the front-part of the chest.—Sticking pains in the side of the chest during the grippe.—Acute stitches in the lower part of the sternum, extending to the back, shoulders, and small of the back, and are diminished by motion, (in the case of a non-menstruating female of 42 years).—Continual slight pain in the left side of the chest, (in a professional clarionettist).—Accumulation of mucus in the chest.—Hæmoptoe.—Tuberculous phthisis.—Vomica.—Periodical attacks of short and quick breathing, only in the day-time and during rest, the breathing is sometimes arrested for moments, attended with cold creeping through the body and violent pain in the back, (in the case of a young man whose brother had died with consumption). Nocturnal spasm in the chest, (in a female, *Sep. V.* one drop).—Palpitation of the heart on walking fast.—*Affections of the heart*, with violent, unequal, intermittent palpitating and tremulous motion of the heart, violent, rather loud and sometimes intermitting sounds of the heart, with dulness of percussion over a larger surface.—Gives relief in hydrothorax.—Painful stiffness of the small of the back, (*Sep. 5*, one drop).—Pain and stiffness of the arms and lower limbs, (in a rickety child).—Large misshapen swelling of the whole hand; the whole epidermis is raised in large blisters, which itch, sting, and discharge a fluid, (after excessive exertion with the hand).—Swelling of the foot, weariness, pain and weakness in the loins, leucorrhœa, asthma, with heat on making an exertion, (in the case of a non-menstruating girl of 18 years).

CLINICAL NOTE BY DR. NEIDHARD, OF PHILADELPHIA.

*Sepia* is a most efficacious remedy in disturbances of the circulation in the female sex, characterized by the following symptoms: flushes of heat, redness, swelling of the face, general determination of blood to the head and right temple; general swelling of the upper part of the body, more in the morning; swelling of the chest, stomach and abdomen; hands and feet cold; throbbing in the sacral region; palpitation of the heart, with occasional intermittent pulse, scanty urine, costiveness.

*In diseases of the skin, with the following symptoms:* small, red pimples, producing a roughness and cracking of the skin, and from which sometimes oozes a watery humour; at other times they are dry; they principally affect the inside of the joints of the arms and legs, particularly the knee and elbow joints, but are also, chiefly in children, to be seen on the face.—In young girls, when the menses have not appeared, or only slightly, *Sepia* generally brings them on more fully.

*In diseases of the womb* : with heat in the womb, bearing down after exercise, with slight pain there as well as in the back.

#### SYMPTOMS.

**Mind and Disposition.**—Desponding, sad. Very sad and weak. Melancholy, in the morning. Anxious about her health, irritated, weak. Imagines she will have consumption, *and is sad about her health.* All her ailments appear to her very distressing. When merely thinking of his past sufferings, his pulse becomes faster and his breathing is arrested. *\*Great sadness, weeps frequently.* Irritable and weeping mood. Feels unhappy, without any cause.—Dread of men. Wishes to be alone and to lie down with her eyes closed. Dreads to be alone a single moment. Solicitous and apprehensive, out of humour. Trembling with fearfulness, cold sweat on the forehead.—Paroxysms of oppressive anxiety. Great anguish in the blood. Anxiety in the evening, her face becomes flushed, and these paroxysms of heat come and go from time to time. Great internal restlessness for many days, accompanied with hurriedness ; he would like his work to be finished when it is merely begun. Restlessness and want of cheerfulness for many days ; she is engaged in sad recollections, is anxious, and cannot remain long in one place.—*\*Complete discouragement.* Extreme loathing of life ; he felt as if he could not bear such a miserable existence, and as if he would sink into nothing if he did not destroy himself.—*\*Inclines to start and is very fearful.*—Discontented. Feels easily offended. Not disposed to any kind of work. Mind brooding on grief, as after secret chagrin. °Melancholy and peevish. Irritated in the whole body. *The nerves are very sensitive to every noise.* Playing on the piano affects her very much. The recollection of past disagreeable occurrences makes him feel extremely dissatisfied. He involuntarily recollects vexatious occurrences, which makes him feel so angry that he is beside himself, accompanied with anguish, palpitation of the heart, and sweat over the whole body. *He criticizes everything and wants something different from all other people, with weeping and heat in the face.*—Inclines to be out of humour. She is so much excited by anger that she dreads an apoplectic fit, and her eyes see black. Inclines to be vehement. Gets into a passion about a trifle, with trembling, (especially of the hands). Extremely sensitive through a slight cause ; fit of desperately furious gestures, with sobbing ; she throws herself on her bed and remains the whole day without eating, (immediately before the menses).—Laziness of mind and despondency. *\*Great indifference,* °even to his own family. *Apathy.*—Alternately cheerful and sad. Involuntary fits of laughter and weeping in alternation, without either resulting from a corresponding mood.

**Sensorium.**—*\*Weak memory.* He frequently makes mistakes in writing. Absence of mind, he made mistakes in speaking and used wrong words. He imagines things which he does not want to imagine, uses wrong expressions which he knows to be wrong, proposes to himself things which are contrary to his intentions, and is in contradiction with himself, and therefore in a very disagreeable and uneasy mood.—Without thought or sense, in spite of his desire to work. *Heavy flow of ideas.* Gloominess, *\*and inability to think* the whole forenoon and many afternoons in succession. Sensation of stupidity in the head, in paroxysms, with shuddering and momentary arrest of breathing ; after this she was obliged to take deep breath.—*\*Dulness of the head.* Dulness of the left occiput. Dulness of the fore part of the head. Dulness of the head, as in catarrh, with a reeling sensation. Dulness of the head with pressure in the eyes, increased by walking in the open air.—Weak head, she is almost unable to think, especially in the afternoon. The whole head feels dull and vacillating,

with tension of the muscles of the neck and nape of the neck.—*Cloudiness of the head*, frequently in the morning on rising from bed. Painful gloominess in the head, especially the forehead. Dimness and dulness of the head, with whirling sensation, for four days. Dizziness and stupid feeling in the head, he frequently knows not what he is about.—*Stupefaction of the head*, with tightness of the chest and weakness of the whole body.—Every morning, when rising, the head feels heavy; going off in a few hours. Giddiness, she is scarcely able to keep the head straight. Vertigo in the morning when raising one's-self in bed, as if the things in the room were moving about. Vertigo when walking, as if the objects were moving. Vertigo, he staggers when walking and looking up. \**Vertigo only when walking in the open air*, she had to be led. Vertigo when seeing a large plain before her. Vertigo when moving the arms. Fits of vertigo when walking in the open air, lasting two or three minutes; sensation as if something were rolling about in the head, she staggered; in the evening she was attacked with headache and roaring in the ears. Vertigo, with want of desire to do anything. Vertigo unto falling, every morning when rising. Vertigo every afternoon from three to five o'clock; everything turns with her when walking, sitting or lying. Giddiness every afternoon, from four to six o'clock, when walking or sitting. Two fits of vertigo when stooping, after supper, as if the senses would vanish. Vertigo with cold hands and feet. Vertigo and vacillating sensation, when taking some simple drink; he imagined he would have an apoplectic fit, for five minutes; afterwards flush of heat for five minutes.

**Head.**—Headache, every minute, as if proceeding from the back, a stitching in the head at every step. Dull headache every morning, after rising. Intense headache, in the morning on waking, (and after rising). \**Headache every morning, with nausea*. Headache, in the morning, in the forehead, as if catarrh would set in. Headache in the forehead and vertex; afterwards anxiety in the pit of the stomach, with trembling; afterwards violent bleeding at the nose. °Headache with great desire for an embrace. °Headache with photophobia and inability to open the eyes, on account of the pain. Paralytic feeling in the forehead. Headache, most violent towards evening, especially when shaking the head. Headache after the siesta, as if from concussion of the head. °*Paroxysms of hemicrania*, with nausea, vomiting, and boring sticking extorting cries.—Concussion of the brain when knocking the foot against anything. Motion in the brain when shaking the head.—*Rush of blood to the head*. \**Heat* in the head, with a burning sensation through the ears; this causes difficulty of hearing and dimness of sight. Great heat in the head, in the morning, with sensation as if the nose would bleed. Painful heat in the head, frequently accompanied with suffusion of heat over the whole body. Violent heat rising to the head, every five minutes. Heat in the head, in the evening.—Violent headache, with intolerance of external warmth: nevertheless she felt chilly. Headache, as if the head would burst, also when coughing.—\**Beating headache*, in the evening. Beating in the head, in the side on which she is resting. Violent beating headache in the temples. \**Painful beating in the occiput*. Beating headache at every motion. Beating headache, very painful, in the vertex, in the morning shortly after rising. Beating in the upper part of the head, very painful, at the least motion; when turning the eyes and when moving the head, the beating moves upward as if out of the head; there is an indistinct beating even when remaining ever so quiet.—Pinching jerks in the head, in the morning, when rising. Single paroxysms of undulating headache, in the forehead. *Violent painful jerking in the forehead*. Pressure, jerking and beating in the head with heat, as if everything would issue from the forehead and eyes, for three days—Aching pain in the hot forehead, in the evening, from seven to eight

o'clock. Headache, only in the fore part of the head, mostly towards the forehead, a pressure on the brain, occurring at least eight or ten times an hour, and abating again in half an hour; after the lapse of an hour the pressure ceased for an hour or an hour and a half; returned a little on the second day. Pressure, mostly in the forehead and eyes; lastly nausea, with much spitting. °Aching over the eyes. Dull aching pain at a small spot of the occiput. Pressure on the upper part of the sinciput. Violent pressure in the head, the whole day, with vertigo, weeping muced and profuse coryza. Aching pain in the right occiput. Aching pain in the occiput, in the evening, until midnight. Aching pain in the outer part of the occiput, as if the parts were sore. Deep-seated headache, with aching pain in the molares, on one side. Pressure and tension in the forehead and eyes, with burning. Pressure on the top of the head, after mental labour. Oppressive weight of the head in the temples and over the forehead, as if the head were congested with blood, as in violent coryza.—Heaviness in the occiput, especially in the morning. Heaviness of the head, she was scarcely able to raise it. Heaviness of the head, in the evening, and headache of one side, after lying down.—Pressing, digging-up, itching headache, with stiffness of the nape of the neck and sensitiveness of the head when touching it. Boring digging-up pain in the forehead, commencing in the forenoon, the whole day, at the least motion.—Crampy pain in the vertex and in the upper part of the occiput, with feeling of soreness which finally becomes burning.—Compressive sensation in the upper part of the head, the whole day, with great dyspnœa.—Headache, pressing as if from within outward. \**Headache, as if the eyes would fall out.* \**Violent headache, as if the head would burst.*—*Contractive headache*, in the forehead. Contractive pain with pressure, in the sinciput, (the first days). Vibratory contractive sensation in the sinciput, in the evening.—Pinching pain in one side of the head, in paroxysms.—Headache in the forenoon, as if the brain were crushed.—Painful *cracking* in the head, as if something broke in it, with pain in the nape of the neck when turning the head.—*Stitching headache*, continually in the lower part of the forehead, close over the left eye, worse during motion in a room, much relieved by walking in the open air. *Stitching* in the forehead, now here, then there. Prickings in the forehead every day, when walking fast, with inclination to vomit. *Stitches in the forehead* with inclination to vomit, (she was not able to eat anything); relieved by lying down. Dull stitches in the whole head, lastly in the occiput, making it impossible for him to do anything. Severe stitches in the occiput, towards the vertex. Occasional single darts through the head. *Stitching* in the left temple. *Stitching* in the outer part of the temple. *Stitching headache* in both temples, in the evening. Frequent stitches in the left side of the head, in the afternoon; also in the occiput, in the evening. Violent stitching over the left orbit from within outward, with complete contraction of the eye, three days in succession, in the morning after rising, until noon; somewhat relieved in the open air. *Stitching* in the head over the ear, for a few minutes. *Stitching headache*, through the eyes, the whole day.—*Drawing* in the occiput. Frequent drawing pain in the fore part of the head. Painful drawing, at times in the right, at times in the left occiput, inferiorly. Drawing pain in the occiput; when feeling it, a pain as from subcutaneous ulceration is experienced in it. Single turns of drawing pain in the outer parts of the forehead, extending as far as the occiput. Rheumatic drawing in the left side of the head. Superficial drawing and boring in the head, more at night, and being so violent before midnight that she was obliged to leave her bed; extending into the temple, ear and teeth.—*Tearing* in the head, above the forehead and in the eyes, from two o'clock in the afternoon until bed-time. *Tearing* in the upper part of the right forehead. *Tearing* in

the left frontal eminence. Tearing over the eyes. Tearing in the left temple, extending into the upper part of the left side of the head. Intermittent, slight tearing in the lowest part of the left occiput, near the neck. Tearing in the occiput. Tearing, drawing and stitching, from the forehead and occiput to the vertex.—Pain in the occiput, mostly at night, and worst when lying on it, as if hollow, and as if there were ulceration under the scalp and in the brain, relieved by pressing on it with the hand.

**Scalp.**—Pain of the scalp when touching it, as if the roots of the hairs were painful. \**Great falling off of the hair.* Moving of the scalp forward and backward; he is obliged to bite the molar teeth together. °*Involuntary shaking of the head.*—Jerking of the head to and fro, with complete consciousness, early in the morning. \**A good deal of itching in the hairy scalp.* Itching on the vertex, with great falling off of the hair. Itching of the occiput, in the evening. Corrosive itching of the scalp. Violent itching of the head, when the headache is going off.—°Coldness on the head.—Humid scalp. A number of scabs on the scalp, (for forty days). Small, itching pustules on the occiput, towards the nape of the neck, forming into ulcers of the size of an inch, with rough crusts, under which the secretion continued for a long time.—*Swelling above the temple. Swelling on the forehead. Small, red pimples on the forehead, rough forehead.* Painful pimples on the forehead. Painful, small indurations on the forehead.

**Eyes.**—*Pain in the eyes*, with headache and heat in the eyes.—Congestion of blood to the eyes.—Pressure over the eyes, when walking in bright daylight. Pressure, heat and twinkling in the eyes as of a thousand suns.—\**Pain in the eyelids, when waking, as if too heavy*, and as if he could not keep them open. Two mornings in succession the eyelids feel drawn together as if pressed down by a heavy weight; without agglutination. °The upper lid feels heavy and falls.—Pressure in the lower part of the right eyeball. Painful pressure in the upper part of both eyeballs, especially frequent in the right. Aching pain when turning the eyes to the right side. Pressure in the right eye as from a grain of sand, aggravated by rubbing, felt most when pressing the eyelids together. Pressure, with tearing, in the orbits, especially that of the left eye.—*Creeping in the inner margin of the left orbit.*—*Itching of the eyelids.* Itching of the eyes. Itching of the eyeballs. Violent itching in the left outer canthus, with sore pain after rubbing. Itching of the inner canthus, in the morning after waking; rubbing occasions a smarting and violent lachrymation, followed by a feeling of soreness in the outer canthus, where the lids are somewhat adhering to each other. Violent itching smarting in the inner canthus of the left eye, with lachrymation and the conjunctiva being somewhat reddened. Smarting in the right eye, in the evening, with inclination of the lids to close.—Stinging in the left eye. °Prickling pain in both eyes, in the evening, at candle-light. Smarting pain in both eyes.—*Burning of the eyes, in the morning*, and weakness of the same. Burning in the outer canthus, frequently during the day, for one hour. Burning sensation in the margin of the left lower eyelid, towards the outer canthus. Heat in the left eye, in the morning, with swelling in the inner canthus. \**Inflammation of the eyes, with redness of the whites* and stinging and pressure in the same. Inflammation of the eyes, not bearing cold water. Inflammation of the eyelid with a sty on it.—Swelling and some redness of the right upper eyelid, in the morning. Swelling below the eyes, in the morning, after waking. Violent red swelling of the lower eyelid, with aching and burning pain. \**Swelling of the eye*, with headache of the same side. °Swelling of both eyes, in the evening.—*Scabs in the eyebrows for eight weeks.* Red *herpetic spot* on the upper eyelid, scaly and peeling off. °Pustules on the cornea.

°Fungus hæmatodes.—*Glassy appearance* of the eyes. The eyes look as if swimming, in the morning when waking, with smarting in the canthi.—*Lachrymation*, morning and evening. *Lachrymation* in the open air. \**Agglutination of the lids* in the morning. Agglutination of the lids, only in the evening.—*Jerking and twitching* of the eyelids. Daily twitchings below the eyes. Frequent twitching of the left lower eyelid, with sensation as if the eye would run, which obliges him to wipe it often. °Inability to open the lids, at night. °*Paralysis* of the lids.—The eyes are fatigued by reading and writing, with pain in the inner canthus as if sore.—Feeling of nausea and anxiety when exerting the eyes.—\**Dimness of sight when writing*, so that he is scarcely able to recognise anything. °Dimness of sight when reading. Vanishing of sight. He only sees one half of the things he looks at; the other half is obscure. °Incipient amaurosis, with contraction of the pupils.—Sight is impeded by a fiery zigzag before the eyes. \**A number of black spots* before the eyes. White luminous vibrations before the eyes. Sparks of fire before the eyes, with great faintness of body. Twinkling before the eyes, when looking in the light; he sees a zigzag-shaped wreath of colours. °Gauze. °Streaks of light. *Green halo* around the candle-light. The light of day dazzles the eyes and causes headache. The light of the candle incommodes the eyes by occasioning a contractive sensation when reading or writing.

**Ears.**—Pain in the left ear as if it would be torn out. Tearing in the eminence behind the right ear. Drawing pain and heat in the right ear. Drawing-stitching pain in the internal ear, from within outward. *Dragging pain* in both ears, accompanied with pressure and stitches. Violent pressing, from without inward, below and in front of the ears. Pain in the ears, in the evening, resembling otalgia. Continual otalgia in both ears, at night. Pressing in the ear, from within outward, when pressing on the rectum at stool. Sore pain in the ear. Pain as from subcutaneous ulceration in the meatus auditorius internus, when inserting the finger into it.—*Stitches* in the weak ear, causing her to cry out in a piteous tone of voice. Severe stitching in the left ear and cheek. Stitching in the parotid gland, it swells and a tensive pain is felt in it when turning the head. Single fine stitches in the interior of the left ear.—*Tingling* in the right ear. *Heat and redness* of the left ear.—*Swelling* near the orifice of the meatus auditorius, with stinging pain in the swelling when pressing on the parts next to the antehelix.—*A good deal of itching in the weak ear every day.* A good deal of itching in the good ear, violent roaring and accumulation of a purulent, white cerumen. A thin pus is discharged from the ear, with itching.—°Herpes. °Herpes on the lobule. °Herpes behind the ear and on the nape of the neck. *Suppurating eruption* on the ear.—\**Sensitive to noise*, °to music.—Noise before the ears as of paper when ruffling it in the hands. Gurgling in the ear, when raising one's-self after stooping. *Frequent tingling in the ear.* Singing before the ear. Rumbling in the right ear. °*Whizzing* and beating in the ear. \**Loud sounds and humming in the ears*, (immediately). \**Whizzing and roaring* in the ears, with sensation as if stopped up; nevertheless she was able to hear. Whizzing before the ear, in the evening when writing, mingled with whistling. Deep-sounding, pulsative howling in the ear when lying on it, for two nights. *Roaring in the ear*; after which she heard nothing. Roaring and pulsative blowing as of a soft wind in the right ear, at night.—°Hardness of hearing. Sudden, short deafness of the ears, as if stopped up with a plug.

**Nose.**—Painful pressure in the root of the nose. Stitching pain in the tip of the nose, when touching it, as if a sharp hair were stuck in. Itching of the tip of the nose. Sore feeling in the nose, becoming very painful at every inspiration.—\**Swollen, inflamed nose, with sore and ulcerated nostrils.* Painful, in-

flamed swelling of the nose. Scurfy nostril. *Small ulcer* in a nostril, lasting a long while. °Plugs in the nose.—*Painless little induration* in the root of the nose. Pimple near the nose, resembling a blister filled with blood. Pimple near the right nostril becoming a large scurf. *Painful eruption on the tip of the nose*.—In the morning he blows streaks of blood out of the nose. \**Bleeding of the nose and discharge of blood from the nose when blowing it*. *Violent bleeding of the nose*. Bleeding of the nose for seven hours, but only a few drops from time to time. °Bleeding of the nose after getting heated in the least. °Bleeding of the nose after concussing or knocking it in the least.—°Loss of smell. °Fetid smell from the nose. Tenacious mucus in the nose. Indurated mucus, like plugs. Discharge from the nose of a piece of yellow-green skin, bordered with blood.—*Feeling of dryness* in the nose and fauces. Dryness in the posterior nares, and nevertheless much mucus in the mouth, with involuntary desire to swallow. The left nostril is frequently too dry, as if closed by swelling, but without catarrh.—\**Obstruction of the nose*; discharge of indurated mucus from the nose. *Obstruction of the nose*, for seven days, with difficult breathing. Sudden obstruction of both nostrils, in the morning.—\**Dry coryza*, only in the left nostril. *Violent dry coryza*, with roaring in the head and ears. Dry coryza with prickling pain in the forehead and eyes, constant desire to cough and a good deal of dry cough during sleep, without waking.—Catarrhal fever, with weakness of the lower limbs and drawing in the arms.—Coryza, three days in succession, also for several weeks.—He sniffs all the time. Coryza with diarrhoeic stool.—Yellow water comes out of the nose when blowing it, with cutting pain in the forehead.—Fluent coryza (immediately).—*Frequent sneezing, almost without coryza*, for several days. Fluent coryza with sneezing, preceded by tingling in the nose. Sneezing, at six o'clock every morning. Fluent coryza with sneezing, she had not had it for two years. Fluent coryza, the nose dropping all the time. Violent fluent coryza, with great pain in the occiput, and painful drawing in the hips and thighs, for a couple of weeks.

**Face.**—*Paleness of face*, also with blue margins around the eyes. Sick, pale looks in the morning, with dim, red eyes. \**Yellow face* and eyes for one day. \**Yellow spots in the face*, and a yellow streak over the upper part of the cheek and nose. °Sunken face. \**Redness and flushes of heat* in the face. *Heat in the face*, every morning when waking. Heated face in the evening, with heat in the head. Great heat and redness in the face at noon, with cold feet. Heat in the face, in the morning, paleness of face in the evening. When talking, his face feels hot in a moment.—*Puffy face*. Considerable swelling of the face, without redness.—*Tension and contraction of the skin* in the face, especially on the forehead.—Slight tickling in the region of the left temple, followed by a sensation as if the skin would be raised.—*Aching pain* in the malar and nasal bone.—*Tearing pain* in the left cheek, thence extending across the ear towards the occiput.—*Cramp-pain* in the facial bones.—*Drawing pain* in the face, with swelling of the cheeks.—Short, violent tearing extending from the forehead down along the right wing of the nose. Slight tearing in the right malar bone, below the temple. Tearing in the upper jaws. Tearing in the left articulation of the jaw, close in front of the ear.—*Itching of the whole face*. Itching of the upper part of the cheeks, and when rubbing the parts, a burning smarting is experienced in them. *Pimples on the right cheek*. Pimples in the face which itch somewhat. Eruption in the face, resembling red roughness of the skin. °Herpes and scurf. °Warts in the face. °*Crusta lactea?*—A number of *black pores* in the face.—*Hot lips*. °Dry and scaly lips. Violent burning in the upper lip, close below the nose. Cutting in the upper lip, as from a splinter. Sore pain in the right side of the lower lip, near the corner of

the mouth. *Yellowness* around the mouth. *Herpetic eruption* on the lips. Humid pimples along the margin of the vermilion border of the upper lip. Large, scurfy eruption in the vermilion border of both lips, (after a journey in the cold). Eruption in the corners of the lips, painful when touched. *Painful ulcer* on the internal side of the lower lip, the pain being relieved by cold water. The inner side of the lower lip felt sore and was covered with painful vesicles. Painful pustule in the middle of the lower lip. Tension of the lower lip. Considerable swelling of the lower lip, in the morning. Herpetic blotches around the mouth. *Urpes* near the mouth.—*Pimples on the chin*, with ulcerative pain when touched. Itching pimples on the chin. Long lasting scabs on the chin.

**Jaws and Teeth.**—Sensation, when chewing, as if the jaws could not be separated, and as if the joint would crack. Cramp-pain in the lower jaw, preceded by pain in the neck. Swelling of the submaxillary gland, when pressing on it one feels a pain in the tooth. Pain in the submaxillary glands as if crushed, also painful when touched. Stinging pain in the left lower jaw and the submaxillary glands occasionally, especially when touching them.—*Toothache*, when biting and pressing the tongue against the teeth. The teeth are very painful when touched, or when talking. °Toothache of pregnant females. (For the kinds of toothache cured with Sep., see *Clin. Obs.*). He bites his teeth together during his nightly sleep, which gives him a good deal of pain. Disagreeable feeling of coldness in the lower foreteeth. Drawing feeling of coldness in single upper incisores. She cannot bear a draught of air coming to her teeth; no pain in bed, only in the morning after having been up an hour; no pain when touching or cleaning the teeth. Dull pain in old roots; cold things cause a thrill of pain through the teeth. All the teeth are painful, especially a hollow molar tooth, which feels elongated and bloated, with swelling of the gums and cheek which terminates the pain. Painful heaviness in the upper incisores. Grumbling in the foreteeth. Nightly toothache, hindering sleep; in the morning when the pain ceased, she felt so irritated that she was not able to sleep even then, although she felt very weak.—*Drawing pain* in the right and left posterior lower molar tooth. Drawing in the upper molares. \**Drawing toothache*, -when hot or cold things get into the mouth. Drawing in the teeth as from a cupping-glass. \**Drawing in the hollow tooth extending into the ear*, aggravated by cold water. °Drawing pain in the teeth, extending into the arms and fingers. Drawing pain in a sound tooth when the air got into the tooth in a warm room; the drawing was not felt in the open cold air. Drawing-cutting toothache.—*Tearing* in the lower jaw below the incisores. Tearing toothache through the left ear, during and after a meal.—Rheumatic pressure through the teeth and forehead in single jerks. Tearings and jerks in the teeth, in the afternoon, at every fourth inspiration; worse when lying, accompanied with profuse ptialism. Tearing and jerking toothache from six in the afternoon until one or two o'clock after midnight; four days in succession. Single jerks in the teeth, day and night, when a draught of air gets into the mouth or ear, followed by a grumbling in the teeth which makes one uneasy. Jerks in the molar teeth with pressure, especially when stooping.—*Dull aching pain* in the molar teeth, with pain in the submaxillary glands.—*Digging-up sensation* in the upper teeth.—*Gnawing* in the posterior molares.—\**Stitching toothache*, she could have cried. Sticheing in the foreteeth. Stitch extending into the cuspidatus from below the right eyelid, apparently through the bone. Stitching in the tooth and jaw, extending into the ear; at night it prevented her from sleeping, and in the day-time she had to tie a kerchief over it.—*Stitching beating* in various roots of the teeth, with burning in the gums, recurring when entering the room after walking in the cold air, also after eating and biting, especially when coming in contact with warm things, for

eight days, after which lapse of time the tooth begins to turn black and to become hollow. \**Beating toothache*, -changing to a stitching on the third day, the teeth becoming hollow very fast.—*Groaning sensation* in an upper incisor.—*The teeth soon decay*. *Great dulness of the teeth*, for seven days. An incisor starts out of its socket and feels elongated. *Looseness* of the lower incisors. All the teeth become loose and painful, and the gums bleed readily when spitting. Violent *bleeding* of the teeth, in the morning.—*Drawing* in the gums, above the two upper foreteeth. *Stitching* in the gums. *Swelling* of the inner gums. Bloating, *dark-red* gums, with painful beating, as in incipient suppuration, so violent that he is scarcely able to endure it. \**Painful swelling of the gums*. Painful swelling of the gums of hollow teeth, with swelling of the cheeks. Swelling of the gums with painful soreness. Sore pain and swelling of the gums; they stand off from the teeth and bleed when touched ever so lightly. Sore, ulcerated gums. *Bleeding from the gums*, almost without any cause.

**Mouth.**—Fetid smell from the mouth.—*Swelling* of the inner mouth, making it almost impossible to introduce any nourishment. *Swelling of the inner mouth and gums*, with burning in the mouth, extending into the throat.—*Sore pain of the tongue*. \**White tongue*. *Coated tongue*. Tongue covered with mucus, one or two hours after a meal. Pain of the tongue, *as if burnt*, for five days. Pain as if burnt on the tongue, when smoking tobacco, (to which he was used). Tearing and smarting as from pepper, on the posterior part of the right side of the tongue. Sharp smarting on the fore part of the tongue. Vesicles on the tongue, and pain as if burnt. Painful vesicles on the tip of the tongue, above and below. Pain on the right side of the tongue, (being covered with a thick mucus while the pain is felt) hindering chewing and distinct articulation. Pimple on the tip of the tongue and very sweet saliva.—Pain, as if burnt, of the anterior part of the palate directly behind the teeth, when touching the parts with the finger or tongue.—*Ptyalism* in the evening. Accumulation of saltish saliva in the mouth.—*Dryness and roughness* of the tongue and palate. Great dryness of the tongue when waking in the morning, as if burnt. Frequent dryness in the mouth, as if her tongue would stick fast. Dryness of mouth, throat and tongue, which is quite rough in the morning. Dryness of the mouth and throat, in the morning on waking, she was unable to utter a sound, or to speak.

**Pharynx and Œsophagus.**—Dryness in the throat the whole day. Dryness in the throat, in the evening before going to sleep, not relieved by drinking. Constant dryness and tensive sensation in the throat.—*Sore throat, smarting and scraping*, in the posterior region of the fauces and upper part of the palate, as if a violent catarrh were approaching. *Scraping sensation* in the throat, in the evening. Scraping sensation in the throat, when swallowing. Roughness in the fauces and burning, increased by clearing the throat.—*A good deal of mucus* in the throat, he is obliged to clear it and to hawk up the mucus. A good deal of mucus on the *velum pendulum palati*. A quantity of sanguineous mucus is hawked up.—*Slight creeping* in the throat, with a feeling of harshness inducing a frequent clearing of the throat.—Sensation in the left side of the fauces, which is first smarting, afterwards cutting, sometimes also a mere pressure.—*Sore throat with swelling of the submaxillary glands*.—*Aching pain* in the upper and right side of the throat. Pressure in the throat even when the neck is dressed ever so loosely. *Pressure in the throat*, in the region of the tonsils, *as if the cravat were tied too fast*. Pressure in the throat towards the back, when swallowing food or drink. Pressure in the throat as if he had swallowed something which will not go down. Sensation *as if a lump had lodged* in the throat.—*Constrictive pain* in the throat, with pressure, directly above and on the larynx.—*Pinching* in the throat, from the larynx upward. Painful con-

traction and pressure in the throat. °Starting sensation in the throat.—Stinging-scraping sore pain in the region of the pharynx, during empty deglutition. \**Stinging sore throat*—during deglutition.—*Numb sensation* in the right tonsil.—*Feeling of heat* in the throat. *Inflammation* of the throat. Inflammation and swelling in the upper part of the throat. Inflammation, great swelling and suppuration of the left tonsil; he was unable to swallow on account of the pain, had a heat in his whole body, thirst and burning in the eyes. Difficult deglutition; the muscles of deglutition feel paralyzed for several evenings. Violent pain in the region of the cardiac orifice of the stomach when swallowing food.—*Painful jerk* from the throat down to the pit of the stomach, in the morning when sitting up in bed.—Smoking does not agree with him, contracts the fauces.

**Taste and Appetite.**—Mucus on the tongue, having a putrid taste. Taste of manure in the mouth. *Sour taste in the mouth*, with costiveness, or in the morning when waking. Sour-bitter taste in the mouth. *Repulsive bitter taste* in the mouth, in the morning. Ugly taste in the mouth, as from old catarrh. Bitter taste, only when clearing the throat. Ugly taste in the morning, and dryness and mucus in the mouth. Putrid after-taste, after drinking beer. Taste in the mouth sweet as sugar.—\**Much thirst*. Much thirst in the evening, °also in the morning. \**Absence of thirst*. No appetite, but thirst. Feeling of satiety, with nausea, and a feeling of relation. \**Aversion to all food, especially to meat*; he was only able to eat bread and butter and soup. The mere idea of eating made him sick at the stomach, the taste in the mouth being otherwise good. No appetite; nothing tasted well to her. Does not relish anything. Repletion of the stomach in the evening. Diminished appetite; \**everything tastes too salt*. Little appetite; nevertheless he relishes what he eats. °*Aversion to milk*. Loses his taste for smoking. *Desire for vinegar*. Violent desire for wine, which he never drank otherwise.—\**Ravenous hunger*; if it is not satisfied, the water accumulates in his mouth. He gets an appetite at the sight of food. *Excessive appetite*; after a meal weakness and regurgitation of food. Great appetite for supper. *He wants to eat all the time; the mere thought of food makes his mouth water*. Feeling of emptiness in the stomach. Emptiness in the stomach, with nausea as soon as she merely thinks of some food she wants to take. \**Painful feeling of hunger in the stomach*.—°Canine hunger.

**Gastric Symptoms.**—Great bitterness of the mouth during a meal. He-cough after supper. Pulsations in the pit of the stomach during a meal, increasing in proportion as he eats much. Anguish and heat during a meal, so violent that her face becomes quite bloated and red; eyes, ears and nose are affected by the heat, and drops of sweat make their appearance at the tips of the fingers. Colic during supper, followed by three evacuations with bearing down. Eructation after a slight meal. Bitter eructations after breakfast. Rising of air after a meal. Intermission of the beats of the heart after dinner. Febrile excitement after dinner. Heat and palpitation of the heart while digesting his food. Heat in the face after a meal. Vertigo after a meal, obliging one to hold one's-self. The head was affected after a meal; it felt oppressed even by the slightest covering. Profuse sweat in the face after eating warm food. Stitches in the head after a meal. Dull tearing in the forehead, immediately after a meal. General profuse sweat after dinner, with feeling of heat.—*The pains increase during and immediately after a meal*.—°*Acidity in the mouth after a meal*. Tearing in the whole thigh, especially the knees, after dinner and supper. Directly after a meal, feeling of soreness in the throat, and as of a spasm of the inner side of the cervical vertebrae. Laziness after a meal. Dry cough after a meal. After a meal, pressure as from flatulence on the right side and deep in the abdomen, and afterwards in the side; it

is felt only when moving the part and when stooping. Flatulent distention after dinner, relieved by eructations, until evening, when it disappeared without emission of flatulence. Great distention of the abdomen, directly after eating soup. Puffiness of the abdomen after dinner. Diarrhoea after tasting boiled milk. Drawing pain in the stomach, and a gnawing sensation extending as far as the back, where it is most painful, followed by great relaxation and weakness, one hour after dinner. °Great weakness of digestion.—*Eructations* in the evening, violent and frequent, preceded by great distention of the abdomen. *Very frequent eructations*. \*Eructations with desire to vomit. Frequent, gurgling empty eructations. \**Bitter eructations*, in the morning when rising, with bitter taste in the mouth and throat, nevertheless he relishes his meal, and after having done eating the bitterness disappears. Bitter eructations with nausea. \**Sour eructations*—after supper. Eructations tasting like spoiled eggs.—During an eructation, in the morning, he feels a pinching in the stomach as if something would tear loose. Stitches in the pit of the stomach, in the left side, and between the scapulæ during an eructation. Painful eructations; blood gets into the mouth (after quick riding). During an eructation (in a very warm room) blood got into his mouth.—Burning at the stomach after an eructation.—Eructations alternating with hiccough. °Acidity in the stomach with loathing of life.—*Hiccough after a meal*, for a quarter of an hour. Hiccough while smoking, (to which he was used) and contraction in the fauces, with sensation as if a plug had lodged in those parts, causing nausea and discharge of water from the mouth.—Burning, proceeding from the stomach. Heartburn, forenoon and afternoon, for several hours, from the pit of the stomach to the throat, where he experiences an acid taste and a sensation as of scraping.—\**Sort of waterbrash*—in the afternoon, going off by eating. °Waterbrash after drinking, °or preceded by turning in the stomach.—*Nausea* the whole day, at intervals, also after eating, with accumulation of watery saliva in the mouth, the taste in the mouth being constantly sour-bitter, without appetite, but the food having a natural taste. Nausea after eating, also with vomiting. °Nausea of pregnant females. *Nausea before breakfast, for several mornings*. Nausea on waking, evening and night. *Morning-nausea*, as if all the viscera were turning inside out. Inclination to vomit, in the morning when washing her mouth. Nausea in the morning, when riding in a carriage, to which he was accustomed. Nausea and weakness. Nausea (almost immediately) followed by drawing through all the limbs. Nausea without eructations, at ten o'clock every morning, for some minutes. Nausea with bitterness in the throat, without vomiting. Nausea every morning, going off after eating a little. Inclining to vomit, anxious, giddy.—\**Vomiting*—after the morning-nausea and eating a little, afterwards retching. The vomiting (during pregnancy) is frequently so fatiguing that blood is expelled with it. Violent vomiting, several times a night, with violent headache. *Bilious vomiting*, two mornings in succession. Two attacks a day, of one hour each, of contractive griping in the hypochondria, with nausea, thence extending to the back, as a stitching, followed by stitching in the chest and yawning, until he vomited bile and food. \**Vomiting during pregnancy*. Vomiting of a milky water (during pregnancy) although she had not drank any milk.

**Stomach.**—\**Pains in the stomach*, after eating, also after supper. °Pain in the pit of the stomach, when walking. The least pressure on the region of the stomach causes great pain. \**Pressure at the stomach after a meal* and when touching it. Pressure in the pit of the stomach. *Pressing in the pit of the stomach*. Pressure at the stomach at night, three nights in succession. \**Pressure on the stomach*, as from a stone. Hard pressure in the pit of the stomach, as from a stone, even before breakfast, but worse when eating bread. Pressure

at the stomach, as if the inside were sore. Pressure in the pit of the stomach, going off by a fermenting movement downward. Pressure at the stomach from morning till noon. Pressure at the stomach in the evening, followed by headache. Violent pressure on the left side below the ribs, going off by lying down. Tearing with pressure around the pit of the stomach.—*Heaviness* in the stomach, with dull pain in the whole abdomen.—\**Cramp in the stomach* and abdomen. °*Cramp in the stomach and chest*. Contraction in the region of the stomach.—\**Burning in the stomach and pit*. °Heat in the stomach and pit, with sensation as if eating would relieve it. \**Stitching pain* in the stomach, and in the distended abdomen. Sudden stitches in the pit of the stomach, when swallowing the nourishment very fast, °also with pressure. Fine prickings in the pit of the stomach. Stitch below the pit of the stomach, during an inspiration.—Rumbling in the stomach.—°Beating in the pit of the stomach.

**Hypochondria.**—Stitching-tensive pain in the hypochondria, during motion while stooping. Tensive stitching pain around the hypochondria, hindering motion, worst when walking. Stitch around the right lower rib, towards the pit of the stomach, continuing for minutes, going off by an empty eructation. Frequent dartings below the hypochondria and through the abdomen; she could have cried out. *Stitching in the side of the abdomen* for one hour, followed by difficulty in breathing. Stitches in both hypochondria when coughing. Drawing pain in both sides of the abdomen, repeatedly. Painful feeling in both sides of the abdomen, as if a stiff body or lump had lodged there, making stooping either impossible or painful. Stitches through the abdomen from the right to the left side, quick as lightning. Stitching pain under the short ribs of the right side, during fits of dry, parching cough in the evening. Beating in the region of the liver. Violent stitches in the region of the liver, in the evening, for ten minutes; the region is afterwards painful to the touch, with costiveness. Dull stitch in the region of the liver. Sore pain in the region of the liver. Pain in the right side of the abdomen. Simple pain in the liver, when driving on an uneven road, directly below the last rib, arresting the breathing. Feeling of fulness in the region of the liver. Violent cramping in the region of the liver, relieved by eructations and emission of flatulence. Drawing pressure in the region of the liver, in the evening. Aching pain in the region of the liver. Aching pain in the right side of the abdomen. A few jerks in the liver.

**Abdomen.**—Stitches striking occasionally from the epigastrium close below the pit of the stomach into the left side, upward. Violent stitches in the left side of the abdomen. Pain from the umbilicus to the genital organs, especially when touching the parts.—Stitches through the abdomen, directly above the hips. Alternate stitching and pinching in the intestines, in paroxysms of ten minutes. Stitches from the umbilicus to the genital organs, when coughing and throwing off mucus. Stitching pain in the right muscles of the abdomen, with visible twitching. Stitches in the groin. Stitches through the left groin, in the morning.—Smarting-boring pain in the right side of the umbilicus.—Pain in the umbilical region, very intense when coughing or stooping. Aching pain in the distended epigastrium, one hour after dinner, and after some exercise in the open air. Pressure in the whole abdomen, increased after a meal, three days in succession, with dullness of the head and tenseness of the skin on the head. A good deal of pressure and tightness in the epigastrium, sometimes relieved by internal fermentation; accompanied with pressure and stitches in the umbilical region. Pressure in the abdomen, going off after stool. Pressure in the abdomen, on the left side below the umbilicus, and sometimes entirely in the left side. Pressure in the forepart of the abdomen, on the right side. Undulating pressure in the right groin from within outward. Painful pressure in the her-

nial region, when laughing violently. Drawing-tensive pressure in the abdomen. *Weight in the abdomen.* *Feeling as of a load in the abdomen*, during motion. Pain in the middle of the abdomen, from afternoon till supper; sensation as of a lump having lodged there; towards evening the pain rose to the epigastrium, with drowsiness, nevertheless she was not able to sleep at night. *Distention of the abdomen.* Painful distention of the abdomen when riding in a carriage. Hard, distended abdomen, especially in the evening, even the veins of the abdominal integuments are distended; accompanied with stitching pain in the abdomen. Accumulation of flatulence when walking in the open air. Frequent hard distention of the abdomen, with cutting in the intestines. Great distention of the abdomen, followed by violent rumbling and movement in the same. Distention of the abdomen, with diarrhoea and pinching.—Colic in the morning when in bed. Colic in the pelvic cavity, in the morning, pressing from within outward, writhing and contractive. Violent cutting across the abdomen, as if caused by flatulence, going off by motion; at the same time a cutting in the left testicle. Violent colic extending as far as the chest, with shifting of flatulence. Cutting in the abdomen, at night, with desire to urinate. Violent colic in the morning. °Cutting colic, after exercise. Cutting in the hypogastrium, in the afternoon, continuous and also in single paroxysms. Colic with frequent nausea: Frequent attacks of colic, she is obliged to bend double for a couple of minutes.—Pinching cutting in the intestines, with moaning anxiety as if stool would be discharged involuntarily. Pinching in the abdomen for one hour almost every morning, with nausea, qualmishness and accumulation of saliva in the mouth. Daily pinching in the abdomen without diarrhoea, relieved by eructation. Frequent pinching in the abdomen without flatulence. Pinching in the hypogastrium the whole day, in paroxysms of a quarter of an hour, with only one hard evacuation a day, for three days in succession.—Gripping in the intestines, with sensation as if turned inside out.—*Spasms in the abdomen.* *Spasmodic contraction* in the right side of the abdomen. Frequent attacks of contractive pain in the right side of the abdomen, worst in the morning, followed by violent contractive pain in the stomach, whence the pain extended into the chest; relieved by eructation. *Digging-up*, and contraction in the abdomen, with emission of a good deal of flatulence. \**Digging-up in the abdomen*, —with nausea.—\**Burning* in the abdomen, when walking in the open air. Burning pain in the left side and below the umbilicus. Burning, and feeling of heat in the lumbar region (region of the kidneys) during a deep inspiration. Burning in the right side of the abdomen, when walking far. Burning in the right groin. Burning in the abdomen, when sitting, going off when walking.—Pain in the abdomen, as if the bowels had been dashed to pieces. Pain in the abdomen, in the afternoon, as if the bowels would be torn out.—Beating here and there in the abdomen. °Feeling of coldness in the abdomen. °Hardness in the abdomen and sensation of adhesion.—°Pot-belliedness of mothers.—°Ascites.—The abdominal muscles are painful during motion, only at night. °Brownish spots on the abdomen.—Voluptuous *itching* in the left groin, in the evening when in bed, becoming intolerable by rubbing, speedily removed by light tickling with the tip of the fingers.—\**Feeling of emptiness in the abdomen.*—Uneasiness in the abdomen. Uneasiness in the abdomen, as if diarrhoea would come on, going off by emission of flatulence. Rumbling and wheezing in the abdomen, with distention of this organ. *Rumbling and loud grumbling in the abdomen.* Violent fermentation in the abdomen. Rumbling in the evening, and incarceration of flatulence, movement of flatulence in the abdomen. Rumbling in the abdomen, with eructation. Fine, quick gurgling in the right iliac region. Short and slight bubbling (gurgling) in the left iliac region, above the hip, perceptible

to the hand on the outside. Rumbling in the abdomen, when lying. Loud rumbling and feeling of emptiness in the left side of the abdomen, every day. Profuse emission of foetid flatulence.

**Stool.**—\*In the succeeding days the stool becomes hard, sometimes even knotty, and is insufficient. Hard, difficult stool, sometimes mingled with mucus. Hard stool, with cutting in the rectum. Diarrhoea, the first days Diarrhoea, after drinking milk. \**Exhausting diarrhoea*, the first days. °Green or sour-smelling diarrhoea of children. Soft, papescent stool, having a very foetid, sourish smell, being expelled suddenly, and the whole of it at once. Stool having a putrid, sourish, foetid smell. Three thin acrid stools a day, after which varices protrude, emitting considerable humour, and causing an intense pain when sitting. °The stools are too soft. A number of jelly-like stools, with colic. Stool of a whitish colour. Slimy diarrhoea, with distended abdomen. Stool in a few days, the faeces being first hard, then soft. Constant desire for stool, only a little being passed. Unsuccessful urging to stool towards evening, stool coming on in the morning, and being frequently hard and in lumps. Unsuccessful urging to stool, only wind and mucus being passed, with sensation in the rectum as of a lump having lodged in it. Difficult expulsion of soft, thin-shaped faeces. Two stools a day, always accompanied with some tenesmus. °Scanty stool with straining and teresmus. The expulsion of stool, which is brownish and not hard, requires considerable straining, and the quantity expelled is very small. Incipient flatulent colic previous to stool, with moaning and groaning. Colic, previous to stool, which looks natural. Nausea previous to every liquid stool. Emission of prostatic juice at every difficult stool. Blood with every stool for eight days. Blood with stool, which is not hard. \**Much blood with stool*, after cutting in the abdomen.—Discharge of sanguineous mucus *after stool*. A second stool is followed by stiffness and feeling of hardness in the back, and tightness in the pit of the stomach, with oppressed breathing. Aching pain in the forehead after stool, which is not hard. Emptiness and relaxation in the abdomen after stool. Headache after a papescent stool. After a thin stool, a sort of smarting in the abdomen. Great weakness in the abdomen and complete loss of appetite after two difficult and hard stools.—*Expulsion of ascari-des*. \**Contractive pain* in the rectum, and thence in the perinæum and vagina. Contractive pain in the anus, and afterwards ascending in the front part of the abdomen, during stool. Frequent and painful contraction in the anus. Crampy sensation in the anus, going off after fermentation in the abdomen.—Tensive pain in the anus, (and rectum). Tension in the region of the anus, after stool. —Tenesmus in the anus, with feeling of soreness, sometimes occurring at intervals. Pain in the rectum during stool, and afterwards for a long time while sitting. Excessive cramp-pain in the rectum, before and after hard stool. Violent cutting in the anus and rectum, at night. Cutting in the rectum during stool, with discharge of blood. Cutting in the rectum, in the afternoon, extending towards the abdomen, and followed with unsuccessful pressing and bearing down on the rectum.—Feeling of weakness in the rectum, in the evening when in bed, causing an uneasiness which prevents him from falling asleep. *Stitches in the anus*. Violent stitches in the rectum, at night. Severe dull stitches in the anus, in succession. Stitches in the anus after the morning-stool, until afternoon. Violent stitching in the anus, especially while contracting and when pressing on it from without. Slow stitch in the left groin, from below upward, during stool. Stitching and tearing in the anus. Stitches in the perinæum towards the rectum, when sitting, in the evening. Stitching and burning at the anus.—*Burning at the anus*. Burning at the anus during stool. \**Burning at the anus every day*, during hard stool, mingled with unsuccessful desire for stool,

(the first days). \*Burning in the rectum, the whole day. \*Burning in the rectum, while expelling the latter half of a loose stool. Heat and swelling of the margin of the anus. Soreness of the anus. Sore pain of the rectum, mostly between stool, with sensation, even when lying down, as if it would be pressed out, in paroxysms of one hour; accompanied with varices of the rectum, painful when touched.—\**Itching and stinging* in the rectum. *Itching in the rectum and anus.* Violent itching of the anus and creeping in the rectum. Scraping sensation in the anus during stool. Smarting in the rectum, after stool. °Oozing of moisture from the rectum. °Discharge of mucus from the rectum, with stinging and tearing.—Protrusion of the rectum, (in a few hours). *Prolapsus recti.* Congestion of the anus, in the afternoon, shortly after a meal. Profuse sweat directly above the anus, before and after stool. \*Protrusion and itching of the varices of the rectum. Protrusion of the varices during stool, or when walking. Protrusion of a humid, painless varix after good stool. The varices become painful. Pain of the varices when walking. Varices without costiveness. The varices seem to be indurated. Bleeding of the varices when walking. °Flowing hæmorrhoids.—Stitches in the perinæum towards the rectum, when sitting, in the evening. Soreness between the buttocks.

**Urinary Organs.**—Scanty emission of urine, (the first seven days). Pressure on the bladder, in the morning, and desire to urinate; micturition takes place in a few minutes. *Continual desire to urinate, with painful bearing down in the pelvis,* in the morning. Frequent and great desire to urinate. He urinates twice or three times in one hour; he feels a pressure on the bladder, but he is a good while before the urine makes its appearance; if he tries to retain his urine he is attacked with anxiety and pressure on the bladder.—*Sensation as if drops come out of the bladder, (which was not the case,)* especially when at rest.—After micturition, a little of the fluid remains behind in the urethra and afterwards makes its appearance at the orifice.—After having suffered with heat, redness and puffiness of the face for two hours, followed by paleness lasting for many hours, he is attacked with an inability to pass his water, lasting 14 hours, succeeded by a violent desire to urinate every quarter of an hour, which results in the emission of but a very slight quantity of urine; afterwards these periods of retention of urine and desire to emit it recur several times; the last retention lasting about 20 hours, although he had been drinking a good deal. Little micturition with much thirst. At night he dreams that he was urinating into the chamber, whereas he was wetting the bed. He is obliged to urinate as often as he was called up at night, suffering much thirst even during the night.—Pressing on the bladder and frequent micturition, with tension in the abdomen. Pressure on the bladder, in the evening, with burning after micturition.—He emits much more urine than corresponded to the quantity of drink he had swallowed. °Wets the bed, before midnight. Quantity of water-coloured urine. Pale-yellow urine without sediment, not even in 24 hours. \*The urine becomes turbid and foetid when standing, with white sediment. The urine is frequently turbid and dark while emitted, as if mixed with mucus. \**Turbid urine with brick-dust sediment.* Turbid, clay-coloured urine, with red sediment on the sides of the vessel. \**Blood-red urine.* The urine deposits blood in the vessel. Discharge of a milky fluid from the urethra after micturition at noon. Discharge of prostatic juice after micturition.—Pinching pains in the bladder. Spasm of the bladder. *Violent burning in the bladder,* without desire to urinate.—Burning in the urethra. *Burning in the fore part of the urethra.* \**Smarting in the urethra* during micturition.—Smarting in the fore part and orifice of the urethra. Smarting in the urethra with drawing from before backward, in the morning on waking.—Tearing in the fore part of the urethra. Violent tearing

in the urethra. Violent, continual cutting, soon also stitching in the urethra. Itching in the urethra. °Secondary gonorrhœa.

**Male Genital Organs.**—*Copious sweat of the genital organs.* °Itching about the parts. °Weakness of the parts. Stitches in the penis. Burning in the penis, during an embrace. Itching inflammation of the penis, increasing the excitation during an embrace.—*The glans is hot and itching*, with soreness of the prepuce. Hot glans, with a pale-red, sometimes itching eruption. *Red tips* on the glans. Secretion of a purulent fluid in the lower parts of the glans, having a sourish-salt smell, with itching.—Continual suppuration and itching of the *prepuce*. Red, almost sore *little indurations*, going and coming, on the inner side of the prepuce and on the glans, itching when touched.—Considerable sweating of the scrotum.—Heat in the testicle. Cutting in the testicle. Pinching tearing in the testicles. Rheumatic drawing in the testicles, sometimes also in the thigh. °Swelling of the scrotum. °Pains in the testicles.—*Great increase of the sexual desire*, (the first five days). Sexual fancies without erection. Desire for an embrace with quick emission of semen; afterwards tension in the hypogastrium, extending into the spermatic cords.—Painful erection after the siesta, after sitting. Powerful erections, becoming short after the 29th day, with quick emission of semen during an embrace. °Decreasing erections (curative effect), (the first days). Long-continuing erections at night. Want of erections, (for several days). Long erections after an embrace and nocturnal emissions. Nightly emission with dream. He is frequently threatened with an emission, but it is suppressed each time by his waking. Imperfect emission while dreaming of an embrace. Weak and watery emission. °Emissions after onanism. °The emissions disappear, (secondary effect). Burning in the fore part of the urethra after an embrace. After an emission he feels lazy, faint, is sensitive to damp air, with turbid urine, vertigo and constipation.—Erection *after an embrace*, afterwards weakness of thought, vertigo, despondency, relaxation of the body, low-spirited and inclining to start in the evening. Anxious and restless the whole day, after an embrace. Great weakness of the knees after an embrace.—Feeble thrill *during an embrace*. Embrace with insufficient erection.

**Female Sexual Organs.**—Painful stiffness, apparently in the uterus. \**Pressing in the uterus, oppressing the breathing, from above downward*, as if everything would come out of the vagina, accompanied with colic; she has to cross one limb over the other to prevent a prolapsus of the vagina; however, there was no prolapsus, but a mere increase of jelly-like leucorrhœa. °*Prolapsus of the vagina and uterus*. °Induration of the neck of the uterus. °Is a good remedy in cancer and scirrhus of the uterus. °Swelling and humid itching eruption on the inner labia. \**Soreness and redness of the labia*, in the perinæum and posteriorly between the thighs, also before the menses. Jerking in the vagina from below upward, in the morning on waking from a dream. °Contractive pain in the vagina. \**Violent stitches in the pudendum*, almost extending as far as the umbilicus. Stitches in the vagina every three or four seconds, and a similar paroxysm of stitches in a quarter of an hour. \**Itching of the pudendum*. *Discharge of blood* from the vagina after an embrace. Pain in the abdomen as if the menses would appear. \**Menses too early* by six, two, seven, fourteen days. Menses too early by eight days, and too scanty, appearing only in the morning. *Discharge of a few drops of blood a fortnight before the period of the menses*. Discharge of blood from the vagina, only when walking. °The menses are too scanty, -too late (secondary effect, at the time of full-moon).—*Re-appearance of the menses which had been suppressed for four months*. Re-appearance of the menses in an elderly female, forty-eight days

after taking the medicine and after a suppression of two months, accompanied with drawing from the teeth into the cheek, which became somewhat swollen.—°Sepia is frequently indispensable at the critical age.—Before the menses: violent colic with faintishness. Shuddering all over the body, the whole day. Burning in the region of the pudendum. Aerid leucorrhœa with soreness of the pudendum. Sensation as if the pudendum were enlarged. Pressure in the abdomen, and after this had passed off, soreness of the perinæum and swelling of the pudendum, before the blood makes its appearance.—During the menses: exhaustion in the morning. Tearing in the tibia. Toothache and throbbing in the gums. Obscuration of sight, and great weakness, going off while lying. Violent pressure in the forehead, with discharge of hard foetid matter from the nose. Drawing in the teeth, extending upward into the cheek. Drawing from the teeth into the cheek, which became bleated. Bleeding of the nose, three evenings in succession. Melancholy, especially in the morning. \*Pains in the limbs, also as if bruised. °Abdominal spasms with pressing downwards. She is unable to sleep, owing to tearing in the back, chilliness and heat, thirst and painful contraction in the chest. She was obliged to remain in bed for two days, on account of restlessness in the body, drawing pain in the lower limbs and abdomen, with rumbling; on the second day she had palpitation of the heart for several hours, in the forenoon, accompanied with dyspnœa.—*Leucorrhœa*, with stitches in the uterus. \**Leucorrhœa with itching in the vagina*, °or of the pudendum. Sanguineo-mucous discharge from the vagina. \**Yellowish leucorrhœa*. Watery leucorrhœa. Mucous leucorrhœa. The leucorrhœa increases when she is attacked with frequent eructations and retching; in this case her face becomes paler. Discharge of a green-red fluid from the vagina, during her pregnancy. Leucorrhœa, especially profuse after micturition. Leucorrhœa having the appearance of pus. Leucorrhœa like milk, only in the day-time, with burning pain and producing soreness between the thighs. °Corrosive leucorrhœa. Profuse mucous diarrhœa, having a foetid smell, with drawing pain in the abdomen. Pains while walking, on account of soreness occasioned by the leucorrhœa.—°Disposition to miscarriage. °*Affections of pregnant females*: °*Toothache*. \**Nausea and vomiting*. °Colic. °Costiveness. °Cough.—\**Stinging in the breasts*, -worst when becoming cold in walking or riding in a carriage. Itching of the left nipple which bleeds and shows a tendency to ulcerate. °*Soreness of the nipples*.—°Chafing of infants.

**Larynx.**—Frequent pressure in the larynx, painless, in the morning. Dryness of the larynx, in the morning.—\*Sudden hoarseness. Hoarseness and fluent coryza. She is unable to sing high notes, on account of hoarseness. *Hoarseness*, he is unable to utter a loud word. Hoarseness, with weakness and chilliness, (in a few hours). \**Hoarseness with dry cough*, from titillation in the throat. Cough, occasioned by titillation in the larynx, without expectoration, °sometimes attended with costiveness. Violent desire to cough, occasioned by a tingling in the chest. Cough and coryza, every morning until nine o'clock; she commences to sneeze even when yet in bed. °Cough of pregnant females.—Short and hacking cough when going to bed. Cough in the evening before going to bed, from eight till nine o'clock, until she throws off, then the cough disappears. The cough is worst after lying down in the evening. Dry, short evening cough, with intermittent stitches in the right hypochondrium, for several hours. Dry cough with vomiting of a bitter liquid, in the evening when in bed. When coughing she feels nauseated, is occasionally obliged to retch, and then becomes hot and perspires slightly. Violent cough with scanty expectoration, but with vomiting, which is generally bitter, only in the evening when lying in bed. Cough, fatiguing the chest and stomach.—The desire to cough is frequently

so sudden and violent, that he is not able to breathe fast enough and that his chest becomes spasmodically contracted. *Spasmodic cough.* Dry cough, as if proceeding from the stomach and abdomen, or as if occasioned by constipation, or as if something had remained in the stomach which did not come off. Dry cough during the day, obliging one to lie down and ceasing while lying down; the cough ceased during the night while lying, but he had dry coryza.—Violent, dry cough, with stitches in the right side of the chest. Cough with stitches in both sides of the epigastrium. Cough with stitches in the back. When coughing the upper part of the sternum is painful.—*Scraping cough*; sensation as if his chest had become suddenly affected. Cough, which is frequently dry, short and hacking, with pain in the pit of the stomach, and scraping, raw, sore pain in the region of the larynx, not felt when swallowing food; the cough does not rouse her from sleep, but after waking the cough is very violent and continuing; sometimes there is a slight rattling in the trachea, resulting in mucous expectoration.—*Cough at night, waking one from sleep.* Cough, day and night; causing a pain in the pit of the stomach.—Painful tearing at a small spot of the brain, as if something had been torn loose, during a short fit of cough.—*Accumulation of much mucus* in the larynx, which it is difficult to cough up, but easy to swallow, going down even during a deep inspiration. Violent cough with expectoration after rattling of mucus in the chest, with sore and raw pain in the throat, which continues even half an hour after the cough. Slight expectoration when coughing, with wheezing and slight rattling in the chest. Mucous expectoration from the chest, without much cough or dyspnœa. °Cough with difficult expectoration. *A good deal of cough with expectoration*, only before midnight as soon as he gets into bed, not during the day.—Expectoration of *white mucus* of the size of a millet-seed. Violent cough with much discharge of white mucus, lasting one hour every night, for several weeks. A good deal of cough with expectoration, day and night; the cough wakes her from sleep, accompanied with a sensation as if the chest were hollow and smarting inside, as if sore.—His chest feels quite raw, owing to his coughing and expectorating so much —*\*Expectoration from the chest, tasting very salt*, °also with cough, particularly in the morning and evening. Gray and yellow expectoration from the chest. Yellowish expectoration, tasting like rotten eggs. That which he coughs up has a putrid taste, and the breath which he expels with the expectoration has a foetid smell.—*\*Cough with blood-streaked expectoration*, after dinner. Cough with bloody expectoration, every morning, without pain in the chest. Short, hacking cough, in the evening after lying down, with profuse expectoration of pure, coagulated blood, one turn every minute —*\*A good deal of purulent expectoration* with violent cough, great oppression of the chest and rattling; the slightest exercise takes away her breath, and she is quite exhausted. She has no breath when coughing, without being able to expectorate. °Suppuration of the lungs. Short breath, (immediately). *\*Short breathing when walking.* Short breathing when walking, as if her chest were full. Loud wheezing through the nose during an inspiration. Loss of breath when taking ever so little exercise.

**Chest.**—*\*Dyspnœa with tenacious mucus in the chest.* Oppression of the chest morning and evening. When standing still, the breathing is arrested. Asthmatic, especially when palpitation of the heart occurs, after some emotion of the mind. He wakes covered with sweat, and asthmatic, continuing for four hours. Considerable oppression of the chest in the evening, aggravating the breathing and becoming much worse when lying; she had to sit up in bed; accompanied with luminous vibrations before her eyes. Oppression about the lower part of the chest. Difficult rather than short breathing. Oppression of

the chest with stitches during a deep inspiration. He wakes at night with oppression of the chest; he had to breathe heavily and deeply for one hour, and felt yet somewhat oppressed in the morning after waking. Fit of asthma at night; he was lying with his head bent over, felt an oppression, had to take deep breath to get air, for one hour; followed by cough accompanied with expectoration of tenacious mucus. °Dyspnœa with oppression and shortness of breath, when walking, going up stairs, or lying in bed. Considerable oppression of breathing, towards evening, from a pressure over the pit of the stomach. Oppression of breathing in the evening, from a pain under the short ribs of the right side, preventing her from making the least motion.—\*Pain in the chest, from motion. °Pain in the side when breathing and coughing.—Very violent pressure in the chest, without touching it. Pressure in the chest, when stooping and during a deep inspiration. Aching pain in the chest, increased by certain movements. Aching pain in the region of the lowermost left ribs, also when touching that part. *Severe pressure in the chest*, in the evening when in bed. Aching pain in the region of the left lowermost rib only when walking. Pressure in the upper part of the left side of the chest, towards the axilla, most violent during a strong inspiration; when touching the part it is painful as if bruised. Pressure in the right side of the chest, in paroxysms, relieved by empty eructations. Drawing, with pressure, in the region of the right false ribs, towards the back, going off by motion and by rubbing. \**Pressure on the upper part of the sternum*, as from a weight.—*Feeling of heaviness in the chest*, obliging one to take deep breath.—Fulness in the chest, and contraction of the same, hindering breathing. Constrictive sensation in the chest, in the morning, early.—*Tensive pressure* in the chest, rather on the left side.—*Attacks of tightness* in the chest. Tension from before backward, in the region of the left ribs, as after a catarrh.—Aching of the whole chest.—*Stitching in the left side* of the chest, when coughing. \**Stitch in the right side of the chest* and scapula, during an inspiration and cough. Stitches in the right side of the chest, towards evening, \**during an inspiration*. Stitches in the right side, when walking in the open air. Stitches in the right side, in the morning, after a sort of half sleep. Stitches deep in the chest. Stitching pain in the right side of the chest, during an expiration. Violent stitching in the chest, at every inspiration; he was only able to take short breath; this affected his head. Continuous stitches in the left chest, independent of breathing. Sharp stitch in the right chest. Stitch, continuing one minute, in the region of the right lowermost rib, towards the pit of the stomach, going off by eructations. °Sticking in the chest during mental labour. Stitching in the heart, in the afternoon.—\**Rawness* in the chest, as of raw flesh.—Violent *burning* in the sternum. Burning pain in the sternum, while drinking beer.—*Burning sore pain* in the upper part of the left chest, also when touching it. Pressure, with tearing, in the highest portion of the left chest, near the shoulder-joint, recurring shortly after an eructation, which afforded relief.—Violent tearing in the lower right ribs.—\**Orgasm of the blood*, and *congestion of blood to the chest*, as if hæmoptysis were about to set in. Gurgling or bubbling sensation in the left chest. Beating in the pit of the stomach, in the morning, followed by orgasm of the blood in the chest, resembling palpitation of the heart, afterwards burning heat in the face and body, without any heat or redness being perceptible to the hand, and without thirst, but some sweat.—Beating of the heart, in the evening, for a quarter of an hour. Palpitation of the heart, with stitches in the left side of the chest. Palpitation of the heart, with great anxiety, and trembling of the fingers and lower limbs. Palpitation of the heart, with feeling of anxiety, obliging one to take deep breath, without depressing the spirits, for several days.—Intermission of the beats of

the heart, with anxiety. Intermission of the beats of the heart, especially after a meal.—Itching of the surface of the chest. Itching of the upper part of the sternum. °Brown spots on the chest.

**Back.**—\**Pain in the small of the back*, when walking in the afternoon. *Painful weariness in the small of the back.* °*Weakness of the small of the back in walking.* *Pain as if sprained in the small of the back*, above the hips, in the evening in bed, and in the afternoon. Weariness of the lower part of the spine, from walking, as if broken. Drawing, with pressure, on the left lower side near the small of the back. Frequent sharp pressure on the os sacrum, and a little below. Gurgling on the right side of and near the small of the back. When lifting something he felt a darting in the small of the back from without inwards, so painful that he dared not move, he had to walk bent, and experienced violent stitches in that part, when knocking the foot against anything. *Stitches posteriorly above the right hip, continuing almost uninterruptedly for four days; the pain being so violent that she was almost unable to lie on the right side; when touching the part, it felt painful as from subcutaneous ulceration.* Intermittent pressure directly above the right hip, a little towards the spinal column. Burning pressure in the small of the back. Reddish, herpetic spots above the hips. °*Beating in the small of the back.* °*Pressing pain.* —*Pain in the back*, only when sitting, even when sitting ever so little. Pain in the back, only when walking, arresting the breathing. Pain in the upper part of the back, every morning, when lacing herself a little tightly. Painfulness of the whole back when stooping while writing. Pressure on the spinal column, above the small of the back, with rheumatic drawing in the nape of the neck. °*Cutting digging-up and pressure in the back.* °*Crampy tearing.* When stooping, he is suddenly attacked with a violent pain in the back, as if he received a blow with a hammer, accompanied with a lancinating pain, so violent that he came near falling down and losing his breath; the pain was relieved by pressing against a hard object. Stiffness in the lower part of the back, making it very difficult for him to keep himself straight. \**Stiffness in the back*, diminishing when walking. Tensive pain in the right side of the back, below the scapula, especially when lying on the right side. Drawing pressure near the spinal column, along the scapula, sometimes extending to the nape of the neck. Weariness in the back, in the morning, on waking, as if she could not turn herself or raise herself easily, or as if she had been resting in a forced position, almost as if the parts had gone to sleep. °*Chilliness on the back.* °*Brownish spots on the back.* °*Itching eruption on the back.* Drawing pressure below the right scapula, now in the back, now more in one side; it is especially felt when the arm is kept straight, while sitting.—Severe pressure at a little spot between the scapulæ. *Tensive pain in the left scapula, towards evening.* Tensive pain between the scapulæ. Drawing in the scapula, at intervals. *Tearing in the left scapula, as if from a cold.* Drawing between the scapulæ and in the upper part of the chest. *Stitching in the left scapula.* Stitches between the scapulæ. *Stitching with pressing between the scapulæ.* Stinging pain from the scapula down through the ribs, on the right side of the back, at every inspiration, lasting as long as this does, in every position of the body, but less when walking in the open air. Stinging in the scapula, extending as far as the side and chest, only when sitting and walking fast; the stitching ceases when walking moderately, or when leaning against the affected side; mostly in the evening and afternoon. Burning constrictive pain around the shoulders, chest and neck, in the evening.—Drawing and stitching in the *nape of the neck*, even when at rest, arresting the breathing. Feeling as if the nape of the neck were swollen. \**Stiffness of the nape of the neck.* Painless swelling in the nape of

the neck, of the size of a hazel-nut. Violent itching in the nape of the neck. *Jerking* in the nape of the neck, with shaking of the head. Aching, sore pain in the lowermost cervical vertebra, in the evening, when walking in the open air. °Tetters in the nape of the neck and behind the ears.—*Tensive pain* of one side of the neck, as if swollen. *Stretching of the neck*, straining of the cervical muscles, with distortion of the facial muscles. Red, itching *herpetic spots* on both sides of the neck. Large *boil* on the neck, below the left jaw, with stinging pain.

**Upper Extremities.**—Titillating burning in the right axilla. *Swelling* and suppuration of one of the axillary glands. Itching of the axillæ. °Humid herpes in the axilla.—Crampy drawing in the right shoulder, and in the whole side. *Aching pain, as if sprained*, directly below the left shoulder-joint, posteriorly. Dull, drawing-tearing pain, as if sprained, in the shoulder-joint, (after dinner). Tension and drawing in the left shoulder-joint, going off by moving it. Tearing in the interior and exterior of the left shoulder-joint. Violent pain in the shoulder-joint, when raising a small weight, or when resting the elbow in an elevated position; it is a sort of intensely-painful pressure, with trembling of the hand. Pain as if sprained in the shoulder-joint, when resting the arm on the table while writing. Violent pain in the shoulder-joint, as if it would tear off; the pain is relieved for a quarter of an hour by eructations. Pain in the shoulder, which was higher than the other by malformation, also when touching it. Stiffness of the left shoulder; she is not able to raise her hand up to her head. *Drawing pain in the shoulder-joint*, early in the morning when in bed, until one hour after rising. Pulling and drawing on the shoulder, when at rest. Great pain in both shoulders. Pressure on the shoulder; at night, it felt as if gone to sleep and sprained. Aching sore pain on the shoulders, as if excoriated. Pain in the region of the head of the humerus, and the tendon of the pectoralis muscle, when bending the arm back and when touching the part.—The arms feel very languid and go to sleep when at rest. Feeling of stiffness and coldness in the arm, as if there were no blood in it, but without any coldness being perceptible to the hand. The arm goes to sleep when leaning the head upon it. Paralytic feeling in the left arm; nevertheless it can be moved easily, as well as the fingers. °Paralytic sensation in the arm, afterwards throbbing in the same. \**Drawing in the arms from above downward*, extending into the fingers. *Jerking* in the right arm from below upward, followed by trembling of the hand, hindering writing. Tearing in the arm, from the wrist to the shoulder; the pain scarcely allowing him to move the arm; when letting the arm hang down, it becomes blue and rigid; the greatest pains come on at night, less in the daytime when at rest. °Rigidity of the joints of the arms, the elbow and finger-joints, as if too short. °Warts on the arms.—Burning of the skin of the upper arms, on the outside, directly below the shoulder-joint, as if a vesicatory had been applied. Pain in the upper arm, tingling and humming, more violent when moving the arm or when stooping, but going off when at rest and when lying in bed; the pain extends as far as the shoulder-joint, and occasions an uneasiness in the arm for three days. Jactitation of the muscles of the upper arm. Violent pain in the left upper arm, as if bruised. *Pain as if bruised in the right upper arm*, also during motion. Large *blister* on both upper arms, with violent itching. °Inflammatory swelling in the middle of an upper arm, bright-red, hard, dotted with red spots. Tearing in the left upper arm, at a small spot above the elbow. Drawing pain in one, afterwards in the other upper arm.—*Itching in the bends of the elbows*. Tension in the elbows, as if the joints were too short. Stitches in the elbow-joints. °Stiffness of the elbows. Brown spots on the elbow of the size of lentils, surrounded with a *herpetic skin*. *Itching scurf* on

*the posterior part of each elbow.*—Cramp in the left *forearm* when walking. Tearing, with pressure, in the left forearm, in the interior and exterior of the bend of the elbow. Groaning sensation in the forearm. Drawing tearing in the lower part of the forearm. Tearing now in the left, then in the right forearm, near the wrist-joint. Tearing drawing from the outer side of the left hand through the forearm, extending as far as the elbow. *Red swelling* on the forearm, with pain as if pressing on a fluctuating tumour.—Lancinations in the left *wrist-joint*. °Stitches in the wrist-joint on moving the hand. °Stiffness of the wrist-joints. Drawing pain in the right wrist-joint.—Tearing in the *hand*. The hand feels numb and goes to sleep, when holding something with it, or carrying something in it. Weakness of the muscles of the hand. Visible twitchings and jerkings in the internal muscles of the hand, with stitching pain. \**Heat in the hands* in the day-time; the mind being excited at the same time. °Cold sweat. *Icy coldness* of both hands in the warm room, so severe that they spread a chilly feeling over the whole body. A wart seems to form on the outer side of the hand. The skin of the palm of the hand *peels off*. A cicatrix on the top of the index-finger commences to bleed spontaneously. Roundish, bright-red *spot* on the ball of the right thumb, itching violently, which cannot be removed by scratching, in the evening. °Suppurating blisters on the dorsum of the hand and the tips of the fingers. °Pemphigus with swelling of the hand. °Itch and scurfs on the hands.—Large itching blister on the right thumb. The thumb becomes bent towards the little finger and remains immovable. Tearing in the posterior joint of the right thumb.—*Tensive pain in the metacarpal joints of the fingers, especially when bending them*. Drawing and stitching in all the fingers of the left hand. *Stitches* in the metacarpal joints of the fingers. *Arthritic drawing* in the finger-joints. *Tingling* in the tips of the little fingers. Numbness of the right fingers in the evening. Violent *pricking* in the tip of the left thumb. Painful *tickling* under the nail of the right thumb. *Almost painful tickling under the nail of the left index-finger*. Tearing under the nail of the right index-finger. Clenching of the index-finger since morning; it was impossible for him to stretch it. \**Panaritium* on the left index-finger, \*with violent beating and stitching in the same. °Painless ulcers on the tips of the fingers. °Malformation of the nails.

**Lower Extremities.**—°*Coxealgia* with lancinating pains. *Soreness* with burning pain between the nates. Intermittent drawing pressure directly over the right side of the nates. Drawing from the right hip to the soles, the whole day. *Cramp-pain* in the hip-joint, she had to walk to relieve it. Sudden tearing cramp-pain in the region of the hip, extending down to the foot, when walking about, for eight or ten minutes. *Pain as if bruised* in the right hip-joint, only when lying on this side. Pain as if bruised, and weakness in the hip-joint, worst when rising from the chair, so that she was unable to get along without holding on to something; the pain was relieved by continuing to walk. Tearing, with pressure, over the right hip, from before backward. Pressure in the right hip-joint, close to the abdomen, commencing and increasing gradually, and decreasing as gradually. Burning tearing in the inner border of the left glutei muscles. Pain in the nates, scarcely permitting him to sit still. Visible, but painless jerking in one buttock and the corresponding thigh.—Sweat of the lower limbs, so copious in the day-time, that it penetrates through drawers and pantaloons. Creeping upward and downward in the left lower limb. The left lower limb is jerked upward in the forenoon, when sitting. \**The lower limbs go to sleep* when sitting. Stiffness of the lower limbs, extending to the hip-joint. After sitting a little, the limbs become quite stiff and go to sleep, with tingling in the same. Painful tightness in the left thigh and leg, as if the parts had

gone to sleep, down to the soles. Numbness and sudden paralytic feeling of one lower limb, when standing. Great uneasiness in one of the lower limbs, in the evening, being a kind of internal imperfect itching. \**Icy coldness* of the lower limbs, from forenoon till bed-time. °Lameness of both lower limbs.—Trembling of the thighs and knees, without feeling chilly, with jactitation of the muscles of the thighs. Itching of the femora when sitting, she has to change her position all the time. The posterior muscles of the thighs are very painful when sitting. Spasmodic jactitation of the muscles of the thighs when walking. *Tearing* in the right thigh when walking, the place where the tearing is felt being painful to the touch. *Drawing* in the thighs. Drawing pain in the femora from below upward. Lancinating aching pain in the groin, extending into the thigh while advancing the limb when walking. Undulating pain in the upper part of the femur. *Cramp* in the thighs when walking. Attacks of creeping in the thigh, down to the toes, frequently lasting a quarter of an hour, several days in succession. *Pain of the thighs as if bruised*, when touching them, with tension in the same when walking. Paralytic tension in the right thigh and hip-joint when walking. *Lancinations in the thigh*, when walking, momentarily depriving the lower limbs of all their power and almost paralyzing them with chilliness. Lancinations in the left thigh when at rest, afterwards ulcerative pain in the outer parts. Short pain in the right thigh, in the evening after lying down, but so violent that she had to remain quiet without being able to move; for sixteen evenings in succession. *Boils on the thigh*.—*Drawing pain in the knees*. Arthritic drawing in the knees. *Violent drawing pain* in the knees, when walking and rising from a seat. Lancinations between the patella and the knee-joint. Tearing in the right knee, as soon as she becomes cold; no pain when touching the parts. Tearing around the knees and malleoli, only when sitting and lying. *Tension* in the tendons over the knee, when going up stairs. Tension around the knee. Tension in the knee when walking in the open air. *Stitching* in the knee. Stitching and cutting in the bend of the knee. Stitching directly below the patella, when walking fast. Boring pain in the left knee-joint, when at rest. Cracking in the knee-joint. °Stiffness of the knees. Great *weakness* in the knees. Cold knees, at night. Painful *swelling* of the knee, with tension in the knee, both when at rest and in motion. Soft, painless swelling on the patella; when kneeling a tension and unyielding tightness is experienced in the knee; the swelling feels numb.—*Uneasiness in the legs every evening*, with creeping in them. Pressure and drawing in the legs, from the knees to the toes, most violent when sitting or lying, relieved by walking. Slight tearing between the left knee and calf. *Heaviness* of the legs as far as the knees, as if they would fall off. Pain of the knees and tibiae as if bruised, more when sitting than when walking. Pain in the tibia and fibula, but especially in the malleoli, as if the bones would be distended. Pain as if bruised and weariness of the legs: she could not prevent falling into a slumber full of anxious fancies. Sore pain in the region of the tibia, only during motion. Tearing now above, now below the right calf. Tearing in front directly below the right knee. \**Drawing pain in the leg*, extending as far as the heel, where she experienced stitches. Drawing in the leg and big toe. Drawing deep pain in the right tibia, extending beyond the malleoli. Burning in the lower half of the legs, at night when in bed; she has to uncover them. Tensive pain in the calf. Pain, as if bruised, of the gastrocnemii muscles and hamstrings. °Cramping in the legs. Swelling between the tibia and calf. *Swelling of the legs, rising as far as the knee, when sitting and standing*, and dispersing when walking. Tension in the calves. Drawing tension, like a cramp, in the calves, from the malleolus to the knee. Aching pain in the lower part of the right calf, as if a cramp would come on. \**Violent cramp*

*in the calves, at night when in bed*, when extending the legs, and next day constant tension of the calves, as if too short. Violent itching of the tibia. Many itching *pimples* on the legs. Acuminated pimples on the calves, as high up as the knees; occasioning an itching here and there, and a stinging where the clothes rub against the skin. Violent tickling stitch in the lower part of the right tibia.—Tensive pain in the tendo-Achillis. After a walk in the open air, the tarsal joint feels painful, as if compressed. Tensive pain in the dorsum of the left foot, making it impossible for her to walk on the pavement. Pressure in the tarsal joint, as if the boot were too tight. *Pain in the tendons of the tarsal joints when walking, as if too short.* Pain in the foot, when walking in the open air, as if a tendon in the region of the malleolus had become strained.—*\*Swelling of the feet.* The feet become bloated when walking long. Heaviness in the feet, extending up to the knees, since early in the morning. Buzzing in the foot. *\*Creeping in the feet* when standing. *The feet go to sleep, frequently when sitting*, especially in the morning. °The soles go to sleep with tingling. °Prickling and burning in the feet. Tearing in the lower part of the right foot. °Twitching of the feet during sleep. *\*Profuse sweat of the feet*, also especially the toes, for two weeks. Profuse sweat of the feet, *having an intolerable smell*, the toes becoming sore. °Suppression of the sweat of the feet. °Ulcers on the dorsum of the foot. Burning of the feet, at night. Icy cold feet, afternoon and evening when sitting. *Very cold feet, in the evening, especially in bed*; and when the coldness of the feet passes off, he has very cold hands. *Fætid smell* of the (generally sweaty) feet.—Sticking pain in the sole also when touching it; she is scarcely able to walk. Stitching in the dorsum of the foot, especially painful when walking on stone pavement. Pimples on the dorsum of the foot, itching violently. Prickling in the soles and pain of the corns. Creeping or prickling stinging in the sole and under the toes, more when at rest than when walking. Stitching in the soles, even when sitting. Tearing in the right sole, close to the toes. Frequent cramp in the internal body of the sole of the foot. Long-continuing cramp in the soles of the feet, in the evening when in bed. Itching of the outer side of the left sole.—Stitching in the *heel*, only at night. *Stitching in the heel and corn*, in the day-time. Burning-stinging and smarting sore pain in the heel, when sitting. Spasmodic stitching in the heel, as if the tendons were too short, in the evening when extending the leg and taking off the boots. Stitching and tearing in the heel, day and night, more painful when stepping than when at rest; she was pale and cold, and the parts felt numb when touched. When walking, *blisters* easily form on her heel. °Ulcers on the heel, from spreading blisters.—Tearing in the right small toe. Tearing in the big toe. Stitching with pressure in the left big toe, more when at rest than when walking. Burning stinging in the tip of the big toe. Tickling in the tip of the right big toe. Bone-pain in the ball of the big toe. Pain in the anterior joint of the left big toe, first tickling, then smarting, frequently recurring. Cutting in the toes, as with a knife, at night, mostly when lying on the back, with redness of the tips of the toes; in the morning the pain has gone. A nail on the toe, *which had been distorted for a number of years, suppurates*, and a new nail forms in its place. \*Pain in the upper part of the toes, sore and corrosive. Itching of the toes. *Cramp in the toes*, recurring for several days. °Corns. Burning and aching pain of the corn, even when the shoes are wide. Drawing pain in the corn, in the evening. Stitching in the corns, also when at rest; when knocking against the corn, the stitches are so severe that one would like to cry out. Burning and stitching in the corn. Inflammation of the corn.

**Sleep.**—Excessive yawning and stretching. In the afternoon, after a slight meal, he felt lazy and drowsy. Very drowsy at noon, in the afternoon wide

awake again. Drowsiness in the day-time, and not disposed to do anything. *Drowsiness in the day-time ; she goes to sleep as soon as she sits down.* Timely drowsiness in the evening, with oppressive dulness of the head. Slumbering (almost immediately) with sweat in the face. Drowsiness every three days, returning four times ; the child sleeps almost the whole day ; whenever he sits down he goes to sleep, and complains of pain in the forehead.—\**Remains wide awake late in the evening.* Does not go to sleep on account of uneasiness. Restless in the evening when in bed, and waking early in the morning. \**Wide awake at night, on account of ideas crowding upon him.* She wakes at one o'clock at night, and is unable to fall asleep again. Sleeplessness before midnight, lying still in her bed. Sleepless night, without pain, but being unable to lie still.—Wide awake and excited the whole night ; nevertheless he feels bright and strong on the day following.—*Restless sleep* for several weeks, mingled with dreams, and tossing from side to side ; afterwards quiet sleep. Great uneasiness in the limbs, at night. \**Frequent waking at night,* many nights in succession. Sound sleep, but mingled with a number of vivid dreams. Sleep disturbed by many disagreeable dreams. *Loud talking during sleep.* Moaning and groaning at night while asleep. Restless sleep with vexatious dreams ; he exclaimed, stamped with his feet, and raised his arm, which he then laid slowly down again.—Raises himself about midnight, as if delirious, begins to laugh ; when interrogated he closes his eyes tightly, sits quite immovable, with stretched arms and hands and the teeth clenched ; after drinking a little water, he asks what he is to do with that quantity of water in the stomach, nevertheless he drank more, held up his hand curved as if he were yet holding the tumbler, smiled withal, and said, "This is very fine, the water has triumphed ;" he then talked about three couriers who had arrived, and pointed to people whom he said were standing here and there. Attacks of anxiety at night ; he has to get up and walk about. A sort of fainting fit about midnight, lasting a quarter of an hour, with consciousness, but with inability to talk or to stir a finger ; he had a sort of dream during his fainting paroxysm, as if he were fighting with a ghost ; shortly after, having recovered from the first fainting fit, he fell into a second, dreaming that he had lost himself in a forest. While falling asleep she was attacked with inward trembling, and with itching on the thigh, going off after scratching. Oppressive orgasm of the blood when going to sleep. She was not able to lie still for five minutes, owing to heat and anxious dreams. *Orgasm of the blood,* at night. Heat and consequent uneasiness at night. Very much heated in the morning on waking. Febrile heat at night, with anxious fancies and dreams, and sweat about the head. Nightly sleeplessness, and fanciful ravings while asleep. When closing his eyes, at night, his imagination is filled with all sorts of visions, passing off again as soon as he opens his eyes. At midnight he wakes with chilliness, great anxiety, jerking and spasmodic drawing in the thighs, chest and jaws, for half an hour. He wakes at night with violent anxiety and spasms in the abdomen, afterwards in the mouth, chest and hip-joint, with palpitation of the heart. Little sleep at night, owing to pain in the hip-joint when moving it. Violent tearing from the hip-joint to the foot, at night, hindering sleep. \**Jerking of the limbs,* at night. Starting during the siesta. Frequent startings and jerkings when falling asleep. Great uneasiness in the body, at night, which prevented her from lying still ; she had to turn constantly from side to side, and dared not close her eyes lest she should feel worse. Great uneasiness of the body after a short sleep.—Drawing and pressure in the pit of the stomach, at night. Painful pressure in the abdomen, and pain as if bruised, at night, waking her. Burning pricking in the heels, for several nights, waking her. Violent throbbing headache, at night. Pressure in the

eyes, at night. Violent itching in the right ear, at night, with dampness of the ear. Pressing in the left ear, for a quarter of an hour, on waking, in the morning. Drawing pain in the molar teeth, extending into the forehead, and waking her frequently at night. Beating in the molar teeth, extending from above the cheeks towards the occiput. A sort of grumbling sensation in the molar teeth, at night. Drawing in the corns the whole night. Stitches in the tip of the elbow, at night, when waking, which takes place frequently. Vertigo at night, when raising himself in bed. Waking at night with violent colic, sometimes aching above and around the umbilicus, with a trembling motion of the heart which can be felt on the outside of the chest, (no palpitation) but full pulse; accompanied with nausea and sense of great weakness; three nights in succession, the mouth being very dry.—Violent palpitation of the heart, in the evening when in bed, and beating of all the arteries. Violent beating in the head, in the evening when in bed, and sensation as if the head were moving.—Disturbed night's rest, with pain in the small of the back. The arms go to sleep at night, as far as the hands, which is especially painful when they are under the cover; in this case a tearing stiffness is experienced in the parts.—Dry titillating cough, with a sort of spasm in the chest, at night, passing off in the morning. *Sleep is disturbed by frequent coughing, and aching in the feet.* Unceasing cough the whole night.—Frequent micturition at night.—The hands go to sleep frequently at night. He wakes at night with inclination to vomit. Great pain as if bruised, at night, while asleep, and sense of exhaustion in the thighs and upper arms; the pain disappeared immediately on waking. Inexhaustible dreams, the whole night. Vexatious, horrid dreams. *Anxious dream*, as if he were chased and had to run backward; on waking he imagined that something was approaching him from above, which oppressed the chest; after which he felt a creeping and stitches in the chest. *Anxious dream*; he dreams that his body has become disfigured. *Frightful dream*; she dreams that she is falling from a high mountain. *Frightful dream*; she exclaims in her sleep. Dreams full of dispute. *Anxious dreams*, driving him out of his bed. *He wakes with a shriek and start.* Exclaims during his nightly sleep. Sleep is disturbed by lascivious dreams and erections. Dreams that she is threatened with rape.—Want of strength in the upper and lower limbs, in the morning when waking. Feeling of weakness in the morning when waking, as if nauseated.—*\*Long, unrefreshing sleep.* Fatiguing sleep. Wakes up late, with weariness of the limbs. No desire to get up in the morning. Anxiety in the morning on waking, going off after rising.

**Fever.**—In the morning, after waking, he feels faint and weak, and is sometimes attacked with feverish shivering and short breath, and a sensation of internal heat, although there was not any. Great thirst, in the morning after waking. Waking in the morning with much chilliness and internal uneasiness. *Complete want of thirst, for eleven days.*—Feverish, faint; hot urine.—Shivering, several times a day, without chilliness. Constant febrile shuddering, during the siesta. Constant chilliness, day and night, with pinching in the abdomen. Internal chilliness, the whole day, in a warm room. Chilliness in the evening, with thirst, sweat at night. Chilliness in the evening, afterwards thirst. Feverish shuddering, even about the head, with icy-cold hands, yawning and great faintness. Shuddering when going to bed; afterwards heat in the face, when in bed.—*Fever* in the afternoon, at five o'clock; thirst, and, after drinking cold water, chilliness and desire to lie down; slight perspiration at night. In the forenoon the feet, and, after these, the rest of the body became cold, with chills; he had to lie down, got warm; in the morning, at four o'clock, he felt hot, after having been in slight perspiration over the whole body. Chilliness in the afternoon, and heat in the forehead, for half an hour. Feverish shiverings, with

alternation of heat, until night. Alternation of heat in the head, and chilliness in the lower limbs. Febrile heat mingled with feverish shuddering, accompanied with dulness and heaviness in the forehead, preceded by luminous vibrations before the eyes as of a thousand suns, with heat and pressure in the eyes, accompanied with much nausea, great oppression of the chest, as if constricted all over, but without shortness of breathing; from morning till evening.—Almost uninterrupted *heat* of the whole body, with redness of the face and sweat about the head and body, and violent headache, being a sort of heaviness; also accompanied with palpitation of the heart and trembling over the whole body; after the heat he feels a chilliness and coldness with deadness of the hands; for four days. °Intermittent fever, with thirst during the chilliness. Fever and ague, at frequent but indefinite periods of the day; first, general heat with sweat in the face, violent thirst and bitterness of mouth; then again chilliness with general coldness, also in the face, and with inclination to vomit, and pressure in the forehead extending into the temples; during the heat she felt a vertigo as if she would fall. Violent chills for one hour, followed by violent heat and inability to collect one's senses; after which, violent sweat in the evening; the urine being brown and having an acrid smell. Some chilliness in the morning, followed by heat in the face and hands, lasting the whole day; although the face looks pale, no thirst or sweat; in the forenoon aching pain in the stomach and headache when stooping. Fever, with pressing in the temples, at intervals of some minutes, and with shortness of breath during the night, as if occasioned by an internal heat; next morning weakness in the lower limbs, thirst, want of appetite, drowsiness; during the day febrile shiverings, sore throat and swelling of the sub-maxillary glands. Continual dry febrile heat, with redness of the face, great thirst, painful deglutition, stitches in the left scapula, arresting the breathing, and tearing in the upper and lower limbs. \**Flushes of heat* as if hot water were being poured over one, with redness of the face, sweat over the whole body and anxiety, without thirst, but with dryness in the throat. Heat for two hours, in the afternoon, and drawing in the thighs, as in fever. Anxious heat, morning and evening. \**Attack of heat, every afternoon* from one till six o'clock, for several days. Flush of heat in the evening, afterwards itching. Great heat until midnight, (during the first eight nights).—Continual exhalation day and night. Slight sweat in the evening before going to sleep. *Profuse general night-sweat*, from evening till morning. Night-sweat, from above downwards, to the middle of the calves. *Cold night-sweat on the chest, back and thighs*. Sweat every other night. Sweat every morning on waking, mostly on the lower limbs. *Morning-sweat over the whole body*. Sweat after waking, continuing the whole day in excess, and exhausting him so much that he was scarcely able to stand on his legs in the evening. Sour-smelling sweat. *Sourish night-sweat*, for five mornings. \**Sweat when walking*, -particularly in the open air, also with exhaustion. \**Sweat from the least motion*. °Sweat when sitting. The sweat smells almost like juniper-blossoms.

**Skin.**—Swelling of the whole body, face, abdomen, legs and arms, extending down to the wrist-joint, without thirst, but with great shortness of breathing, for three weeks, with fever every two or three days, being an alternation of chilliness and heat at irregular hours, even at night; during the heat he is covered all over with sweat. In the evening swelling in the wrist-joint, in the bend of the elbow, and around the tarsal joints; there was tension in the joints during motion; in the morning the swelling had disappeared, but the parts felt sore when touched.—°Glandular and lymphatic swellings. °Scirrhus indurations. *The skin of the whole body is painful as if sore*. Intense pain in the skin of the body when knocking any part of the body against anything.—Prickings in

the skin, in the evening when getting warm in bed.—*Itching of the face, arms, hands, back, hips, feet, abdomen and genital organs.* The itching becomes a sort of burning. Itching, and itching *pimples in the joints*, especially in the bends of the elbows and knees, and in the region of the tarsal joint, more in the evening and morning than in the day-time, (in a few hours). Itching *resicles and blotches* in the face, on the hands and feet. °Dry itch and itch-like eruptions. °Pemphigus. Red, insensible little blotches of the size of lentils, on the hands, emitting some humour when pricked. The sting of a bee causes redness and an itching red rash over the whole body, inflamed eyes and drops of sweat in the face; all this in a few minutes. Itching in the ulcer. Burning and stitching in the ulcer, in the night. The sore spot swells, becomes hot, and a burning pain is experienced in it. Peeling off of the cuticle, in more or less large, generally roundish spots, especially on the hands and fingers, without pain, (in a few days). Claret-coloured spots on the neck and under the chin, without sensation. °Brown, red, herpetic spots on the skin.—°Scurfy, humid herpes, with itching and burning. \**Ringworm.*—Soreness of the skin, in the joints °also in children.

**General Symptoms.**—*Affections of the female sex*, particularly of feeble, delicate individuals, with fine, sensitive, delicate skin. °Affections of the capillary system. °Nervous affections. °Bad consequences of chagrin. °Bad effects from onanism. °Scrofulous (and rickety) affections. °*Rheumatic affections*, particularly of slender persons, or with great disposition to sweat, and alternation of chilliness and heat.—°Pains as if sprained, particularly when exerting the affected parts, likewise at night in the warmth of the bed. *Drawing in all the limbs*, (almost immediately). Arthritic drawing in the knees and finger-joints. Drawing all over, even in the bones of the arms. Drawing tearing from below upward, in the upper and lower limbs, the whole day, only when at rest, with great weakness. Tearing in the knees and elbow-joints.—Jerking and stitching in various parts of the body.—Paralytic stitches here and there; every stitch was followed by immobility of the part lasting a few minutes. Jerking sensations in various parts of the body, also in the head, right and left side. When moving a limb, it jerks. The right leg sometimes jerks in the day-time, followed by trembling of the right hand, making it impossible for him to write. °Jaecitation of the muscles. All the parts of the body on which she is lying or sitting, ache. Pain in all her limbs, especially the hips.—Sense as of *purring* in the lower limbs, arms and hands.—\**The limbs go to sleep easily*, even when stooping, laying the limbs across one another, reaching high up with the arms, etc. She feels as if she might easily injure herself, sprain a joint, etc., °or particularly after performing manual labour.—\**She easily strains herself* when working, which occasions stiffness and tightness in the nape of the neck. °Stiffness and immobility of the joints.—*Impatience* when sitting, a sort of uneasiness in the bones. Uneasiness in the whole body. Fearfulness when riding in a carriage. Anxiety in the limbs; he has rest nowhere. Frequent trembling in the whole body. Tremulous motion in the whole body.—\**Orgasm of the blood* in the body, three days in succession. Orgasm of the blood, with congestion of blood to the head and chest. She feels pulsations in the whole body, especially in the whole left side of the chest. *She feels pulsations* in the head and all the limbs, day and night, but more at night. She becomes very much heated from a short walk. Violent heat in the head and face after a walk. Headache and faintness become much worse when walking in the open air. Flushes of heat after slight motion. Hot, oppressed and anxious from smoking, (to which he was accustomed). Warm and oppressed in the evening. Heat in the tip of the left toes, darting like an electric spark through the left side into

the head and leaving a troublesome weakness in that organ; lasting only half a minute. *Profuse sweat when walking.* Profuse sweat during motion, smelling almost like juniper-blossoms. The slightest exercise excites sweat. She feels either too cold, or else she is attacked with heat, resulting in sweat. Warm feet and icy-cold hands, or vice versa; frequently, however, both extremities are icy-cold.—*Sensitiveness to cold air.* \*Tendency to take cold particularly in the wind.—Unusual catarrhal symptoms after becoming wet; violent feverish chilliness, in a few hours fainting fits, next day coryza. A cold occasions spasm of the stomach, a sort of burning contraction. Liability to cold; after drinking a glass of water, excessive chilliness and diarrhoea of a watery mucus, until he goes to bed. Tearing in the left scapula after being slightly exposed to a cause of cold.—Slight attacks of vertigo and palpitation of the heart when walking in the open air. Pressure in the region of the heart when walking, generally. Distention of the abdomen with emission of flatulence, during a walk. All sorts of pain in the long bones, during a walk in the cold air, especially in the extremities of those bones. During every movement of the body he feels nauseated as if he would vomit, and so faint that he had to lie down on the ground as soon as he got into the open air; all his limbs felt relaxed and weak. Flatulent distention of the abdomen as soon as he got into the open air.—Paroxysms: 1. *Fit of nausea* in the morning during a walk, his eyes saw black, he felt hot from noon till evening, with tearing in all the limbs and constant nausea; in the evening he felt a weakness even unto fainting, with melancholy; everything affected his nerves, he inclined to start; at night he emitted a quantity of foetid flatulence. 2. *Fit of drawing-aching pain* in the umbilical region, followed by discharge of mucus from the anus, with violent pressing on the rectum and stitching; shortly after, congestion of blood to the chest, with anxiety and uneasiness increasing to a sort of fever after a meal, alternation of internal heat and chilliness, sweat about the head from one to four o'clock; after this a headache which left a pain in the nape of the neck; the same symptoms recurring on the day following. 3. Sensation as of an icy-cold hand between the scapulae, afterwards coldness over the whole body, followed by a suffocative spasm in the chest, lasting several minutes; after this he was seized with clonic convulsions of the right lower limb, and jerking in some of its parts, also jerking of the right arm, while the lower limb was held fast; lastly trembling in the lower limbs lasting the whole day.—*Fainting fit*, while slowly riding in a carriage.—He suffers for a whole week with *spasms* as if originating in nervous weakness, lasting sometimes a whole day, the pulse being at times feeble, at others spasmodic.—Numb feeling in all the nerves, also those of the tongue, with dulness of the head and absence of thought, in the evening.—He feels oppressed in sultry weather, but cheerful and light during a thunder-storm.—A walk of half an hour exhausted him so much that he felt nauseated and was unable to breathe; the trachea appeared to be closed, down to the pit of the stomach.—He felt so weak that he imagined he would faint. Very weak in the morning, with uneasiness in the body.—*Fit of vertigo with fainting*, for two hours, with very short breath.—The lower limbs felt bruised and weak; every nerve felt painful, and they felt likewise painful when touched; the pain disappeared after dancing. Great weakness of the lower limbs. Indolence of both body and mind, with difficult breathing. Heaviness in all the limbs. *Heaviness in the feet*, when walking. Weakness of the knees. One of the lower limbs feels paralyzed suddenly, for a couple of hours. She becomes paralyzed when vexed. Weakness of all the limbs, with chilliness.—She became tired and had to lie down, in the forenoon. Great weariness in the morning when rising. Although he felt strong and cheerful when rising, yet, a few hours after, he felt weak and indis-

posed, to such an extent that he had rather go to bed than attend to his business.—When rising from bed he felt fainting, even unto falling, with absence of thought; afterwards chilliness with goose-skin and yawning for one hour; pale tongue, pulse weak and slow. °Paroxysms of hysteric weakness. Obscuration of sight during the menses, with weakness obliging her to lie down; this gives her relief.

**Characteristic Peculiarities.**—The pains are not felt during violent exercise, as walking in the open air, fencing, etc., (riding on horseback excepted,) but are most frequent and violent when sitting quietly, forenoon and evening. The symptoms are much worse in the evening and night, than in the day-time. Shuddering attends the pains. The pains are relieved by the application of warmth.

## 221. SILICEA.

SIL.—Silica.—See HAHNEMANN's Chronic Diseases, V.

COMPARE WITH—Alum., Ambr., Am, Bell., Bov., Calc., Carb. a., Caust., Cyel., Cie., Cin., Dros., *Graph.*, Ign, Hep., Kali, Lach., Lyc., Magn., Merc., Natr., Petr., *Phosph.*, Puls, Rhod., *Rhus tox.*, Ranun. secl., Sab., Sass, Sep., Spig, *Sulph.*, Verat.—Sil. is sometimes particularly suitable after Calc., Hep., Lye., Sulph.—After Sil. are frequently suitable: Hep., Lach., Lye., Sep.

ANTIDOTES.—Camph., Hep.—Sil. antidotes Mere., Sulph.

### CLINICAL OBSERVATIONS.

According to Noack and Trinks, Sil. has proved curative in diseases which exacerbate at the period when the moon changes.—Polypi.—Scrofulous and rachitic affections with caries and herpetic eruptions.—Hysteria bordering on mental derangement, a sort of monomania, with aggravation when the moon is on the increase.—Epilepsy, (one of the most important remedies; *Bæmninghausen*, New Archiv. II., No. 1, p. 89, relates a case of epilepsy by the high potencies.—Decrease of the epileptic attacks.—Chronic weakness of the more important parts of the nervous system, with suppressed sensibility and mobility, suppression of the secretions, particularly on the periphery.—Paralysis.—Erysipelatous inflammation.—Erysipelatous inflammation on the neck, as far as the middle of the chest; the thyroid body was swollen, hard, very painful; the cellular tissue under the inflamed portions of the skin, was so likewise; in this case the silex was particularly suitable to the inflammation of the thyroid body.—Pseudoerysipelas.—(Zoster, three cases of which were cured by one pellet of the 30th attenuation of Sil.)—Tinea capitis—Lepra Americana with paralysis of the hands.—Furuncles, after the itch had been cured.—Carbuncle on the nape of the neck. Anthrax.—Tumours on different parts of the skin, particularly on the back and in the hip, of the size of a pigeon's egg.—*Lymphatic tumours.*—Exostoses.—Ganglion on the tendon of the extensor digitorum communis, on a middle-finger. Hygroma cysticum patellæ, particularly in individuals who have to kneel a good deal on the floor (cured in three cases)—Induration of the cellular tissue of infants. Glandular indurations, not occasioning any pain, but a violent itching.—Hard tumours.—Suppurations of every sort, with good or bad pus, particularly in membranous tissues.—Suppuration of internal organs.—Sil. promotes suppuration.—Sil. restores the suppurative process when it had become arrested in consequence of the suppression of the

nervous influence.—Suppuration of the glands in any part of the body, also of the mammae after mastitis.—Suppuration of lymphatic swellings.—Steatomata suppurate after the exhibition of Sil.—Suppurating, serofulous ulcers.—Ichorous suppuration of the cellular tissue after induration (in full-grown persons).—Abscesses at various parts of the skull.—Swelling and suppuration of the parotid gland.—Suppuration of the cervical glands. Abscess on the tongue. Abscess of the mamma.—Suppuration of the right mamma after previous phlegmonous inflammation.—Panaritium.—Suppurating ulcer at the root of the right middle finger after erysipelatous inflammation.—Panaritium with throbbing pain, and incipient suppuration.—Ulcers from abuse of Merc.—Serofulous ulcers and fistulae on the neck, with caries of the subjacent bone, particularly of the clavicle.—Sil. renders inalignant ulcers benign.—Ulcers on the feet.—Malignant ulcers in the legs. Spongy, readily-bleeding ulcers on the dorsum of the foot, occasioned by a chilblain.—Putrid ulcer; in old psoric, cachectic persons living in poverty and filth; wide-spread, erysipelatous or deeply-penetrating asthenic inflammations with considerable swelling of the soft parts, as frequently occur in drunkards from slight injuries, contusions, or even without those causes; such inflammations soon pass into bad suppuration; from fistulous canals of various sizes a fetid, bloody, white-coloured, yellowish ichor is discharged; portions of dead cellular tissue, of a fetid odour, dingy appearance, and partially penetrated by a tenacious, yellow pus, are slowly detached; open ulcers with shaggy callous edges, penetrating through to the bone, remained behind, not disposed to heal, and inducing a state of debility with loss of appetite and strength; and suppurations are most frequent on the hands; the soft parts round the ulcers are swollen, hard and blue-red; the small orifices of the fistulous canals are surrounded with callous edges.—Interstitial distention of bone.—Caries. Caries of the bones with hectic fever.—Caries with exfoliation of the bony substance which had been destroyed by suppuration, with profuse secretion of partly malignant, partly laudable pus, with or without hectic fever, impoverished reproduction, night-sweat (Trinks has cured a number of such cases by giving the second or third trituration of Sil. for several months in succession).—Caries of the mastoid process.—Caries of the faeial bones.—Caries of the zygomatic process.—Caries of the inferior maxilla.—Caries of the lumbar vertebræ and the trochanter major, with cough and purulent expectoration.—Caries of the radius, ulna and tibia (in conjunction with other remedies).—Caries of the left radius. Caries of the last joint of the middle finger.—Suppuration of and in the hip-joint.—Suppuration of the knee.—Caries of the tibia and metatarsal bones.—Caries of the tibia and femur. Caries of the tibia with herpes.—*Worm fever* in serofulous individuals.—Attacks of vertigo, every day, as if he would fall without consciousness, headache every day from morning till evening, most violent in the forenoon, with weariness early in the morning; the vertigo was particularly excited by some great emotion and increased by stooping; the vertigo is preceded by rush of blood, oppression of the chest and pit of the stomach.—Trichiasis with ectropium.—Ulcers on the cornea.—Remnant of a fungus hæmatodes? oculi, with specks on the cornea and swelling of the submaxillary glands.—Titillation in the ears.—Frequent buzzing in the ear.—Report in the ear, after which the hearing improves.—Report on yawning, with improvement of the hearing.—Sensation as if the ear were stopped with cotton.—The hardness of hearing increases at full moon.—Hardness of hearing, sometimes relieved or momentarily arrested by blowing the nose. Hardness of hearing with otorrhœa. Rheumatic-hæmorrhoidal? deafness.—Cartilaginous induration of the upper lip.—Toothache with swelling of the bone or periosteum.—Ulcer which had perforated the right side of the tongue. Stomacace gangrenosa with perforating ulcer of the palate.—

Scrofulous swelling and induration of the cervical glands, parotis, coming on slowly, increasing gradually, lasting a long while, sometimes attaining an enormous size, almost without pain, redness or heat of the skin.—A glandular swelling of the size of a fist on the right side of the neck was considerably diminished.—Abscess of the liver.—Ischuria.—Chronic gonorrhœa.—Stricture of the urethra.—Hydrocele depending upon scrophulosis.—Mucous and purulent cough. Phthisis with expectoration of purulent mucus.—Phthisis of stone-cutters.—Ulceration of the lungs.—Aneurism.—Affections of the spinal marrow arising from spondylarthrocæ, (in conjunction with Calc., Rhus t., Sulph., Carb. veg., and Ars.).—Atrophy of the left hand, with debility and a feeling of numbness in the fingers.—Roughnesses on the tendinous sheaths in the wrist-joint, impeding motion.—Fungus articularis of the right patella.—Induration below the knee of the size of an egg.—Spavin of horses, when exudation and callous formation have already commenced.—Fœtid sweat of the feet.

#### SYMPTOMS.

**Mind and Disposition.**—*Desponding* and melancholy. °Discouragement. °Want of cheerfulness.—Longing for home.—*Weeping mood* for two hours. The least remark makes her weep.—He is frequently seized with anguish, making it impossible for him to sit still. °Anxiousness and ill-humour, from the slightest cause, also from great nervous weakness. He is frequently attacked with impatience and restlessness, so that he knows not what to do with himself. He feels a most *violent compunction of conscience* about trifles, as if he had committed the greatest wrong.—\**Great tendency to start.* Starting followed by great anxiety. Sensitive to noise, it makes him anxious. He is inconvenienced by loud conversation.—*Unsteady* and confused in his actions. She was unwilling and unable to do anything, from bad humour. Internal loathing of life.—*Obstinate.* Whimsical and fault-finding.—Dissatisfied.—*Vexed* at everything. Quarrelsome, in the evening. The child becomes headstrong, resisting. *He is easily put out of humour*, even when trying to keep cool. Irritable, although cheerful. °Yielding.—°Not disposed to work. °Indifferent and apathetic.

**Sensorium.**—Forgetfulness, *want of memory.* Liable to use wrong expressions while talking. Great *absence of mind* in the forenoon, with uneasiness in the head and pit of the stomach. He is almost always at two different places at the same time, in his mind.—\**Difficulty of thinking.* °*Fixed ideas*, thinks of needles all the time, dreads them in looking for them, and counts them all over. His head feels obtuse and the body relaxed, even after a short conversation, he has to break it off. Intellectual labour is difficult for him. Inability to read or write, from noon till evening, going off after supper.—Dulness of the head, and bruised feeling of the body. \**She feels as if intoxicated.* Strange feeling in the head, as if she would fall from side to side, with tingling in the ears. Painless dulness of the head, as if it contained too much blood. Dizzy, as if stupid, he was at a loss to find the proper words, and used wrong expressions almost constantly (immediately). °Great facility to think and to express one's-self in fluent style.—*Vertigo* when going forward (he imagined he was going backward). Slight vertigo, the whole day, with some nausea. Constant vertigo, as if moving to and fro, even when sitting, less when lying. Excessive vertigo; sometimes, when walking, she knows not where she is, and she inclines to fall from side to side. Vertigo with retching; water comes out of her mouth. Vertigo, as if he were being raised. Vertigo when looking upward. Vertigo after the usual smoking; when closing his eyes, all things turn with him, this passes off when opening them again. Vertigo in the evening and morning, when rising. Constant violent vertigo. Stupifying vertigo in the morning, or vertigo

with inclination to vomit. *The vertigo seems to proceed from the back through the nape of the neck into the head; it is painful, she knows not where she is, and inclines to fall forward all the time.* Frequent vertigo, only when sitting, not when walking, especially when riding in a carriage; he suddenly loses his senses for one minute, but without obscuration of sight. Vertigo every morning, half an hour after rising. Violent vertigo in the morning with nausea; she inclined to the right side, several days in succession, and so violently in the evening that she had to lie down. Vertigo at breakfast, as if the head would fall to the left side, with heat in the face and sweat on the forehead. Vertiginous stupefaction of the head, in the morning when rising, with nausea unto vomiting; relieved by riding in a carriage in the open air, but returning after re-entering the room; the room seemed to turn with her, *and she staggered to and fro.* Gloominess and vertigo in the head, for several weeks.

**Head.**—Headache at night. Headache from hunger. °Headache every morning. °Headache from being heated. \*Headache from the nape of the neck to the vertex, also as if proceeding from the back. Violent headache, with loss of sense, she moaned and cried for help. Weariness of the head. °Heaviness of the head, from noon till evening. Painful heaviness in the head, as if the head were full of lead, increasing from morning till night. Heaviness, tearing and stitches in the head, especially in the forehead, the head feels drawn sideways. *She feels as if she could not hold her head.*—Heat in the head with anxiety.—*Groaning shaking of the brain, when stepping firmly or when knocking the foot against something.*—Pinching in the head when walking.—Painless jerks in the head.—*Oppressive jerk in the middle of the forehead, recurring by turning rapidly, stooping or talking.*—Oppressive pain in the forehead, from a little mental exertion.—Headache, with heaviness and uncomfortable-ness in all the limbs.—Pressure in both sides of the occiput. Pressure in the occiput, soon after sticking in the forehead, with chilliness of the nape of the neck and back. Pressure in the temple, and over the right eye after a slight cold. Pressure in the occiput and nape of the neck, early in the morning. Pressure in the head, with weakness of the body. Pressure over the nose, in the morning. Aching pain in the occiput, diminished by wrapping up the head in a warm handkerchief. Pressure on the top of the head, in the evening, extending into the eyes. Pressure in the forehead, from morning till evening. Sensation as of a heavy load pressing in the forehead, above the eyes. Pressure in the right temple, from noon till evening. Aching pain in the forehead and eyes, as if a catarrh were approaching. Aching pain in the forehead, in the morning, a little while after rising, not increased by motion. In the morning violent aching pain extending down to the eyes; accompanied with violent chilliness, and nausea and faintness in the afternoon; the eyes felt painful when turning them to one side and closing them, and the closed eyes were still more painful when touching them. Hard pressure, with a jerk, deep in the brain, in paroxysms of one or two minutes.—Pressure, tension and pushing in the head, as if crowded together or pressed asunder.—Pain as if the anterior lobes of the brain were compressed, from twelve till two o'clock. Compressive sensation in the brain.—Tension in the eyes and forehead, with faintness of the body.—Headache, as if the brain and eyes would be pushed forward.—Headache, as if the contents of the head would issue through the open skull.—Violent headache, as if the skull were pierced by violent stitches.—*Disagreeable feeling, as if the head were teeming with living things, whirling around in it.*—Boring pain in the forehead, for many days in succession.—Tearing pain as if the head would burst, and beating in the head commencing in the top, as if simultaneously on the inner and outer side, with chilliness; he had to lie down and turned himself

to and fro in his bed, for four hours; the pain was relieved by trying something firmly around his head. Tearing in the fore part of the head, from four till seven o'clock every afternoon. Tearing pain in the forehead, towards the parietal bones, the whole day, increased towards evening, aggravated by motion. Tearing-beating headache, with eructations. Tearing and stitches in the head, in the afternoon.—*Stitches in the temples.* Stitches in the brain from below upward. Severe sticking pain in the forehead. Bewildering stitches in the head, with great disposition to be dissatisfied and ill-humoured. Stitching and beating in the forehead, in the morning. Stitching in the top of the head and over the eyebrow, with a sensation as of drawing pressure.—Beating pain, in the forehead, in the afternoon, for one hour. Congestion of blood to the head, with stitches in the occiput. Rush of blood to the head, when rising from a seat, with feeling of fulness in the brain. Rush of blood to the head, beating in the sinciput and forehead, with heaviness in the head. Rush of blood to the right temple. Obscuration of the sight after the headache.

**Scalp.**—Painful *sensitiveness* of the head, as after violent headache. Pain of the scalp when touching it. Bruised sort of a pain in the top of the head. The hat causes an intense pain in the occipital protuberances. Itching pain in the right side of the occiput. Thrill over the hairy scalp, as if the hair stood on end, but without chilliness. °Sweat in the hair in the evening. His forehead feels numb and dead. Itching of the occiput. Violent itching of the left side of the head. *A good deal of itching in the hairy scalp.* When scratching the itching places on the head, they feel sore. Itching pimples on the hairy scalp. °Itching, humid porrigo. °Tumour-like elevations. Itching blotches on the head and nape of the head. \**Great falling off of the hair* when combing the head.

**Eyes.**—Pain in the eyes, in the morning, as if too dry and full of sand.—Pressure and smarting in the orbits. Pressure in the eye-lids. Pressure in the eyes, every afternoon at four o'clock. Pressure and pushing in the left canthus. Pressure in the upper eyelid, with violent stitches in the lid as from a splinter, and vanishing of the visual power.—Tearing and burning in the eyes when closing them and pressing on the lids.—Burning smarting of the right lower lid, in the morning.—*Itching* of the upper lid. Itching of the right eye in the evening. Itching in the eyebrows. Itching of the sore eye, immediately. Burning itching of the eyelids.—Ssmarting in the canthi, in the morning. \*Ssmarting or heat in the eyes.—*Redness of the whites*, with aching pain. °Redness of the eyes with biting in the canthi. Redness, first around the eyes, afterwards of the white, °with inflammation of the eyes and lachrymation.—Sensation in the left eye as if full of water. Lachrymation of the outer canthi. Lachrymation and a sort of darkness of the eyes.—A good deal of gum in the inner canthi. Agglutination of the eyes in the morning. \**Agglutination at night*, with smarting of the lids.—Swelling in the region of the right lachrymal gland and lachrymal sac. °Fungus hæmatodes? °Ulcers on the cornea. °Spots and cicatrices.—*Twitching of the eyelids.* Painful cramp in both eyes, closing them so tightly, that they can only be opened with great trouble. She is unable to open her eyes in the morning, owing to a pain excited by the light of day.—Flying notes.—°Sparks or black spots before the eyes.—\**The eyes are dazzled by the light of day*; he is unable to see for moments, in paroxysms. Attacks of photophobia, alternating with inflammation of the whites and lachrymation. Gauze before the eyes.—\**Things look blurred, letters, etc.* Beating in the ear concusses the eyes, making things appear to go up and down. °Obscuration of sight, as if looking through a gray coat. °Paroxysms of sudden blindness. °Far-sightedness. °Paleness of sight in reading. °Cataraet and amaurosis.

**Ear.**—Drawing pain, a sort of otalgia, in the meatus auditorius. Drawing pain along the right ear and neck. Cramp-like *drawing in the right ear*. Jerking pain in the left ear. Jerking cutting in the bone behind the ear. \*Beating in the ear, -also with concussion of the eyes. °Boring in the ears. °Shooting through the ears.—*Tearing* in the inner and outer parts of the ear. Tearing behind the right ear.—Painful pressing in the meatus auditorius.—Aching pain in the left ear, when blowing the nose.—*Itching* in the ear, especially when swallowing.—Heat of the lobules and about the head. *Itching of the outer ears*.—*Scurf* behind the ears. Inflamed humid margins of the ears. Swelling of the outer ear, with humour coming out of the inner ear, accompanied with hissing, which suppresses the hearing. Discharge of humour from the left ear. Quantity of moist wax in the ear.—*Feeling as if the ear were obstructed*, °sometimes going off with a report. The hearing is very sensitive. Exceedingly sensitive to noise, even unto starting.—*Diminution of hearing*, from whizzing in the head. Difficulty of hearing the human voice, worse at full-moon.—*Gurgling* sensation in the right ear. Sensation in the right ear, as if something were beating on the tympanum, which causes a groaning sensation in the head, and makes him anxious. Cracking in the ear when swallowing. Noise in the ear as of the wind blowing into it, at short and regular intervals. Beating in the right ear. Beating in the ear on which he was resting at night. Dull grumbling in the ear, with hardness of hearing and sensation as if something were in the ear, especially in the morning when rising, for four days. Thundering roaring and grumbling in the ear. Sense as of ringing of bells in the ears, so loud that he has to get up at night for quarters of an hour and walk about. Whizzing in the ears. Roaring in the left ear, before and after a meal. Chirping in the ear as of crickets. Fluttering noise in the ears. \**Swelling of the parotid gland*, with stitching pain. Hard swelling of both parotid glands, with painful rigidity in the swelling when moving the head or when touching the swelling.

**Nose.**—Beating pain in the nasal fossæ as if ulcerated, striking to the brain like rays, with sensation of tightness and causing an aching pain in the forehead; when touching the tip of the nose, a pain as from sub-cutaneous ulceration was experienced in it for two days. Painfulness of the septum narium. Burning stitch on the side of the nose. Fine, drawing tearing in the nose. Tearing in the left nasal wing. Drawing in the root of the nose and the right malar bone. Creeping and digging-up in the tip of the nose. °Gnawing in the upper part of the nose, with heaviness on stooping and great sensitiveness to pressure. Painful soreness of the lower part of the septum narium, with stinging pain when touching it.—\**Itching of the nose with red tip*. *Itching in the nose*.—Rash-vesicles under the nostrils, with red areolæ and painless. Reddish vesicles on the nose, with scurf. \*Itching and small vesicles around the nasal wings. Sensation as if pieces of food had got into the posterior nares. When swallowing, the food gets into the posterior nares. Feeling of great dryness in the posterior nares. Itching and sore pain in the forehead behind the wing of the nose. Pimple on the nose. Itching pimples on the side of the nose. \*Smarting painful scurf deep in the right side of the nose. °Ulcers in the nose.—A quantity of acrid water runs out of the nose, making the inner nose and nostrils sore and bleeding; accompanied with a smell from the nose as of blood or a recently-slaughtered beast, for five days. Bleeding of the nose when inserting the finger, with dryness of the nose. Blood drops occasionally out of his nose, only when stooping. Discharge of sanguineous mucus from the nose when blowing it. Violent bleeding of the nose. Sensitive smell, (curative effect). °Loss of smell.—\**Frequent sneezing*. Desire to sneeze, but generally ineffectual. When sneezing the chest is painful as if it would burst. Complete obstruction of the

nose; she was scarcely able to talk, and had to open her mouth widely to breathe. °Chronic obstruction. °Plugs of mucus in the nose. °Troublesome dryness of the nose. A good deal of mucous discharge from the nose, without coryza. Fluent coryza. Violent catarrh. Dry coryza, in the morning, on waking. Continual coryza, now dry, now fluent. Coryza for weeks. Coryza and cough with swelling of the sub-maxillary glands, pain in the throat during deglutition, great chilliness; she had to lie down; after having been in bed for an hour, she felt a burning heat over the whole body. °Fluent coryza after chronic stoppage of the nose.

**Face.**—*Pale face.* White spots on the cheeks from time to time. Red spots on the cheeks, and red nose, burning and painful, when making a slight exertion, especially after a meal. Heat and burning of the face, after washing it with cool water, for two hours. Swelling of the face, and the glands of the lips and glands of the neck, with chilliness and icy-cold feet.—Drawing pain in the malar bone and behind the ear, worse when touching the parts. Tearing in either cheek, for four hours, afterwards dulness of the left molar teeth. Bruised pain in front of the left ear, in the articulation of the jaw, when touching it or when chewing.—Itching in the region of the whiskers. Violent itching of the forehead down the nose. *Eruption* in the face. Pimples on the forehead and above the nose. Pimple near the eyebrow. Large boil on the cheek, not very painful, near the nose. °Chapped skin. °Scirrhus induration in the face and on the upper lip. *Eruption on the lips, vesicles on the margin of the upper lip*, stinging when touched, causing a smarting pain. *Pimple on the margin of the vermilion border of the upper lip*, first itching, afterwards, when converted into a scab, merely smarting. Two large pimples on the upper lip. Painful ulcer in the corner of the mouth. *Ulcerated corner of the mouth*, itching, the scurf lasting for many days. *Painful pimple on the margin of the vermilion border of the lower lip.* °Ulcer on the vermilion-border of the lower lip. °Cancer of the lip. Sponge-like ulcer on the inner side of the lower lip. Smarting vesicles on the vermilion border of the upper lip. Burning itching around the mouth, without eruption. *Swelling* of the lower lip, for two days. Swelling of the upper lip and the gums, very painful to the touch.—Pimple on the chin. Red, itching, elevated herpetic spots on the chin. *Boil* on the chin with stinging pain when touched.

**Jaws and Teeth.**—*Pain of the sub-maxillary glands when touched*, without swelling. Stitches in the sub-maxillary glands, which are swollen. *Swelling of the submaxillary glands*, painful when touched, with drawing pain in the glands and sore throat when swallowing, as if swollen internally. °*Hard swelling of the sub-maxillary glands.*—*Painful contractive cramp in the left articulation of the jaw*, and afterwards in the temple. °Nightly drawing and sticking in the lower jaw. °Caries and swelling of the lower jaw.—\**Toothache, especially when eating warm food; and when cold air gets into the mouth.* Toothache after a meal. The boy has a kind of teething-fever, although he has all his teeth; the saliva runs out of his mouth, he grasps at his gums, and has heat in his head, in the evening. Sudden sharp pain in a cuspidatus while eating. Toothache in the morning, until after rising. Simple toothache all the time, except during a meal, most violent at night. Toothache with swelling of the bone and periosteum of the lower jaw, with heat all over, at night, preventing sleep. Violent toothache, the whole jaw aches, with pressure and jerks, hindering sleep the whole night.—Tensive toothache. Violent pressure in a hollow tooth.—*Drawing* in a hollow tooth, in paroxysms. Drawing in the lower cuspidati.—*Tearing* toothache when eating, and a quarter of an hour after. °Tearing pain, also with drawing and jerking, *most violent at night*, or only during and after

a meal. Lancinating pain in a hollow tooth, only during a meal.—*Stitching* toothache, making both warm and cold things intolerable. Stitches in a sound tooth, from violent wind, the tooth being painful when touched, as if from sub-cutaneous ulceration, followed by swelling of the lower jaw. Burning stitching in several teeth, becoming painful after a meal: the pain is most violent at night, and is aggravated by cold air getting into the teeth; with heat in the head and burning in the chest. Pain of a molar tooth, when biting, as from sub-cutaneous ulceration. °Digging and boring in the teeth. The teeth are loose and sensitive to pain when chewing. A lower molar tooth is painful as if elongated. Dull teeth, for four weeks. Dulness of the upper teeth, as if set on edge by acids. Inflammation of one of the lower molares, with swelling and soreness of the gums.—Painful sensitiveness of the gums to cold water. Swelling of the gums; warm drink causes burning, and, when chewing, the gums feels sore. *Painful inflammatory swelling of the gums.* *Sore gums.* Sore vesicles on the gums and the inner side of the lips. Small ulcer on the swollen gums. °The gums bleed readily.

**Mouth.**—His mouth and lips are dry. Constant *dryness of the mouth.* Profuse saliva in the mouth. Accumulation of water in the mouth. °Constant mucus in the mouth.—Sensation on the fore part of the tongue as of a hair lying on it.—Sore tongue with painful spots at the tip. Coated tongue, °also with brown mucus. Numb tongue. *Swelling of the right half of the tongue,* painless. Heat comes out of his mouth.—Itching of the palate and velum pendulum palati. Single stitches in the velum palati. Ulcer on the palate extending as far as the gums.—Elongation of the *uvula*, with dryness of the throat. Swelling of the *uvula*.

**Pharynx and Œsophagus.**—The throat is very dry, with hoarseness and itching in the meatus auditorii. Frequent hawking up of a thickish mucus. Hawking up of salt mucus. Hawking up of yellow, fœtid lumps. Sore throat with much mucus in the throat. Pain in the region of the larynx, when lifting a heavy weight. Aching pain in the left side of the throat, during deglutition. Sore throat during deglutition, as from a lump in the left side of the throat. Seraping sore throat, in the morning; stinging in the throat in the evening. Sore throat, as if the food glided over sore places, with occasional stitches in those parts. Soreness of the throat, as if from singing. \**Stinging sore throat, only when swallowing,* the neck being painful when touched. Difficult deglutition; the food goes down slowly; there is a grumbling in the pharynx, then in the stomach; three seconds after this, the food is down. *Bad smell from the mouth, in the morning,* almost as in mercurial ptyalism.

**Taste and Appetite.**—Bitterness of the throat, as if proceeding from the stomach. \**Bitter taste in the morning.* Putrid taste in the morning. Oily taste in the mouth. Bloody taste in the morning. Sour taste, with some bitterness. °*Loss of taste.* Repulsive, slimy taste in the mouth.—Feeling of loathing in the throat, in the afternoon. Complete want of appetite. \**Aversion to meat-soup.* °Aversion to meat, he does not digest it. Desires only cold, raw things.—Appetite without knowing for what, with accumulation of water in the mouth. He is very hungry, eats a good deal, and nevertheless complains of the upper part of the throat being closed. Canine hunger, the water accumulating in her mouth. Canine hunger, appeased by lying down for a short while. She is hungry, but she cannot get down any food. Canine hunger before supper, with complete loss of appetite and trembling of all her limbs; afterwards chilliness and coldness over the whole body, with heat in the chest. Canine hunger towards evening, with feeling of nausea in the pit of the stomach after eating ever so little. Canine hunger in the morning. Gnawing hunger which can be

appeared for a short time by a piece of bread. Increased appetite for supper; he ate more than usual, and, nevertheless, could not satisfy his appetite; in a quarter of an hour his stomach felt full.—\*Great thirst with loss of appetite. Thirst with dryness of the throat. Thirst without desire to drink, also during the chilliness. Violent vertigo at dinner, without inclination to vomit, and good appetite.—*After a meal*: \**Acidity in the mouth*. Continual hunger, and repletion of the stomach. A weakness resembling canine hunger, passing off by eating again, although without an appetite. Weakness in the stomach. The stomach appears to be inactive, although the appetite is good. Colic, a sort of writhing in the intestines. Pressure at the stomach, also followed by water-brash and vomiting. Expectoration of mucus from the trachea. \**Eructations and acidity*, and an ugly taste from the stomach, which continues to the next meal. Load as of a stone in the stomach, with a feeling of repletion. Violent eructations after supper, *Pressure at the stomach*. Fits of cramp-pain in the stomach. Sensation as if the hair stood on end. Cutting in the epigastrium. \**Repletion* for a couple of hours, alleviated by eructations. Increased hard hearing. Sweat while eating and talking. Chilliness. Palpitation of the heart with anxiety, for half an hour. Profuse heat in the face. The eyes feel dazzled, and as if surrounded with mist. \**Drowsy* and faint, he is obliged to sleep. Nausea, going off after lying down. Colic, going off after eructations. \**He feels full*, and as if the clothes were pressing on the abdomen, the abdomen being drawn in. °Heartburn. Violent colic, even after taking some warm beer, going off after rumbling and eructations.

**Gastric Symptoms.**—The taste of the food remains in the mouth a long time after eating.—The stomach feels inactive although the appetite is good. Frequent, empty, loud, or \**sour eructations*, also with burning in the throat. Sour and bitter eructations in the morning, as if from a deranged stomach.—Warm rising from the stomach to the throat.—*Heartburn from the stomach*, after every meal.—Hiccough before and after a meal.—Nausea as after tasting an emetic. °Nausea after every heating exercise. °Constant nausea, also with vomiting, even at night. Nausea without vomiting, even before breakfast, as if in the pit of the stomach, with good appetite and relish. °Nausea every morning, also with headache and pain in the eyes on turning them. Short nausea in the morning, followed by sudden faintness and chilliness until noon. Nauseated, faint and trembling, when smoking. Nausea as if in the hypogastrium; now rising, now descending, for several days in succession. In the morning when getting up, writhing in the pit of the stomach, followed by nausea rising to the throat, accompanied with violent palpitation of the heart and violent pressure in the sternum; she has to force up bitter water from the stomach, relieved by eating; she does not vomit food. °Waterbrash, also with shuddering.—°Vomiting after every drink. °Vomiting of the ingesta at night.—Flatulent food presses in the stomach like a lump, she has to throw it up again.

**Stomach.**—Violent pain in the pit of the stomach going off by hard pressure on the part. °Painfulness of the pit to pressure.—*Load in the stomach, like lead*. Feeling of heaviness in the stomach, with want of appetite. Aching pain, followed by cramp-pain in the stomach, after one eructation. Pressure at the stomach and cutting in the intestines, every half hour. Pressure at the stomach, increased by walking in the open air, amid frequent empty eructations. °Pressure at the stomach from quick drinking.—*Screwing together* in the region of the stomach, followed by soft stool. Gripping, pinching and crampy sensation over the stomach and the hypochondria, in frequent paroxysms, for a week. Gripping and sudden grasping in the stomach. Colicky pain and gnawing in the stomach, with nausea and cold thrills over the nape of the neck and back, with

audible rumbling in the abdomen; going off when lying on the back with his limbs drawn up.—*\*Burning in the pit of the stomach.* Burning over the pit of the stomach, almost like heartburn.—Drawing, pinching and stitching in and around the pit of the stomach and in both hypochondria, down to the hip-joints.

**Hypochondria.**—Drawing, dull pain in both hypochondria, extending to the spinal column, less at night. Stitches in the hypochondria.—Continuous pressure in the right hypochondrium. °Hardness and distention of the region of the liver. °Throbbing ulcerative pain, increased by contact and walking.—Pain under the left ribs, as if something would tear. Pain under the right ribs, posteriorly, (in the region of the kidneys,) in the evening. Continuous stitching pain under the last ribs, worse when taking deep breath; the ribs themselves are painful when touched.

**Abdomen.**—Colic as if from incarcerated flatulence, with pressing toward the rectum as if flatulence would pass out. Violent colic; the child cries day and night about the pain in the abdomen. Violent colic, with sensation as if she became rigid; the hands became yellow and the nails blue, as if dead. Colic with much inclination to extend one's limbs. *\*Colic with constipation.* Tearing in the abdomen.—*Writhing pain* in the abdomen.—Pinching colic, two hours after a meal, recurring from time to time. °Pinching in the hypogastrium, without diarrhœa. Violent, but short pinching in the abdomen, almost every afternoon.—*Cutting* in the umbilical region from time to time. Cutting colic, in paroxysms, also at night. Violent cutting in the hypogastrium with incarceration of flatulence; every step causes her a pain in the abdomen, (after lifting a light load). *\*Cutting in the hypogastrium, without diarrhœa.*—Single stitches in the left side of the abdomen in the evening. Stitching pain in the left side of the abdomen, more externally, when walking. *\*Burning in the bowels.* Stinging burning in the epigastrium, in the morning after rising, for an hour, not entirely removed by stool, with pressure in the rectum.—*Aching pain* in the abdomen. Pressure in the abdomen, after dinner. Pressure in the whole abdomen in the morning, with rumbling and emission of flatulence, without relief. Pressure in the umbilical region, and below it, shortly before and after stool. Oppression in the abdomen, noon and evening, a sort of pressure partly towards the rectum, partly towards the genital organs.—*\*Distention of the abdomen, as far as the stomach.* The abdomen feels heavy and is distended. *The distention is generally worse after a meal.* Distention without emission of flatulence, but with eructation. *\*Hot, distended abdomen,* °also in children. °Pot-belliedness.—Violent rumbling in the abdomen. *Fœtid flatulence.* Frequent emission of flatulence. Colic previous to emission of flatulence. Pinching in the abdomen previous to emission of flatulence. *\*Violent rumbling* in the abdomen after the cessation of the colic. Pain in the right groin. Tearing in the groins, in the evening. Tearing and drawing through the right inguinal canal. °Pain of the inguinal hernia. Pain in the region of the hernia as if something would be torn out. Feeling of swelling in the left groin, or as if hernia would protrude. *\*Inflammation of the inguinal glands,* °of the size of peas, painful to the touch.

**Stool.**—Constipation the first days, afterwards very hard stool. *\*Costiveness.* Hard stool the first days. *\*Constipation for three days, afterwards stool composed of hard lumps.* The feces remain long in the rectum, as if it had no power to expel them. After long straining, making the abdominal muscles feel sore, the protruding feces suddenly recede into the rectum, constantly. Good stool, but with much straining.—The colour of the stool is lighter than usual.—Soft stool for two days without diarrhœa. °Several papescent stools a day.

Diarrhoea for several days, day and night, without colic. Frequent discharge of a little fluid having a cadaverous smell.—*Stool with mucus*, followed by itching of the anus. Papeseent stool with fragments of mucous membrane, followed by smarting burning at the anus. Liquid, slimy, frothy stool, followed by burning and smarting at the anus. Frequent desire for stool, passing only mucus, with chilliness of the body and qualmishness in the throat. Stool mixed with bloody mucus; afterwards smarting at the anus. Discharge of blood and mucus from the anus, with violent burning at the latter.—*Ascarides* with the stool.—Burning pain in the prepuce after stool. Pressure at the anus after soft stool. Pressure in the right temple, after a soft stool with straining; afterwards empty eructations. Painful stinging and itching of the rectum during stool. Increased oppression of the chest after stool. After stool the colic decreases some; he is exhausted, falls into a light slumber, from which he wakes again with violent colic.—Jerking, almost dull sticking pain in the rectum. Long stitch in the rectum. Violent stiches in the rectum, in the direction of the genital organs, when walking. Cutting in the rectum.—Tension in the anus. Contractive pain in the anus, from behind forward, (in the perinæum). Pain in the anus as if constricted during stool.—Itching of the rectum, in the evening. Itching of the anus and varices. Burning at the anus. Burning in the rectum during stool, for several days. Protrusion of the varices during stool, difficult retrocession of the same, and bloody mucus from the rectum. Dampness of the anus. The varices which had protruded during stool, become incarcerated in the anus. Distention of a vein in the rectum to the size of a goose-quill, with itching and pressing. Intense pain of the varices which had protruded but little. Stinging pain in the varices. Boring cramp-pain from the anus to the rectum and testicles. *Scurfy*, elevated spots above the fold near the os coccygis. Frequent burning pain in the perinæum, especially after an embrace.

**Urinary Organs.**—Frequent desire to urinate. *\*Desire to urinate with scanty emission*, -or also copious emission.—*\*Micturition almost every night*. In the morning, early, he is obliged to urinate every quarter of an hour, for several days. Involuntary discharge of urine, after micturition, while sitting. Frequent but unsuccessful desire to urinate. Copious stool and urine. Desire to urinate, with smarting in the urethra. Smarting in the urethra during micturition. Cutting of the urine.—The urine becomes speedily turbid. Yellow sediment in the urine, looking like gravel, (the first days). Reddish, sandy sediment in the urine. The urine deposits yellow sand. Hot, light-yellow, burning urine.—Pressure on the bladder when urinating, with subsequent burning. Continuous fine stiches in the fore part of the urethra. Burning in the urethra while urinating. Troublesome itching in the genital organs when urinating.

**Male Genital Organs.**—Painful pimples on the mons veneris. Itching and red spots on the glans.—Pressing from the prostatic gland forward.—Itching under the prepuce. *\*Redness of the prepuce near the corona, as if excoriated*, with frequent itching. Swelling of the prepuce, with itching, humid pimples on the outside.—Pain of the scrotum worse at night, but only when lying. Pain in the right testicle, as if indurated. Distensive or compressive violent pain in the left testicle, as if swollen.—Creeping in the scrotum. *\*Ichiug and humid spot on the scrotum*. Sweat of the scrotum; it itches all over. *\*Hydrocele*. Pressure in the spermatic cords, with relaxed scrotum, (the first days).—*\*The sexual desire is very much excited during the first eight days*; night and day he has erections for half an hour, with the testicles drawn up. Sexual fancies in the day-time. Violent erection, with relaxed scrotum. *Violent nightly erection* without sexual desire. Frequent erections in the day-time, without any apparent cause. Violent erections with drawing pain in the testicles.—Slow

erections. No trace of erections, (after several days). \**Weak and almost extinguished sexual desire*, (the first five weeks). Increasing sexual desire, (after twenty-one days.) with erections.—Frequent and copious emissions. Emission with heavy dreams, in a married man. *Discharge of prostatic juice* at every stool.—After an embrace, paralytic sensation in the right side of the head, After an embrace the whole body feels bruised.

**Female Sexual Organs.**—She feels nauseated during an embrace. Labour-like feeling in the vagina. Itching of the pudendum.—\**Menses too early.* °Menses too early and too feeble. °The menses, which had been suppressed for three months, re-appear. Some bloody discharge at new moon, eleven days before the regular period, which appears on the regular day. Retarded menses, When taken during the menses, the Sil. seemed to suppress it for four days, after which they flowed four or five days, and then discontinued for five or six weeks. Diminished menses. \**Increased menses.* Increased menses, with repeated paroxysms of icy coldness over the whole body at the time of their appearance. Strong smell of the menstrual blood.—The menses are preceded by violent pressure and oppressive sensation over the eyes, as if a load were pressing there. °Diarrhœa before the menses. Great costiveness immediately before and during the menses. During the menses: icy-cold feet. Pale colour of all things. Melancholy anguish in the pit of the stomach, wants to drown herself. Violent burning and soreness of the pudendum, also an eruption on the inner side of the thighs. Drawing between the scapulæ, only at night; she had to bend backward, to obtain relief. °Colic.—Immediately after the period, a bloody mucus flows from the nose.—*Painful smarting leucorrhœa*, especially after taking sour things. Discharge of a quantity of white water from the womb, with violent itching of the pudendum. °Leucorrhœa during micturition. °Milky leucorrhœa, in paroxysms, preceded by cutting around the umbilicus.—Violent motions of the fœtus in a pregnant female.—°Miscarriage.—°Inflammation and suppuration of the mammæ and nipples (see Clin. Obs.). °Induration of the mammæ. °Cancer of the mammæ. °The infant refuses the breast and vomits after nursing.

**Larynx and Trachea.**—Rough throat, sometimes with dry and hacking cough. Sore feeling in the larynx. Sensation as of a hair on the tongue, extending down to the trachea, with tingling obliging one to hack. Cough with hoarseness. Cough from titillation in the throat. Cough, especially after a meal, with expectoration of white mucus. Frequent dry and hacking cough. Titillating itching in the region of the pit of the throat, threatening suffocation, until a convulsive cough sets in, continuing for hours without interruption, and causing a pain in the abdomen and throat.—*Soreness of the chest from the dry and hacking cough.* Cough for five weeks. Great pressure on the chest, when attempting to cough deep; this is prevented by the pain. Dry cough from taking a cold drink. Cough is brought on by talking. *Cough only when lying*, night and morning. Short and hacking cough from nightly titillation in the throat. Fatiguing cough in the evening when lying in bed, with rattling. Cough for two nights, with fever; the cough goes off by warming the abdomen. °Suffocative night-cough.—Dry spasmodic cough, every quarter of an hour, with violent rawness of the chest and throat.—°Fatiguing cough, day and night, aggravated by motion, with scanty expectoration of mucus.—*Cough with vomiting when expectorating.* Cough inducing vomiting of mucus. \**Excessive continual cough with discharge of a quantity of translucent mucus.* Cough with expectoration, in the morning and day-time, sometimes salt, sometimes brownish and rather putrid. Cough with expectoration, making the water turbid; that which goes to the bottom has a fœtid smell. Hawking up of greenish-yellow, *fatid*

*globules. Thick, purulent mucous discharge* from the trachea. \**Vomiting of quantities of purulent matter*, when coughing. °*Ulceration of the lungs. Cough with bloody mucus*, also in the morning. Discharge of clear, *pure blood* towards noon, with deep, hollow cough; shortly after, fainting spell.—*Scraping sensation and pain in the chest*, when coughing and throwing up, for sixteen days, with indisposition to work, ill-humour and weariness of the whole body. When coughing the chest is painful as if bruised. Pain in the pit of the stomach after a violent cough.

**Chest.**—When breathing the chest feels bruised. Scraping sensation in the chest when breathing. Frequent deep and sobbing breathing.—°*Arrest of breathing*: °when lying on the back; °when stooping; °when running; °when coughing.—°*Shortness of breath*: °when doing some manual labour; °when walking fast.—°*Panting when walking fast*.—*Oppression of the chest*. Alternate oppression of the chest and pain in the back, (after a cold?). Frequent oppression of the chest and head with anxiety. *Dyspnœa* in the morning on waking, °also during rest. Oppression of the chest, as if his throat became constricted, especially after a meal. Violent, but painless oppression of the chest; he is unable to take deep breath.—*Weakness in the chest*; when talking he is obliged to exert the whole chest for the purpose of bringing out the words.—°*Pressure in the chest when coughing and sneezing*. Several attacks of pressure on the chest, in the morning, in bed. Pressure in the left side of the chest, in the morning when rising. Pressure and stitches in the left side of the chest. *Aching pain in the sternum*, towards the pit of the stomach. *Aching pain in the left side of the chest*, towards the false ribs. Sharp pressure in the left chest. Pressure and drawing in the right side of the chest, towards the axilla. Violent pressure on both sides of the chest, lasting an hour.—*Oppressive tension*, especially in the left side of the chest.—*Tearing pain in the left side of the chest*.—*Violent stitch through the right side of the chest*. °*Stitch through to the back*. Stitches under the right ribs when taking an inspiration. *Stitches in the right side*. Stitches in the left chest. Stitches in the chest, especially during a deep inspiration. Stitches in the sternum, especially after dinner.—*Violent contractive pain* when walking, in the fore part of the chest, proceeding from the back, when moving about. The chest became oppressed, the breathing short, and the pain more violent; when quietly leaning against something, the pain disappeared entirely and did not return when again moving about.—*Congestion of blood* to the chest. Heat in the chest, with chilliness and coldness of the whole body. Burning pain in the chest.—*Transitory orgasm in the region of the heart*, for eight days. Palpitation of the heart when sitting still, with trembling of the hand in which he holds something. Oppressive heaviness in the region of the heart.—*Pain under the right arm*, as from the pressure of the dress. Itching rash on the sternum. Induration in the left fleshy side of the chest. Pinching jerk in the left intercostal muscles, frequently during the day, independent of breathing and contact.

**Back.**—Pain of the os coccygis as after a long ride. *Violent pain in the small of the back*. Urging in the small of the back to stretch himself. Lameness in the small of the back. Paralytic pain in the small of the back, in the morning when rising. Pressure and tension in the small of the back. Stitch in the small of the back causing one to start. °*Pain in the small of the back on touching it*. °*Spasmodic drawing in the small of the back* which does not permit one to rise and obliges one to lie down.—\**Stiff back*, after sitting. Pain in the curved spine. Pinching pain in the right side of the back, for one hour. Beating in the back. Violent tearing or beating pressure in the back, with chilliness, afterwards dull oppressive headache with heat in the head, (the first

days). °Tearing and sticking in the back. °Sticking in the loin when sitting and lying. Burning in the back when walking in the open air and getting warm. Chilliness of the back. Itching of the back. Painful cutting in the back, the whole day. °Inflamed abscess on the psoas-muscle. °*Swelling and curvature of the vertebræ*.—Pain between the scapulæ, as if the parts would be torn asunder. Tearing pain under the scapulæ, when walking. Tensive drawing in the right scapula. Drawing pain in the scapulæ, in paroxysms; afterwards the pain passes to the nape of the neck and head, she becomes dizzy as if she would fall. Pressure on the scapulæ as if from a load, more violent in the morning when at rest than during motion; they seemed to him swollen, and when leaning against something with the back, the pain arrested his breathing. °Bruised pain in the scapulæ. *Frequent stitches in the right scapula*. Stitches between the scapulæ. Creeping in the left scapula. Vibratory twitchings in the skin of the scapulæ. Burning pain in the left scapula. Tension in the nape of the neck. Violent tearings in the middle of the nape of the neck. Crampy pain in the right side of the nape of the neck, relieved only as long as she presses her hand on the part. *Stiffness of the nape of the neck* with headache. \**Glandular swellings in the nape of the neck*, °also hard. Pimples on the nape of the neck. Itching pimples on the nape of the neck, like nettle-rash. °Abscess on the nape of the neck.—*Swelling* of the right cervical muscles. Stiffness of one side of the neck; he was unable to turn the head, from pain. Pressing in the left side of the neck, as if the veins were swollen. \**Swelling of the cervical glands*. Swelling of the *thyroid body*; the part itches, and, when touching it, a stinging is felt. Stitches in the cervical glands.

**Upper Extremities.**—Drawing aching pain in the axillary glands. \*Violent *swelling* of the axillary glands, °also with suppuration. Pain in the *shoulder*, a sort of pressure extending into the hand, with sensation as if she were unable to lift anything heavy, although she is able to use her hand well. Violent aching pain in the right shoulder extending to the left elbow, as soon as he uncovers the parts and they become cold. Painful *jerk* in the right shoulder-joint, in the evening, jerking the arm up. Tearing in the shoulder during motion. Stitches in the shoulder-joint, in the morning.—Heaviness of the *arms* as if filled with lead. Languor of the arms, in the morning when in bed. °Languor of the arms with trembling, during slight work. Slight jaetitation of the muscles of the arms. Rheumatic stiffness of the left arm, more painful during motion than rest. Drawing in the arm, as far as the little finger. Tearing in the arm, extending as far as the thumb. \**Tearing in both arms*. Uneasiness and *trembling* in the right arm. The arm goes to sleep when laying it upon any thing. Violent pressure in the left arm, apparently in the marrow. The skin of the arms and hands becomes chapped. *Congestion of blood* to the arms, when working while stooping; they swelled and trembled for about an hour. *Beating* in the right arm after a meal. Beating in the right arm; the jaetitation of the muscles can be felt with the other hand; the arm became lame and the beating returned when raising the arm high up.—Many boils on the arm, also large ones.—*Tearing pain in the upper arm*. Pain in the upper arm when pressing upon it. Darting pain in the right upper arm.—Drawing pain in the *elbows*, apparently in the marrow.—Paralytic tearing in the left *forearm*. Paralytic pain in the extensor tendons of the forearms. Jerking pain in the left lower arm. Twitchings in the muscles of the left lower arm. °Incipient lameness of the lower arm, causing the hand to drop everything. °Induration of the cellular tissue of the forearm. A number of hard blisters on the lower arm, of the size of peas, upon a red base, itching and burning, lasting only one night, (from the

wrist-joint to the elbow.) Tearing in the wrist-joint, painful when touched, and, when moving it, sensation as if it would break. Pain in the wrist-joint as if sprained. Paralytic weakness of the wrist-joints, in the morning. °Stitches from the wrist-joints through the arm, at night.—Cramp of the hand, when writing. *Cramp-pain and paralytic weakness of the hand when exerting it slightly.* Drawing pain in the hands. *In the night the hands go to sleep.* Prickling and numbness of the hands. *Ganglion on the dorsum of the hand,* between the third and fourth metacarpal bones; with pain as if sprained when bending the hand, and as if bruised when moving it. Profuse sweat of the hands. Violent *itching* under the skin of the palm of the hand. *Pustule* on the dorsum of the hand. °Ulcer on the hand.—Paralytic drawing in the fingers. °Creeping in the fingers. Sensation as if burnt in the back of the finger. Pain in the flexor side of a finger as from a splinter. *Tearing in the fingers.* Tearing in the finger-joints and in the thumbs. Darting pain in the index-finger. °Weakness and stiffness of all the fingers. °The joints are painful when pressing on them. *Numb feeling* of a finger, as if enlarged, and as if the bones had become distended. Stitches in the ball of the thumb. *Cramp-pain* in the joint of the thumb. *Weakness* of the right thumb, making almost the whole hand useless. *Contraction* and stiffness of the left middle finger; when extending it again, the whole extensor tendon feels very painful. Great *dryness* in the tips of the fingers, in the afternoon. Sensation as if the tips of the fingers were ulcerated. Pain in the left index-finger, as if a panaritium would form. A small crack in the index-finger becomes affected with a burning pain; *a lymphatic vessel becomes inflamed*, extending from that crack beyond the wrist-joint, and the sore spot finally becomes covered with a blister, with burning, pressing, stitching pain. Violently-itching *blister* on the posterior joint of the left index-finger. Blisters on the fingers, as from heat, with tingling itching. Prickling pain, now in one, then in another finger, also in the arms, as if gone to sleep. Stitches in the middle finger. Jerking stitches in the middle finger. Prickling in the ring-finger.—Rough, yellow finger-nails. Gray, dingy nails, as if decayed, jumping about like powder when cutting them, and dividing off into layers. *Frequent panaritium*, °also with proud flesh, or even when caries has already set in.

**Lower Extremities.**—Itching of the *nates*. Pain in the left *hip* when stooping, for a quarter of an hour. Drawing-jerking pain in the right hip-joint, making it impossible to move the limb.—Paralytic weakness of the *limbs* when rising from a seat, going off when walking. Uneasiness and paralytic weakness in the joints of the upper and lower limbs, when sitting or walking. Paralytic sensation of the whole right limb, with painful sensitiveness of the morbidly-affected ball of the toe, when walking. Heaviness of the limbs. Great weariness of the limbs from a short walk. The right limb goes to sleep. Tearing in the left limb. °Drawing and rigidity in the left limb. Jactitation of the muscles of the left limb. Itching of the left limb. Prickling in many parts of the lower limbs, gradually removed by violent scratching.—Pain of the *femora* as if bruised, when walking, sitting or lying, even in the morning on waking. Drawing in the thighs, extending to the feet. Jerking pain in the muscles of the right thigh. Tearing from the pelvis to the bend of the knee. °Pressure, tearing and sticking in the thighs. Prickings in the left thigh, when walking. *Stitches in the left thigh.* Itching of the inner side of the thighs. Some *boils on the posterior surface* of the thighs. °Itching ulcers, also about the malleolus. °Softening and caries of the bones.—Pain of the knee as if tied too fast. *Painful feeling of stiffness* in the knees when walking or standing. Pain in the left patella.

Drawing in the left knee. Tearing in the knees when sitting, going off by motion. Tearing around the right knee, extending down to the foot, both when at rest and in motion, more in the forenoon. *Weakness of the knees.* °*Swelling of the knee, also inflammatory*, with blue redness, nightly pains and excessive sensitiveness to contact.—*The legs* up to the knees, and the feet are icy-cold in the evening, and he has to lie in bed for half an hour before they get warm; for many days in succession. The legs are cold up to the knees, in a warm room. Drawing pain, in the evening, along the legs, terminated by a starting or jerking in the limb. Sort of tremor without chilliness, in the legs, from the knees down to the feet, in the evening from six till seven. *Itching of the legs.* °*Swelling of the legs.* °*Ulcers*, also with sickly complexion.—*Itching rash on the calves.* \**Boils on the calves.* *Sensation, when walking, as if the calves were too short*, which passed off when sitting. Painful *cramp* in the right calf, in the morning, when in bed. °*Cramp in the calves*, also particularly in the evening after working. Tearing in the left calf, with chilliness, afterwards in the left shoulder. Sticheing in the calves, when advancing the leg while walking. Sticheing in the upper part of the calf, when walking in the open air. °*Numbness of the calves.*—Aching pain in the left *tibia*, for two hours. Pinching pain in the front region of the left *tibia* and knee. Red, painful smarting spot on the right *tibia*, for two days. °*Caries of the tibia.*—Pain as if sprained in the tarsal joints. Liability of the tarsal joints to become strained. Tension in the tarsal joints, even when sitting. Stiffness and weariness of the tarsal joints, with swelling around the malleoli. °*Sticking in the malleolus*, particularly on pressing the foot to the floor.—*The feet* become cold when beginning to walk. Cold feet every day, becoming warm at night. Icy-cold feet in the day-time; at night, when in bed, burning heat in feet and hands, with drawing pain in the feet, up to the knees. Icy-cold feet in the evening, even in bed. *Burning feet.* Burning soles, at night. *Swelling of the left foot, extending up to the ankle.* \**Swelling of the feet*, -most violent in the morning, when rising, less in the evening; tense when walking. Swelling of the feet, with redness; pressure on the red part, leaves a white spot; with pain from the toes to the malleoli. Laneinations in the left foot and heel, afterwards in the right shoulder. Tearing in the right sole. Pain in the dorsum of the foot, as if bruised. \**Fetid sweat of the feet.* \**Cadaverous smell of the feet, without sweat, every evening.* Sour smell of the feet, intolerable, no sweat. *Profuse sweat of the soles and between the toes; he became quite sore in walking.* °*Suppression of the sweat*, also succeeded by coldness of the feet.—*Large blister on the heel, without itching.* Sticheing in the heel and the big toe, when standing or sitting. *Tearing in the heel.*—*Cutting in the sole.* Pain in the ball of the foot. Sticheing in the soles. *Painful cramp in the right sole, and especially in the big toe*, during a long walk. °*Intolerable voluptuous titillation* after a little scratching, making one almost frantic.—*Soreness of the soles*, especially near the toes. °*Painful hard bunions.*—The toes are stiff, and she is not able to bend them. Pain as if sprained in the joint of the big toe. When walking two toes are painful, as if from pressure of the boot. Continuous violent pain in the big toe, he is scarcely allowed to step. *Tearing in the big toes*, (in the evening. Tearing in the right big toe. Pain under the nail of the big toe and stiches in the toe. Itching-cutting pain under the nail of a toe. Cutting in the right big toe. Cramp-like sticheing in the toes. Violent stiches in the big toe. Stiches in the distorted toe. Stiche in the joint of the big toe. Frequent boring in the big toe. Stiches in the big toe causing the limb to jerk up. Ulcerative pain of the big toe, which had been sore previously, only when stepping. Itching, suppurating *scurf* on the frozen toes. °*Ulcerative pain of*

the big toe, also with stinging pain. A corn forms on the big toe, with violent burning. The corn is intensely painful when touched. *Stitches in the corn*, causing the foot to jerk up.

**Sleep.**—\**Much yawning.* Aching pain in the angle of the lower jaw, extending into the ear, when yawning. Long siesta, afterwards faintness. *Great drowsiness in the evening.* \**Great drowsiness in the day-time.* Stiffness of the whole body, at night, as if it had gone to sleep, with anxiety, hindering sleep.—She spends her nights without sleeping, but absorbed in strange fancies and ravings. Wide awake the whole night. Total sleeplessness, for eight or ten days. Is unable to sleep, for one hour and a half, on two evenings in succession, owing to ideas crowding upon him. *He wakes at two o'clock in the night, and remains awake for a long time, owing to ideas crowding upon his mind.*—Uncasy sleep, without pain.—Frequent waking, with chilliness.—Restless sleep, she starts and talks in her sleep. He frequently wakes and starts, without dreaming. He wakes in a perspiration, with desire to urinate. Starting during the siesta. *Frequent starting in the afternoon, while feeling drowsy.* Starting from sleep, the whole night, with trembling of the whole body.—\*Congestion of blood to the head at night. \*Orgasm of the blood at night; throbbing in all the arteries. °Heat in the head, also with sleepiness, or with vertigo during sleep, (about midnight). A good deal of thirst at night; her mouth was dry all the time. Jerk in the head, in the evening while falling asleep, afterwards beating in the right ear. Nausea at night, (the first night). He wakes for several nights, after eleven o'clock, after a sleep of one hour and a half, and then goes to sleep again. He wakes after midnight, with burning in the stomach and inclination to vomit; followed by empty eructations tasting of the supper without any disagreeable taste. Roughness and scraping sensation of the right side of the throat at night when lying in bed on the right side, occasioning a cough for half an hour, with mucous expectoration, for several nights. Stitching in the left side of the chest at night, down to the last rib, at every inspiration. Dry night-cough, occasioning even vomiting and a sweat as from anguish; he had to get up. In the evening, when on the point of going to sleep, she jerked several times with the arms and the right lower limb, and grasped with her hands. In the evening, after having gone to sleep, her whole body starts and she wakes. \**The body is jerked up for an hour and a half*, while sleeping without dreaming. In the evening after lying down, (and having begun to doze,) he began to strike with his hands and kick with his feet, without being conscious of it, accompanied with jerking of the body, with his eyes closed, (without exclaiming,) and while snoring loudly; the foam appeared at the mouth, afterwards he lay motionless as if dead, was quite rigid when raised, opened his eyes, which were immovable, and began to articulate indistinctly, (epileptic fit?). *Incarceration of flatulence* at night, causing constriction of the chest. Pain in the small of the back, as if bruised, at night. Jerks through the head, in the evening when in bed, ending with a stitch in the occiput. At two o'clock at night, he is waked by a painful rush of blood to the head, with heat and pricking. Oppressive headache at night; she cannot think where she is; everything turns with her, and her heart throbs. Vertigo with nausea, at night, when dreaming. Vertigo about midnight, even when sleeping, with heat in the head. At night, his little finger becomes quite stiff; he is not able to bend it. At night, violent pains in the hypogastrium, a sort of drawing together, followed by profuse sweat all over. Exhausting nightly *diarrhœa*. Sudden pinching pain close below the right eye, in the evening when in bed. At night, desire to urinate, with erection. Nightly pains in the ulcer on the leg. Troublesome night-cough, until four o'clock. He feels chilly at night, in a sort of half-sleep, without waking. Great weakness at

night, unto fainting. Nightly pain in the small of the back and in the shoulder on which he is resting. He frequently wakes at night with a pain in the stomach, first an aching, afterwards a crampy pain. In the evening, when on the point of going to sleep, he experiences pulsations in the head, throbbing of the heart, and a tremor through the whole body, for some minutes. He wakes with anguish and a stupifying vertigo. He wakes with a quicker pulse, palpitation of the heart, feeling of heat, eructations and pressure in the pit of the stomach; afterwards retching, with discharge of bitter mucus. He wakes with anxiety and increase of flatulence, the whole of which passed off after walking in the room, without emission of flatulence. He wakes after midnight with restlessness, difficulty of breathing and dryness of the skin. Uneasy sleep and frequent waking with chilliness. He dreams that they attempt his life, and wakes from his dream with suffocative anguish, without being able to speak. Anxious waking at three o'clock in the morning. Frightful fancies immediately after going to sleep; he starts, and exclaims. Continual loud laughing while asleep. In her nightly fancies her head appears to her very large. *°Frightful fancies before her eyes, at night.* After waking from an anxious dream, she remains full of anxiety, and her heart beats audibly. Restless sleep, with frequent waking and many dreams; one chasing the other. He wakes after midnight, and remains awake for a long time; after falling asleep again, he is haunted by fancies. He frequently talks during sleep. *\*Frequent dreams and exclamations during sleep.* The boy exclaims at night, and is restless. The boy wakes at night, weeping violently, does not come to his senses, but moans and utters inarticulate sounds. In a dream, which is a sort of somnambulism, he sees very vividly distant regions which he had never seen in reality, and unknown things which he had desired to possess. While asleep, he acts as if he would get up. She gets up while asleep, climbs over chairs, tables and a piano, and lies down again without waking. He dreams a good deal at night, and is haunted by fancies, rises, walks about in the room, without knowing for a long time where he is. He dreams that he is attacked with epilepsy, and that his head is drawn to one side. He dreams half-waking that innumerable spirits are about to seize him; on waking he is unable to move a limb, and he lies bathed in sweat with great anguish and palpitation of the heart; afterwards great fearfulness. He dreams that he is pursued by a ghost. He dreams that he is obliged to die. Nightmare in a state of half-waking, with great anguish, as if a smoky beast weighing a hundred weight were lying on him, so that he is not able to stir or to utter a sound. He wakes in great anguish about midnight, and is unable to stir in spite of every effort, and imagined that thieves are on the point of breaking in; he became easy on rising, but the anguish returns on lying down again. On waking from a dream about war at four o'clock, he feels a rheumatic pressure between the scapulæ, especially when moving the left arm.—*Bad dreams, with violent weeping.* Dream about serpents with anxiety. She dreams that she is in the act of being choked; but she is unable to exclaim, and kicks with her feet. He dreams that he has committed murder, and has been denounced. He dreams that he is being drowned. Dream full of quarrel and humiliation. Anxious dream, he is pursued. He dreams that some one takes hold of his finger, this caused him to start. He dreams that he is fighting with robbers, he wakes very much heated, oppressed with anxiety and covered with sweat. He dreams of robbers and murderers, he wakes and says that he will overtake them. Dream full of cruelty, without anger. Frightful dreams, in the first hours of the night. Wild dreams and frequent waking with uneasiness. *\*Dreams and fancies as soon as she goes to sleep.* He dreams of the business of the day and of big dogs that pursue him. He dreams of the events of his childhood. He

dreams of the events of his youth, they are so vivid in his imagination that he has great trouble to banish them. *Many dreams* about long journeys. He dreams of the things he had done or heard the day before, but confusedly. He dreams of marrying a person. Lascivious dreams and powerful sexual desire. *Lascivious dreams with emission.* Lascivious dream which is very disagreeable to her. He dreams that he is disturbed in the act of enjoying an embrace; on waking he has an erection and sexual fancies. Sexual ideas, morning and evening, with erections. *Emission* and sweat on the back.

**Fever.**—Spasmodic chilliness, in the evening when in bed, he shook. Violent chilliness in the evening, especially in the shoulders. Painful pricking behind the left breast, during the chilliness, at night and in the day-time. *He is very chilly*, the whole day. Constant chilliness in the evening, which can be felt by others. Constant internal chilliness, with loss of appetite. Chilliness, even when walking in the warm room, and increasing to a trembling in the open air. *Chilliness at every motion*, the whole day; in the morning great weariness, even unto sleeping. Disagreeable feeling of chilliness, in the afternoon, especially on the arms, in the warm room. An icy-cold creeping over the body, frequently. Chilliness, during the stinging pain. Shuddering for half an hour, frequently in the day-time, followed by slight heat, mostly about the head and in the face. Violent, continual, internal chilliness, for several days. Fever in the evening, after lying down; violent chilliness, she could not even get warm in bed, which gave her a pain in the stomach. Slight chilliness down the back, with icy-cold hands, afterwards violent heat with distention of the abdomen. Fever in the evening; heat all over, with thirst, without any subsequent sweat. Dry heat and thirst, for several evenings, followed by colic and headache. Fever with violent heat about the head, dark redness of the face and thirst, four days in succession, from noon till evening; a headache set in half an hour before the heat. Heat in the face and lobule of the ear for many evenings. *His blood is easily excited.* Fever in the afternoon, mere heat, with horrid thirst and very short breath. Feverish heat, the whole night, with violent thirst and panting breathing. The whole body of the child is burning-hot during the fever, with red, bloated face, hard glands, of the size of peas, around the neck and down the sides of the shoulders, with distended abdomen and continual diarrhoea. Violent heat and redness of the face, with cold hands and feet.—°Hectic fever, particularly during a long suppuration. °Worm-fever of scrofulous individuals. °Fever of dentition. The fever and ague produced by Sil., is characterized by little sweat, generally sets in from ten in the morning until eight in the evening, and from midnight until early in the morning. During the apyrexia the children are obstinate, and they cry when touched or spoken to.—Exhalation over the whole body every night, (the first nights). Profuse sweat, towards morning, every night. Profuse sweat, every night, with want of appetite and debility, as if he were threatened with consumption. Nightly sweat on the chest. Sweat having a strong smell. °Sweat during moderate walking. Morning-sweat. *Night-sweat*, especially on the trunk. \**Profuse, general night-sweat.* General exhalation, at night, when in bed. Sweat, only about the head, trickling down the face. Profuse, dripping sweat at night, especially in the region of the loins. °Exhausting sweat.

**Skin.**—Great irritability and painful sensitiveness of the skin when touching it.—\**Itching* of the back, scapulæ and thighs. \**Itching and biting of the whole body* after lying down, which cannot be removed by scratching. Quick creeping as of fleas, in several parts of the body; in some parts becoming an intolerable itching, the whole day, but especially in the evening, when undressing. Creeping itching over the whole body and also on the head. Pricking in the skin here and there, resembling flea-bites. Stinging itching in several places, especially at

night. Eruption over the whole body, resembling varicella, accompanied, preceded and followed by violent itching. Pustules on the forehead, occiput, sternum, and vertebral column, resembling smallpox; they are extremely painful, and finally form ulcers suppurating a good deal. Rose-coloured blotches in leprosy patients. (For the ulcers and abscesses cured with Sil., see Clin. Obs.) *Little scratches* heal with difficulty and suppurate. Pain in the ulcer as if subcutaneous. Smarting in the ulcers which were generally painless. \**Aching pain* in the ulcer on the leg. *Stitching aching pain in the spot where an ulcer had formerly been on the leg.* Stitching in the ulcer on the leg. \**Stitching and burning* in and around the ulcer on the leg. Boring pain in the sore place on the leg. *Paralytic pain*, particularly in the outer condyle of the humerus and the inner condyle of the thigh, during motion. Liability to strain parts, bringing on stitches in the pit of the stomach and frequent vomiting at night; sometimes cutting in the hypogastrium with incarceration of flatulence.—Paroxysms. 1. A feeling of violent coldness in the whole left side of the body, frequent slumbering and starting, as if she would go away without knowing whither; after this she began to lose her senses, spoke unintelligibly, did not recognize any body, and became so weak that she was not able to turn to the other side without being aided; next came violent convulsions with staring look, distortion of the eyes, twitchings of the lips, heaviness of the tongue with indistinct articulation, stretching and distortion of the head and limbs, for a quarter of an hour; this was followed by frightful roaring, falling of tears from the eyes, foam at the mouth; afterwards a warm sweat made its appearance over the body, the breathing became freer, slumber came on, and senses and speech gradually returned in a couple of hours. 2. She turns pale, becomes still and loses her appetite, sheds tears and complains of violent stitching in the ear, she vomited and her hands became so weak that she was not able to raise a cup to her mouth. 3. Want of appetite; pale, wretched countenance; every morning sweat, which was sometimes very profuse; heaviness and weariness in the limbs, obliging her to lie down; nausea; chilliness every evening before going to bed; stitching now here, now there, in the sides of the chest, abdomen, limbs, sometimes so violent that she started; pain under the sternum during an inspiration, and itching of the arms and legs, with small pimples. 4. Disagreeable sensation in the genital organs; afterwards a sort of cutting in both sides of the trunk, from below upward, extending to the shoulders, and thence to the arms, which felt as if gone to sleep, with rigidity; this fit came on while at rest, mostly when sitting or standing, every quarter of an hour, but not at night. °Spasms of the arms and lower limbs. Tearing in the joints and soles, with jerks in the feet like St. Vitus' dance, causing a number of sleepless nights. Shocks through the whole body. Jerking of the lower limb, followed by sensation as if the head were shaking, as in a chill, the hair standing on end with natural temperature of the skin. °Jerking of the limbs day and night.—*Epileptic fit*, at night, about new moon; first, the body becomes stretched, afterwards it is jerked up, but without a cry and without biting the tongue.—Trembling of all the limbs in the morning, especially of the arms, which feel paralyzed.—Great stiffness of the limbs. Stiffness of the back and small of the back after sitting.—Deadness of the hands and feet. When walking in the open air, she was suddenly attacked with so much faintness and drowsiness that she had to walk home. A kind of nausea. Dryness in the mouth. Pinching in the abdomen. Violent stitching pain in the tendo-Achillis. Heaviness of the lower limbs. She feels every change in the weather in the head and limbs. The thunder-storm, both when approaching and present, makes a violent impression on him, his strength fails in walking, he has to be led, becomes faint and drowsy, with heaviness and heat in the body.—

\*Great liability to cold. A cold causes cough, internal chilliness (at night), loss of appetite, and a stinging or burning headache.—Faint and trembling after a walk in the open air, in the evening.—Heaviness of the upper and lower limbs as if filled with lead.—The whole body feels bruised and broken, and so weak that she has to keep her bed for three days. Great emaciation while confined to the bed for five days.—Careless, heavy gait —Weakness of the back, and paralytic feeling in the lower limbs; he was scarcely able to walk. Weakness in the joints, they give way. Laziness in the afternoon, walking fatigues him. Had to lie down before dinner, owing to sudden exhaustion. So weak that he is unable to walk, but without pain.—Weariness in the lower limbs, in the morning. Very weak, in the morning after walking. Great weariness and dulness when attending to some mental labour; he came near going to sleep while teaching.

**General Symptoms.**—°Chronic ailments from abuse of mercury. °Hysterical affections. °Muscular weakness of children, and difficulty of learning to walk. °Chronic rheumatism and arthritis. °Phlegmonous inflammation. °*Scrofula and rhachitis*, also with enlarged head and slowly-closing fontanelles. Severe *bone-pain*, now here, then there, particularly early on rising, before moving about. \**Drawing in the limbs*, also with tearing and sticking,—or cramp-like drawing, or particularly in the ears, jaws, hands and tibiae. °Nightly sticking in all the joints. All the muscles are painful during motion. *Painfulness of the whole body*, felt even during sleep, in the morning, also on waking, (particularly in the right upper arm and left shoulder), less after rising. \**Bruised pain in the limbs*, as from a wrong position at night, or as if beaten, or particularly in the evening, the pain obliges one to change one's position constantly.—Ulcerative pain of the whole side of the body on which he is resting, with constant chilliness when uncovering himself ever so little, insufferable thirst and frequent flushes of heat in the head.

**Characteristic Peculiarities.**—Most of the symptoms of Sil. seem to make their appearance about new moon. *The pains are increased by motion.*

## 222. SOLANUM.

### a. LYCOPERSICON.

SOL. LYC.—Tomato.—See ARCHIV, XVII.

#### SYMPTOMS.

**Head.**—Stupid feeling in the head. Heaviness and dulness of the head. Heaviness of the head, with weakness of the posterior cervical muscles. Sensation as if the head were compressed or squeezed from both sides. Boring in the left side of the occiput. Boring, the skin of the sinciput being stretched with pain. Pressure under the frontal bone as if the brain would be pressed out, relieved by leaning the head on anything, constantly felt in the evening and continuing for a while in bed.—Pressure in the right malar bone. Stitch in the left malar bone. Stitch in the left cheek.—Dry coryza.

**Trunk and Extremities.**—Slight sticking under the sternum, on the left side, without difficulty of breathing.—Sticking in the inner side of the left forearm. Painful sticking behind the left acetabulum. Sticking during rest and motion above the right outer malleolus.

**General Symptoms.**—Cannot fall asleep in the evening, turns about, every position is disagreeable to him. Frequent waking and tossing about at night;

the limbs on which he is lying feel paralyzed. Lame feeling, on account of which he turns on his back. He is waked by insignificant dreams. Has to get up at night to urinate.—Is vexed about trifles, more so on account of his memory being weak. Vanishing of ideas, aggravated by leaning the head on anything. He forgets whatever he wants to think of.

### b. MAMMOSUM.

SOL. MAM.—Night-shade.—See ARCH., XIII.

#### SYMPTOMS.

He gets enraged about things which he imagines are possible. Inability to think coherently. Although his ideas about a thing are perfectly clear, yet he is unable to write down anything but incoherent sentences.—Sensitiveness to tobacco.—No stool on the second day; on the third day the stool comes later, with straining.—Hawks up a little lump tinged with blood.—Hawks up blood-streaked mucus from the larynx.—After walking a little he frequently experiences a sticking pain while walking, causing lameness, and going off after standing and sitting.—Twitching of a large portion of muscles under the right scapula, as if the flesh were seized with the hand and shaken to and fro.—Uneasiness, he is unable to continue any kind of work steadily.—Great weariness and disposition to sleep without being able to sleep, afterwards slumber, followed by a deep sleep for several hours, from which he wakes without being able to collect his senses; he remains for a long time without volition. Long siesta, in spite of which he feels sleepy early in the evening, and sleeps well all night. Dreams, with news of some one's death, and violent weeping.—(Vesicular erysipelas over the whole body.)—He sees everything as if he were in a fever, with hard pulse.

### c. NIGRUM.

SOL. NIGR.—See JOURNAL DE CHIMIE MÉD.—HIRTZ, of Strassburg, 1843.

#### SYMPTOMS.

Complete cessation of the mental functions.—*Vertigo*.—Horrible headache.—The face is congested with blood. Red, bloated face. Confused and anxious expression of countenance.—Open, humid, glistening eyes.—Extreme dilatation of both pupils.—Alternate contraction and dilatation of the pupils.—Mistiness before the eyes.—Loathing, vomiting of the ingesta. Frequent vomiting, first of mucus, afterwards of a bluish or gray-blackish fluid. Tenesmus of the anus.—Difficulty of breathing.—Hot skin, though covered with sweat. Frequent sweats over the whole body. Excessive thirst. Small, frequent pulse. Quick, irregular pulse.—Red, scarlet spots on the whole skin.—Convulsions and spasms. Tetanic rigidity of the whole body. They stretch their hands during the spasms as if they would grasp something; after this the hands are carried to the mouth, and the boys (of two and three years) chew and swallow. Trismus. Coma, alternating with convulsions and moaning.—Great restlessness.—General violent convulsive restlessness. Tremor. Violent subsultus tendinum. Moaning as in hydrocephalus.

#### CLINICAL OBSERVATIONS.

With *Solanum mammosum* Dr. *Hering* has cured a kind of varicella. Dr. *Gron* has employed *Solanum nigrum* with success in a case of raphania, charac-

terized by painful creeping in the limbs, with distortion of the hands, convulsions, tonic spasms, occasional attacks of tetanus, epilepsy, imbecility, rage. (See *Arch.* XI., 1, p. 92.)

### CLINICAL OBSERVATIONS.

According to *Noack* and *Trinks*, the following diseases have been cured with *Spigelia*: violent headache, with inflammation and lachrymation of the right eye, and sensation as if the eye would be pressed out of its socket, with photophobia. Meningitis serophulosa infantum, acute hydrocephalus of children, with predominant affection of the occiput, in the second stage, when no effusion has yet taken place.—Paralysis of the right upper eyelid.—Ulceration of the margins of the eyelids, with smarting and painful soreness.—Rheumatic ophthalmia: violent redness of the eye; congested condition of the vessels, arising from the sclerotica a few lines from the cornea, in the shape of a blue-red circle; the lower segment of the cornea is dim, so that the shape of the pupil cannot be recognised, and objects look misty; the eye is painful when touched, the pain being a violent aching pain, extending even to the bony parts of the orbit and to the temporal region, as if an ulcer would form in the eye.—Rheumatic and arthritic ophthalmia.—Corneitis.—Pain in the eye, lasting every day from morning till noon, and then disappearing suddenly.—Neuralgia of the optic nerve: pain every morning as if the eyeball were too large and would be forced out of its socket, attended with violent boring and digging and frequent violent stitches; these pains are aggravated by opening and moving the eyes; the pain extends to the frontal cavity, where it changes to a frightful digging, and distensive pressing; the pupils are contracted, the eye is not inflamed but looks glassy, faint, almost staring, and is very sensitive to the light; bright flashes shoot across the eyes; the upper lid is stiff and paralyzed; the skin around the eye is extremely sensitive and painful, contact causes an exquisite pain.—Pain in both eyes, which are at times violently aching, at times burning, more in the right eye, aggravated by moving the eye and facial muscles, with flashes and fiery wreaths before the eyes, mistiness.—Otagia.—Humming in the ears.—Periodical hardness of hearing.—Prosopalgia Fothergillii.—Drawing and jerking in the teeth.—Toothache: constant drawing and tearing in all the teeth, particularly of the upper jaw, in the front teeth; flashing pain in the crown and roots of single teeth, penetrating to the upper jaw; the pain is most frequent in the day-time; the teeth, particularly those which are decayed, are very sensitive to the cold air; stitches and tearing in the eyes and ears, heat in the mouth, burning of the upper lip, painful pressure in the stomach.—*Beating toothache*, generally attended with darting-tearing, burning pains in the malar bone, puffiness of the face, and yellow margins around the eyes.—Helminthiasis with and without fever.—*Helminthiasis*: nausea, vomituration early in the morning, abdominal pains, great languor, with pale face.—Paroxysms of violent sticking pain in the whole left

side of the chest, excited even by mere contact, and obliging one to lie on the left side, without swelling, with visible, strong, equal beats of the heart, with a similar beating in the pit of the stomach, pulse uniform, vertigo, dilatation of the pupils, humming in the ears, whitish tongue, loss of appetite, distended abdomen, constipation, excessive debility (arising from local injury in case of a boy of 13 years, considerably improved by Spig. I.).—*Carditis*.—*Endocarditis*, with and without articular rheumatism, and even with effusion in the pericardium.—*Endocarditis rheumatica*, most suitable after the inflammation has been removed, and when the pulse and the beats of the heart are synchronous.—Tumultuous beating of the heart, with suffocative sensation and spasms of the chest.—*Chronic affections of the heart*, with general convulsions: undulating beats of the heart on auscultating, indistinct, diffusive beating on laying the hand on the heart, tumultuous beating of the heart when lying and sitting, not synchronous with the pulse, spasms in the chest, suffocative symptoms, tremulous sensation in the chest and temples, increased by motion, sensation of tearing in the chest on raising the arms above the head and when touching the pit of the stomach, sensation of spasm and balancing sensation in the abdomen, ascending to the chest, etc.—*Chronic affection of the heart* after carditis: purring sensation in the region of the heart, tremulous sensation of the carotids, great asthma on taking the least exercise, highly-red lips and cheeks, which turn pale on making any motion, elevation of the last four true ribs, sternum and xiphoid cartilages, distortion of the dorsal vertebræ, etc.—*Chronic affection of the heart*, with articular arthritis: audible palpitation of the heart, causing a pain that extends to the back, cutting pains from the heart to the shoulders, head and arms; dyspnœa increasing to loss of breath, aching-cutting pain in the abdomen where the ribs commence, arthritic pains and stiffness of the joints; great emaciation, etc.—*Chronic affection of the heart*, particularly valvular diseases, hypertrophy and dilatation of the heart, when the following physical signs are present: percussion-sound normal or else dulness of percussion-sound over a large surface, increased shock of the heart, raising the wall of the chest, not synchronous with the radial pulse; instead of the usual sounds a noise is perceived in different parts of the heart, either during the systole or diastole, or during both.—Hypertrophy of the heart, with insufficiency of the bicuspid valves.

#### SYMPTOMS.

**Mind and Disposition.**—*Sadness*: attended with great anxiety. Sadness with discouragement and fearfulness. Sadness with ill-humour and redness of face. Is unable to enjoy himself with others, without precisely feeling sad.—Oppressive anxiety with restlessness, which does not allow him to remain quiet. Anxious solicitude for the future, also with vexed, intractable mood.—Excessive lowness of spirits in the evening, increasing to a desire to kill one's-self, attended with chilliness. Taciturn. Serious and taking the least jest in bad part. Vexed and sensitive. Inclines to be vehement. Excessive cheerfulness. Alternate cheerfulness and gloom. Cheerfulness alternating with palpitation of the heart and anxious oppression of the chest.

**Sensorium.**—Stares at one spot.—Weakness of memory, forgetfulness, also with indolence of the mind. Is unable to recollect anything, even that which is most familiar to him.—Painful dulness of the head. Dulness of the head, *with pressure through the forehead*. Dulness with drawing in the occiput, in the evening, during a walk in the open air. Wild and confused feeling in the head, particularly in the evening, or also with empty feeling in the forehead and sensation as if the hair were standing on end, attended with sensitiveness of the hairy scalp. Sensation of emptiness in the head, and reeling sensation as when

intoxicated, while sitting. Painful *gloominess* in the forehead and temples, as if the head were compressed from both sides. Constant stupid feeling of the head, rendered any kind of mental labour difficult. Stupor, as from smoking strong tobacco.—*Vertigo* when sitting, walking and standing. *Vertigo* which is most violent when lying. *Vertigo unto falling*, particularly *when standing*, or looking down. *Vertigo* in the open air, when turning the head while walking. *Vertigo* when walking, with staggering, as if he would fall to the left side. *Vertigo* as *from intoxication*, with unsteady gait, or when walking, with sensation as if everything were turning in a circle. *Vertigo*, the head falling backwards, with loss of consciousness, nausea in the palate, and pinching uneasiness in the chest and abdomen, as if stool would come on.

**Head.**—*Headache from shaking the head*, with vertigo or heaviness. Pain in the forehead. °*Periodical, typical headache?* Aggravation of the headache *in the open air*, or in a recumbent posture, with amelioration by walking about. Pain in the occiput as if the throbbing of the arteries could not take place without first overcoming an obstacle.—*Heaviness of the head* with pain when shaking it. Heaviness in the occiput, as if a load were sinking. Heaviness of the head, with sensation, on stretching the facial muscles, as if the top of the skull would burst. Painful heaviness as from a load, in the left frontal protuberance.—*Pressure in the head*, worse on stooping. Pressure in the left hemisphere of the brain. Pressure at a small spot of the vertex. Paroxysms of pressure whenever he presses the foot against the ground, during a walk in the open air, from without towards the middle of the brain. Pressure in the cerebrum and cerebellum, making him dizzy. Pressure in the occiput from without inwards, aggravated by stooping. Pressure in the whole sinciput. Pressure *in the temples*, also *from without inwards*, particularly in the right temple. Pressure in the forehead, also from without inwards, or *from within outwards* (also with tension). Pressure with tearing, from the left frontal protuberance to the occiput. Drawing pressure in the right vertex and occiput.—Pressing in the forehead, *as if the brain would be pressed out*, also particularly *when stooping*, or relieved for a moment by pressing the hand against the forehead. Pressure in the right side of the head from within outwards, pain as if the head *would burst*, when coughing or talking very loud.—Tension in the head, as if something were tied round the brain very tightly.—Violent *tearing* in the head, forehead, occiput and temples. Paroxysms of tearing, particularly in the right frontal eminence, when standing and sitting, with involuntary staring. Tensive tearing, particularly in the direction of the left orbit.—*Digging tearing*, particularly in the left parietal bone, when moving about, walking and when making a *wrong step*, worse towards evening. Digging tearing in the occiput, left vertex and forehead, aggravated by motion, and by every loud noise, by loud talking and opening the mouth, most violent when lying.—*Stitch* in the right frontal eminence. *Stitch* in the left temple, as from an electric spark.—*Boring* in the forehead. Boring in the occiput and on the vertex.—Intolerable bubbling sensation in the occiput, aggravated by walking, and afterwards by the least motion and by a horizontal position, most relieved by leaning back when sitting.—*Pushes and jerks* in the left side of the head. Pushes and jerks in the occiput and temples, whenever he presses the foot to the ground, during a walk in the open air. Tearing jerks in the right temple.—*Shaking and swashing sensation in the brain* when walking, every step being felt in the brain. Shaking sensation in the forehead when merely moving the head.—*Heat* in the head. Burning pain in the left temple and forehead.

**Scalp.**—Sensitiveness of the scalp to the touch, and particularly when moving it. *Ulcerative pain* on the vertex, even without touching the part, with

sticking jerks penetrating deep into the brain. *Even the hair is painful to the touch.* The occiput is so painful that he cannot lie on it. Pain as if bruised at the occiput. Violent pains at the occiput, early in the morning, with stiffness of the nape of the neck preventing the motion of the head. Pressure with drawing at the left temple, or with tearing at the parietal bone. Sticking with pressure at a small spot of the left occiput. *Lancinating tearing on the left side of the head*, also contractive (at the parietal bone). The scalp feels contracted and as if put upon the stretch.—Aching *bony swelling* at the temple, near the orbit, with painful soreness when touched.—*Creeping itching* on the forehead, inducing friction. Tingling itching on the left vertex. Painful biting in the skin, on the left side of the forehead. *Burning on the temples*, or only from the right forehead to the eyes, which feel so painful that they cannot be moved (*Rash on the hairy scalp.*)

**Eyes.**—°*Nervous pains* in the eyes. \**Pains in and above the eyes*, also particularly deep in the orbits. Is unable to turn the left eyeball in every direction without feeling pain. \**Pain of the eyeballs, during motion, as if too large.* Tension in the left eyeball. °The pains in the eyes are aggravated by moving the eyes and facial muscles.—*Pressure* in the eyes with sensation as if tears were secreted, and mistiness of sight. *Pressure over the eyes*, particularly over the right eye and in the whole head. Pressure in the left eye, as if compressed from above. \**Intolerable pressure* in both eyes, worse when turning them. Pressure in the eyes, with vertigo on looking at a thing sideways. Hard pressure under the right upper lid, going off by friction. Pressure in both eyes as if from sand. Stinging pressure under the lids. Pressure from without inwards, near the right eye.—\**Sticking* in the right eye, particularly during motion. \**Digging sticking*, -with depression of the upper lid. °*Sticking* with boring, penetrating to the interior of the head, sometimes attended with a maddening pain. Itching stinging in the right eyeball. Itching stinging in the right inner canthus. Itching stinging *in the lids*, also particularly in the margin of the right upper lid.—*Cutting* in the margin of the left lower lid.—*Tingling* in the eyes. *Itching* in the left eye, going off by rubbing. *Burning* in the eyebrows. Itching burning in the right eyebrow. Burning in the left eye towards the temple. Contractive burning in the right eye. Burning under the right lid. Burning in both eyes, obliging one to close them, attended with an apprehension that he will not be able to open them again, followed by an appearance of blood-red fire before the eyes which obstructs the sight; sight returns after a profuse flow of tears and great dilatation of the pupils.—°*Arthritic ophthalmia.*? °*Rheumatic ophthalmia.*? °*Corneitis.* \**Inflammation of the margins of the lids, with ulceration*, -and smarting soreness. \**Inflammation of the whites*, -also with turgescence of the vessels, or early in the morning, with heaviness of the lids and inability to open them.—Profuse moisture of the eyes. Flow of tears. Discharge of a quantity of acrid water. A quantity of gum on the lids.—\**The eyes look dim and faint.* Involuntary motion of the eyes. Distortion of the eyes. \*Great inclination to wink.—\**The upper lids hang down as if paralyzed.* The upper lids feel stiff and painful, with difficulty of raising them.—Dilatation of the pupils, even from the smallest dose.—°Great sensitiveness of the eyes to the light.—°The eyes remain unmoved in whatever direction they are turned, from weakness. Vanishing of sight when looking at anything. Indistinctness of sight as if the eyes were full of water, or as if a mist were before the eyes, or as if filaments or hairs were hanging from the eyelashes. Scintillation. Long-sightedness. °Flashes before the eyes. Transient amaurosis. °Cataract.?

**Ears.**—Increase of pain in the meatus auditorius. Pain in the ear like otalgia, particularly about the margin of the left ear. Pressure in the left ear, as from a plug. Pressure in the right ear, extending to the malar bone and the molares. Distensive pressing in the left ear. Drawing pain in the left ear, in the direction of the malar bone, or in the posterior valve. Crampy sensation in the right external ear. Pushing tearing in the right ear. *Boring sticking* in the right ear, also jerking sticking extending to the Eustachian tube and throat. Darting pain in the ear, extending to the eye and lower jaw. Throbbing in the left ear. Twitching in the right external ear.—Stinging *itching* in the left ear. Creeping itching in the right ear, or also prickling itching. *Burning of the ears.*—Bounding swashing in the ears, as from water, on pressing the foot to the ground.—Painful sensitiveness of the hearing to sound.—*Stoppage of the ears*, in the open air, when wind gets into the ears. Stoppage of the ears, in the evening, as if something were lying against the tympanum which feels contracted. Stoppage of the ears on blowing the nose, so that he does not hear anything until the ear opens again after boring with the finger into it. The left ear feels obstructed. *Hardness of hearing* in the left ear, with sensation as if the ear were closed, and fluttering in that ear. °Periodical deafness?—*Humming* before the ears, also with undulating pulsations in the ears. Violent buzzing and humming in the ears, particularly in the evening. Slight blowing in the ears, with subsequent discharge of moisture from the ear, and improved hearing. *Ringling* as of bells, when talking, sounding through the whole head. *Humming* before the ears, also as from wind. Ringing in both ears, with feeling of obstruction.

**Nose.**—Disagreeable sensation in the root of the nose, as if there were an impediment.—Itching of the whole side of the nose. Itching of the right wing of the nose. *Titillation of the dorsum of the nose, as from lightly touching the little hairs on the dorsum of the nose, or as if a light current of air were passing over it; this sensation is felt for a long while.* Itching creeping in the nose, obliging one to scratch. Itching boring in the right nostril, obliging one to sneeze. °*Biting* in the nose.—Herpetic eruption, around and in the nostril, with sore feeling to the touch.—Frequent sneezing, particularly early in the morning, in bed, with bloody mucus.—Loss of irritability of the inner nose; snuff does not excite it.—*Stoppage of the nose*, with frequent discharge of mucus from the posterior nares and the fauces.—Coryza, first day, then fluent. °Fluent coryza after the least cold.—Profuse discharge of mucus from the posterior nares and fauces, at times white, at others yellowish. Discharge of a small quantity of green, viscid mucus from the nose on blowing it, the fore part of the nose being constantly dry. Profuse discharge of mucus from the posterior nares, particularly at night, threatening suffocation unless hawked up at once.

**Face.**—\**Pale, disfigured face*, with yellow margins around the eyes. °The cheeks and lips are at times pale, at others dark-red.—*Puffiness* of the face, particularly after the siesta, with pale, disfigured face, as after a severe illness. On rising in the morning, the facial muscles look swollen and distorted.—°Typical, nervous prosopalgia. °Prosopalgia on one side of the face, with anguish about the heart and great uneasiness. °Violent pains in the face, not allowing the least contact or motion, with shining swelling of the affected side. \**Pressure in the malar bones.* \**Darting tearing, or tearing with pressure*, particularly in the right malar bone. \**Burning* in the malar bones, particularly the right. Drawing sticking, from the right upper jaw to the vertex.—*Burning* in the skin, in front of the right ear, or also in the left cheek. Sticking in the left

cheek.—*Tension and burning* in the lips, particularly the upper lip. Blackish, painless pimple on the vermilion border of the lower lip.—Tumour on the chin, left side, itching during the siesta. Painless pustules.

**Jaws and Teeth.**—Tensive pain in the articulation of the jaw. Pressure in the region of the angle formed by the ascending plate of the lower jaw. *Tearing in the lower jaw*, in the direction of the ear and extending to the nape of the neck, making the motion of the head painful. Pain, in chewing, as if the right articulation of the jaw would be torn out.—*Toothache* with prosopalgia, pale, bloated face, yellow margins around the eyes, palpitation of the heart, chilliness and restlessness. Toothache from smoking tobacco the evening previous. Toothache, only after eating something, and at night, not allowing him to sleep and driving him out of bed.—*\*Darting pain* through all the teeth, most violent in a decayed tooth. Coldness in the upper teeth, with fine dartings in the same. *Drawing* in a decayed tooth. *\*Painful jerks* in a decayed tooth, —from the crown to the root, *\*aggravated by cold water*, —or by the contact of air, and in the afternoon; relieved (apparently) by smoking tobacco. Throbbing *tearing*, aggravated by cold water, going off by lying down.—*Cramp-pain* in the upper molares, with sensation, when keeping the mouth closed, as if the lower jaw were squeezed against the upper as by a cramp. *Pressing* in the teeth *from within outwards*, most violent when lying on the right side, intermitting while eating and drinking, but commencing again immediately after, and frequently waking him at night.—Bubbling pain in a left molar tooth.—Gnawing pain in a decayed tooth.

**Mouth.**—Offensive smell from the mouth, perceived only by others. Stinging dryness in the mouth, early in the morning in bed, the mouth feeling as if glued together, even when containing a quantity of saliva. *Accumulation of a quantity of saliva in the mouth and fauces*, which has to be spit up, because, when swallowed, it excites nausea. The saliva is frequently white and foamy. Burning vesicles in the mouth, at times on the tongue, at others on the palate.—The tongue exhibits a pumber of rhagades. The tongue is coated white. *Painfulness of the back part of the tongue* as if swollen, particularly when chewing. Stitches in the right side of the tongue, also itching-boring stitches, attended with sourish taste in the mouth.—Burning pain of the palate.

**Pharynx and Œsophagus.**—Pressing stitches in the region of the larynx, increasing in violence and extent, intermitting during deglutition, but returning afterwards. Titillation in the pharynx, with sensation as if a half-liquid body were rising in the throat, with hollow cough, waterbrash, and fear lest he should faint.—Swelling on the left side of the fauces, with stitches during deglutition.—A good deal of mucus in the fauces and mouth, early on waking, at times white, at others yellowish.

**Appetite, Taste, Gastric Symptoms.**—Flat taste in the mouth. Putrid taste, as if having a foetid odour.—*No appetite, but a good deal of thirst. Complete aversion to smoking, snuff, and coffee.*—Great desire for food and drink. *\*Canine hunger*, also with nausea and thirst.—Violent thirst, late in the evening.—Rising of air, after every meal. Sour eructations, reaching the tongue.—*Nausea* as after long fasting. *°Nausea* before breakfast, with sensation as if something were getting into the throat from the stomach. Desire to vomit.

**Stomach.**—*Pressure* in the pit of the stomach as if a load were lying on it. Pressure in the pit of the stomach, with ineffectual desire to eructate, which does not take place until air has been swallowed. Pressure in the pit of the stomach as from a lump, disappearing after pressing with the hand, and changing to a tension and pressure in the chest. Pressure in the stomach.—*Stitch* in the pit

of the stomach on expiring air, more when sitting and walking than when lying. Stitch in the pit of the stomach, with oppression of the chest, worse during an inspiration. Stitch, also burning stitch, near the pit of the stomach.—° *Great sensitiveness of the pit of the stomach*, the least contact or pressure of the clothes excites great anguish, with heat and redness of the face, and sensation in the chest as if something were tearing loose.

**Abdomen.**—Sticking in the left hypochondrium, in the evening, obliging him to bend double. Stitch, deep in the right hypochondrium, intermitting during a deep inspiration, but returning on expiring air. Sticking in the hepatic region on walking fast and running.—Colic, as from a hard lump in the umbilical region, in the evening. Sensation in the abdomen as if a great load were sinking in it, especially during an inspiration. *Painful pressure in the abdomen, as if the walls of the abdomen would burst, especially in the evening, previous to the loose stool, after which the pressure abates somewhat.*—Shifting pinching, with pressure, in the abdomen, disappearing again after the emission of flatulence, three afternoons in succession. Pinching in the whole abdomen, in a recumbent posture, so violent that he was unable to stir. *Pinching in the abdomen as if all the intestines were strung together; this occasions great anxiety, and impedes the breathing.* Violent pinching in the abdomen, followed immediately after by a loose stool, the looseness increasing gradually, the evacuation being, nevertheless, somewhat difficult. Now a pinching, now a grumbling or rolling is felt in the abdomen; every paroxysm of this sort of pain is accompanied with a desire to pass urine; the urine was not altered, but went off in greater quantity, for six days. Pinching in the umbilical region, on the left side. Pinching stitch in the abdomen, with emission of flatulence; this is immediately followed by an urging to stool.—Cutting in the umbilical region, several afternoons, with chilliness, diarrhœa and profuse micturition. Violent cutting, early in bed, from both sides to the middle, with emission of flatulence, which does not afford any relief.—The cutting and digging in the abdomen which seemed to be occasioned by the sitting down, are much less painful after rising.—Pinching in the abdomen, which extended into the chest like a stitch, accompanied with emission of flatulence. Sticking while walking, on the left side of and near the umbilicus. Dull, intermittent stitches on one side of and at a distance of a few fingers' breadth from the pit of the stomach. *Sharp stitches in the abdominal cavity, in the region of the os innominatum, resembling splenetic stitches, only while walking; they pass off after having made thirty or forty steps.*—Tearing drawing through the abdomen.—Slight burning in the abdomen, with tasteless eructations that seem to be mingled with something watery.—Grumbling in the abdomen, resembling the croaking of frogs. Loud grumbling in the left, afterwards also in the right side of the abdomen. Rumbling here and there in the abdomen, as from flatulence, painful now and then. Rumbling in the bowels preceding an evacuation, of which several papescent ones occur early in the morning, and one in the evening. The emission of flatulence is accompanied with a sensation as if a quantity of loose stool had escaped, together with the flatulence; this was not the case, however. Flatulence having the smell as of spoiled eggs, for several hours. Itching in the left groin. Dull stitch in the groin. Tensive stitch in the right groin, only during a walk. Boring-digging pain in the right groin. Stitches above the groin, in the hypogastrium, with a stitch-like oppression of the chest. Tensive pain in the right groin when touching it. Cutting and sticking in the region of the abdominal ring; the intestines protruded and formed a sort of sac; the place felt sore to the touch.—Itching-gnawing, fine stinging in the muscles of the left os innominatum. Intermittent

dull stitches in the left side, directly over the os innominatum. Burning stitche, posteriorly, in the region of the border of the left os innominatum, on the side of the os sacrum, during an inspiration. Boring stitche in the os ilium.

**Stool.**—White stool, every day. Discharge of pieces of thick mucus by the anus, for two days; he felt as if he passed wind; the stools were like sheep's-dung, and enveloped in mucus. Long, ineffectual desire for stool in the abdomen, after an evacuation. No stool on the first day; on the second day (after taking another dose) he passed hard stools, after long straining. Spasmodic pushing and pressing in the rectum, as if he could not retain the stool. Frequent desire, without being able to pass anything. Stool, the first portion of which is hard, the second loose; after the evacuation he experiences a few pushes in the forehead, from within outward. Discharge of loose stool, for two days, mingled with a yellowish tenacious mucus, two or four times a day, at irregular intervals. The evacuations and the urging were accompanied with a painful bruising sensation in the region of the first four ribs of the left side, going off after the evacuation. Crawling in the rectum and anus, as from ascarides. Itching in the region of the anus and os coccygis, for many days, and not abating after scratching. Itching of the anus, abating after scratching. Dull pressure in the rectum, between the stools.—Boring stitche in the perinæum.

**Urinary Organs.**—The urine is emitted with difficulty in the night; the emission is followed by burning. Ten copious emissions of urine in one night, with painful pressure on the bladder, going off after the emission was terminated. Copious emissions of urine, even after having urinated previous to taking the medicine. Watery urine. Urine with whitish sediment, for several days.—(The urine spirted out of the urethra when pressing upon the bladder exteriorly.) In the afternoon, while rising from his seat, five or six drops of urine drop out of his urethra suddenly and involuntarily; this takes place four times in succession; every dropping is succeeded by burning in the fore part of the urethra. Burning stitche in the urethra, with desire to urinate.

**Genital Organs.**—One-half of the glans is swollen. Creeping about the glans every day.—*Frequent erections, without sexual desire, but with thoughts about an embrace. Discharge of prostatic fluid.* Itching stitche in the left testicle. *Itching stitche in the right testicle and in the penis,* from behind forward. Burning stitche in the right testicle and in the penis. Twitchings in the scrotum.

**Larynx.**—Some cough early in the morning, when the coryza had passed off. She is attacked with cough and coryza at night. Catarrh, a sort of catarrhal fever; he was hoarse, and felt hot to others day and night; no thirst or sweat, the eyes protruding, with profuse coryza, violent headache and weeping mood. Dry, violent, hollow cough, occasioned by an irritation deep in the trachea, especially when stooping; the cough arrests his breathing. Sort of suffocative cough as is occasioned by water getting into the larynx.

**Chest.**—°Shortness of breath, particularly in talking, with anxiety, redness of the cheeks and lips. °Dyspnœa, during motion in bed; can only lie on the right side and with the trunk raised. °*Danger of suffocation,* when making the least motion or raising the arms. °Sudden suffocative attacks, with anxiety and palpitation of the heart. °Spasms of the lungs, in affections of the heart.—Sensation as of excessive hunger in the chest, with accumulation of saliva in the back part of the mouth.—Pain in the chest, at intervals.—*Violent pressure in the chest below the left clavicle.* Excessive hard pressure in the whole chest, towards evening.—*Strong, painful oppression in the middle of the chest.* Pressure above the xiphoid cartilage when standing. Pressure and drawing in the chest when standing. Painful pressure in the chest after hawking.—*Tearing, with*

*constriction of the muscles of the chest, when standing. Cutting constriction of the chest, with anguish.—Tearing with constriction of the lower part of the chest, above the pit of the stomach, with oppression : afterwards the same pain is felt in the upper part of the chest, below the pit of the throat, accompanied with palpitation of the heart.*—°Spasmodic sensation in the chest, as if proceeding from the pit of the stomach, with arrest of breathing.—Violent pain in the upper part of the left chest, resembling a pain as if sprained, only when turning the body to the right side, when making a wrong step, or when turning the left arm, for a whole day.—Lancinating pain commencing below the left nipple, and extending into the region of the scapula and the upper arm, more violent during deep inspirations.—*Tearing-boring pain from within outward below the right nipple, extending towards the sternum, and changing to a sharp pressure with tearing.* Sudden, drawing, stinging pain along the sternum from above downward. Sticking in the chest, contracting it, so that he was unable to breathe. Stitch in the chest from within outwards, between the acts of inspiration, which is easy. Tensive stitches in the left chest, more violent during an inspiration. Tensive stitch in the right chest and abdomen, continuing during inspirations and expirations, worse when walking, for two hours. Tensive-drawing stitch in the region of the true ribs of the right side, continuing during an inspiration and expiration, more violent when pressing on the parts externally. Continuous tensive stitch in the right chest, more violent during an inspiration and expiration. Tensive-boring stitches in the left chest, continuing during an expiration. Tensive stitch in the false ribs of the right side, continuing during an expiration. Boring stitch in the region of the diaphragm, on the right side, continuing during an inspiration and expiration. Stitch in the chest, in any position, from within outwards; the stitch is especially felt in the sternum. Sharp stitches above the left nipple from without inward, when sitting bent while writing, recurring at various periods; the stitches disappeared speedily when raising his chest. Fine prickings in the right side of the chest. Momentary, violent sticking pain in the left chest, toward the clavicle, preventing the breathing, in the evening. Quick, painful darting in the front part of the chest, as from an electric spark. Darting pains in the outer parts of the upper portions of the chest, below the axilla. Violent stitch in the left side, close below the heart, passing into a sort of creeping for a short while, and afterwards returning with the same violence in the form of a stitch. Pinching stitch in the left region of the diaphragm, so violent that it arrested his breathing, and he had to stand still. Itching stitch below the clavicle. Itching, corrosive stinging near the left axilla, anteriorly. Itching stitch in the left pectoral muscles. Dull stitch in the left chest, continuing during an inspiration and expiration. *Dull stitches in the right chest, continuing during an inspiration. Dull sticking-pinching pain below the right nipple, in the thoracic cavity, from within outward, more violent during an inspiration. Dull stitches in the region where the beats of the heart are felt, a little more exteriorly, recurring regularly as the pulse.* Dull, oppressive sticking in the heart, between the region where the beats of the heart are felt, and the scrobiculus cordis; the same sticking is felt in and above the scrobiculus cordis, and the chest is oppressed.—(For the affections of the heart which have been cured with Spigelia, see Clin. Obs.) *Unusually strong beating of the heart; he frequently hears the beating; the beating could be seen externally through the clothes. Palpitation of the heart and anxious oppression of the chest.* Palpitation of the heart, early in the morning after rising, when sitting, with anxious oppression of the chest; the heart seems to be in a tremulous motion. *The palpitation of the heart increases by sitting down, and by bending the chest forward.* The anguish increases during a deep inspiration, and

when arresting the breathing; he has then palpitation of the heart and oppression; the heart beats more violently, and he feels the pulsations of the heart when laying the hand on the pit of the stomach. *As soon as he sits down after rising, the heart begins to beat violently; the part above the place where the beating is felt feels as if painfully oppressed by a load; at the same time he feels a cutting and digging-up in the abdomen, as if caused by incarcerated flatulence, continuing longer than the palpitation.*

**Back.**—Stitches in the small of the back, worse during an expiration and inspiration.—Twitchings in the dorsal and intercostal muscles. Stitches in the back, opposite the heart. Prickings in the back when walking, shifting to the left side. Painful pricking in the upper dorsal vertebræ. Itching stitch in the dorsal muscles of the right side. Itching in the back, in the region of the right scapula, not going off by scratching. *Bruised sensation in the spine, even during rest.*—Sensation in the left scapula, as of drops of blood pressing through a valve, a kind of bubbling. Dull, boring stitch in the left scapula. Sharp stitches in the region of the right scapula, exteriorly, returning at regular intervals.—Feeling of lameness in the nape of the neck, without hindering motion. Drawing from the nape of the neck along the occiput. Pain in the nape of the neck, preventing one from raising the head after stooping. Painful sensation in the nape of the neck as if gone to sleep, early after rising, when holding the neck still, going off during motion.—Red pimples on the neck, sore to the touch. Sticking in the right side of the neck, with sticking in the ear and parotid gland during deglutition. Tensive pain on the left side of the neck, with hard glandular swelling on the following morning, which is painful to the touch, attended with stinging during deglutition, swelling of the gums and difficulty of opening the jaws, morning-sweat and disappearance of the stinging by pressing on the swelling.

**Upper Extremities.**—Twitching on the top of the right shoulder. Tensive pain in the left axilla, in rest. Burning pain in the left axilla. Itching in both axillæ, especially the left. Pain as if sprained in the shoulder-joint, and in the posterior joint of the thumb and index-finger. His arm frequently went to sleep when writing, so that he was unable to hold his pen. The left shoulder and the arm hang down very heavily when walking, with tension in the fore part of the upper arm. Trembling of the upper limbs. Feeling of weight in the right upper and lower arm, in rest; nevertheless he raises the arm very easily. Drawing pain in the right deltoid muscle, more violent when pressing upon it strongly. Cutting drawing across the deltoid muscle. Pressure with tearing in the middle and the external surface of the right upper arm, more violent when touched.—Twitching in the muscles of the left upper arm.—Itching stitch in the tip of the left elbow. Itching, pricking pains in the bend of the right elbow, obliging one to scratch. Severe stitches in the bend of the elbow, and in the fingers.—*Jerking in the muscles of the left lower arm, directly above the wrist-joint, only during rest.* Aching in the right lower arm. Pain in the right lower arm as if both bones were squeezed with pincers, during rest. Boring stitches in the right lower arm. Itching in the outer parts of the right lower arm. Single sticking jerks above the wrist-joint. *Aching above the right wrist-joint, during rest.* Violent lancinating pains above the left wrist-joint, when moving the index-finger while holding the arm close to the body. Tearing in the carpal joints of the left hand, recurring at regular intervals; soon after a cramp-like tearing is felt in the palm of the hand, not impeding the motion of the hand.—Cramp-pain through the metacarpal bones of the left hand, from the side of the thumb to the tip of the little finger, as if the whole hand were squeezed. Drawing pain through the metacarpal bones. Fine tearing in the phalangeal articulations.—The hands

are pale-yellow, as after a long illness. The hands go to sleep during rest, with tingling in the tips of the fingers, going off when moistening them or when firmly seizing anything with them. Cold hands, with cold clammy sweat, especially in the palms. Creeping in the hands when pressing them together, as if they had gone to sleep. Boring creeping at a small point of the palm of the right hand. Itching in the palm of the hand and in the tips of the fingers, as if frozen. Burning itching in the middle of the palm of either hand. Involuntary drawing of the tendons of either hand, so that the fingers were contracted with cramp-pains in the hollow of the hand. Reddish hard pimple at a spot of the palm of the left hand which had been burning and itching the day previous; the pimple remained for several days with a burning itching sensation.—*Painful drawing in the metacarpal joint of the thumb. Tearing pain in the joints of the right thumb.* Tearing in the articulations of the fingers of the right hand, recurring regularly as beats in music. Single sticking jerks near the posterior joints of the fingers. Burning pains in the back of the posterior joint of the little finger. Burning pain in the outer parts of the articulation of the left thumb. Paralytic pain in the right index-finger. Pimple on the middle finger of the right hand, painless; when pressing on it, it emits yellow pus, and disappears on the day following. Tearing with pressure, in the tip of the left little finger. Itching stinging in the tips of the fingers. Bubbling, dull stitches in the tips of the fingers, as if frozen.

**Lower Extremities.**—Creeping in the calves. Drawing in the legs from above downward, with a feeling of warmth, or as if warmth were coming to the parts; the feet were likewise warmer. Single sticking jerks above the tarsal joints. Early in the morning, when first setting the feet upon the floor, the soles are painful, as if ulcerated. Tensive pain in the left glutei muscles, when walking. Heaviness of the lower limbs, he has to drag them, he feels a humming in them. Great lassitude of the lower limbs, especially the thighs, even when sitting. Bruising pain in the groin, and in the upper and inner part of the thigh, towards the perinæum, as after a long ride, in a person who is not used to riding. Bruising pain in the anterior muscles of the thighs, only when walking. Drawing pain in the right hip, and in the muscles of the right thigh. Below the neck of the left femur, in the external and posterior muscles, he experiences, at a small spot, intermittent, burning, sharp stitches when sitting, diminished by rising, but more violent than before when sitting down again. *Itching in the skin, more in the thighs than legs, frequently returning after scratching.* Continual corrosive itching of both thighs, as if an eruption would make its appearance; scratching does not relieve it. Creeping itching of the right thigh, going off by scratching. Tension in the muscles of the anterior thigh, only when walking. Tension in the right thigh, only when sitting. *Itching, continuous stitch in the left thigh. Tensive, continuous stitch in the left thigh, when walking, ceasing when standing, and afterwards returning when sitting down.* Drawing tearing in the right thigh, when sitting. Tearing, with pressure, in the outer parts of the left thigh, from the knees to the os innominatum, as if in the periosteum; the pain was more violent in those parts where pressure could be made on the bone. Aching in the right thigh, more violent when pressing on it. Aching above the right knee when sitting, disappearing by motion. Boring pain above the right knee-joint, only during rest.—Tearing tension in the outer side of the left knee-joint, when setting down the foot in going up stairs. *Tearing pain, as if sprained, in the left knee-joint, only when walking, so that he is sometimes obliged to limp, on account of his not being able to bend the leg.* Sharp, deep pricking in the outer parts of the right patella, when sitting. Severe prickings through the knee, when bending it; only when

walking the pricking ceased for a few moments.—Single jerks in the outer parts of the patella. Compressive pain in the knees, mingled with drawing and striking; the pain increases the longer he walks. The knee is painful when touching it, as if bruised. Bruising pain in the interior of the knee-joint, when bending the knee. Digging-up and great uneasiness in the left knee; he had to change its position all the time, to bend it, to stretch it, etc.—Short-lasting feeling of heaviness in the right leg, when sitting. Itching digging-up in the left tibia below the patella, during rest. Tensive stitch in the left tibia, during rest. Drawing in the legs from above downwards, with a feeling of warmth, or as if warmth were coming to the parts; the feet were likewise warmer.—Creeping in the calves. *Sticking in the calf, accompanied with jerking and pulsations in the patellæ, when the knees are stretched.* Sensation in the right calf as if drops of blood were pressing through a valve, a sort of bubbling. Digging-up pain in the right calf, interiorly, more violent when walking. Cramp in the left calf. Tensive drawing in the left calf, when walking. When sneezing he experiences a tremulous chilliness through the legs, from above downward.—Burning pain above the right malleolus internus. Fine boring stitch in the right malleolus internus, during rest. Pain when bending the foot up and down, as if the tendons around the joint were too short, a cramp-like sensation. Single sticking jerks above the tarsal joints. Smarting drawing in the tarsal joint, with a feeling of soreness. Hard pressure as from a hard stone in the tarsal joint, accompanied with drawing in the joint, when standing.—Darting tearing in the dorsum of the foot. Intermittent tearing in the metatarsal bones of the left foot. Intermittent tearing in the left foot, behind the toes. Itching of the dorsum of the left foot, during rest, not going off by scratching. Itching-boring stitch in the dorsum of the right foot, during rest, obliging him to cry out violently. Burning pain in the dorsum of the left foot. Digging-up, with pressure, in the right foot, behind the toes, only during rest.—Fine tearing in the muscles of the left toes. Wart-like excrescence on the second toe of the left foot, without sensation, disappearing again after three days, and leaving a white cicatrix behind. Wart-like excrescence on the second left toe, painfully smarting, but burning when the shoe presses on it, like a corn; it left a white thick cicatrix. Itching stitch in the second toe of the right foot. Creeping in the tips of the right toes, only during rest. Itching stitch in the sole of the right foot, continuing during motion. Violent stitches in the sole of the left foot, when sitting. Boring-itching stitch in the ball of the second and third toes. Sensation in the sole of the left foot when stepping, as if the parts were too much stretched and too short, occasioning a stitch-like pain. Itching creeping in the sole of the right foot. Early in the morning, when first setting the feet on the floor, the soles are painful as ulcerated.

**Sleep.**—Constant yawning (immediately).—Yawning without drowsiness. Frequent desire to sleep, which he is, however, able to resist. Excessive drowsiness in the morning. Drowsiness, with yawning, as if he had not slept enough. Irresistible drowsiness in the evening as long as he remained up; but as soon as he had lain down, he was unable to sleep for a long time. Long siesta, contrary to habit. No sleep before midnight, every night, but no pain. Constant restlessness in all his limbs at night; he has to change the position of his limbs all the time, to bend or stretch them.† *Restless sleep, frequently disturbed, full of anxious, frightful dreams, for example: that the lightning had knocked away his shoulder. After lying down he remained awake until late in the night.* Sleep disturbed with many dreams which he does not recollect. Stupified

† This restlessness was very soon relieved by Aurum.

sleep.† Sleep disturbed with vivid dreams, which he is unable to recollect; after midnight he wakes frequently, and is in a half-waking state.—*Confused dreams, during which his mind is so busy that he feels weary in the morning; on waking he does not recollect his dreams.* Vivid dreams of known things, of one and the same object, for a long time. Vivid dreams about fire and dispute; he thinks it is time to rise at one o'clock. Anxious dreams of fire and ghosts. Dream about an embrace with emission, without erection.—Feels more weary in the morning than the night previous.

**Fever.**—Violent chilliness over the arms and shoulders. Violent chilliness through all the limbs, the whole day, without thirst, two days in succession. Violent chilliness and coldness immediately after dinner. Chilliness in the afternoon, followed by heat and thirst. Fever: chilliness in the evening, with cold hands and distended abdomen, without thirst; next night, while lying quietly on his back, all his joints seem bruised, he has vivid, pressing dreams, talks in his sleep, his body feels hot, his mouth, nose, and eyes dry, without thirst. Chilliness for half an hour in the evening, when lying down, followed by heat and sweat all over, almost the whole night. Alternate chilliness and heat the whole day, with redness of face. *Chills every morning after rising.* Thrills of shuddering over the whole body, at intervals of from two to ten minutes; they seem to proceed especially from the region of the chest. Sometimes the chills extend from the pit of the stomach only as far as the abdomen and the lower limbs, sometimes also as far as the back. *A slight movement of the body brings on chills.* Shaking chills without thirst, early in the morning, with tolerable lightness in the movements of the fingers, and brightness of mind. *Occasional chilliness every morning after rising, for a couple of hours.* *Chilliness of the whole body without thirst, only in the morning, several mornings in succession, returning at intervals, and extending from the feet upwards.* *Every morning he has chill creepings,* now only over the feet, then over the head and hands, now over the back, or the chest and abdomen, then over the whole body, without thirst. *Slight chilliness in the back, toward the abdomen as far as the umbilical region.* Thrill of shuddering over the whole body, without heat or thirst. Sensation of goose-flesh on the right thigh, without any chilly feeling. Chilly feeling and goose-flesh on the arms; he dares not approach his arms to the body, for then he experiences a disagreeable, shuddering sensation. Thrill of cold shuddering over the whole body, except the arms, with sensation as if the hairs were standing on end. Thrill of shuddering over the whole body, with heat over the whole body, without thirst. Cold sensation over the whole body, without any coldness to others; his skin was warm to the feel all over, especially on the chest. Internal feeling early in the morning: cold thrills at intervals from five to ten minutes, with increased warmth of the skin; the chilliness seems to start from the pit of the stomach, and to spread over the trunk, head, and the upper limbs, without thirst. Coldness of the tips of the fingers, the remainder of the hands being moderately warm. Cold hands, hot face, no thirst. Feeling of heat all over, and especially heat in the face; nevertheless he longs for the warm bed in the evening. *The hands feel cold to the face, but warm to each other; the palms are a little moist and clammy.* Feeling of heat in the face and hands: whereas the hands feel cold to the face and the face cold to the hands. Alternation of coldness and heat on the left side of the forehead, no change of temperature being perceptible to others. *For five days in succession he felt a chilliness in the morning after rising, at the same hours, and heat at noon (five hours afterwards), mostly on the trunk, but more so in the face, with*

† From the smallest dose.—*Berglius.*

*redness, but no particular thirst.* Alternation of heat and chilliness; the chilliness being especially felt on the back, the heat in the hands and face. As soon as he lies down he feels chilly; after which he is covered with a profuse fœtid sweat.—Heat, with great desire for beer. Great heat, with sweat over the whole body, especially about the head, without thirst. Increased warmth on the back; hands and abdomen feel to him burning hot; he feels hot all over. Feeling of heat in the body, without any heat being perceptible to others. Heat in the lower limbs, at night, without sweat or thirst. Feeling of internal heat at night, with dryness of the mouth, without thirst. Flushes of heat over the back, after supper. Feeling of heat in the spine. Flush of heat over the face, without redness.—Pulse feeble and irregular, at times quick, at others slow. Pulse falling from 72 to 54, during the morning fever.—Sweats easily on being slightly covered.

**General Symptoms.**—When walking, every wrong step he makes causes a painful jerking through the limbs.—He feels bruised all over; when rising from a seat he feels giddy, his legs feel unsteady, as if he would stagger.—Pain, as if sprained or bruised in the right shoulder-joint and in the posterior joints of the thumb and index-finger. Trembling of the lower, and then of the upper limbs.—Small blotches on the lower limbs, after scratching them. The whole body is very sensitive to the touch; when knocking any part of the body against anything, the part feels painful with shuddering; even when stepping, the body is painfully concussed. Prickings in several parts of the body, after a moderate walk, when going up stairs.—*All his limbs are affected, especially when walking; his spine feels bruised.* He does not feel well in any part of his body; his limbs feel heavy and weary; he is not disposed to work, although his mind feels cheerful. Tearing in the limbs, either directly above or below the joints, close to the bones, as if they were scraped. °Arthritic lancinating tearing.—Great heaviness in the upper and lower limbs; after going up stairs he breathes heavily.—He feels intolerably hot when taking but moderate exercise, especially in the face; the whole body perspires when the exercise is more violent. He is very sensitive to cool air. Great lassitude, especially when going up stairs. Great lassitude in the morning; all his limbs feel heavy; he dislikes to stir. Weariness when walking, standing or lying; he is almost unable to do anything with his hands, or even to dress. Weakness of the body and tremor of the hands when seizing anything. Great lassitude after a walk. Great lassitude of body and mind, especially after standing. Great debility, when hungry. When walking in the open air, he is at first strong, but soon feels weak, especially in the muscles of the thighs, with an anxious pressure on the chest, in consequence of which he would like to eructate, which he is, however, unable to do; he obtains relief by an urging to stool and emission of flatulence. In the evening, while in the open air, he feels very sick and anxious, with internal heat, and has to hasten back to his room, where he does not feel much better. After a moderate exercise, he feels so debilitated, that he imagines that he is on the point of dying.—Convulsions, death.

**Characteristic Peculiarities.**—All the symptoms are worse in the afternoon.

## 221. SPONGIA TOSTA.

SPONG.—See HAHNEMANN's Mat. Med. Pura, IV.

COMPARE WITH—*Acon.*, *Dros.*, *Hep. s.*, *Iod.*, *Phosph.*—After Spong. is frequently suitable *Hep. s.*

ANTIDOTE.—Camphor.

## CLINICAL OBSERVATIONS.

According to Noack and Trinks, the following affections have been cured with Spongia: affections of the lymphatic vessels and glands.—Glandular swellings.—Bad effects from abuse of Cinchona in fever and ague: at the time of the paroxysm, excessive weariness, obliging one to lie down.—Gastric-rheumatic angina of little children, with rattling breathing, without cough or hoarseness, dulness of the head, sopor, constipation.—*Orchitis*, at times cured with Spongia alone, at times in alternation with Clematis.—Swelling of the testicles with hardness, but little inflammation.—*Chronic orchecocele*: increasing swelling of the testicle, firm, smooth, round swelling of the size of a fist, without alteration of the external skin, generally painless, except some dull pains or shooting stitches at intervals; the testicles are sensitive to pressure, with drawing in the spermatic cord and loins.—*Torpid croup*: little irritation in the throat with coolness of the skin, dry cough, considerable oppression of breathing, great hoarseness (*Iod.* had no effect in this case).—*Angina membranacea* (giving first Aconite to remove the inflammatory symptoms).—*Croup*: when the cough is not very violent, and when the windpipe is very dry, with hoarseness, oppressed breathing with long inspirations, or as if the air were cut off by a suddenly closing valve, or as if a plug had lodged in the throat, with raising and depressing of the larynx during breathing, the head is bent backwards, the neck is pressed outwards, the voice suddenly gives way when talking, with anguish, feeling of suffocation, sawing respiration, pale face, anxious look.—Trinks thinks that in most cases of croup, Spongia is sufficient, even to overcome the inflammatory symptoms.—*Acute bronchitis*: seated, sticking cramp-pain with pressure below the throat in the upper part of the thoracic cavity, under the sternum, with constrictive, oppressive sensation of pain over the chest, frightfully oppressed, quick, anxious, irregular breathing which is sometimes completely arrested, with rattling and boiling sensation in the chest, dry, rough, hollow, barking cough without expectoration, hoarseness, dryness and roughness of the throat; the patient sits up in bed, with dry, hot, red skin, pulse hard and frequent (preceded by Aconite).—Chronic inflammation of the mucous membrane of the trachea with hoarseness, roughness, burning in the trachea, occasional expectoration of tenacious mucus.—*Laryngeal phthisis*: chronic pains in the larynx and trachea, with difficulty of speech, hoarseness, expectoration of lumps of yellow mucus.—Catarrh of the windpipe with dry cough and hoarseness without fever.—Hoarseness and catarrhal cough.—*Struma*.—Asthma thymicum.—Dry irritating cough, arising from burning titillation in the larynx.—Chronic cough.—Asthma. Doctor Neidhard has employed it successfully in the following affections: chronic affections of the windpipe characterized by sensation of choking, swelling in the larynx, and external swelling, tickling in the throat, expectoration of a yellowish-white mucus of a saltish taste, soreness, dryness, hectic fever every afternoon; catamenia every two weeks; preceded by colic, soreness in sacrum, craving in stomach. Sulph. and Calc. carb. removed the hectic fever and the expectoration, but after a shorter or longer period all the symptoms re-

turned, although in a diminished degree; the same was the case with Jod., Sang. Can., Dros., Hep. s., Lach.; even if these medicines relieved the other symptoms, they never relieved the enlargement and choking, but after a while it always came back. Spongia, taken for months alone, produced a radical cure. The patient was of a consumptive family and of a dark complexion.

## SYMPTOMS.

**Mind and Disposition.**—Paroxysms of *anxiety, with heat*, pain in the pit of the stomach, weeping, inconsolable, she wants to die. Great anguish and restlessness during the night's sleep, with great irritability, impatience and weeping mood in the morning. She is very timorous, and is unrelentingly pursued by a frightful image from the past. Headache, loss of appetite, drowsiness, lassitude all over, ill-humour; everything was disagreeable to her.—Apprehensive as if she were threatened by a misfortune. She inclines to start, and does start at every trifle; when starting she always feels a heaviness in the feet. She is not satisfied with the quantity of work done; she cannot do it to her satisfaction.—Taciturn and dissatisfied, or indolent.—Insolent, contradictory.—Mischievously witty.—Alternately cheerful, weeping, quarrelsome, and vexed mood. *Irresistible desire to sing, with excessive mirth*, for half an hour; afterwards absent in mind, and not disposed to work, for an hour.

**Sensorium and Head.**—Weakness of the head, and a dulness which unfits him for any kind of mental labour, accompanied with a feeling of weariness through the whole body. The head feels dull and stupid. Vertigo when sitting, as if the head would fall to one side, with a feeling of heat in the head. Giddiness as if one would fall backward. Vertigo in the head, as if tipsy. The head feels heavy the whole day. Heaviness of the head after resting it on the table. Painful heaviness of the occiput as if full of lead, while walking. Heaviness and fulness of the head, increased by stooping.—Drawing pain in the vertex (immediately), violent pressure in the forehead and occiput, as if they were pressed together, at noon.—Painful pressure in the vertex. Dull painful pressure in the right frontal eminence, from within outward. *Dull headache in the right hemisphere of the brain, when coming from the open air into the warm room.* Painful pressure in the right parietal bone, from within outward, when lying. Dull painful pressure, from before backward, in the forehead, above the eyes, as far as the occiput and nape of the neck, for ten hours, until he falls asleep. Sharp pressure in both temples, externally. Pressure on the left side of the forehead. Painful pressure on the right side of the head and neck, descending. Pressure in the right temple from within outwards.—Violent tearing pain in the left temple, close to the orbit, occasioning a sensation of pressure in the left half of his eye.—Violent pressing pain in the left occiput, as if it would burst.—Jerks through both sides of the head, especially in the temples as far as the occiput, whenever he gives a jerk with his arms, or sets his foot down firmly.—Occasional pain in the side where the (small) goitre is; beating in the head, descending down to the cheeks and extending into the neck in the shape of a tearing.—Dartings in the forehead, increased when walking.—Stinging, with pressure, now in the forehead, now in the occiput, only during motion, accompanied with a sensation of burning heat from the region behind the ear, across the occiput down to the nape of the neck.—Prickings on the left side of the forehead. Boring prickings in the left side of the forehead when walking in the open air, as from within outwards. *Sharp stitches in the left temple, externally, as far as the forehead.* Beating in the left temple. Buzzing like a double pulsation in the region of the ear, when lying on it, on either side. Sensation in the forehead as if the blood had become accumulated in it. Increased rush of blood

to the head, with heat on the forehead and throbbing of the carotids. Sensation in the head as if everything would issue through the forehead.

**Scalp.**—Gnawing pain on the top of the head, externally. Disagreeable sensitiveness of the scalp, especially when moving it. Burning in the right side of the scalp. Sensation as if the hairs on the top of the head were standing on end, or as if some one were moving them; most violent when moving the body.

**Eyes.**—Painful pressure over the right eye, rather externally. Pressure below the eyelids, all around. Pressure and sticking in the right eye.—Tension in the region of the left eye, near the temple. Early in the morning, when in bed, the left lids close; she can open them only with difficulty. When staring at one point, she has headache and her eyes run.—The eyes are sunk deep.—Yellow crust-like eruption in the region of the left eyebrow, painful only when touched.—The eyes look dull and the eyelids are swollen, as after intoxication, or as if he had been revelling all night; he feels debilitated and drowsy.—Sudden stitching drawing in the region of the outer angle of the left orbit, extending around the upper and lower border of the eye, towards the inner canthus.—Tensive sticking pain in the left outer canthus, most violent when moving the eyes; going off by contact.—Itching of the lids. Stinging itching below the left eye, somewhat abating by rubbing.—Pricking in the region of the eye.—Oppressive heaviness in the eyelids, as if they would close.—Sticking, and lastly aching pain in both eyes, in the evening.—Burning in the left eye around the eyeball. Burning pain in the outer surface of the left lower eyelid. Redness of the whites in the eye. Suppuration of the eyes. Considerable lachrymation.—She has great trouble in distinguishing distant objects.

**Ears.**—Pressure and pushing in the ears. Otalgia, a contractive pain. Fine stitches in the right ear, from within outward, as if through the tympanum (immediately). Cramp-pain in the left ear, when walking in the open air. Drawing pain in the internal right ear. Stitch darting from the upper jaw into the interior of the right ear, in the evening when in bed.—Ringing in the ears. Hardness of hearing. Red swelling of the anterior border of the concha of the right ear, with a pimple in that swelling, which emitted a purulent humour, for nine days; the ear was painful when pressing on it. Inflamed pimple close to the meatus auditorius, which became finally covered with a scurf, and remained for several days painful to the touch. Tumours on the left ear, painful to the touch. Burning in the orifice of the right ear. Sore pain in the cartilage of the ear, not altered by contact. Tensive pain in the swelling close to the orifice of the meatus auditorius, and creeping in that swelling as if it would form an abscess and burst; occasional stitches are felt in it.

**Nose.**—Tearing in the nose.—Arrest of mucous secretion in the nose.—Eruption on the tip of the nose, and on the lips.—Violent bleeding.—Tensive contraction over the root. Titillating stinging in the left nasal bone.—Dry coryza. Fluent coryza.

**Face.**—Pale face. Eyes sunk. Heat on one side of the face, even by merely thinking of it. Redness of the cheeks, without heat. °Blueness or redness, with puffiness of the face, also with expression of anxiety.—Tearing, with pressure, in the right malar bone. Stinging on the cheek or left upper jaw. Cramp-pain in the region of the left upper jaw, or extending from the articulation of the left jaw over the cheek (during supper).—Swelling of the cheek.—Stinging itching of the left cheek.—Eruptions on the lips. Stinging of the lower lip.—Burning of the chin as if an eruption would break out, worse by putting the skin on the stretch. Pain of the chin, on touching it, as from subcutaneous ulceration.

**Jaws and Teeth.**—Painfulness of the lower jaw to the touch. Glandular

swellings, also tense and painful to the touch, impeding the motion of the neck.—Pain as if something had got between his teeth in chewing. Pain as if the posterior right molars would be lifted out of their sockets and were swollen, as well as the gums.—Stinging in the upper incisores. *Itching* in all the teeth.—Feeling of looseness and dulness of the molars, when chewing.—The gums are swollen and painful when chewing.

**Mouth and Pharynx.**—Accumulation of mucus in the mouth.—*Vesicles* on the border of the tongue, with some pain, or on the inner cheek with stinging burning, not allowing one to eat anything solid.—Faint speech.—Stinging in the throat, morning and evening, particularly after a meal, with sensation of pressing from within outward, externally. Burning in the larynx, then in the ears.

**Appetite and Gastric Symptoms.**—Sweetish taste in the mouth. \**Bitter taste* in the throat, not in the mouth. Tobacco has a scraping bitter taste in the mouth and fauces.—Increased appetite. Violent hunger.—Empty eructations. °Eructations, with cutting and tearing in the stomach. Sour regurgitations. Repeated *hiccup*. Bitter eructations. Desire for cold water in the evening. Accumulation of water in the mouth, with nausea. Nausea when smoking as usually. Disposition to vomit, without vomiting.

**Stomach.**—Pressure in the pit of the stomach, in the afternoon. Aching pain in the region of the stomach, continuing the whole forenoon. She cannot bear any tight clothes around the trunk, especially around the region of the stomach. Disagreeable sensation of laxness in the œsophagus and stomach, as if he had drank a quantity of tepid water for several hours, °also with sensation as if the stomach were open. Sensation of internal coldness in the pit of the stomach, with fulness in that region.

**Abdomen.**—Stitches in the region of the liver.—Spasms in the abdomen. Painful contraction below the stomach, on the left side, especially when lying on the right side.—*Pricking* in the abdomen, with loud rumbling.—Frequent *pinching* in the abdomen, abating after emission of flatulence. Colic, pinching in the whole abdomen. Pinching deep in the abdomen, when sitting; it obliges him to get up, he imagines he has to go to stool; the pain abates immediately after rising, and disappears entirely when stooping while standing.—*Cuttings* in the epigastrium, after a meal, in the morning. Cutting in the abdomen after supper, in the direction of the left chest. Violent colic after breakfast, obliging him to bend the abdomen double; accompanied with great desire for stool, the fæces being natural but scanty.—Fine stitch in the outer region of the navel.—Tensive pain in the epigastrium when walking, worse on stooping. Tensive pain in the epigastrium, when sitting.—Digging-up sticking in the abdomen, on the left side, only during an expiration, and worse on stooping.—Sensation as of something alive burrowing under the abdominal wall, above the left hip, in the left side, on which he is resting in bed, in the morning.—Strangling sensation in the left side of the abdomen, becoming more painful by pressing on the part with the hand. Strangling sensation deep in the abdomen, relieved by the emission of flatulence, but increasing again soon. Dull stitch in the psoas-muscles of the right side.—Heat in the abdomen when smoking, which rises into the chest, the rest of the body feeling chilly.—Fulness in the abdomen, after a meal. Grumbling and empty rising. Pain in the inguinal ring, as in inguinal hernia. Cramp-pain in the left groin, while sitting. Glandular swelling in the right groin, with tense pain in walking. Tearing pain, with pressure, in the abdominal ring, only when sitting, on both sides, at different times. Qualmish feeling in the abdomen, accompanied with frequent liquid stools.

**Stool.**—\*Hard stool, delaying seven hours. (The first portion of the fæces

is hard, the latter soft.)—White diarrhœa.—Bruising pain in the region of the anus, almost like soreness. Every evacuation is preceded by stitches in the anus and grumbling in the abdomen. Emission of flatulence, and a loose evacuation.—Pressure in the lumbar region, occasioned by flatulence, during stool. Sore pain at stool, for some days. Tenesmus in the anus, during stool, as if diarrhœa would set in.—Tensive pain from the middle of the abdomen to the anus.—*Ascarides* are passed every day.

**Urinary Organs.**—Sensation in the neck of the bladder, as if he would urinate. *Frequent micturition.*—Inability to retain the urine.—Frequent desire with little discharge.—Thin stream. (The urine looks frothy.) The urine deposits a thick, grayish-white sediment. The clear, saffron-coloured urine deposits a yellow sediment when standing.

**Male Genital Organs.**—Voluptuous itching of the tip of the glans, for several hours, obliging him to rub. Itching burning of the scrotum and the body of the penis, several times. Painful drawing stitches from the body of the penis through the glans. Simple pain of the scrotum, also when touching it.—Squeezing, strangulating pain in the testes.—Long, rather dull stitches from the testes to the spermatic cord.—Aching *\*swelling of the testes.* °Orchitis. Swollen, painful spermatic cord.

**Female Sexual Organs.**—Pain in the back, afterwards palpitation of the heart, previous to the menses, the whole day.—Drawing in the upper and lower limbs during the menses.—The menses appear too early and too profuse (immediately).

**Larynx.**—(For the affections of the larynx, and the kinds of cough which have been cured with Spongia, see Clin. Obs.) *\*Hoarseness*, cough and coryza, very violent. Scraping, burning and constriction of the larynx. Dryness in the region of the larynx, increased by hawking. Difficult respiration, as if the throat were closed with a plug, and as if the air could not pass. Hollow *\*cough, with expectoration*, day and night. Painful pressure below the short ribs when coughing. Hawking of mucus. Pain in the chest and trachea when coughing, with roughness in the throat. *\*Constant cough* from a deep spot in the chest, where he feels a pain as if that part of the chest had become sore and bleeding from the cough. Dry cough. *\*Dry cough, day and night, with a burning in the chest*, as if some hot substance were in the chest; the cough diminishes after eating and drinking. (Frequent night-cough for two minutes, with ill-humoured expression of countenance.)

**Chest.**—Violent asthma. Slow, deep breathing, as after exhaustion, for several minutes. She became suddenly debilitated after an exertion; the chest was especially fatigued; she was almost unable to speak, with heat in the face and nausea; in a few hours heaviness in the head. Hurried, panting breathing after a dance. *She becomes weak after every exertion, no matter how little; the blood rushes to the chest, the face becomes hot, the body begins to glow, the veins are distended and she loses her breath; it takes her a long time to recover herself.* After a moderate exercise in the open air she becomes suddenly weak and sinks down on her chair; great anguish, nausea, paleness of face, rush of blood from the heart to the chest, as if she would vomit blood; her eyes close involuntarily, almost spasmodically; tears press out of the eyes through the closed lids; she is conscious of herself, but her will has no control over the action of her limbs.—Stinging itching in the left side of the chest, near the shoulder. Boring stitch in the right intercostal muscles, continuing during an inspiration and expiration. Violent prickings in the right side of the chest, from within outward. Drawing stitches in the left chest when sitting bent, especially when taking a slow, deep inspiration. Severe, intermittent stitches in the left

side of the chest. Drawing stitches below the second rib of the left chest, only when walking. Fleet, painful stitches in the right side of the chest; if he rubs the part, he feels as if a load were descending there behind the skin.—Cutting pain with pressure in the left side of the chest, when taking a deep inspiration; not much pain otherwise.—Sticking-pinching crawling in the left side of the chest, in the region of the sixth, seventh rib, becoming more painful by external pressure. Pressure in the left chest, sometimes accompanied with stitches in motion and rest. Pinching jerk in the left side of the chest, from without inward. Sudden pain in the muscles of the chest and back, left side, as if a broad, pointed body were pressing upward; a broad pressure with many fine stitches. Fine stinging in the outer parts of the chest and arms, for several days.

**Back.**—Violent stitch in the small of the back. The small of the back and the nates are very numb. Dull pain in the region of the right sacro-iliac symphysis, when standing. °Drawing tearing and sticking in the small of the back.—Aching in the small of the back, only when walking, especially when setting down the left foot. Fine tearing in the region of the os sacrum, from the right side to the left, superiorly, only when sitting. Pressing sensation in the spinal marrow, going up and down, when sitting straight.—Feeling of coldness in the back, in the region of the last ribs. Burning itching of the back, at night; he merely slumbers, tosses about constantly, with heat of the body, no thirst; especially towards morning.—Painful shooting stitch in the region of the right scapula. Pain in the outer regions of the scapulæ, as if something pointed had been pushed in; a constant sticking pain, accompanied with soreness. Sensation in the thyroid gland, and in the cervical gland, during an inspiration, as if air were rushing up and down in those parts. Pain as if the cervical glands near the larynx and trachea were swelling. Sensation of pressure in the goitre, several times a day. Continual prickings above the pit of the throat, externally, in the lower part of the goitre. Several large pimples under the chin on the neck, painful when pressing on them. Several glandular swellings below the right lower jaw, impeding the motion of the neck; a tensive pain is experienced in them when touching them. Sticking pain in the goitre when swallowing, slight aching between the acts of deglutition. Stitches in the goitre; also between the acts of deglutition. Stiffness of the neck, when turning it and when stooping. Intermittent, slow pressure on the right side of the neck, as if the skin were pressed between the fingers; that same region was painful to the touch along the carotid artery. Painful pressure above the thyroid cartilage, increased by touching it (immediately). Aching pain in the region of the larynx while singing. Tension of the right cervical muscles, when bending the head backward. Sensation in the goitre as if everything in it were vacillating and moving about in it, as if alive, especially when swallowing. Sensation in the goitre as if there were a movement in it, a bloating and pressing as if everything would come out. Painful tension on the left side of the neck near the pomum Adami, when turning the head to the right side. The region of the thyroid body feels indurated. Twitching of the muscles of the right side of the neck when lying. Fine darting stitches in the outer region of the larynx at different periods. Shooting stitch on the left side of the neck. Long slow stitches in the right cervical muscles, immediately on waking from sleep, disappearing during deglutition, and afterwards reappearing again immediately. Fleet creeping in the outer region of the neck. Painful cramp in the cervical muscles after opening the mouth widely, and afterwards biting the teeth together firmly; the lower jaw was drawn down violently, with a heaviness in the articulation of the jaw as if it would be dislocated. Drawing prickings through the left side of the neck. *Painful feeling of stiffness in the left side of the nape of the neck when turning the head to the right side.* Frequently-

returning, cracking pain with pressure on the left side of the nape of the neck, close to the scapula, not influenced by motion. Cracking in the nape of the neck when stooping.

**Upper Limbs.**—*Jactitation of the muscles around the left shoulder-joint.* Burning on the top of the left shoulder. Fine stitches in the axilla, when sitting. Constant pricking itching in the left axilla, when sitting.—Sticking drawing through the upper arm. Stitches in the elbow-joint, when moving it. When bending the arm he feels a stitch in the tip of the elbow; this is followed by a tearing in the elbow-joint, as long as he keeps his arms bent. Aching in the tip of the left elbow.—Pain in the left *lower arm* as if the bone were compressed. Large blisters on the right lower arm. Drawing pain in the lower arms. (Burning in the lower arms and hands.) Cramp-pain below the elbow-joint, in the upper part of the forearm, with slow bubbling, especially when leaning the arm on anything. Severe boring stitches, from within outward, in the internal muscles of the right forearm. Heaviness in the forearms. Trembling of the forearms and hands (in a few minutes).—Drawing-aching pain in the right wrist-joint. Crumbling sensation in and behind the wrist-joints. Several stitches in the right wrist-joint, during rest. Tensive pain in the left wrist-joint, during rest and motion. Violent drawing in the left wrist-joint.—Itching in the ball of the left thumb, which cannot be removed by rubbing. Swelling of the hands; she was unable to bend her fingers. In one point of the palm of the hand he feels a pinching, with sensation as if the skin were drawn towards that point. The tips of the index-fingers become numb, without turning pale. Cramp-pain in the ball of the left thumb, only when moving the hand, the whole day. Painful drawing in the posterior joint of the left thumb, extending into the forearm. *Cramp-pain in the ball of the right thumb, continuing the whole day, and spreading into the thumb when the hand is moved.* Continuous sore stitch in the region of the anterior articulation of the thumb. The metacarpal joint of the left middle finger became big and red, and felt rigid when bending it.—Aching pain in the posterior finger-joint of the right hand.

**Lower Limbs.**—Quick jerkings of a part of a muscle, in the region of the right buttock. Pain in the internal part of the thigh, aching posteriorly. Fine, excessively-painful stitch in the skin of the internal portion of the right thigh. Severe boring stitches from within outward, in the outer parts of the right thigh, near the hip. Continuous drawing stitches in the upper part of the outer portions of the thigh, directly below the left groin, especially when walking. Titrilating itching of the outer parts of the left thigh, close to the groin, obliging him to rub the parts. Tension, as if a muscle were too short, in the outer parts of the upper extremity of the thigh, whenever setting down the foot; the tension is always accompanied by a stitch. Pulsative sharp stitches through the right thigh over the knee, early in the morning when in bed. Sticking pain, with pressure, over the right knee, when sitting. Heaviness in the knee-joints, perceptible when walking. Weariness in the knees when walking, as if they would give way, even when setting down the foot firmly. Drawing pressure, in paroxysms, in the region of the bend of the left knee, felt only when bending the knee, and alternating with a similar sensation in the axilla. Dull sticking in the left knee, in the evening when lying down (continuing during motion), for a quarter of an hour. Continued prickling itching in the bends of the knees, when walking, obliging him to scratch. Aching pain in the tendon of the right outer hamstring, more violent when walking than when sitting. Violent drawing in the left knee; afterwards profuse sweat, at night. After a short siesta the legs go to sleep, first the right, then the left; when trying to walk, the left leg was spasmodically drawn up to the thigh; even when sitting he was not able to keep

it stretched, it was then drawn spasmodically backward. Tearing in the tibia, the whole forenoon. Sharp stitches in the right calf, when walking. Great uneasiness in both legs; he has to change their position frequently. Sensation of heaviness, with tearing, in the left tibia, close to the tarsal joint. When walking fast, he experiences a sensation in the lower part of the left tibia as if a load were hanging from it. Drawing tearing from the right tarsal joint to the knee. Drawing pain from the right foot to the thigh.—Creeping in the left foot, coming on when walking, and not going off when sitting. Tearing in the malleoli; the feet are heavy as lead, the heaviness ascending in the tibiæ.—Prickings in the heels, when sitting down after a long walk, for one hour.—Prickings in the right heel from below upward, when sitting. Severe pricking in the right heel, from within outward, when standing. Aching pain in the right heel, increasing when walking.—Voluptuous itching in the dorsum of the toes of the right foot, early in the morning, when waking, obliging one to scratch.

**Sleep.**—Great weariness and disposition to sleep. *Sleepiness with yawning without being inactive, in the afternoon.*—*Sleep disturbed with dreams.* Sleepless almost the whole night, with frightful dreams about murder, (sixth night). Sleeplessness until after midnight. He was unable to sleep; as soon as he fell asleep, he became delirious; his forehead felt thick and sore to the touch, an aching pain over the eye, worse when stooping, as if everything would come out of the forehead; he felt chilly and cold in the back; this lasted twenty-four hours, during which time he felt chilly. She spoke several times loud in her sleep, but not anxiously. He frequently wakes in the night, as in affright. For four nights in succession his sleep is disturbed with many dreams; he wakes about midnight, but he feels so restless that he is unable to fall asleep again; when closing the lids he sees the most vivid images: at one time he imagines that a battery is fired, at another that everything around him is in flames; at times scientific subjects crowd upon his mind; in short, a number of objects pass through his fancy, disappearing as soon as he opens his eyes, and reappearing when closing them; this lasts until morning.—Sad dreams. Fatiguing dreams. Vexatious and anxious dreams, exciting a desire to weep.

**Fever.**—Cold hands. Cold feeling in the lower limbs.—Coldness, paleness, and sweat in the face, with heat of the whole body. Stretching of the upper and lower limbs. Violent chilliness on the back, not going off by the warmth of the stove. Shuddering and chilliness over the whole body, especially in the back, although he was standing near the warm stove, without thirst, continuing for two hours. Fever: early in the morning he has pain in the head and abdomen, followed by violent chills, with cold bluish hands and some thirst; afterwards, when lying down, he feels a dry, burning heat, with some thirst and a good deal of uneasy slumber, for 36 hours; during the night, when waking and moving about, he feels a nausea and vertigo, with slight sweat every twelve hours, when the heat abated; lastly tearing and sticking in the left eye and cheek, and eruption on the lips.—In the afternoon he felt an aching in the occiput, a sort of heaviness and a stitch on turning the head, with heat in the face, hands and feet, chilliness of the rest of the body and disposition to coryza, accompanied with weariness of the body, and bitterness in the mouth; in the evening, after taking off his clothes, he had shaking chills, followed in a quarter of an hour, when in bed, by heat of the whole body except the thighs, which were numb and chilly; sweat at night.—Increased temperature of the whole body, with thirst. Cool sweat in the face, in the evening when sitting, accompanied with an increased feeling of warmth through the whole body. Flushes of heat in the face and blood, with irritation of the nerves. Several attacks of heat a day, with anxiety, pain in the region of the heart, weeping and disconsolateness; she would like to

die immediately. Sensation of burning heat on the forehead, without any heat being perceived by others, with quick, hard pulse, for half an hour. Violent heat on the forehead, alternating with shuddering on the back, without thirst, in the afternoon. He feels a sudden and anxious heat over the whole body, with heat and redness of the face, and sweat.—Pulse full and quick.

**Skin.**—At all hours of the day he feels a creeping somewhere about the skin, were it only at a little spot; after that the spot becomes hot and red; then he feels a corrosive itching in that spot like the crawling of a flea (without pricking,) after which miliary vesicles make their appearance; the itching is not diminished by scratching; on the contrary, scratching seems to make the itching more lasting. An itching eruption makes its appearance on the skin, together with red, itching spots. When scratching an itching spot, an itching is felt in many other parts. Especially when feeling cold, she experiences an itching gnawing in the outer parts of the chest, in the pit of the stomach, back, upper arms, at other times only about the feet; rubbing increases the gnawing itching and produces redness; vesicles make their appearance upon those parts, but they soon disappear again. Itching over the whole body as when sweat breaks out, obliging him to rub, and returning all the time, early in the morning when waking. Continuous itching stitch about the whole body, now here, now there, as from a fine needle, obliging him to rub, but not disappearing by the rubbing. Painful stitches in several parts of the body, obliging him to scratch.

**General Symptoms.**—The lower half of the body feels numb.—Weariness in the whole body, especially the arms.—She feels most comfortable in the horizontal position.—Extreme relaxation of body and mind; she prefers not doing anything.—Bruised feeling in the upper and outer parts of the body. On waking, his whole body feels bruised.—The body felt so heavy that he felt obliged to lie down on the ground when walking in the open air, without drowsiness.

## 225. SQUILLA (SCILLA) MARITIMA.

**SQUIL.**—See HAHNEMANN'S *Mat. Med. Pura*, IV.

**COMPARE WITH**—Bry., Dros., Hyos., Iod., Mur. ac., Natr. mur., Nux. v., Puls., Rhubarb, Rhus tox., Seneg., Spong.

**ANTIDOTE.**—Camphor.

### CLINICAL OBSERVATIONS.

According to *Noack* and *Trinks* the following affections have been cured with Scilla: Anasarca (with pellets of the sixth attenuation).—Ascites (the medicine was continued for three months).—Pneumonia with expectoration of a quantity of mucus.—Violent pneumonia when Aconite is of no avail.—Pleurisy with dry cough.—Pleurisy and cough with mucous expectoration.—Neglected catarrh in a female of 50 years with florid complexion, and who had spit blood in former years: had coughed the whole summer during her residence in the country; in October she was suddenly attacked with hæmorrhage from the lungs, spitting up a couple of spoonfuls of bright-red blood, every raising of blood was preceded by a pricking in the right lower lobe of the lungs, from which the blood seemed to proceed; constant cough with expectoration of thick lumps of solid pus enveloped in a flocculent substance; great prostration. This whole group of symptoms yielded completely and radically to the tincture of squills, one drop in a tumblerful of water, in one week, (*Hempel*).

## SYMPTOMS.

**Mind and Disposition.**—Vexed about trifles.—Lazy in the morning, is not disposed to mental labour. Business is repugnant to him, he is indifferent, taciturn.—Not disposed to think, desponding.—Anxious with dread of death. Whining mood. Cheerful mood, (curative effect?). Courage, resoluteness, (curative effect?).

**Sensorium and Head.**—Early in the morning, when rising, he feels giddy as if he would fall to one side. His head feels weak and dreamy. *The head feels cloudy and dizzy.* Vertigo with nausea, as after having turned in a circle for a long while. Dulness of the forehead and occiput, with pressure in front and behind. Crampy pain in the sides of the head. *Contractive pain in both temples.*—Swashing sensation in the head, when shaking it.—Dull, humming headache, early in the morning after rising.—*Heaviness* in the whole sinciput, early in the morning after waking.—Extreme heaviness in the whole head, as if he could not keep it still, only when sitting.—Flat pressure on the whole top of the head, as from a burthen. Short-lasting pressure in the occiput. Aching pain at a small spot of the left frontal eminence. Aching-drawing pain in the forehead.—*Quickly-passing pain in the occiput, extending from the left to the right side.* Single painful stitches in the forehead, from the left to the right side, and accompanied with drawing. Drawing in the right temple, terminating in a stitch. Drawing-sticking, long continued pain in the occiput, when sitting. *Slow stitches in the right forehead.* Darting stitch in the right temple as far as the forehead. Violent drawing stitches in the right temple; they contracted one-half of the brain.—Painful shock in the left frontal eminence.—Tearing pain in the occiput. Tearing headache.—Digging-up pain in the forehead.—*Painful sensitiveness of the top of the head* and internal stupefaction, early in the morning.—(Gnawing) itching of the forehead and chin, as if an eruption would break out, disappearing while scratching the part, but returning immediately after. Stitches in the right frontal eminence and nose.

**Eyes.**—Titillation in the outer canthus of the left eye. Itching in the left eye. Contractive sensation in right eye.—The left eye is evidently smaller than the right; the upper lid of the right eye feels swollen, it hangs down, which can be felt, and on which account the eye is somewhat smaller. The eyes feel as if they were swimming in cool water, for a few minutes.—*Contraction of the pupils* (immediately). Dilatation of the pupils.—Fine burning in the outer canthi. A multitude of fine prickings in the outer canthus of the left eye.—Violent tearing in both eyes at the same time, behind the eyeballs as it were.—Turning sensation before the eyes, with obscuration of sight.

**Ears and Nose.**—(Tearing pain in the interior of both ears.) Drawing sticking in the right ear, proceeding from the forehead.—Acrid mucus from the nose. Sore feeling about the margins of the nostrils.—Acrid nasal mucus.—Frequent sneezing. Discharge of mucus from the nose.—*Coryza with ulceration of the nostrils.* Biting coryza, with much weeping. Profuse coryza, with dim, faint, watery eyes (in the forenoon). Fluent coryza, with constant sneezing.

**Face. Jaws and Teeth.**—The face is alternately sunken and bright, without heat or chilliness. Distorted, rigid features, large eyes and staring look, with redness of the cheeks, no thirst. °Dark redness during the heat, followed by paleness. Corrosive itching of the forehead and chin.—°Cracked lips, with brown crusts.—°Black lips. Humid and spreading eruption over the middle of the upper lip, with stinging itching.—Stitches in both the upper cuspidati, as when a sharp and cold air rushes into the teeth, when eating or drinking any thing either cold or warm. °Black teeth.—Pain in the submaxillary glands.

**Mouth.**—His mouth feels viscid and slimy. °Mouth open and dry.—Vesicles on the tongue.—The upper palate feels rough and scraping posteriorly. Burnt taste in the palate, even while chewing food; it remained after eating, and was not felt while swallowing. Burning in the palate and throat. Scraping burning in the palate, resembling heartburn.

**Appetite and Gastric Symptoms.**—(Everything tastes sour and bitter.) The taste of food is less and dull. \**Complete loss of appetite*; he is unable to eat anything, and nevertheless has a good taste in his mouth. Loss of appetite, partly because he had no appetite, partly because the food tastes as if burnt, and partly because some food had no taste: for example, meat and soup; whereas other kinds of food had a sweetish taste, such as bread and butter. Canine hunger (in a few hours). He could not eat enough, he relished his food so much; his stomach felt full, and he had an appetite nevertheless.—Tobacco does not taste well.—The food, especially meat and soup, has a repulsive sweetish taste.—*Empty risings.*—Short eructations. The eructations have a repulsive taste. Sour eructations. After dinner he has eructations tasting of the ingesta, and a disposition to vomit. Nausea and eructations. Desire to vomit, in the region of the stomach. °Constant nausea during the morning cough. Nausea in the back part of the throat, and an almost constant accumulation of saliva in the mouth. Constant alternation of a desire to vomit in the pit of the stomach, and indications of diarrhoea in the abdomen; either one or the other is present, the latter especially.—Excessive efforts to vomit.—Violent nausea.—Vomiting.

**Stomach and Abdomen.**—Weakness of the stomach. Deranges the digestive power of the stomach. Painful crampy sensation in the pit of the stomach. Fine stitches near the left side of the pit of the stomach. Cardialgia. Intermitting pressure in the pit of the stomach. Pressure at the stomach as from a stone. Excessive pain in the stomach.—Inflammation of the bowels.—Drawing pain in the abdomen, increased by walking and not abating by pressing on the abdomen. Tearing through the abdomen, below the umbilicus. Acute pain between the umbilicus and the pubic region, as from flatulence or a purge, or as if diarrhoea would set in. Tension of the abdomen, which however felt soft. Cutting-pinching in the abdomen. Pinching in the abdomen. Pinching and rumbling in the abdomen, as from flatulence. Incarceration of flatulence and cutting in the abdomen, without emission of flatulence. Rumbling above the pubic region (more frequently when standing or walking, than when sitting), going off after a meal speedily and permanently. Empty feeling in the abdomen, as after fasting. Sensitiveness of the distended but soft abdomen. Emission of a loud flatus whenever he touched the abdomen. Unceasing emission of noisy, strong, foetid flatulence, relieving the abdomen momentarily.—°Ascites.—Sticking pain, with pressure, in the left side of the abdominal muscles. Bubbling in the right abdominal muscles.

**Stool.**—*Hard, scanty fæces*, in the evening. Hard stools every day.—*Papescent stool*, without colic. Discharge of a quantity of brown, loose, slimy, foetid fæces, without pain or tenesmus, accompanied with bubbling flatulence, and mixed with ascarides and a quantity of irregular, white filaments. Diarrhoea from two to seven in the morning, watery, almost without flatulence. °Black diarrhoea.—Bloody stools.—Sticking in the region of the anus when walking. Itching of the anus.

**Urinary Organs.**—Tenesmus of the bladder after micturition, without any urine being present. The emissions of urine are not more frequent, but more scanty (for three days). Frequent micturition, without any increase of urine.

(in the first hours †). *Great desire to urinate*, with scanty emission. (Hot urine, the fæces being mixed with undigested particles, and very fœtid.) *Great desire to urinate*, and to evacuate the bowels; the first emission of urine being accompanied with a loose stool without colic. Constant, but ineffectual desire to emit urine. Violent desire to urinate; he emitted an unusual quantity of urine, which looked like water. Little desire, with reddish urine, of an ordinary quantity, with reddish sediment, for three days.—*He is unable to retain the urine, the quantity being too great*, for twelve hours. *Great desire to urinate*. \*Reddish urine, with red sediment, °also hot and dark urine.—Sanguinolent urine.—Brown-yellow, transparent urine, scanty, and forming flocks when standing (the first eight hours).‡ \**Urinates at night*.—°Diabetes.—Sticking in the region of the orifice of the urethra, and a little further back. Sticking pain in the urethra when straining at stool.

**Genital Organs.**—Anxious, dull stitches in the glans. \*Compressive pain in the testicles.—Hemorrhage from the uterus.

**Larynx.**—Titillation in the region of the xiphoid cartilage, internally, occasioning a cough, which increased the titillation. Slight irritation in the pit of the throat, inducing cough, in the upper part of the trachea; he coughs a few turns. Cough with diminished expectoration; at every turn of cough he experiences a painful pressure in the thoracic cavity, from within outwards, and a painful contraction of the abdominal muscles. Cough in the morning, with profuse mucous expectoration. \*Violent cough early in the morning, with stitches in the side at every turn of cough, with expectoration; the days previous there was scarcely a trace of cough. °Cough from drinking cold water. He is frequently obliged to take a deep inspiration, and this deep inspiration occasions a cough. °Cough at every inspiration, evening and night. Frequent desire to cough, the cough being dry and short, occasioned by a titillation below the xiphoid cartilage. \**Cough with expectoration*.§ Constant expectoration of mucus. °Cough with bloody expectoration.—Dry, violent cough, occasioning a racking pain in the abdomen, and dryness in the throat. Cough even unto retching. When coughing and walking, he feels a pain in the side of the abdomen as if an intestine would break forth. Coughing, talking, or performing the least exercise, excites

† NOTE BY HAHNEMANN.—The primary effect of Scilla upon the urinary passages is a great desire to urinate, with copious emission, especially of a urine which is clear as water, or which at least is watery, although not much so.

In a few hours after this first and positive effect of Scilla, the secondary effect or reaction of the organism takes place, being the contrary of the primary effect, viz: little desire to urinate, scanty and rare emission of urine, the urine having sometimes a natural colour, sometimes being more dark, or the emission being scanty even when there is much desire, or no emission at all.

All this being unknown, it was impossible that Scilla should ever have cured dropsical swellings, for which purpose it was already employed by the Egyptians thousands of years before the Greeks. Most of those patients who were treated with Scilla for dropsical swellings, were hurried into premature graves.

Dropsical swellings can only be cured by Scilla when the symptoms of the urinary organs correspond to those of Scilla. Such swellings are very rare. Scilla will, on the contrary, be found a specific remedy in cases of diabetes.

‡ NOTE BY HAHNEMANN.—This appeared to be a curative effect; the prover suffered with copious secretion and emission of urine.

§ NOTE BY HAHNEMANN.—According to all my observations, Scilla excites the mucous glands of the trachea and of the bronchial tubes, so that the mucus becomes thinner and looser, and can be thrown off more readily. This is its primary effect. When used as an expectorant, it palliates the symptoms, and, if the tenacious mucus in the chest be a chronic ailment, Scilla finally increases the suffering, inasmuch as by a reaction of the organism, the mucus in the bronchial tubes becomes more and more tenacious, and the cough more and more dry. Scilla is therefore useful for excessive secretion of mucus in the chest, for which it has already been recommended by Weickard.

an intolerable feeling of heat, without any heat being perceptible externally. Headache and stoppage of breathing during cough. °Pressure on the bladder during cough and spurring out of the urine. (Rattling before the cough, which disappeared after the cough.)

**Chest.**—Heavy, slow expirations and inspirations. Dyspnœa, with frequent quick breathing and anxiety as long as the asthma lasted. Dyspnœa and sticking in the chest, most troublesome during an inspiration. Oppression across the chest, as if it were too tight. Darting stitches on either side of the chest, not far from the sternum. Pressing, broad stitches during an expiration, below the last rib, on either side (for two days). Dull, broad stitches in the lowermost last rib, early in the morning when in bed, which waked him. Drawing stitch from the last true rib, as far as the shoulder. Compressive pain in the right side of the chest, terminating in a stitch. Pointed stitches in the region of the extremity of the clavicles towards the shoulder, during an inspiration and expiration. Stitches in the region of the left and right true ribs, at the same time. \**A kind of pleurisy.* Constrictive stitch in the left side, under the last rib, excited by rapid walking. \**Stitches in the left side.* Stitches in the middle of the xiphoid cartilage, almost like one continuous stitch. Repeated stitches in the sides. Excessive stitching near the sternum from above downwards, making the breathing difficult.—Pressure (tension?) in both sides, from the axilla to the abdomen, particularly when extending the thoracic cavity during an inspiration.—Drawing pain in the chest.—°The pains in the chest are worse towards morning.—°Congestion of blood to the chest.—°Pneumonia and pleurisy.—(Aching pain in the right side of the chest, below the arm, which becomes a beating pain when stooping; when touching the parts, he felt a pain as if the flesh were loose.)

**Back.**—Painful sensitiveness of the skin from one hip to another, across the back.—Painless drawing in the outer part of the left scapula. Painful darting above the left scapula.—Red pimples on the back, the tips whereof were full of pus, with stitch-like itching, and with a burning-stinging itching after scratching; on the day following every pimple was covered with a small crust. A spot of the size of a dollar, between the scapulæ, composed of densely-crowded, but not confluent pimples, with titillating (creeping) itching, as of a flea, transformed by scratching into a burning-stinging itching, but changing again to a crawling itching some time after.—Stiffness in the left cervical muscles. Stinging itching about the throat and jaws, as from a flea, going off momentarily by scratching and recurring afterwards. Pimples on the neck which increase until the seventh day, and are painful only when rubbed. Drawing and squeezing in the cervical muscles, even when not moving them. The skin of the neck is sensitive to the rubbing with the cravat, and exhibits reddish, almost excoriated places. Stiffness in the nape of the neck. Rheumatic pain in the lateral cervical muscles.

**Upper Limbs.**—Sweat in the axilla. Convulsive jerking of the left arm (when standing). Crawling itching under the right arm, in the outer parts of the chest, removed for a short while only by scratching. Painless jerkings and jactitations in the muscles of the upper arm. Slow pricking along the skin from the shoulder to the middle of the upper arm.—The hands frequently go to sleep in the day-time, when leaning the head on them. Painful pricking in the middle of the left metacarpus. Darting pain in the wrist-joints. (When handling the recent bulbs with the hands, they become covered with vesicles.) Stitch-like drawing pain from the left wrist-joint into the fingers. Painful pricking in the joints of both hands, also without moving them.

**Lower Limbs.**—Convulsive jerking of the upper and lower limbs, when sit-

ting. The thighs feel bruised. Weariness of the thighs.—Bubbling, descending from the upper part of the thigh to the toes, in one uninterrupted line. Prickings in both thighs. Drawing-pain in the muscles of both thighs. Intermitting drawing pain in the outer parts of the thighs, when sitting or walking. Contractive pain in the bend of the left knee, obliging him to bend the knee, when standing.—Drawing pain in the leg.—Burning pain in the ball of the right foot, as after freezing. Sweat of the toes.

**Sleep.**—Frequent yawning without drowsiness. *Stretching of the upper limbs, with yawning, without drowsiness.* He feels more debilitated from the sleepless nights, than from the diarrhoea. Drowsiness in the evening, a few hours before his time. Sleep, with merry dreams. Languor and drowsiness after dinner. *Restless sleep.* Frequent waking, and turning in bed from side to side. He dreams that his body has become puffed up to an enormous size; the dream was so vivid, that he felt himself on waking, to see whether it was true. He wakes after midnight, with anxiety and desire to vomit. During sleep he fetches a deep and heavy breath occasionally. Debility early in the morning after waking and rising, especially in the region of the hips. Confused feeling and heaviness in the head, after a quiet sleep without dreams.

**Fever.**—Heat in the face, more internally than externally, without thirst, increasing when moving the body; the rest of the body feeling chilly, when uncovered ever so lightly. Heat and redness in the face, for three hours, especially in the face, when performing the least motion, and when talking. (Dry external and internal heat, without thirst, for three hours; afterwards internal dry heat, without thirst. Heat in the head, with cold feet. Every afternoon the body feels hot, without thirst, and cold feet. Thirst during the evening-chills, without any internal or external heat. Small, hard pulse; it feels like a tight cord. During the vomiting, the pulse falls to forty, with shuddering over the whole body, the skin being somewhat cold. When walking, even in the heated room, he feels cool and chilly on the back and arms, not when sitting. Icy-cold hands in a warm room. Icy-cold hands and feet, the rest of the body being warm. Internal chilliness at night, with external heat, without thirst. Feeling of great heat in the whole body, in the afternoon, but without external redness or thirst, for some hours. External heat with internal chilliness in the evening, immediately after lying down. Chilliness, and shortly after, heat over the whole body. Heat over the whole body, as from heating drinks, with icy-cold feet, without shuddering, thirst or sweat. Feeling of heat in the whole body, without thirst or sweat.

**Skin.**—Burning and itching of the skin. Small red spots on the hands, feet, chest, and the whole of the body, assuming the appearance of itch-like pimples, a sort of greasy itch which shows itself between the fingers, on the feet and the whole body, with burning itching (a few days). Cold gangrene.—Irritates the scirrhus tumours. Scirrhus tumours, accompanied by fever and inflammation, are apt to become cancerous from using squills.

**General Symptoms.**—Soreness between the limbs.—Bubbling sensation below the scapulæ, in the back and the left upper arm.—Continued, dull, rheumatic pains in the whole body, abating during rest and increasing during motion.—Weariness.—Feeling of heaviness in the whole body, as if weary.—The whole body becomes languid especially when taking a long walk.—Uneasiness in the upper and lower limbs; he has to move them all the time to obtain relief. Violent pains in the limbs.—Spasmodic movements. Convulsions.

## 226. STANNUM.

STANN.—Tin.—See HAHNEMANN's Mat. Med. Pur., V.

COMPARE WITH—Am. carb. and mur., Arg. met. and nitr., Calc. c., Cann., Caust., Chin., Dule., Fer., Ign., *Puls.*, Seneg., Sil., Zinc.

ANTIDOTE.—*Puls.*

## CLINICAL OBSERVATIONS.

According to *Noack* and *Trinks*, Stannum has removed the following affections: spasms of children excited by irritation from worms, with subsequent discharge of a large number of worms.—Epilepsy.—Exhausting night and morning sweats.—Obstinate prosopalgia.—Constipation after mental exertions, attended with fulness, bloatedness, uneasiness in the abdomen, heat in the head, lowness of spirits.—Melæna (in conjunction with *Nux v.* and *Bell.*).—Leucorrhœa with hectic fever.—Laryngeal phthisis with complete aphonia, pain in the larynx, violent cough, purulent expectoration, hectic fever, night-sweats, diarrhœa.—*Phthisis trachealis*.—*Cough with mucous expectoration*.—Violent cough, with desire to vomit, copious expectoration of thin white mucous, oppressed breathing, stitches in both sides of the chest increased by inspiration and cough, debility, nervousness.—Atonic chronic mucous cough, with loss of strength and emaciation.—*Pituitous phthisis*.—*Cough with purulent expectoration*.—Stannum has been given with good effect to individuals with sensitiveness of the mucous membrane of the lungs or incipient pulmonary phthisis; the cough being at first dry, afterwards accompanied with expectoration of little lumps of pus, yellow, crumbling, saltish and leaving a putrid after-taste, of a sweetish-putrid smell.—*Purulent secretion of the bronchial mucous membrane*, with prostration of strength and continuous fever.—*Ulcerous phthisis of the lungs*.—*Pituitous asthma*, with excessive secretion of mucous in the chest, atonic chronic cough with expectoration of mucus, prostration of strength and emaciation.

## SYMPTOMS.

**Mind and Disposition.**—Sad, hypochondriac mood.—*Indescribable anguish* and melancholy, several days.—Aversion to men, dread of men. \**Want of disposition to talk*. Takes no pleasure in anything, without being ill-humoured. \**Discouragement*.—Irritated, with heat of the face; she wanted to do all sorts of things, but did not accomplish anything. Restless and absent, no perseverance in working. Restlessness, cannot long remain at the same place. Very busy, but does not accomplish anything; he is always thinking of something else that he ought to do. He did nothing according to his desire. Unable to think, not disposed to do anything. Dulness of mind, indifference to things around him, paleness and dimness of sight. Out of humour the whole day, not in the open air. Dissatisfaction. Apprehensive of the future, still, taciturn. \**Still, ill-humour, he does not like to answer, and his answers are short*, is easily put out, becomes angry. Quiet, with uncomfortableness of the body. Ill-humour, and quickly-passing sensitiveness, (the first three days). Violent, but quickly-passing anger.—Quiet, good-humoured. Talkative. Excessively merry.

**Sensorium.**—*Dizziness of the whole head*.—Dulness of the head, as if catarrh would set in, with sneezing. Heaviness and dulness of the head, worse in the evening. *Heaviness in the head, both when at rest and in motion, in the evening, for two hours*.—Stupifying vertigo, only when walking in the open air; he staggers as if on the point of falling. Sudden fit of vertigo, when sitting.

Vertigo, as if all the objects were too far distant. Vertigo, as if the brain were turning; he loses his thoughts, is unable to continue his reading, and sits on his chair as if deprived of consciousness.

**Head.**—Headache, almost every morning, with want of appetite, nausea and ill-humour.—*Pressure* in the left side of the occiput, from within outwards. Oppressive heaviness, with feeling of emptiness in the left hemisphere of the brain. Painful pressure through the right side of the head. Painful pressure through the right temple, almost as if on the outer side. Pressure in the left temple, first weak, afterwards increasing and then decreasing again, as if the forehead would be pressed in. Pressure from the middle of the forehead to the centre of the brain. Pressure in the forehead, temple and vertex, diminishing by external pressure. Pressure in the right temple when lying on it, going off when raising one's-self. Pressure in the forehead, increased by bending the head backward, relieved by pressing upon it. Sudden sharp pressure on the top of the head, with sensation as if the hair were moved. *Pressure in the forehead from within*, with drowsiness, diminished by pressing on the part. Pressing through the frontal eminences, from within. *\*Stupifying aching pain in the brain*,—over the eyebrows, both when at rest and in motion. Dizzy pressure through the whole head. Painful pressing of the brain against the skull and the occipital bones, in the evening, even after going to bed. *Pain*, the whole day, *as if the temples would be crushed*. Pressure from without inward in the temples and the occiput.—Pain as if the brain were distended and tight. Pressing together in the occiput, below the vertex. Sudden constriction and pressing in the whole sinciput, slightly increasing and decreasing.—Contractive pain in the right occiput.—Frequent sensation in the head as if in screws; with occasional slow jerks or drawing pressure here and there.—Cramp-pain in the head, as if a bandage were tied round the head very firmly.—Violent jerks through the fore part of the head, alternating with dull pressure. Sudden jerks, with pressure, in the left temple and left side of the forehead, causing him to exclaim. Pain as if the forehead would be crushed.—Boring aching pain in the left temple, the whole day. Boring-aching stupifying pain in the left hemisphere of the brain, on the surface. Boring in the occipital bones, with intensely painful heaviness.—*Drawing* through the forehead and vertex, with a sensation of pressure. Drawing pressure from the right parietal bone to the orbit. Drawing pressure in the upper border of the left orbit. Drawing, with pressure, in one temple and side of the forehead, causing a gloomy sensation.—Tearing on the left side of the parietal bone and forehead. Pressure, with tearing, in the right half of the head. Pressure, with tearing, in the right half of the forehead, in paroxysms, more violent when stooping. Pressure, with tearing, in the left occipital bone. Pressure, with tearing, in the forehead.—Drawing tearing, as with a jerk, in the outer parts above the left eyebrows.—Long, dull stitch in the left frontal eminence. Stitching pain, in the forehead, also when at rest, for several days; stooping produces a sensation as if the contents of the head would issue through the forehead. Pulsative stitching in the temple, with heat in the head, chilliness in the body, and weakness of the head, depriving him almost of his mind; accompanied with slumber and loss of sense.—*Beating pain* in the temples.—Heat in the forehead, can be felt with the hand. Burning pain in half of the sinciput, like fire, also in the nose and eyes, the parts feeling hot on the outside, both when at rest and in motion; he had to lie down; accompanied with nausea and retching, from morning till night.—Painful sensation, when shaking the head, as if the brain were loose and were shaking against the skull.—Humming in the head; noise occasioned a groaning vibration in the head.—Sense as of faintness in the head, and sleepiness.—Pain *as from subcutaneous*

*ulceration* in the outer parts of the head. Stinging in the centre of the forehead. Sudden dull stitches in the right side of the sinciput. Stitch-like pain, especially in the left side of the forehead, with fluent coryza. Burning stitches in the vertex.—Burning tension in the fore part of the hairy scalp, close above the right side of the forehead.

**Eyes.**—Pain in the eyes, as if they had been rubbed with a woollen cloth, diminished by moving the lids.—*Pressure* in the left eye, or in the left inner canthus as from a sty, with lachrymation. Painful pressure in the right inner canthus. Pressure in both upper eyelids. Pressure in the eyes. Sensation behind the right eyelid, as if a hard body had lodged there.—Sudden *jerks* in the upper border of the right orbit, and in other parts, with intensely-painful stupefaction of the head.—Sudden intensely-painful dull *shocks* on the outer side of the upper border of the left orbit.—Tensive *stitch* in the left eyeball, most violent when moving it. Burning stinging in the right eye, toward the external canthus. Stinging burning in the left canthus. Violent, little, burning stitches in the lids of the right eye, more toward the outer canthus. Burning pain in the left lower lid. Burning in the eyes.—*Itching* in the inner canthus. Itching in the left eyeball relieved by rubbing. Smarting in the eyes as after rubbing them with a woollen cloth.—Nightly *agglutination* of the eyelids, and weakness of the eyes in the day-time.—A swelling, containing pus, in the inner canthus of the left eye, like fistula lachrymalis.—Contraction of the eyelids, with redness of the whites, and burning sensation.—*Twitchings* in the right inner canthus.—*Winking* of the left eye, for a week.—Jerkings in the eyes.—*Protrusion* of the eyes, and painfulness of the same as after weeping.—Faint, dim, sunken eyes.—The pupils are first contracted, afterwards dilated.—He sees a *rainbow*, at candle-light.

**Ears.**—Dragging pain in the outer ear. Frequent drawing in the left ear.—Tearing in the right meatus. Drawing in the whole of the right ear, internal and external, worse on moving the lower jaw.—*Cramp-pain* in the whole of the right ear, for eight hours.—Pinching *tearing* in the cartilage of the left lobule, with occasional sensation as of a cool wind blowing upon it.—Drawing *stitch* in the upper wing of the left ear.—*Pressure* in the outer part of the mastoid process.—*Boring pain* in the right ear, with cold feet.—*Itching* in the left ear.—*Ulceration* of the ringhole in the lobule.—Shrieking in the ear when blowing the nose.—*Tingling* in the left ear.—Sensation in the ear as if blood were rushing through it. *Creaking* before and in the left ear, in the evening.—Feeling of *obstruction* in the left ear, with hardness of hearing, diminished by blowing the nose, after getting up, for four days.

**Nose.**—Feeling of heaviness and obstruction in the upper part of the nasal fossæ. Bleeding of the nose when rising in the morning. Violent bleeding of the nose, on waking in the morning.—Dry coryza, only the right nostril being open. Left nostril is closed, swollen, red, painful to touch.

**Face.**—\**Face pale and sunken*, also with sunken eyes; the features looked elongated and sickly.—*Flushes of heat* in the face, which can be felt internally and externally.—Cramp-like *pressure* in the muscles on the left malar bone.—*Stupifying pain* in the face, especially in the forehead.—*Contractive pain* in the bones of the face and teeth of the right side, as if the side were shorter. Contraction and pressure in the internal side of the right cheek. Drawing pressure in the facial bones of the right side, especially the malar bone and the orbit. Gnawing pressure on the left side of the face, especially the malar bone.—Tearing, extending from the malar bone into the lower jaw, near the corner of the mouth.—Burning-itching stinging in the malar bones. Burning pain in the right cheek, below the eye. Burning cramp-pain in the left cheek, followed by

swelling of the cheek, in the evening; when drawing the face to one side, a pain is experienced between the cheek and teeth as if glass-splinters had been stuck in. Pain and swelling of the upper jaw; the cheeks are red and a stinging is felt in them. Painful swelling of the left cheek, with an ulcer on the teeth.—Itching *pimples* in the face, feeling sore when touching them or washing the face. Pimple in the left eyebrow, with burning pain and aching when touched.—Lancinating pain at a small spot of the lower lip. Broad, cutting stitches in the front part of the chin.—A red tumour at the angle of the right lower jaw, with drawing pain increased by contact, for eight days.

**Jaws and Teeth.**—Painful swelling of the submaxillary glands. *\*The teeth feel elongated.* Jerking pain in all the teeth, shortly after a meal, (cold or warm;) with heat in the face, relieved only in the open air.—*\*Looseness of the teeth.*

**Mouth.**—Tenacious mucus in the mouth. Accumulation of saliva in the mouth. An acid saliva flows out of his mouth, in the morning on waking. Yellowish mucus on the tongue. Fœtid odor from the mouth and throat.—°Red tongue.—Talking fatigues him.

**Pharynx, Œsophagus.**—*Sore throat* as if swollen, with feeling of dryness and a drawing tensive pain. Pain in the throat as if sore and swollen, independent of swallowing; after hawking up much mucus the voice has a higher pitch than usual.—*Cutting* in the pharynx, as with knives, when swallowing.—*Stinging* in the upper part of the fauces, with sensation as if parched, between the acts of deglutition.—Feeling of *dryness* and stinging in the throat, in the region of the right tonsil, somewhat relieved by coughing and swallowing.—*Scraping* below the pit of the throat, internally. A good deal of mucus in the throat, in the morning. Scraping in the throat.—Irritation in the throat, inducing a good deal of hawking, followed by great soreness.

**Taste and Appetite.**—*Flat taste* in mouth. *Bitter-sour* taste. Everything, except water, tastes bitter; no bitter taste in mouth between meals.—*Sweetish rising* in the throat.—Beer taste, like herbs. Flat, and sour-bitter taste of the beer.—Acrid and dry taste of the tobacco when smoking.—Want of appetite, food having its natural taste.—Great appetite and hunger. The child refuses to drink, (the mother having taken Stan.)—Increased thirst.

**Gastric Symptoms.**—Dull grumbling in the abdomen, when the food has nearly reached the orifice of the stomach.—°Great weakness of digestion.—Frequent hiccough.—Frequent empty eructations. Eructations tasting flat, with much saliva in the mouth. Frequent bitter eructations, after a meal. *Sour eructations, with subsequent roughness of the throat,*—when walking in the open air.—Shaking from nausea, several times, with nauseating fulness in the pit of the stomach. Nausea and bitterness in the mouth. Nausea after a meal.—Retching in the evening, followed by sour, and afterwards bitter taste in the mouth. Retching, with sensation as of deranged stomach.—Bitter bilious vomiting after eating soup. Sour vomiting. Vomiting of undigested food, after violent retching. *\*Hæmatemesis.*

**Stomach.**—Pressure at the stomach, in the forenoon. *Pressure and crowded sensation in the pit of the stomach;* when touching it, a pain as from subcutaneous ulceration is experienced in it. Anxious pressure in the pit of the stomach, when lying, as if hemorrhage would set in, for some hours, going off by pressing on the part. Tensive pressure in the pit. Dull hard pressure under the last cartilages of the ribs, relieved somewhat by pressing on the part.—*Cutting around the stomach.*—*Spasmodic griping* in the stomach and around the umbilicus, with constant nausea, and with anxious rising to the pit of the sto-

mach.—Long fine *stitch* in the region of the xiphoid cartilage, shortly after a meal. Sensation in the pit of the stomach, as when the stomach is deranged.—Repletion and distention of the stomach, with hunger. Sense of puffiness under the skin in the region of the stomach, with pinching in the abdomen when walking.—°Chronic cardialgia, with bitter eructations, feeling of hunger and diarrhoea. °Cardialgia with nausea and sickly complexion.

**Abdomen.**—Quickly-passing burning below the diaphragm.—°Hysterie and hypochondriac spasms in the region of the diaphragm and abdomen.—*Cutting* in the right hypochondrium, more violent when sitting bent. Cramp-pain, with pressure, in the left hypochondrium, more or less violent. °Stinging in the region of the spleen. Simple pain in the hypochondria, followed by dull shocks from the left to the right side, they seem to become more violent when pressing on the right side.—Sudden painful *jerking* in both sides below the true ribs. °Stinging in the region of the liver. Pressure in the region of the upper part of the liver. Pressure in the region of the liver.—Pain in the abdomen, extending into the stomach and in both sides below the ribs, when pressing with the hands upon the umbilicus.—*Pressure* in different parts of the abdomen, with desire for stool. Drawing pressure in various parts of the abdomen. Dull, slow pressure on the right side of and near the umbilicus. Burning pressure in the right side of the abdomen.—*Tensive pain* in the abdomen, towards the small of the back, most violent when stooping.—Repletion in the abdomen after a meal. Painful distention of the abdomen, with painful sensitiveness of the abdominal integuments to the touch. Bloatingness of the abdomen.—*Cramp-pain* below and above the umbilicus, going off soon by doubling one's self over the edge of a table, without emitting flatulence.—*Pinching* between the pit and umbilicus, as if some one were pinching the muscles together. Pinching cutting in the umbilical region, almost the whole day. Pinching pain close above the left os ilium, as if a tendon had become strained, when stooping. Pinching in the umbilical region, as from a cold. Pinching movement in the abdomen, as if from incarcerated flatulence.—Drawing cutting in the abdomen, near the right ilium.—*Digging-up* in the abdomen, before every stool. Painful digging-up in the umbilical region; the place is sore to the touch.—*Sore feeling* in the whole abdomen, worse when touched. Smarting pain in the abdomen. Pain of the abdomen, when touched, as from subcutaneous ulceration, with arrest of breathing.—*Stitching* in the right side of the abdomen, afterwards drawing in the right shoulder; she had to lie down, face and arms being covered with sweat, after which she became chilly. Several violent stitches in succession in the right side of the abdomen, especially when coughing and breathing. Boring stitch in the left side of the epigastrium, when walking.—*Cuttings* in the hypogastrium, externally. When taking an inspiration, a cutting as with a knife suddenly darted through the abdomen from the left to the right side, making her start. Dull stitches in the region of the kidneys, from without inward. Stinging pain in the hypogastrium. Fine stinging in the symphysis pubis, on the left side.—Burning pain in the abdomen.—Feeling of distention in the abdominal muscles of the right side, above the spinous process of the ilium. Gurgling in the abdomen. Loud rumbling in the abdomen after every meal. Rumbling in the abdomen, as from emptiness. Frequent accumulation of flatulence in the abdomen. Incarceration of flatulence. Creeping sensation in the right side of the abdomen, as if he had taken a cathartic.—Bruised pain under the left ribs.—*Feeling of emptiness* in the abdomen, without hunger, though he relished his food and ate a good deal; eating agreed with him, but the body felt as if it could not support itself. *Feeling of emptiness* in the abdomen, after a meal.—Pressure in the *inguinal glands*, with swelling in that region. Fine pinching in the left groin. Pricking

in the right groin as if he had strained the part in leaping; going off when raising himself. Sensation in the left groin as if hernia would protrude.

**Stool.**—Retention of stool.—Frequent desire for stool.—*Unsuccessful desire* for stool.—Sudden desire for stool, the stool being first natural, then papaceous, lastly thin, with shuddering through the body from above downward, and a drawing from the small of the back through the thighs; when about to rise, he feels all the time as if he had not yet got through.—Renewed desire for stool, shortly after stool.—Frequent desire for stool, passing but little, and sometimes only mucus.—Dry stool in lumps. Dry stool of large size, with violent cutting pains. Discharge of a single hard lump with straining. Difficult expulsion of tight, but not hard stool, as if the bowels had not strength enough to expel it.—Hard stool, which felt slippery without being so.—*Loose stool* in the forenoon, thin in the afternoon. Frequent and continuous desire as if diarrhoea would set in, in the evening, with pinching and painful motion in the abdomen, as if caused by a cold, and with shocks in the left side as from a foetus, with distention of the abdomen; afterwards thin stool with desire remaining after it, and colic continuing until she went to bed. Stool with mucus shaped as a worm. Greenish, scanty stool.—Burning pain in the region of the liver after stool. Dull pressure in the rectum after stool. Discharge of mucus after stool. Burning at the anus, between and immediately after stool.—Aching pain in the *rectum*. Itching stitch in the rectum. Continual itching around the anus. Little blotch on the left side of the anus, resembling a varix and sore to the touch. Corrosive pain round the anus, when walking or sitting. Soreness and smarting at the anus, with fine stinging.

**Urinary Organs.**—Retention of urine. Deficient desire to urinate, as from insensibility of the bladder.—Desire to urinate, as if the bladder were full; the urine being scanty, foetid, the emissions rare and painless. Frequent desire to urinate, also at night, for three days; after this he urinated less than before taking the drug. \*Frequent desire to urinate, with copious emission. After micturition, intensely-painful pressure in the neck of the bladder and along the urethra; constant sensation as if urine would yet come; if some drops do come the pressure becomes much worse.—Burning in the fore-part of the *urethra*, especially when urinating; he had a desire every minute and emitted a good deal of urine.—Vesicle on the margin of the orifice of the urethra. Soreness of the tip of the urethra.

**Male Genital Organs.**—Jerking in the penis, as far as the point of insertion in the bladder, as if an emission would take place. Burning in the interior of the genital organs, like a violent desire for an emission.—No desire or power, not even when excited.—Intolerably voluptuous feeling in the genital organs and in the whole body, terminating in emission.—Burning pain in the glans, and shortly after desire to urinate.—Burning stitch in the glans. Pricking sensation in the glans.—*Erection*, immediately; no erection whatsoever the three days following.—*Emissions*, without dreams.

**Female Sexual Organs.**—*Prolapsus vaginae*, which is very inconvenient during hard stool.—Pressing in the hypogastrium, as if the menses would make their appearance; worse when pressing on the parts.—The menses are more profuse than usual.—Great anguish and melancholy the week previous to the menses; ceasing as soon as the menses made their appearance. Pain in the region of the malar bone previous to the menses, when touching it; during the menses contusive pain in the region of the malar bone, it is felt even when moving the muscles of the face.—\*Discharge of transparent mucus from the vagina. °Cessation of the leucorrhœal discharge. °Yellowish leucorrhœa. °Leucorrhœa with great loss of strength.

**Larynx and Trachea.**—\**Rough throat.* \**Hoarseness*; weakness and emptiness in the chest; when beginning to sing, she had to interrupt herself continually and breathe; the hoarseness was sometimes momentarily relieved by a fit of cough. °Chronic catarrh, with roughness, weakness of the chest, dyspnoea and cough, with expectoration. \**Mucus in the trachea*, in the forenoon, -easily thrown off by coughing, *the chest feeling very weak* as if deprived of its contents, with languor of the whole body and limbs, in which a weak feeling is moving up and down; many mornings in succession. Accumulation of mucus in the chest, with rattling breathing, which can be heard by others.—Titillating creeping in the throat, (larynx?) with a feeling of dryness, obliging one to cough.—Irritation in the trachea, during an inspiration, as if from mucus, there being neither mucus nor dry cough; it is more violently felt when sitting bent than when walking.—Short cough from time to time, as if from weakness of the chest, with hoarse, weak sound. Short and hacking cough, three short turns.—Constant desire to cough as if owing to much mucus in the chest, with an internal feeling of panting and slight rattling. Constant desire to cough, from a continual constriction of the trachea. Titillating cough, as if from a soreness deep in the trachea, with scraping rising into the throat.—Exhausting fits of cough, which occasioned a bruised sort of pain in the pit of the stomach. \**Dry, concussing cough.* °Cough excited by reading, talking or singing. °Cough from lying on the right side. °Cough from titillation in the chest.—Oppression of the chest when coughing. Scraping in the throat, \**with greenish expectoration of a disagreeably sweetish taste*, more violent in the evening before going to bed; hoarse speech; \*after every cough, (with irritation in the lower part of the trachea,) *sore feeling* in the chest and trachea. Violent cough with expectoration and spitting of blood. \**Yellow* expectoration from the trachea, having a putrid taste. Expectoration having a salt taste. °Expectoration having a putrid taste. °Mucous phthisis. °Consumptive cough, (see Clin. Obs.)

**Chest.**—Fit of asthma, short breathing and anguish, in the evening. The breathing becomes shorter in the evening, accompanied with anguish; he is obliged to breathe hurriedly for a long time until he succeeds in drawing a deep breath, when the shortness disappears. °Asthma at night, when lying on the back, and from exercise in the day-time. *Asthma and want of breathing*, when going up stairs or performing the least motion. \**Asthma as if the clothes were too tight; he has to unbutton them, to breathe easily.*—°*Wheezing and rattling in the chest.*—\**Oppressive weight in the upper part of the chest; he is frequently obliged to take deep breath, accompanied with a feeling of great emptiness in the pit of the stomach.* Oppression of the chest, as if something were rising into the throat arresting the breathing. Feeling of pleasant lightness when taking deep breath, frequently. Feeling as if the chest expanded, when at rest and occasionally, accompanied, however, with a feeling of anxiety as in palpitation of the heart. Short, troublesome breathing from weakness of the respiratory organs, with great emptiness of the chest, but without loss of breath.—Oppression of the chest, as if contracted internally, with sensation as if the inspired air were very dry. Oppressive cramp-feeling in the chest, when sitting; increased by taking breath.—Pressure deep in the chest, as from a load. Tension and pressure across the upper part of the chest, in the morning on rising from bed. \**Constriction of the chest*, in the evening, with anguish. °Tension across the chest. Contractive pain in the chest, under the right arm, changing to a pricking when moving about.—*Stitches* in the chest and shoulder-joint when taking breath. Violent stitches in the chest and sides, hindering breathing, several forenoons; distention of the abdomen in the afternoon. Tensive stitch in the sternum, continuing while taking breath. A sudden long stitch in

the left side of the chest, one hand's breadth below the axilla, causing one to start. Sudden sharp cuttings as with a knife, in the left side of the chest. Sharp, piercing prickings on the clavicle. Frequent cuttings through the chest from below upward, and in front in the region of the upper ribs from within outward, independent of breathing. Burning stitches in the left chest, more violent during an expiration, when walking in the open air. Stitch, resembling a flea-bite, in the last true rib of the right, and the false rib of the left side. Lancination in the left chest, when walking and standing.—Cutting pain in the right chest. Crampy cutting in the right ribs, when walking, only during an inspiration.—*Pressure* in the chest, below the right nipple, from within outward. Aching in the whole chest, especially above the pit of the stomach, worse during an inspiration.—*Bruised pain in the chest*, when at rest and in motion. \**Sore pain in the whole chest*, commencing in the throat. \*Feeling of weakness in the chest, as if deprived of its contents, particularly after expectorating or talking.—Digging-up pain in the chest and thence descending into the abdomen, exciting a desire for stool.—Drawing pressure in the region of the united cartilages of the last false ribs.—Drawing, from the clavicles to the left axilla. Sudden drawing under the left breast, when raising one's self in bed, followed by sharp cuttings extending thence to the clavicle, in the direction of the shoulder, where the pain remains fixed; thence it moves along the left shoulder into the abdomen, made worse by drawing the chest in, pressing on the part, and especially during an inspiration and hacking; in all these conditions the pain is felt as a painful jerk. *Jactitation of the muscles* of the upper part of the chest, near the left axilla. *Violent itching* of the nipple.

**Back.**—Violent creeping in the *small of the back*. *Burning pressure* in the small of the back, a little to the right.—Painful *pressure* in the left side of the back above the hip, from above downward. Undulating *shock* in the back above the left ilium, causing him to start. Stitching pinching in the back, in the region of the false ribs. Twitching jerking of the muscles of the last false ribs. Violent *tearing* in the *lumbar vertebræ*, extending from both sides to the lumbar region, more violent at every movement of the trunk. Dull shocks in the lumbar region, with sensation as if cool air were blowing on him. Sharp, jerking stitch in the left side of the back and at the same time in the left thigh. Burning fine pricking at a small spot of the middle of the back. Fine pricking through the back from within outward. Digging-up stitches in the muscles of the right side of the back, continuing while taking breath. Lancination in the left side of the back, from below upward, when standing.—Drawing pressure in the spine, *below and between the scapulæ*, more violent during motion, especially when turning the body. When lifting a load she suddenly felt a sensation between the scapulæ as if sprained, more on the left side, accompanied with violent sharp cuttings when making the least motion, taking breath or yawning; bending backward causes an intolerable pain. Drawing tearing in the left scapula, partly towards the back, partly towards the shoulder. Slow, intermittent dull stitches between the scapula, towards the middle of the spine. Sharp broad stitches in the spine, between the scapulæ, from within outward. Violent burning pricking in the upper part of the scapula, going off only for a short while by rubbing.

**Neck.**—Itching prickings in the nape of the neck, in the morning when in bed. Boring dull stitches from the fauces through the muscles of the nape of the neck. Drawing in the nape of the neck from below upward, with a feeling of stiffness, she was not able to move her head easily. Pain in the nape of the neck when bending the head forward. Sudden intensely-painful stitch in the lower part of the nape of the neck. Weakness of the muscles of the nape of the neck, as if she were not able to support her head, with pain when moving the

head. Cracking of the cervical vertebrae, which can be heard even by others, when shaking the head quickly. Red, somewhat elevated spot on the fore part of the neck, with a white painless pimple in the centre.

**Upper Extremities.**—Burning pricking on the right shoulder. Compressive sensation in the shoulder. Tearing in the top of the left shoulder. Pressure and drawing, as from a load, in the top of the left shoulder, in the outer parts of the upper arm, and likewise in the deeper muscles of the forearm from the elbow, going off gradually in the room. Paralytic tearing in and below the right shoulder-joint, more violent during motion. Sudden, intensely-painful, hard knocks on the right shoulder. Itching prickings in and below the axilla. Paralytic pain as if sprained, close below the shoulder-joint, only when at rest; going off only for a short while by motion.—Weariness in the arms and legs; he has to let his arms hang down. Great debility in arms and legs, as if they had lost all power, and as if the legs could not support the body.—Intensely-painful jerking, now in the surface of the arm, now in that of the hand, now in a finger, resembling a hard blow.—Pain in the arm-joints as if sprained; she was not able to bend them without great pain.—Arms and fingers are almost entirely immovable. *Paralytic weakness and oppressive heaviness of the arms*, especially the right arm, particularly of the upper arms and joints; *aggravated by every motion*, and sometimes with want of breath. Paralytic weakness of the arms, when holding a small weight for a short time only. The arms become easily fatigued by a slight effort, obliging him to drop the things which he holds in his hands. Paralytic tearing in the left arm, especially the wrist-joint, more violent during motion. Tearing deep in the left arm, especially the upper arms. Drawing in the left deltoid muscle, as from weakness.—Transitory drawing from the elbow towards the *upper arm*. Tearing in the anterior and superior portion of the right upper arm. Tearing, with pressure, in the middle of the right upper arm, quickly coming and going. Tearing, with pressure, in the middle of the left upper arm, from before backward and from without inward. Tearing, with pressure in both upper arms, in paroxysms. Jactitation of the muscles of the internal side of the left upper arm, when laying the arm on something; going off by changing the position of the arm, but returning when the arm resumes its former position. Twitchings in the muscles of the upper arm above the elbow-joint, when at rest. Digging-up stitch in the right deltoid muscle. Bruised pain in the lower part of the left upper arm. Piercing pain, in paroxysms, in the left humerus, as if crushed and compressed, when at rest and in motion.—Tension and sore feeling in the tip of the *elbow*, especially when bending the arm.—Cramp-like stiffness in the right *forearm*. Paralytic tearing in the right lower arm. Pressure in the right forearm, from behind forward and from within outward.—Pain as if sprained over the left *wrist*, in the region of the styloid process of the ulna. Pain as if sprained in the left wrist-joint. Tearing, with pressure, in the right wrist-joint, more violent during motion. Transitory jerkings in the dorsum of the left hand, above the joint. Pinching close above the wrist-joint, on the side of the ulna. Quick drawing, in short paroxysms, from the ulnar side of the wrist-joint towards the hand.—Cramp-pain in the dorsum of the left *hand*, between the index and middle fingers. Cramp-like contraction of the palm of the left hand. Jerking tearing in the hand, proceeding from the fingers. Tearing, with pressure, at intervals, in the metacarpal and carpal bones, and also in the posterior joints of the fingers. Burning pricking, with pressure, in the outer border of the metacarpal bone, proceeding from the left little finger. Fine, dull, intensely-painful shocks in the upper part of the metacarpal bone of the left index-finger and in other parts of the hands, as if a nerve, which had been put upon the stretch, were touched with a little hammer. Weakness and

trembling of the hands, especially when laying them on the table and writing, which gave him trouble. Trembling and feeling of heat in the left hand. \**Swelling of the hands*, in the evening. Burning itching in the dorsum of the hand, as if bit by mosquitoes, not to be removed by rubbing, for eight hours. Small, red, painless spots on the dorsa of both hands. Small blotches below the wrist; itching in the day-time, the itching being aggravated by rubbing. Chilblains on the hand, during mild weather.—Tearing, with pressure in the posterior joints of the fingers of the right hand, more violent during motion. Drawing stitches in the posterior joint of the left index-finger, in the direction of the tip. Cramp in the fingers, they remain contracted for a long while. Cutting in the ball of the left little finger, more violent when bending it forward. Pricking in the tips of all the fingers. Fine prickings in the tip of the left middle-finger. Drawing in the posterior joint of the left thumb, and below the wrist. Cramp-like drawing pain in the left middle-finger, with jerks causing the finger to tremble. Intense jerking pain between the thumb and index-finger, when holding the pen; he does not feel anything when holding the pen loose or ceasing to write, but the jerking soon returns and continues a long while. Tearing in the posterior joint of the index-finger, gradually going off when moving the hand. Pain of the whole left index-finger as if sprained, when bending it, stretching it, or when at rest, frequently recurring for five days.—Painful *hang-nails*.

**Lower Extremities.**—Continuous itching pricking in the left buttock, near the anus. Jaetitation of the left glutei museles. Violent pain in the museles around the hip-joint, when raising the thigh. Transitory dull pressure in the ossa ischii, when sitting.—Pain in the right *hip* as if sprained, when walking, he was almost obliged to limp for several hours. Drawing in the left hip. Paralytic pain in the hip-joint when walking. Pain as if sprained close below the hip-joint, in the thigh, only when walking. Uneasiness in the limbs, he has to change their position constantly in the evening.—*Paralytic heaviness and weakness in the limbs, especially in the thighs and knee-joints*; he is scarcely able to walk, but has to sit and lie down. Painful weariness of the lower limbs when standing, with debility and staggering. Bruised pain of the lower limbs when going up stairs; when going down stairs, they feel so weak and powerless that he is in danger of falling. Weakness of the right limb, especially the thigh, apparently the femur; it pained him when standing, he had to support himself on the left limb.—Itching pricking in the upper and inner side of the *thigh*. Stitch-like pain in the museles of the right thigh, only when standing. Pricking in the inner side of the left thigh. Drawing, with pressure, on the inner side of the left thigh, in the groin, extending from the os ischium to the posterior side of the thigh, afterwards from the hip to above the small of the back on the right side; with occasional grumbling in the os iselium. Cutting in the interior of the left thigh. Pulsative dull pressure in the middle of the inner side of the thigh. Pain as if sprained in the thigh, below the hip-joint, when walking. Drawing tearing in the left thigh, both when at rest and in motion. Drawing pressure on the outer side of the right thigh, which he had laid across the other when sitting. Pricking itching in the outer side of the thigh, going off for a time only by rubbing. Iteling pimple on the left thigh.—Pressure on the right *knee-joint*. Tensive pain in the bend of the left knee. Stiffness in the bend of the right knee. Sudden stiffness of the knee, she can only bend it with great pain. Drawing tearing in the bone, from the knee to the middle of the thigh, when sitting. Tearing, with pressure, in the right knee-joint, in front, from without inward and below the patella. Tearing in the ligaments of the internal side of the left knee. Burning scraping in the outer side of the left knee. Dull

stitching in the outer side of the right knee, only when standing; going off again when moving the limb and sitting. Fine, painful stitches in the right knee and bend of the knee, when sitting. Languor in the knee-joint, he is scarcely able to walk, with drowsiness. Jerking twivelings below the patella. Bruised pain in the bends of the knees and in the calves as after taking a long walk, in the evening, when at rest and in motion. Cold knees and feet.—Drawing tearing in the *leg*, when sitting. Cramp-like tearing in the right leg, when walking. Painful drawing in the outer side of the calf, when at rest and in motion. Tension in the left leg. Drawing, extending from the bend of the right knee to the calf. Great weariness of the legs, especially the left, extending from the feet upward and in the knees, with drawing at intervals, especially when standing, with soreness of the soles. When walking, especially when walking in the sun, her knees threaten to give way with languor of the whole body and moisture in the face. Painful rigidity in the inner side of the left calf when standing. Violent cramp in the calf, almost the whole night. Pressure in the whole right calf. Pressure below the right calf, when at rest and in motion. Pinching in the upper part of the inner muscles of the calf. Frequent painful heaviness in the outer muscles of the left calf, when walking. Sensation in the leg as if a cord had been tied around firmly. Painful feeling of a heavy weight in the left leg which he had laid across the other when sitting, and which was hanging down. Pulsative pressure in the right tibia. Yellow, round spots on the left leg, for two days. Small swelling on the tibia, with a red point on it; when touching that point a pain is felt as if the flesh were loose on the bone.—Painfulness of the feet from above the malleoli down to the soles, when sitting, less when standing or walking. Disagreeable heat in the feet, which can scarcely be felt by the hand. Violent burning in the feet and hands. Flush of heat in the feet. Reddish *swelling* of the feet, especially around the ankles, with sensation as if the feet were tied too fast. \**Sudden swelling around the ankles*, in the evening. Pain under the ankles, in the evening when lying in bed, as if the heel would be torn out. Tearing, with jerks, in both ankles of the right foot, and thence into the toes when sitting; when standing the pain seems less, but then the tearing is felt from the toes upward. Creeping in the feet, as after a long walk, or as if they would go to sleep, gradually rising into the legs. Itching pricking under the left inner and outer ankle. Itching in the dorsum of the left foot.—Tearing, with pressure, in the right *heel*. Drawing tearing between the metatarsal bones of the last two toes. When stepping on the outer side of the right heel, a dull stitching pressure is felt as far as the calf, only when walking; disappearing on raising the foot. Cramp-pain in the sole of the right foot, when sitting. Sharp pressure across the right sole, when sitting.

**Sleep.**—Stretching of the arms and legs. A good deal of yawning, when walking in the open air, but with oppression, as if a band were around the chest. Violent desire to gape; nevertheless he was not able to gape full enough even when opening the mouth ever so widely.—*Drowsiness* after a walk in the open air, especially when hearing music. Drowsiness in the evening; sleep being prevented by a constant uneasiness in the legs.—Frequent starting at night, when asleep. Uneasiness in the whole body, after waking at one o'clock at night, with digging-up in the tibiae. Deep sleep for several nights. (He spoke during sleep and said that an external application could not cure an internal affection.) The child moans during the nightly sleep, prays and supplicates in a timid manner.—Vivid dreams. Anxious dreams, of quarrels, neglected business. Confused, vivid dreams, things do not succeed according to her wishes, she talks aloud, tosses about, and, on waking, finds herself sitting up.

He hears a loud report in a dream. Pleasant dream of earthly magnificence and greatness. Dream full of cruelty. Lascivious dream with emission, without erection. Lascivious dream with erection without emission. On waking, at night, he lies on his back, with the right limb stretched, and the left limb drawn up, and half uncovered. At night, after waking, undulating drawing jerks deep in the hands, apparently in the nerves, he could have cried out.—Drowsy and dizzy in the morning, on waking from a long sleep, as if he had not slept enough. In the morning, on waking, the back and the lower limbs are painful as if bruised; she feels tired as if she had not slept enough, and as if the body had not been rested long enough; she feels a little better a few hours after rising. While dressing herself, she is suddenly attacked with so much weakness that she is scarcely able to breathe. In the morning on waking, he feels a pain and heat in the head.

**Fever.**—Shuddering, only in the left arm, causing the arm to jerk. Shuddering, in the evening, only in the left foot, up to the middle of the thigh. Shuddering, at ten o'clock in the forenoon, for several days, with coldness of the hands, deadness of the fingers and insensibility of the tips of the fingers. Slight feeling of coldness and moderate shuddering, with goose-flesh on the arms and continued chattering of the teeth, resembling a convulsion of the masseter muscles.—*Chilliness over the whole body*, for half an hour. °Chilliness over the back, in the evening, or only about the head with thirst. Quickly-passing chilliness along the back especially.—Feeling of *heat*, especially internally. Great heat in the head, with hot forehead, sometimes with redness of the face, accompanied with a general, but slight heat of the whole body, worse in the evening, with much thirst, five evenings in succession. Feeling of heat over the whole body, especially on the thighs and back. Violent heat over the whole body, especially the chest and back, with a feeling as of hot sweat trickling down, without any heat being felt by the hand. He is now and then attacked with anxious heat, as if sweat would break out. Anxious heat and sweat set in all the time, even when moving about ever so little. °Burning heat in the limbs and particularly on the hands.—Hot *sweat* over the whole body, and complete exhaustion, even after slight exercise. Heat and sweat over the whole body, (from four to five in the afternoon,) afterwards chilliness; thirst during and after the heat, returning at the same hour for several afternoons.—\**Profuse sweat*, for two nights, exhausting. Profuse sweat every morning after four o'clock.—Morning-sweat, mostly on the neck, nape of the neck and forehead.—\*Hectic fever.?—°Worm fever.?—°Pulse quick and small.

**Skin.**—Itching burning pricking over the whole body, especially in the outer parts of the trunk, particularly in the morning when in bed, for some days. Corrosive itching when undressing, over the whole body, he was obliged to scratch. Fine prickings in the whole left side of the body, next day only in the right.—Itching eruption over the whole body.

**General Symptoms.**—Stitching pinching, alternately, in various parts of the body.—Heavy pressure now in one, now in another bone.—Heaviness in all the limbs, languid feeling in the chest, and more or less violent fits of anxiety. Bruised pain in the limbs, and especially above the small of the back. Paralysis of the left arm and foot, from fright, disappearing at night. Internal heat after a walk in the open air, especially in the chest and abdomen, without thirst. Extremo relaxation of body and mind; he is unable to attend to his work for a long time, has to lie down and sleep.—Loss of strength, as if his lower limbs had been crushed.—Excessive heaviness; he wants to sit or lie down: when attempting to sit down he almost falls down on his chair, he has not strength enough to sit down gradually.—Great weariness with constant inclination to sit; he feels this weariness most when walking slowly, and he therefore walks fast in-

voluntarily. He feels his weariness less when walking fast, but so much the more afterwards. Weariness of the whole body for seven days, especially after going up stairs. Great weariness in the day-time; he has to lie down, but he is unable to sleep; and, if he does sleep, he is attacked with vertigo, absence of mind, and dullness, for half an hour. Trembling and unsteady in the whole body and limbs; the hand trembles more when laying it lightly upon something, than when grasping a thing firmly.—Faint and drowsy. Great faintness after going down-stairs, she was scarcely able to breathe, felt nothing on going up-stairs. °Exhausted from talking. °Sweats easily when walking during the languor. °Nervousness.—°Intolerable uneasiness in the whole body.—°Hysteric spasms.—°Eclampsia of children during dentition. °Epilepsy, with clenching of thumbs, pale face, loss of consciousness.—°Emaciation.—Consumption.

**Characteristic Peculiarities.**—Many pains, especially the drawing pains with pressure, commence lightly, increase gradually and to a very high degree, and decrease again as slowly. The symptoms seem to disappear when walking, they return immediately when at rest; the lassitude is greatest when walking.

## 227. STAPHYSAGRIA.

STAPH.—*Delphinium staphis agria*, L.—See HAHNEMANN'S *Mat. Med. Pura*, Vol. IV.

COMPARE WITH—Ambr., Arn., Con., Ign., Lye., Merc., Nux. v., Phosph. ac., Phosph., Puls., Ruta, Thuj., Verat.

ANTIDOTES.—Camph.—It is used as an antidote against Merc. and Thuj.

### CLINICAL OBSERVATIONS.

According to Noack and Trinks the following affections have been cured with Staphysagria: *Consequences of chagrin with indignation*.—Sea-scurvy.—Hydrargyrosis.—Sycosis. Dry, thread-shaped figwarts, (in conjunction with nitric ac., Rummel).—Arthritis. Arthritis nodosa.—Arthritis nodosa of the finger-joints.—Anthratic metastasis.—Miliaria chronica.—Dry herpes. Herpes furaceus. Suppurating humid tetters, forming crusts, on the thighs of a boy, with swelling of the inguinal and axillary glands, and violent itching in bed. Humid herpes on both arms with tensive and burning pains.—Lupus vorax.—Diseases of the bones.—Inflammation of the bones. Swelling of bones.—Pædarthroace.—Caries.—Intermittent fever.—Intermittent fever with evening-chill, without subsequent heat.—Tertian fever with scorbutic symptoms.—Hypochondria from onanism.—Scabs on the hairy scalp with violent itching.—Tinea capitis favosa.—*Humid scald-head*.—Considerable falling off of the hair.—Susceptibility of the eyelids to inflammation.—Nodosities in the margins of the eyelids and inflammatory conditions of the Meibomian glands, with nightly agglutination.—Scrofulous ophthalmia. Arthritic ophthalmia.—Hardness of hearing with enlargement of the tonsils from abuse of mercury.—Inflammation of the facial bones.—Toothache: *Gnawing* pain in a decayed tooth, with drawing in other teeth, early in the morning after chewing, aggravated in the open air and by taking a cold drink, relieved by warmth, accompanied with ready bleeding of the gums.—*Attacks of pain in sound as well as decayed teeth*, with sensitiveness and painfulness of the teeth, aggravated by the contact of food and drink.—Tearing, proceeding from a decayed tooth, and extending through the whole left side as far as the pes anserinus, where the most violent pains are experienced, which are aggravated by slight contact and diminished by strong

pressure.—Tearing toothache.—Painful excrescences of the gums.—Stomacace scorbutica.? Scorbutic ulcers in the mouth.—Inflammation of the tonsils increasing until the patient was in danger of suffocation, attended with ptyalism, sticking and boring in the ears.—Cardialgia.—Dysentery.—Ischuria.—Inflammation of the testicles.—Painless inflammation of the testicles. Inflammation of the ovaries as arising from unfortunate love, or in consequence of thinking all the time on sensual things.—*Struma*.—Inflammation of the hip-joints with threatening suppuration.—Ischias with great forgetfulness.

## SYMPTOMS.

**Mind and Disposition.**—*Sadness*, with sensation as if the mind were dead. Sadness with ill-humour. Sadness, with apprehension that the least accident will have the worst consequences. \**Great desire to weep*, wraps up her face and weeps aloud, does not wish to hear anything of anybody. \**The circumstances in which he is living make him sad*, he is filled with grief, weeps, and nothing gives him any pleasure.—\**Great indifference*, he is hypochondriac, would like to die. Indifference, with phlegmatic mood and mental relaxation. Indifference, with want of disposition to think or talk, with sadness and want of sympathy. Even the most attractive things do not make an impression upon him.—Want of disposition to every serious labour.—Serious, taciturn, speaking but little.—Great anxiety with fearfulness. Anxiety with dread of the future. Internal violent anguish, not allowing him to remain quiet anywhere. Anxious thoughts about past things as if they were present, with anguish, sweat as from anguish, obscuration of sight, illusions of the fancy, and indifference to life. (Anguish and fear, in walking fast, as if some one were coming after him, has to look round constantly).—*Ill-humour*, with indisposition to perform any kind of mental labour. Peevish and ill-humoured, weeps frequently. Ill-humoured about nothing. Ill-humour with restlessness, he has no rest anywhere. Silent ill-humour, he is vexed at everything, even at things which do not concern him. Ill-humoured and melancholy, and so irritable that he does not know how to compose his temper. She is irritated whenever a word is spoken to her, it causes her to weep. \**Is so ill-humoured and irritated that he wants to throw away everything he is holding in his hands*, particularly early in the morning.—°Great sensitiveness. Quarrelsome, and nevertheless, he is merry.—Fifful mood; alternately cheerful and anxious, lastly quiet and contented.—Cheerful, good-humoured, talkative and in good spirits, (curative action.?)

**Sensorium.**—Dulness of the mind, preventing him from accomplishing anything. *Vanishing of the ideas*; when talking or thinking upon a thing, the former ideas are at once forgotten when a new idea crosses the mind. An idea vanishes when he is endeavouring to retain it. While meditating so many confused thoughts cross his mind that he is unable to disentangle it, and forgets all about the ideas he was going to think of.—Great weakness of memory, difficulty of recollecting what he has been reading or thinking about, even a few minutes after. He does not know whether the things he had in his memory have actually happened, or whether they had been a mere dream.—*Dulness of the head*, alternating with great clearness of the head. Constant dulness of the head, with oppression of the mind. The head feels dull, as if stupid, with heaviness and dizziness in the forehead, or only at a small spot in the centre of the forehead, attended with a sort of insensibility, so that, when walking in the street, he does not know whether he is walking to the right or left side. Giddy sort of dulness when talking while standing. Confused feeling of the head, as if during catarrh, or early in the morning, with contractive pressure in the vertex.—*Vertigo*, only in the room, as if stupified. Vertigo on stooping and turning the head rapidly.

Vertigo, particularly when sitting, diminished by walking about. Vertigo, as if everything were turning in a circle, also particularly in the evening in bed, when lying. Runs against a door when walking, owing to his giddiness.

**Head.**—Heaviness of the head, relieved by leaning the head on the hand. Sensation as of a heavy load in the head, over the cribiform plate, like a lump shaped into a ball. Alternation of stupifying and boring headache. Violent headache, early in the morning after waking, as if the brain were torn, going off afterward amid violent, spasmodic yawning. When shaking the head, he had a sensation, at a small spot in the middle of the forehead, as of something heavy, such as a leaden bullet, were lying in the brain, which could not be detached.—Tearing in the outer parts of the head and in the teeth. Itching of the hairy scalp. Itching, crusty eruption of the hairy scalp, as well as directly over and behind the ear. The hairy scalp itches; it is humid and covered with crusts. Great falling off of the hairy scalp. Large but painless blotch in the hollow behind the lobule of the ear, with a white pimple on the top. *Itching pimples in the nape of the neck.* Pain in the vertex, a sort of contraction and compression from all sides. *Oppressive, stupifying headache, especially in the forehead, more violent when moving the head and when standing.* Pain in the head when stooping, as if the parts would issue through the forehead. *Headache as if the brain were compressed (mostly in the forehead) with paroxysmal roaring in the ear, which terminates much sooner than the headache.* *Sensation as if the occiput were compressed internally and externally.* Pressing of the brain, especially in the occiput, against the skull, and pressure in the brain, as if too much blood had accumulated in it, in the evening before going to bed, continuing after lying down. Pressing headache in the left half of the forehead, from within outward. Oppressive painful heaviness in the occiput, with pressure from within outward, when walking in the open air. Heavy pressure over the orbit of the right eye, in the open air. *Hard pressure in the head, in the region of the right temporal bone, and of the vertex.* Hard pressure on the right side of the forehead. Pressure over the right eye, and drawing from below upward. Pressure above the right eye, behind the eyebrow, as from something hard. *Aching pain in the left temple, externally and internally, as if one were pressing on the part somewhat hard with the finger.* Drawing pressure in the forehead, from time to time. Violent tearing with pressure through the left hemisphere of the brain, especially violent in the forehead, gradually increasing and decreasing. Dull, painful, sometimes sticking pressure from within outward, first in the whole forehead, afterwards only in the left frontal eminence, going off during rest, but returning with so much more violence during motion. Sharp pressure on the top of the head, occasionally. Tearing in the forehead, in the evening when sitting; when stooping he felt a sticking in the forehead; when walking he felt relieved.—Sticking headache, the whole day. Sticking in the left temple. Single, long, dull stitches from the scalp into the brain, not far from the vertex; the place is painful to the touch. Stitch-like and drawing pain, with pressure, in the left side of the forehead. Dull pinching headache in the forehead, with stitches in the region of the temples, abating by walking, but returning when sitting or standing. Sudden stitches in the upper part of the frontal bone, causing him to start. Boring stitch in the vertex from within outward. Boring stitch, with pressure from within outward, in the whole of the left half of the forehead, *awaking him early in the morning twice, with violence, for one minute.* *Sharp burning prickings in the left temple.* Fleet burning stitches in the occiput, from right to left during the first day, afterwards from below upward. *Dull sticking in the right temple, externally and internally, as if the bone would be pressed out; more violent when touching the part.* Pulsative

drawing-tearing sticking in the left temple, apparently in the bone; next day it was felt from time to time, now in the left, then in the right temple, sometimes also in the left frontal protuberance, less violent, continuing a few days. Headache during motion, as if the brain would fall out; also in rest he felt as if the brain were compressed, were standing off from the skull, and were lying in it loose.

**Scalp.**—Drawing-cutting tearing in the side of the forehead. Burning-sticking pains in the region of the left parietal bone.—Burning stitches in the outer parts of the frontal bone. Corrosive itching of the whole of the occiput, rather made worse by scratching. Corrosive itching of the upper part of the occiput, with sore pain, returning at the same time in the evening and at the same place. Itching gnawing of the hairy scalp, increased by rubbing, for several days. Pricking itching of the hairy scalp, and small pimples on the forehead. Fine burning pricking of the scalp. A number of hairs can be easily pulled out of the scalp without pain. Burning pain, with pressure, in the region of the left temporal bone, interiorly, close above the ear. Rheumatic drawing with pressure, when bending the head forward, in the outer parts of the occiput, commencing at the articulation. *Painful drawing in several outer parts of the head, more violent when touched.* Painful drawing in the region of and behind the occipital protuberance, at every motion of the head. Sore feeling in the outer parts of the right parietal bone, only when touching them, preventing him from lying on that side. Rigid pain in the left side of the nape of the neck and occiput, only at night, frequently waking him from sleep, and making it impossible for him to lie on either side.—°A number of itching scabs on the hairy scalp.—\*Scabs on the hairy scalp, itching violently. \*Humid scabs, also with bad smell.

**Eyes.**—Pressure in the eye; she has to wink frequently. Early in the morning, when waking, the eyes are dry, and a pressure is experienced in them; she is unable to open them without having previously moistened them. Contractive sensation in the upper eyelid, causing a flow of tears. Tearing pressure in the outer canthus, in the region of the lachrymal sac. *Pressure in the upper eyelid, the whole day*, more violent when closing the eye. Pain under the left upper eyelid, as if a hard body were lying under it. Pain, with pressure from within outward, in the upper wall of the right orbit, directly behind the eye, continuing a long while and returning frequently. Aching pain in the upper part of the right eyeball. Hard pressure in the inner canthus of the right eye.—The eyes are dim, and so hot that the eyeglass becomes cloudy from the heat. Dim-sightedness as if the eyes were full of water, with itching and stinging in the inner canthus; he has to rub the place. When writing, the eyes soon ache; especially in the afternoon he experiences a smarting and burning in them, after which a few smarting tears run out; he has to avoid the light, because light brings on the pain the sooner.—*Smarting pain in the inner canthi.*† Biting water runs from the eyes early in the morning.—Violent itching in the inner canthus, early in the morning, worst in the open air; he is obliged to rub the eyes.—Dry gum in the eyelashes and in the outer canthus, at night; the gum becomes likewise dry in the open air, and this occasions a tension. *Dry gum in the inner canthus*, constantly.—Sensation in the eyes as if sleepy. Dryness of the eyes in the evening, with pressure in the same. Itching of the margins of the eyelids. *Inflammation of the white of the eye, with pain.*—Pimples around the inflamed eye. °Inflammation of the lids.—Burning tearing, with pressure, in the right temple, close to the eye. Burning

† In a man who had never suffered with pain in the eyes.

sensation, with pressure, around the left eye.—His eyes close sometimes, although he is not drowsy. °Spasmodic closing of the lids.—Contraction of the pupils, after which they dilate considerably. *Dilatation of the pupils for many hours.*—Severe pain; cutting as with a pain below the left upper eyelid. Burning, which is not disagreeable, in the outer canthus of the right eye, extending a good ways back of the eye towards the ear, and returning in paroxysms. Itching of the margin of the upper eyelid, in the open air; two hours later the itching was likewise felt in the other eye; it went off by rubbing. Dull stitches in the eyes, when exerting them. Sticking shoeks in the eyeball, as if it would burst. *Deep, hollow eyes, with blue elevated margins, like one who has indulged in excesses,* for four days. The right eye is open more widely than usually. Illusion of sight; when rising from a seat, he thinks he is much larger than usual, and everything before him appears to be much lower than it is. When looking at a thing it appeared covered with a white gauze, which made the object invisible. When reading, he saw small black flashes between the letters, and then whole lines had disappeared. When looking into the open air he sometimes saw black flashes before his eyes, a kind of vibration of the light. In the night, while in bed, she sees a fiery column before her eyes.

**Ears.**—Dull, but deep stitches in the interior, first of the left, then of the right ear. (Drawing pain in the region of the ear.) Pinching in the left ear. Cramp-like burning pain, with pressure in the outer parts of the left posterior concha.—Stitch in the left ear. Dull, painful stitch, deep in the right ear, in the evening. *Tensive stitch in the left ear.*—Feeling of coldness rushing into the right ear like a cool breath, for a few hours.—Ringing in the left ear. Ringing in one or the other ear, when moving the head, disappearing again during rest. Slight reports in both ears, occasionally, as if the wind were suddenly rushing in, without diminution of hearing. °Hard hearing, from swelling of the tonsils.

**Nose.**—Itching of the left wing, going off by contact. *Smarting and soreness in the left nostril, as if ulcerated.* Soreness of the inner nose, with scurf in the lower part.—Frequent sneezing, with or without catarrh.—\**Stoppage* of the nose (—in the evening, with complete want of air and difficulty of speech.) °Obstruction of the posterior nares, with nasal twang.—Coryza with cough, for several weeks. °Coryza with ulcerated nostrils. Coryza, the mucus being at first thick, then fluid.—Fluent coryza, with alternate discharge of watery fluid, and thick mucus, with titillation in the nose. Sudden coryza (in the afternoon) with catarrhal speech. Violent coryza, with obstruction of one nostril, a good deal of sneezing, lachrymation and chapped lips.

**Face.**—*Hollow eyes, with weary-looking, pointed countenance,* as if one had been revelling the whole night, or as if from a violent emotion. *Blue margins* around the deeply-sunken eyes, as after excesses. °The face becomes brown and blue, from indignation and chagrin.—°Nervous prosopalgia. \**Pressure and beating, extending from the teeth to the eyes.* Ulcerative pain of the left cheek, when yawning. Drawing in the malar bones. Cutting drawing in the left malar bone. Tearing with pressure, in the left malar bone and in the teeth. Tearing and pulling through the cheek, from the head to the teeth. Sticking in the left malar bone, or burning stinging in the right malar bone. °Inflammatory pains of the malar bones.—Itching of the cheeks. Itching stinging of the cheeks, also with gnawing. Burning prickings in the face and the rest of the body. *Burning sharp sticking in the left cheek, obliging him to scratch.*—Pimples on the cheeks, forehead, and in the corners of the mouth, with stinging itching and pain, as from subcutaneous ulceration when touched,

or with drawing itching, which returns after scratching. Tensive pain of the facial eruption.—Scurvy ulcer in the middle of the upper lip. Scurvy pimple on the vermilion border of the upper lip. Sensation in the lip as from fine cuts, as if it had become cracked. Burning of the middle of the upper lip, near the outer edge, for minutes. Vesicle on the edge of the vermilion border of the lower lip, stinging and burning when touched. Sharp stitches with pressure, in the upper lip, from within outwards. Shining red ulcer on the margin of the vermilion border of the lower lip, occasioning a dull sticking drawing pain, which is sometimes accompanied with an agreeable itching, inducing scratching which causes a stinging. Ulcer on the lips, with a gnawing drawing pain in the ulcer. Ulcer on the lips, emitting pus at first, afterwards a greenish water. Tensive sensation below the chin, in front, under the border of the lower jaw, as if a blotch would form. *Sensation below the chin, near the symphysis of the lower jaws, as if a gland were swollen; there is something hard, like cartilage, of the size of a hazlenut; he feels a hard aching pain in that part, during deglutition, when touching the part, or when rubbing the part with the cravat.*

**Jaws and Teeth.**—*The submaxillary glands are painful, as if swollen and contused.* Swelling of the tonsils and submaxillary glands. The toothache is excited by drawing air into the mouth. Gnawing pain in the four lower fore-teeth, especially at night. Painful traction in the teeth from time to time, followed by beating in the gums. Drawing toothache, with pressure in the anterior teeth, as if occasioned by mercury, worst at night, towards morning. Piercing drawing in the hollow tooth, and in the corresponding tooth of the other side, early in the morning. Violent drawing toothache, with swelling of the cheeks; aching pain in the same side of the head, and heat in the face. Compressive-drawing toothache in the right row, which can be excited by cold water. Drawing pain in the hollow tooth, early in the morning. Violent tearing in the roots of the teeth, causing the facial muscles to become distorted, now to one, now to another side. A tooth which had been but slightly affected for a long time, became suddenly hollow within eight days. Exfoliation of the posterior surface of an incisor tooth. Painful drawing in the gums of the posterior molar teeth and in their roots. Painful drawing in the gums of the incisors and the cuspidatus, and in their roots, right side, extending into the muscles of the lower jaw. Painful spasmodic contraction of the gums of the upper and lower teeth of the right side, making it impossible for her to separate the jaws without pain. *When eating he feels a tearing in the gums and in the roots of the lower molar teeth.* Tearing in the whole row, with a feeling of dullness in the teeth, when pressing them together. *Toothache when eating; the teeth are loose; he is not able to chew his food properly; when chewing he feels as if the teeth were pressed more deeply into the gums; he has the same sensation when the teeth of the upper and lower jaws simply touch each other; the gums are white.* The hollow teeth are sensitive to the least touch; and if the least food remains in the hollow tooth, a violent pain is felt extending into the root, and the gums around the teeth are sore. Tearing toothache, *\*immediately after eating and chewing*, and after taking a cold drink, going off within half an hour, but returning again after chewing; it was not excited by warm drinks or motion, but made worse when already existing, especially by exercise in the open air. When drinking anything cold, her teeth became painfully affected, like hollow teeth. *\*Toothache in a hollow tooth after eating; a corrosive drawing (except in the incisors, where a pressure was experienced), which became much worse in the open air, even when the mouth was closed, but was gradually eased in the room for several days. The teeth begin to grumble, even when*

chewing. Tearing, first in the root of the hollow tooth, afterwards extending as far as the crowns of the teeth, only directly after eating and chewing, aggravated in the open air; accompanied with a pressure from the crowns of the affected teeth towards their roots; when touching the tooth with the finger, the other teeth become painful. *Titillating sticking in the molar teeth of the right lower jaw.*—Burning swelling of the gums, with heat in the cheek. The gums are painful to the touch. *The gums bleed for many days when pressing upon the gums or brushing the teeth.*—The gums become pale and white. The teeth blacken rapidly; she is obliged to brush them twice a day; nevertheless they exhibit black transverse streaks in the middle. The inner side of the gums is painful and swollen, also when swallowing. Blister on the inner side of the gums, passing into an ulcer, and occasioning a stinging pain. Blotch on the gums, painful only when pressed upon with anything hard. The gums become corroded.

**Mouth and Pharynx.**—Vesicles in the mouth. Ulcers. °Painful adventitious growths on the inner cheek. Ptyalism. Bloody Saliva. Mouth constantly filled with water, as when very hungry. Constant accumulation of mucus in the mouth.—Tongue coated white. Sticking in the tip of the tongue without being touched by anything. Sticking pain in the border of the tongue when pressing it against the palate, as if a sting were sticking in the tongue, going off when eating. Sore pain of the fore-part of the tongue. Dry tongue and tenacious mucus in the posterior nares, closing them. He talks very faintly, on account of a weakness in his organs of speech, although he is otherwise lively. Dry feeling on the tongue, accumulation of sourish water in the mouth, and tenacious mucus, obstructing the posterior nares. *Rough throat*, as if sore, when talking and swallowing. Stitches in the palate, extending into the brain. Dryness of the throat, especially in the evening, before going to sleep; stinging in the throat during deglutition.—Stinging in the palate, when dry, in the evening. Painful drawing from the os hyoides to the lower jaw; more violent when touching the side of the neck. Swelling of the sublingual gland, which prevents deglutition, for four hours. Burning scraping in the palate, between and during deglutition. The palate is rough and scraping, but very moist. Smarting with pressure, in the posterior part of the palate, only between the acts of deglutition. Scraping sensation in the fauces, behind the nares, as if snuff had got through. °Swelling of the tonsils from abuse of Mercurius. Constantly swallowing when talking.

**Taste, Appetite and Gastric Symptoms.**—Flat, qualmish taste in the mouth; nevertheless, food has a good taste. Nasty, bitter taste, when the mouth is empty. Watery taste in the mouth; food, however, has a good taste.—Food has no taste to him, still he has an appetite. Bread tastes sour to him. Great desire for milk. (Beer excites a scraping, repulsive taste in the throat.) Tobacco has a biting taste. \**Extreme canine hunger, even when the stomach was full of food*; when eating again he relished his food. °Canine hunger with waterbrash. °Desires only liquid things. °Great desire for wine; °for tobacco.—He drinks less than usual.—Heartburn while smoking his usual tobacco. Scraping eructations, affecting the larynx. Pressure and sticking as high up as the chest, when she attempts to eructate. Hiccough after every meal. Hiccough half an hour after supper. For three days he feels qualmish. Nausea, with desire to vomit, every morning. Desire to vomit. Sensation as if the stomach were hanging down relaxed; still he has no appetite. Sensation as if one would vomit, in the morning. Nausea in the mouth and pharynx, when eating, as if he would vomit. Accumulation of water in the mouth, after a meal; a kind of water-brash. Accumulation of water in the mouth, immediately, with single,

short eructations, as after having taken an emetic which has no effect. A sort of eructation; a quantity of mucus gets into his mouth from the upper part of the throat. Tasteless eructations; but neither air nor anything else comes up. Rising of a tasteless humour after a meal. *Frequent hiccough* when smoking. Frequent linceough accompanied with nausea and stupefaction of the head. A few hours after a copious and substantial meal, he has a violent sensation of hunger, with accumulation of water in the mouth.

**Stomach.**—\*Pressure in the stomach early in the morning after waking, as from a load, remaining the same in any position of the body. °Pressure in the stomach with tension, excited and aggravated by eating, particularly by eating bread. Pressure in the pit of the stomach, with fulness and sticking.—Pain in the stomach as if hanging down relaxed, as from hunger, without appetite. Digging-up pain in the stomach.—Tensive pain in the region of the stomach. Pinching-oppressive pain in the pit of the stomach, disappearing again when sitting and bending the body forward.

**Abdomen.**—Tension across the epigastrium, in the hypochondria, (as hypochondriacs complain of,) causing an anxiety and oppressing the breathing, early in the morning, in bed. Crampy pressure below the sternum, on the left side of the xiphoid cartilage. Fleet painful pressure under the last ribs, as from incarcerated flatulence. Contraction in the hypochondriac region, oppressing the chest and breathing, continuing for three days. Crampy pressure below the short ribs of the right side. Pressure, with heaviness and tension in the abdomen. The abdomen feels compressed, which oppresses the breathing. Tensive, painful pressure in the abdomen, as if he had eaten too much and then pressed upon his abdomen, with nausea and accumulation of saliva in the mouth.—Drawing pain through the abdomen. Drawing in the sides of the abdomen from above downward, as if the menses would appear. Drawing pain in the abdomen, as from flatulence. Rumbling and cutting in the abdomen, for many days. Continued sticking pain in the abdomen, under the right ribs, only at the commencement of a walk in the open air. Three paroxysms of cutting in the umbilical region, as if externally, in the evening when in bed. Cutting in the bowels, especially after a meal, with nausea, causing the water to flow together in the mouth, and great lassitude; after the cutting she experiences a great heat in the face, and the blood rushes to the head; the veins of the hands become distended. Spasmodic cutting in the abdomen, with trembling of the knees, in daytime, when performing the least exercise, especially violent after micturition; in the evening the cutting is felt without performing any exercise, relieved by bending double. Cutting in the abdomen, before stool. *Hard, painful pressure below the umbilicus, on the right side.* Stitches, with a crampy sensation, above the umbilicus, on the left side; they are sharp, and recur regularly as beats in music. *Pinching stitch in the bowels, left side.* Continuous, dull stitch in the region around the navel, worse during expiration and when pressing on the part. Tensive stitch in the left abdominal muscles. Bruising pain above the hips, in the loins, extending below the umbilicus, most perceptible when bending forward, but felt likewise when touched. Bruising pain in the abdomen. *Itching prickings in the umbilical region.* Dull stitch in the left groin, more violent when pressing upon the part, but disappearing during an expiration and inspiration. Great rumbling in the abdomen, without pain and without emission of flatulence. Rumbling in the left side of the epigastrium. Rumbling in the abdomen after a meal, which sounds as if bubbles were bursting. Rumbling in the abdomen, and drawing in the intestinal canal. Copious emission of flatulence. Incarceration of flatulence. *Hot flatus.* Excessively fetid flatus. Pinching in the bowels with emission of flatulence. *Violent screwing-pinching pain in the whole*

*of the abdomen, now here, now there.* Pinching in the abdomen, and drawing in the sides, as if diarrhoea would set in. Pinching in the epigastrium, early in the morning, as if diarrhoea would set in; nevertheless he was unable to go to stool.—Tremulous sensation in the abdomen, and indication for diarrhoea. Feeling of weakness in the abdomen, as if it would drop.—°Pot-belliedness of children.—\**Swelling of the inguinal glands*, -also painless, and most perceptible when walking and standing.—°Inguinal hernia from mechanical causes.

**Stool.**—Tardy stool early in the morning, owing to an absence of the peristaltic motion in the large intestines. Cutting colic and nausea, early in the morning, followed by diarrhoea; the last portion is mere mucus.† Colic with diarrhoeic stool, the last portion of which is mere mucus. Loose stool, which goes off while imagining that wind would pass. Diarrhoea and flatulence.—Dysenteric stools with tenesmus and cutting.—Several ordinary stools a day, four days in succession. *Costiveness for several days* (the first days). Hard stool with flatulence between. The stool is twelve hours later than usual, and comes off in small and hard pieces. Hard stool on the first day, no stool on the second, hard stool again on the third day, ordinary stool on the fourth day. Hard, scanty stool, with a burning-cutting pain in the anus. Scanty, hard stools of a small size, coming off with a painful pressure in the anus. Difficult stool; at first he passed hard fæces; these were immediately followed by loose stool, which excited pain and pressing as if the rectum had been constricted, followed by tenesmus. A loose, yellowish, copious evacuation, immediately after a hard stool, early in the morning. Loose, but difficult stool, owing to a constriction of the anus, as in hæmorrhoids. Frequent desire for stool, without colic; he passed very little each time, which was very hard, with a pain in the anus, as if it would burst. Ineffectual desire for stool, without anything in the rectum.—Cutting and digging-up in the epigastrium and hypogastrium, after which a small quantity of loose fæces is passed; after the discharge of the fæces, the cutting is felt again with a renewed desire for stool, but no evacuation in spite of any exertion; a sort of tenesmus, which does not disappear (nor does the colic) until he leaves the seat. Cutting in the abdomen, with violent desire for stool, after which a small quantity of liquid fæces is passed, with chilliness in the head; a kind of tenesmus immediately after the passage of the fæces.—Contusive pain in the rectum, after hard stool, for three quarters of an hour. Continuous aching pain in the rectum, when sitting. Smarting sore pain in the rectum, a long time after stool.—Violent itching of the anus, with blotches around the anus. *Itching of the anus when sitting, between the stools.*

**Urinary Organs.**—*Copious and frequent micturition*, for several days. Scanty secretion of urine the first day.‡ Copious, red urine. Cutting during micturition, which becomes still worse after micturition. Pressure on the bladder, on waking from sleep; she had to emit a large quantity of urine; renewed desire, with pressure, in an hour. Involuntary spirting out of urine when coughing. \**Frequent emission of a watery urine at first*; -in a few days the urine became dark-yellow. Emission of a small quantity of urine every fifteen minutes, for the first four days; on the days following the usual quantity of urine is passed, but of a dark color, and every hour. He urinates very often, on the second day less frequently, but more copiously. He urinates a little more fre-

† NOTE BY HAHNEMANN.—The following four symptoms seem to have been occasioned by an excessive dose; almost every drug becomes a cathartic when taken in an excessive dose; the true primary effect of Staphysagria seems to be; colic, with desire for stool, constipation, or scanty, hard, or even loose fæces, but the latter rarely.

‡ NOTE BY HAHNEMANN.—The symptoms of the urinary organs are similar to those of the alvine evacuations.

quently than usual, and a little less at a time. \**Frequent desire to urinate, passing a small quantity of dark-coloured urine, for three days.* Frequent desire to urinate, with copious secretion of urine. *Desire to urinate: he emits scarcely a spoonful of reddish or dark-yellow urine in a thin stream, sometimes drop by drop; after urination he feels as if the bladder were not yet empty, for the dropping continues.* °Painful micturition.—At night the urine is passed with erection of the penis, drop by drop, with burning in the region of the neck of the bladder, accompanied with ineffectual desire for stool; he was relieved by lying bent double. Immediately after micturition he feels a pain as if sprained, directly above the urethra, behind the os pubis. Cutting during micturition, worse after micturition. Smarting and burning tingling at the orifice of the urethra, between the acts of micturition. *Burning, deep in the urethra, when sitting, only between the acts of micturition.* *Burning in the whole of the urethra, at every micturition, for many days.*

**Genital Organs.**—Sticking pain in the right side of the glans, when standing or walking.—Dampness about the corona glandis, under the prepuce.—Itching of the interior of the scrotum, which can only be alleviated by pressing the scrotum between the fingers.—Discharge of prostatic juice during hard stool. Involuntary emission during the siesta, in an old man who had not had such a thing for thirty years. *Nocturnal emission* five nights in succession, *accompanied with lascivious dreams.* After a nocturnal emission he feels a weakness and heaviness in both arms, as if he had lead in them. The primary effect of Staphysagria is to excite the sexual desire; five or six days after, a constant absence of that desire sets in, both in the genital organs, and in the fancy. Voluptuous itching of the outer parts of the scrotum,† increasing by rubbing, becoming a sore pain externally, while the itching continues internally, and finally occasions an involuntary emission of semen. Painless bubbling in the scrotum. *Violent drawing-burning stitches from the right abdominal ring, apparently in the spermatic cord, as far as the right testicle,* (which is, however, painless to the touch,) when sitting, standing or walking, but most violent when stooping. Drawing (tearing) with pressure in the right testicle, as if it were violently compressed. *Aching pain in the outer parts of the left testicle when walking, also after every friction; the pain is more violent when touching the part.*—White humid excreescences in the hollow behind the corona glandis, and a similar excreescence on the corona itself, both of them itching when touched by the shirt.

**Female Sexual Organs.**—Painful sensitiveness of the pudendum; when sitting she feels a pain in that part. Spasmodic pains in the pudendum and the vagina. Stinging itching of the pudendum. Smarting of the pudendum, also between the acts of micturition. A vesicle on the internal surface of the great labium of the right side, posteriorly, occasioning a biting with sore pain when touched. Appearance of the menses, which had ceased to flow for a year, with cutting and rumbling in the bowels, at new-moon.‡ °Ovaritis. ? °Useful in cancer of the womb.?

**Larynx and Trachea.**—°Pressure and contraction in the pit of the throat, after chagrin, aggravated on swallowing. °Roughness of the larynx, after much talking. *Tenacious mucus in the chest,* the first six and eight hours after taking the medicine, and then several mornings in succession; afterwards, and in the daytime, loose expectoration from the chest. Weak feeling in the chest; it

† Cured by smelling of Ambra.

‡ NOTE BY HAHNEMANN.—This being a primary effect, the menses did not return in the months following.

feels somewhat oppressed, with hawking. Constant desire to hawk, excited by tenacious mucus in the larynx, which he finds it unable to throw off. He throws off a quantity of mucus easily. \*Cough, with titillation exciting the cough, only in the day-time. Violent cough after lying down, in the evening and at noon, with expectoration of tenacious mucus. Cough with expectoration mixed with drops of blood, preceded by a scraping sensation in the chest.—\**Cough, with yellow expectoration like pus*, most violent in the forenoon from 9 to 12 o'clock, not very copious in the morning, °also at night. Ulcerative pain behind the sternum, when coughing. Sharp cough threatening to tear open the larynx, as if occasioned by a constant narrowing of the trachea, without any previous particular irritation. Dry and hollow cough. Sharp irritation in the larynx, with desire to cough, immediately after a meal, the cough, however, being very little. Sharp cough shortly after a meal, with accumulation of water in the mouth; sensation as if this water were driven through the œsophagus with force, and cut it. *Itching, fine, sharp stitches in the region of the upper end of the sternum, directly below the pit of the throat, obliging him to scratch the part.*

**Chest.**—Pressure and heaviness on the chest, when sitting, abating when walking. \**Contractive oppression* of the chest, causing slow and difficult inspirations; the expirations relieve the symptom; accompanied with anxiety and restlessness, especially when sitting, relieved by walking for five hours. Pressure above the pit of the stomach, like soreness, with nausea in that region.—Pressure in the left chest, uninfluenced by breathing. Oppression of the chest and feeling of uneasiness, driving him from one place to another, in the afternoon. *Dyspnœa towards the end of the embrace.* Uneasiness in the chest. °Spasm of the diaphragm after chagrin.—Painful stitches in the chest, making the expirations difficult. Dull stitch in the left chest, returning in a few minutes. Violent stitch in the right chest, when sitting and bending the upper part of the body obliquely to one side and forward.—Tensive stitches in the left chest, when lying and during motion, more violent during an expiration than inspiration; most violent when going up stairs, when a continuous stitch is felt finally, which almost arrests the breathing. Continuous, boring, dull stitch in the left chest. Dull stitches in the intercostal muscles of either side, when sitting, worse when leaning backward, and continuing during inspirations and expirations. Soreness behind the sternum. Sticking-cutting in the region of the left costal cartilage; sensation as if an incision were being made there, accompanied with stitches. Sharp stitches commencing in the posterior region of the right ribs, and winding round as far as the cartilages. *Stinging-itching between the costal cartilages.* Sharp stitches in the region of the fourth costal cartilage of the right and left side, at intervals of several seconds, and lasting longer than usual; they press slowly from within outwards, independent of breathing. Palpitation of the heart when walking and when listening to music. Tremulous palpitation of the heart during slight exercise. Violent palpitation of the heart when waking from the siesta. Constant pain in the middle of the sternum, as if ulcerated, worst when raising and stretching the body; the pain likewise increases when touching the part; it becomes a tension and a sort of pressure, sometimes arresting the breathing. Bruising pain in the muscles of the chest, early in the morning, when moving in bed, and in the day-time when crossing the arms; she does not feel anything when touching the parts, nor when taking breath. Pain of the outer parts of the chest to the touch. Dull sticking-aching pain in the region of the cartilages of the last ribs, when stooping; they feel sore when touched. Rash on the chest; the chest becomes red and itches when he becomes warm. Herpetic eruption in the region of the lower ribs,

composed of small, close, red pimples, occasioning a burning-itching stinging, as from nettles; the place becomes painful after rubbing it; accompanied with a thrill of chilliness across that part, and the epigastrium.

**Back.**—Stitches and pain as if sprained, in the small of the back, during rest, disappearing when walking. Early in the morning he feels a pain in the small of the back, as if every part of it were broken; when rising from her bed she was unable to raise anything from the floor, until 8, 9 o'clock; after this she felt hungry, and then had colic with diarrhoea, the latter portion of which was slimy. Drawing-down pain in the small of the back, more when stooping than when standing erect, least when sitting. Pressing in the small of the back the whole night, as if bruised; the pain was worst at 4 o'clock in the morning; it went off on rising. Pain in the small of the back, not much impeding walking, most violent when rising from a seat, when turning to the other side in bed, and whenever performing a lateral movement, for several days. Violent burning in the lower and outer parts of the os sacrum. Drawing sticking, sometimes darting, in the os sacrum, when sitting.—Hard pressure on the left side of the vertebral column, in the dorsal muscles. Drawing pressure in the first dorsal vertebrae, accompanied with a smarting sensation. Burning-aching pain below the right scapula, close to the spinal column, accompanied with a painful feeling of heaviness in the right chest. Stabbing pain between the first dorsal and the prominent vertebrae.—Pain in the back, at night, from evening until 5 o'clock in the morning, shocks and knocks, arresting his breathing, during a slumber. Severe stitches along the back, from below upward. °Abscess in the psoas-muscle. °Curvature of the spine.? Pressure and tension in the muscles of the nape of the neck and shoulder. Early in the morning, rheumatic pain in the nape of the neck and between the scapulae, like a drawing; when rising from bed the pain was so great that she was unable to move her arms or to turn her neck, the whole forenoon, several mornings in succession, with languor of the whole body until noon.—°Glandular swellings.? When bending the head forward, when sitting, it falls forward almost involuntarily. Heaviness of the head and weakness of the cervical muscles; he had to lean the head backward, or on either side. Sensation in the nape of the neck, as if it would be pressed down. Paralytic drawing in the region of the spinous process of the first dorsal vertebra. Paroxysmal stitches in the side of the neck, almost behind the ear, in the evening. Tensive stitch in the left cervical muscles. Drawing with pressure on the right side of the neck, independent of motion or contact. Tensive pressure in the side of the neck. Drawing aching, rheumatic pain in the side of the neck, when bending the neck forward. Fine tearing in the muscles of the neck. When bending the neck forward, a rheumatic pain is experienced in the region where the neck rests upon the shoulders and back, a sort of drawing-pressing stiffness.

**Upper Limbs.**—Stitches in the left axilla. *Itching prickings in both axillæ.* Dull, aching pain in the right axilla. Drawing-sticking in the left shoulder-joint, especially when moving the arm towards the chest. Stitch, with pressure in the right shoulder, from below upwards. Slight pressure on the shoulder, painful to the touch, as if the flesh were loose, when walking. Pressure on the shoulder, as from a load, when sitting. *Pain in the right shoulder-joint, as if sprained, only during motion.* Dull sticking pains in the region of the shoulder joint, more violent when touching or moving the joint. Violent aching pain in the left shoulder-joint, not disappearing by motion. Drawing, with pressure, in the shoulder-joints, early in the morning when in bed, and directly after rising; more violent during motion—Fine tearing about the head of the left humerus, more violent during motion. Paralytic drawing in the shoulder-joint

sometimes in the whole of the arm when laying it under the head, while in bed. Tearing pain in the left upper arm, in the deltoid muscle, when sitting, going off by motion. Tearing pain in the muscles of the left upper arm, close to the elbow. Stitch-like tearing in the muscles of the right upper arm, near the elbow-joint. Paralytic aching pain in the left upper arm, more violent during motion. Hard pressure in the right upper arm from without inwards, more violent during motion. *Paralytic aching pain in the outer parts of the upper arm, more violent during motion and contact.* Drawing, with pressure, here and there, in the upper limbs, more violent when touched. *Paralytic pressure in both upper and lower arms; more violent during motion and contact.* Drawing, with pressure, in the deltoid muscle. Pain in the region of the bones of the arm, only during motion. Intolerable pressure in the periosteum of the humerus, during rest and motion; the place is still more painful when touched. Drawing, with pressure, in the right upper arm, in the evening when in bed.—Itching pimples on the elbow and towards the hand.—Drawing-tearing pain in the forearm, especially when moving the arm and hand. Red elevation on the forearm, with a pustule in the middle, with burning pain, occasioning an ulcerative pain when touched. Slow, dull stitches, like pressure, in the middle of the forearm. Paralytic weakness around the elbow-joint. Sensation, near the bend of the elbow, more toward the forearm, as if an eruption had broken out, or as if one had ripped the skin with a pin, a kind of burning thrill; however nothing is seen in that spot which is especially painful when touched. Drawing, with pressure, a sort of cramping, below the left elbow, near the outer side of the ulna. Lancination in the left forearm. Drawing, with pressure, in the muscles of the forearm and on the dorsum of the hand. Jerking in left forearm, during rest. Cramp-pain around the right wrist-joint, going off when stretching the fingers, but returning when bending them, which is accompanied with a lancination through the whole arm as far as the shoulder. Drawing pressure in the wrist, especially during motion. Lancination in the left wrist-joint.—Drawing pain through the metacarpal bones in the dorsum of the hand, especially during motion. Titillation in the palm of the left hand, inducing one to scratch. The right hand feels hotter to him than it really was; it was redder than the other hand, with a fine tearing in the metacarpal joints of four fingers. Titillating, sharp stitches in the palm of the hand. Herpes on the hands, itching in the evening, and burning when scratched. Painful drawing in the metacarpal joint of the right index-finger. *Paralytic drawing-pain in the phalangeal joints, more violent during motion.* Hard pressure in the region of the metacarpal bone of the left index-finger, more violent when touching or moving the finger. Intermittent aching pain in the region of the metacarpal bones of the left thumb, more violent when touched. Painful drawing in the joints of the fingers of the right hand. *Fine, jerking-tearing in the muscles of the thumb, especially violent in the tip.* °Arthritic nodosities of the finger-joints.? Tearing pain in the muscles of the ball of the left thumb, going off when moving the thumb. *Fine, jerking-tearing in the muscles of several fingers, especially in their tips.* When stretching the fingers without supporting them upon anything, they are convulsively moved up and down. Creeping in the fingers, as if they would go to sleep. Aching, cramp-like pain in the ball of the right little finger, when moving the hand. Continuous aching pain, commencing in the metacarpal joint of the right middle finger, and extending towards the tip of the finger, continuing also during motion. *Deep, itching-burning, sharp prickings in the left thumb, inducing scratching.* Tensive stitches in the tip of the left thumb. Pricking pain in the metacarpal and phalangeal joint of the right index-finger, continuing during motion. Cramp in the fingers and in several parts of the limbs. *Sensation as*

*if the tips of the fingers of the left hand were covered with a hard skin; he has little sensation in them, and does not well distinguish what he touches.*

**Lower Limbs.**—Burning, corrosive itching of the nates, as when something made of wool is drawn over the skin, in the evening when in bed; scratching drove it from one place to another. Boring pain in the left glutei muscles when sitting. *Stinging itching of the glutei muscles and several parts of the body.* His nates feel sore after he has been sitting a while. Feeling of numbness in the left hip when standing, extending to the abdomen. Aching pain around the hip-joint when walking and sitting. °Coxagra with threatening suppuration.?? Sore pain in the upper and internal surface of the thigh. All the muscles of the thighs feel bruised when walking fast, for two days. Herpes on the thighs and legs. Creeping in the thighs and legs, which had been swollen for years, the swelling being elastic, with sensation as if the interior of the limbs were hot and heavy, and were being distended. When lying he experiences a painful weariness across the thighs, and as if they were bruised; with sensation of excessive rigidity in the joints and a tremulousness in the same, so that he is not able to hold them still. Pain as if sprained in the middle of the left thigh, especially when walking. Tension in the vastus externus when walking. Paralytic pain, like drawing, in the middle of the thigh, anteriorly, during rest and motion. Burning pricking in the posterior surface of the left thigh. Deeply penetrating, dull stitch in the middle of the left thigh, exteriorly. Fine, painful, piercing stitches in the internal surface of the left thigh, directly over the knee. *Itching stinging in the internal sides of the thighs.* A kind of goose-flesh, without chilliness, on both thighs and legs; a number of red and white pimples on them, the tips whereof contain a whitish pus. Weakness of the thighs and legs for several days, especially in the knee-joint; he has to drag the leg; accompanied with lancinations in the calf, and pain in the small of the back. *Pain in the thighs when walking* (more in the left), she has almost to drag them. Dull sticking, almost scratching sensation in the right thigh, internally, above the knee-joint.—Stitch-like pain in the inner border of the knee. Jerking, above the right patella. Drawing tearing below the left patella, not going off by motion. *Drawing sticking in the right knee-joint, more violent during motion.* Dull stitches in the region of the knee-joint, near the patella; *when touching the part, the stitches were changed to an aching pain.* Dull stitches in the right knee-joint, early in the morning, immediately after rising, more violent during motion. When walking, he experiences in the right knee-joints and in the bellies of the gastrocnemii muscles a paralytic drawing resembling a weakness, continuing for a long time, even after walking, when sitting. Pain (as from making a wrong step?) in the knee, for one minute, when walking, and moving the foot. Sensation, on rising from a seat, as if the knees would give way; a tremulous, nervous drawing-up in the bend of the knee. As soon as he lies down, he experiences a drawing-up sensation in the knee-joints, a kind of nervousness and voluptuous uneasiness in those joints, obliging him to get up. Drawing sticking in the left knee-joint when sitting; sometimes he feels a jerking in the joint. Stitching pain, with pressure, in the outer side of the knee, when stepping and feeling the part.—Burning-itching pimples on the leg. Itching of the leg, in the evening, in bed; after rubbing, flat ulcers break out, with violent pain. Heaviness and tension in the calf. Intolerable cramp in the calf and sole of the foot of that limb upon which he is resting; it wakes him from the siesta. Cramp, especially in the upper and lower part of the calf, on waking; it cannot be diminished either by stretching or by rubbing the limb; the pain becomes more intense by thinking of it, even after it had already been diminished. *Burning pricking below the left knee, on the outer side, sometimes in paroxysms.*

*Boring stitch in the right tibia, during rest.* Itching of the right tibia above the external malleolus, not going off by rubbing. Laming pressure in the gastrocnemii muscles of the right leg, externally, more violent when touched.—*Tearing pain in the muscles of one or the other leg, when standing or sitting.* Lancing in and below the right calf, and above the left heel. Itching stitch in the right calf, continuing when standing and walking, and going off by scratching. Drawing, with pressure, in the outer part of the tibia, when sitting.—Drawing pressure across the tarsus, especially during motion. Tearing, with pressure, in the left tarsal bones, close to the joint. Contractive sensation of heaviness in the left tarsal bones, close to the tarsal joint. Painless swelling of the dorsa of both feet, of long duration. *Stinging itching close above the outer malleolus of the right foot, obliging him to scratch.* Burning itching of the internal malleolus of the right foot. Itching in the region of the tendo Achillis, above the heel.—*Stinging itching of the big toe of the right foot.* Burning, with pressure, in the tip of the big toe of the right foot, during rest.—Burning itching of the little toes, in the evening, as if frozen; they are painful when touched, and the painful places are red, for four days. Itching burning of the little toe of the right foot, as if frozen; it felt painful when pressing upon it slightly. Swelling of the metatarsal bone of the right little toe, painful when touched. Burning painful itching in the toes, as if frozen. Tingling in the lower surface of the toes, as if they had been to sleep.—Aching pain in the inner side of the sole of the left foot during rest. Pricking in the sole of the foot which is laid across the other, when sitting.

*Sleep.*—*Violent yawning, causing the tears to drop from his eyes.* Frequent yawning, as if he had not slept enough. Great weariness and drowsiness after a meal; he feels a desire to lie down, falls asleep soon, but feels gloomy and heavy on waking, and dreads to walk; walking was very troublesome for him, especially going up hill; after walking a little longer, he felt very cheerful and strong. Falls asleep as soon as he lies down in the evening. Drowsiness in the day-time; he slept on sitting down. *Great drowsiness in the afternoon.* He falls asleep late in the evening, and wakes again at 4 o'clock in the morning, several nights. Wakefulness early in the morning, followed by drowsiness and a chilly shuddering over the back. He wakes towards morning, as if he had slept enough, but falls asleep again immediately. Wakeful before midnight; but as soon as he went to sleep he dreamed of dispute. Immediately after going to sleep he is waked by a dream that he is fighting with a wild beast, which makes him start. He dreams about his business as soon as he falls asleep. The child is very restless in the night, and calls her mother all the time. He wakes every hour in the night, from 2 o'clock, without any cause. He did not sleep the whole night, and nevertheless his eyes closed. Violent burning pains in the ulcer, in the evening after lying down, for hours, so that she was unable to fall asleep. The herpes itches only at night. His upper and lower limbs started, several nights, as if some one had tickled him; a kind of spasmodic but painless jerking; he felt moreover hot, although he covered himself but lightly, but without thirst or sweat. Tossing about during sleep. Restless for several nights, was filled with all sorts of thoughts before midnight. Vivid, disagreeable dreams, towards morning. Vivid dreams, with coherent ideas. *Dreams about murder.* Dreams full of wrath. Restless dreams; he is busy with all sorts of things, starts as in affright, wakes, but does not become entirely conscious of himself. *Amorous dreams and emission of semen.* Voluptuous dreams without emission. In the evening her calves pained her so much that she was unable to go to sleep; she had to change the position of her limbs constantly, to get some relief; she had the same sensation

in the calves after having got up in the night and having laid down again. He dreams as soon as he falls asleep; now he fights with some one, now he has anxious images, which wake him, and then he dreams again.

**Fever.**—Coldness in the evening. *Shuddering the whole night, without thirst and without subsequent heat.* Internal shuddering, with violent thirst, several days, at three o'clock in the afternoon, without subsequent heat. Shuddering, with goose-skin, several afternoons at three o'clock, ceasing in the open air, and no thirst. Chilliness early in the morning when in bed, without subsequent heat. Cold feet in the evening, in bed. Violent chill in the evening before falling asleep; he shook in his bed, and could not get warm. *Frequent chilliness at night, which wakes him, but he does not become conscious of himself.* Shuddering, with drowsiness and dryness of mouth. *Shuddering and chilly feeling when taking a meal,* without thirst, two hours before the hot stage. Chilliness on the back, even when near the hot stove. Back and arms remained cold although he was near the stove; frequent chills over the back and arms, toward the nape of the neck, over the head and face, early in the morning after rising. Chill, shaking the whole body, with warm forehead, hot cheeks and cold hands, without subsequent heat and thirst. Fleet chilly shuddering along the back, after a meal. Chilliness early in the morning when in bed, followed by heat; she did not wish to rise in the morning. Slight heat after the shuddering. Early in the morning, when in bed, he feels a heat about his head, with sweat on the forehead. In the open air she was attacked with some heat and headache, (towards evening.) Feeling of great heat, as if she were burning externally, with thirst, and orgasm of the blood. Feeling of great heat at night in the hands and feet; he had to keep them bare. Heat at night, especially around the forehead, so that she remained awake after three o'clock; chill at nine o'clock in the forenoon. °Evening-fever, consisting of the cold stage merely. °Tertian, with scorbutic symptoms. Feeling of heat to him, and real heat in the face, without thirst, an hour after the chilly stage. Feeling of warmth over the back, which is not disagreeable, three hours after a meal. At intervals he experiences a suffusion of heat over the lower part of the back, the rest of the body being cool, without any subsequent sweat. Feeling of warmth on the forehead, as from a constant, warm breath touching it; sometimes also a cold breath, with redness of the cheeks and warmth of the external body. When waking in the night, he is covered with warm sweat, on the abdomen, feet, genital organs, although covered moderately, no thirst; when uncovering himself, a cold air comes upon him, the sweat ceases, he imagines he will take cold.—Disposition to sweat. °Inability to sweat, even when taking the most violent exercise, with pale face and headache. °Cold sweat on forehead, hands, and feet.—Profuse night-sweat. \*Putrid smelling night-sweats. Night-sweat smelling like rotten eggs.—Excessive sweat in the afternoon, with heat of the whole body, without thirst, although he sat very quietly.

**Skin.**—Itching of the head and whole body, especially early in the morning, a creeping itching and crawling as of a flea wandering from one place to another. *Itching sharp stitches in different parts of the body* Prickings, resembling flea-bites, in the lower limbs, hand, nape of the neck, head, etc. Stinging burning here and there in the skin. Burning sensation on the limbs, now here, now there, but never on the rest of the body. Deeply-penetrating sharp stitches, returning at long intervals, in different parts of the limbs.—*Blotches* of the size of peas on the whole body and thighs, itching and emitting a humour when scratched open, when they occasion a burning pain. °Chronic rash, or with nocturnal convulsions. *Itch-like eruptions.* \*Herpetic eruptions. °Dry, crusty herpes. °Cut-wounds.—\*Frequent boils.—°Mercurial ulcers.? °Carious

and scorbutic ulcers.? Tearing and jerking around the ulcers in the evening and early in the morning, during rest; ceasing when walking. Lancination in the ulcer. Smarting, or smarting itching in the ulcer, as from salt. Darting and pecking pains of the ulcerated leg, the skin of which becomes covered with a thin crust, from which a yellowish water oozes out. °Indurated glandular swellings. °Affection of bones. °Swellings. °Inflammations. °Caries.?

**General Symptoms.**—°Scorbutic affections. °Serofulous and rickety affections. °Arthritic nodosities of joints.? °Chronic mercurial ailments. °Ailments from chagrin with indignation, also from care and grief. °Hysteric and hypochondriac ailments. °Onanism.? °Hemiplegia, after chagrin.—In the morning, after rising from a seat, he turns pale, becomes giddy, falls to one side as in a swoon; similar paroxysm next day about the same hour. *Drawing-tearing pain here and there in the muscles of the whole body*, when sitting. Pain in the joints of the shoulders, elbows, fingers, back, knees, of a drawing kind, when moving those joints, less during rest, especially in the evening. Tremor in the interior of the limbs, early in the morning, when keeping them for a long time in one position. Paralytic drawing in different parts of the body, especially the joints, when keeping the limbs for a time in an unusual and inconvenient position. All his limbs ache; the muscles ache when touching them, the joints when moving them, more in the forenoon than in the afternoon. *Pain in all the bones.* Early in the morning, when rising from bed, all the joints feel stiff, especially the shoulder and hip-joints, and the small of the back. Early in the morning, when in bed, she feels very tired, without drowsiness; all her limbs ache as if bruised, and as if no strength were in them, for one hour. Below the shoulder and hip-joints the limbs feel bruised and painful, as after a long journey on foot. General bruised feeling, worst when walking, relieved when sitting and lying; especially in the calves she experiences an excessive painful weariness, as if beaten with clubs; she was scarcely able to drag her feet. The whole body feels painful as if bruised, with feeling of lassitude, worse during motion; when walking a little, after having been seated, the painful sensation came on again with renewed violence. Great weariness in the knee-joints early in the morning after rising; he finds it difficult to walk or stand. *Debilitated all over, especially in the joints, when walking.* Weary and weak, early in the morning. Great weariness and disposition to sleep in the afternoon when sitting.

### CLINICAL OBSERVATIONS.

According to *Noack* and *Trinks* the following affections have been cured with *Stram.*—Drawing, laming, somewhat spasmodic pains in the limbs.—Acute and chronic rheumatisms.—Pains in the limbs and joints.—Clonic spasms, accompanied with a sort of mental derangement, in children.—Spasmodic

attacks occurring in a case of typhus.—Spasmodic attacks of children, suffering alternately with constipation and diarrhoea, or flatulence.—Convulsive phenomena, alternating with paralytic symptoms, in a case of vesicular erysipelas of the face, accompanied with meningitis.—Convulsions and incipient hemiplegia, consequent on epilepsy.—Hysteric spasms, preceded by great irritability and sensitiveness of temper, disposition to weep alternating with unusual mirthfulness, and by sexual excitement; these symptoms were speedily followed by an alternation of tonic and clonic, tetanic and cataleptic spasms.—A kind of St. Vitus' dance, occasioned by the vapours of mercury and fright.—*St. Vitus' dance*.—Paroxysms of convulsions resembling St. Vitus' dance, alternation of emprosthotonos and pleurosthotonos; the paroxysms were followed by ease, exhaustion, and by a condition resembling somnambulism; vision of strange persons, stopping at strange places, converse with spirits and God, emphatic speeches and prophecies in the case of a feeble and irritable female.—Epilepsy.—Catalepsy.—Hydrophobia.—Fainting fits every day; the patient suddenly falls as if dead, with pale face, almost imperceptible breathing, waking after one to three hours; if disturbed during the paroxysm she rolls about on the floor, becomes enraged, bites those around her, in the case of a girl of 14 years.—*Measles with violent erethic fever*, bright-red, bloated face, great heat of the body, profuse sweat, frightful visions, such as rats and mice, which frightened the patients, and from which they endeavored to hide themselves, deglutition impeded as if by spasm.—Typhus with delirium, anxiety, illusions of hearing and sight, Typhus after the cholera: Typhus exanthematicus: excessive delirium, continuing with unabating violence day and night, not leaving the patient a moment's rest. At times he was singing and whistling, at others he was conversing with those near him in different languages, or he endeavored to jump out of bed, and to go about his business; without any symptoms of inflammation of the brain or its membranes. After a dose of 10 drops of the first attenuation the patient slept 36 hours, and woke with complete consciousness, without however recollecting what had past. Typhus putridus.—Mania à potu.—*Mania feror*.—*Mania saltatoria savages*.—*Mania puerperalis*.—Mental derangement: violent headache, followed by excessive delirium, loss of sight and hearing, striking about with hands and feet, excessive dilatation of the pupils, slow pulse.—Mental derangement with spasmodic symptoms, staring look, attempts to escape with shrieks, frightful visions, fever-heat, redness of the face, moist skin.—*Rage*, with furious delirium, etc.—Timid mania.—Alternation of convulsions and rage.—Laughing, weeping, and singing in quick alternation.—Loud laughing, alternating with vexed mood and moaning.—Great mirthfulness, with extravagant motions and speeches.—Loquacity after mania.—Imbecility.—Stupefaction of the senses, and insensibility to external impressions.—Hallucinations.—Hallucinations after vesicular erysipelas, which was treated with applications of cold water; he hears dancing music, sees men, and hears them talk in foreign tongues, etc., (cured with repeated doses of the second attenuation by Trinks).—Mania.—Loquacious delirium, denoting fright.—*Monomania religiosa*: extreme lowness of spirits, she despairs of her salvation because she is not able to do the work required of her, attended with craving for air and desire of company; these symptoms were caused by fright in an unmarried woman of 30 years, (cured with one drop of the third attenuation, morning and evening, by Mayrhofer).—Delirium tremens, the patient imagined that one half of the parts of his body was cut off. Delirium tremens with furious delirium, desire to escape, etc.—Delirium tremens: the patient confounds his words, his eyes glisten, with piercing, staring looks, dilatation of the pupils, optical illusions, visions of animals, dogs, cats, rats, mice, etc.—

Nervous vertigo.—Dangerous cerebral affection, with delirium during and after vesicular erysipelas.—Amblyopia amaurotica.—Hemeralopia.—Prosopalgia nervosa Fothergillii.—Nervous prosopalgia of the most violent kind: extending over all the branches of the facialis in the right half of the face, of a tearing and lancinating kind, with distortion of the affected side of the face, and oscillation of the facial muscles, (four cases, cured with large doses of the tincture and extract by Sebroen).—*Singultus spasticus*.—Amenorrhœa.—Influenza.—*Spasms of the chest*: spasm of the muscles of the chest, and twitching of other portions of muscles.—Asthma.—*Angina pectoris*.

#### SYMPTOMS.

**Mind and Disposition.**—°Melancholy, also with desire for company, lights, and sunshine, because darkness and solitude aggravate the symptoms. °The symptoms are worst after the fall-equinox.—°Endeavours to escape, imagines he is alone all the time, and is afraid.—°Is at times indifferent to his business, at times he imagines that he is unable to accomplish it.—He beats those around him with a terrible cry, and rages. He bites a person's hand. Furious delirium. *Indomitable rage*. She has to be kept in bed by force. A strong man was scarcely able to hold him. He assails men, beats them, and endeavours to seize them. *Great desire to bite*, and to tear everything with his teeth, even his own limbs. Alternation of *convulsions and rage*: he had such violent spasms that his mother was not able to hold him; when the spasms abated he became furious, beat and bit those who attempted to hold him. Rage, he wants to murder men. Rage, he wants to kill himself.—°*Hydrophobia?*—Serious, thinking of himself, taciturn. Phlegmatic, with *weariness of mind* and sadness of heart; *everything is indifferent to him*, but he is neither vexed nor debilitated. *Not disposed to any serious work*. Out of humour and vexed the whole day: he was beside himself with ill-humour, and was extremely thoughtful. Silent ill-humour; he is vexed at everything, even at those things which do not concern him. Out of humour and restless the whole day.—He dreads the future. Sad; he apprehends evil consequences from trifling things, and cannot ease himself. Sad without any cause. Very irritable and quarrelsome with his brother and sister. Exceedingly fretful, nothing pleased him. Very passionate, easily provoked into a rage. °When his father got him to recognise him, the boy said, "Why, papa, is that you?" and commenced stroking, or rather clawing with his fingers of his father's face. Quarrelsome, but merry mood.—At first he is cheerful, then anxious, and lastly, calm and contented. °Loud laughing, alternating with vexed mood and moaning.—Smiling and jesting. He was cheerful and communicative, and enjoyed his existence. (Curative effect.)

**Sensorium.**—Vertigo, with redness of face. Vertigo, with pain in the abdomen, and a gauze before his eyes. Vertigo, with diarrhœa. Vertigo, headache, dim-sightedness, violent thirst, tenacious mucus in the mouth, rumbling in the abdomen, and pain in the epigastrium. Vertigo for eight days. Vertigo; he staggers to and fro like one drunk. He becomes giddy while sitting or standing in a room; he staggers. Vertigo, want of thought four mornings in succession after rising; he has but a dull and distant recollection of things, (weakness of memory,) and he sees as if through a gauze, for two hours. He staggers about the room and looks as if he were seeking something. He stumbles against the door whenever he goes through it. Intoxication, with thirst, and a profuse flow of a burning urine. Rush of blood to the head. Heat of the head, and sparkling eyes. Apoplexy. Weakness of the head. Heaviness in the head. *Stupefaction of the head*, with dim-sightedness. *Stu-*

pidity. She sits senseless and immovable like a wooden figure. Dulness of the head. *Obscuration of all the senses* and anxiety, followed by a red rash on the back, and sweat. Extreme insensibility of all the senses. Intoxication. Stupid feeling in the head. Intoxication, and heaviness in the body. Vertigo: the head feels drawn backward; he is moreover very drowsy. Disagreeable light-headedness, with a feeling of weakness in the head. Diminished memory. The loss of sense seems to be accompanied with an internal uneasiness, and to proceed from it. The black letters seem to him gray, and as if a second letter of the same kind, and of a light-gray colour, were placed sideways or above (a kind of diplopia), for example—F F† Objects appeared to be in an oblique position. He saw things as if through coarse linen, only fragments of them, and as if cut through; for instance, of a face he only saw the nose, etc., as if the eyes had but a small vision, and he was only able to see a small point at once. He imagines he sees a reddish-gray border around white things, for instance, paper. Uneasiness, delirium. While slumbering he hears two persons talk, but he does not know who they are. *\*He does not notice the objects around him.* Stupefaction of the senses; some laugh all the time, but they neither hear nor see, although they have the thing constantly before their eyes; they even talk and answer the questions put to them, as if they had their senses, although the whole is like a dream to them. °Stupefaction of the senses and insensibility to external impressions.—After waking he does not recognise anything around him; he takes his book, and goes to school, but he enters by the wrong door. After waking, all things appear to him as if they were new, even his friends, as if he had never seen them. He imagines he is very tall, but the objects around him seem to him very small. Absence of mind; bland delirium (for 24 hours.) He apprehends the loss of his senses. Imbecility. Insanity. *\*Strange fancies.* *\*Loquacious delirium.* Delirious, he had no memory or consciousness. °Delirium, with strange ideas.—During the intervals of his half consciousness, he recollects his waking dreams, but not those things which he had done or said in his lucid moments. He talks with a person whom he does not know, and answers that person as if he were in his senses; but, upon coming to his senses he does not recollect the conversation. He talks with absent persons as if they were present, accosting dead figures, such as chessmen, with the names of those persons, and not noticing any of the persons around him. He walks about the room taciturn, with staring, sparkling eyes, and blue margins around the same, but he does not notice the objects around him, and is interested only in the objects of his fancy. He dreams with open eyes, talks nonsense; and if his friends tell him so, he excuses himself, saying that they had induced him to talk nonsense; after that he is again absorbed in his dreams, and continues his nonsense. The patient is in a state of insanity, he is full of not unpleasant fancies, expresses his wishes by signs, and runs about for some days busy with his fancies, and cheerful. *\*He dances in the church-yard at night.* *\*Insane, he dances, gesticulates, breaks into a laughter, sings.* *\*He sings, and utters unclean things.* He is like one enchanted and beside himself. He grasps at the air with his hands, laughs, crawls about his bed. He shows by his gestures that his mind is confused: he kneels down and extends his arms as if he were looking for something. With his eyes staring, and his pupils dilated, he saw nothing, *\*did not recognise any of his family,* carried his hands about as if he would grasp at something, and stamped with

† When he attempted to draw this phenomenon, while seeing it on paper, he drew but one F, and afterwards carried the pen over the same lines, imagining that he had drawn a second F.

his feet. °Kneels in bed, starts up at the least contact with cries and wild gestures. He bends his knees, and kneels down, and stretches his arms as if he were looking for something. °Religious mania, with pious looks, (praying.) Confusion of intellect, he laughs, moans. Paroxysms of constant talking, or of rage, or he breaks into a loud laughter, or he acts as if he were spinning. °Talks with ghosts. Senseless quarrelling. Continued violent quarrel. He imagines he will be slaughtered, roasted, and eaten. He jumps out of his bed at night, and exclaims that the disease will break forth from his head. She sometimes exclaims about dogs, cats, and rabbits approaching her from above, from the side and in the middle of the room. °Delirium throughout the evening. Delirium, he is frightened as if a dog would bite him. He imagines he sees ghosts. °He jumped from his bed at midnight, ran about the room, caught at every one as he passed them, said a man was chasing him, and repeatedly said, "You shall not have me." He starts up in affright. Sadness. His imagination is confused, and is disturbed with fear. °Timid mania, in childbirth. °Mania, with pride and affectation. Strange objects intrude upon his fancy, frightening him. She imagines she sees a number of persons, and grasps at them, and yet they were not present. \**Frightful fancies, his features show fright and terror.* In his lucid moments he requested to be held lest he should fall. The things and persons around him appear to be changed: although he knows at first that his friends are around him, yet he forgets it immediately after; *he imagines he is quite alone in a wilderness, abandoned; he is afraid; figures of animals start out of the ground, side by side, causing him to fall to one side, where however similar forms start up, causing him to run forward.* °The child said there were big sores on him. He sees more horrifying figures on his sides than before him (between three and four hours). Inclines to start. Alternate consciousness and rage. °Alternation of ludicrous manners and sad looks.

**Head.**—Headache. Dull or violent headache. °Headache, with obscuration of sight and hardness of hearing. Pain in the head and pelvis. Headache with anorexia. Headache and distention of the abdomen at times. Beating pain in the right temple, with diarrhœa. °Beating headache, particularly in the vertex, and with fainting fits. Giddy headache with fainting and thirst. Headache and pain in the eyes. Violent headache and toothache, with profuse lachrymation.—\**Convulsions of the head*—and arms, with hiccough. *Spasmodic drawing, only in the head and eyes, with grinding of the teeth.* He frequently raises his head from the couch. Spasmodic drawing of the head to either side, with screaming and raising of the arms over the head. Early in the morning he moves his head to and fro, with excessive thirst. He moves his head to and fro; this movement is only interrupted by hiccough.

**Face.**—\*Swollen face, turgid with blood. Swelling of the face and redness of the cheeks. Swelling of the face, eyes, and tongue. \*Swelling and redness of the eyes and face. Swelling of the left side of the face generally, but especially of the left cheek. The skin on the forehead is wrinkled, the eyes stare, the whole face looks wild and frightful.—At first his face looks friendly, except the staring eyes; at last it becomes quite disfigured by deep furrows from the inner canthus to the cheek, by folds running from the nasal wings across the angle of the mouth, and by knitting the eyebrows, and it looks frightful on account of the sparkling eyes; after the lapse of an hour the eyes look dim and the face has a dismal expression. At first his face looks quite friendly, except the dilated pupils, but afterwards it looks dismal, like that of a man who is anxious, with deep furrows and wrinkles. °Turgid face, also with friendly expression. The cheeks are red and bloated, but the upper part of the face

looks gloomy and contracted. Frequent redness of the face, with staring eyes. °Circumscribed redness of the cheeks.—Shuddering about the chin.—Trembling of lips, hands, and feet. The lips have a yellow streak along the vermilion border, as in malignant fevers, and adhere firmly together. Erysipelas on the right side of the cheek, nose, and face. Pale face. Frequent sweat in the face and on the forehead. Face and breast of a coppery-red colour, (somewhat mottled,) similar to the colour of the North American Indians. Whiteness of the alæ nasi, and space around the mouth, and a spot on each temple. \*The upper part of the face and cheeks of a dirty copper-colour, while the parts below the nose around the mouth are white.

**Eyes.**—Contracted pupils; they do not dilate in the dark; all things appear to him smaller and at a greater distance, and like one dazzled by the light. \**Dilatation of the pupils.* Extreme dilatation of the pupils, with obscuration of sight. The pupils are dilated and immovable. Dim, sad look. \**Sparkling eyes*; he complains of the rays of the sun dazzling him, and of loss of appetite. \**Glistening eyes.* Staring eyes. \**Staring, somnolent eyes.* Burning of the eyes, with dim-sightedness and profuse sweat. Pressure and tension in both eyes, for six days. Pressure in the eyelids, as if swollen, which is really the case, or as if oppressed with sleep; hence a great disposition to sleep, which he is however able to overcome. Ulcerated eyelids. Agglutination of the eyelids, at night. *Swelling of the eyes.* Swelling of the eyes, with dilated pupils and contortion of the eyeballs in every direction.—His eyes close, his eyes see black. Swelling and inflammation of the eyelids. The upper eyelid hangs down, as if caused by a spasm of the orbicularis muscle.—Redness of the whites of the eyes and the margins of the eyelids; the eyes run profusely. Pink colour of the sclerotic coat, the left eye is most discoloured. Extreme sensitiveness of the eyes to the light. Lachrymation of the left eye, of the right eye, and of both eyes together. He sheds tears without knowing it. Lachrymation of both eyes, with obscuration of sight. He opened his closed eyes only when spoken to.—*Dim-sightedness.* Obscuration of sight, excessive. Dim-sightedness every morning, as if a gauze were before the eyes. *Dim-sightedness with great thirst* and sweat. Blear-eyedness after dim-sightedness.—Vertigo and headache after dim-sightedness. Presbyopia for a long time; he was only able to read distant print. Contraction of the pupils occasioned by drinking vinegar after the pupils had been dilated by Stramonium: during this contraction all objects appeared to him extremely small; as to the distant objects, he did not see them at all; but on looking at the sun, the pupils remained staring, and his sight became entirely obscured. The patient is unable to discern small things, such as the point of a pin. Indistinct, confused sight. All things look as if in an oblique direction. Diplopia: he sees small things at the places where they are, but he sees a second representation thereof a little higher and to one side. (See Sensorium.) The objects are multiplied, and of various colours. *Black things seem to him gray.* He sees objects in a room which do not exist. Fiery visions before her eyes. Disappearance of sight and hearing. He saw things as through coarse linen, and as if cut through; of a face he only saw the nose, etc. He imagines he sees a reddish-gray border around white things, for instance, around paper. When reading he was unable to distinguish a syllable; the letters seemed to move and become blurred. Dulness of vision, as if he saw things through fog or a glass of turbid water. The objects looked as if they had become diffused, and were too distant. Almost complete blindness for six hours; on the days following he experienced a pressure as from the middle of the eyeball at every change of light, either on going from a dark place into a lighter, or from a light place into a dark.

**Ears and Nose.**—Wind rushes out of both ears. Complete deafness. Illusions of hearing.—Stoppage of the nose, with feeling of dryness. Spasmodic sneezing. °Pain in the left ear, passing down to the left side of the chest.

**Teeth.**—*Grinding of teeth*, with shuddering over the whole body. Grinding of teeth; he raises his hands above his head, and he moves them as if he were winding a ball of thread. Grinding of teeth, with gloominess in the head.—Grinding of teeth, contortion of the hands and shuddering lock-jaw, with closed lips —Beating toothache, as if a portion of the teeth would fall out.

**Mouth.**—The inner mouth feels raw and sore.—Inability to swallow, on account of dryness of the throat. Great dryness in the mouth, so that white bread tastes to him like straw. Dryness of the tongue and palate, so that they feel quite rough, without any thirst at first. *Extreme dryness of the mouth and want of saliva*; he is unable to spit up anything, *although the tongue is pretty moist and clean*. The palate feels parched, so that he is not able to eat a mouthful of bread. Excessive dryness of the inner mouth. Extreme aridity of the tongue and mouth. Sensation of dryness on the tongue and in the throat. Dryness of mouth, thirst; dim-sightedness, sparkling eyes, sweat and diarrhœa. Dryness of mouth and palate with violent thirst, and such an absence of taste that he drank a pint of vinegar at one draught, without tasting it.—Constant *muttering*. *The patient screams* until he is hoarse or has lost his voice.—*Stuttering*, and uttering of inarticulate sounds. Talks little, and utters inarticulate sounds with a loud voice. His voice has not the usual sound; it is much higher and finer than usual; it is a mere sounding, he is unable to utter an intelligible word (he hears and feels it himself); this makes him anxious.—\**A kind of paralysis of the organs of speech*; he has to exert himself a long while before he is able to utter a word; he merely stammers and utters inarticulate sounds. He is mute and does not answer. *Dumb, he expresses his wish by pointing to things*. He was mute, immovable and pulseless for six or seven hours, and his limbs were paralyzed, without consciousness; after that period he tossed about in bed with great rage, made innumerable signs to those around him which were not understood, and then became quiet again. His tongue is paralyzed; it trembles when he attempts to put it out, as in typhus fever. Swelling of the tongue. Swelling of the tongue all over. The swollen tongue hangs out at the mouth. Bloody froth at the mouth. Hydrophobia (with other symptoms mentioned in their respective places, we have): restlessness, violent convulsions, the patient being so violent that he had to be tied; he rolled about in his bed sleepless and uttering howling-screams: he was delirious without memory or consciousness; his pupils were extremely dilated, violent desire to bite, and to tear everything with his teeth; extreme dryness of the inner mouth and fauces; the sight of a light, mirror or water excited horrible convulsions; irresistible aversion to water, with constriction and convulsions of the œsophagus, froth at the mouth, and frequent spitting. Dread of or aversion to water and any other liquid, with spasmodic motion. Aversion to watery liquids; he became enraged when his lips were moistened.—Frequent spitting. Saliva hanging out at the mouth. Frequent ptyalism. Long continuing ptyalism and diuresis. Profuse ptyalism with constantly increasing thirst. Copious ptyalism, day and night; he loses from three to four pounds of saliva. Ptyalism with hoarseness. Tenacious ptyalism. Viscid mucus in mouth, with good appetite.

**Pharynx and Œsophagus.**—The food forms a round lump in the œsophagus, so that he apprehends suffocation. Bread and butter taste to him like sand; on account of the dryness of the mouth, the things remain in the œsophagus and threaten to strangle him. She tries to eat bread and milk, but is

unable to swallow either. The velum palati hangs down very low; food and drink went down with a good deal of difficulty, and with a scraping pain in the velum pendulum palati. Difficult deglutition, with stinging pain in the fauces.—Difficult deglutition, with aching pain in the submaxillary glands.—Constrictive sensation in the fauces after a meal. His throat feels constricted as if he would suffocate, or as if he were threatened with an apoplectic fit. Constriction and spasm of the œsophagus. Thirst, violent, or with headache. Violent thirst with copious secretion of burning urine. Troublesome thirst with the saliva hanging out in threads.

**Taste and Gastric Symptoms.**—Constant *bitterness* in mouth, and the food has a bitter taste. Food has a spoiled taste. *Every kind of food tastes to him like straw.*—*Diminished appetite.* Undiminished appetite, with colic, diarrhœa and vomiting. Increased appetite.—*Spasmodic hiccough*; sour eructations.—(The limbs are convulsed, while an artificial vomiting is excited.) Inclination to vomit. Inclination to vomit, with profuse ptialism, in the evening. Nausea, with flow of an extremely saltish saliva. Vomiting at night. Vomiting of green bile at night. In the evening he vomits up bile with mucus. Vomiting of green mucus, with thirst. Vomiting of a sour-smelling mucus. Vomiting of mucus in the evening. Bilious vomiting after the least motion, even after sitting up in bed.

**Stomach.**—Biting pain in the stomach. Aching pain in the stomach. *Anxiety about the pit of the stomach*, before noon, or with dry heat of the body, or difficult respiration.—Inflammation of the stomach.

**Abdomen.**—Bloating abdomen, especially in the pit of the stomach. In the evening the abdomen is bloated, with heat of the body and anxiety in the pit of the stomach. Bloated, but not hard abdomen. The abdomen of children becomes highly bloated from the seed of Stramonium, with anxiety in the pit of the stomach, cold sweat, chilliness of the limbs, confusion of intellect, stupified half-slumber, and anxious evacuations upward and downward. Bloated abdomen, painless to the touch. Colic, as if the abdomen were puffed up; the abdomen was painful, even when touching the side. Distended, but not hard abdomen. The epigastrium is tense, hard and painful. *Rumbling in the abdomen*, with diarrhœa. *Rumbling in the abdomen with colic.* Violent fermenting in the abdomen for 7 days. *Rumbling in the abdomen*, with obscuration of sight. He complains of rumbling in the abdomen, as if living animals were crying and moving about in all the bowels. Colic, rumbling and diarrhœa. Itching in the abdomen. Colic, watery vomiting and diarrhœa. Tearing pain in the abdomen, as if the umbilicus would be torn out, after which the pain shifts to the inner chest.—Tumour in the groin.

**Stool.**—Constipation for 6 days, without pain or trouble. He has a desire to go to stool, but he only has an evacuation 24 hours after. A writhing pain in the bowels, previous to every evacuation; a blackish diarrhœic stool every hour. Diarrhœa, six days in succession. Diarrhœa, ceasing after a profuse perspiration. Diarrhœa, with increase of appetite. Diarrhœa, with paleness of face.—Stools have a cadaverous smell.—Emission of a large quantity of flatulence.—Discharge of coagulated blood from the anus. Hæmorrhoids for several days.

**Urinary Organs.**—\*Suppression of urine.—Sensation as if he could not retain his urine and as if the urethra were too narrow and unable to be distended.—He was frequently obliged to urinate, but the urine was retained a minute before it came, and although it came out in drops, yet a large quantity was passed in the forenoon, (after 4 or 5 hours). During micturition, no stream is formed in spite of all straining; the urine is warmer than usual, but it comes

out only in drops; he is not able to hasten the emission or to press out the last drops, but without experiencing any painful sensation in the urethra, except the sensation as if a cylindrical body were pushed through the urethra.†—Diuresis, with shuddering and rumbling in the abdomen. Profuse, involuntary emission of urine. Profuse diuresis without thirst.

**Genital Organs.**—Lasciviousness. Complete inability to perform an embrace. Impotence.—During the menses the body swelled as of semen. Excessive loquacity during the menses. Watery menses. Discharge of black blood from the uterus. Metrorrhagia. Excessive menstrual flow, with drawing pains in the abdomen, thighs and other limbs. Re-appearance of the menses which had been suppressed for four years.—Erysipelas of the left cheek immediately after the menses. Hiccough and moaning after the menses.

**Larynx and Chest.**—\*Voice hoarse and rough; \*higher and °croaking; without modulation.—Hæmoptysis.—Spasmodic dry cough, worse in the evening and morning, with darkness around the eyes.—Frequent sighs.—Violent stricture across the chest.—Oppressed breathing.—Hard pressure on the cartilages of the third and fourth ribs, with difficult respiration; he is unable to inspire a sufficient quantity of air; he does not feel any great anxiety.—Oppressive and unusual pains.—Aching pain in the chest and sternum, excited by talking.—Difficulty of breathing, with anxiety about the pit of the stomach.—His breathing becomes more and more difficult, and he becomes blue in his face.—°Spasms of the chest, particularly in hysteric females, or occasioned by spasms of the pectoral muscles.—Feeling of dryness in the chest.—Slow inspirations and sudden expirations.—Sensation as if something were turning about in the chest, followed by heat in the face.—Drawing (rheumatic) pain, extending from the side of the neck into the limbs.

**Back and Extremities.**—*Drawing pains in the small of the back.*—Bruising pain in the back and abdomen, excited by motion. Bruising pain in the back and shoulder. A spot in the back which is painful whether touched or not. Small spot in the back, occasioning a drawing pain when touched. Drawing tearing pains in the back and epigastrium. *Drawing pain in the middle of the spine, with drawing pain in the opposite posterior part of the stomach.*—Trembling of the arms when eating.—Fine, sharp stitches in the forearm and a rheumatic constrictive pain in the deltoid muscle. The sound hand trembles when eating. He grasps at a thing quickly, imagines he has seized the thing before touching it, and, if he does hold the object, he does not feel that he has hold of it.—Spasmodic rigidity of the whole lower limbs. Drawing pain in the thighs.—Severe pain in the loins.—Pain in the right thigh. A few sharp stitches in the outer part of the right tibia.—*Boils on the feet.*—Burning and itching of the feet. Rheumatic drawing in the left tarsus, evening. More or less violent burning in the dorsum of the foot.

**Sleep.**—Drowsy and staggering. Sleeps a few hours. Drowsiness in daytime. \**He sleeps in the daytime, and he wakes with an important and solemn look.* Quiet sleep. Quiet sleep after the convulsions had ceased. Some sleep for twenty-four hours; they lie like dead persons. After a deep sleep full of dreams, during which he has an emission of semen, he feels quite drowsy, and he sees as through a gauze. \**Deep sound sleep;* he fetches breath with great trouble and snores during an expiration and inspiration. Deep snoring sleep, drawing up the leg rarely. Slumber, with stertorous breathing, and a bloody

† NOTE BY HAHNEMANN.—After drinking vinegar, the urine came out again in a thin stream, and the desire to urinate was not as frequent.

Troth at the mouth; dark-brown countenance, death.† He lies on his back with open staring eyes. Restless sleep, violent headache and profuse diuresis. Restless sleep full of dreams, with tossing about in bed. Restless sleep followed by violent headache, vertigo, lachrymation and ptyalism. Sleep interrupted by screams. Screaming and howling at night. Wakes from his sleep with a scream. Remained awake all night, tossed about in his bed, and uttered crowing screams. Starting up from sleep and vacant looking around, with incoherent talking.—During the restlessness he would drink water when offered, but he did not ask for it. Great restlessness with moaning, or with itching of the skin.—Gets up and goes to bed again, two or three times the same morning. Tired on waking in the morning. Sleepless.

**Fever.**—Tremulous, weak, unequal, sometimes intermittent pulse. Small quick pulse. Frequent, quick, small, irregular pulse. Small, quick, and at last scarcely perceptible pulse. Extinct pulse. *Strong, full pulse* of 90 beats.—Chill through the whole body, with single jerks, partly of the whole body, partly of single limbs, of the elbows and knee-joints, without thirst. Whenever he takes a dose of Stramonium, he experiences a disagreeable, shuddering chill, as if he dreaded the stramonium. The limbs and the trunk are cold all over. She lies on the floor, cold, senseless, and breathing feebly. Chilliness along the back in the afternoon. Chilliness and shuddering of the limbs at night. In the afternoon he experiences a tremulous tossing of the knees and feet, as from violent chilliness, his mind being unimpaired. Violent chill. °Heat of the head, then general coldness, then heat with thirst. \*Fever in the afternoon two days in succession.—Violent fever at noon, returning with the same violence about midnight. After the vomiting, in the evening, he experiences a continuous, violent fever, with profuse sweat. Fever every day after noon. Fever in the evening, for two days. Towards noon he experiences great heat, redness in the face, vertigo and lachrymation. Great heat with quick and small pulse and bright-red vermillion-coloured countenance. In the evening he feels a burning above the knee when walking, and heat through the whole body, with excessive thirst.—Heat of the whole body. Great heat, slight sweat, quick soft pulse. Great heat, and talking during sleep.—°Gastric fevers with jerking of the arms and fingers. °Worm fevers. °Typhus stupidus. °Typhus after scarlet and purple rash. °Typhoid fever of the remittent character, with pain in the left ear and terminating in the left side of the chest, dry cough aggravating the pain. Copious sweat. Sweat with diminished appetite. Profuse sweat at night. Sweat after severe thirst. Sweat in the back. Frequent sweat with good appetite, diarrhoea, distention of the abdomen and colic. Violent sweat, with great thirst.—Profuse sweat with colic. Cold sweat over the whole body.

**Skin.**—Eruption‡ over the whole body, with swelling, inflammation and itching. Blisters on the skin, breaking out after the violent symptoms have made their appearance. Inflamed, painful pustules on the right leg, emitting an acrid water. Itching eruption. Chest and back are covered with a red rash, pale in the morning, redder and more frequent in the afternoon, and perceptible in the warmth, for 11 days; after the lapse of that period the scales fall off. Itching over the whole body, early in the morning, after waking. Tingling in

† In the case of a child of eighteen months, six hours after swallowing the seed. The body was covered with a number of brown stripes, the abdomen was filled with a yellowish water, the bowels were distended with air, the liver, spleen and lungs were likewise covered with brown stripes, there was a good deal of water in the pericardium, the heart was flaccid, and it, together with the blood-vessels, was filled with a quantity of fluid blood.

‡ NOTE BY HAHNEMANN.—All the eruptions and the itching occasioned by Stramonium, seem to be secondary symptoms.

all the limbs. Creeping under the skin. Creeping, extending from the left side into the thigh, or into the toes of the same side, thence into the abdomen, whence the creeping descends again into the right thigh and foot. °Measles with delirium. °Anasarca after scarlatina, with typhoid fever.? °Copper-colour of the skin of the left knee.—Redness of old cicatrices.

**General Symptoms.**—Suppression of all the secretions.—He wants open air. He hurries off too fast in going to a place. Extreme irritability; he moves about so fast in the first hour, that all his motion is finally arrested and his eyes see black. He performs all his movements with great force and hurriedness, so that he feels an anxiety if he cannot achieve them at once. Although he staggers, yet his limbs obeyed the will so readily, that he felt as if he had not any; they seemed to him much longer than they were, so that when walking, he thought he had touched the floor, when the foot was yet half a foot away from it; this made him finally set down the foot very rapidly. When going down stairs he takes two steps for one, and is not aware of it till he stumbles.—Fainting in the forenoon, with great paleness of face, and afterwards loss of appetite. Fainting, with great dryness in the mouth. Stertorous breathing during a swoon. After the swoon there remains a spasm of the head to either side, with redness of face.—Heaviness of the limbs. Heaviness of the feet and weariness of the legs. Slow motion of the limbs, *with creeping in the same*. Heat over the whole body and sweat, during the least motion. Difficult motion and creeping in the limbs, with lachrymation.—Sensation in the arms and limbs as if they were separated from the body in the joints.—The limbs go to sleep.—Difficulty of moving the limbs, the pulse being almost extinct. Immobility.—\**Loss of voluntary motion* (catalepsy) *and loss of the senses*; deglutition remains unimpaired. \**Stiffness of the whole body*. \**Paralyzed limbs* °after apoplexy.? Paralysis of several parts of the body. When rising, he threatens to fall (in the first eight hours). He is unable to walk alone, he falls unless he is held. The lower limbs give way when walking. He is unable to stand. He has to lie down.—°Epileptic convulsions, also with weeping. °Spasms after fright.—°Spasms from mercurial vapours.? °Spasms of children. °Chorea St. Viti.—°Tonic spasms of children. The limbs of the child were quite stiff. Continual cramp in hands and feet. The hands are clenched, (not the thumbs); but they can be opened. \**Violent motion of the limbs*. Constant movement of the hands and arms, as if he were spinning or weaving. Convulsions. Violent convulsions in bed, during which he was like frantic, and had to be tied. *Frightful convulsions at the sight of a candle*, mirror, or of water. The convulsions and the delirium were especially excited by contact; they were followed by great weakness. The convulsions and the dilatation of the pupils remained when the pulse had already become slower and the abdomen relaxed. \**Spasmodic movements*. Spasms in the left arm, afterwards in the right leg, followed by sudden spasms of the head in all directions. He moves his limbs to and fro. His hands tremble when seizing anything. Spasmodic drawing up and inwards of the anterior muscles of the thigh, in paroxysms. Convulsions of the left lower limb; they commence with a shock and the limb is drawn inwards and upwards. *Spasmodic tossing up* of the limbs. Alternate contractions of the hands and feet. *Slow contracting and stretching of the limbs, in paroxysms*. Trembling of the limbs Trembling of the whole body. Constant trembling of the feet. Throwing about of the arms and legs, but most of the arms, with opening and shutting of the hands, and many motions of the fingers.

#### PATHOLOGICAL ANATOMY.

*In men*: The vessels of the brain, heart and lungs are distended with black,

generally fluid blood, the stomach and bowels are injected and inflamed here and there.—The abdomen and pericardium contained a quantity of yellow water; the skin, liver and lungs exhibited brown streaks, the blood was thin and fluid. (*Wibmer and Heim.*)

ANTIDOTE.—Camph.

### CLINICAL OBSERVATIONS.

Spasms, particularly of the calves and soles of the feet.—Violent chronic cardialgia during the period of digestion.—Consumption: copious, difficult expectoration of white pus, with chilliness and coldness.

### SYMPTOMS.

**Mind and Disposition.**—Oppressive anxiety. Ill-humoured. Vehement.—Not disposed to talk.—Forgetful.—Vertigo with nausea, early in the morning. Vertigo with weariness, in the evening, with pressing in the temples from within outwards.—Reeling sensation.—The covering on the head makes the head feel dull.—Heaviness of the head, with *malaise* all over. Heaviness in the forehead, with frequent fine stitches; the whole head feels as if dashed to pieces.—Pain in the forehead, as if the contents of the skull would issue from it. Aching in the forehead, spreading thence over the whole head. Sudden pressure over the right eye as from a finger. Sudden pressure over the left eye, with sensation as if something were moving there internally. Pressing feeling in both temples, and towards the forehead.—Pressing pain in the sinciput, particularly in the frontal region and orbits. Pressing pain in the occiput, in the evening. Violent compressive pain in the middle of the occiput.—Tensive pain from the vertex to the jaw, in the evening. Tensive headache, in the evening, followed by erratic aching pain. Tensive pain about the head, as if the scalp in the region of the vertex were put upon the stretch. Headache, as if the whole head were distended from within, when lying in bed, particularly when the head lies low; several evenings in succession. Paroxysm: tension over the whole head, in the evening, for five minutes; afterwards tensive pressure over the whole chest; after this, the same kind of pain was felt in the small of the back, whence it shifted to the left foot, where it remained the whole night; when turning on the back, at night, it felt painful as if excoiated, likewise the small of the back.—Dull drawing pain in the right temple. Frequently recurring spasmodic drawing from the head through the eyeballs.—Several painful tearings in the middle of the forehead. Violent tearing in the right occiput.—Sudden painful jerk in the head, here and there, occasionally.—Violent sticking pain in the left frontal eminence, extending to the side of the head. Violent dull stitch in the right temple, spreading in every direction. Sticking pain in the temples. Stitches in the head. Sticking and tearing, ulcerative pain and heaviness in the whole head, early after rising.—Violent boring pain at a small spot, on the right occiput, at night.—Feeling of excessive heat in the head and face, in the afternoon when walking, with redness of the face and sensation as if

is hard, the latter soft.)—White diarrhœa.—Bruising pain in the region of the anus, almost like soreness. Every evacuation is preceded by stitches in the anus and grumbling in the abdomen. Emission of flatulence, and a loose evacuation.—Pressure in the lumbar region, occasioned by flatulence, during stool. Sore pain at stool, for some days. Tenesmus in the anus, during stool, as if diarrhœa would set in.—Tensive pain from the middle of the abdomen to the anus.—Ascarides are passed every day.

**Urinary Organs.**—Sensation in the neck of the bladder, as if he would urinate. *Frequent micturition.*—Inability to retain the urine.—Frequent desire with little discharge.—Thin stream. (The urine looks frothy.) The urine deposits a thick, grayish-white sediment. The clear, saffron-coloured urine deposits a yellow sediment when standing.

**Male Genital Organs.**—Voluptuous itching of the tip of the glans, for several hours, obliging him to rub. Itching burning of the scrotum and the body of the penis, several times. Painful drawing stitches from the body of the penis through the glans. Simple pain of the scrotum, also when touching it.—Squeezing, strangulating pain in the testes.—Long, rather dull stitches from the testes to the spermatic cord.—Aching *\*swelling of the testes.* °Orchitis. Swollen, painful spermatic cord.

**Female Sexual Organs.**—Pain in the back, afterwards palpitation of the heart, previous to the menses, the whole day.—Drawing in the upper and lower limbs during the menses.—The menses appear too early and too profuse (immediately).

**Larynx.**—(For the affections of the larynx, and the kinds of cough which have been cured with Spongia, see Clin. Obs.) *\*Hoarseness*, cough and coryza, very violent. Scraping, burning and constriction of the larynx. Dryness in the region of the larynx, increased by hawking. Difficult respiration, as if the throat were closed with a plug, and as if the air could not pass. Hollow *\*cough*, with *expectoration*, day and night. Painful pressure below the short ribs when coughing. Hawking of mucus. Pain in the chest and trachea when coughing, with roughness in the throat. *\*Constant cough* from a deep spot in the chest, where he feels a pain as if that part of the chest had become sore and bleeding from the cough. Dry cough. *\*Dry cough, day and night, with a burning in the chest*, as if some hot substance were in the chest; the cough diminishes after eating and drinking. (Frequent night-cough for two minutes, with ill-humoured expression of countenance.)

**Chest.**—Violent asthma. Slow, deep breathing, as after exhaustion, for several minutes. She became suddenly debilitated after an exertion; the chest was especially fatigued; she was almost unable to speak, with heat in the face and nausea; in a few hours heaviness in the head. Hurried, panting breathing after a dance. *She becomes weak after every exertion, no matter how little; the blood rushes to the chest, the face becomes hot, the body begins to glow, the veins are distended and she loses her breath; it takes her a long time to recover herself.* After a moderate exercise in the open air she becomes suddenly weak and sinks down on her chair; great anguish, nausea, paleness of face, rush of blood from the heart to the chest, as if she would vomit blood; her eyes close involuntarily, almost spasmodically; tears press out of the eyes through the closed lids; she is conscious of herself, but her will has no control over the action of her limbs.—Stinging itching in the left side of the chest, near the shoulder. Boring stitch in the right intercostal muscles, continuing during an inspiration and expiration. Violent prickings in the right side of the chest, from within outward. Drawing stitches in the left chest when sitting bent, especially when taking a slow, deep inspiration. Severe, intermittent stitches in the left

side of the chest. Drawing stitches below the second rib of the left chest, only when walking. Fleet, painful stitches in the right side of the chest; if he rubs the part, he feels as if a load were descending there behind the skin.—Cutting pain with pressure in the left side of the chest, when taking a deep inspiration; not much pain otherwise.—Sticking-pinching crawling in the left side of the chest, in the region of the sixth, seventh rib, becoming more painful by external pressure. Pressure in the left chest, sometimes accompanied with stitches in motion and rest. Pinching jerk in the left side of the chest, from without inward. Sudden pain in the muscles of the chest and back, left side, as if a broad, pointed body were pressing upward; a broad pressure with many fine stitches. Fine stinging in the outer parts of the chest and arms, for several days.

**Back.**—Violent stitch in the small of the back. The small of the back and the nates are very numb. Dull pain in the region of the right sacro-iliac symphysis, when standing. °Drawing tearing and sticking in the small of the back.—Aching in the small of the back, only when walking, especially when setting down the left foot. Fine tearing in the region of the os sacrum, from the right side to the left, superiorly, only when sitting. Pressing sensation in the spinal marrow, going up and down, when sitting straight.—Feeling of coldness in the back, in the region of the last ribs. Burning itching of the back, at night; he merely slumbers, tosses about constantly, with heat of the body, no thirst; especially towards morning.—Painful shooting stitch in the region of the right scapula. Pain in the outer regions of the scapulæ, as if something pointed had been pushed in; a constant sticking pain, accompanied with soreness. Sensation in the thyroid gland, and in the cervical gland, during an inspiration, as if air were rushing up and down in those parts. Pain as if the cervical glands near the larynx and trachea were swelling. Sensation of pressure in the goitre, several times a day. Continual prickings above the pit of the throat, externally, in the lower part of the goitre. Several large pimples under the chin on the neck, painful when pressing on them. Several glandular swellings below the right lower jaw, impeding the motion of the neck; a tensive pain is experienced in them when touching them. Sticking pain in the goitre when swallowing, slight aching between the acts of deglutition. Stitches in the goitre; also between the acts of deglutition. Stiffness of the neck, when turning it and when stooping. Intermittent, slow pressure on the right side of the neck, as if the skin were pressed between the fingers; that same region was painful to the touch along the carotid artery. Painful pressure above the thyroid cartilage, increased by touching it (immediately). Aching pain in the region of the larynx while singing. Tension of the right cervical muscles, when bending the head backward. Sensation in the goitre as if everything in it were vacillating and moving about in it, as if alive, especially when swallowing. Sensation in the goitre as if there were a movement in it, a bloating and pressing as if everything would come out. Painful tension on the left side of the neck near the pons Adami, when turning the head to the right side. The region of the thyroid body feels indurated. Twitching of the muscles of the right side of the neck when lying. Fine darting stitches in the outer region of the larynx at different periods. Shooting stitch on the left side of the neck. Long slow stitches in the right cervical muscles, immediately on waking from sleep, disappearing during deglutition, and afterwards reappearing again immediately. Fleet creeping in the outer region of the neck. Painful cramp in the cervical muscles after opening the mouth widely, and afterwards biting the teeth together firmly; the lower jaw was drawn down violently, with a heaviness in the articulation of the jaw as if it would be dislocated. Drawing prickings through the left side of the neck. *Painful feeling of stiffness in the left side of the nape of the neck when turning the head to the right side.* Frequently-

and accompanied with pressing pains in the abdomen.—Leucorrhœa while walking.

**Larynx.**—Hoarseness. Hacking cough, from irritation in the larynx. Short cough, now and then, with aching pain in the chest, after a walk.

**Chest.**—Contraction of the chest. Dyspnoea while walking, with uneasiness and burning in the face, during the headache. Aching pain in the chest, particularly during motion. Aching pain under the sternum, at night, disappearing on rising. Dull pressure in the region of the heart, at intervals.—Spasmodic griping and drawing in the chest.—Sticking in the chest, when coughing and drawing breath. Shootings through the chest, from below upwards, along both sides of the sternum.—The sternum is painful to the touch. Pressure on the sternum. Slight burning along the left side of the sternum, from below upwards. Drawing pain in the right pectoral muscles.

**Back.**—Pain in the small of the back and in the back, as if bruised, in the forenoon; he found it difficult to stoop and move about, the pain increased likewise by contact, or on turning the back away from the sun into the shade, after which an unpleasant drawing sensation was experienced; afterwards the pain extended from the small of the back beyond the hip; as this pain disappeared, an aching pain was felt now in the sinciput, then in the occiput, for a fortnight.—Drawing pain in the small of the back, towards noon. Drawing pain in the left lumbar region, towards evening. Drawing pain in the pelvis, towards evening, shifting to the joints of the lower extremities, and changing to a sticking. Drawing pains in the pelvis and lumbar region, extending upwards, towards morning. Slight drawing pain along the vertebral column, in the afternoon, changing to a seated, dull-tearing pain in the joints of the lower extremities, increasing by walking. Tensive drawing in the dorsal and psoas-muscles, when sitting. Fine drawing pain in the back, proceeding from the pelvis, in the evening before going to bed. Intense aching pain in the region of the first lumbar vertebra, at night. Fine drawing pain in the small of the back, at night, gradually changing to a burning pain in the joints of the left lower extremity. Tearing pain in the small of the back, early in the morning. Slight sticking pain in the small of the back, towards evening.—Burning in the right side of the neck during motion and contact. Tearing tension in the nape of the neck, as if the tendons would be drawn up, excessively painful and recurring frequently.

**Upper Extremities.**—Languor of the right arm, as if it had lost all its vitality, going off during motion. Painful feeling of lameness in the left shoulder and elbow-joint, at night. Laming pain in the right forearm, in the evening. The hand and forearm become quite numb, as if lame, but are warm; sensibility is restored by motion. Numbness in the right thumb. Violent trembling or rather shaking of the fingers of the right hand, on pouring some liquid on it.—Slight tearing pain in the joints of the right arm, in the evening, with great weariness. Dull tearing pain in all the joints of the extremities of the right side, in the evening. Violent tearing pain in the joints of the upper extremity, in the evening, becoming more violent in bed. Excessively-painful tearing in both shoulders, in the evening. Tearing pain in the right shoulder and elbow-joint. Tearing pain in the left elbow, wrist and finger-joints, towards evening. Tearing from the elbow to the middle of the forearm, excited by touching the spot with the finger. Tensive tearing in the forearm, as if in the marrow. Tearing in all the tendons of the fingers, along the forearm, when letting the arm hang down. Tearing and beating on the side of the left thumb.—Pressure on the left shoulder, within narrow limits.—Sticking pain in the right axilla, towards evening. Sticking pain in the right shoulder. Pul-

sative stitches in the inner surface of the right forearm.—Dull drawing in the elbow-joints. Painful drawing in single joints of the fingers and in the wrist-joints.—Continued burning pain in the right shoulder-joint. Burning pain in the left wrist-joint, in the evening. Painful sensation like burning and tension between the left thumb and index-finger.—Intolerable pain in the middle of the right forearm, a tearing, tension and cramp-pain, going off during motion. Cramp-pain in the right middle-finger, extending as far as the hand.—Gnawing in the right ulna, as if in the marrow. Tearing gnawing in the right little finger, at intervals.—Tearing jerking in the finger-joints.—The veins of the arms and hands are distended and feel tight, accompanied with languor and ill-humour.—The skin of a cicatrix on the forearm becomes more and more detached.—The ulcer on the arm discharged more than usual, with pain and burning when touched, particularly towards morning; at night the affected arm perspires profusely.

**Lower Extremities.**—Languor in the right, and then in both thighs, increasing in bed. Sudden weariness of the lower extremities, worse during rest.—slight twitchings in the right lower limb.—Laming pain of both limbs in the evening.—Dull pain in the knee, and tarsal joints, worse when walking and standing.—Tearing pain in both hips and knee-joints, early in the morning. Violent tearing from the right hip to the knees, going off during walking. Slight tearing pain in the limb from below upwards, and disappearing in the lumbar region. Slight tearing pain early in the morning, proceeding from the knee-joints through the pelvis, and disappearing in the lumbar region. Extremely painful tearing in the left thigh, as if in the bone. Tearing in the right patella. Dull tearing pain in both knees and tarsal joints, increasing during a walk. Violent tearing pain in all the joints of the left extremity, early in the morning, terminating in weakness of those parts. Violent tearing pain in the left knee and tarsal joint, after midnight. Tearing in the region of the right outer malleolus. Painful tearing in the left heel, in the evening, when sitting. Painful contractive tearing in the hollow and joints of the right foot. Violent tearing in the metacarpal joint of the second toe; as it passed off, a violent itching was experienced at the root of the nail.—Drawing pain in the hip, early in the morning, proceeding from the right tarsal and knee-joint. Painful drawing in the whole limb, during rest, going off by motion. Painful drawing and feeling of lameness in the whole right limb, during a walk in the open air, disappearing during rest, and in warmth. Drawing pain in the right knee and tarsal joints, towards evening. Drawing pain in the muscles of the right leg, commencing on getting into bed, and continuing the whole night. Starting in the limbs and of the whole body, on falling asleep.—Continual sticking pain in the knees and tarsal joints, in the evening. Sticking pain in the left heel, in the evening after lying down. Frequent darting in the right thigh, as if in the bone.—Hard, oppressive aching pain in the joints of the lower limbs, in the evening, on going to bed.—Painful gnawing in the left thigh, as if in the marrow.—Gripping and griping tearing in both thighs, in the morning, followed by a burning itching in the toes. Pulsative griping, tearing from the knee to the toes, in the evening, on lying down, preventing sleep until midnight; the pain terminated with an itching in the toes.—Itching pain in the left limb.—Burning around the knee and in the distended tibia, on getting into bed, (the bony enlargement having been occasioned by abuse of mercury); afterwards headache supervened, as if the occiput would be pressed out, and lastly a griping tearing in the teeth of the left upper jaw; he fell asleep at 11 o'clock.—Violent pain in the foot, the whole night, with general dry heat; next morning he began to perspire, which lasted the whole morning, with relief of the pain.—Heat and

burning of the feet, after lying down, in the evening.—Numbness and tingling in the right heel, with tearing in the toes.—The left foot and leg are very much bloated, in the evening.—<sup>o</sup>The habitual œdematous swelling of the left foot has almost entirely disappeared.

**Sleep.**—Frequent yawning.—Wakeful, late in the evening. He wakes about twenty times, in consequence of a dry cough, with vertigo, as if he would fall on waking. Restless sleep. Frequent starting during a sort of half slumber in the evening, she trembles all over and feels sad and oppressed on the chest. On going to sleep in the afternoon and at night, he experiences a single sudden jerk through the trunk, rousing him completely.—Mortifying dreams. Dream full of joy.

**Fever.**—Shuddering over the hairy scalp. Shuddering over the upper part of the back. Chilliness with shuddering in the forenoon. Chilliness from the small of the back over the posterior portion of the thighs, during a walk in the open air.—Increased feeling of warmth in the hands, with internal chilliness and coldness of the lower extremities. Dry heat at night, followed by sweat. Heat from mouth and nose, the lips are chapped, the tongue dry, with thirst. Profuse sweat at night, with pain in the foot on uncovering it.—Violent throbbing of the arteries and heart.

**Skin.**—Tension of the skin, here and there, in the evening, in bed.—*Itching* in the evening, on the neck, chest, occiput, abdomen, left thigh, worse after scratching, on the right shoulder and upper arm.—Small pimples on many parts, with burning itching, particularly after scratching.

**General Symptoms.**—*Tearing* in the limbs, particularly in the joints, worst in the evening, and at night in bed, or only on the right side (in the evening). Twitchings in the right lower limb. Painful tumult in the limbs, early in the morning.—Bruised feeling in the trunk. Languor of the whole body, particularly the lower limbs, early.—Great weariness in the evening.—Great *debility* early in the morning. Debility in the evening, with much yawning, pressure in the left side of the head, scintillation and paralytic immobility of the right limbs. Sudden debility in the calves, as after a long walk, with languor when sitting. Debility in the whole body, with tremulousness.—Feeling of weakness, with lameness and starting of the limbs.—Heaviness in all the limbs.—Tremor of all the limbs.—Emaciation.

**Characteristic Peculiarities.**—The right side is particularly affected by Stron. The pains seem to be principally seated in the long bones and their marrow. Many pains hover from place to place, so that their locality can scarcely be pointed out. The pains are least felt in the open air, in warm sunshine, and warmth generally.

## CLINICAL OBSERVATIONS.

According to Noack and Trinks, the following affections have been cured with Sulph.—*Hydrargyrosis*.—*Tremor artuum*, with weakness of the limbs, from abuse of mercury.—Diseases from mismanaged itch.—Dropsical cachexia, without organic degeneration of the intestines.—Chlorosis with tubercles, in alternation with calc.—Acute inflammatory affections, when the critical reaction had to be stimulated.—Telangiectasia.—Fleeting tearing pains at times in one, at times in another part. Fleeting lancinating pains in the joints.—Arthritis vaga.—Neuralgia.—Chorea from eruptive crudities.—Scarlatina with soporous condition, starting, distortion of the eyes.—Scarlatina with sopor and vomiting.—Eruptions breaking out after smallpox. Pocks appearing after vaccination.—*Erysipelatous inflammation* with swelling and throbbing, stinging pains. Erysipelas faciei.—Chronic erysipelas of the face, with swelling of the nose, feeling of heat and burning, fever, blisters and foetid scaly eruption on the occiput. Erysipelas of the face and feet. Erysipelas terminating in suppuration.—Pale, tight, hot swelling of various parts.—Chronic cutaneous eruptions of various kinds. Eruptions occasioned by the oil of birch-nuts.—Herpes on different parts of the body. Dry scaly herpes. Herpes on the cheek with psorophthalmia. Herpes on the lower limbs, forming crusts, and itching violently. Benign eruptions on the heads of children. Tinea faciei. Tinea capitis. *Humid, and still more dry scald-head*. Crusta serpiginosa. Crusta lactea. Eruption in the face; the skin becomes chapped, a large number of yellow scurfs forming upon it, with griping, and with burning pain after scratching; similar eruption on the arms, thighs, and abdomen. Pimples or crusts in the face. Humid herpes on the calves and tibiae, with violent burning, itching, and profuse discharge. *Herpes miliaris phlyctenodes*; clusters of small vesicles filled with a serous lymphatic fluid, upon an inflamed base, increasing to the size of a dollar or hand, forming irregular circumscribed spots, separated from each other by sound skin; they appear principally on the extremities, itch and burn, and either discharge or become covered with thin white scales. *Herpes crustaceus* (impetigo Willan): upon a red, circumscribed surface, small, closely-crowded vesicles make their appearance, discharging a purulent lymph, which soon changes to thick yellow-greenish crusts; these crusts frequently fall off, leaving a moist, somewhat raised, red, bluish surface, upon which new crusts soon form; this herpes itches and burns, and, in children, frequently appears in the face. *Herpes crustaceus* on the head, face, calves, with otorrhœa. Herpes crustaceus on the loins. Herpes crustaceus in the bends of the knees, and on the adjoining parts. *Herpes circinnatus*. *Herpes squamosus* on the forehead.—*Mentagra*.—Periodically-recurring vesicular eruption on the upper extremities, the vesicles containing at first a clear lymph which changes to pus; with violent griping in bed at night.—*Itch*. Itch and chlorosis from itch. Greasy itch. Post-scabial diseases.—*Lupus vorax* (in conjunction with arsenic).—*Lepa Americana*.—Telangiectasia.—*Warts* on the arms and hands. Horny warts.—*Nævi*.—*Intertrigo infantum*: behind the ears, on the neck, under the arms, in the groins and between the thighs the skin was very red, and over a large surface, it was sore, moist, and covered here and there with a thick, fetid, purulent lymph.—*Anasarca* after scarlatina, with swelling of the cervical glands. Anasarca (in conjunction with Succus sambuci).—*Scrofulous ulcers*, internal and external. Psoric ulcers of the tibia. Fistulous ulcers? Proud flesh shooting up from fistulae. Ulcers with predominant

disposition to produce proud flesh, particularly with bluish circumference, not very sensitive, the base being covered with pale-red, spongy, insensible proud flesh with a smooth and shining surface, accompanied with a copious secretion of thick, yellow pus.—Chronic ulcers on the feet, also with smarting pains and itching.—Scrofulosis.—Swelling of the cutaneous glands of the chest.—Lymphatic swellings.—Softening and curvature of bones.—Rachitis.—Distention of bones.—Caries and carious ulcers.—Intermittent fever.—Double-quotidian.—Status nervosus with violent delirium in scarlatina.—*Typhus* with evening-sweat (in alternation with *Ruta*, by *Bosch*, *Hygea*, XIX., p. 4). *Typhus* with the following symptoms: paleness, sunken eyes, itching-burning eruption on the lips, dirty-white, dry tongue, bitter, putrid taste, vomiting of food and bile, sensitiveness of the pit of the stomach and umbilicus, rumbling, watery, flocculent, yellowish, nocturnal diarrhoea, turbid urine with reddish sediments, oppression, dry cough in the evening and at night, bad sleep, dry heat, pulse moderately accelerated.—Profuse sweat.—Hypochondria with venous congestion of the abdomen. Real hypochondria and hysteria. Hypochondria with weakness of the lower extremities, sensation as if they would go to sleep, with vague pains, painful spasm in the bowels, fulness of the abdomen, loss of appetite, mucous expectoration, irritation inducing cough, hard stool, forgetfulness and sadness.—Chronic *vertigo*.—Hemicrania, with darting, deeply-penetrating stitches in the forehead, temples and cheeks.—Encephalitis of children, with sopor. Acute hydrocephalus. Chronic hydrocephalus with spasms. Falling off of the hair in lying-in females.—Convulsive trembling of the head after repelled itch.—*Acute ophthalmoblenorrhœa*. Blepharoblenorrhœa. Lippitudo. Hordeolum. Inflammation of the eyelids. Blepharophthalmitis. Psorophthalmia glandulosa et mucosa. Chronic inflammation of the eyelids from foreign bodies having got into the eyes, or, in new-born infants from the light striking on the eye. Ophthalmia neonatorum. Ophthalmia of various kinds from repelled itch. Taraxis with burning-itching pain. Conjunctivitis with interstitial distention of the conjunctiva; redness of the cornea, œdematous swelling of the eyelids with purulent discharge. Ophthalmia: the left eye seems larger, the lids are very much swollen, the albuginea is red as blood, cornea dim with suppurating ulcer, aching pains around the orbit, particularly in the light of the sun and when moving the eyeball. Ophthalmia metastatica: uniform redness of the sclerotica occasioned by fine vessels traversing it, with single bundles of varicose vessels in the conjunctiva, blue ring margin around the cornea with dimness, contracted and immovable pupil; discharge of acrid tears, photophobia, violent tearing pains in the infra-orbital and temporal regions which become worse in the evening and at night, fever. Scrofulous ophthalmia of children, or with phlyctænæ, also with interstitial distention of the lids, or with specks on the cornea. Arthritic ophthalmia. Keratoditis rheumatica. Psoric ophthalmia. Obscuration of the cornea (Keratoditis scrofulosa) with effusion of yellow gray lymph between the layers of the cornea giving the latter a distended appearance in the parts where the effusion has taken place.—Ulcers on the cornea.—Hypopion with inflammation of the sclerotica and cornea.—Cataract.—Cataract and amaurosis after repelled itch.—Amblyopia amaurotica after repelled eruption on the head.—Incipient amaurosis with tearing and burning in the eye.—Otorrhœa scrofulosa with excoriations of the meatus auditorius, and scurfy, humid eruption on and behind the ears. Purulent otorrhœa. Singing and fine whizzing in the ears.—Prosopalgia.—Stitch-like jerks in decayed teeth of either jaw. Beating toothache, particularly from suppressed cutaneous eruptions, with swelling of the gums, great sensitiveness of the points of the teeth, congestion of blood to the head. Parulis and fistula dentalis.—Aphthæ.

—*Angina tonsillaris*.—Inveterate arthritic affections of the tonsils and uvula. Chronic inflammation of the tonsils.—Heartburn.—Chronic vomiting of the ingesta, with tensive pain at the elbow, aching pain of the forehead and vertigo. —*Chronic dyspepsia*: constant bloatedness of the epigastrium, with oppression of breathing, even before breakfast, but particularly after eating; empty and sour eructations, inclination to vomit, vomiting, constant pressure, with occasional burning at the stomach and costiveness.—Pressure in the region of the stomach and constant distention of the abdomen, in consequence of chagrin.—Chronic inflammatory affections of the stomach: burning, contractive pains in the stomach, sensitiveness to pressure, fulness and tightness of the præcordia, acidity, vomiting of water and of the ingesta (in alternation with *carbo veg.*) —*Cardialgia* from suppressed itch.—Chronic *cardialgia*, particularly when the pain in the region of the stomach and back is seated, with loss of appetite and costiveness.—Incipient schirrous degeneration of the stomach, particularly with hæmorrhoidal disposition and after repelled itch.—Chronic hepatitis.—Induration of the liver with vomiting of hydatids.—*Tabes meseraica* with diarrhœa, emaciation, crying, restlessness. *Atrophia meseraica infantum*.—*Infarctions* of the portal system.—Hæmorrhoidal colic, with strangury and other complaints. —*Chronic constipation*, also of children and new-born infants.—Diarrhœa with itching and pain in the rectum. Chronic papescent diarrhœa, with leucorrhœa and amenorrhœa.—*Diarrhœa dysenterodes*: violent cutting in the bowels, dysenteric pressing and diarrhœa.—*Dysentery*: discharges of mucus with and without blood, preceded by cutting in the bowels, tenesmus, fever, etc.—Slight protrusion of the rectum, in feeble children. Prolapsus ani of children with itch-like eruption.—*Hæmorrhoids* with colic and costiveness. Blind and flowing piles. *Hæmorrhoidal congestions* in the abdomen, congestion of blood to the head, nervous excitement, aching pains in the head, restlessness at night.—Chronic bleeding from the anus.—Hæmorrhoidal affection: swollen and painful tumours, preventing one from rising, with constipation, constant urging to stool, stool enveloped with mucus, painful stitches from the anus to the small of the back, painful tightness in the small of the back and anus, loss of sleep and appetite.—Hæmorrhoids, particularly blind ones, with costiveness and stinging in the rectum. Sulph. is an excellent remedy for many affections arising from a hæmorrhoidal disposition or from suppression of the usual hæmorrhoidal discharge, characterized by congestion of blood to the head, constant aching pains in the occiput, vertigo, congestion of blood to the heart, palpitation of the heart, slight vascular excitement, pulsations in the whole body with anguish and oppression, and easily excited by slight exercise or emotions, derangement of the digestive functions, costiveness. *Hæmorrhoidal affections* with tenesmus, colic, pain in the small of the back.—Catarrh of the bladder, urine with mucous sediment and troublesome pressure on the bladder.—*Amenorrhœa*, also with sticking headache, vivid redness of the face, violent pains in the uterine region at a period when the menses used to make their appearance, and itching pimples on the chest.—*Fistula urinaria*, from stricture of the urethra.—Suppression of the menses with fever, congestion of blood to the head, chest, spleen, vertebral column and small of the back, gastric and abdominal symptoms, hæmorrhoidal congestion, shortness of breath, pressure in the chest, stitches in the side, heaviness and languor of the lower extremities, etc.—Chronic burning in the urethra after gonorrhœa. Common gonorrhœa and orchitis gonorrhœica. Gleet. Hæmorrhoidal gonorrhœa. Dysmenorrhœa with epilepsy (in conjunction with Puls.).—Partial prolapsus uteri.—Swelling of the ovarium.—Leucorrhœa with chronic cough, feeling of weakness in the chest when talking and mucous expectoration, profuse night-sweats. *Leu-*

*corrhea* (in alternation with Stannum).—Impoteneo (in conjunction with Conium).—Facilitates conception.—Disposition to miscarriage.—Soreness and rhagades of the nipples of nursing females.—Suppurating ulcer of the mamma with proud flesh.—Aphony with great restlessness during the suppurative stage of smallpox.—*Grippe*: moderate fever, stitches in the chest, during a deep inspiration, violent turns of cough, with great oppression of breathing. Chronic catarrh, with asthmatic symptoms and palpitation of the heart.—Constant, short, racking cough with exhausting night-sweats, after pneumonia. Mucous cough with vomiting.—Croup, in slight cases, giving first Aeonite; Sulph. brings on the catarrhal stage.—Chronic affections of the larynx, particularly with hoarseness and aphony.—Cough with expectoration of white mucus and night-sweats.—Cough after measles, in phthisical subjects.—Hæmoptoe.—*Pneumonia* in the stage of hepatization, particularly in persons disposed to hæmoptoe, in scrofulous subjects, when effusion into the pleura has set in, with violent febrile orgasm, great dyspnœa.—Pleuritis with effusion, giving first Acon. if the fever be violent, or, if slight, Sulph. from the commencement. Also in pleuritis complicated with pneumonia, when the stage of hepatization has already set in.—Pleuropneumonia (cured by one dose of Sulph. 900). Tuberculous pneumonia. Chronic affection of the chest, with tightness of breathing, and frequently-recurring inflammation arising from pulmonary tubercles and other chronic inflammatory irritations of the thoracic organs. Inflammatory affections of the lungs in individuals with pulmonary tubercles.—Pulmonary phthisis from mismanaged itch.—Suppuration of the lungs.—Consumption with chronic cough and slow fever, after measles.—*Pulmonary phthisis*: constant cough, with expectoration of yellow-green pus, night-sweat and fever. *Pulmonary phthisis*: cough, with copious purulent expectoration and stieking pains in the chest.—Tuberculous pneumonia.—Chronic affection of the lungs. Chronic asthma with profuse sweat. Asthma from repelled itch. Asthma spasticum periodicum.—Rushes of blood to the heart with aching pain.—Periodical palpitation of the heart (in conjunction with Acon.).—Affection of the spinal marrow: violent pains in the back, with dislocation of the vertebræ and paralysis of the lower extremities, after a repelled itch-like eruption in a boy of three and a half years.—Curvature of the vertebræ.—Inflammation and swelling of an axillary gland.—Burning, tearing and swelling of the shoulder-joint, which is painful to contact; the pains are increased by motion and at night.—Fungous excrescences on the left forearm of a child, after itch.—Excessively-painful tumours in the joints of the arms and feet, sensitive to contact.—Periodical spasms in the arms.—Arthritic swelling of the hand.—Panaritium.—Ischias nervosa antica, with tearing pain, after repelled itch.—Ischias with burning and stinging pains, particularly at night.—Complete lameness of the lower extremities, in rickety individuals.—Paralytic condition of the hip-joints, with violent pains in the small of the back and tearing in the left lower limb.—Coxarthrocace.—Coxalgia scabiosa.—Inflammation of the knee-joints.—Chronic tumour on the knee, of the size of a fist, with doughy feel.—Arthritic inflammation of the knee-joints, with stinging and burning pains, violent swelling of the knee and foot, with fever.—Phagedenic ulcers on the foot, with burning pains.—Chilblains.—Painful corns.

#### SYMPTOMS.

**Mind and Disposition.**—\**Despondency*. During the day she frequently feels quite unhappy, without knowing why, she wishes to die. Moaning and lamentations, day and night, with much thirst and slight appetite, although she swallows her food hastily. Sad on account of her disease. °Melancholy, she

fears for her salvation. Hypochondriac sadness, (the first week). Apprehensive of future misfortunes. Great anguish, in the evening after lying down, she is unable to go to sleep. Anxiety, as if he would lose his life. *Great disposition to weep*, without any apparent cause. Exceedingly sensitive. Now inclines to weep, now to laugh. During the nightly cough the boy weeps for a long while and is very restless. She imagines that she is giving wrong things to the people, causing their death. She fears for others, with anxiety. Anxiety with heat in the head and cold feet, he knows not what to do; he forgets every moment what he was about to do.—Involuntary haste in seizing something.—Inclines to start. Starts violently, even when hearing his name called. °Fear of ghosts at night. He starts in the afternoon when wide awake, and a cold thrill rushes through his body.—Uneasiness and hurriedness in the day-time; he could not restrain himself. She has no rest anywhere, day or night. His mind is constantly agitated. Great absence of mind; he is unable to chain his attention to the object before him, and does his work very awkwardly. Slow, irresolute. Excitement with inclination to fritter away one's time, almost as after taking coffee. He imagines he is becoming thin.—Low-spirited, out of humour, inclining to weep, especially morning and evening. Excessively out of humour; nothing satisfies her. He gets angry about everything, is offended at every little remark, thinks he ought to defend himself, *\*gets vehement*. *Out of humour*, gloomy in the head, as when a catarrh is setting in. She was angry at herself. *\*Irritated -and taciturn*.—*Slowness of mind and body during the day, and not disposed to any kind of labour*. She becomes impatient at everything she undertakes. He takes no pleasure in anything. The slightest occupation is repulsive to him. He sits for hours immovable and lazy, although he has many things to attend to. He has no disposition for anything in the evening, business, enjoyment, conversation, exercise; he feels very uncomfortable, and he knows not what to do with himself.—*So obstinate and peevish* that he does not answer any question; he does not want any one to come near him, and cannot get fast enough what he wants. Impetuous and peevish. She is overwhelmed with internal discontent, does not do anything to her satisfaction, is obstinate and inflexible, without knowing why.—Irritated mood, as if he had been offended. Quarrelsome mood, and vexed about everything.

**Sensorium.**—When walking in the open air, she becomes suddenly sad; she is filled with anxious, vexed, desponding thoughts, that she cannot get rid of; this makes her apprehensive and vexes her unto tears. She thinks of a great many past events which had wounded her feelings, (also of joyous things and melodies;) they crowd upon her in succession, she cannot get rid of them, in the day-time, when not doing anything, but worst in the evening when in bed; then they hinder sleep. While thinking of indifferent things, she calls up in her mind disagreeable, offensive occurrences, adding more and more disagreeable recollections until she is unable to get rid of them; accompanied with much courage, which induces her to take bold resolutions. *\*Great inclination to philosophical and religious speculations*. She imagines she has beautiful dresses, looks upon old rags as beautiful dresses, takes a coat for a vest, a cap for a bonnet. Mania; she spoils her things, throws them away, imagining that she has everything in abundance, and, besides, dwindling down to a skeleton. She says absurd things day and night.—*Extremely forgetful*, especially of proper names. She forgets what she was just saying. So forgetful that she had but a confused recollection of the things which had just happened. Forgetfulness of phrases; cannot speak the words he wishes to. Dulness of sense, he is not collected, is embarrassed, avoids society. If some one talks to him, he wakes as from a dream; he looks like an idiot, and has to make an effort to comprehend and an-

swer correctly. Words and phrases which he had heard, pass involuntarily through his head.—Sensation as of a fog in his head, and dizziness which makes him sad; vague ideas with irresoluteness. She ran about the room for five minutes without knowing where she was. She was unable to connect two ideas, and was like an imbecile. Sensation in the head as if she had not slept enough. °Difficulty of thinking. *Dulness of the head*, in the morning, and oppression of the forehead until noon. Dulness of the head after a walk in the open air. Dizziness with stitches in the head. Dulness of the head, as if from congestion of blood to the head, especially when going up stairs. Dizziness, a sort of humming and buzzing through the forehead, when walking fast or when moving the head fast. Dizziness and swimming of the head. Swimming of the head, worse from looking upwards and downwards, and from turning round quickly.—Reeling sensation in the head. Reeling sensation, stupefaction and great faintness, in the forenoon at eleven o'clock; she had to lie down, and lay until three o'clock in a quiet slumber, in which she heard everything that was said. Weakness of the head like a sort of stupefaction, when walking in the open air, with gloomy, disagreeable ideas, for several minutes. °Inability to collect one's self and heaviness of the head from stooping. Stupefaction of the head, she imagined she had lost her senses.—Vertigo when sitting; *staggering on rising*. Vertigo in the evening, after having been lying in bed for a quarter of an hour, as if he would faint and as if everything in his head were turning; two evenings in succession. Vertigo when lying on her back at night. *Vertigo in the morning, with some bleeding at the nose*. *Violent vertigo in the morning when rising; whenever he attempted to stand he fell back on the bed*, which lasted about half an hour. Short vertigo, as if he would fall to one side. Vertigo when walking, a sort of reeling. Vertigo, inducing a tendency to fall forward, when suddenly rising from one's seat. Vertigo when walking, a sort of eloudiness before the eyes, a staggering to the left side, for some minutes. *Vertigo when stooping*. \**Vertigo when walking in the open air*, (after supper;) she was not allowed to stoop, to look down, and had to hold on to something in order not to fall. Vertigo for eight minutes, when ascending an elevation; he was unable to step firmly, the senses being clouded. Vertigo when walking, and anxiety when looking down; her eyes swim immediately. Vertigo, when crossing a river, she came near falling, and all her limbs felt paralyzed. Vertigo in the evening, when standing, with rush of blood to the heart. Vertigo with inclination to vomit. He can walk straight while he looks steadily before him, but staggers if he looks to either side. After sitting awhile, the vertigo leaves his head, but is renewed by rising again. Dizziness and unsteadiness of the head and body, early in the morning, as if standing upon shaking ground.

**Head.**—*Headache with nausea*, °also with heat and humming in the head. Headache as if from incarceration of flatulence. Headache every morning, over her eyes, as if from dry coryza; he sneezes continually. Headache, worse in the open air than in a room. Headache, her eyelids are drawn together. Headache only when going up stairs. Violent headache, in the vertex, for twelve hours, returning every morning like a fever. Pain in the vertex, when chewing, coughing or blowing the nose. Violent pain in the centre of the head, from coughing and sneezing. °Headache from working in pewter and lead. °Nightly headache, particularly from moving in bed ever so little. A good deal of headache, especially when stooping. *Every step he makes affects his head painfully*. Headache in the occiput, from noon; a sort of stupifying groaning was felt in the occiput when stepping; she had to sit quietly for four hours. Pain in the vertex, as if pressure were made on the brain. Soreness of the right side of the head. The pain in the right side of the head moves into the right leg and back

again. Numbness in the right side of the head.—*Pressure* in the front part of the head, as after nightly revelling; in a few days the pain is felt as a glowing tearing in the right side of the head and in the teeth, aggravated by touching the parts with cold water. *Pressure in the head, in the morning*, immediately after rising. Aching in the head; every step affects his forehead painfully, with sweat on the forehead. Headache, generally on the top of the head, as if the eyes would be pressed down. Aching pain over the left eye, in the afternoon. Aching pain in the forehead, more violent during motion or in the forenoon. Pressure in the head, from one temple to the other, in the morning after rising. Sharp painful pressure below the left parietal bone, immediately after supper. Pain in the whole head, as if it had been pressed from without, for instance, by a tight hat. Oppressive headache in the room, when the head is covered with a tightly-fitting hat; the pain goes off when uncovering the head. Pressure in the head, every other morning, at eight or nine o'clock in the morning, and continuing until bed-time. \**Violent pressure in the forehead.* \**Pressure in the temples and tightness in the brain*, when reflecting or doing some other mental labour. Painful pressure from time to time from the vertex into the brain, especially late in the evening and at night when in bed; the pain obliges her to wrinkle the forehead and to draw the eyelids together. Pressure in the head, in the direction of the forehead. *Nightly* headache, and intolerable pressure in the lower part of the occiput and in the vertex, increasing continually, accompanied with pressure on the eyes, which she was obliged to close, and with a chilliness which no clothing could remove; he was also covered with a foetid sweat, during which he had to walk up and down in his room. Headache in the forehead, pressing from within outward. Headache, especially in the forenoon, as if the head were drawn forward and downward. °Headache every day, as if the head would burst. °Periodical aching pain, every eight days, with tearing and stupefaction.—Feeling of fulness in the head as if filled with blood. Feeling of fulness and heaviness of the head. Feeling of heaviness on the top of the head. *Heaviness of the head*, every movement of the head becoming disagreeable. *Heaviness of the head*, when sitting, lying, moving about or stooping. *Feeling of heaviness* and dulness of the head, as if the brain would fall forwards, relieved by walking; afterwards fine pricking in the head. The head feels too heavy for his neck to support. Headache, like a weight pressing through the brain from the vertex, and like a hoop around the head. Headache, as if a board were pressing against the head in front.—*Tension* in the forehead. Tensive pain in the head. Tensive pain in the eyes, only when raising them, for several mornings, in bed, on waking.—Headache, *as if between screws*, in and above the forehead. Contractive pain in the temples, for several mornings. Compressive pinching of the brain from side to side, frequently lasting a whole minute.—*Drawing* through forehead and temple, intensely painful, as if a worm were creeping through that part, (the first days). Drawing pain in the occiput, so violent during mastication that he has to cease eating.—*Tearing* in the head, through the ear. Tearing in the head as with a saw. Tearing and pressure in the left temple and eye. Tearing in the forehead. Tearing in the head, more in the afternoon than forenoon, with faintness and thirstless heat; he had to lay his head on the table to obtain relief. Tearing in the head, generally in the sides and forehead, sometimes with drawing and pricking, and with ulcerative pain, relieved by moving the head, by pressing upon it, and by the open air. Nightly headache, as if the skull would be torn off. After waking from the siesta, when opening the eyes, he feels a sudden headache, generally on one side, as if the brain were torn or sore. Stitch-like tearings, after long, unequal intervals, now through different parts of the head, now through the malar bones, the region of

the ear, the jaws and other parts of the face.—°Drawing and tearing through the head. A *stitch* in the head. Sticheing pain in the temples. Pricking pain in the forehead, only when walking. Stitches in and above the forehead. Stitches in the forehead, in the evening, becoming more and more violent afterwards. Stitches through the forehead when talking or coughing, obliging her to hold her forehead with her hand, mostly in the evening, for many days. Stitches through the forehead, at every step, every day; she has to knit her brow when talking aloud or coughing. Stitches in the head and through the eyes. Stitches through the forehead every day from morning till night. Some stitches in the vertex. Pricking headache at different times, sometimes continuing during the night, with tearing in the lower jaw or bruised pain in that side of the head, sometimes relieved for a short time by compressing the head, sometimes obliging one to lie down.—*Boring pain* under the vertex, the place is painful to the touch.—Painful tingling and creeping in the temples.—*Jerking pain* over the right eye.—*\*Beating* in the head, in the morning. Bubbling beating, at night, in bed. Beating in the head, neck, and about the heart; every part of her seemed to tremble. Single *shocks* through the whole head. Hammering headache during an animated conversation. Painful hammering in the head. Pulsations in the left occiput, finally passing into a jerking sensation. Pulsative beating, which can be felt by others.—*\*Rush of blood to the head*, even with loose stool, and after riding in a carriage. Rush of blood to the head; pressure in the head and through the eyes; she was like one deaf. *Orgasm of the blood* in the head, and frequent flushes of heat. Rush of blood to the head, resembling a slight pressure on the head. Pain in the left side of the occiput, *as if the blood had ceased to circulate*, after waking from sleep.—*Heat in the head*, in the morning. Heat in the head, in the evening, with cold feet. Violent, dry heat in the head, with glowing face, in the morning on waking. Burning and pricking in the left side of the occiput.—°Chronic encephalitis. °Chronic hydrocephalus.—*Buzzing* in the vertex. Tingling roaring through the head and ears.—Pain, when nodding, *as if the brain were beating against the skull*.

**Scalp.**—Headache, on the left side, externally; when feeling the parts, a pain as from subcutaneous ulceration was experienced in them. Sensitiveness of the scalp to the touch, in the vertex. Violent pain in the vertex, in the evening, as if the hairs would be pulled out; they rise in that spot which is most painful. Occasional burning aching pain at a small place near the nape of the neck, and especially after scratching, when lying on that place. *\*Feeling of coldness* about the head. A *cold spot* on the top of the head, continually.—Itching on the top of the head, with uneasiness. Itching of the occiput. *Violent itching of the forehead*. Pricking in the forehead, apparently in the bone.—*Itching pimples* on the hairy scalp, (the first 14 days.) Itching pimples on the forehead, with pricking in the pimples when rubbing. *Small blotches* on the forehead, painful to the touch. °Tinea capitis, dry, or fœtid and humid, with thick pus, yellow crust and itching.—Movement of the scalp from the nape of the neck across the top of the head as far as the forehead.—*Walking with the head bent forward*. The hairs are painful when scratching the head. *Pain of the roots of the hairs*, especially when touching the hair. *Falling off of the hair*, °also of lying-in females.

**Eyes.**—Heaviness of the eyes.—*Pressure* in the eyelids, in the evening. Pressure in both orbits. Pressure in the upper eyelids. Pressure in the eyeballs when walking in the open air. °Violent pressure on moving the eyes. Pressure in the eyes, every evening, as if he would sleep, without being sleepy. Pressure in the eyes, especially when working in the light of the sun. Pressure in the eyebrows and eyeball. Pressure and itching in the eyes, and vertigo

when stooping.—Pain of the eyes when moving them. Painful pressure over the eyebrows.—Drawing pain in the bones of the orbit.—Pain of the eyes from foreign bodies, sand or dust, having got into the eyes.—*Itching of the eyelids*, as if they would become inflamed. *A good deal of itching in the eyebrows* and tip of the nose. *Itching and smarting in the canthi*. Smarting in the eyes, as from spirits of hartshorn. Smarting in the eyes, succeeded by lachrymation.—Cutting in the right eye.—Stinging and burning in the outer canthi with dim-sightedness, in the evening. *Bruised pain* of the eye, when closing the eyelids and pressing on them with the finger. Bruised feeling and burning of the eyelids. Painful *dryness* of the eyeballs, and sensation as if they rubbed against the lids. Smarting and painful dryness of the margins of the eyelids. Smarting in the eyes with sensation as if they were running. Smarting in the eyes, in the evening; the light of the candle appeared like a red wheel, he was not able to see by it. Smarting and sore pain, after midnight, on the inner side of the eyelids; followed by a sensation of dryness on the inner surface of the lids, with sensation of friction. *Feeling of heat* in the eyes.—Sensation in the eyes as if *full of blood*.—*Burning in the eyes*. *A burning jerk* in the right eyelid. Sensation as of a number of *burning little sparks* on the lids, which closed immediately. Burning on the outer surface of the lids. Burning of the upper lids. *Burning in the interior of the eyelids*, they are inflamed and red, and a tension is experienced in them when touched. When reading the eyes burn and become easily weary. Burning in the eyes without redness. Slight burning in the eyes, as from lime. Burning and pressure in the eyes; agglutination in the morning, and swelling of the lids and the whole face.—*Redness* of the eyes during the day; in the evening they itch violently. Burning pain above and below the eyebrows, every afternoon. Inflammation of the lower eyelids, without any particular swelling. (For the kinds of inflammation which have been cured with Sulph., see *Clin. Obs.*). Swelling of the upper eyelid, and dry gum in the eyelashes, also with redness and burning pain. Swelling and pain of the eyelids, with lachrymation. Swelling and redness of the eyes, with pimples on the lids. °Swelling of the conjunctiva with inflammation. °Swelling of the lids with interstitial distention.—*Stye* on the upper lid, in the inner canthus. °Tubercles in the lid. Pimple on the upper lid. °A white little *vesicle* in the white of the eye, close to the cornea. °*Ulceration of the margins*. Dimness of the cornea as if covered with dust. °*Obscuration of the cornea*. °*Specks on the cornea*. °*Ulcers on the cornea*.—°*Obscuration of the crystalline lens*.—*Dryness* in the space within the lids. °*Dryness of the eyes*.—His eyes are watery and sometimes glassy. Lachrymation of the eyes; followed by dryness. Lachrymation, and burning of the eyes in the morning. Tears, which feel greasy, are secreted from both eyes.—*Purulent mucus* in the eyes. °*Agglutination of the eyes*, two mornings in succession. Agglutination of the eyes in the morning, the lids are thick and red; afterwards dry gum in the lashes.—*Jerking* in the eyelids, generally in the afternoon. Jerking of the lower eyelid. Almost constant jerking of the left lower eyelid. *Twitching of the lower eyelids, every day*. Twitching of the eyelids for several days. *Trembling* of the eyes. In the morning after rising, °*her eyelids frequently close of themselves*.—The pupils are exceedingly liable to contract. The pupils are dilated and immovable. Distortion of the left pupil. Obscuration of sight when reading. Occasional dimness of vision. Sense as of gauze before the eyes, and dim-sightedness both when looking at near and distant objects. The objects appear more distant than they are. Dark points and spots before the face. Optical illusion as if her skin were yellow. Black notes seem to hover not far from the eyes. A white spot before the eyes, when look-

ing into the air. Luminous vibrations before the eyes. Sensation as if the eyes were dazzled when looking at an object for a long while. In the morning the eyes feel dazzled. \**Intolerance of the light of the sun.* The eyes are painful when looking at the flame of a candle. The eyes are painful when closing the lids and pressing on them.—°Weakness of sight. °Incipient amaurosis. °Is unable to recognize anything distinctly. °Does not see small objects, and larger objects are seen as if through mist. Cannot see anything at a distance.

**Ears.**—*Otalgia* in the left ear.—Violent pressure in the ears, when swallowing or sneezing. \**Drawing* in the left ear, during an eructation from the stomach.—*Tearing in the left ear*, extending into the head.—*Stitches in the left ear.* Stitching pain in the ear, as far as the fauces.—The outer ear feels as if gone to sleep, for eight days.—*Violent itching of the outer ears.* Tickling in the ear. Itching in the ear, (immediately,) afterwards itching and heat of the outer ear. Painful creeping and gnawing in the left outer meatus auditorius. The internal ear is painful when cleaning it.—*Large boil* on the helix.—Severe stitches in the *glandular swelling*, for several days.—The cracking of a whip produces a sensation in the ear as of the splashing of water, the hearing being exceedingly sensitive.—Excessive *sensitiveness* of the hearing. Excessive sensitiveness of the auditory nerve in a person affected with hard hearing, making her feel nauseated when playing on the piano. Every noise is disagreeable to him.—Unpleasant feeling of obstruction in both ears, for several days. Deafness of both ears, passing very soon. The left ear has become closed in such a manner that he is indeed able to hear everything, but he is not able to understand what people tell him.—°Obstruction of the ears when eating. When blowing the nose, the ear becomes closed. Sensation, when blowing the nose, as if air were entering the ear.—\**Humming in the ears*, with hardness of hearing, during which the ears did not seem to be affected by the sound which seemed to be perceived by some internal sense, but very dull. Buzzing before the ears, for several days. *Humming* before the ears, now before one, now before the other ear; she cannot hear well with the ear affected by the humming. Humming and pulsations in the ear. \**Whizzing* of the ears. *Roaring before the ears*, in the evening when in bed, with rush of blood to the head. *A good deal of tingling in both ears*, when sitting. Violent tingling in the ears, in the morning, when in bed, for five minutes. *Cracking* in the ear, or sense as of bursting as of an air-bubble. Cracking before the ear in the articulation of the jaw, when chewing. Frequent reports in the ears, as if a cord were breaking. Fluttering noise in the ear.

**Nose.**—A sort of spasm in the nose. Boring above the root of the nose. Pressure in the right nasal bone, in the evening. Cracking in the upper part of the nose, or sense as of bursting as of an air-bubble. Dryness of the inner nose. Pain of the tip of the nose when touching it. Tearing in the nose, after dinner, going off for a short while by pressing on it. Itching in the nose. Redness and burning of the nostrils, as if sore. \**Inflammation of the nose.* \**Swelling of the nose.* Pain in the nose, which is swollen and ulcerated internally. Inflamed, swollen wings of the nose. Black pores on the nose, upper lip and chin. Sensation as if the blood were rushing to the nose, especially in the open air. Scurfs in the nose. °Dry ulcers on the nose. °Cancer of the nose.? °Freckles on the nose.—A yellowish, viscid, strong-smelling fluid drops out of the nose for two evenings and mornings, without coryza,—*Bleeding of the nose*, for seven days. °Bleeding of the nose, two afternoons in succession, afterwards the nose pains when touched. Discharge of blood from the nose when blowing it.—*Loss of smell.* Dulness of the sense of smell. *Intolerance of odours.* Smell in the nose as of soaked peas. Sharp, acrid smell in the nose, as of smoke.

Smell in the nose as of burnt horn. Smell in the nose as of old, fœtid coryza. Bad smell of the nasal mucus when blowing the nose. Concussive sneezing. Frequent violent sneezing, and almost constant yawning. Sneezing preceded by nausea. Painful feeling of dryness in the nose. Creeping in the nose.—*Violent coryza*. Fluent coryza, like water. Burning fluent coryza. Obstruction of both nostrils, with frequent sneezing. Fluent coryza, the mucus coming through the posterior nares. Feeling of obstruction in the upper part of the nose, fluent coryza and burning soreness, with discharge of acrid water and rough base voice, afternoon and evening. *Violent obstruction of the nose for several days*, with discharge of bloody lumps when blowing the nose. Coryza with chilliness, catarrh and cough. Violent coryza with rawness in the chest, and cough with much expectoration. Frequent secretion of a thick, yellow, purulent mucus from the nose. °Obstruction of one nostril. °Chronic obstruction of the nose with constant desire to blow it, and little discharge.

**Face.**—\**Paleness of face*. Pale, wretched appearance. °Pale bloated face. \**Deep eyes surrounded with blue margins*. Dark redness and heat of the face, especially when walking in the open air. Flushes of heat on the left cheek, forenoon and afternoon, for one hour. Heat and burning in the face, with a few red spots between eyes and ear. Heat in the face, every afternoon from 5 till 9 o'clock. Burning painful heat of the face and the neck, with red spots on the face. \**Redness and heat of the face*, with burning, especially around the mouth. Burning in the face, and on the neck, without redness. Redness and violent burning in the region of both malar bones. °Circumscribed redness of the cheeks. Heat in the face, during the day, with burning in the region of the malar bone, and redness of the whole nose.—Sensation as if cold water were poured over her face under the skin, the face feeling cold to the hand, in paroxysms of some minutes.—*Creeping sensation* in the face. *Twitchings*, sometimes in the region of the malar bone, sometimes of the chin.—*Pressure* and burning in the cheeks and malar bones. Painful pressure in the region of the malar bone and below the eye.—*Drawing pain* in the left side of the face, apparently in the skin, above the eye, in the region of the temple and malar bone, extending as far as the lobule, most violent in the morning.—*Tearing* in the right half of the face. Tearing in the malar bone, at other times in the lower jaw, as if the parts would be torn out.—*Bruised pain* in the right malar bone, also at night.—*Swelling* of the cheeks, with pricking pain, and pain when touched, for eight days. Red swelling of the cheeks, painless. °Swelling and redness of the face. °Swelling and redness of the cheeks. °Erysipelas of the face, also with swelling.—White, itching spot on the cheeks.—*Violent itching* of the face, with small, painless pimples, emitting a humour after scratching.—*The lips* are always hot, pricking and burning. Burning lips. Dry lips. Dryness of the vermilion border of the lower lip, with scurf and tensive pain. *Chapped lips*. Burning *rhagades* in the lower lip. Scaly, dry, rough upper lip and margins of the nostrils. *Swelling of the upper lip*, painful. Swelling of the lower lip, covered with an eruption. Tremor, or twitching of the lips. Vesicle on the middle of the lower lip. Red, itching tip in the middle of the upper lip. Red *blotch* on the margin of the vermilion border of the lower lip; when touched, it feels painful and pricking. Elevated, *herpetic eruption* near the corner of the mouth, toward the cheek. Fever-blister on the upper lip.—Itching around the *chin*. *Painful eruption* around the *chin*.—Spasmodic drawing in the *jaws*. Drawing jerk in the left lower jaw. Jerks in the lower jaw, when falling asleep. Tearing in the right upper jaw, in the evening. Stitching in the lower jaw, through the ear. Painful *swelling* on the upper jaw, above the gums. Painful swelling on the lower jaw, below the gums. Large, painless lump on the

lower jaw, tense when chewing. *Glandular swelling on the lower jaw.*—Prickings in the *submaxillary glands*, which are painful when touched.

**Teeth.**—*Toothache in the open air.* One of the molar teeth is painful when touched. °Evening toothache. Nightly toothache. *Toothache from the least draft of air.* Toothache, renewed by washing the mouth with cold water. Toothache, terminating in swelling of the cheeks. Toothache, in paroxysms of two, three hours, succeeded by digging-up; she bears cold things rather than warm. Great sensitiveness of the tips of the left upper teeth, worse when coming in contact with cold water, with darting pain. Painful jerking in a hollow tooth, after dinner. Aching pain in the tooth, with pain of the submaxillary gland.—*Drawing toothache.* °Drawing toothache aggravated by warmth. Violent drawing pain in an incisor tooth, until eleven o'clock at night, followed by sleeplessness lasting until morning. Drawing pain in the molars, aggravated by drawing in cold air. Drawing pain in the teeth in the open air. Tearing-drawing toothache, now on the right, now on the left side, lasting whole hours and sometimes intermitting a half hour or whole hours; also in the night, on waking. Drawing and tearing in the teeth, generally aggravated by cold water, sometimes relieved by warm; frequently accompanied with jerking in the tips. Grumbling and drawing in the teeth.—\**Jerks through single teeth.* Jerks and stitches in the teeth, at regular intervals, also after midnight and in the morning, during and between meals; when drawing in air, a painful dart into the gums is experienced; even when not touched they feel sore and as if loose.—*Pricking pain* in all the teeth, day and night, increased by mastication. Pricking toothache, even affecting the ear; he was waked by it in the night. Violent stitch through the teeth, from every cold drink.—*Stitching, burning and beating* in the teeth, extending into the orbits and ear.—*Beating, drawing toothache.* Beating and boring in the teeth.—*Boring in the teeth*, as with a hot iron. Boring pressing in the teeth and in the outer parts of the head, a few minutes after eating.—Frequent *cutting* through all the teeth of the right side, resembling the passage of cold air through the teeth.—Toothache, every afternoon, as if the teeth would be torn out, with chilliness; going off in bed.—\**Feeling of looseness* in the teeth, in the evening. \*When biting, the teeth feel loose, and, when eating, as if paralyzed. Looseness of the teeth, and bleeding of the gums, for three weeks. One of the molar teeth feels as if elongated and becomes loose, with simple pain when knocking the tooth against something, or when chewing. The tooth feels elongated and is affected with a simple pain, without biting, or without touching it. *The teeth felt elongated so that she was scarcely able to bite.* The teeth felt sore as if elongated, and as if groaning vibrations were taking place in their interior.—*Dulness of the teeth* and pain, only when biting; he was not able to chew brown bread, on account of the pain.—The teeth become covered with brown mucus.—Red, saltish-sour water oozes from a hollow molar tooth of the left side.—*Bleeding of the teeth.* \**Swelling of the gums with throbbing pain in the gums.* Swelling of the gums around the old roots. °Hard swelling, discharging blood and pus. °*Fistula lachrymalis.*?

**Mouth.**—Contractive sensation in the mouth. Spasmodic contraction of the mouth on swallowing the first mouthful.—*Vesicles* in the mouth, with a burning pain. Small, sore vesicles in the mouth; even slightly-salted food causes a smarting. °*Aphthæ.*—*Peeling off of the skin* of the inner cheek.—*Slimy mouth*, in the morning.—*Dry mouth* after a meal. Dry mouth and scraping in the throat as if the food would not go down.—*Burning* in the mouth, in the morning, without thirst.—*Dryness* of the mouth, and taste of blood. Burning in the mouth, with eruption around the mouth. Burning in the mouth, as

from pepper, causing a thirst which cannot be relieved by drinking, day and night. A good deal of heat in the mouth and much thirst, at night. Heat in the mouth, without thirst.—*Sanguineous saliva*, with sweet taste.—Accumulation of saliva in the mouth, sour and bitter.—°*Ptyalism* from abuse of mercury. *Fætid smell* from the mouth, after a meal. *Fætid smell* in the morning, or evening. °*Stomacace*. Sour smell.—*Burning pain on the surface of the tongue*. Smarting on the tongue, as if covered with vesicles. Smarting vesicle on the right side of the tongue.—Red tongue, with white tip, like aphthæ.—White-coated tongue in the morning. \**Dry tongue in the morning*. °Brown, parched and rough tongue. °Cracked and vermilion tongue. Salt tenacious mucus on the tongue every afternoon.—Twitchings in the upper surface of the tongue. Frequent stuttering when talking.

**Pharynx and Œsophagus.**—Dry throat; the tongue adheres to the palate, but is moist and covered with a foamy mucus. Dryness of the throat in the morning, followed by a salt taste in the mouth, disappearing after a meal. Dryness of the throat at night; a good deal of mucus on the tongue, on waking. Dryness of the throat, as if parched. Great dryness of the fauces and palate.—Mucous expectoration without cough.—*Vesicles* on the palate, hindering eating and talking.—*Sore throat*, with swelling of the cervical glands. Painful pressure in the throat, during deglutition, as if the palate were swollen. \**Pressure in the throat as from a lump*, during and between the acts of deglutition. Pressure in the fauces, as if in the nape of the neck, in paroxysms, all night, felt even when breathing. Pressure in the upper part of the throat, during deglutition, and pain in the upper part of the chest. Sensation, when eating, as if something pressing had lodged in the pharynx; after eating this feeling disappears. *Sore throat during empty deglutition, as if she were swallowing a piece of meat*, or as if the uvula were elongated.—Ulcerative pain in the ear when swallowing.—Choking and sore feeling in the throat when swallowing, and as if the tonsils were swollen, with prickings extending into the ears. Sensation as if a hard ball were rising into the throat, contracting the pharynx and oppressing the breathing. Contractive sensation in the throat, as when one swallows astrigent things, with fine prickings, worse on swallowing. Sensation in the throat as if it became distended.—*Sensation in the middle of the œsophagus as if spasmodically contracted, as if the food would not go down*. Sensation as if the throat were swollen, with prickings when eating; accompanied with a sensation as if the submaxillary glands were swollen.—*Stitches in the throat when swallowing*. Stitches in the throat, more during an empty deglutition than when swallowing food; between the acts of deglutition she experiences a pain as if a lump had lodged in the throat.—Scraping in the throat, with hawking.—Elongation of the uvula.—Redness and swelling of the tonsils.—Burning in the pharynx, in the evening, with heat on the tongue. *Burning in the œsophagus from below upward, with sour eructations*.—Fermenting sensation in the upper part of the throat.

**Taste and Appetite.**—Pappy taste in mouth, in the morning. Doughy taste. Flat taste; \**putrid* taste in the morning.—Sensation in the throat as if greasy vapour were rising from the stomach.—Sweet taste in the mouth on waking. *Sweet, nauseating* taste in the mouth the whole forenoon. Sweetish-putrid taste.—Copper taste.—\**Sourish* taste in the morning, or before retiring. *Taste of vinegar* the whole day.—*Bitter taste*, accompanied with low spirits and dulness of the head. *Bitter taste in the morning on waking*. Bitter, spoiled taste. *Taste as of bile before breakfast; nevertheless the food has a good taste*. Bitter mucus in mouth, worst in the morning. Bitter taste, soon after eating. Every aliment tastes bitter to him. Bitter-sour taste, at dinner.

Saltish-sour taste in the mouth. Salt taste of the food.—Everything tastes alike. All the aliments *taste like straw*. Food tastes to him like decayed straw. Does not relish tobacco. Food smelled like limestone, but had a good taste. His dinner had a putrid smell to him, but had a good taste.—\**Complete loss of appetite*; cares only for sour things. Complete loss of appetite, as if the scrobiculus cordis were constricted. Empty feeling in the stomach.—Feeling of hunger in the abdomen; but a little food satiates him. He has an appetite; but as soon as he sees the food, the appetite disappears and his abdomen feels replete; when he begins to eat he feels an aversion to the food. \**Excessive hunger and appetite*. Thirst for several hours. Increase of appetite, the first days. Violent thirst for beer. Great thirst, without heat; he relishes his beverage, but it does not quench his thirst, and it seems to incommode the stomach. Desire for sugar-water. No appetite, but constant thirst. Even a little beer excites the blood. Beer has a long after-taste. Canine hunger which frequently obliges him to eat; if he does not eat, he has a headache, feels weary and has to lie down.

**Gastric Symptoms.**—*Aversion to meat*; it nauseates her. Aversion to sour and sweet. Desires only soft food, not bread. Sudden aversion to sweet things and milk. °Disgusts one of drinking wine. Milk lies heavy in her; she throws it up again curdled. Sourness in mouth and sour eructations after drinking milk. Sour taste in the mouth after drinking milk. Milk produces bitterish scraping eructations. Violent eructations after drinking milk, even unto vomiting of mucus. Acids oppress her. Farinaceous food causes an uneasiness in the abdomen. °Vegetables are indigestible. °Sweet things increase the colic and the pain in the stomach. Irresistible desire for sugar.—He cannot eat meat or fat at supper; it oppresses the stomach, draws the abdomen up and hinders stool. Weakness and dulness of the head at dinner, continuing until evening. Sweat in the face during a meal, and redness of the white of the eye.—Headache after a meal, with pressure in the eyes. Headache over the eyes and nausea after a meal: followed by heaviness of the head. After a meal, redness and sweat in the face. Pain in almost all the teeth at dinner. Violent colic, immediately after a meal. Loud grumbling in the abdomen after a meal. Rumbling in the abdomen after a meal. *Repletion in the abdomen after eating but little, with oppression of breathing*. *Pressure in the stomach, immediately after eating*, also with nausea and waterbrash. Feels worn out an hour after dinner, as if she had suffered hunger for a long while. Laziness in all the limbs, especially the lower, after dinner. Stool, generally after every dinner. Several hours after a meal, great oppression of breathing succeeded by yawning. Worn out and physically-depressed after eating. Violent chilliness after eating. Sour eructations after a meal. When eating a little more than ordinarily, she has an ugly, sour-fœtid taste on the day following. Accumulation of saliva in the mouth, when beginning to eat. Troublesome dry coryza, producing dulness of the head, especially after a meal. At dinner he is tormented by coldness of the feet, with itching of the nostrils out of which water drops, accompanied with uneasiness, everything being disagreeable to him. Great coldness of the feet and palpitation of the heart after dinner. Shuddering and feeling of coldness after a meal. Chilliness in the abdomen after a meal. Burning in the hands after a meal. Sensation after a meal as if the pharynx were closed. Hiccough after a meal when walking in the open air.—She vomits as soon as she eats or drinks anything. °The food rises into the throat. *Sort of absence of digestion*. *Empty eructations after every meal, and every morning*. *Frequent empty eructations*. Unsuccessful eructations when going to bed.—Hiccough, with pain behind the palate. Pressure in the region of the spleen previous to the eructa-

tion. Eructations tasting of onion. *Eructations tasting like bad eggs*, with nausea. Sweetish eructations, in the morning. \*Sour eructations and *much troublesome acidity in the stomach*. Sour eructations after a meal. Sour eructations with taste of lead. *Sour eructations*, frequently during the day. Bitter, scraping eructations tasting of the food. °Burning, sour eructations. °Eructations having a foetid smell, at night during sleep.—Regurgitation of the food, an hour after eating. Regurgitation of undigested food. °Sour regurgitation, also of drinks.—*Heartburn, the whole day*. Heartburn, in the morning; creeping and burning in the chest.—*Nausea every morning*.—°Nausea while riding in a carriage. Nausea unto fainting. Nausea *before the meal*. Nausea in the stomach, with tremor in the whole body. Nausea with accumulation of saliva in the mouth, after breakfast. Nausea with eructations.—*Nausea with desire to vomit, three mornings in succession*. Frequent desire to vomit, even when she has not taken any food. Frequent desire to vomit, during the day. Desire to vomit at night, and sensation in the pit of the stomach as if waterbrash would set in.—*Waterbrash* before a meal. Waterbrash after dinner and supper, preceded by pressure in the pit of the stomach. Waterbrash, with retching in the morning when washing one's mouth and hawking up mucus. Waterbrash in the evening, followed by vomiting of the food which he had taken seven hours previous. Waterbrash two hours after a meal, followed by vomiting of the ingesta accompanied with great nausea and shuddering.—*Vomiting* with violent sweat. Vomiting of a clear saltish fluid. \*Sour vomiting. °Sour vomiting at night, with nausea and cold sweat in the face. *Vomiting of the ingesta*, in the morning, with tremor of the hands and feet. Vomiting of the food which had been taken at dinner, in the evening. Vomiting of mucus, with nausea and retching in the morning. Bitter vomiting in the afternoon, with nausea. Vomiting of blood and of a blackish, tasteless fluid, accompanied with faintness, at the appearance of the menses.

**Stomach.**—\**The region of the stomach becomes very painful when pressing upon it*, even the bed-cover causes a pain; food causes no pressure at the stomach.—*Pressure* at the stomach, with nausea, (immediately). Painful pressure at the stomach, with anxiety. °Pressure with burning. °Pressure towards the chest and back. °Pressure towards the abdomen and hypochondria. °Pressure as from a lump. Pressure below the stomach, very violent when lying. Pressure below the pit of the stomach. Anxious pressure at the stomach. Intolerable pressure in the pit of the stomach and the epigastrium, in paroxysms, generally in the morning, somewhat relieved by pressing on the part with the hand, for several days. \*Violent pressure at the stomach, a couple of hours after a meal, even the back being painfully affected by it. °Compression in the stomach with vomiting.—*Weight* in the stomach. *Feeling of repletion in the stomach, as if it were puffed up*, without distention. Sensation as if the stomach were full and soaked like a sponge, with violent thirst in the afternoon.—Sense of hollowness in the region of the stomach.—\**Swelling* of the pit of the stomach.—In the evening tension of the stomach and chest, extending as far as the back, as if she had eaten too much, with pain of the pit when touching or pressing upon it.—Contractive pain in the stomach.—Acrid and scraping sensation in the stomach up to the throat. Contractive pain in the region of the stomach, arresting the breathing. Contractive pain in the stomach, the whole day, with boring in the nape of the neck, increasing after a meal, and accompanied with great sensitiveness of the scalp, (the day preceding the menses). Screwing together and bruised pain in the stomach, the same pain being felt on the right side in one of the lower ribs and in the hip. Cramp-like contraction in the pit of the stomach, before dinner, arresting the breathing.—*Violent spasm of the*

*stomach*, for several hours in the night. Violent spasm in the stomach before dinner, followed by profuse sweat, in the morning on waking. °Spasm of the stomach immediately after a meal.—Clawing feeling from the stomach to the throat.—°Digging-up in the pit of the stomach.—Pinching from above downward in the region of the stomach.—Biting pain in the stomach.—Cutting in the stomach, in the afternoon.—Pricking in the stomach. *Pricking in the pit of the stomach*, in the morning when standing. Pricking in the pit of the stomach during a violent inspiration. Frequent prickings in the pit of the stomach. A dull stitch from the right region of the stomach to the lumbar region, occurring during every inspiration, in the evening.—*Feeling of coldness* in the region of the stomach. Cool sensation in the stomach. The region of the stomach feels cold on the outside.—*Feeling of heat* in the region of the stomach, and hacking sensation when sitting quiet. Burning in the stomach and abdomen, most when walking or standing. Burning in the pit of the stomach and all around. *Burning in the stomach*, several times during the day. Burning in the stomach like violent heartburn. °Burning and stinging in the stomach. °Burning with tearing in the stomach. Burning, cutting, and writhing sensation in the stomach.—*Beating* in the pit of the stomach with a faint feeling, or pulsative sensation when sitting, accompanied with orgasm of the blood in the chest, as if the breathing would be arrested.

**Hypochondria.**—In the region of the liver pain when touching it. *Pressure* immediately after dinner. Pressure at night, accompanied with yellowness of the whites of the eyes. Violent pressure and contraction. Tensive and burning pain. Drawing pain which arrested her breathing; she had to walk bent the whole day. The liver feels swollen, hindering breathing. *Frequent stitches* in the region of the liver and in the right groin. Stitching in the right hypochondrium. Sudden stitches in the region of the liver, from within outward. Stitching in the region of the liver, especially when walking in the open air. Stitching pain under the right short ribs. Pinching in the right hypochondrium, when walking. Boring pain in the region of the liver, after dinner. Beating and frequent and short tremulous movements in the region of the liver, from time to time. Tension and beating in the region of one of the right lower ribs, relieved only for a short while by pressing on the part.—°Chronic hepatitis. °Swelling and hardness of the liver, also after abuse of quinine. °Jaundice.—Cutting and burning in the region of the left lower ribs.—Burning, and, when sitting bent, fine, burning stitches in the outer parts of the right lumbar region. The flatulent movements are especially painful and stitching in the left hypochondrium. *Stitching in the left side of the abdomen during a deep inspiration* and when walking in the open air. Stitching at times in the right, at times in the left side of the abdomen. The left side of the abdomen goes to sleep, with a feeling of chilliness. °Heaviness as from a lump. °Pressure with eructations. °Swelling and hardness of the spleen, with pain when running. \**Pressure under the left ribs*. Pain under the ribs (across the diaphragm) when blowing the nose and when coughing.—Sensitiveness in both hypochondria, in the morning, feeling sore to the touch. Pain in the epigastrium, directly under the chest, as if all the inward parts were becoming detached and were ecchymozed, only during motion and when breathing.

**Abdomen.**—Colic after every meal. °Colic after drinking. °Periodical colic. °Colic relieved by sitting bent. Colic at night, as if the internal parts would be crushed and were ecchymozed. \**Painful sensitiveness in the abdomen, as if all the parts in it were raw and sore*,—as immediately after parturition, there seeming to be something moving about in the abdomen, or sudden stitches being experienced in the abdomen and thence extending into the whole

head. \**Movement in the abdomen* °as of the fist of a child. Movement in the abdomen, as if something would press out. \**Pain as if something would be torn out.* Colic, obliging one to bend double.—*Pressure* over the umbilicus, with little appetite; he is unable to sleep at night on account of that pressure. Pressure in the hypogastrium. Pressure in the left iliac region, as if something hard had lodged there; the pain obliges her to walk bent over to one side. Painful pressure in the right iliac region, when standing or walking against the wind, or when turning to the left side after lying on the back. Sore pressure in the hypogastrium, after a meal, accompanied with eructations. °Pressure with heaviness as from a lump, relieved by sitting bent. °Digging-up pressure. °Chronic pressure, only in the epigastrium, or in the left side.—*Repletion* and heaviness in the abdomen, after a meal, as if overloaded. Repletion of the abdomen after eating but little. Frequent distention of the abdomen.—*Tension* of the abdomen, every morning on waking. Tension in the abdomen, as from incarcerated flatulence. Tensive sensation, or sensation of pressure in the whole abdomen, especially in the hypochondria, accompanied with an anxious, hypochondriac mood, a few hours after dinner. Sensation in the abdomen, as if something were violently pressing through the intestines.—\**Spasmodically-contractive colic*, -extending into the chest, the groin, and the genital organs. Crampy contractive pain around the umbilicus, when sitting, going off when rising. Colic after midnight, with pain in the side of the abdomen. °Cramp colic from piles; °from flatulence, °relieved by sitting bent; °aggravated by eating sweet things; °with cutting and sticking; °with diarrhœa.—*Violent pinching* and tension in the abdomen, from noon till evening. Pinching around the umbilicus, rising in the direction of the stomach, going off by emission of flatulence, afternoon and evening. Sticking pinching directly over the hips and in the region of the last false rib. Violent pinching in the hypogastrium, preceded by rumbling in the abdomen and emission of flatulence; after entering the room.—*Cutting* in the epigastrium, with sensation as if felt in the chest. Violent cutting in the abdomen, momentarily. Cutting in the abdomen, in the evening, and weariness when going up stairs, as if the menses were approaching. Cutting colic, after dinner. Violent cutting in the abdomen, with great nausea, and such a profuse sweat that her linen and bed became drenched. Cutting in the hypogastrium, when making an effort at stool, or when pressing on the hypogastrium, or when bending backward; not in the usual posture. Cutting in the abdomen and small of the back, followed by diarrhœa and tenesmus.—*Sudden stitches* in the abdomen, darting through the whole body as it were. °Stitches in the left side of the abdomen, also when walking or taking deep breath. Prickings in the lesser intestines for three quarters of an hour. Sudden and transitory stitches in the abdomen. Stitching and pinching in the abdomen, in the morning. Burning pricking at a small spot near the umbilicus, for a quarter of an hour. Stitches and violent burning in the hypogastrium, with a cramp-pain in the right lower limb.—*Constant digging-up* in the abdomen, with only one stool a day, for some weeks.—*Heat* in the left side of the abdomen.—*Anguish* in the abdomen, followed by a feeling of weakness in the feet, extending beyond the ankles, resembling an inward tremor.—°*Congestion of blood* in the abdomen.—°*Ascites*.—Pain in both sides of the abdomen, as from incarcerated flatulence, in the morning when waking; with emission of short flatus, affording no relief. \**Incarceration of flatulence* in the left hypochondrium, with anxiety. When deprived of stool for a long while, \*the flatulence becomes incarcerated in the left side of the abdomen, causing violent pressure, and extorting a loud cry from her when making the least movement. \**Distention and hardness* of the abdomen in the evening. °Distention of the epigastrium, with oppression of breathing, before

breakfast and after a meal. Distention with fulness, in bed, early, going off after emission of flatulence. Distention on waking every morning.—\*Repletion after eating. Repletion and heaviness after a scanty meal, as if overloaded.—*Rumbling in the abdomen* as from fermenting beer, followed by sudden desire for stool, the first portion of which is hard, the latter liquid, without mucus, morning and evening. \**Rumbling in the hypogastrium, as if empty.* \*Violent rumbling in the left side of the abdomen. Gurgling in the abdomen.—Quantity of flatulence. Flatulence smelling like rotten eggs.—\**The abdominal muscles are painful when touched, as if bruised* Relaxation of the abdominal muscles, he is not able to raise himself. \**Painfulness of the abdomen, when touching it*—or when walking, with dull pain in the abdomen. The clothes press on the abdomen. *A good deal of itching* of the epigastrium and hypogastrium, at night. Itching of the abdomen after dinner; when rubbing it, a sensation is experienced in the intestines as if pinched or crowded together, especially in the hypogastrium, towards the centre, worst when stooping or taking a deep inspiration, better when walking.—Pressure in the hypogastrium, extending over the whole pubic region, as if the parts were tied together, continually.—Tearing in the inguinal glands of either side. Stitches in the right groin, arresting the breathing. Burning stitches in the left groin, in the evening. \**Painful swelling of the inguinal glands*, also with suppuration. Pressing in the abdominal ring, as if hernia would form. *An incipient inguinal hernia presses violently through the ring, causing a bruised and contusive pain, and cannot be kept in place by the hand.* Protrusion of a former hernia; he is obliged to wear the truss. °Painful inguinal hernia. °Inflammation of incarcerated hernia. (See *Clin. Obs.*). Drawing pressure in the right groin and in the left side of the abdomen.

**Stool.**—*Constipation* for two days, afterwards one evacuation, coming on suddenly. Occasional costiveness. °Chronic constipation. °Constipation of infants. °Constipation with piles. °*Hard and difficult stool.* Hard stool as if burnt. Hard, scraping stool. Hard, black stool, as if burnt. \*Lumpy stool mixed with mucus. Lumpy stool with burning pain in the anus and rectum. Hard stool followed by pain in the anus. \**Knotty*, but not hard stool. \**Insufficient stool.* Stool, with sensation as if something had remained behind.—\**Frequent unsuccessful desire for stool.* Sudden desire for stool; nevertheless he has to make an effort to expel the faeces, although the stool is soft and natural. Tenesmus before and after stool. \**Pressing on the rectum, as if it would protrude, with pressing on the bladder.* Tenesmus after stool; she was unable to sit still owing to the pain in the anus. Constant desire for stool, at night; she had to get up ten times, was not able to lie or sit down on account of the stinging and the sore pain in the anus; she felt as if she had pressed out all the inside of the abdomen; with excessive pain in the anus when drawing it in.—The stool escapes suddenly and almost involuntarily.—Soft, thin-shaped stool. Frequent, papescent stool, with cutting in the abdomen. Soft, half-liquid stool, frequently. Soft stool, with tenesmus and burning of the anus, followed by emission of hot, foetid flatulence and pinching in the region of the small of the back.—Scalding-hot stools.—Thin stool, every morning, with cutting in the hypogastrium, for twenty days. Involuntary discharge of thin, papescent, bilious-looking stool, imagining that wind was going to pass.—Diarrhoea for four days. °Diarrhoea after cold; °of pregnant females; °with chilliness; °with difficulty of breathing; °with colic and distention; °of children, sometimes with bloody, brown or green mucus, attended with moaning and crying. Watery diarrhoea every half hour, preceded by grumbling in the abdomen, without pain. Six diarrhoeic stools causing almost fainting, first accompanied with heat and warm

sweat, afterwards with cold sweat on the forehead and feet, and with white tongue. Frequent *frothy diarrhœa*, with tenesmus, even at night. Diarrhœa, with tenesmus and cutting in the abdomen; the tenesmus goes off by applying warm cloths. °Brown diarrhœa with pinching in the abdomen. °Fœtid diarrhœa. Pale stool. Sour-smelling stool. \**Passage of undigested food* with stool. Stool covered with mucus. Stool three times a day, with mucus. White *slimy stool*. °Nightly dysenteric stool with colic and tenesmus. Discharges of reddish mucus, with fever, want of appetite, lying down and colic. *Mucous stools*, streaked with blood, for several days. Blood with stool, in the evening. \**Ascarides with stool*. The ascarides cause an itching in the rectum. \**Passage of lumbrici with hard stool*, and after violent colic. Discharge of tœnia with hard stool.—Every evacuation is preceded by colic. Soreness in the abdomen before stool. Shifting of flatulence and pinching in the abdomen, with discharge of flatulence and sometimes a pain as if the anus would be torn, with urging to stool or tenesmus after stool (during diarrhœa).—Palpitation of the heart, during stool, disappearing after stool. Obstinate and weeping during the morning-stool. Nausea during the evening-stool, as if she would vomit. Painful pressure in the rectum during the loose stool. Sensation, during stool, as if the internal parts were contracted. Rush of blood to the head during soft stool. Cutting in the rectum during natural stool. Burning in the rectum during stool. Burning sensation in the anus during stool; the anus looked red and inflamed, and was covered with varices. \**Prolapsus recti* during stool, °particularly when hard. Bruised pain in the intestines after stool. Great exhaustion after stool. Pressure in the anus and rectum after a soft stool. After a difficult but not hard evacuation, prickings in the rectum, from the anus upward, so violent that he came near losing his senses from the pain; afterwards chilliness and faintness. Beating pain in the rectum after stool, the whole day. *Burning at the anus* after a thin stool. Contractive pain in the anus after stool.—Pressure toward the anus.—Pressure or tearing in the rectum. \**Violent stitches* in the rectum, —especially in the evening. *Violent stitches in the rectum, also between stools*, arresting the breathing. Burning at the anus, after having been seated for a time. Violent burning at the anus. Strangulating sore pain in the rectum, when lying. Sore pain between the nates. Itching of the anus, and rectum. °Creeping and biting in the rectum, as from ascarides, in the evening when sitting. Grumbling in the rectum. Crowding repletion in the rectum. Swelling of the rectum, with burning itching.—*Humid varices of the rectum*, even after good stool. Humid varices of the rectum, with smarting and pricking, when walking or sitting. Dull stitch in the varices of the rectum, causing him to start. Involuntary discharge of humour from the anus, followed by itching.—Contractive sensation in the perinæum.

**Urinary Organs.**—°Retention of urine.—*Scanty urine*, (the first 36 hours).—*Violent desire to urinate*, with burning in the urethra. Constant desire to urinate, with burning in the urethra. Constant desire to urinate; she passes a few drops involuntarily. °Painful desire to urinate, with discharge of drops of bloody urine, requiring great efforts. Uneasiness previous to micturition. After having had an emission he wakes with a violent desire to urinate, which continues even after micturition, owing to an irritation in the inner orifice of the urethra, (not in the bladder). *Frequent and sudden desire to urinate*. Sensation in the urethra as if he would urinate all the time. Constant desire to urinate, with scanty emission. The urine passes out with great violence.—\**Frequent micturition*. Frequent desire to urinate, preceded by cutting in the hypogastrium. Urinates every half hour, with voluptuous pressing extending into the anus.—\**Copious micturition after midnight*. °Wetting the bed. *Violent desire to*

*urinate at night.*—Discharge of urine while emitting flatulence. Discharge of urine while coughing.—Thin stream of urine. Intermittent stream.—Water-coloured urine. °The urine is at times clear, at times saturated with thick sediment. Dark-brown urine. The urine is red in the evening, and deposits a sediment over night. The urine becomes turbid in a few hours. Whitish urine, even while emitting it. Yellow urine. Sediment in the urine resembling white flour. Reddish sediment in the urine. *Greasy pellicle on the urine*, for seven days. \**Fætid urine.* °Rose-coloured urine. The urine has a fætid smell like sweaty feet.—Blood is passed with the urine, the urine being slimy.—Cutting in the abdomen before micturition.—\**Burning in the fore-part of the urethra during micturition.*—Towards the end of and immediately after micturition he feels a cutting in the urethra, as if the urine were acrid like lye.—Burning in the urethra during micturition.—Pressure in the bladder after micturition.—Hard pressure on the bladder. Stitches in the bladder or in the hypogastrium. Cutting in the urethra before and during stool. Smarting in the female urethra. *Burning in the fore-part of the urethra, inside and outside, between the acts of micturition.* Itching in the middle of the urethra. Stitches in the fore-part of the urethra. *Stitches or cuttings in the urethra and in the hypogastrium.* Tearing in the urethra. Redness and inflammation of the orifice of the urethra. °Secondary gonorrhœa.?

**Male Genital Organs.**—°Fætid sweat of the parts.—°Soreness between the thighs, particularly in walking.—Frequent itching and dampness of the mons veneris.—*Stitches in the penis.* Stitches in the penis, in the morning during micturition, especially in the glans, as if the urethra would be pierced; at the commencement of micturition the urine came out drop by drop; afterwards it was retained. The penis looks bluish, is always cold, and the prepuce is drawn back.—Itching of the glans. Glans and prepuce are icy-cold. Burning and redness of the prepuce. Redness and swelling of the prepuce. Phymosis with secretion of *fætid pus* from under the prepuce. The prepuce hangs far over the glans, and is fissured into four or five flaps. The prepuce becomes stiff and hard as leather; it shines on the inner surface and secretes a thin ichor having a disgusting smell. °Deep ulcer on the glans and prepuce, with pad-shaped border.—Groaning sensation in the *testes* and genital organs. Pressure and tension in the scrotum and spermatic cords. Prickings in the scrotum. The scrotum hangs down flaccid, for several weeks. °Burning of the scrotum. °Soreness and dampness of the scrotum. °Hydrocele. Thickening and swelling of the epididymis. Coldness of the genitals, in the morning. \**Male impotence.* Incomplete emission of semen. Almost complete extinction of the sexual desire.—*Increased sexual desire.* Excessive desire for an embrace, without erection. Excessive voluptuous desire in the interior of the sexual organs, in the morning after waking, with erection lasting an hour and a half, violent at first, but feeble in the end; the desire terminated in a burning pain which disappeared only after emission. \**Several emissions*, (the first nights). Involuntary emission of watery semen. Involuntary emission of semen with burning pain in the urethra. Involuntary emission of semen in an old man, who had not had any for a number of years past. Emission of semen during the siesta, in a man of seventy, who had not had any for twenty years past.—Discharge of *prostatic juice*. Discharge of prostatic juice after micturition and stool. °The semen is emitted too rapidly.

**Female Sexual Organs.**—Weak feeling in the genital organs. °Pressing on the parts. °Congestion of blood to the uterus.—Itching in the *vagina* from time to time. \**Troublesome itching of the pudendum*, with pimples all around. Painless *vesicles* on the outer parts of the pudendum. \**Burning in the vagina*,

she was scarcely able to sit still. Burning in the pudendum, no itching. Inflammation of one of the labia, with burning pain. *Sore place* in the pudendum, externally, and also in the perinaeum, for ten days. Violent itching of the clitoris. *Sore feeling* in the vagina *during an embrace*.—The menses are *\*too early* by one day, too profuse, accompanied with violent colic and pain in the small of the back, preceded by chilliness over the whole body. The menses are more profuse and last longer. The menstrual blood is thick, black, and so acrid that it makes the thighs sore. Discharge of blood from the uterus almost every day, for several weeks, °after re-appearance of the long-suppressed menses. Menses too early by seven days; two days; eleven days, preceded by cutting in the hypogastrium. Menses too late by three days; by two days, accompanied with oppression and uncomfortableness. Menses too late by two days, with constipation and distention of the abdomen. Sudden suppression of the menses after having flowed uninterruptedly for two days and a half. Menses more profuse, the blood having an acid smell. °Pale menses.—Uneasiness and anxiousness the day *before the menses*. Shortly before the menses, cough, in the evening when lying in bed, she had to rise to be relieved. Spasm under the left hypochondrium before the menses. Stitching in the hollow tooth three days before the menses, in the morning from seven to eight o'clock. Burning in the throat like heartburn, immediately before the menses. Bleeding at the nose immediately before and after the menses. Crowded feeling in the chest, shortly before the menses.—Drowsiness in the day-time, *during the menses*. During the menses, pain in the hypogastrium, now cutting, now contractive. During the menses, in the morning, violent colic and pain in the small of the back, with bloatedness, the flow being scanty; in the afternoon the flow of blood was more profuse and the pain became less, the pain was generally relieved by strong exercise. Pinching in the abdomen during the menses, accompanied with pain in the small of the back and chilliness of the whole body. Spasmodic pain in the hypogastrium during the menses, as if the intestines were strung up in knots by threads; she was neither able to walk nor lie down, but had to sit up. Drawing colic during the menses. Pressure in the forehead during the menses, generally in the afternoon. Pressure in the pit of the stomach during the menses. Rush of blood during the menses. Violent pain in the abdomen during the menses, with great heat, chilliness, and a sort of epilepsy; she became quite stiff, drew her mouth to one side, and moved to and fro without talking, with cold forehead and cold hands.—Itching of the outer parts of the nose, *after the menses*, for many days.—*Violent leucorrhœa*. Thin, or yellowish leucorrhœa, preceded by pinching in the hypogastrium. Mucous leucorrhœa, a fortnight after the menses. Leucorrhœa, smarting like salt. *\*Burning and painful leucorrhœa, making the pudendum sore*. Leucorrhœa preceded by colic. °Sterility,? with too early and profuse menses.? During the first movements of the fœtus she had violent palpitation of the heart and heat in the face, followed by burning in the abdomen.—°Disposition to miscarriage.? Diarrhœa of pregnant females.?—Itching of the mamma. Erysipelatous inflammation of the mamma, with heat, hardness, stinging and redness radiating from the nipple. °Itching of the nipples. °Smarting burning and bleeding of the nipples. °Induration and inflammation of the mammae.

**Larynx and Trachea.**—*\*Rough throat*. Drawing and dryness in the larynx. °Sensation as if something had lodged in the larynx. Hoarseness in the morning. Catarrhal voice, with a feeling of obstruction in the root of the nose. °Deep, rough voice in damp weather. *\*Aphonia*. Haws up pieces of hard mucus. *Coldness* in the throat during an inspiration. The air which he expires is hot. Constant secretion of mucus from the chest. When eating some:

thing dry, it remains lodged in his throat, arrests his breathing, and he is obliged to cough it up again. The larynx feels *swollen*. Painful *shock* in the larynx when coughing. The mucus which had become accumulated in the chest over night, causes a nausea in the morning on waking. \**Creeping in the larynx*; talking excites cough. °Catarrh, with fluent coryza, chilliness, rawness of the chest and cough.—Violent desire to cough, after a meal; *the chest became spasmodically constricted*, \*and he was attacked with retching almost unto vomiting. He wants to cough but he is not able; his sight is obscured. Cough at every inspiration. Dry, short cough only when walking in the open air. Short cough, in the evening while sleeping on a chair. A good deal of coughing when going to bed, with heat in the head and face, and cold hands. Dry cough before retiring, worse than in the day-time. Dry cough at night. \*Dry cough, with hoarseness, dryness in the throat, and coryza of clear water. Short and hacking cough with burning and soreness in the pharynx, worse in the open air and going off after lying down. Sudden dry cough *as if the lungs would come out*. Dry cough in the evening and at night, with some expectoration towards morning, and sensation as if small bubbles were bursting in the chest. \**Loose cough*, with soreness and pressure in the chest, and expectoration of thick mucus; °also with rattling in the trachea and hoarseness. Dry cough in the day-time, with stitches in the right side of the abdomen; accompanied with dry coryza. Cough with expectoration about midnight, again in the morning, and not in the day-time.—°Chronic whooping-cough.?—Dry, short, violent cough, with pain in the sternum, or with stitches in the chest.—*Expectoration* from the chest, tasting like old coryza. \*Coughing up *greenish lumps*, having a sweetish taste. (For the kinds of expectoration which have been cured with Sulphur, see *Clin. Obs.*)—°Ulcerative phthisis.?—\*Headache, when coughing, -as if bruised or torn. Violent ulcerative pain in the occiput, when coughing, (immediately). Pain in the vertex after a short cough, a sort of groaning, and pain under the right ribs. Pain in the head and abdomen from coughing. Stitches in the parietal and occipital bones when coughing. Stitches through the forehead when coughing, she is obliged to hold it with her hands. Painful shocks in the head, when coughing. \*Vomiting when coughing. Throat and chest feel as if cut, when coughing. Concussion of the chest and abdomen when coughing. Stitches in the region of the xiphoid cartilage when coughing. Fœtid smell of the breath when coughing. Stitches under the right chest when coughing. Pain in the right side of the chest when coughing; the place feels sore when touching it. Pain in the scapula when coughing. When coughing, sensation as if the lungs touched the back. Feeling of emptiness in the chest during dry cough. When coughing, stitching pain over the left hip, extending into the small of the back.

**Chest.**—Hawking, every time he takes deep breath. Arrest of breathing, in paroxysms, partly during motion, partly when sitting or lying; he is obliged to take deep breath, after which the asthma passes off. Asthma, convulsions and death, (after four days). °Spasmodic asthma of full grown persons. °Mucous asthma. Asthmatic after a walk. *Asthmatic during a walk* in the open air. Asthmatic from long talking. Arrest of breathing when pressing on the chest. \**Rattling in the chest*, -relieved by expectoration. Frequent attacks of suffocative arrest of breathing, in the day-time. Sudden arrest of breathing, at night, in bed, when turning to the other side; going off when sitting up. Arrest of breathing, even when talking. Frequent arrest of breathing while sleeping; she had to be roused to prevent suffocation. \**Nightly suffocative fit*, -without pain. She had scarcely fallen asleep in the evening, when the breathing was arrested and she was threatened with suffocation; she started up with a loud

cry and was unable to regain her breath; towards morning she had violent palpitation of the heart, followed by slight sweat. After having walked twenty steps her chest feels constricted, she would like to remain standing from time to time to recover her breath. Not asthmatic but unable to take deep breath. When attempting to take deep breath, his chest feels contracted. Asthmatic in the morning, relieved by taking something; the difficulty of breathing seems to be in the pit of the stomach. *Tightness and oppression* over the whole body, more in the chest, externally as it were, with anxiety; he sweated after lying down, after which he felt perfectly relieved. Tightness in the chest, as if something had grown fast. Oppressed breathing when stooping. Oppression of the chest with stitches in the left side, independent of breathing. Involuntary, hurried breathing while getting into bed, and afterwards *\*difficulty of breathing*; he had to take deep breath, more when sitting than when walking. Weak feeling in the chest, she breathed with difficulty. *\*Weakness in the chest when talking.* Anxiety in the chest. Tightness of the whole chest. Painful sensitiveness of the upper part of the sternum, also when touched. Tension in the right chest and shoulder. *\*Pressure in the upper part of the sternum, when walking in the open air, -going off by continuing to walk.* Pressure across the middle of the chest, as if one had swallowed too large a morsel of food. In the morning when in bed, constantly increasing pressure in the chest; he had to rise, after which it went off. Aching pain in the sternum when walking; he feels no pain when touching the part. *Pressure in the chest, with anxiety.*—*\*Heavy feeling* in the chest for several days.—*Contractive pain* around the chest. Painful sensation as of *screwing together* in the chest, frequently, during motion.—*Spasms in the chest* in the evening, in a warm room; she breathed with difficulty, had not air enough, with palpitation of the heart; worse during motion, relieved by lying down. Violent spasms in the chest, occasionally.—Pain in the chest, on turning to the other side, as if something were falling forward. °The chest feels tired from singing. °Pain in the chest from straining. °Chronic pain from neglected pneumonia. °Pain as if the chest would fly to pieces, when coughing or sneezing. Pain in the chest when moving the arms. Excessive pain in the chest, in the evening, as if some one seized the chest internally and attempted to lift it out of its place or turn it round, triturate or dash it to pieces. °Periodical spasms of the chest, constricting it, with blue face and short breath. *\*Stitches in the chest extending to the back.* Stitches in the left chest when breathing. Short stitches in the region of the heart. Stitches in the region of the heart, at night, when lying on the back, during the least movement. *\*Stitches in the sternum, -with dragging and as if externally.* Violent stitches from the right chest through the pit of the stomach and the stomach. Stitch from the right chest to the scapula. Stitching contractive pain in the muscles of the chest, painful when touching them. Stitches in the chest and dorsal muscles. Painful stitches in the right chest, causing one to start. Continuous sticking in the left chest, going off only for a short while by a deep inspiration. °Sticking in the left chest, when coughing, taking deep breath and raising the arms.—*Cutting* and burning deep in the chest, after a walk in the open air. Cutting in the chest down to the pit of the stomach.—*Beating* deep in the chest.—*Cracking* in the sternum during motion.—Sense of *heat* in the chest in the morning on waking. Burning in the throat and hot breath, in the morning on waking. Burning in the chest and considerable warmth in the face. °Burning in the chest arising to the face. Burning in the right side of the chest, suddenly coming and going. Burning and contractive sensation at a small spot of the sternum, rather externally.—*Feeling of coldness* in the chest, a sort of chilly tension. Strange movement in the region of the heart. Beating in the

sternum, as of an ulcer. Shoeks in the left chest, towards the heart, arresting the breathing, accompanied with great thirst. Crackling beating in the left side of the chest, when sitting or lying, arrested by continuous inspirations. Sudden and violent palpitation of the heart, in the evening during an inspiration. *Palpitation of the heart*, at every hour of the day, without anxiety. *Palpitation of the heart, without any apparent cause*, without anguish, when lying, during the the siesta, etc. Anxious beating of the heart. Pressure in the region of the heart towards evening. Sensation as if the heart had not space enough. Hollow sensation in the region of the heart. Rush of blood to the heart. Violent orgasm of the blood in the chest, a sort of boiling, with qualmishness unto fainting, and tremor in the right arm.—Pain of the right ribs, especially when touching them. Pain in the sternum. Stitches in the sternum, more when touching it. Stitches in the muscles of the chest, when moving the arm. Pain in the upper part of the chest, as if he had had a fall on it. Pain in the upper part of the chest as if bruised, when touching it. Burning in the interior of the right clavicle, as far as the sternum. Itching of the outer parts of the chest.

**Back.**—*In the small of the back*: pains, she was not able to stand erect. Violent pain, only when stooping; tensive, as if the parts were too short; the pains moved across the abdomen into the pit of the stomach and knee. Stitches, also across the small of the back. Pulsative stitches in the region of the *loins and kidneys*. Violent tearings in the left loin, during motion. Burning pain in the small of the back, near the anus. Hard pressure, diminished by walking. Pressure, disappearing on walking, returning when sitting. *Pain above the small of the back*. *Pain above the small of the back*, when walking, not when sitting. Pressing in the small of the back, when standing and stooping. Painful gnawing at a small spot of the small of the back. Bruised pain in the small of the back and os coccygis. Painful stiffness in the small of the back. \**Pain in the small of the back, when rising from a seat*. Sudden pain, as if sprained, under the ribs and in the small of the back. Drawing and weakness in the small of the back. *Drawing pain in the small of the back*. \**Cracking* in the small of the back, down to the anus. °Sensation as if the vertebræ were gliding one over the other, during motion in bed. Sudden, violent pain, as if sprained, in the small of the back, when sneezing, followed by drawing pain close to the spine, and extending thence into the left groin and testicle, especially painful when rising from a seat and walking.—Pain in the *back*, as if sprained, when making a mis-step. Pain as if sprained in the left region of the pelvis and between the scapulæ, when at rest, with intolerably-painful jerks at the least movement. Pain in the back and small of the back, as if bruised. Pain in the back when stooping. Violent pain in the region of the kidneys, after stooping a long while. *Feeling of weariness* in the left side of the back, when moving the arm, as if the parts had been exerted too much. *Heaviness* in the back, in the morning, as if he had been lying uncomfortably, and weariness as if he had not slept enough. \**Stiffness in the back* and sides, as after a cold. Stiffness now in the back, now in the hip, painful when turning in bed; he had to hold his breath. Stiffness in the back after sitting. Aching pain in the back below the scapulæ, in the evening. Drawing in the spine from below upward, when stooping. Stitching pain in the back, when walking. Itching stitches in the back. Grumbling within the spine, all along. Hot thrill over the back. *Burning* and biting in the back. Tearing in the back. Corrosive burning between the shoulders, below the right shoulder-joint, in the small of the back and the right buttoek, in the evening after lying down. °Drawing and tension in the back and nape of the neck, with stiffness. °Curvature of the vertebræ.—Tearing in the left *scapula*, when sitting. Tearing or pricking between the scapulæ, in the evening. *Burning pain*

between the scapulæ. Tensive aching between the scapulæ, when lying or moving. Tension and bruised pain between the scapulæ and in the nape of the neck, extending to the shoulder when moving the head. Tension between the scapulæ and in one side of the neck. Tensive pain in the left side of the back, when moving the arms. Drawing pain in the right scapula, in the evening when going to bed. Pain as if sprained in the right scapula, when moving the arm. Stitching pain in the left scapula, when leaning on the left arm. Several stitches under the scapulæ, arresting the breathing and not allowing one to stoop.—*Stiffness of the nape of the neck* and paralytic pain in the nape of the neck as if sprained. *Cracking* in the cervical vertebræ when bending the head backward and pressing it into the pillow. Tensive pain in the nape of the neck and extending thence over the eye, where the pain became pricking. Drawing jerking in the posterior cervical muscles. Tension and pinching in the nape of the neck, when sitting bent, going off after stretching the neck. Drawing pain in the nape of the neck and the scapulæ. Tearing and tension in the left side of the nape of the neck, before midnight, after waking, with sensation as if the parts were too short when moving the head, the pain being less when keeping the head still. Stitches in the nape of the neck when stooping. *Inflammation and swelling of a posterior cervical gland*, close to the hair, and itching. *Herpes* on the nape of the neck. Continual sweat on the nape of the neck, almost the whole day, sometimes accompanied with a feeling of coldness and shuddering, for a fortnight.—*Stiffness of the neck*. Pain in the right side of the neck when bending the head to that side. Drawing pain in the right side of the neck. Pressing in the outer parts of the neck, when talking much. Pulsations in the left carotid. Painful *swelling* of the neck in front. *Itching* of the neck. Little *blotches* on the neck as if from heat. Pain of a swollen *gland near the thyroid body*, when touched.

**Upper Limbs.**—*Swelling of the axillary glands*. Swollen, moist gland under the right arm. Purulent swelling of the axillary glands. *Sweat of the axillæ, also very fetid*. Pinching alternately in the left shoulder and in the feet. Rheumatic pain in the shoulder. Pain in the shoulder during an inspiration. *Pressure on the shoulder as from a load when walking in the open air*. \**Drawing pain in the shoulder-joint* and in the arm. Tearing, from the shoulder-joint along the humerus. \**Tearing in the shoulders, or shoulder-joints*, especially at night, -with gnawing or violent bruised pain and pricking, at first aggravated, afterwards relieved, by the motion of the arm. Stitches in the right axilla. Tearing in the shoulder-joints when at rest, going off during motion. Stitches from the shoulder to the chest, only during motion. Stitches extending from the shoulder-joint into the arm, when lying on it, and during inspirations and expirations. Beating in the left shoulder, apparently in the bone. Pain of the shoulder-joint, as if dislocated, especially at night when lying. °*Jerking of the shoulders*.—*The arms* are painful as if bruised. The arm goes to sleep for 24 hours. The arms frequently go to sleep for quarters of an hour, especially after working; he has to let them rest. Cramp in the arms after midnight. Pressure and drawing in the interior of the arm, more violent during motion than rest, especially when stretching or raising the arm. \**Drawing and tearing in the arms and hands*. Jerking drawing, at night when in bed, from one joint of the arm to the other, but more violent in the joint. Tearing, slow jerks from the shoulder or elbow-joint through the limb, most painful in the joint, obliging him to close the eyes and to knit the brow. Tearing and paralytic weakness in the right arm. Tearing in the arm, independent of motion. *Red, burning, spots* on the upper and lower arms, (after washing them with soap-water). °*Creeping* in both arms, -also in the tips of the fingers. °*Weakness* of the

arms and hands, particularly early in the morning. °*Swelling of the arms.* °Swelling of the bone of the arm. °Warts on the arms.—Sensation in the upper arm as if something heavy were hanging from it. Weakness of the upper arm, so that she is not able to raise it. Jerking pressure in the deltoid muscle. Tearing in the anterior surface of the left humerus. Dragging sticking in the right upper arm. Bruised pain in the left upper arm, which is likewise painful when touched. Hard, *hot swelling* on the left upper arm, with pricking in the swelling.—Burning pain under the bend of the *elbow*; the part feels pithy or numb to the touch. Bruised pain around the right elbow-joint, when raising the arm, or when clenched the fist. Sharp drawing in the right elbow-joint. Pressure in the elbow-joint when moving it. Tearing, commencing in the elbow joint and extending upward and downward in the arm, also when at rest. Tearing in and above the right elbow-joint, when at rest, going off when moving the arm. The tendons in the elbow-joint feel stretched. *Purulent vesicles* in the bend of the elbow, itching a good deal.—*Slow, painful drawing in the fore-arms, as if in the nerves, extending from the elbow to the wrist and back again.* Itching of the elbow and wrist-joints and especially of the hands, in the evening in particular; little vesicles full of a yellowish fluid form here and there. Tension at one spot of the right forearm, as if the skin would be raised with a pin, the part itching after rubbing it. Tearing in the bones of the forearm, sometimes relieved by motion and by pressing on the part. The right lower arm feels heavy and as if gone to sleep. The right forearm feels paralyzed and without sensation, going off by friction; at night, when lying on the left side. °Swelling of the forearm (from a blow), with burning and rigid sensation.—Tearing pain in the *wrist-joints*, also in the styloid processes. Painful stitches through the wrist-joint, from within outward. Pain as if sprained, in the right wrist-joint, during rest and slight motion, going off at last entirely by violent exercise. Pain in the wrist-joint, as if sprained. Stiffness of the wrist-joints, especially in the morning, disappearing in the day-time. Drawing in the dorsum of the hand, with alternate stitches. Sudden burning stitch in the dorsum of the hand. Tearing in the dorsum of the right hand, sometimes as if in the bones, sometimes in the tendons. Burning in the hands. Distended *veins* of the hands. Frequent *swelling* of the hands. *Formication in the hands.* The hands go to sleep, with tingling, as soon as they are dipped in cold or warm water. Weariness of the right hand, with tearing in the thumb. *Weakness of the hands* in the morning after rising; he has to make a great effort to hold something with it. \**Trembling of the hand* when writing. °Trembling of the hands in doing fine work. Trembling of the right hand in the morning. Tremulous feeling in either hand. A sort of *anxiety* in the hands; he had to seize something. Involuntary grasping with the hand, especially in the afternoon. °Cold hands. Sweaty hands. *Itching in the palms of the hands*; rubbing produces a burning sensation. Itching prickling burning in the palms of the hands. °Red stigmata on the dorsum of the hands. Itching *vesicular eruption* on the dorsum of the hand. *Redness and swelling* of the hands and fingers, as if frozen, with itching in the evening and with tension during motion. Hard, *dry skin* of the hands. *Chapped skin* of the hands. Almost painless chapping of the hands, especially at the commencement of the fingers.—\**Fissures and rhagades* in the skin of the hands, especially in the joints, sore and painful. The parts around the posterior knuckles are chapped and rough, like a grater. A slight injury of the finger becomes sore, with pulsations in the sore, afterwards exhibiting a malignant blister, the whole hand swelling, but no pain to the touch. The *tendons* in the palms of the hands behind the two first fingers feel *shortened*, hard and tensive, so that he is unable to spread

his hand flat on the table.—Drawing pain in the *fingers*, single short jerks, in the afternoon. Cramp in the three middle fingers. Involuntary jerking of the fingers. *Tearing in the fingers*. Tearing in the posterior joint of the thumb, extending as far as the metacarpal joint and dorsum of the hand. Lancination behind the nail of the left ring-finger, as if a pin were stuck in, especially violent in the evening. Feeling of cramp, and as if bruised and swollen in the metacarpal joint of the third and fourth fingers, (during the menses.) Pinching and pressure in the ball of the left little finger, every five minutes, darting into the arm when leaning the elbow on something, with chilliness; in the day-time the pain is changed to violent stitches, likewise accompanied with chilliness, all his limbs feeling weary as after a long journey. Continuous burning-tearing stitch in the dorsum of the middle-finger. Burning jerk in the left middle-finger. Burning in the balls of the fingers, (forenoon). Burning in the tips of the fingers. *Pain as if sprained* in the posterior joint of the thumb. Pain in the flexor-side of the right middle-finger, as if a splinter had been stuck in. Stitches in the tips of the fingers. *Creeping and prickling in the tips of the fingers*, very painful; worse when letting the arms hang down. The two last fingers go to sleep in the evening when in bed. Numbness of the little finger, for a time. Numbness of the two -little fingers, they go to sleep. \**Deadness of the fingers, in the morning*; -the blood recedes from them, with numbness and creeping in the fingers, and shrivelled skin of the tips, for two hours, three days in succession. Deadness of the fingers, in the forenoon. *Coldness* of the fingers. Considerable swelling of the three middle-fingers of both hands. Thick, stiff, red finger-joints, as if frozen, with creeping in them. *Swelling of the fingers*, in the morning. \**Thick, red chilblains on the fingers, itching a good deal when warm*. Certain portions of the epidermis of the fingers peel off. °Warts on the fingers. Profuse sweat between the fingers. Pain of the tips of the fingers in the morning, as if he had cut his nails too short. A number of long nails. \**Panaritium*, -twice in succession.

**Lower Limbs.**—Pain of the right buttock. When sitting a long while, the nates and ossa ischii become painful. Itching gnawing of the nates. Tensive pain in the *hip-joint* when walking. Violent pain as if sprained in the right hip-joint, during the least motion, so that he was unable to step or to walk in the morning; the parts are also painful when touched. Frequent jerking, deep in the left hip, when sitting and when moving the body to one side. Pain in the hip, only during motion and when touching it, as if the parts were bruised, or as if he had had a fall on them. \*Pain in the ossa ischii, she was unable to sit or lie, as if there were sub-cutaneous ulceration; when rising from the seat the thigh felt as if gone to sleep, with pinching in the region of the os ischium. Cramp-like, sudden, very painful jerks around the hip joint. *Drawing pain in the left hip*. *Nettlerash* below the hip. °*Coxarthrocace*.? °Spontaneous limping.?—*Drawing pain in the lower limbs*, in the morning, and in the evening when in bed. Violent tearing in the lower limb, from the heel to the the thigh and hip-joint; when standing the pain is worst in the knee-joint; it was relieved and finally entirely removed by walking. Violent tearing in the right lower limb and hip-joint, when walking, in paroxysms; she was not able to sit long on a low seat without stretching the limb, and without feeling a pain. *Pain in the lower limbs as if bruised*, after walking in the air. \**Uncasiness* in the lower limbs, -she was not able to remain in the room, for two evenings, until bed-time. Dry heat in the lower limbs. *Coldness* in the left lower limb. The right lower limb feels numb, even when lying. Sensation when lying as if he were not able to raise his own limb; nevertheless he was able to do so. When sitting his limbs feel as if gone to sleep. The left lower limb goes to sleep for a whole

hour, two evenings in succession. Both lower limbs go to sleep early in the morning when in bed, with great heaviness. \**Heaviness of the lower limbs*, and tension in the knees and thighs, more in the night than in the day-time. \**Painful heaviness of the lower limbs*. *Heaviness and weariness of the lower limbs*, in the morning when in bed; it goes off immediately after rising. Heaviness and languor of the lower limbs after short walks. \**Excessive heaviness of the lower limbs* when walking, *almost as if paralyzed*. Humming in the lower limbs, as if from weariness. Feeling of anxiety and weakness in the whole of the right lower limb, when walking. \**Weakness in the lower limbs*,—she was scarcely able to walk, and pain as if there were no marrow in her bones. Sudden weakness of the lower limbs, especially of the legs, after a short walk, or also particularly of the knees. °Red spots on the lower limbs. °Transparent swelling of the lower limbs, (after abuse of China).—A kind of paralysis of the *thigh*, apparently in the hip, above the nates. Jerking in both thighs, apparently in the bone. Cramp in the right thigh. Tingling itching of the inner side of the thigh. *Dry heat of the thighs and of the small of the back, with coldness of the back*. *Pain of the posterior muscles of the thigh, when sitting*. The thigh feels as if constricted with a band. Jerking in the thigh and leg. Drawing pain in the thigh. Violent tearings in the right thigh, from the knee to the crest of the ilium, followed by exhaustion and weariness of the whole body. Tearing in the thighs, (femora,) generally relieved by walking. Pricking and burning of the inner side of the left thigh, relieved by friction. Bruised pain in the outer side of the thigh, also when touching the part. Violent pain in the thigh, at night, after a blow. Pain in the inner side of the thigh, as if wounded, in the evening. *Soreness between the thighs*, especially when walking in the open air. Itching pimples on the inner side of the thighs. °Red, *humid places* on the inner side of the thigh, with sore pains.—*Pain in the knee as if stiff*, when rising from a seat. Stiffness of the bends of the knees. Rigidity of the knees. Sensation in the knees as if they were seized by two hands, in the evening. *Tension in the knees* when rising from a seat, walking, and especially when going up stairs. *Rigidity in the bends of the knees* when stepping, as if too short. Tension in the bends of the knees, extending down to the foot. While in bed, the knees are several times spasmodically bent and stretched again. Violent, cramp-like pressure in the bend of the knee, down to the ankles, generally when sitting, twice in an hour, every day in the afternoon, with great weariness and painful rigidity in the head. Pressure in the region of the patella, when sitting or walking. Pressure in the knee-joint, when moving it. Dull stitching pressure at a small point of the outermost tip of the knee. Tearing in the left knee, only when walking. Tearing, externally, in the left patella, disappearing by continuing to walk. Tearing and pain as if sprained, in the left knee, only when stepping, in the evening; the pain goes off after lying down, but returns in the morning. Sticking in the right knee. Sticking in the knee and tibia. Sticking in the right knee, only when standing, afterwards in the left carpal joint. Sticking pains in the knees. Long stitches in the knee, causing one to start and shudder. Sticking in the knee during a slight motion, and when ascending a flight of stairs, but scarcely ever when walking on level ground. Glowing-burning stitch in the bend of the left knee. Paralytic weakness of the knee, when going down stairs, as if sprained. Languid feeling in the knees, as if sprained. Languid feeling in the knees, especially in the forenoon; after ascending a flight of stairs, a burning is experienced in the joint. Bruised pain of the knees, when rising from a seat and bending the knees. Painful weariness in the knee-joints. Feeling of weariness in the knees, early in the morning, when in bed. Relaxation in the knees, as if they would

give way from weakness. The knees give way when walking. Cracking in the knees. Itching around the knees. °Swelling of the knees, also *inflammatory, thick, shining*, with curvature and stiffness. °Dropsy of the knee-joints. °Fungus of the knee. White swelling. Gonarthrocace?—When rising, *the leg* feels as if gone to sleep, and a burning tingling is experienced in it. Coldness of the legs in the evening; they feel cold to one's-self and others. Distension of the veins of the legs. Tremor and weariness, stitching and tearing in both legs, extending from the knees to the feet; when sitting, there is more tearing; when walking the stitching and the tension are felt most, the toes being icy cold. *Tearing in the legs from the knees down to the feet*, when walking or sitting. Tearing in both legs up to the middle of the thighs. Tearing, extending from the knees down to the toes, the feet being so heavy that she is scarcely able to drag them along. Bruised pain in the internal part of the legs near the tibiae, when touching them, as if the flesh were detached from the bones; in the evening. The leg inclines to cramp when stretching the foot. °Erysipelas of the leg. Great pain in the *calves* when going up-stairs. Pricking pain in the right calf. Drawing in the tibia, calf, and sole of the foot, in alternation. Gripping drawing in the calves when sitting, less when walking. Glowing burning and boring in the right calf, in the evening. Painful weariness in the calves at night. Bubbling in the right calf, as of falling drops of water. Tearing and twitching to and fro, in the evening, from the calves down to the toes; when standing or sitting, there was a jerking in the inner sides of the feet, with a feeling of trembling in the whole body, heaviness and tearing in the whole back, chilliness without thirst, with red cheeks without heat; after this the pit of the stomach became affected, with tension and contraction under the ribs, oppressed breathing and a number of stitches in the whole chest and epigastrium. Contractive pain in the calf. Tension, rigid stiffness and contractive pain in the calves, as if composed of parts stitched together. Cramp in the calves even when walking, the calf being painful as if too short. Cramp in the calves, when dancing. Violent cramp in the calves in the morning when in bed. Tremulous feeling in the calves, when sitting. Swelling of the calves.—*The feet* are icy cold in the evening, until bed-time. Coldness and heaviness of the right foot. Coldness of the soles of the feet. Coldness of the feet all the time, cannot get them warm in bed. The soles become soft, painful and sensitive when walking. When stepping the soles are painful as if there were subcutaneous ulceration. Subdued pain in the soles. Violent, momentary pain in the left heel. Contractive sensation in the soles as if too short. Tension in the hollow of the sole of the foot. Tension around the ankles when walking. *Cramp in the sole of the foot* at every step. Stiffness in the tarsal joint, around the ankles. Drawing in the feet, extending to the hip, with cracking of the joints at every movement.—Drawing pain in the soles, in the morning when in bed; a violent pain is experienced in the soles when stepping. Painless jerking in the soles of the feet, going off by motion. Tearing in the sole of the right foot, going off by rubbing. Tearing in the right foot. Tearing in the right heel, for half an hour. Tearing and pricking in the sore foot, at night. Pricking in the right foot. Violent stitches in the tendo-Achillis, almost every 5 minutes. Pricking below the right ankle, even during rest, but more when extending the foot, and even when making the least motion. Stitches in the soles. Stitches in the ball of the right foot. Sticking in the right heel, as from a splinter. Crampy sticking in the dorsum of the right foot, worse during motion. Prickling tingling in the right heel. Burning stitch in the dorsum of the left foot, suddenly. Cutting in the heel, extending to the cavity of the sole of the foot. Burning over the dorsa of the feet. Burning and itching in the soles, especially violent and intolerable

when walking. *Burning in the soles*, when stepping, after having been seated a long while. Burning pinching in the tarsal joint, rubbing increases the burning. \**Swelling of the feet*, -in the warmth of the bed, going off when out of bed. Swelling of the right foot, when walking in the open air. Swelling in the region of the ankle, with pain as if sprained, during motion. Pain as if sprained, in the left tarsal joint, when standing or walking. Sudden bending over of the tarsal joint, when stepping, as if the joint were sprained. Bending over of the foot when walking, or going down stairs. Cracking of the tarsal joint, when walking. Numbness and tingling of the sole of the foot, going off by rubbing. The left sole goes to sleep, in the evening. Great heaviness in the feet, especially in the tarsal joints. Beating in the hollow of the sole, with violent burning for one hour. Sweat of the soles of the feet. Cold sweat on the left sole. Blue spots and varices in the region of the ankles. Pimples around the ankles. *Ulcerated vesicles* on the soles. *Cramp in the toes* when extending the feet.—Tearing in the posterior joint of the right big toe. °Coldness and stiffness of the toes. °Tingling of the tips. °Thick, shining swelling of the toes. °Painful podagra. °Chilblains. °Spreading blisters and ulcerated blisters on the toes. Stitches in the fore part of the left big toe. Sticking in the tips of the toes when sitting or lying. Fine stitches in the middle toes and the two big toes.—Aching pain and soreness of the inner side of the nail of the big toe. The nail of the big toe is painful. Dull pain in the ball of the left toe. Inflammation and swelling of the big toe, with pain. Swelling of the toes. *Itching of the toes which had been frozen formerly* (the first days). White, painful pimples between the toes. *The corns are painful as if pressed by tight shoes.* *Frequent and violent stitches in the corns.* Stinging burning in the corn, in wide shoes. Painful inflammation of the corns.

**Sleep.**—Cramp-like, uninterrupted yawning before bed-time. Frequent yawning and stretching, without drowsiness. *A good deal of yawning and drowsiness the whole day.* Frequent yawning and cold hands.—*Unconquerable drowsiness in the day-time.* *Drowsiness in the afternoon.* *Very drowsy in the evening.* Constant yawning in the evening, for an hour, and an unconquerable weariness. Long sleep in the morning. He sleeps much, and nevertheless does not feel refreshed in the morning. He has no inclination whatsoever to rise in the morning. In the morning, sensation as if he had not slept enough, with his eyes swollen, and with desire to stretch himself. For many mornings she feels very lazy for half an hour, with pain in the back and lower limbs; she had to seat herself frequently. Deep sleep in the morning, without any visible inspirations. Heat in the face and nausea, in the morning on waking. Heaviness in the back and lower limbs, in the morning on rising. She feels very sleepy at night, and her eye-lids feel heavy, they close: nevertheless she is not able to fall asleep.—*She does not fall asleep under an hour*, without pain. \**Difficulty of falling asleep*, -on account of ideas crowding upon the mind. She frequently wakes from a sound sleep, without any apparent cause. *He wakes every half hour.* *Wakeful the whole night.* He is frequently half awake in the night, is however able to think, and feels chilly. Sleeplessness, as if from nervous irritation. She does not sleep at all, although she is tired. Tossing from side to side in bed, at night. *He frequently turns to the other side at night, without waking.* Great wakefulness in the evening; the blood rose to his head, and the night was sleepless.—°Light and unrefreshing sleep.—Involuntary recollection, in the evening, of a business which had been terminated. In the evening, when performing some light work, she perspired for a short while, and dreamed afterwards that she had on a dress which she ought to be very careful of, and guard against stains. \**Talks loudly, while asleep*, of the business which he had done

in the day-time. *Restless night; he wakes with a start as if he had had a fearful dream; after waking he was yet full of anxious fancies, ghosts, etc., which he was not able to get rid of.* Sleep full of dreams; he wanders as if in delirium. She imagines that she has seen or done the things she had merely dreamed of. He imagined he heard a noise, in the evening when on the point of dropping to sleep; this caused him to start so violently that the whole body felt it. Frequent startings when asleep. Starting during the siesta. Jerking with the foot, when slumbering. \**Violent headache at night*, disturbing her rest.— Waking in the morning, with giddiness and dulness of the head. He is frequently roused at night \**by a throbbing in the head*, afterwards in the chest.— Violent palpitation of the heart at night, when turning to the other side. Digging-up sensation in the forehead, at night. Burning in the mouth at night, with thirst. Compressive pain in the stomach, at night after waking, going off by bending double. *At night, pressure at the stomach, for an hour, relieved by eructations.* At night, pressure at the pit of the stomach, causing anxiety and accompanied by palpitation of the heart; several nights for hours. After midnight, pressure at the stomach and throbbing headache. Vertigo on waking at night. Vertigo and nausea at night, while sweating; everything turned with her until morning. Pain in the fore-teeth, at night. Frequent nausea at night. About midnight, she is waked by stitching and cutting in the abdomen.— \**Nightly flatulent colic*, with retching, anguish and dulness of the head. At night, sharp stitches in the abdomen, followed by frequent emissions of flatulence. At night, cramp-like pressure in the abdomen. At night, contractive colic, all of a sudden. Pressing in the abdomen from above downward, it wakes her. Protrusion of the umbilical region, as if caused by the uterus, in a pregnant female, at night, when lying on the back, in paroxysms of some minutes.— Sweat over the whole abdomen, at night, extending as far as the groin, the feet being cold as far as the ankles, and accompanied with dull cutting in the soles.— At night, during sleep, a humour and some fæces escaped from her anus. Asthmatic in the evening when in bed. Attacks of arrest of breathing, at night.— Oppression of the chest, at night, as if the chest were oppressed by a heavy load; he had to sit up. He wakes in the morning with rawness of the chest. At night, shocks in the left chest towards the heart, arresting her breathing, with great thirst. Short and hacking cough for a whole hour, in the evening after lying down; this made her feel hot; again at three o'clock in the morning. Sanguineous expectoration at night, with greasy, sweetish taste in the mouth.— Quick beating of the heart, in the evening, after turning from side to side for some time. Violent pain in the back for several nights, with bruised feeling in the small of the back, and with great orgasm of the blood. Violent pain in the hip-joint at night, also when touched. Painless jerks in the small of the back, in the evening when in bed. Aching pain in the thigh the whole night. Tearing in the thigh and leg, at night when in bed, she was not able to get warm in bed. *At night he is obliged to put his lower limbs out of the bed to diminish the tearing.* Tearing in both feet at night, after which they felt rigid and he was unable to sleep. Stitches in the corns at night. Cramp in the calves when extending the feet. Heat of the feet, in the evening when in bed, with a feeling of burning, obliging her to uncover them for several hours; afterwards uneasiness, itching and creeping in the feet. Titillation in the left upper and lower limb, for two hours, in the evening when in bed. A good deal of stretching at night. When sleeping, he lays his arms over his head. Snoring. Palpitation of the heart at night. Sleeps with his eyes half open. Muttering. Sensation as if every part of his body were trembling and beating at night when half awake. Great anxiety, in the evening when in bed, (about full moon.) At

night, he wakes with great anguish and heat all over, and with sensation of a spasmodic condition in the body. Restless sleep after midnight; she dreams that she is having an attack of fever and wakes covered with sweat, with great heat, especially in the face, thirst and chilly shuddering, increased by motion to chattering of teeth. She exclaims while sleeping, that she is black, etc. *Exclamations while asleep.* Moaning while sleeping. Great heat at night, alternating with chilliness. °Nightmare. Involuntary jerking up of his legs when lying down, which wakes him. He dreams he has been bit by a dog. *Anxious dreams*, as if fire were falling from heaven. Anxious dream, as if he were oppressed and crushed by something, (nightmare). Dreams that he is falling from a height. Frightful dreams. Disgusting dreams, with nausea on waking.—Left the bed the first three nights, like a somnambulist, saying: “My head! I am delirious!” and seizing his forehead; going off after walking about. Anxious dream, during which she leaves her bed unconsciously, followed by violent headache. Anxious dream, before midnight; she rises, imagines that a fire has broken out, inquires at the windows, and starts on perceiving that it is nothing but a dream; she felt bruised and faint for three days after. \**Vivid dreams.*—Ludicrous fancies before dropping to sleep, in a sort of half dream, she laughed. For three nights in succession he talked aloud of the things which he saw in his fancy. Visions, as soon as he closes his eyes. Horrid visions, as soon as she closes her eyes in the evening. At night, on waking, a numeral digit was before her fancy, which gradually increased in size, until the lines were half a foot wide. He fears he might take cold in the open air; he knows not whether this is fancy or reality.

**Fever.**—Chilliness, followed by heat, in the evening before falling asleep.—Chilliness in the afternoon, afterwards heat with thirst, cold feet and sweat in the face and on the hands; with dry night cough, as soon as he gets into bed.—Creeping shuddering over the skin, without chilliness. Passing chilliness, on the chest, arms and back. \*Cold nose, *hands and feet.* Feeling of coldness for several hours, without chilliness; afterwards heat with little thirst, slight sweat with headache and hoarseness, great faintness and loss of appetite. Feeling of coldness through all the limbs, without subsequent heat, in the forenoon. Chilliness in the back from below upward, in the evening, for an hour, without subsequent heat. *Frequent internal chilliness*, without thirst. Chilliness at night, for four hours, preceded by colic, accompanied with heat without sweat; profuse sweat in the night following. Chilliness every evening, which cannot be removed by the warm stove; great warmth in bed, and sour sweat every morning. Chilliness, with diarrhoea, for several hours. Shaking chills in the evening, and great paleness of face. Shaking, feverish chilliness, frequently, in the evening. Shaking chilliness from seven to eight o'clock, without thirst, with cold hands and violent pressure at the stomach, as from a load; afterwards the usual warmth, with thirst. Chilliness and coldness of the whole body, afternoon and evening. Chilliness from morning till evening. Creeping chilliness along the back; it can be arrested by the warmth of the stove. *Chilliness*, with thirst, even near the stove, *after dinner, until four o'clock.* Chilliness, and afterwards shaking over the whole body, commencing at the toes, without heat or subsequent thirst, in the afternoon. Chilliness with headache, in the evening; going off after lying down. Constant chilly creepings along the back, commencing in the small of the back, without heat or subsequent thirst, in the evening from six till eight o'clock. Chilliness in bed, at night, she cannot get warm. Chilliness with frequent shuddering, and heat perceptible to the hand, almost every half hour.—Chilliness and shaking in the afternoon; after lying down, heat in the hands and soles of the feet, passing off soon, without thirst. Shuddering, from the feet

over the back into the arms, for half an hour, at six o'clock in the evening.—Shuddering in the whole body, until bed-time, without subsequent heat or thirst. Shuddering in the evening, followed by heat in the face and hands, with thirst.—Wakes at night with a feverish shuddering, and nevertheless feels warm to others; followed by a little heat. Feels cold in the afternoon; afterwards she became warmer, but the feet remained cold. Chilliness in the forenoon, feeling of heat in the afternoon, although she felt cold to others. Shuddering in the morning at eight o'clock. Chilliness for one hour in the forenoon, followed by a two hours' heat in the head and hands, at three o'clock in the afternoon; this attack occurred several days in succession. Cold hands and feet in the afternoon, followed by chilliness and shaking for half an hour, with blue face; afterwards heat and sweat until half-past nine o'clock. Chilliness in the evening, slight sweat at night. Violent chilliness, in the evening when in bed, followed by ravings of the fancy, heat and violent sweat. Violent chilliness, commencing in the evening, and lasting through the night and next day. Chilliness at five o'clock in the afternoon, afterwards heat, then again chilliness and some thirst, until 8 o'clock. Flushes of heat in the face, afterwards coldness of the whole body both to himself and others, followed by weakness in the femora, especially when sitting, as if there were no marrow in them. Violent heat in the face, towards evening, with chilliness over the back and hairy scalp. Flushes of heat in the face, with feverish shuddering in the outer parts of the abdomen. Heat in the afternoon, mingled with chilliness and continued palpitation of the heart. Heat in the face, in the day-time, followed by chilliness of half an hour every evening about five or six o'clock; after this, heat all over, for one hour.—Thirst even before the chilliness.—Sensation as if warm air were blowing upon the legs, more or less, in the evening.—Fever about noon, a good deal of internal heat with redness of the face and chilliness at the same time; all the limbs felt weary as if bruised, with great thirst, until midnight, when the chilliness and heat abated and she began to perspire all over for three hours. Feverish heat, first in the face, with sensation as if she had just escaped a severe illness; after the heat some chilliness with much thirst. Fever every forenoon, internal chilliness increasing every day, with vertigo, as if the head would sink, without thirst; followed by faintness which was so violent that he was unable to go up stairs, with sweat day and night, only about the head which was bloated. Chilliness for two hours every evening, without heat; next night, on waking, heat without thirst. Great thirst in the morning. A good deal of thirst in the day-time.—Feverish heat with thirst, from noon till evening. Heat with much thirst, only in the day-time, not at night. \**Dry heat in the morning when in bed.* Anxious, disagreeable heat in the morning when in bed, with sweat, and dryness of the throat. Heat towards morning, as if sweat would break out. \*Frequent flushes of heat. °Heat, with sweat about the head. °Heat, with burning of the hands and feet. \*Evening-heat. °Heat in the afternoon, with red spots on the cheeks.—Typhoid fever? °Hectic fever? °Gastric fevers?—Copious morning-sweat, only about the itching parts. In the morning while sleeping, sweat, going off on waking. \*Profuse sweat during slight exercise.—Sweat of the hands and feet in the morning. \**Copious morning-sweat, setting in after waking.* Sweat, at night, only on the nape of the neck.—*Night-sweat, when waking.* Night-sweat, having a sour, pungent smell.—Sweat before bed-time, especially about the hands; after lying down, heat and difficulty of dropping to sleep. Anxious sweat with tremor, in the evening; followed by vomiting; during the anxiety pressure on the rectum; afterwards heaviness of the head and weakness of the arms. Anxiousness, feverish delirium with great

asthma, burning at the stomach, vomiting, convulsions of the whole body, death.—Pulse 84 beats, and half an hour after, 73. Pulse 52.

**Skin.**—Formication of the skin of the whole body. Prickling in the skin of the whole body, in the evening, after getting warm in bed. Burning in the hands and feet, with weakness and exhaustion of the whole body. Prickling in the skin of the cheeks, shoulders and thighs. Stinging itching, especially when walking in the open air. Burning in the skin of the whole body. The itching place is painful after scratching. After slight rubbing the skin is very painful for a long time. Biting as from fleas in the evening after lying down, and in the night; when removed by scratching in one place, it immediately re-appears in another. Disagreeable creeping itching, with pain when scratching the part.—Itching burning in different parts, with soreness after scratching. The itching place bleeds and smarts after scratching it. Itching worst at night, and in the morning after waking. Itching in the axillæ and bends of the knees. After scratching the place feels as if hot.—\**Eruption on the skin.* °Fiery scarlet-eruption over the whole body. °Scurfy eruption, consisting of small vesicles, with red areola and itching. °Crusta lactea. °Measles. °Small-pox, particularly during the suppurative stage. °Erysipelatous inflammation with beating and stinging. Itching, stinging rash over the whole body. Violently-itching rash over the whole body, afterwards the skin peels off. \**Nettle-rash with fever.*—Itching blotches over the whole body, on the hands and feet. \**Burning itching eruption.* Red (itching) pimples on the nose, upper lip, around the chin and on the forearms; they sometimes burn after scratching. Pimples on the back, without sensation, appearing after violent itching in the evening.—\**Hepatic spots* on the chest and back, itching in the evening. °Yellow and brown spots. °Moles.—The old herpetic eruptions itch furiously; he has to scratch them until they bleed. °Dry, scaly eruption. °Eruption, consisting of thick, yellow-grayish scurfs, with burning itching. °Red spotted herpes, with vesicles. A scaly herpetic eruption which had been repelled by external means, appears again, itching violently and burning after scratching. °Warts, also horny. In an old wart below the eye, an itching stinging is experienced.—The skin becomes *chapped* here and there, especially in the open air. °Unhealthy skin. °Suppurations. °Echymosis. °Abscesses. °Sore skin of infants.—\**Boils.* °Chilblains, also with redness, swelling and suppuration, or itching in warmth.—Ulcers in the intestines. °Readily-bleeding ulcers. °Ulcers with raised swollen edges. °Ulcers surrounded with pimples. °Fistula. °Stinging and tearing in the ulcers. °Proud flesh in the ulcers. Violent bleeding of the old ulcers. Tensive pain in the ulcer. The ulcer near the nail emits a fetid odour. The pus of the ulcer, (which was covered with a scurf,) has a sour smell. A small cut becomes painful, smarting at first, afterwards burning, and then becomes inflamed, a beating pain being experienced in it.—°Inflammation, \*swelling, \*suppuration, induration of glands. °Glandular indurations over the whole body, particularly the chest. °Inflammation, swelling, curvature of bones. °Caries.—°Jaundice. °Chlorosis. °Dropsy. °Arthritis. °Rheumatism. (See clin. obs.)

**General Symptoms.**—°Sulphur is principally adapted to lymphatic temperaments, venous constitutions with disposition to hæmorrhoids, also to leucophlegmatic constitutions, with liability to cold, slight sweats, disposition to catarrh and other forms of blennorrhœa, etc. °Serofulous and rachitic complaints, curvature of bones, affection of glands, eruptions and herpes. °Chronic ailments from excessive drinking of wine or coffee. °Ailments from abuse of metals, particularly Mercury. °Ailments from taking cold, (particularly from exposure to wet,

from working in water, etc.) °Ailments from straining a part.—°Arthritic and rheumatic complaints, with or without swelling. °Acute articular rheumatism. °Erratic gout.—°Pains in the limbs, °with weakness and numbness of the parts. °Sticking pains in the joints, with stiffness, or particularly at night.—\**When lying the limbs immediately go to sleep.* The limbs, arms, cervical muscles, scalp, nates and feet go to sleep easily, especially when lying. Pressure in the upper and lower limbs, as if they would go to sleep. \**Drawing pain in the limbs, -in the evening.* Pushing in the limbs, almost like drawing. A pain in the chest which had occurred six weeks ago from a contusion, is felt again as an aching pain, especially in the evening. Momentary drawing in the knee, arm and shoulder. Tearing in the back, knees and legs, in the evening when in bed.—Sudden tearing or jerking here and there in the body. Drawing pain in the abdomen and in all the limbs, for hours in the arms, and for whole days in the thighs. \**Violent drawing and tearing* through the knees and tibiae, especially in the evening. The limbs feel bruised, in the morning after rising. Bone-pain of the limbs, when feeling them, as if the flesh were detached. \*Cracking in the joints, particularly the knees and elbows.—Pinching in the muscles here and there.—Uncomfortable sensation as if all the parts of the body were pushed out of their natural places. Strange feeling of pressure through the whole body.—Tension in all the limbs as if too short, he had to stretch them. Tensive soreness in all the limbs and in the tendons of the feet, after a short walk.—Palpitation with tremor of the hands after a short walk, at noon. \*Single jerks of a hand and foot, in the day-time. Jaetitation of the muscles, here and there, as if caused by electricity. \**Frequent, spasmodic jerking in the whole body* -after supper, with pain in the back and afterwards in the right side of the abdomen.—Epileptic fit, after fright or violent running. °Epileptic fit, with pressing the teeth against each other, and rigidity of the limbs. Epileptic fit; *creeping of a mouse, commencing in the back or arm*, the mouth was drawn to the right and left, painful motions in the abdomen, the left arm becomes turned, with clenched thumbs; afterward trembling in the right arm; after this the whole body was tossed up and down; with very shorth breath, becoming still shorter after the attack; she shrieked during the fit, but was unable to talk. Fit, while walking in the street; sudden obscuration of sight; she walks back at least 15 steps, seats herself suddenly on the stones as if she would fall and had lost her senses, and is conducted home in the same state of unconsciousness; afterwards she feels stiff in all her joints. °Hysteric spasms. °Spasms during dentition. The child, when washed, inclines the head to one side, and when raised, the head inclines to the other side, face and lips become pale, the eyes become staring for two minutes; after this she sneezes, closes her eyes and mouth for one moment tightly and mucus runs out of her mouth; this is followed by sound sleep. Attack of obscuration of sight, when walking in the open air, with violent pressure and beating in the head, nausea and faintness. Attack of stiches in the small of the back, arresting the breathing, accompanied with pain in the head and nape of the neck, succeeded by alternate heat and chilliness, with apprehensive anxiety about the pit of the stomach, until evening.—Attack of cructations toward evening, with nausea, relaxation of the body, violent rumbling in the abdomen and emission of flatulence.—Chilliness, owing to disagreeable news; is scarcely able to get warm in bed. \**Talking fatigues her and excites the pains.*—Jerking in all the limbs, he clenches his teeth and moans with a low voice, for about eight minutes; this is followed by a slumber of a quarter of an hour, followed again by jerking and cramp-like drawing in the limbs, after which he feels very faint. The body is jerked up, as when violently convulsed. Shuddering through the whole body, in the evening when in bed, like a thrill of shuddering

through the skin.—\*Tremulous sensation in the arms and lower limbs. Disposition in the hands and toes to extend and contract. Great uneasiness, he cannot sit still; even when lying he has to move his feet constantly.—\*Considerable orgasm of the blood, and great burning in the hands. Agitation in the blood, with distention of the veins on the hands. Violent palpitation of the heart after walking in the open air.—Dry heat in the body, he feels too warm in any room. Internal heat with thirst. Frequent and suddenly-passing flushes of great heat. Feeling of heat in the whole interior of the body; burning in the chest rising from the bottom of the chest; no thirst.—\**Unsteady gait*, and tremor of the hands. °Tremor of drunkards. \*Tremor of the limbs, especially the hands. Violent tremor of the left scapula, arm and hand, in the forenoon. Tremulous sensation through the whole body, in the morning, but warm.—°Walks stooping. °Difficulty of infants to learn to walk.—Chilliness. \**Inclines to catch cold*. The child is exceedingly sensitive to the open air, (the first days.) When exerting the body a little more than usual, he feels more irritated and passionate.—Headache and weariness in the afternoon during a walk, changing to toothache and drowsiness in the evening. Nausea and debility after a walk, with trembling of the limbs. Dry short cough when walking in the open air. The open air makes him feel chilly as if he were naked. Sweats a good deal when walking in the open air. Profuse sweat when sitting, no sweat at night. Sweats when making the least exertion, reading, writing, talking, or walking. Drops of sweat in the face when making the least exertion. Sweat in the face and nape of the neck, in the morning when in bed, and bruised feeling of the limbs on rising. Heaviness and languor of the limbs from morning till evening.—Lassitude the whole day.—\*Fainting sort of vanishing of strength in the upper and lower limbs, he came near losing his senses. Fainting fit, for a quarter of an hour. Weary and faint all the time. Weary as after an illness. Weariness of the feet. Weariness, going off when walking. Fainting weakness when lying. All the weakness in the limbs disappears after walking. Trembling of the limbs from weakness, during every movement.—*Want of vitality*, a sort of internal coldness; heat almost constantly alternating with chilliness; pale complexion with blue margins around the eyes, dreading the heat when in a cold temperature, and the cold when in a warm temperature. After smoking a cigar, and taking a walk afterwards, he feels quite weak and trembling. Out of breath and faint when making the least exertion, the abdomen being constantly distended and the feet swollen. Fainting and vertigo in the afternoon, with vomiting and sweat. Heaviness of the feet, when walking in the open air, becoming lighter by continued walking. Sensation as if she dragged a load along on her feet; with tension across the chest. Faint and low-spirited, in the afternoon. He became so faint after a drive that he slept the whole day. Very faint in the afternoon.—°Weakness in the limbs, with tingling. °Nervous weakness, particularly after the loss of animal fluids, after onanism or after great exertions.—°Paralysis.—°Emaciation. °Scrofulous emaciation.

**Characteristic Peculiarities.**—\*The drawing (tearing) pains in the limbs become intolerable when the limbs are covered by feather-beds. The pains are relieved by external warmth, increased by coldness. Most pains come on during rest and go off during motion. She feels worst when standing. His right side is more helpless than his left. He is worse every eight days. The symptoms are better at rest, and worst from motion. All the symptoms are without pain. \*The pains appear more aggravated at night. °Pains when the weather changes. The pains, especially those felt in the head and stomach, come on in the open air when walking.

## 231. SULPHURIC ACID.

SULPH. AC.—See HAHNEMANN'S Chronic Diseases, V.

COMPARE WITH—Arn., Con., Dig., Mur. and Nitr. ac., Puls., Ruta, Sulph.

ANTIDOTE.—Puls.

## CLINICAL OBSERVATIONS.

According to *Noack and Trink*, the following affections have been cured with Sulph. acid: Chronic diseases for which Sulph. had been given for a long time.—Pains increasing steadily and then suddenly disappearing.—Erethismus vasculosus, (flashes of heat all over, in females at the climacteric age, cured by *Trinks* in many cases).—*Morbus miculosus Werthfi* (*purpura hæmorrhagica*): red spots resembling those on a trout, scattered all over the skin; they keep growing larger and blur, and finally become entirely black-blue, increasing likewise in extent and elevation over the skin, accompanied with discharges of black blood from the nose, gums, mouth, fauces, anus and urethra, with rapid prostration of strength. (*Trinks* has cured several cases, and considers it a specific for that group of symptoms).—Consequences of mechanical injuries, contusion, pressure, &c.—Contusions, with excitation.—*Burns*.—Chronic ophthalmia.—Aphthæ neonatorum.—Frequent, troublesome rising of air in typhus abdominalis.—*Pyrosis ventriculi*, with vomiting of sour fluid, frequent rising of air, sensitiveness of the stomach.—*Cough with expectoration of blood*.

## SYMPTOMS.

**Mind and Disposition.**—Desponding, peevish mood. Melancholy and weary of life. Great apprehensiveness from morning till evening. Sad, gloomy, irritable. Weeping mood, without any apparent cause.—Distrustful.—Sullen.—Exceedingly nervous and starting violently at the least noise. Uneasy. Hurriedness; she can do nothing fast enough to satisfy herself; this hurriedness wears her out.—Ill-humour the whole day. She dreaded talking to anybody. Vexed, impatient when not succeeding in his work. The anxiety and oppression, and the low spiritedness alternating with exaltation of courage are replaced by an even and tranquil disposition, (curative effect).—Sedate and serious.—Extremely jesting. Exaltation of the mind and heart.

**Sensorium.**—Great absence of mind.—Stupefaction.—Weakness of the head.—Oppressive *dulness* of the head. Feeling of heaviness and fulness in the head, she has to incline it forward. Heaviness of the head, and pain in the head, as if the brain would issue through the forehead. Sudden obscuration in the right side of the head, as from smoke, when sitting. Sense of stupidity and fulness in the head, almost the whole forenoon.—*Vertigo*, in the room, going off in the open air. Vertigo in the afternoon when sewing, as if she would fall from the chair. Vertigo, he had to lie down all the time, for as soon as he raised himself, the vertigo returned. Vertigo when sitting; things turn in a circle.

**Head.**—In the morning, on waking, the head felt as if dashed to pieces. Pain as if the head would burst.—Aching and burning pain in the head, frequently, in the forehead and eyes.—*Pressure* in the right side of the forehead, as from a blow, increasing at first, afterwards disappearing suddenly.—Compressive pain in the side of the occiput relieved by holding the hands near the head even without touching it. Sensation in the left side of the head over the ear, as of being pressed upon with a screw.—*Constriction* of the forehead, increasing

at first, afterwards disappearing suddenly.—Pressure in both temples from without inward.—*Drawing* headache, in the evening. Drawing and tension in the head. Drawing at a small spot of the left temple, more externally. Drawing headache, especially in the right side, toward the forehead.—Painful *tearing* in the centre of the forehead, towards the left side. Tearing and sticking in the right sciniput, relieved by pressing on the part, in the evening. Tearing in the right temple, towards evening. Painful tearing in the left temple, when sitting, at breakfast. Tearing in the whole head, day and night.—*Grumbling* in the temporal bones from time to time. A violent jerk from time to time below the left frontal eminence, going off rapidly. Painful, sudden jerking over the left frontal eminence. Shocks in the right temple, as if a plug had lodged in that part and were pushed in more and more deeply. Single shocks, with jerking, in the right temple. Pain over the left orbit, as if a plug had been pushed in, increasing at first, afterwards disappearing suddenly.—*Stitches* under the left frontal protuberance, into the brain, sudden, dull and intensely painful, resembling shocks. Dull stitch deep into the brain, below the left frontal eminence, increasing suddenly, decreasing afterwards and finally disappearing entirely. Dull stitches in the fore part of the head, now on the right, now on the left side, deep into the brain. Sticking pain, now in the forehead, then in the occiput. Stitches in the head, now here, then there, when walking in the open air.—Sensation in the region of the forehead, *as if the brain were loose*, and were falling to and fro. Intense pain below the right frontal eminence, as if the brain were loose and beat against the skull with pain, when shaking the head.

**Scalp.**—Burning pain in the temple, as if caused by a bruise or contusion, in paroxysms, going and coming like a wave. Pain as from a blow, near the left frontal eminence, increasing at first, afterwards disappearing suddenly. Painful feeling of soreness over the left frontal eminence, single paroxysms of which become more and more painful. *Pain of the outer parts of the head as if from subcutaneous ulceration, the parts are painful to the touch.*—Violent itching of the hairy scalp.—Eruption on the head, face and nape of the neck.—The hair turns gray and falls off.

**Eyes.**—The eyelids fall, and he is not able to open them. °Tension in the lids, in the morning.—Sensation in the right outer canthus as of a foreign body having lodged there; in the morning when walking; going off in the room.—Pressure in the outer canthus. *Stinging itching* in the lower eyelid; he is obliged to rub. Frequent smarting in the right eye. Smarting, burning and running of the left eye, when reading in the day-time. Burning and running of the eye when reading at twilight. Burning pressure in the anterior side of the eyeball, in the open air; the pain ceases in the room and is then only felt when looking steadily at a thing.—Red eyes with photophobia and constant running. *Lachrymation.*—Agglutination of the eyelids in the morning. Jerking in the right internal canthus.—*Dim-sightedness* in the morning. Vertiginous sensation before the eyes, with faintness. °Short-sightedness.

**Ears.**—Violent *itching* in the eoneha.—*Drawing* in the right meatus auditorius, from within outward.—*Tearing* in front of the left ear, and in the temple from below upward. Tearing, deep in the left ear, afterwards tingling in the ear. A few violent tearings in front of the left ear, causing her to start, and extending into the left cheek, where a tingling was experienced. Tearing and sticking in the right ear, rather externally.—*Jerking* in the right ear, preceded by an agreeable warmth proceeding from the inner ear.—*Diminution of hearing* as from a leaf being stretched before the ear.—*Shrill ringing* in the right ear. Noise as of a distant waterfall in the left ear when opening the mouth, during dinner. Whizzing in the ears, in the evening.

**Nose.**—Fine prickling in the right side of the nose.—*Bleeding* of the nose, in the evening when sitting or standing. Unsuccessful desire to sneeze. A vapour came through her nose, followed by twenty sneezings, and finally obstruction of the nose.—Coryza and loss of smell. Violent coryza with sore eyes. Obstinate dry coryza; one or the other nostril being sometimes completely obstructed.—Fluent coryza.

**Face.**—*Face pale*, with movements in the stomach.—Redness and feeling of heat in the right cheek. Cooling burning on the left cheek. Sensation as if the face were *distended*, and as if *albumen were drying on the skin*.—Swelling of the left cheek.—*Jerks* in the face, around the ear.—*Tearing* in the left facial bones.—*Pricking* in the skin below the right eye, first increasing, afterwards disappearing. Violent stitch in the right cheek, frequently, from below upward.—*Bruised pain* in the left malar bone, increasing at first, disappearing afterwards and suddenly.—Small *pimples* on the forehead and the side of the nose.—*The lips* become sealy and peel off.—Pressure as with a knife, directly above the left corner of the mouth.—*Sore pain* in both corners.

**Jaws and Teeth.**—*Tearing* in the lower jaw, now here, then there.—*Pain of the submaxillary glands, the pain affecting even the tongue*, which looks burnt. Swelling and inflammation of the submaxillary glands, sometimes with stitches in the glands.—Pain in right upper incisor, pressing from without inward. Toothache made worse by cold, milder by warm things.—*Tearing* in the left lower teeth, from evening till midnight. *Tearing* in the left cuspidatus and lower jaw, the whole night, during the menses.—*Gnawing* pain in the right lower row of teeth. *The teeth are set on edge*, the whole afternoon. Gnawing pain in a molar tooth and in a cuspidatus, when biting on something hard.—*Digging-up* pain in a hollow molar tooth.—*The gums* feel dull and numb, and bleed when touched ever so lightly.—Swelling on the right lower gums; pus is discharged from the swelling when pressing on it. Ulcer on the gums.

**Mouth.**—Disagreeable feeling of dryness in the mouth, for two days.—Accumulation of sweetish saliva in the mouth. Accumulation of saliva in the mouth, as from hunger, for several hours. Ptyalism with accelerated pulse. Profuse flow of tasteless saliva.—*Vesicles* on the inner side of the cheek. Aphthæ.—Dry tongue.—Frequent rising of mucus into the mouth, causing vomituration and slight choking; he has to swallow it very quickly.

**Pharynx.**—*Rough throat*, almost after every new dose. Scraping in the throat.—Pricking in the pharynx, worse during deglutition, a pain is felt when touching the part.—*Contractive sensation* in the throat, especially on the right side. Sensation as if the throat were swollen, as if a ball were in it.

**Taste and Appetite.**—*Bad taste* in the mouth after waking in the morning. Putrid, flat, pappy taste.—Loss of appetite, with uncomfortableness; the food has its natural, but not an agreeable taste.—*Aversion to food*, disappearing in the evening. She is hungry; but she loathes the food as soon as she approaches it to her lips. The smell of coffee is exceedingly disagreeable to her; it makes her tremble and feel weak. Bread has a bitter, bilious taste, and oppresses the stomach. Milk causes flatulence. Faint and exhausted after drinking milk.—Hunger, but no appetite.

**Gastric Symptoms.**—Relishes the food, but feels qualmish after eating, and has to give up eating, before having satisfied his appetite. He is oppressed by the dinner although he relished it. Cold sweat breaks out when eating warm things, especially on the forehead and face, also on the rest of the body. Colic after a meal, and immediately after, digging-up and uneasiness in the abdomen, without diarrhœa. Extreme faintness after a meal. After a meal the region of the stomach feels tight as if it would burst. Every drink makes the stomach

feel cold, unless spirituous things are administered.—Frequent, long-lasting, empty eructations. \**Sour eructations*, particularly during a walk in the open air. \**Acidity in the throat*. Gulping up of sourish-bitter things. Bitter eructations. Gulping up of sweetish water. Rising of water from the stomach into the mouth. Frequent gulping up of water, going off after dinner. Eructations tasting of onion.—*Hiccough* when smoking.—Rising of saltish water into the mouth.—Nausea and accumulation of saliva in the mouth, with a contractive sensation in the stomach and abdomen. Nausea in the mouth, towards noon, although food has a good taste. Nausea with chilliness. Nausea with desire to vomit, going off by an eructation. Violent gulping up from the stomach, with nausea; she has to swallow it again.—*Vomiting* of pure water, after sudden nausea. Vomiting of pure water, afterwards vomiting of the supper of last night, after which the nausea still continues.

**Stomach.**—*Sensitiveness* of the region of the stomach to the touch.—*Pressure* at the stomach, with sensation as if a hard and bitter body were rising into the chest. Pressure at the stomach, as if from a stone; the pressure rises into the chest, and results in the rising of watery saliva into the mouth. Pressure at the stomach with constant nausea and yawning.—Feeling of *fulness* and distention in the stomach.—Violent *contractive pain* in the stomach and abdomen. Anxious contractive pain in the pit of the stomach, hindering breathing. Painful constriction in the pit of the stomach, lasting a long while.—Sudden *gripings* in the stomach, every evening, as after a cold.—*Cutting* on the left side and near the stomach, toward the back. Cuttings around the stomach and painful movements in the same, both when sitting and walking, in short paroxysms.—*Pricking* in the stomach. Stitch in the stomach which lasts five minutes.—*Agreeable feeling of warmth* in the stomach. *Burning* in the stomach, with a stupid feeling in the head.—*Coolness and relaxed feeling* of the stomach, with loss of appetite.—*Pinching* directly below the pit of the stomach; when pressing on the pit of the stomach, he feels an intense pain as after a shock.

**Hypochondria.**—Stitch in the region of the liver, near the stomach. Sticking in the region of the right ribs, worse during an inspiration, during the menses. Dull pressure from without inward under the right ribs, worse by turns. Gurgling pain in the right side of the abdomen, almost toward the back.—Stitch in the left hypochondrium, when inclining to the right side. Stitching in the left hypochondrium, going off by pressing on the part. Stitching in the region of the left lower ribs, frequently accompanied with stitching in the chest. Slowly pulsative, gurgling pain under the left ribs.—Burning in both hypochondria, when sitting, the whole day.

**Abdomen.**—Superficial, but violent pressure on the umbilicus.—*Pinching* in the abdomen, towards the lumbar region, causing sweat to break out. Pinching and cutting in the abdomen, with violent pressing on the rectum (at night). Violent pinching, cutting and writhing in the abdomen, accompanied with labour-like pains, as if all the internal parts would press out, with a fainting sort of nausea. Labour-like pains through the whole abdomen, as far as the hips, followed by a sensation as if bruised in the small of the back. Cutting and movement of flatulence in the umbilical region.—*Stitching*, resembling splenic stitches, in the left side of the abdomen, during motion, going off when sitting still. Long, dull stitch from the left side near the umbilicus into the abdomen.—*Burning* and pressure below the umbilicus, as if in the uterus. Sensation in the umbilical region, as of a morbid warmth, or as in heartburn.—*Anxious sensation* in the abdomen, in the morning when in bed. Crampy pain in the right groin.—*Jerking* in the left groin, and pressure from within outward, as with a finger, commencing and going off when sitting, afterwards returning when stand-

ing and disappearing when walking, and finally also appearing when walking. *Tearing* in the left lumbar region, when sitting. Stitching and pinching in the left groin. Burning in the right groin, during a short and hacking cough. Stitch in the left groin during an inspiration, followed by fine stitches in the upper and outer part of the left chest; in the evening after lying down. *Pushing from within outward* in the right lumbar region, in the morning when in bed, on waking, as if hernia would appear, going off on rising, but frequently returning. Violent pain in the right lumbar region, when walking and standing, as if hernia were protruding, he dares neither cough nor take an inspiration; afterwards hernia protrudes from time to time with great pain, especially when talking, but also without any peculiar cause, returning when sitting or when otherwise keeping quiet and allowing one to breathe and cough without difficulty. Pain in the right groin, suddenly, pressing from within outward, when rising from stool, as if hernia would protrude, independent of coughing and breathing. Irresistible pressure of an existing hernia through the abdominal ring, with smarting pain of the ring, even after the hernia had been reduced. *Beating*, for several days, in the region of the hernial sac. Stitches in the region of the inguinal hernia.—Sharp, rather superficial, jerking extending over the abdomen, almost in paroxysms.—Rumbling in the abdomen. Grumbling around the umbilicus. Rumbling in the abdomen, with canine hunger, going off after a meal.—*Bubbling* in the abdomen as of water, when lying on the back and breathing.—Short, difficult flatulence. Distention of the abdomen, with emission of silent flatus.

**Stool.**—Intermittent stool. Hard, knotty stool, difficult, painful, or like sheep's dung. Hard stool, consisting of small, black, lumps, mixed with blood, and with such violent prickings in the anus that she had to rise on account of the pain: during the menses.—Stool at first hard, then soft.—Large-sized stool.—Soft, papescent stool, with pressing in the anus before and after the discharge. Loose stool, followed by empty feeling in the abdomen. Diarrhœa, mere frothy mucus, with burning in the rectum, flatulence and rumbling. Watery, green diarrhœa. °Chronic diarrhœa.—Yellow-white stool. Hacked, saffron-coloured stool, in a child, of tenacious mucus. Fetid stool, half hard, half liquid, mixed with a good deal of liquid mucus, and streaked with blood.—Bloody stool, hard, every two, three days.—Pinching in the upper sides of the abdomen *during stool*. Pain, during stool, as if the rectum would be torn.—The intestines feel weary and exhausted *after stool*.—Congestion of blood to the rectum. Varices in the rectum, with pricking and burning. Violent itching of the varices. Dampness of the varices, painful to the touch.

**Urinary Organs.**—*Retention of urine* and stool, (primary effect). Diminution of urine, with burning during the emission.—Constant desire to urinate, the last drops being always preceded by a violent cutting in the urethra, for seven days; afterwards pressing in the groin and loins.—Increased emission of urine.—Urine like water. The urine becomes turbid when standing, and deposits afterwards a loam-colored sediment. White sediment in the urine. Brown-red urine. The urine deposits a blood-coloured sediment and is covered with a pellicle.—Pinching in the hypogastrium before, during, and after micturition. Pain in the bladder, unless he satisfies the desire to urinate immediately. Violent pressure on the neck of the bladder, as if it would be pressed out, the pressure being equally violent when walking, standing or sitting, obliging him to press the thighs against each other, relieved by an embrace.

**Male Genital Organs.**—Warmth in the genital organs and testicles. Relaxation of the scrotum. Itching pain in the upper border of the glans.—

Erections in the day-time, without amorous desires.—Emission without thrill.—Burning in the urethra, after an embrace.

**Female Genital Organs.**—The woman has a violent desire for an embrace, the desire being more felt in the outer pudendum; however, she is not much excited by the embrace. The female dreams twice that she enjoys an embrace, and twice she discharges mucus from the vagina. The female dreams that she craves an embrace; on waking, she has a violent, furious desire for an embrace, the desire being concentrated especially in the clitoris.—Sensation in the abdomen, as if the menses would appear.—Delays the menses by eight days, without causing any trouble. Menses too late, with pain in the abdomen and small of the back. \**Menses too early* and too profuse.—Nightmare two days *before the menses*; sensation as of a load lying on her; she was unable to talk, sensation as if some one were strangling her, she woke in a perspiration.—*During the menses*, stitches in the abdomen and vagina. Thirst and dry tongue during the menses.—*After the menses* great desire for an embrace. Great aversion to an embrace after the menses.—Frequent discharge of corrosive mucus from the vagina. Acid, burning leucorrhœa. Transparent, or milky leucorrhœa, without sensation. Discharge of sanguineous mucus from the vagina, as if the menses would make their appearance.—°Metrorrhagia.

**Larynx and Trachea.**—\*Hoarseness, dryness and roughness in the larynx. Pain in the larynx, talking is difficult for him, the usual mobility and flexibility of the cartilages of the larynx seem wanting. Stitching pain in the larynx.—Cough and coryza with violent hunger. In the morning on waking, desire to cough, without expectoration; a few hours after, he throws off mucus easily. Cough, from the open air. Short and hacking cough. Single, rare, turns of dry cough, also in the morning after rising. Loose cough with mucous expectoration. Turns of dry, short, panting cough. At every turn of cough he feels a dull shock directly over the margin of the right eyelids from within outward.—After coughing he regurgitates the ingesta.—°Chronic hæmoptœ.

**Chest.**—Eructations after the morning cough, at first empty, afterwards bringing up bitter mucus.—Hæmoptysis, when walking slowly.—Occasional and momentary dyspnœa. Frequent oppression of breathing and strangulation, at night. Oppression of the chest, in the morning, with nausea.—Weak in the chest, so that she was scarcely able to talk.—*Fulness* in the chest.—*Pressure in the left chest, and pit of the stomach.*—Drawing tension in the left chest.—Dull pain in the centre of the sternum, as from a shock.—Stitching pressure in the chest and throat, arresting the breathing, equally violent when walking or standing, improved by the open air, in continued paroxysms. Violent stitches in the right chest, frequent and continued; the pain is felt still more deeply when pressing on the part. Violent stitches in the sternum, when entering the room from the open air, the stitches proceeding to the inmost parts of the other side of the chest, in the evening. Dull stitches on the left side near the sternum, in the region of one of the cartilages. Sudden, violent and piercing stitch in the upper part of the left chest, extending to the back. Fine stitches deep in the left side of the chest from without inward, with arrest of breathing. Sticking in the left chest, more violent during an inspiration and when coughing, when walking; less when at rest. Stitches in front of the left axilla, when removing a heavy weight, followed by violent pain as if bruised in a large portion of the sternum. Many violent stitches through the heart, day and night, with sore pain soon after.—Palpitation of the heart without anxiety, when pressing the upper part of the body forward and leaning both arms on the table, with inclination to take deep breath, which is done without difficulty.—Frequent

single burnings on the left chest. Frequent burning as from boiling water, in the outer part of the left chest, alternately more or less violent.

**Back.**—Pain in the *small of the back* as if bruised, when standing or sitting. Sore pain or spasmodic drawing in the small of the back during motion. Burning pain in the small of the back.—Pain in the *back*, as if sore and bruised. Drawing pain in the back, during motion and when stepping. Stiffness in the back for several mornings, going off during motion. Fine stitch in the dorsal spine, and in the left side of the nape of the neck. Boils on the back.—Cutting between the shoulders, with burning, as if the parts would be cut through.—Drawing in the right side of the neck, below the ear. Pain as from an oppressive load between the side of the neck and the left shoulder.

**Upper Limbs.**—Painful sensitiveness of the left *axillary glands*. Ulcerative pain in the right axilla, extending as far as the chest, especially when ascending an elevation, but also when walking, so violent that he has to sit down. Tremulous pressure on the left shoulder, at irregular intervals. Stitching in the shoulder-joint, when raising the arm. Lancinating tearing in the left shoulder. Jerk in the right shoulder-joint when writing. Cutting pain in front of the left axilla. Stitching in front of and below the right axilla.—When writing he occasionally feels in the right arm a drawing and spasmodically-contractive, paralytic pain. Heaviness of the arm. Fine jerking tearing in the right arm, frequently extending from the thumb into the chest, when sitting. Painful tearing in the right upper arm, posteriorly, under the shoulder-joint and reaching up to the joint.—Smarting pain, as if excoriated on the left *elbow*. Tensive pain in both elbow-joints.—Every three seconds a pain like a shock, in the left ulna, close to the wrist-joint; the pain begins suddenly and violently, and radiates into the arm, decreasing as it proceeds, and finally ceasing altogether. Bluish spots on the forearm, as if ecchymozed.—Drawing and weariness in the *wrist-joint*.—Tensive pain and heaviness in the right metacarpus, when walking in the open air with the arms hanging down, as if the blood accumulated in them. Jerking in the metacarpal bone of the right index-finger, extending into the arm, intensely painful. Intensely-painful shocks in the metacarpal bone of the right index-finger. Painful jerks, like dull shocks, in the carpo-metacarpal joint of the thumb, sometimes striking into the arm through the wrist-joint. Dark-red, small elevations on the dorsum of the hand, covered with a little scab, under which pus seemed to be secreted, lasting four days, but not painful. Eruption on the hands and between the fingers, the eruption is itching, especially after midnight. When sleeping the fingers become spasmodically closed, with a jerk, and he starts. Jerking pain in the tips of the fingers, apparently in the nerves. Burning or smarting fine stitches in the side of the middle-finger. Burning prickling creeping in the tip of the little finger, as if gone to sleep, also at a small spot of the middle finger. Sharp, darting pain through the right thumb, beginning in the tip. Dull stitches in the middle joints of the fingers. Tearing under the nail of the index-finger, as in a pararitium, increased by dipping the finger into cold water. Several small very painful *chilblains* on the fingers.

**Lower Limbs.**—Cramp in the right *hip*.—The right lower limb inclines to be numb. Stretching of the lower limbs. Heaviness of the lower limbs. Tearing in the varices of the right lower limb, in the morning when in bed.—Cutting pain in the *thigh*. Spasmodically-contractive, paralytic pain in the right thigh and leg. Intermittent pinching at a small spot of the inner side of the left thigh. Intermittent pressure in the upper and inner side of the right thigh. Contraction in the lower and outer parts of the thigh, extending into the leg at intervals. Burning cutting creeping in the thighs, as if some eor-

roding substance had made the parts sore, at irregular intervals. Dull-sticking pressure, in the outer and middle parts of the left thigh.—Painful weakness of the *knees* when standing, with intensely-painful jerks in the knees. Tearing up and down, deep in the left knee, going off by rubbing. Intense pain as from a blow obliquely over the left knee, in undulating paroxysms. Painful jerks in the inner side of the left knee, like dull shocks. Dull stitches, like shocks, in the middle of the right knee, when sitting, a simple pain being felt a long while after. Burning pricking in the outer parts of the left knee. Intensely-painful prickling stitches in the bend of the left knee. Burning pain in the bend of the right knee.—Creeping in the region of the left *tibia*. Burning itching red spots on the *tibiæ*, with blotches in the centre, swelling after scratching, and the itching continuing again after the swelling subsides. Cramp in the calves when walking, with creeping in the same. Pain of the calves, worse when sitting than when walking. Fine, prickling stitches in the region of the left *tendo-Achillis*.—Intensely-painful pressure in the instep of the right foot, increasing and decreasing.—Tearing in the left *heel*, in the morning on waking. Burning pricking in the heel.—Stiffness of the *ankles*, when walking. Dull, intensely-painful pressure under the left ankle, like shocks or jerks.—Pain in the left *sole* as if bruised, increasing at first, afterwards jerking, then disappearing suddenly.—Jerking pinching in the middle *toe*, in paroxysms. Fine, prickling, piercing stitches under the big toe.—Stitches in the *corn*.—Tearing in the corn.

**Sleep.**—Frequent yawning.—*Falls asleep late in the evening.* *Wakeful* after two hours' rest, at night. Rattling in the chest, in the evening when in bed, and quick pulse. Starts and flow of saliva, while sleeping. Asthma at night, with cough for two hours. She feels a pain in the joints when sleeping, not when waking.—Vexatious *dreams*. Anxious dreams of fire, dead people, etc.

**Fever.**—Chilliness. Chilliness in the room, less in the open air.—Momentary shaking as from chilliness, with goose-flesh.—Passing shuddering through the trunk, from time to time. Constant shuddering down the trunk, without chilliness.—Superficial warmth of the body, with icy-cold hands.—Dry heat in the evening, after a walk of sixteen miles, with thirst and burning in the eyes. Great warmth in the whole body, after going to bed.—*Small, quick pulse*, increased by 10 beats.—Inclines to sweat profusely, at every exertion of the body. She sweats a good deal when sitting, especially on the upper part of the body. Copious morning-sweat. Sourish morning-sweats and subsequent hoarseness.

**Skin.**—\**Itching over the body here and there.* °Disappearance of an existing itching over the whole body, (curative effect). Prickling sensation in the skin, as from woolen clothes.—°Red, itching spot, on the skin. °Small, bluish spots as if ecchymozed (*purpura hæmorrhagica*, see Clin. Obs). °Sore, also with suppuration, looking like mortification.—°Consequences of mechanical injuries, contusion, etc.—Corrosive sensation in the ulcer. Stitching in the cicatrices of burns. Jaundice, (in the workmen employed in the establishments where sulphuric acid is made).

**General Symptoms.**—Dull pressure in small spots of the body, first increasing, afterwards disappearing.—Tearing in all the limbs, especially in the evening; during the menses. Rheumatic drawing and tearing in the whole body, even in the face.—Subsultus tendinum.—Chilliness the whole day. Sensation, when walking, as if he would fall over to either side. Weakness in the lower limbs and small of the back, so violent that he is scarcely able to stand without support. Languor in the whole body, he scarcely dares to raise his arm.—Tremulous sensation in the whole body without trembling.

## PATHOLOGICAL ANATOMY.

The muscles are pale, the blood is darker, blackish, carbonized, with firm clots, (sulphuric acid has been discovered in the disks of the femoral artery). The organs which are touched by the poison, are covered with whitish, wrinkled, yellow, brown, even black scurfs; the subjacent membranes are mortified, carbonized, decomposed, thickened, shrivelled, contracted, frequently perforated; the adjoining vessels are firmly clogged with black blood; the blood is darker, denser, (*Wibmer*).—The whole mucous membrane of the mouth and fauces is interstitially distended and white, the fauces were so much swollen that scarcely anything could pass through; the swelling likewise extended to the pharynx and larynx, the epiglottis was white, and so thick and interstitially distended, that the rima glottidis was almost entirely closed. The ventriculi Morgagni and the mucous membrane of the xiphoid cartilage were similarly degenerated. At the upper extremity of the œsophagus a gangrenous spot of the size of a shilling-piece was discovered; the rest of the mucous membrane of the œsophagus and the mucous membrane of the upper half of the stomach were very red and interstitially distended; the walls of the lower half of the stomach were very much thickened, dark-red on the outer surface, and their inner surface was covered with thick, black, gangrenous masses; the pylorus was entirely closed, and the rest of the intestines had remained intact. (In the case of a man who had swallowed three ounces of concentrated sulphuric acid. *Rust's Magazine*, vol. 52, No. 2, p. 268.)

## 232. TABACUM.

TABAC.—Tobacco.—See NOACK and TRINKS' Manual.

COMPARE WITH—Acon., Ars., *Bell.*, Cham., Cie., Coc., Con., Hell., Hyos., Ipec., Kreas., *Nux v.*, Op., Stram., *Verat.*, Zinc.

ANTIDOTES.—Camph., Ipec., *Nux v.*, Vinum, (Ettmüller arrested with strong wine the convulsions and cold sweats occasioned by tobacco).

## CLINICAL OBSERVATIONS.

According to Noack and Trinks the following affections have been cured by Tabac.: Epilepsy.—Cholera morbus.—*Asiatic cholera* with the following symptoms, after the copious evacuations had been relieved by *Verat.* or *Sec. c.*: constant paroxysms of nausea, being at times more violent, with cold sweat, occasional vomiting, oppression of the stomach, some anguish and restlessness, cramp and tearing in the limbs, occasional clawing in the calves.—Colica renalis, the stone was incarcerated in the right ureter, and Cham., *Nux v.*, and *Bell.*, had been given without success; the patient was cured with three drops of Tabac. 3, every half hour.—Hiccough, after every paroxysm of whooping-cough; the cough was likewise diminished.—*Asthma humidum* with tension in the chest and abdomen, and obstinate constipation.

## SYMPTOMS.

**Mind and Disposition.**—Cheerful and merry. Loquacious. Loss of clearness of consciousness, he cried out to the smokers to leave the room, (although there were no smokers in it,) he spoke in delirium, with open staring eyes for one hour and a half, after which lapse of time consciousness returned. Mania. Sings the whole day. Dances on one leg the whole day, from mirth and good

humour, laughing frequently without cause.—Hypochondriac.—Peevish.—Dread of labour.—He became quite stupid, lost his senses, felt better after vomiting, (in consequence of much smoking). He was unable to recognise those around him, and, if spoken to, he heard the questions but his answers were unintelligible sounds. Muttering delirium. *Stupid, is unable to collect his thoughts*, with heaviness and dullness of the head, going off after vomiting.—Oppressive anxiety, with sad and melancholy thoughts, during a walk. Lowness of spirits, despondency, accompanied with a dying sickness of the stomach, going off after vomiting. Oppressive anxiety or insensibility, after loss of consciousness. Fearfulness, such as girls are liable to, dread of being alone at night, starting at the least noise. *Anguish*, with general sick feeling. *Great restlessness, anguish, oppressive apprehensiveness, melancholy, oppression of the chest, driving him from one place to another, with constant moaning, in the afternoon, relieved by weeping*, or going off on waking (after dinner).—*Vertigo*. Vertigo with sensation as if he could not support himself. Vertigo with qualmishness of the stomach. Vertigo increasing to loss of consciousness. Vertigo as if from intoxication. Vertigo with sickness of the stomach, increasing in the warm room and obliging her to go into the open air, where she vomited the food she had taken. Vertigo, she imagines that the room is turning round. *Reeling*, early after rising. Intoxication, obscuration of sense, vertigo. Intoxication with violent headache.

**Head**.—Weariness of the head, headache, stupefaction, intoxication. Dullness of the head, with dull pressure from within outwards in the region of the root of the nose, accompanied with a sensation of stoppage in the ears. Weariness of the head, she is scarcely able to keep it erect. Violent heaviness and pains in the nape of the neck, he had to take off his cravat in consequence. *Feeling of heaviness* in the head, after dinner.—Pain in the right parietal bone, on making pressure upon it. *Violent headache*, particularly a drawing in the left half of the forehead and through the left eye. Dull headache after dinner, particularly in the forehead, increased by motion. Dull, aching pains deep in the frontal region, with pressure in the eyes. Aching pain in the frontal region, as if the brain were pressed against the bone; the pain increased upon inclining the head to the affected side. Dull aching pain in the forehead and root of the nose. Aching pain, the whole afternoon, particularly above the right eye. Aching pain above the eye, with scintillations, worse in walking. Aching pain above the eyes, with heat in the head. Violent aching pain in the vertex. Pressure on the vertex as from a board. Aching pain on the vertex, sometimes accompanied with sticking. Violent internal pressure in the vertex, immediately after dinner. Wakes with a headache, and pressure in the vertex and temples, lasting the whole day. Pressure in the temples, for ten days. Aching pain in the parietal bones, on waking, going off after rising. Pressure in the occiput. Alternate pressure and sticking in the temples. Pressure from without inwards, in both temples, towards evening. Compressive pain in the whole head, particularly in the occiput. Compressive-contractive sensation in the temples. Contraction in the frontal muscles.—*Stitches* from the forehead to the occiput, going off in the open air, but returning on standing still, and going off entirely when lying. Stitch from the outer margin of the eyelid towards the inner, and penetrating into the orbit. Several deep stitches in the head, towards the vertex. Stitches in the vertex, for ten days, frequently returning. Stitches in the left temple. Stitches in the left side of the head. Painful stitches from the parietal bones towards the occiput, on walking rapidly. Sore stitches in the temples. Drawing-sticking pain from the left temple towards the vertex across the forehead.—Pain in both sides of the head as if

dashed to pieces. Sensation as if even pressure were made on the anterior portion of the brain, from the forehead. (Violent headache, in the morning, during motion, as if something in the head were shaking, less during rest.)—Feeble, tremulous motion of the head, when reading.—Heat in the head. Congestion of blood to the head, with flushes of heat.—Violent itching of the hairy scalp, from the smoke of tobacco. Burning on the head, with formication, loss of appetite, violent sticking in the ears, succeeded by coldness and chills. Formication over the left temple.—A good deal of hair comes out while combing.

**Eyes.**—Pain of the eyes, and scintillations, on looking at a thing. The eyes are painful as after long weeping. Sensation in the right eye as if a hair had lodged in it, towards evening. Pain in the right eye, extending to the occiput. Feeling of pressure in the eyes, particularly on moving them. Pressure in the eyeballs. Violent digging, drawing pains in the eyeballs and temporal regions, increased by motion, with distention of the blood-vessels and increased beating in the same.—Rigid tension and drawing from the left eye down the upper jaw. Feeling of pressure deep in the orbits, with weakness of the eyes and vertigo. A few fine stitches in the upper part of the orbit.—Violent itching in the inner canthus of the right eye, where a burning is experienced after rubbing.—Burning in the eyes, in the evening while reading. A sort of burning in the left eye, attended with a feeling of coolness. Lachrymation on looking at an object sharply. Heat of the eyeballs. Heat with lachrymation. Heat in the orbits. The cornea is somewhat reddened, with photophobia.—Contraction of the eyelids, with smarting pain in the eyes.—Twitching of the left upper eyelid. Contraction of the eyelids, with lachrymation. The eyes are closed, with photophobia.—Dimness of the eyes, as from mucus. Indistinct vision, for some minutes. Vanishing of sight on looking at white objects. Obscuration of sight, with dilatation of the pupils. Towards evening she became almost blind for a few minutes; she imagined she had a veil before her eyes; the sensation was increased by rubbing the eyes. Scintillations. The black spots before the eyes increase.—Great contraction of the pupils.—Dilatation of the pupils. Staring look.

**Ears.**—Pain in the inner ear, on touching the outer. Painful tearings in the right ear. *Sticking* in the ears, particularly in the open air, or when listening to music. Painful gnawing in the right ear. Titillation in the ears. Fine tearing and sticking in the right lobule. Stinging behind the right ear, with a somewhat hard reddish swelling in that region. The ears are burning hot and red.—Whizzing in the left ear. Dull humming before the ears, increased by violent noise or on going into the room out of the open air, for several days. Roaring before the ears, particularly early in the morning. *Sensation as if the ears were closed by something in front.*

**Nose.**—Creeping in the nostril. Sudden burning in the left nostril. Burning under the nose, as from profuse coryza. Feeble smell; wine, however, has a very strong smell to her, so that she is almost intoxicated from the vapours emanating from an emptied wine-glass which was standing in the room.—Acute smell, early in the morning.—Sneezes several times. Unceasing sneezing, almost killing him.—*Fluent coryza with fine smell.*

**Face.**—The face looks bluish and contracted. Transitory sensation in the middle of the face, as if these parts were dead. The permanent contraction of the muscles on the left side of the face, point to apoplexy. Death-like paleness, during the sickness of the stomach. Papulous exanthem in the face. Red spots in the face. Heat and redness of the left cheek, towards evening, without thirst. The right cheek was glowing, the other pale. Mounting of heat to the face. Drawing pain in both angles of the lower jaw. Violent tearing in the

facial bones and teeth, towards evening. Stitch in the articulation of the jaw, when laughing.—The upper lip is rough and dry, with burning sensation. Chapped, painful lips.—Tensive pain in the submaxillary glands, as if swollen, and as if the lower jaw were less movable.

**Teeth.**—Sudden appearance of violent toothache, with heat in the face and reeling in the head. Violent, continued, beating pains in several hollow teeth. Drawing in the gums. Drawing pain in the upper teeth, abating on pressing upon the cheeks. Violent drawing-tearing pain in the upper teeth, extending towards the forehead. Tearing in the teeth of the lower jaw, darting about. Sticking in the decayed tooth, on biting upon it.

**Mouth.**—Stinging in the tongue. Swelling of a sublingual gland, painful when touched. The patient was not able to talk except in a low tone and with intermissions; she complained of exhaustion, confusion of the head and musty taste of tobacco. He is unable to emphasize when reading; he draws out the words, contrary to his habit.—Dryness of the whole mouth, with violent thirst. Dryness of the tongue and lips. Accumulation of saliva in the mouth. The mouth is filled with white, tenacious mucus, which has to be spit up frequently. Flat taste in the mouth, early in the morning. Bad taste as burnt milk. Bitter taste in mouth. *Sour* taste. The water tastes as if mixed with wine.

**Pharynx and Œsophagus.**—The throat is so dry that she is scarcely able to swallow. *Burning in the throat and mouth.* Heat in the pharynx after swallowing. Quickly-passing feeling of stinging heat in the throat. Constrictive pain and burning in the larynx. *Scraping and burning in the pharynx.* Slight catarrhal affection of the tonsils. Creeping sensation in the throat, painful during deglutition. Hawking up of mucus.—Pressure in the throat, as if something had lodged in it.—Spasm of the pharynx.—Painful pressure in the lower portion of the Œsophagus, on swallowing food.—Periodical sensation as of a plug in the Œsophagus, with constant dull pressure in that region. Decrease of sensation in the Œsophagus.

**Appetite.**—Voracious appetite. Constant hunger, she feels sick at the stomach, if she does not eat.—No thirst, (she generally drank a good deal). Aversion to water.—A good deal of thirst in the evening.

**Gastric Symptoms.**—Slight eructations. Frequent empty eructations. Loud eructations, the whole day, particularly after eating. Sour, hot eructations in the morning. Frequent eructations, sickness at the stomach, vomituration.—Hiccough. Spasmodic hiccough. Heartburn, from the stomach to the throat. Qualmishness of the stomach. Sensation of relaxation in the stomach, with some sickness.—*Nausea.* Nausea and accumulation of water. Nausea for one hour, with delirium.—*Loathing.*—Nausea, almost unto fainting, going off in the open air. Violent eructations, retching, nausea. Excessive nausea, on making the least motion. Nausea and pinching in the abdomen. Nausea with sticking in the left temple.—Disposition to vomit on hawking up mucus early in the morning, with flat taste in the mouth.—*Vomiting.*—Spasmodic vomiting, singultus. Vomiting, with sweat, or with diarrhoea and pinching in the abdomen. Violent vomiting, from applying the powder to a wound in the thigh. Hæmatemesis and spasms (from the external application). Violent vomiting, diarrhoea, anguish, debility, stupefaction and sweat. Vomiting of a quantity of liquid in a long stream. Vomiting of mere water, he sees green and yellow. Vomiting as soon as he begins to move. Easy vomiting of a sour liquid. Vomiting of a sour liquid with mucus, after which he feels easier. Sour and slimy vomiting in the morning, with great exertions. Violent vomiting, after which retching remained.

**Stomach.**—After the vomiting the stomach remains weak for a long time.—

Feeling of pressure in the stomach. Slight pressure during and after dinner in the pit of the stomach. *Spasmodic pressure in the region of the pylorus.* Several writhing movements in the pit of the stomach with disposition to vomit, lachrymation and accumulation of water in the mouth. Contractive pain in the mouth, after a meal. Cardialgia. Colic followed by violent cardialgia, great nausea and pyalism. Violent tearing in the stomach after a meal. Sensation as if the stomach would turn. Sticking in the pit of the stomach, through to the back. Violent stitches over the pit of the stomach, less during rest. Sensation of stinging heat, followed by warmth in the stomach, succeeded soon after by loathing, nausea, vertigo, headache. Pain and inflammation of the stomach, and of portions of the intestinal canal. Slight burning in the region of the stomach, and several eructations. Sensation of warmth in the stomach. Burning in the stomach. Feeling of coldness in the stomach, with nausea and disposition to vomit. Feeling of coldness in the stomach and along the vertebral column.

**Abdomen.**—Violent contractions of the abdominal muscles. Sinking in of the abdomen. She wakes after midnight with sensitiveness of the abdomen; after which she had a soft stool with cessation of the pain; the same symptoms at four o'clock in the afternoon. Pain in the region of the liver on pressing upon it, extending to the pit of the stomach. Sticking below the short ribs of the right side. Sticking in the region of the liver. Prickings in the liver, increased by inspirations. Stitches in the liver when walking, penetrating to the pit of the stomach. Sticking in the region of the liver, relieved by stooping, and rendering it impossible to stretch himself. Stitches under the left short ribs. Sticking in the right groin. Numbers of fine stitches in the whole abdomen, suddenly. Burning stinging in the left subcostal region, externally. Sticking in the hypochondria.—Feeling of pressure under the short ribs of the right side, as from a heavy, round body; the place is painful when touched. Pressure in the hypochondria. Aching pains in the umbilical region, with cramp-like retraction of the umbilicus. Violent aching pains in the hypogastrium, with nausea and disposition to vomit; or with chilliness of the whole body; or relieved by emission of flatulence. Sensation of painful pressure in the renal region. Digging sensation and feeling of pressure in the umbilical region. Horrible pains in the abdomen, sensation of violent burning obliging him to shriek; afterwards the pains increased in the abdomen, particularly in the epigastrium. Heat in the intestinal canal. Violent colic, with vertigo, headache, nausea, contraction of the abdomen, small pulse, cold and damp skin, dilatation of the pupils. Colic towards evening, as if diarrhœa would set in. *Pinching in the abdomen*, followed by tearing pain in the stomach. Pinching and rumbling in the abdomen, for twelve days. Cutting around the umbilicus. Painful retraction of the umbilicus, particularly on stooping. Gurgling and rumbling in the abdomen, for eight days, on drawing deep breath. Violent, unceasing rumbling in the abdomen, the whole forenoon, during a walk. Rumbling in the abdomen, with feeling of coldness of the whole body. Spasm of the bowels, with diarrhœa.

**Stool.**—Frequent urging, with little stool, soreness in the abdomen before and after stool. Urging to stool with frequent tenesmus of the rectum. Violent tenesmus with straining, as if the fæces were prevented from passing out, during soft stool. Frequent papeseent evacuations, with itching of the anus. *Diarrhœa.* Shifting of flatulence, *followed by sudden, papeseent, yellow-green or greenish-slimy stools with tenesmus.* Five diarrhœic stools at night, with burning and tenesmus of the anus. *Several diarrhœic stools*, with emission of flatulence, colic, and soreness of the anus.—The stool intermits, contrary to

habit. After several ineffectual urgings he has a hard stool, several hours after the usual time. Stool delays, is harder and darker than usual.—Tenismus and violent pains in the small of the back during soft stool. Tenismus and violent burning in the anus, during stool. Burning pain at the anus, after stool.

**Urinary Organs.**—The orifice of the urethra is somewhat inflamed and sticky.—Increased emission of urine. Enuresis. Frequent pressure on the bladder. Urging to urinate, with or without vertigo. The urine is clear, lemon-coloured, and more copious than usual. Increased emission of a reddish urine with ammoniacal odour. The urine has a dark-red tinge and smells of tobacco. The secretion of urine is entirely suppressed. The urine is not increased in quantity, but is emitted frequently and at one time drop by drop, with tickling in the urethra. Nocturnal enuresis, almost like incontinence. Urination is frequently preceded by an aching pain in the renal region and itching in the urethra. Burning-itching pain in the urethra, after micturition.

**Male Genital Organs.**—Discharge of prostatic fluid. Tingling on the glans. A number of erections towards morning, without any voluptuous sensation. *Nocturnal emissions.*

**Female Sexual Organs.**—The menses, which had delayed one day, appear more profusely than usual. Discharge of a serous liquid from the vagina, a fortnight after the menses.

**Larynx.**—*Tickling and scraping in the throat from below upwards, with irritation inducing cough.* Slight irritation in the upper portion of the windpipe, burning in the fauces and expectoration whenever he takes the medicine. *Dry cough*, with sticking in the pit of the stomach, the whole morning or towards evening. Cough and hiccup at the same time, as if he would suffocate.—Roughness of voice.

**Chest.**—Sensation, on taking deep breath, as if the chest were too narrow, with oppressive sensation of anguish as if he were threatened by some unavoidable accident. Great difficulty of breathing, paroxysms of suffocation. Dyspnoea, anxiety, hurried, labored breathing. Hurried, anxious, irregular inspirations. Slow inspirations, the walls of the thorax being scarcely raised. Oppression of the chest and anguish, as before a swoon. Oppression of the chest, relieved by a deep inspiration. Violent constriction of the chest. Pressure under the sternum. Pressure and stitches in the chest. A few stitches under the right short ribs, with tightness of the chest. *Sticking in the chest, (under the sternum,) with inability to take deep breath*, or in the right side of the chest when talking; stitches in the side and chest when taking a deep inspiration, attended with great weakness of the head as if intoxicated, with scintillations not allowing him to recognise people at a distance. A number of shooting stitches through the chest, from before backwards, aggravated by deep breathing. Fine stitches from the centre of the chest to the sternum. Sore sticking in the right side of the chest, worse during rest. Sore pain in the chest, during rest.—Violent palpitation of the heart when lying on the left side, going off by turning to the right side. Irregular, generally slow beating of the heart. Violent beating of the heart and carotids.—Pressure on the sternum as from something heavy. Pain in the sternum as if a knife were sticking in it. Sensation, on taking a deep breath, as if the intercostal muscles were cut to pieces from before backward, aggravated by contact, with lachrymation from pain. Violent sore pain in the mamma, with sensation as if the nipple would be bit off.

**Back.**—Stiff neck, preventing one from turning the head to the left side. Sticking in the right scapula. Burning under the scapula.—Contractive pain in the small of the back, particularly violent after stool. Dull pain in the centre of the spinal marrow, early in the morning, with bruised pain in the

body, particularly the upper limbs. Pain in the small of the back and loins, particularly when sitting. Intolerable pain in the small of the back, rendering it difficult to sit or lie. Throbbing pain in the region of the sacrum, in the evening. Pain in the right buttock, on pressing upon it. Sticking pain above and in the left buttock. Pains and tension in the glutei muscles and those of the thigh, as after a fatiguing journey on foot.

**Extremities.**—Coldness and trembling of the limbs. Spasms of the limbs. *Tremor of the limbs.* 1. **UPPER EXTREMITIES.**—Pulsations under the right shoulder. Sticking and drawing in the left shoulder. Drawing pain in the left arm, at a spot of the size of a dollar, as if an ulcer would form. Tension in the left arm, particularly in the elbow. Pain in the right arm, on raising it. Lame feeling in the arm, with cramp. Complete exhaustion and painfulness of the left arm. Drawing pain in the elbow-joint, on turning the forearm. Tearing in the tendons of the left forearm, in the direction of the hand, afterwards in the elbow. Sticking pains in the elbow, hindering the sudden stretching of the arm. Sensation as if sprained in the left forearm, particularly in the left elbow-joint, with painful stitches on exerting the arm. Sticking and tearing in the right hand. Drawing laming cramp-pain in the right hand, extending as far as the elbow. The hands feel lame, with coldness in the hands, afterwards burning with bloatedness of the tips of the fingers and difficulty of moving the hands, with coldness and chilliness of the body. Weakness of the hands. Cramps in the hands and arms. Cramp in single fingers, particularly while washing, early in the morning. Spasmodic contractions in the hands and arms. Spasm and formication in the three first fingers of the left hand. The fingers are somewhat swollen. 2. **LOWER EXTREMITIES.**—Dull aching pains in the hip and knee-joints. Sticking in the right hip towards evening. Drawing in the thighs. Sticking in the left thigh, between the shoulders and under the sternum. Sticking in the bend of the knee on bending it, with pressure during rest. Frightful burning in the knee, with sensation on touching it, as if full of needles.—Spasm in the knee. Cracking of the knees in walking. Tension from the knee to the foot, when walking. Formication in the left leg from the knee to the toes.—Feeling of lameness below the knee, as if gone to sleep. Tearing along the tibia or calf. Lame feeling in the right foot. Burning on the side of the sole of the foot, as from a hot iron, most violent towards evening. Acute pain in the balls of the left toes, hindering stepping. Cramp from the toes to the knee.

**Sleep.**—A good deal of *yawning*, after a meal. Drowsiness. Stupefying sleep at night. Deep sleep, succeeded by profuse sweat. Sopor. For some moments he appeared to be in a comatose condition, after which he was waked by the pain, without however complaining; instead of this he made automatic motions with great vehemence, arose, made a few steps like an intoxicated person, and then threw himself again on his couch, tossing about. Sleep, stupefaction and profuse sweat. Great drowsiness going off in the open air, towards evening, also in the forenoon or after dinner, afterwards short sleep from which he is roused by palpitation of the heart.—Difficulty of falling asleep in the evening, and waking in the morning.—Wakes several times during the night on account of pains in the left carpal and tarsal joints. Restless night-sleep with coldness and tossing about in bed.—Starting during a slumber.—*Innumerable dreams.* Anxious dreams about fire. Painful dream about the falling out of a tooth. He dreams that his tongue is too large, that it is hanging out of his mouth, and reaches to the nose, (hindering talking and screaming); weeps on that account with great anguish, (a kind of night-mare.) Frightful dreams, from which he wakes with consciousness, but unable to talk or move.

**Fever.**—Coldness of the left, and heat of the right hand. *Icy coldness* of the legs from the knees to the toes, the whole night, with burning of the thighs, and a good deal of heat. Goose-flesh the whole day. Coldness of the extremities. Violent chill with disposition to stretch one's-self, in the evening. Violent chill in bed, in the evening. Chattering of the teeth, in the evening, from coldness. *Coldness and shuddering in the whole body*, in the evening, with flushes of heat. *Shaking and shuddering* of the whole body, every evening, or the whole day, with cold sweat in the palms of the hands. *Chill* the whole day, with aching pain between the shoulders, with yawning, stretching of the arms. Chill in the open air, only in the morning. *Internal coldness* with feeling of heat, the hands being at times cold, at others warm or sweaty, *without thirst*.—Warmth of the body, with icy-cold hands. Increase of external warmth, with sensation of shuddering and as if bruised internally, and indisposition to do the least thing. Increase of warmth, particularly perceptible in the palms of the hands. Hot skin with great thirst. Heat and restlessness. Heat and sweat. Sensation as if the blood circulated more rapidly and strongly. Profuse sweat, with coldness of the extremities. Flushes of heat after vomiting. Heat and feeling of dryness, increasing every minute. Icy-coldness of the legs, with heat of the body. Dry, hot skin, with thirst and quick pulse. Profuse sweat about the head and on the chest. Profuse sweat before midnight, smelling of tobacco. *Cold sweat*. Cold sweat in the hands. Night-sweat. Viscid, cold sweat, coldness of the limbs and great languor, with slow, intermittent pulse. Small, slow pulse. Small languid pulse, with cold skin and viscid sweat. Pulse quick, full, large. The pulse is fuller and quicker by 10 beats. Hard, quick pulse. The pulse is almost imperceptible, very small, intermittent, exceedingly slow, 45 beats.

**Skin.**—Itching of the body, here and there, relieved by scratching. Frequent itching in the face, in the evening, resembling flea-bites. Itching of the arm and neck, resembling flea-bites. Burning and tension in the skin of the right side of the neck.—Pimples on the forehead, chest, back, small of the back, fingers. Miliary rash on both cheeks, under the eyes, perceptible only to the touch. Red, itching eruption on the whole back. Pustulous eruption on the nape of the neck and upper limbs. Papulous eruption with increased sensitiveness of the skin, so that slight wounds and excoriations which generally healed without the interference of art, caused a good deal of inflammation. Eruption in the corner of the mouth. *Red spots* in the face and on the right shoulder, burning when touched. Small itching vesicles surrounded with a red areola and filled with a yellowish fluid, feeling sore when touched. Increased turgescence of the skin, with itching and slight sweat. Dryness of the skin. Unusual dryness and burning of the skin.

**General Symptoms.**—Aversion to business. *Great weariness, languor, and debility of the extremities, and trembling of the hands and feet*.—In the forenoon he feels more languid than in the afternoon.—General relaxation of the whole body, with rhagades and warmth of the palms of the hands. Sensation of increase of the muscular power, with indisposition to make the least motion. *Trembling* of the head and hands, with excessive mirthfulness as if intoxicated, after dinner. Trembling of the whole body, after the nausea. Trembling, or rather shaking of the feet, for a long time. Trembling of the limbs, for 6 or 7 minutes, after which he lies as if paralyzed, with stupor, headache, general paleness, colic, difficult breathing, lastly coma, pulse 68, death. Diminished irritability of the voluntary muscles. General debility and coldness, great anguish and swoons. *Apoplexy*. Vacillation, trembling, general weariness of the muscles, spasmodic contraction of the muscles, spasms, general in-

sensibility, relaxation. Fainting fits, trembling, loss of consciousness. Weakness towards evening, shuddering and coldness between the shoulders on moving a part of the body, attended with reeling, sticking in the temples, forehead, and vertigo.—Constant disposition to stretch the arms.—Convulsions and rattling, death in three quarters of an hour. Convulsive movements, with paleness and distortion of the face, staring look, stupefied expression of countenance, slow and small pulse; at intervals the child uttered a cry, spoke incoherent words, and was covered with profuse sweat, and tortured by loathing and pain in the epigastrium which became worse on pressure. Convulsions and death in 15 minutes, from an injection.—Violent involuntary contraction of all the muscles; with expressions of the most horrid pain; he constantly laid his hand on the abdomen and pulled his penis with great violence.—*Spasms and convulsions*.—Epilepsy.—Jaundice. Arthritis.—Consumption.—Emaciation, particularly on the back and cheeks.—Complete insensibility, with loss of memory and consciousness. Sensation as if his vitality had left him. Death-like paleness.

**Characteristic Peculiarities.**—The pains on the left side predominate, he is better in the open air.

### 233. TANACETUM.

TANAC.—Tansey.—See ARCHIV., XIII., p. 170.

#### SYMPTOMS.

Great mobility, extraordinary motions and strange gesticulations, stretching, drawing up the feet and then extending them again suddenly, (without the least pain,) for half an hour, several times after taking repeated doses of the medicine, (in a boy of twelve years, from half an ounce of the extract).

### 234. TARAXACUM.

TARAX.—Leontodon Taraxacum, Dandelion.—See HAHNEMANN'S *Materia Med. Pur.*, V.

COMPARE WITH—Con., Kali, Nux v., Puls., Spig., Valer.

ANTIDOTE.—Camphor.

#### CLINICAL OBSERVATIONS.

Rheumatism.—Fever with gastric and gastric-venous conditions.—Quotidian fever and ague: In the evening the hands and nose become cold, after which sleep sets in during which the patient sweats considerably, particularly about the head; the apyrexia is characterized by languor and vertigo.—*Febris intermittens quotidiana sudorifera*.? Debility, loss of appetite, profuse sweat every night, thirst day and night, restless sleep; Ars. was of no avail; Tarax. effected a complete cure.—Violent headache which is felt only when walking and standing.

#### SYMPTOMS.

**Mind and Disposition.**—Gloomy mood, when unoccupied, does not know what to do with himself. Discontented early in the morning, not disposed to

talk. Irresolute and dreading to work.—Cheerful and confident. Loquacious. Disposed to laugh.

**Sensorium.**—Dulness of the head during a walk in the open air, with reeling and dizziness.—Vertigo during a walk in the open air. Vertigo with unsteady gait. Vertigo as if intoxicated, the head inclines at times to the right, at others to the left side.

**Head.**—°Violent headache, felt only when walking or standing.—Heaviness of the head, with heat and redness of the face. Heaviness of the occiput, going off on stooping, and coming on again when raising the head and keeping it erect; in this case it is worst.—Sensation in the head, half pressure, half itching. *Pressure in the lowest part of the occiput, and heaviness of the same.* Painful pressure in the sinciput in the direction of the forehead. Oppressive stupefying pain in the forehead, as after an intoxication. *Aching pain in the right temple.* Burning painful pressure in the head from below upward. Painful pressure in the head from within outward. When sitting, he feels an oppressive stupefying pain in the whole forehead, so that he lost his senses when reading, and did not know where he was, accompanied with nausea; he felt better in the open air. Continued painful pressure on the forehead. Drawing aching pain in the temple. Painful drawing pressure on the frontal bone, when standing.—Contraction in the forehead over the nose, alternating with tingling, like vertigo; at times a sensation as if the brain were distended in various places; this sensation gives no pain. Sensation in the head *as if the brain were constricted* from all sides by a soft pressure.—When walking in the open air, he feels a crawling pain in the forehead, with pressure, spreading from the middle of the forehead, as if it contained something alive.—*Drawing pain in the left temple when sitting, ceasing when walking or standing.*—*Tearing pain* in the occiput, when walking, going off when standing still. Tearing in the outer parts of the occiput, when walking.—*Lancination* in the occiput, behind the right ear. Lancinations in the left side of the forehead in quick succession. Continuous sticking pain in the left side of the head (for six hours). *Prickings in the left temple when sitting, ceasing when standing.*—Violent, continuous pain in the left temporal region, when walking, going off when standing. *Sharp stitches in the left and outer side of the forehead.* Dull sticking pressure in the outer parts of the forehead. Pimple on the right side of the hairy scalp, above the temples, painful when touched, as if from subcutaneous ulceration. Tension of the forepart of the scalp, as if stretched tight over the skull.

**Eyes.**—Pimple in the middle of the left eyebrow, with painful pressure when touched. Contraction, then dilatation of the pupils.—*Agglutination* of the eyelids, early in the morning on waking, for several days.—The eyes do not bear the light of day, they water constantly, accompanied with a pressure in the region of the right upper eyelid, as if from something which he tries in vain to wipe off.—*Burning in the left eyeball.* Violent burning in the right eyeball, towards the inner canthus.—*Burning, fine pricking* in both eyelids of the left eye. *Burning pricking in the left eyeball,* toward the outer canthus. Sharp sticking pain in the right eye. Sharp pressure as from a grain of sand, in the inner canthus of the right eye, with sensation as if the eyelids were swollen.

**Ears.**—Hardness of hearing; in the evening his hearing is dull.—Pressure in the interior of the left ear from without inward. *Tearing* in the outer meatus auditorius, and sharp pressure behind the ramus of the lower jaw.—Stitches behind the ear, with tearing along the side of the neck. Sticking in the right ear from within outward, ending in a tearing from without inward. Itching-burning stitching in the right ear. *Drawing pain in the outer parts of the right ear.*—Chirping in the left ear, as of grasshoppers.

**Nose.**—Pustule in the corner of the right wing.—Bleeding of the left nostril before dinner.—Frequent sneezing, during a walk in the open air.

**Face.**—Feeling of heat and redness in the face.—Sharp pressure in the right cheek. Stitch with pressure in the cheek.—*Pustule* on the upper part of the left cheek, with a red areola, occasioning a gnawing pain when touched.—Cracking of the middle of the upper lip. Pustule near the right corner of the mouth.—Sudden itching below the chin.

**Teeth.**—Painful pressure, like two shocks, in two incisores, rather in the crown. Sour-tasting blood flows out of the hollow teeth of the right side. Sensation in the teeth, when chewing, as if they had been made dull by eating some fruit. Drawing pain in the hollow teeth of the right side, extending along the cheek as far as the eyebrows.

**Mouth.**—Frequent accumulation of sourish water in the mouth. *Accumulation of saliva in the mouth, and sensation as if the larynx were closed by pressure.*—Burning pricking in the left side of the tongue. Tongue coated white. White-coated tongue, peeling off here and there gradually. *The tongue is coated with a white skin, with sensation of rawness on the tongue; it then peels off in patches and leaves dark-red, tender, sensitive places.* Dry, brown-coated tongue, early in the morning, when waking.

**Pharynx.**—Difficult deglutition; a kind of pressure as from an internal swelling of the throat. Sharp pressure in the anterior wall of the pharynx and larynx, between the acts of deglutition, inducing cough, but going off when swallowing.—The phlegm tastes sour, and sets the teeth on edge.—Dryness and stinging in the throat. Feeling of dryness in the throat, and a bitter phlegm in that region, making the speech sound hoarse.

**Taste and Gastric Symptoms.**—Bitterish taste in the mouth, before a meal; food, however, has a natural taste. Bitter taste rises into the mouth from the œsophagus. At the tip of the tongue the butter has a repulsive, saltish-sour taste; when reaching the palate, it has the usual taste. Meat, especially gravy, tastes sour to him, when it touches the tongue. Tobaceo has no good taste, it occasions a burning in the throat, almost like heartburn, and arrests the breathing, goes off again by drinking.—Bitter eructations and hicough. Empty eructations, continuing for several days, especially after drinking.—Nausea, accompanied with anxiety, when sitting, going off when standing. Nausea, as if the stomach were overloaded with fat things; he felt as if he would vomit, with an oppressive stupifying pain in the forehead, he felt relieved in the open air. Qualmishness and nausea in the pharynx.—Great chilliness after eating, and especially after drinking.

**Stomach and Abdomen.**—Painless motion and grumbling in the abdomen. Rumbling in the umbilical region, toward the left side. *Sudden continuous movement in the abdomen, as if bubbles were bursting in it.*—Tension in the pit of the stomach, and pressure on the xiphoid cartilage, when stooping.—Pressure below the ribs of the left side. Aching pain in the left side of the abdomen.—*Pinching in the abdomen, followed by emission of flatulence.*—*Continuous stitches, with pressure, in the left side of the abdomen.* Single, violent and sharp stitches partly in the left portion of the epigastrium, partly in the left or right side of the abdomen, partly in the hypogastrium. Severe stitch in the side of the abdomen, continuing for a minute. Burning stitches in the left side of the hypogastrium, in the direction of the genital organs. Boring pain in the region of the umbilicus, from within outward, toward the right side.—Pressure in the left lumbar region from within outwards.—Itching-stinging pain in the right abdominal muscles. Painless bubbling in the muscles of the left iliac

region.—Feeling of pain in the left *groin* when walking, as if sprained, somewhat relieved by standing and touching the part.

**Stool.**—Two soft stools on the first day, difficult and with much straining. A third evacuation on the first day is hard, with a good deal of straining. The stool comes on sooner than usual, and is papescent; the urging continued, without anything being passed.—Titillation in the perinæum, between the anus and the genital organs, obliging him to scratch. Voluptuous itching of the perinæum; after scratching a corrosive pain was felt in the part scratched, lasting for hours.

**Urinary and Genital Organs.**—*Desire to urinate, without pain.* Frequent desire, with copious emissions.† Frequent desire with scanty emissions.†—Tickling of the prepuce. Continuous boring pain in the glans.—Fine stitch in the left testicle. Burning stinging in the right testicle.—Emission every other night. Long-lasting, involuntary erections.

**Respiratory Organs.**—Titillation in the pit of the stomach, inducing a hacking cough; he felt it coming a few seconds previous, but was not able to prevent it.—Boring and digging pain in the right chest, more violent and continuous when walking.—Pressure in the left side of the chest, below the axilla. Pressure on the internal surface of the ribs, during an expiration, when standing, in the right side of the chest, from the hepatic region into the chest, at a spot of the size of the hand. Burning pressure in the sternum, more violent during an expiration than inspiration.—Stitch, with pressure, in the right chest, going off during an expiration or inspiration; when pressing on the part, the stitch returned and spread as a continuous stitch. Stitch in the right side of the chest, from without inward. Dull sticking in the left chest. Sticking in the left side toward the back. When standing, during an inspiration, he experiences stitches in the chest from without inward. Continuous sticking in the right side of the chest when walking. Violent sticking in the sternum. Stitch in the right chest, directly below the axilla. Three violent stitches, one at every inspiration, below the last rib of the left side, posteriorly. Severe stitch in the region of the sixth rib. Violent sticking in the left side of the chest, in the region of the lowest rib.—Boring-sticking drawing in the region of the acromial extremity of the right clavicle.—Jerking in the left intercostal muscles. *Jerking in the right intercostal muscles.* Tensive pain in the region of the diaphragm, during a deep inspiration.

**Back.**—Pressure in the *small of the back.* Soft pressure in the small of the back, when standing. Painless creeping in the small of the back.—Tensive sticking in the *back* towards the right side. Sticking pain, with pressure, in the whole spine towards the right side, when lying, with difficult breathing, especially violent in the small of the back.—Continuous dull stitch in the right *scapula*, from within outward. *Rumbling and bubbling in the right scapula.*—Acute pain when moving the jaw and neck, in the region of the lower part of the parotid gland and in the muscles of the neck, and extending from the sternum up to the mastoid process. *Jerking in the lower part of the side of the neck.* Sharp, boring stitches in the left side of the neck from within outward, for a few minutes (immediately). Jerking, with pressure, in the posterior cervical muscles, behind the left ear. *Sticking in the left side of the nape of the neck, as with a somewhat dull pin,* when standing, going off when sitting. Sticking, with pressure, in the nape of the neck.

† NOTE BY HAHNEMANN.—These two symptoms, the former of which is the primary, the latter the secondary effect, show how wrongly the common physicians proceed in endeavouring to cure dropsical swellings, with diminished secretion of urine, by Taraxacum. It will be found useful in some kinds of diabetes, provided they do not depend upon a chronic miasm, as they often do.

**Upper Limbs.**—Throbbing on the left shoulder, for one minute. Jerking on the left shoulder. Painless rumbling on the left shoulder, with chilliness all over.—Jerking in the external muscles of the left upper arm. Twitching in the upper arm. Paroxysmal throbbing on the inner side of the upper arm. Aching pain in the muscles of the left upper arm. Aching pain on the inner side of the left upper arm. Pain in the outer side of the left upper arm, resembling electric shocks. Itching pain on the inner side of the left upper arm. Sharp stitching in the outer side of the left arm. Painful, violent prickings in the posterior surface of the upper arm, going off by friction. Intermittent stitches in the outer side between the elbow and the middle of the right upper arm, during rest.—Sticking in the right *elbow-joint*—Stinging in the left forearm, during rest and motion. Sharp stitches in the right forearm, going off by contact. *Jerking in the muscles of the left forearm.* Burning in the right forearm. Aching pain on the inner side of the right forearm. Frequently returning drawing pains in the forearm.—Tearing drawing in the left *wrist-joint*, extending into the three last fingers—Pimples on the *hands*, especially on the sides of the fingers, also on the dorsum of the hand, with itching. Burning pain in the third and fourth fingers of the left hand. Sticking pain in the fourth finger of the left hand. *Aching pain in the three last fingers of the right hand. The tips of the fingers are cold as ice.*

**Lower Limbs.**—Jerking in the left *glutei muscles*, inferiorly. Itching of the left *glutei muscles*.—Twitching in the upper part of the muscles of the *thighs*. *Sticking pain in the whole left thigh.* Boring stitches in the inner side of the thigh when sitting. A spot in the upper and front part of the thigh feels painful as if bruised, more so when touched than when walking. Pressure on the inner side of the right thigh, when sitting or standing, not when walking. Gnawing itching of the left thigh, obliging one to scratch. Tearing in the outer hamstring when sitting.—Drawing-sticking pain in the outer side of the right *knee*, during rest and motion. Sticking pain in the *knee-joint*. Sharp pressure on the outer side of the knee, when bending the leg. Burning pain in the left patella. Continuous burning pain in the front part of the right knee.—Burning pain on the outer side and in the lower part of the right *leg*. Burning in the front part of the tibia. Violent stinging in the right leg, extending from below upward, when standing, going off when sitting. Prickings in the outer side of left leg, extending from below upwards, when standing, going off when sitting. Drawing pains in the legs, when sitting and walking. Weakness of the legs, especially when going up stairs. When walking, the right leg is weaker than the left, and nevertheless this leg feels as if the muscles were stretched the most. Corrosive pain in the outer parts of the right leg (when standing). Tearing pain in the outer border of the left leg (when standing). Beating, dull stitches in the surface of the right calf, below the bend of the knee. Stinging in the right calf. Continuous burning stitches in the calf (when sitting). *Aching pain in the left calf. Darting pain in the right calf, going off speedily when touching the part.* Violent itching of the left calf, in the evening, when lying, obliging one to scratch; the itching continues after the scratching; after the scratching the place becomes red and humid. Stitch in the dorsum of the left foot, toward the big toe.—Stitch in the internal malleolus of the right foot, when sitting. Itching stinging in the region of the internal malleolus. *Drawing pain in the dorsum of the right foot when standing, going off when sitting.* Drawing-aching pain in the dorsum of the left foot, when standing. Tearing drawing in the left tarsal-joint. Burning pain in the right foot, externally. Burning drawing in the dorsum of the left foot. *Pressure in the dorsum of the right foot.* Itching in the dorsum of the right foot, going off

by scratching. A few itching vesicles on the dorsum of the foot. Stitches extending from the dorsum into the sole of the foot. Boring pain in the sole of the right foot. Burning boring in the sole of the left foot, toward the little toe. *Sticking pain in the sole of the right foot*, from within outward, when sitting, at times violent, at times fine. Itching stinging in the sole of the right foot. Burning-aching pain in the sole of the right foot, in the direction of the toes, when sitting.—Continuous drawing along the tibia, coming from the little toe, when sitting. *Paroxysms of burning in the toes*, especially in the dorsum of the right big toe. Sticking in the right big toe, in the direction of the second toe. Burning stinging in the right big toe, when walking. Lancinations in the toes. Violent itching in the dorsum of the fourth toe of either foot. A good deal of sweat between the toes, especially those of the right foot.

**Sleep.**—Frequent yawning, when sitting, as if he had not slept enough.—Drowsiness in the day-time (when reading;) his eyes closed, he had to lie down; the drowsiness passed off during motion. Irresistible drowsiness after a meal; on waking he felt a desire to urinate, with some burning; this was felt only before and after the emission of urine. He falls asleep when listening to scientific objects, in spite of his efforts to the contrary, and he has at once vivid dreams. Frequent waking from sleep, and tossing about in bed; he had no rest in any position. Frequent waking from sleep, as if he had slept enough. On waking from sleep, his whole body was covered with a light sweat, exciting a biting in the skin all over, inducing scratching. In the evening when on the point of falling asleep, his whole body was covered with sweat, which continued the whole night; in the morning he felt bright. He began to sweat all over when on the point of falling asleep; the sweat woke him frequently; every time he woke he felt a heat all over his body, and a more glowing heat on his cheeks; he was drenched with sweat, but he felt bright in the morning.—Anxious, vivid dreams, which he is unable to recollect. Dreams full of dispute at night. Voluptuous dreams.

**Fever.**—Chilliness through the whole body. Chilliness for some hours, with continuous, oppressive headache. Violent chilliness when walking in the open air, as in a paroxysm of fever, without being followed by thirst or heat.—Sudden warmth of the face when walking in the open air; also of the rest of the body, without thirst. *Heat in the face, to himself and others, with redness.* Face, hands and the rest of the body are hot, without thirst.—Slight sweat all over. Fever and ague (see *Clin. Obs.*).

**Skin.**—The following skin-symptoms are extracted from a case of poisoning by Taraxacum reported in the London Lancet, January, 1846: A lady took a dessert-spoonful of Hooper's fluid extract of Taraxacum prepared in vacuo, twice a day, for *bad liver* as she termed it, and continued it without intermission for somewhat more than a week, when the following symptoms made their appearance: Feels uncomfortable and restless in herself, a sort of fidgetiness, as she expressed it, and general uneasiness, for which she could not account as she had often been much more indisposed without experiencing such miserable feelings she had, moreover, some nausea, and an uneasy sensation of sinking in the præcordia; her nights were also restless, and her bowels had become confined, rather an unusual occurrence with her. To remedy the latter she took some aperient pills, which operated mildly, with relief to all the symptoms, so that she felt more comfortable, and continued the taraxacum steadily. In the course of two or three days more, however, the constipation, nausea, and all the other uneasy feelings again returned, when she again took, of her own accord, this time, some magnesia, which also operated on the bowels with the same relief as before. At first she did not feel particularly uneasy, or trouble herself

much concerning these matters, thinking they might be the proper effects of the remedy she was taking; accordingly she made little complaint about them, but persevered regularly to take the taraxacum, fully expecting, as she said, that it would, in the end, have the beneficial effect she had been led to anticipate. This vain hope, however, soon vanished, and with it all further confidence in the virtues of the medicine, when, on awaking in the morning, to her great discomfort and amazement, she discovered the upper part of her body covered with a rash, to which her attention was first directed in consequence of its incessant tingling and itching; the itching, in short, was so urgent, that at first she could not possibly refrain from scratching, which afforded much satisfaction and relief for the time; but, as the relief proved only temporary whilst the operation seemed greatly to increase rather than diminish the irritation, by producing a greater abundance of the eruption and increased redness of the skin, she was, therefore, afraid to indulge in it. Her condition now became completely wretched, and feeling altogether much alarmed lest she had done herself some serious and permanent injury by taking this medicine without the sanction of professional authority, my attendance was requested. When I saw her there was no eruption on the face, but it was slightly swollen, and exhibited merely patches of efflorescence or redness, without any thickening or elevation of the cuticle. On the forearms and hands the eruption, when examined by me, appeared to be of a mixed character—lichen and urticaria combined; the lichenous or papular eruption (the papula about the size of a pin's head, and of a purple or dark-red colour) was dispersed over the whole of the arms, back and front, but thicker about the wrists and bindings of the elbows than any where else, in which places it was also clustered together in patches upon an inflamed base. The heads of numerous papulæ appeared to have been broken off, and afterwards covered with a brownish incrustation, as if blood had first exuded and then become hardened; but this, no doubt, was occasioned partly by the friction of the dress, and partly by the scratching to which the parts were, in the first instance, subjected, for the purpose of allaying the distressing tingling and itching from which there is scarcely any respite in such cases. The urticaria occupied principally the front of the arms; the wheals or elevations were not very numerous or prominent, unless friction was had recourse to, by which they could be produced almost to any extent; they were stated to come out and go in again two or three times in the course of the day, and to be always very large and abundant in the morning; the chest and around the waist were also said to be thickly covered, and the redness intense, but I am not permitted to inspect these parts. The pulse was considerably accelerated, full, but soft; and there was also much febrile action, with rather severe frontal headache; the tongue was thickly coated on the back part with a yellowish-brown fur, and there was much complaint of dryness of the throat, in which there was a circumscribed ring of inflammation surrounding the isthmus faucium; the bowels were much confined, and the urine high-coloured, and considerably diminished in quantity. The treatment, of course, was simple, and consisted merely in the administration of saline aperients, together with restricting the patient to the use of a vegetable and cooling diet for a few days; to allay the irritation of the skin the affected parts were to be sponged with vinegar and water twice a-day, or, indeed, at any time when the urgency of the tingling and itching rendered this step necessary. The taraxacum, having been discontinued by the patient herself, previous to my seeing her, was, of course, not resumed; nor would it, perhaps, have been an easy matter to have persuaded her to have done so under existing circumstances. Under this mode of treatment the eruption and other unpleasant symptoms speedily disappeared, and in the course of five or six days there was scarcely a

vestige of the disease remaining, excepting, perhaps, a little desquamation of the cuticle from off the parts where the eruption had been.

**General Symptoms.**—He moves all his limbs with ease, but he feels as if the moving forces were embarrassed.—Weak feeling of the whole body; languor, during which he would like to sit or lie down; when doing either he is in a state between consciousness and unconsciousness, like one who is on the point of falling asleep.—Internal sensation as if he were very sick; all his limbs ache when touched or when placed in a forced position.—Almost all the symptoms appear when sitting; they disappear on walking.

## 235. TARTARUS STIBIATUS.

**TART. STIB.**—Tartarus emeticus.—See **NOACK** and **TRINKS**.

**COMPARE WITH**—Acon., Ant. cr., Asa f., Bar. c., Cham., Cocc., Ign., Ipec., Kali nitr., Nitr. ac., Nux v., Puls., Sep., Verat.—After Tart. stib. are particularly suitable Bar. c., Ipec., Puls., Sep., Sulph.—Tart. stib. is particularly efficacious after Puls. and Bar. c.

**ANTIDOTES.**—Of large massive doses: *China* (particularly the yellow bark), *Ipec.*—Of small doses: Asa f., Chin., Cocc., Ipec., Op., Puls.—The principal remedy for the pustules which Tart. stib. causes on the genital organs, is Conium.—Tart. stib. antidotes Sepia.

### CLINICAL OBSERVATIONS.

*Noack* and *Trinks* propose Tart. stib. for the following affections: Diseases of a metastatic nature.—Hypochondria when the distress evidently proceeds from the abdomen.—Eclampsia lactantium.—Epilepsia cephalica.—Traumatic tetanus.—Fainting fits.—Asphyxia, particularly of new-born infants.—Comatose conditions.—Trembling of old people.—Acute rheumatism.—Arthritis.—Phlebitis.—Sporadic cholera.—Unhealthy skin.—Delaying appearance of the exanthem; suppression of the exanthem.—*Pustula*, phlyctænæ, furunculi, particularly smallpox-like eruptions; *variola maligna, putrida*; Tart. stib. is suitable when the mucous membrane of the trachea has been invaded by variola or varioloid.—Impetigines.—Rash, particularly when mixed with phlyctænæ and furunculi, particularly after vaccination.—Pustulous scabies.—Induration of the cellular tissue.—Abdominal typhus.—Gastric fever.—Rheumatic fever.—Erysipelatous fever, with soft, large, quick pulse.—Exanthematic fever.—Affections of the mind, mania, imbecility.—Delirium tremens.—Chronic arachnitis and meningitis.—Encephalomacia?—Chronic hydrocephalus; hydrocephalus from suppression of a cutaneous eruption.—Clavus hystericus.—Ophthalmia, particularly rheumatic.—Amblyopia, amaurosis, particularly rheumatic or gastric, also in pregnant females, after violent paroxysms of colic, strong emotions, in hypochondriac and hysteric individuals.—Rheumatic prosopalgia.—Stomach.—Inflammation of the fauces and angina, particularly in acute exanthems.—Difficulty of swallowing, dysphagia, particularly in drunkards, hysteric and hypochondriac persons; metastatic dysphagia; dysphagia preceding the appearance of fever eruptions; dysphagia in encephalitis and injuries of the head; dysphagia when apoplexy is threatening.—Esophagitis.—*Vomitition and vomiting*: previous to an attack of megrim; in violent congestions of the head, intoxication, injuries of the head, concussion of the brain; in metastatic cerebral affections; in dropsy of the brain at every motion of the head; in the case of

hypoehondriae, hysteric and frantic individuals; in the precursory stage of eruptive diseases; in the case of small-pox patients; after scarlatina, when anasarca threatens to set in; in consequence of overloading the stomach; after suppression of local sweat, sudden healing of old cutaneous eruptions and ulcers; in consequence of suppressed paroxysms of the gout; in inflammation of the thoracic and abdominal viscera; in the case of parturient and lying-in females, after suppression of the lochia; in inflammation of the veins; in puerperal fever; in affections of the kidneys and stone in the bladder; in violent paroxysms of cough.—Vomiting of bile.—Vomiting of blood, particularly in debauched people, pneumonic patients, feverish cutaneous eruptions, suppression of the menses.—Cardialgia simplex, particularly when venous congestion of the stomach is present.—Gastritis.—Gastromalacia.—Cholera morbus.—Venous congestion of the abdomen.—Ascites.—Bright's disease.—Peritonitis. Enteritis.—Enteromalacia.—Bilious, rheumatic, dysenteric, paralytic diarrhœa. Diarrhœa preceeding a paroxysm of megrim. Diarrhœa accompanying acute exanthemata, particularly miliaria; diarrhœa during or shortly after the eruption of smallpox, during scarlatina. Diarrhœa attending on inflammatory diseases, particularly pneumonia. Diarrhœa of drunkards.—Cystitis.—Stone.—Retention of urine, particularly in eruptive fevers, especially smallpox, or after violent emotions, injuries of the head, in chronic hydrocephalus.—Ischuria hæmorrhoidalis.—Inflammatory affections of the trachea. Bronchitis of infants, catarrhal cough with croup-sounds.—Tussis ferina.—Whooping-cough.—Croup.—Laryngeal and tracheal phthisis, particularly when aphonia is present.—Rheumatic pleuritis, particularly when complicated with bronchitis, with difficult expectoration, dry, tormenting cough.—Pneumonia vera, bilious pneumonia in the second or third stage. Bilious, rheumatic pleuropneumonia.—Pneumonia notha.—Asthmatic complaints, particularly in eruptive fevers, or when hæmoptoe threatens to set in, in the case of drunkards, in affections of the diaphragm, in plethoric persons when arising from an emotion of the mind, in mismanaged angina pectoris. Paralysis of the lungs.—Asthma Millari, particularly after measles or croup.—Rheumatism of the heart, with dilatation.

NOTE ON THE ADMINISTRATION OF THIS MEDICINE, BY NOACK AND TRINKS.

In hydrocephalus metastaticus it is indispensable to use the remedy both internally and externally; externally it has to be used in large doses, (in the form of a solution or ointment).

#### SYMPTOMS.

**Mind and Disposition.**—Loss of sense.—*Dulness and dizziness.*—Stupefaction and suppression of all the sensual functions.—Delirium; muttering. Wild mirthfulness with subsequent ill-humour, vexed mood and anxiety for the future.—Apprehensiveness and restlessness; great anxiety; *anguish with cold sweat.*—Excessive uneasiness of mind, with indisposition to work, proceeding from the abdomen.—Desponding, chilly, with pain in the chest and great drowsiness, towards evening.—*Tendency to start.*

**Head.**—Vertigo, with scintillations, particularly on lifting a thing, raising one's self or walking.—*Heat in the head*, increased by motion. Heat about the forehead.—Violent headache, with vertigo and palpitation of the heart.—Dulness of the head, with pressure in the temporal region.—*Dulness and stupefaction of the head, with tensive sensation and drowsy and weary feeling.*—Intoxication with difficulty of moving the tongue.—Pain in the anterior portion of the head, (clavus hystericus).—*Headache with pressure from without inwards.*—*Tensive, stupifying headache, with pressure from without inwards, in the fore-*

*head and over the root of the nose, particularly proceeding from the temples, with drawing and digging to the root of the nose.*—Painful drawing from the temporal region to the malar bone and upper jaw.—Dull pressure in the forehead, sometimes changing to a sticking, aggravated by cough.—Twitching, drawing and tension in the forehead.—Slight sticking or lancinating tearing in the forehead.—Sharp stitches in the whole head, during motion, or only in the temples.—*Intermittent tearing in one side of the head.* *Slight tearing*, drawing pain from behind forwards in one side of the head. Painful drawing to and fro in the anterior and superior portion of the head, with tensive pressure.—Heaviness of the head, particularly of the occiput.—Acute pain in the right hemisphere of the brain, with feeling of heaviness, as if the brain were transformed into a hard lump.—*Trembling of the head during every motion of the body.*

**Eyes.**—*The eyes feel so weary that they close.* Disposition to press the eyelids firmly together.—The eyeball feels bruised, particularly on touching it.—Tearing in the eyes.—Darting in the inner canthi, with pressure in the eyes.—Burning and smarting in the inner canthus, with redness of the conjunctiva.—Burning in the eyes, in the evening.—*The coats of the eye become redder and more sensitive, swell up, the ciliary vessels becoming turgid with blood,* (from the external application of the remedy).—The eyes are turgid with blood, (accompanied with strangulation).—Passing and frequently-recurring scintillations, mistiness and vertigo, particularly on rising from a seat.

**Ears.**—Humming.

**Nose.**—Ulcerated nostrils.—Bleeding.—Sneezing and fluent coryza, with chilliness, deficient smell and taste. The coryza is preceded by bleeding at the nose.

**Face.**—Blue margins around the eyes, blue lips, pointed nose, wretched look and great paleness.—Great heat in the face.—Red face, (from strangulation of the throat).—Intensely-painful drawing and lastly dull pressure in the malar bone.—Convulsive twitching of every muscle in the face.—*Spasmodic closing of the jaws.*—*The lips are parched, scaly, cracked, excoriated, red.*

**Pharynx.**—Sudden swelling of the cervical glands and tonsils.—Spasm of the cervical muscles.—Burning heat in the throat.

**Teeth.**—Violent toothache, early in the morning.—The teeth are covered with mucus.—*Red gums.*

**Mouth.**—*Dryness of the mouth.* Burning in the mouth.—Inflammation of the mouth and mucous membrane of the tongue, with small pustules. Large pustules in the mouth, depressed in the centre.—Swelling and excoriations in the mouth. Aphthæ.—Increased secretion of saliva.—Difficulty of moving the tongue.—The tongue is moist and clean, gray or coated white. Red tongue, covered with raised papillæ, (as in scarlatina). The tongue is bright-red and dry in the centre.

**Pharynx and Œsophagus.**—Constant disagreeable sensation about the palate.—Violent sore throat.—Painful dry heat and redness in the throat. Inflammation of the pharynx with small pustules. The soft palate is bright-red, swollen, covered with tenacious mucus and vesicles.—The fauces and Œsophagus are covered with large pustules depressed in the centre. Difficulty of swallowing, the Œsophagus is tightly closed so that not the least drop can pass, with red face, eyes turgid with blood and vertigo.—Dysphagia with difficult breathing.

**Appetite.**—Disagreeable, bad taste in the mouth. Metallic, astringent taste. Saltish taste. Food tastes flat. Foul, qualmish taste, with accumulation of water in the mouth.—No thirst on one day, and thirst again the next. Desire for water and apples.—Canine hunger, while walking in the open air.—*He relishes his food, but is frequently attacked with loathing after having eaten.*

—*Constant loathing.*—Qualmishness, prostrate feeling.—Indescribably-unpleasant feeling internally. Qualmishness in the stomach after a meal.

**Gastric Symptoms.**—Frequent nausea with anxiety, alternating with general uneasiness, or else continuing, accompanied with great dulness of the head, disagreeable feeling in the throat, pressure in the pit of the throat. Nausea with disposition to vomit, in repeated paroxysms, proceeding from the region of the umbilicus and stomach.—*Constant nausea, vomiting and diarrhœa.*—Nausea, cutting in the abdomen with sensation as if a stone were laid across it, retching with urging to diarrhœa, vomiting of food having a sour taste, with great exertions, trembling of the body, bending double, and lastly a scraping sensation in the throat, chilliness and watery diarrhœa.—The nausea is relieved for a short time by eructations and emission of flatulence.—The nausea is followed by a feeling of emptiness in the stomach.—*Empty or putrid eructations*, and frequent regurgitation of the beverage, or rising of an acrid, sour or saltish-watery fluid into the mouth, which, if swallowed, leaves a sourish taste and scraping sensation.—Hiccough, rising of air resembling hiccough.

**Stomach.**—Audible shifting of flatulence in the stomach.—Sensation as if the stomach were overloaded, with putrid eructations, disposition to vomit, pinching in the region of the stomach and stinging pain in the anterior and superior portion of the head.—Ineffectual retching. Frequent violent retching with accumulation of water in the mouth, languor and sweat on the forehead.—*Violent vomiting*, with headache, trembling of the hands and general racking of the body. *Spasmodic vomiting* of tenacious substances. Excessive vomiting of bile.—Hæmatemesis.—Cholera morbus with vomiting.—The vomiting is preceded by an exceedingly troublesome feeling of nausea, anguish, yawning, profuse lachrymation, violent pressure at the stomach.—The vomiting is followed by great languor, drowsy and weary feeling, loathing, desire for cooling things, pale, sunken face, and dim swimming eyes.—Violent oppression of the stomach, momentarily relieved by nausea.—Violent beating in the region of the stomach.—Unpleasant sensation of warmth and burning in the region of the stomach.—Congestion of blood to the stomach.—Excessive pains in the stomach.—Violent cardialgia, bordering on inflammation.—Inflammation of the stomach.

**Abdomen.**—Burning in the left hypochondrium, in the pit of the stomach and abdomen.—Cutting and sticking in the pit of the stomach, particularly when drawing in the abdomen.—Excessively-disagreeable sensation in the præcordia.—The abdomen is sensitive to contact.—Swelling of the epigastrium. The epigastrium is distended.—Painful tension all round below the short ribs, as if from incarcerated flatulence, hindering sitting.—Hard pressure and stitches in the epigastrium.—*Violent colic as if the bowels would be cut to pieces.*—Violent cutting and writhing in the abdomen, and labour-like tearing from above downward across the groin through the thighs down to the knees, with fine, violent stitches in the umbilical region, nausea, accumulation of water in the mouth, shifting of flatulence with rumbling in the abdomen, and diarrhœa.—Great malaise in the epigastrium and hypogastrium, obliging one to lie down.—Sensation as if one would vomit with urging to diarrhœa, relieved by emission of flatulence by the mouth and rectum. Pain in the epigastrium and hypogastrium, increased by pressure.—*Tearing, violent cutting and pinching in the abdomen*, relieved by stool.—Aching, tense pains in the region of the pubic bones.—Violent pressure in the abdomen as if filled with stones, without hardness of the abdomen, aggravated by sitting, particularly by sitting bent, occasioning a continual motion of the limbs, much uneasiness and lowness of spirits.—Pulsative sensation in the abdomen.—Sensation of great fulness in the abdomen.—*Meteorism.*—Rumbling and pinching in the abdomen, with emission of

flatulence.—Pressure on the rectum with silent emission of hot flatus, affording relief.

**Stool.**—Light-brown yellow diarrhœic stool.—Uninterrupted watery evacuations. Colliquative diarrhœa with meteorism. Involuntary diarrhœic stool, (death in thirty-six hours).—Diarrhœa and vomiting.—Violent shifting of flatulence in the undistended abdomen previous to the diarrhœic stool.—Palpitation of the heart during the diarrhœa.—Tenesmus.—Bloody stools.—Burning at the anus after stool.—Sudden violent stitches from the abdomen through the rectum. Shooting stitches in the rectum.—Heat and burning pains in the anus. Violent tension in the perinæum.

**Urinary Organs.**—Sharp stitches in the region of the kidneys, particularly when moving the arm. Violent tension with pressure in the region of the bladder. Acute sticking pain in the lower portion of the bladder. Troublesome burning-titillating sensation from the rectum through the urethra as far as the glans, particularly in the latter.—Violent pressure on the bladder, with violent tension in the perinæum.—Pressure upon the bladder with scanty emission, violent thirst, waking him from sleep at night.—Violent pressure on the bladder, with burning in the urethra, emission of the urine in drops, the last drops being bloody, and accompanied with violent pains in the bladder.—Inflammatory red urine, depositing bloody, red filaments when standing.—Dark-brown red turbid urine, having an acrid smell. Watery urine with mealy sediment.—Urine leaving white spots (antimonial spots).—Increased secretion of urine.—Increased burning in the urethra after micturition.

**Male Genital Organs.**—*Pustules.* Constant sticking pain in the posterior portion of the urethra.—Tearing in the testicles.

**Female Genital Organs.**—*Pustules.* Pressure and pain in the groin with cold creepings, previous to the appearance of the menses. Discharge of watery blood from the vagina.

**Larynx.**—Feeble voice. Aphonia from exhaustion or after clonic spasms. Dumbness. Burning under the sternum.—Cough and sneezing.—Violent titillation in the larynx inducing cough.—Loose cough at night.—Rattling of mucus.—Cough after a meal, with vomiting of the ingesta.—Cough of children, occasioned by anger.—The coughing spell is accompanied with sweat about the head, heat and dampness of the hands. Gasping for air at the commencement of every paroxysm of cough.

**Chest.**—Short, difficult breathing, obliging him to sit up in bed. Want of air obliging one to sit erect, relieved by coughing and expectoration.—Nocturnal paroxysm of orthopnœa.—Frequent attacks of unequal, intermittent breathing during sleep.—The inspirations are less frequent.—Unusual oppression of the chest. Difficult breathing accompanying the dysphagia.—*Velvety feeling in the chest.*—Paroxysms of sore pain in the chest, with desponding mood.—Feeling of warmth about the heart, and sudden attack of great languor, obliging him to let his arms hang down. Warmth and anxiety about the heart, with violent palpitation re-echoing in the head.—Tingling and pushing in the pit of the stomach, with violent, sudden beating of the heart, returning every night and continuing until sweat breaks out.—Palpitation of the heart without vexed mood, with lowness of spirits. Palpitation during the diarrhœic stool.—The heart almost ceases to beat.—Dilatation of the heart.

**Back.**—Burning in the back.—Rheumatic pain in the back. Painful sensation in the back, as if from weariness, particularly when sitting, or in the small of the back as after carrying a load.

**Upper Extremities.**—Pain in the shoulder as if sprained.—Cracking in the shoulder-joints and tearing extending to the hands.—Violent tearing-jerking and

intermittent drawing in the arm. Violent drawing and uneasiness in the arms.—Rheumatic pain in the elbows.—Violent tearing in the muscles of the forearm.—Rheumatic drawing in the hand.—Trembling of the hand. Cold hands and icy coldness of the tips of the fingers.—Deadness, dryness, hardness and insensibility of the tips of the fingers.

**Lower Extremities.**—Heaviness in the loins.—Violent rheumatic drawing and uneasiness in the lower limbs, particularly in the region of the knee.—Lancinating tearing pain in the hip, in the thighs and legs.—Extremely-painful cramps in the thighs and calves.—Sticking in the hip and knee.—Intensely-painful burning, slow jerking in the knee-joint, occurring regularly as beats in music.—Tension in the hamstrings and on the dorsum of the foot when walking.—Sudden, painful grumbling in the big toe at regular intervals as beats in music.—The feet go to sleep, particularly after sitting down.—Cold feet.

**Sleep.**—Constant yawning and stretching.—Laziness and great drowsiness with vertigo, particularly when sitting, even in the open air when riding on horseback.—Irresistible desire to sleep, in the forenoon, particularly when sitting, with vivid dreams during which the thoughts he had when waking, continue, with frequent starting.—Drowsiness in the day-time.—Deep sleep.—Lethargy.—Sleeplessness before midnight or the whole night.—Restless sleep, frequent waking after anxious dreams, with dryness of the mouth and chapped lips.—Light sleep at night full of dreams about events. Dreams about fire. Clear and coherent talk during sleep. Sudden jerks during sleep, proceeding from the abdomen; at times one, at times the other arm is jerked up, at times a leg and then the whole body.

**Fever.**—Anxiety and restlessness.—Great malaise all over, arising from the abdomen, with involuntary moaning and internal uneasiness, causing him to leave his seat.—General uneasiness alternating with nausea.—Yawning and stretching.—Cold creeping through the veins.—Chilliness about the whole body, with tremor, several forenoons in succession, also at night and early on rising, or in the afternoon.—*Cold as marble, after the clonic spasms, with collapse of pulse.*—Chilliness in the evening, followed by great heat and drawing in the occiput. Chilliness during motion, alternating with heat, the patient wakes at night with thirst and pressure on the bladder. *Chilliness with flushes of heat.* Loss of appetite and increased colic, returning every evening at the same hour.—*Great heat and thirst.*—Restlessness, violent febrile motions, great heat, thirst, headache, with profuse sweat in the night following.—*Excessive heat of the body,* morning and afternoon, aggravated by the least motion, particularly in the head and face.—Heat, profuse sweat, irresistible desire for sleep, and increased secretion of urine.—Frequent sweats, particularly on the affected parts. General, profuse sweat. Profuse night-sweat. Cold, clammy sweat. Throbbing in every artery of the body, perceptible even externally. Sweat on the forehead, and nape of the neck. Quick, almost audible throbbing all over.—Quick, feeble, tremulous pulse. Irritated pulse. Full, quick pulse. The pulse is softer and quicker than usual (88). The pulse is weaker and slower than usual.—Slow pulse (50). Small, contracted, accelerated pulse. Suppressed, irregular, imperceptible pulse. Collapse of pulse. Gastric fever.

**Skin.**—Pale skin.—Cold clammy skin, particularly about the head and extremities.—Insensibility of the skin.—Disposition to swellings, erysipelas and ulcers.—Itching of the skin, with general uneasiness and loathing, aversion to the appearance of an exanthem. Itching around the old ulcer. Crawling itching in the wound. Dark-yellow spots of tolerable size, particularly on the fingers.—Small, red spots on the hands, resembling flea-bites.—Violent, itching, suppurating rash, particularly on the occiput, chest and arms. Itch-like erup-

tion, particularly on the wrist-joint and upper arm.—Pustulous eruption on the whole body, *particularly on the genital organs*, also on the mucous membrane of the inner mouth, fauces, œsophagus and larynx. Single vesicles or blotches, not very much inflamed, and resembling chickenpox, gradually increasing in size and number, filling with pus, and then surrounded by red inflamed areolæ; they resemble smallpox, afterwards form crusts which, on falling off, leave red spots which become whiter than the rest of the skin. Small red pustules, increasing in size and numbers on the third day; on the fourth day they are surrounded with brown elevated edges, form crusts and suppurate in the centre; on the 6th and 7th days. Some of them attain the size of the nail of a thumb, look like flat ulcers and contain a good deal of pus; on the eighth day most of them flow into each other and discharge pus and blood.—*After the pustules*, rash over the whole body, with profuse sweats, difficult breathing, constant heat, thirst and headache.—*Round, large, full, burning, painful pustules*, with red areolæ, forming in two weeks and leaving deep cicatrices.—Furunculous-pustulous eruption, occasioning a violent painful itching, generally suppurating, from the size of a pin's head to that of a pea.—Pustulous eruption, the pustules filling with pus, drying up in a few days and sometimes leaving deeply-penetrating, malignant ulcers.—Pale, livid, blackish depressed pustules, containing a bloody or blackish fluid, the skin underneath being œdematous or livid. Pustules filled with blood or bloody serum, collapsing when bursting, turning blackish and frequently changing to malignant, broad deep ulcers, which sometimes penetrate into the substance of the muscles, spread and become covered with dead flesh; they frequently leave ugly marks.—*Gangrenous ulcers* with violent wound-fever.

**General Symptoms.**—Weariness in every part of the body.—Drawing-tearing, aching, tensive, also beating and stinging pains.—Pains as if sprained and bruised feeling in the limbs.—Cracking of the joints.—Complaints proceeding from the abdomen (malaise, restless mood, shocks and jerks in the limbs).—Great sensitiveness of the whole body, even when touching it.—Disposition to morbid sensitiveness.—Complete insensibility (of animals and men). Tremor during every motion of the body, particularly of the head and hands. Peculiar internal trembling.—*Spasmodic movements* and convulsive twitchings about the arms and hands. Violent clonic spasms, with loss of consciousness, lockjaw, striking about with the limbs, and subsequent loss of pulse, speech, and marble-coldness of the body.—Deathlike rigidity and convulsive distortion of the body, (with gangrenous feel which are excessively painful).—Death-struggle.—Paralysis (in animals).—*Fainting fits*: feeling of coldness in the pit of the stomach, qualmishness so violent that he came near falling, heat in the head, loss of consciousness.—Great laziness and weariness in the limbs, relaxation of the whole body, great prostration and languor, exhaustion, collapse of pulse, loss of speech, marble-coldness of the body.—Stitches in the varicose veins from below upwards, with painful, smarting itching in themselves. Inflammation of the veins (from injecting the poison into the median vein).—Caries of the skull-bones (after frictions).—Gastric dyscrasia and gastric affections, with general sinking of the irritability.—Difficult digestion.—Cholera morbus.—Emaciation.

**Characteristic Peculiarities.**—The symptoms come on or are aggravated by sitting, frequently last only a short time, and recur in paroxysms.

#### PATHOLOGICAL ANATOMY.

*In Men.*—The head is drawn to the left side.—Thickening of the dura mater, which adheres firmly to the inner table of the skull (in the place where the ointment had been rubbed in); towards the anterior portion of the left hemisphere of the brain a circular portion of the dura mater of one inch and a half

in diameter was found ossified (in the case of a man of 50 years, who had poisoned himself with 40 grains of tartar emetic, and died on the fifth day. *Orfila*).—Thickness and opacity of the arachnoid membrane at the upper surface of the brain; the membrane was found uniformly red and inflamed, particularly on the right side, between the two hemispheres, (in the case of the same individual).—A large number of elevations filled with a reddish serum, were found at the base of the brain.—The cerebral substance was softer than usual.—The lateral ventricles contained a serous, transparent, colourless liquid, the larger quantity (from four to five spoonfuls) being contained in the left.—On moving the body, a viscid, white fluid flowed out of the mouth.—The mucous membrane of the stomach and intestines was unusually pale (*Lænnec*).—The peritoneum was of a brick-red all over (*Orfila*).—The stomach and bowels were distended with blood. The mucous membrane of the stomach (except in the cul-de-sac) was red, swollen, exhibiting a visceous covering, and easily seen; the same condition of the mucous membrane prevailed in the duodenum.—Gangrene of the coats of the stomach, putrescence of the spleen, diaphragm, lungs.—The larynx is covered with large pustules depressed in the centre.—The trachea likewise.—The limbs are very stiff and half bent.

*In Animals* (dogs, rabbits).—Inflammation and hepatization (even gray hepatization) of the lungs.—The lungs are very much altered, of an orange-coloured or violet appearance, not crepitating, filled with dark blood, with contracted parenchyma, some portion of which resemble the parenchyma of the liver and others that of the spleen.—The mucous membrane of the intestinal canal from the mouth down to the orifice of the rectum, is red, the blood-vessels being turgid with blood.—Obstruction of the mesenteric arteries.—Uniform, deep, dark-red colour of the blood, particularly in the lungs and the medullary substance of the brain.

## 236. TARTARI ACIDUM.

TART. AC.—See PRACT. COM., 1827.

### SYMPTOMS.

The whole body, particularly the lower limbs, feel bruised. The symptoms seem to be less in the open air.—Frequent yawning and stretching.—Feeling of coldness, in the evening, in bed.—The lips are dry and burning, also with black or brown margins.—Dulness of the teeth.—The mouth is slimy with flat taste.—Loathing.—Feeling of coldness in the abdomen. Pinching in the abdomen, with emission of flatulence.—Violent tearing in the sole of the foot, after a meal, not allowing him to step.

## 237. TAXUS BACCATA.

TAX. B.—Common yew-tree.—See BIBLIOT. HOM. DE GENÈVE.

COMPARE WITH—?

ANTIDOTES.—?

### SYMPTOMS.

**Head.**—Vertigo. Stupefaction. Headache like heaviness, over the right eyebrow in the right temple; increased by coughing, with increased lachryma-

tion; the same pain is felt on the left side after twenty-four hours. Pain in the forehead, extending to the face, with drawing in the eyes and profuse lachrymation. Burning headache. Dragging pain from both sides of the head. Pressure in the left temporal region. Stinging pain in the forehead. Pain over the eyebrow, accompanied with luminous circles which are in constant motion, particularly before the right eye, accompanied with sensation of emptiness in the stomach about the hour of dinner, relieved by eating. Heat on the forehead.

**Eyes and Mouth.**—Itching pain of the eyes. The eyelids dropped and looked bluish. Drawing in the eyes, with itching, relieved by rubbing. Lachrymation in the open air and in the room, on exerting the eyes ever so little. Lachrymation of the left eye. Violent itching of the outer canthus of the left eye. Small, dry tetter at the outer canthus of the left eye, on a red base, with violent itching.—Dilatation of the pupils.—Bluish lips.—Coldness in the upper cuspidati.—Stinging warmth in that portion of the tongue which was touched by the medicine.—Bitter taste in the mouth as from Peruvian bark, not continuing long. Tenacious, burning, saltish saliva. Ptyalism. Thick saliva, more salt than usual, sometimes so acrid that it causes a burning in the mouth.

**Appetite and Stomach.**—Unusual desire to eat, returning after being satisfied, accompanied by general debility, malaise and weakness in the region of the stomach.—Loathing, sometimes followed by vomiting of mucus or saburra, rarely mixed with bile. Nausea with profuse secretion of hot saliva.—Painless vomiting.—Pain in the pit of the stomach, sensitive to the least pressure; the oppression is aggravated by pressing on the stomach, which causes a slight cough with expectoration. Pinching and burning pressure in the region of the stomach. Feeling of emptiness in the stomach, without hunger.

**Abdomen.**—Uncomfortable distention as from eating too much. Dragging and tension across the abdomen. Pressure across the umbilicus. Slight dull pain in the region of the umbilicus. Shifting of flatulence with dull pain and stool at an unusual hour. Rumbling and gurgling before breakfast, rising from the hypogastrium to the umbilicus.

**Stool.**—Hard stool (during the whole time of proving). Small evacuation with tenesmus. Soft stool in the morning, quite unusual. Slight diarrhoeic stool with tenesmus. Unusual soft and frequent stools. Diarrhoea with tenesmus and intolerable pain at the anus during and after every evacuation or urging.

**Urinary and Genital Organs.**—Some tenesmus of the bladder. Tenesmus of the bladder, with some burning pain in the urethra. Ischuria. Strangury and reddish urine. Troublesome micturition, frequently alternating with emission of clear urine. Frequent urging to urinate, the urine is passed with difficulty, in a thin stream.—He is very active during an embrace, without increase of sexual desire. Prostration after an embrace and great oppression (relieved by Staphysagria).—Appearance of the catamenia.—Discharge of mucus from the vagina.

**Larynx and Chest.**—Violent, fatiguing cough. Hacking cough, soon after dinner, excited by a deep inspiration, with slight oppression. Cough without expectoration, only in the day-time, most violent before and after a meal. Oppression in the day-time, particularly when the stomach is empty or full. Pain in the region of xiphoid process when coughing, aggravated by making the least pressure on that part. Sticking in the left side.

**Back.**—Cutting pain in the sacral region, when walking, obliging him to support his loins. Cutting pain under the loins, preventing him from sitting

and standing and hindering the free movement in bed; going off gradually after the lapse of five days. Not continuing, slight pain in the upper part of the back, increasing after twenty-four hours.—Drawing in the left cervical muscles. Pain in the left shoulder, shifting after the lapse of an hour from the shoulder to the loins.

**Extremities.**—Rigidity of the extremities with a sort of immobility, particularly after sweating, followed by fleeting, but violent pains. Numbness and paralysis of the limbs. Acute pains in the knees, elbows and in various parts of the vertebral column. Acute flying pains in the limbs after sweating.

1. *Upper Extremities*: Pain in the olecranon, during motion and rest, but worse during motion, shifting about, but always towards the humeral extremity, seems to be seated in the periosteum. Dull pains in the phalangeal articulations of the right hand. Pain in the right index-finger, for several days, not constant, particularly excited by the contact with some liquid either warm or cold. Pain in the joint between the first and second phalanx of the left middle-finger.

2. *Lower Extremities*: Pain in the left hip, with feeling of warmth in the interior of the hip, with tearing and intense feeling of coldness on the outer side. Moderate and superficial pain in the right hip and knee, and a more deep-seated but not more acute pain in the right thigh: a sort of tearing with chilliness; only in the day-time. Painful movement in the right knee, around the patella; after some time a similar pain is experienced in the left knee after it had ceased in the right. This pain reappears very violently after taking coffee and wine, preventing walking; violent stitches in the knees, with excessive feeling of debility in those parts, sometimes as if the knees would give way suddenly, with cutting pain. Excessively-violent cutting pains in both knees, more in the left, going off at night and then shifting to the tarsal joint. Flashing stitch in the articulation between the first metatarsal bone and the phalanx of the right foot. Podagra. Violent pinching on the middle of the left calf, with circumscribed itching in that region. Tingling sensation in the right leg, down to the sole of the foot, where the sensation was more perceptible. Tingling sensation in the whole left foot.

**Fever.**—Unpleasant coldness on both thighs, particularly anteriorly, the whole day. Tremor as at the commencement of a fever-paroxysm, after breakfast, dryness of the mouth without thirst, general malaise (for half an hour). General shuddering at two o'clock in the morning, lasting a few minutes, followed by dry heat particularly of the hands and feet, with general malaise, dryness of mouth without thirst, afterwards profuse sweat on the forehead which ceases three hours after the paroxysm. Unpleasant dryness and great heat in the palms of the hands for several days.—Profuse night-sweat.—Fetid sweat.—Sweat on making the least exertion, with great debility. Viscid, fetid sweat, with violent itching and redness of the skin.

**Skin.**—Broad, rather flat pimples on the posterior and upper portions of both arms, with violent itching. Red-brown spot on the nose, without pain or itching, sensitive to pressure only in the centre, where a pimple forms which scales off in a few days. Eruption on the dorsal surface of the right forearm, preceded by a burning itching: hard, round, red pimples, scaling off; new pimples keep constantly forming in the middle, for one month; slight military eruption on the left forearm. Cutaneous eruptions, frequently appearing several weeks after the last dose, frequently with symptoms of gangrene; phlegmonous erysipelas; pustules on the skin; itching of the skin in the region of the cutaneous glands). Petechiæ without fever, death in four days, with some inflammation of the stomach.

**General Symptoms.**—General malaise: Reeling during rest, when sitting,

particularly when standing. Restlessness which scarcely allows of any mental exertion.—Convulsions.—Complete sleeplessness. Yawning, without drowsiness. Feeling of drowsiness.—Excessively taciturn.—Jaundice?—Gangrenous decomposition of the fluids?—Violent narcotic affection of the nervous system.

#### PATHOLOGICAL ANATOMY.

The body is covered with dark-red spots; the lips blue; pupils irregular; the mucous membrane of the stomach and intestines is softened and red; the lungs exhibit a vivid color (?); the cerebral vessels are turgid with black blood (in a child, *Hurt*).—Traces of inflammation of the stomach, softening of the mucous membrane, accumulation of dark blood in the heart and brain, (*Wibmer*).

### 238. TEREBINTHINA.

**TEREB.**—Oleum Terebinthinæ.—See *HARTLAUB* and *TRINKS' Annals*.

**COMPARE WITH**—Aeon., Bell., Camph., Canth., Nux v., Puls.

**ANTIDOTES.**—Camph.?, Canth.?

#### CLINICAL OBSERVATIONS.

Anasarca and ascites.—Chronic catarrh of the bladder.—Ischias nervosa.

#### SYMPTOMS.

**Mind and Disposition.**—Mania, continuing for several days.—He thinks with ease.—Difficulty of chaining one's attention.

**Head and Sensorium.**—Vertigo.—Two paroxysms of sudden vertigo, with obscuration of sight. Intoxication: profuse sweat from morning till night, stupefaction, and deep sleep from which he wakes in the morning confused and languid, with reeling when standing; copious and rapid micturition afforded great relief. The intoxicating effects of wine were considerably augmented by oil of turpentine, particularly the vertigo.—Dull headache with colic. Aching pains in the whole head, with vomituration, at times abating, at others returning. Heavy oppressive pain over the left eye, in the evening, for half an hour, when sitting and exerting the head. Excessive fullness and pressure in the head, causing her to scream constantly. Slight tearing headache. Tearing headache, towards the right side, for nine days. Tearing from the forehead to the right ear which feels hot to her, the left ear feeling cold. The tearing headache lasts until evening, going and coming. Cutting in the forehead. Shooting in the right mastoid process. Cutting, titillating pain in the left temporal region, going and coming, going off by rubbing, in the evening in bed.

**Eyes.**—Black motes, momentarily, during a walk in the open air, with quick-passing sensation of vertigo.

**Ears.**—Sensation in the ears as of the striking of a clock, increasing for four hours.

**Face.**—Drawing in the bones of the right half of the face and forehead, in the evening.—The face is pale and sunken.—Herpes on the tibia.

**Nose.**—Discharge of a watery fluid at times from one, at times from both nostrils, without symptoms of catarrh. Violent bleeding at the nose.

**Teeth and Mouth.**—Drawing in the teeth. °Burning soreness and interstitial distention of the gums every morning, with liability to bleed on brushing

the gums.—Burning in the tip of the tongue, with great elevation of the papillæ.

**Pharynx and Œsophagus.**—Pleasant coolness in the pharynx. Scraping sensation in the throat. Warmth and scraping in the pharynx and stomach.

**Appetite.**—Want of appetite, even for favorite dishes. Aversion to meat. Sudden desire for rue, after a copious supper, while performing some intellectual labor with great industry and pleasure.—Bloated abdomen after a meal. Pressure in the pit of the stomach, after a meal as after swallowing food too hastily.—Rancid eructations.—Slight nausea.—Vomiting of yellowish mucus.

**Stomach.**—Pressure in the stomach, changing to slight nausea which passes off after an eructation. Pressure in the stomach, while lying on the left side, disappearing by turning to the right side. Pressure in the pit of the stomach, as if from without. Slight painful pressure at a small spot in the pit of the stomach, disappearing on stooping, or when lying or drawing deep breath. Sensation as if he had swallowed a ball which had remained lodged in the pit of the stomach. Pinching below the pit of the stomach, with nausea and eructations. Feeling of warmth and pain in the region of the stomach. Burning in the stomach, with nausea and vertigo. Warmth in the pit of the stomach, when sitting, in the evening, with much yawning and accumulation of water in the mouth.

**Abdomen.**—Meteorism, frequent colic and movements in the bowels. Distention of the abdomen, as from flatulence. Heaviness in the abdomen, after the siesta. While lying down, after dinner, he feels as if the umbilical region were pressed upon by a round, cold, flat surface. Sensation of coldness in the abdomen, as if uncovered, after dinner. Pressure below the diaphragm, shifting from the left to the right side. Violent burning pressure in the hypochondria. Slight pressure and drawing in the left epigastric region. Aching and cutting pain under the left ribs, when sitting, going off during motion. Burning in the right hypochondrium. Cutting in the hypogastrium. Lancination in the left side of the abdomen, in the evening, while in bed, afterwards also in the right side. Constant cutting in the whole abdomen, thence extending into the thighs, both during rest and motion. Cutting in the abdomen, with protruded places here and there. Shooting in the left side of the epigastrium, in the evening, during micturition. Pinching and sticking in the right side, shortly after an evacuation. Sensation as if the bowels towards the spinal marrow were constricted, with anguish, hunger and thirst. Rumbling in the abdomen. Aching pain in the left kidney. Pressure in the kidneys, when sitting, going off during motion. Sensation of heaviness and pain in the region of the kidneys. Pain and sensation of increased warmth in the region of the loins, in the parts corresponding to the kidneys, also in the hypogastrium; the hypogastrium is sensitive to pressure which occasions tenesmus of the bladder, strangury, pains in the urethra. Fleeting drawing in the right kidney, and thence proceeding to the right hip. Violent burning, drawing pains in the region of the kidneys. Sensation as if the pubic arcade would be suddenly distended. Fleeting tearing pain in the symphysis pubis. Crampy pressing and pushing in the groin, from within outwards, as if hernia would press out, alternately in the left and right groin, going off when walking; for weeks. Cutting drawing in the right groin, passing off soon. Burning itching of the skin of the right groin. Slight and painful swelling of the inguinal glands, when sitting.

**Stool.**—Ineffectual urging.—Costive, with distention of the abdomen. The stool is harder and less copious. The fæces are of a chesnut-brown and unnaturally dry.—Papescient stool, with pinching in the abdomen and burning at

the anus. The stool is thin, greenish-yellow, smelling of turpentine. Diarrhoeic stool with diminution of the nausea. Eight discharges of mucus and water, with pieces of tænia. Thin, yellow stools with discharge of tænia and ascarides.—Burning at the anus, after stool. Violent burning in the rectum. Itching burning at the anus, after stool. Burning and tingling in the anus, with sensation as if ascarides would crawl out.

**Urinary Organs.**—Inflammatory symptoms about the bladder. Fleeting movement in the region of the bladder, during stool, as if the bladder were suddenly distended and drawn forward. Violent dragging and cutting in the bladder, alternating with a simi ar pain over the umbilicus, less during a walk in the open air, worse during rest. Frequently-recurring spasmodic pain in the bladder, when sitting. Burning in the bladder. Burning in the urethra, during micturition. Diminished urine. Difficult micturition, with smell of violet. Strangury. Dysury, sometimes real urethritis, with painful erections as in chordee. *Cripple suppression of urine.* Increased secretion of urine, the first days. Enuresis.—Scanty and red, or profuse and clear urine, *smelling of violets.* Urine scanty and red even bloody. The urine deposits a thick, muddy, white-yellow sediment, looks like wine, and has the smell of violets. The urine deposits a slimy sediment, twelve hours after micturition. Hæmaturia.

**Male Genital Organs.**—Slight drawing in the left testicle, when sitting. Cutting drawing from the left inguinal ring to the left testicle, going off on stooping. Violent, crampy drawing in the left testicle, and along the left spermatic chord. Fleeting burning of the posterior side of the right testicle.—Seminal emission at night.

**Female Sexual Organs.**—Tearing in the mons veneris. Drawing in the thighs, with colic, as if the menses would appear, although she had had them a week previous. The menses delay for a few days and then appear suddenly. Increased menses.

**Chest.**—Dryness of the mucous membrane of the air-passages: it becomes hot, injected, swollen. Aching pains behind the sternum, sensation of troublesome prickling in the trachea as at the commencement of bronchitis, sometimes attended with blood-streaked expectoration. Difficulty of breathing, the lungs seem congested. Dyspnoea. The existing dry cough is increased, particularly when lying down after eating.—Burning in the chest, along the sternum, generally spreading over the whole chest and terminating in shooting stitches through both nipples (after taking a warm drink). Itching, fleeting pain in the left pectoralis major.

**Back.**—Drawing pains in the small of the back. Drawing in the dorsal and psoas-muscles, with feeling of laziness and heaviness, during a walk in the open air. Drawing pain in the back, when sitting, particularly in the evening. Aching pain in the back, rising to the intra-scapular region, where the pain changes to a beating.—Gradual painful drawing from the nape of the neck to the occiput, afterwards spreading to the forehead.

**Extremities.**—Stiffness of the limbs. Heaviness in the limbs. The nerves of the extremities, particularly the lower, are exceedingly sensitive; *intense pains are experienced along the track of the larger trunks.*—1. **UPPER EXTREMITIES:** Drawing in the humeri, early in the morning. Pain as if sprained in the muscles of the left upper arm. 2. **LOWER EXTREMITIES:** Drawing and tearing pain in the hip-joint. Drawing in the outer side of the right thigh, as if in the fascia lata. Drawing laming pain in the left thigh. Drawing along the thighs. Drawing in the groins and thighs. Drawing in both thighs, along the large vessels. Pains in the feet.

**Sleep.**—Cannot sleep for two hours. Frequent waking and tossing about at night, for a week. Night-mare. Sopor.—Ceases to dream as usual.

**Fever.**—Chilliness.—Increased sweat. Hot skin, pulse 65 to 68. Feverish heat through the whole body, pulse hard and frequent, headache, red face, thirst and sensation of dryness of the mucous membranes. Fever with violent thirst. Pulse rises from 69 to 80, becoming small and rather hard; with feeble throbbing of the carotids.

**Skin.**—Inflammation, redness and painfulness of the skin (from rubbing the oil on the skin). His hands and feet, and finally also his thighs, became quite red, the skin itched intolerably, with large vesicles below the thigh. A scarlet-like exanthem made its appearance on the affected knee, spread down to the ankle, then made its appearance on the chest and right foot, and gradually spread over the larger portion of the body; disappeared, however, in a day. Suddenly appearing and disappearing erythematous, papulous and even vesicular eruptions, like those which are apt to break out after eating moluscae and crustaceae.

**General Symptoms.**—General languor. Loss of strength, for three days. His muscles feel stiff, he walks slowly and bent like an old man. Fainting. Dropsy. The sweat and the exhalation from the lungs smell strongly of turpentine.

#### SYMPTOMS ON ANIMALS.

The beats of the heart are irregular and lastly imperceptible, respiration hurried, the Schneiderian membrane red, dry, the breath smells of turpentine; the eye became staring, the animal was languid, seemed to be tormented by violent colic, discharged urine frequently, improved soon however (from one drachm injected into the veins of an animal). From two drachms: trembling, tottering, falling, urging to stool and urinate; fever for eight days, with cough, then putrid fever and death; the post-mortem examination showed symptoms of putrid fever and pneumonia (*Hertwig* in *Dieffenbach's* transfusion and infusion of the blood).—The dog ran about, screamed, fell, was attacked with tetanus, the beats of the heart and pulse were accelerated, died in three minutes; the lungs were engorged with blood, the bronchial passages filled with bloody mucus, the mucous membrane in the region of the annular cartilage was red, the heart flabby, the left ventricle empty, the right full. (In a dog, from two drachms of turp.)—The dog reeled, discharged slaver, vomited twice, discharging blood and mucus, was languid and sad. (In a large dog from two drachms).—Breathing labored, violent, with fetid breath, death; the lungs were dark-red, blood coagulated (from one ounce injected into the veins of a dog).—Uneasiness pulse falling to 45, fuller and harder, quiet in four hours, with discharge of milky urine (in the case of a horse of six years, from one ounce).

### 239. TEUCRIUM.

TEUCR.—Teucrium marum verum.—See *STARR'S* Additions.

COMPARE WITH—Con. m., Ign., Magn. p. aret.

ANTIDOTES.—Camph.? Ign.

#### SYMPTOMS.

**Mind and Disposition.**—Ill-humoured. Indolent, physically and men-

tally. Peevish at dinner and soon after, and so irritable that even the talking of other people excites his feeling, although he is not the subject of their conversation, with pressure in the forehead.—*Irresistible desire to sing, a few hours after taking the drug.*

**Head.**—Confusion of the head. Her head feels stupid, and she feels tired, obliging her to lie down all the time.—Painful pressure in the whole sinciput, extending from within the forehead towards the outer parts, and is then felt most violently and longest in both temples. Burning-pressive and tensive sensation, at times in the right, at times in the left frontal eminence, externally. Dull, crampy headache, frequently. Aching in the right half of the forehead. Fleeting pressive and pushing sensation in the right frontal eminence. On stooping he immediately feels a painful pressure in the left frontal eminence, disappearing again when raising himself.—Tearing in the head, commencing in the temples. Aching at a small spot, close over the right frontal eminence. Sensation of burning pressure in the outer parts of the forehead. Tearing in the interior of the right side of the head. Aching sensation in the whole occiput. *Pressure in the forehead, over the eyes. Painful pressure in the right temple, frequently alternating with a similar sensation in the right frontal eminence, and in the left temple.* The skin on the forehead feels sensitive to the touch; when pressing on the forehead for a long while, a painful pressure is felt in the forehead, but only in that part of it where the pressure is made with the hand.—Sticking in the occiput, even in the whole head.

**Face.**—Pale, wretched complexion, with hollow eyes, and a sensation as if they were lying deep in their sockets; for two to three hours (in the forenoon of the first day of proving).—Frequent sensation of a flush of heat in the face, without any external redness. The face is red and puffed. A kind of rash on the forehead and the upper part of the face; the parts feel like a grater, with burning itching mostly in the evening, more in the warmth, not in the cold; rubbing makes the parts red, for several days. Bright-red, painless spot in the middle of the right cheek, with a small, acuminate elevation in the middle; the spot becomes pale under pressure of the finger, but the redness returns as soon as the pressure ceases. A few cracks on both sides of the lower lip, internally, with raised edges, and a painless small pimple on the left side; when passing the tongue over those parts of the lips, they feel sore and like velvet, but painless; for three days. Tearing with pressure in the right malar bone, extending as far as the teeth.

**Eyes.**—The eyes are red and inflamed, with coryza. Profuse running of the left eye, in the open air, for several days. The eyes look as if the person had been weeping; they smart. Increased redness and some puffiness of the upper eyelids of both eyes.—Pressure in the right eye as from a grain of sand. Smarting in the inner canthi of both eyes, with increased redness of the conjunctiva. Tearing below the right eye.

**Ears.**—Otalgia in both ears.—Sticking in the left ear. Lancination in the interior of the left ear. On the second day, on passing his hand through the hair and over the right ear, he felt a hissing sound in the ear, which passed down the parietal bone, and through the whole internal ear; this experiment was repeated for a quarter of an hour with the same result; at the end of that period these und ceased, but soon recurred again louder and longer; a similar sound was heard afterwards when talking, or when merely expressing a fine or strong sound; also when inhaling the air through the nose with force. Occasional fine sounding in the right ear when blowing the nose; a sound as if air were forcing its way through mucus; after that the ear remained closed for a

while, and then opened again with a dull report.—Dry eruption, resembling scaly herpes, on the right lobule; the skin is cracked, and peels off gradually in small white scales; sore and painful to the touch.

**Nose.**—Creeping in the nose soon after taking the medicine, recurring frequently. Violent creeping in the right nostril, with lachrymation of the right eye. Short lancinations in the upper part of the right nasal cavity. Sensation in the right nostril as if it were half stopped; he has to sneeze and blow the nose, without being relieved; after three and four days.—Fluent coryza in the open air, for several days. Large red pimple under the right nostril, near the septum; it is sore and smarting to the touch as when one pours anything acrid upon a wound; accompanied with coryza, for many days. Stoppage of both nostrils, frequently, in the day-time, and especially in the evening when reading loud.

**Jaws and Teeth.**—Frequent and short attacks of drawing toothache, in the anterior molar teeth, on the left and right side. *Violent tearing in the roots and gums of the right lower incisores.* Drawing pain in the posterior and superior molar teeth. Buzzing pain in the incisores. The incisores and their gums are painful during deglutition.

**Mouth, Pharynx and Œsophagus.**—Pain on the right side of the tip of the tongue, as if sore or squeezed with the teeth; corrosive, especially when the parts are touched with the teeth. *Smarting as from pepper on the left, and afterwards on the right side of the root of the tongue. Smarting, and scraping sensation in the posterior fauces, especially on the left side.* Occasional slight drawing and tearing in the fauces. Stinging pain in the throat, impeding deglutition. Aching pain in the left side of the throat, near the pharynx. Unusual irritation, hawking up more mucus than usual. After hawking up mucus, he retains a mouldy taste in the mouth for several hours. Warm sensation along the pharynx and Œsophagus immediately after taking the drug.

**Taste and Appetite.**—Increase of appetite in the morning, which he generally lacks at that time. Uncommon feeling of hunger, as if the stomach were not properly filled by the food, for several days. Feeling of hunger which prevents sleep (relieved by Ignatia).—Eruptions tasting of the medicine immediately after taking it. Bitterish taste in the upper part of the throat, after dinner, also gulping up of slightly bitter-tasting food, several times; after several days.—Violent hiccough when eating, with violent shocks in the pit of the stomach, several times.—Qualmish feeling in the pit of the stomach, without eructation or nausea.

**Stomach and Abdomen.**—Pressure in the pit of the stomach. Anxiety and oppressive sensation in the pit of the stomach, when standing. Painful pressure in the pit of the stomach from without inward, without anxiety. Pressure in the right lumbar region from within outward. Sensation of emptiness and grumbling in the region of the stomach, at an unusual period when the prover could not feel hungry; that sensation extends into the bowels and recurs constantly. Pressure from within outward in the left side of the epigastrium. Pressure in the abdomen, above the right lumbar region.—Tearing drawing in the right, afterwards also in the left side below the short ribs, in the soft parts between the ribs and the hip-bones, recurring in several increased paroxysms.—Aching pain at a small spot on the left side of the epigastrium, at the distance of a handbreadth from the umbilicus, on the same line with the latter; increased by pressing on the parts.—Rumbling in the abdomen with crampy pain in the abdomen and emission of loud inodorous flatulence.—Dull pinching on the right side of and in the abdomen, towards the small of the back, passing quickly, after a few minutes.—Slight colicky pains in the lumbar region, after a

meal. After taking a little small beer at dinner he experiences some colicky pains and emits fetid flatulence; this is followed by a sensation as if diarrhœa would come on, and by a copious, papescent fetid stool. Frequent fine pinching in the right hypochondrium, almost as if owing to incarcerated flatulence, at different periods, especially morning and evening. Dull painful pressure through the abdomen, in the region of the umbilicus, with rumbling.—In the evening when lying in bed, he experiences a pressing downward in the right spermatic cord, toward the abdominal ring, not painful, but with sensation as if the spermatic cord were squeezed; next morning, after breakfast, the sensation returned in short paroxysms when sitting, without flatulence; he did not feel it at stool, felt it again in the afternoon when eating a little. Crampy sensation in the abdomen extending into the testes, as if they had suffered strong pressure. At different periods, in the morning and evening, before breakfast and after eating a little bread, or when drinking water, he experiences a sudden cutting through the abdomen, or a momentary feeling of nausea, as if he would vomit and could not bear any water.—*Frequent emission of silent, very warm flatus, having frequently the smell of liver.*—Feeling of swelling, itching and creeping in the region of the anus, as from ascarides, restlessness at night, tossing about; this continued for several days and came on at regular periods of the day after four, six, and eight weeks, together with the nightly restlessness. (In a patient suffering with worms, 1-10000th of a grain of Teucrium caused the discharge of a very large quantity of ascarides, removing for about two months all the accompanying troubles, creeping about the anus and want of appetite.) Some creeping, and sometimes violent stinging in the anus, in the evening when in bed. Creeping in the rectum after stool.

**Urinary Organs.**—*Increased discharge of watery urine.* Sore feeling with pressure in the forepart of the urethra, not when urinating. Smarting pain in the forepart of the urethra, between the acts of micturition. When first urinating after rising, he feels a burning in the forepart of the urethra, and still a long while after, a burning pain.

**Genital Organs.**—Drawing pain in the root of the penis on the left side, in the morning, and afterwards at other periods of the day; the pain extends into the integuments of the left testicle, so that they are still painful some time after, when touched. Diminution of the sexual desire.

**Respiratory Organs.**—Sensation as if she would have a cold. Coryza with humid obstruction of the left nasal cavity, and at the same time tearing on the left side of the neck below the jaw. Short, dry cough a few minutes after taking the drug, commencing with a slight titillation in the upper part of the larynx, and returning at short intervals. Titillating sensation in the evening after lying down, as if dust had been inhaled into the trachea, inducing a disagreeable, dry, irritating cough, which cannot be suppressed and becomes worse as the coughing continues; it lasts about half an hour, prevents sleep; the cough, together with some other symptoms, recurred after eight weeks. Disagreeable sensation of huskiness and dryness in the trachea, for many days, inducing hawking with some discharge of phlegm after some effort; sometimes the expectoration is loose, without relief.—A few sharp stitches deep in the right chest when breathing.—Undulating tearing not far from the axilla in the right chest.—When bending the body backwards, while sitting, he feels a crampy painful sensation in the lower part of the chest, accompanied with an aching below the ribs of the left side close to the spinal column; all these symptoms disappear on bending the body forward (after three quarters of an hour).—Pressure in the right chest. Oppressive sensation with stricture in the anterior parts of the chest. Crampy-pressive sensation in the lower part of the

chest and in the pit of the stomach, extending higher up into the chest and lower down into the abdomen, and producing an anxious uncomfortable feeling; recurring frequently, but disappearing when walking. Dull sticking in the region of the left ribs, one handbreadth below the left nipple. Pressure on the right side near the spinal column, in the region of the right kidney.

**Back.**—Burning in the region of the left scapula. Rheumatic drawing and tension in the back, on the left side, not far from the axilla. Tearing with pressure in the region of the short ribs on the right side. Crampy pain in the region of the short ribs, left side.

**Upper Extremities.**—Short, drawing pain in the right side of the neck, increased by contact. Aching pain on the top of the right shoulder not far from the neck. Tensive pain in the shoulder-joints. Aching sore pain in the left axilla, as if an abscess would form. Rheumatic drawing in the left shoulder (the bone). Intense paralytic aching in the upper part of the right upper arm; if the arm hangs down quietly or is moved only slightly, no pain is felt; as soon as the arm is raised, it feels very heavy and paralytic; if it is raised high and forced backwards, the pain is most violent, for instance, in taking off the hat; the pain is then most violent in the region where the deltoid muscle is inserted in the humerus; upon attempting to lower the arm when raised high up and forced backwards, the arm loses all its strength and sinks down. Dull drawing-tearing pain in both humeri. Painful tensive sensation of heaviness in the muscles of the left forearm. Tearing in the right upper arm, a little above the right side of the wrist-joint. Tearing in the surface of the right forearm, close to the tip of the elbow. *Suddenly appearing, dull cutting pain through the muscles of the right forearm, at the distance of a span from the wrist-joint.* Feeling of heaviness in the whole left arm, so that he is obliged to let it hang down; passing quickly. Visible, painless, paroxysmal, anxious jerking in the right biceps muscle, in the region where the two heads unite. Tearing in the lower surface of the left forearm, close to the wrist-joint. Rheumatic tension in the region of the left elbow. Tearing in the lower surface of the thick part of the right forearm. Burning in the bend of the left elbow. Tearing with pressure in the external metacarpal bone of the right hand. Dull tearing in the upper surface of the left metacarpus. Tearing in the right wrist-joint. Tearing in the dorsum of the left hand. Drawing, intermittent pain in the dorsum of the right metacarpus. Tearing pain with pressure in the right carpus, increased by squeezing the part with the other hand, going and coming. Tingling in the anterior joint of the left thumb and index-finger, as if they would go to sleep; sometimes coming on of itself, sometimes after pressure; passing off soon. Tearing with pressure in the second phalanx of the left middle finger. Ready and painful bending, as from weakness, of the posterior joint of the left little finger, for instance, when rubbing the palms of the hands against each other. Drawing-tearing pain in the anterior joint of the left index-finger, coming on in paroxysms, lasting a short while only; at nine o'clock in the evening. Aching at a small place of the tip of the right index-finger, as if a panaritium would form; going off after two days. Sudden perceptible and rapid beating of the pulse in the middle phalanx of the left index-finger, in the evening, every pulsation being accompanied with an intense drawing, arthritic pain, as if in the bone, for some minutes; afterwards the pulse gradually decreased, and the pain likewise. Short, smart burning in the tips of the three middle fingers of the left hand. Tearing in the ball of the left thumb. Tearing under the nail of the left middle-finger. Painful clucking (clucking) sensation in the interior of the second phalanx of the left index-finger. Tearing in the lower joints of the left ring and middle-fingers. Stinging-burning in the

inner side of the lower joints of the left ring and middle-finger. Tearing in the knuckle of the little-finger, posteriorly, towards the wrist-joint.

**Lower Limbs.**—Jactitation in the muscles of the arms and lower limbs, especially in the region of the hip. When resting the thighs upon the chair while sitting, a pain is felt in them, extending from the middle down into the bend of the knee, as if the ischiatic nerve were pressed upon. Tearing, from above downward, in the head of the left femur, coming on during motion, continuing during rest in paroxysms. Aching pain below the left knee, anteriorly. Lancination above the left knee. Tearing pain in the left tibia and ulna, near the tarsal joint. Tearing in the right tarsus, when sitting, returning in paroxysms, disappearing when walking. Tension, with pressure, in and above the left tendo-Achilles. Aching and tearing sensation, with heaviness, in the whole right leg, more distinct in the calf. Tearing in the lower joints of the left big toe. The right big toe is somewhat inflamed and painful on the left side of the nail and a little above, as if the nail had grown into the flesh (which is not the case however); rather increased by walking; returning in the forenoon for several days, when sitting quietly; in the afternoon redness and pain disappear. Tensive tearing in the lower joints of the three smallest toes of the right foot.

**Sleep.**—He finds it difficult to wake in the morning; he is tired and weak on rising. Disturbed sleep; he has vivid and anxious dreams, with startings, until after midnight. In the afternoon he cannot take his siesta, owing to confused and vague ideas crowding upon his mind.—Does not fall asleep until after midnight; he then wakes frequently, turns from side to side, dreams; towards morning the body feels hot; he feels well on getting up.—Drowsy the whole day. *Vivid, mostly pleasant dreams.* Many restless, anxious dreams.

**Fever.**—He likes to walk in the open air, and does so without feeling tired in the least; accompanied with cheerful mood and peace of mind. He feels chilly after eating, several days in succession, with sensation in the abdomen as if stool would appear, and as if this were the cause of the chilliness. While quietly talking with some one on a certain subject in the warm room, in the evening, he was attacked with chilliness and trembling of the whole trunk, recurring frequently at short intervals and disappearing after the conversation was terminated. Chilliness over the whole body with icy-cold hands, accompanied with frequent yawning and a sensation as if he had to stretch himself frequently. Towards evening the body feels warmer than usual, and the mind feels elated and sociable.

**General Symptoms.**—Going to sleep of the limbs, with creeping, in the morning in bed, and in the afternoon when sitting. *\*Irritated, tremulous sensation in the whole body.* Staggeres somewhat; places one foot on top of the other when walking, soon after taking the drug.—Frequent biting as from fleas in the day-time, now in the upper, now in the lower arms, thighs, hips, chest, neck. Itching-stinging, resembling flea-bites, in various parts of the surface of the body. About noon, especially shortly after dinner, he feels relaxed and as if he were fasting (as after an intoxication).

## 240. THEA SINENSIS.

THEA.—See NOACK and TRINKS.

### SYMPTOMS.

**Mind and Disposition.**—Temporary exaltation of mind. Excessively ill.

humoured; everything became unpleasant to her, whereas she had been very cheerful previously; she was disinclined to think or write. Taciturn and peevish. Has greater confidence in himself.

**Head.**—Momentary attack of vertigo during a walk in the open air, as if her senses would vanish. Gloomy, heavy and dizzy in the forehead.—Momentary pain in the occiput, almost in the nape of the neck, tense, as if stiff. Excessively-disagreeable headache, with throbbing of the carotids.

**Mouth and Appetite.**—Scraping feeling at the upper palate. Copious watery saliva in the mouth during the first hours, with sensation of hunger; six hours after, a troublesome dryness in the mouth is experienced, with expectoration of a small quantity of frothy tenacious saliva, with feeling of satiety, although she had taken only her ordinary quantity of nourishment, with some thirst; after drinking, her mouth fills with watery tenacious saliva. Intolerable smell in the mouth, early after waking. Complete aversion to food, until dinner, of which she partook sparingly.

**Stomach and Abdomen.**—Disagreeable sensation of excessive relaxation of the stomach, with qualmsiness and nausea, and discharge of water from the mouth; her stomach felt as if hanging down like an empty bag, and heavy. Slight anxiety in the præcordial region. Slight pressure in the region of the stomach. After dinner she experienced acute stitches from the right to the left side, under the ribs, the whole afternoon, at intervals.—Relaxation of the bowels.—Tea favors the protrusion of hernia. Quickly-passing rumbling in the bowels, particularly in the region of the stomach, as if from flatulence.

**Fever.**—The pulse became quicker, then slower, irregular and intermittent. Pulse 92, then 84 and 80.—Feeling of anxious oppression about the heart.

**General Symptoms.**—Excessive desire to lie down. Oppression, slight nausea, general tremor, palpitation and oppression of the heart, feeling of debility as if the knees would not support her body. A certain uneasiness of the heart, general trembling and debility, making him feel somewhat sick even until the next day. His excitement, occasioned by an animated conversation and intense thinking, became less, and a quiet, refreshing sleep ensued. Feeling of great ease. Feeling of faintishness, which made her feel vexed.

## 241. THERIDION.

THERID.—See ARCHIV., Vol. XIV.—Is frequently suitable after Calc. and Lye.

### SYMPTOMS.

**Mind and Disposition.**—Despondency. Tendency to start. Dread of labor, particularly his professional business. Wants to do something, but has no desire for anything in particular. His time passes very fast, although he is not very busy. Cheerful, humming a song, with heat and dulness in the head. Disposed to talk and to perform intellectual labor (secondary action.?)

**Head and Sensorium.**—Difficulty of comparing, not of originating ideas.—Dulness of the head, with great heaviness. Sensation as if it were not his head, or as if it were something quite different. Fulness and dulness behind the ears. Strange feeling in the head.—*Vertigo*, on stooping. *Vertigo* with nausea, particularly when her eyes close (at night). *Vertigo*, which is felt even during sleep and comes on again after waking, with vomiting, on making the least motion.—Headache on moving. Violent headache, in the forehead, with

throbbing extending to the occiput. Headache at the root of the nose and over the ears as from a pressing band. Compression in the temples.—Itching of the head.

**Eyes and Ears.**—Burning over the inner canthus, on waking. Sensation as of a gauze before the eyes, with luminous vibrations even when the eyes are closed. °Frequent paroxysms of luminous vibrations before the eyes, for years. —°Violent itching behind the ears. Excessive sensitiveness of hearing (removed by Aconite). Every strong sound strikes through the whole body, particularly into the teeth, aggravating the vertigo, which then causes nausea. °Noise as of a water-fall.

**Nose and Teeth.**—Itching in the nose. Discharge of water from the nose the whole day, or on blowing the nose, with subsequent feeling of heaviness high up in the nose.—°The lower jaw feels as if immovable for many mornings, but then opens of itself.—The teeth are sensitive from cold water or sound.

**Appetite, Abdomen.**—Slimy taste. °Saltish taste.—Constant desire to eat and drink without knowing what. Desire for sour fruit, wine. Talkative after spirituous drinks.—Nausea at night, on closing the eyes, with vertigo. Vomiting of slimy water, with vertigo which is excited again by the least motion. The vomiting is preceded by cold sweat all over the body. Vomiting of bile, early in the morning. After vomiting the throat feels scalded, with pain in the small of the back, hurried pulse, and headache.—°Sea-sickness?—Sensitiveness of the pit of the stomach.—\*Pain in the inguinal region, °during motion, or with sensation on drawing up the limb, as if hard blows were received on it.

**Stool, etc.**—Intermittent stool. The latter part of stool is more difficult to pass than the former. Seanty papaceous stool every day, with much straining.—Protrusion of the anus.—The scrotum looks shrivelled. Complete absence of sexual desire on the fourth day. Violent erections on the sixth day. Profuse emission of semen during the siesta, on the eighth day.

**Chest.**—Arrest of breathing, from pressure as if something were falling towards the pit of the stomach.—Violent stitches high up in the chest, through the left shoulder as far as the neck. Pinching sticking in the left pectoralis major muscle.

**Back, Limbs.**—Itching of the back. Pain between the shoulders.—Stitch from the elbow to the shoulder. Burning itching of one finger, with redness of the part.—Itching and blotches of the buttock. Strange cold drawing from the right hip to the knee, internally; external warmth is pleasant. Itching of the calf. Pain of the little toe as if from pressure, when walking.

**Sleep.**—Drowsiness in the morning. Dreams of travelling during the siesta. Bites his tongue frequently during sleep. Wakes from a short sleep with vertigo (which is felt even during sleep), has to rise, falls on rising, (as if fainting,) with breaking out of cold sweat and retching, with vomiting of acrid, slimy water, diarrhoea, renewal of vertigo on making the least motion, and of the nausea and vertigo as soon as she closes her eyes, with nausea and vomiting of bile in the morning; the throat feels scalded, the small of the back is painful and weary, pulse accelerated and head painful. He dreams that a tooth is breaking off.

**Fever.**—Internal chilliness after lying down on account of a heaviness in all his limbs (after breakfast). Liability to sweat after walking and drinking.

**General Symptoms.**—°Hysterical complaints. °Complaints at the age of pubescence or at a change of life.—Feels sick and trembling. °Weak, all his limbs tremble. So weak, that he is unable to stand, he sweats and trembles.

## 212. THUJA OCCIDENTALIS.

THUJ.—See HAHNEMANN'S Mat. Med. Pur., IV.

COMPARE WITH—Asa f., Bry., Cann., Canth., Chin., Cop., Fer., Led., Lyc., Merc., Nitr. ac., Phosph. ac., Petrol., Plat., Puls., Sabin., Sep., Saph., Sulph.—Thuj. is frequently suitable after Nitr. ac. (in syeosis or mercurial syphilis).—After Thuj. are frequently suitable Nitr. ac., Puls., Staph.?

ANTIDOTES.—Cham. for the nightly toothache, Cocc. for the fever, and Merc. for the nightly ailments.—Is used as antidote against Mere., Thea.?

### CLINICAL OBSERVATIONS.

According to *Noack* and *Trinks*, Thuj. has been successfully employed in the following affections: Chronic-color of the skin of the breast and the right side of the abdomen, with excessive nervous irritation.—*Warts*. Wart on the wing of the nose. Warts on the hands. Warts and herpes in the face. *Warts of horses, cattle and dogs*.—Sycotic warts, discharging a moisture, pus and blood and with a broad base, with smarting-burning pain (*Trinks*, in a number of cases; horny, hard sycosis warts are cured with the biniodide of merc., or the hydriodate of potash). Horny, conical fig-warts fissured into several parts; after the external administration of Thuj., the warts divided into several thin, thread-shaped portions down to the base. Fig-warts under the arms. Fig-warts on the prepuce. Large moist fig-warts at the anus. Mulberry-shaped condylomata at the anus, with rhagades. Cauliflower-shaped condylomata after gonorrhœa or balannorrhœa, on the inner surface of the prepuce or on the glans, pale-red, with stinging and burning pains, itching and bleeding when touched. (According to *Segin* and *Ohlhauth*, Thuj. does not cure every case of sycosis).—Light-red, spongy, cauliflower excrescence shooting up from a panaritium, sensitive to contact and bleeding readily (after balanitis).—*Sycotic excrescence*: hard, grey-blue, spongy, readily-bleeding swelling on the lower eyelid, painful to the touch, filling up the orbit, pushing the globe of the eye before it, stinging, tearing, burning, itching, etc.—Obstinate scurf in the nose, re-appearing constantly, with inflammatory redness and sensitiveness etc.—Neuralgia facialis?—Ranulae.—Gonorrhœa with sycosis—Gonorrhœa secundaria.—Diseases of the prostate gland, occasioned by a long-lasting gonorrhœa, consisting partly in hypertrophy, partly hyperæmia, or infiltration of the middle lobe and of the excretory ducts. Suppuration of the prostate gland.—In a case of marked suppuration of the prostate gland, three drops of Thuj., 2 and 3, morning and evening, occasioned an increase of the pains and the urging to urinate, producing moreover violently-burning, painful hæmorrhoidal tumors; the disease was cured completely and in a short time by the biniodide of potash (*Trinks*).—Scirrhus and cancer of the uterus. Female gonorrhœa with or without warts.—Constipation, as if from torpor of the bowels or volvulus?—Hæmorrhoidal congestion, or blind and flowing hæmorrhoids, with stinging and burning pains at the anus (according to *Trinks*, one of the principal remedies for that affection).—Chancreous warts, or warts which grow upwards and do not yield to Mercury.—Tearing-throbbing ulcerative pain from the shoulder to the fingers, with twitching of the muscles, deadness of the forearm, numbness of the fingers, aggravated by warmth.—Quotidian fever.—Styæ scattered here and there, with affection of the conjunctiva, and deranged

digestion.—Darting pains proceeding from the temples, with loss of appetite (after operations on the eye).

#### SYMPTOMS.

**Mind and Disposition.**—(During a rapid walk he became restless and low-spirited). Mental uneasiness for many days; all things are troublesome and disagreeable to him. Low-spirited and desponding.—Tired of life.—Dissatisfied.—Extremely scrupulous about the least trifle. Everything is unpleasant to him; he is anxious for the future.—Angry about an innocent jest.—Out of humor unless everything is according to his fancy.—He walks with an excess of lightness, as if carried along on wings; she made several miles in a very short time and in excellent spirits (immediately).—Good humor. Cheerful mood, without excess. Disposition to talk.—Absence of mind, unsteadiness, and disposition to perform now this, now another thing.

**Sensorium.**—He staggers after having stooped. Vertigo, also when sitting; she staggers when walking. Frequent vertigo, also when lying in bed. A good deal of vertigo when sitting; a sort of moving to and fro, made worse by lying down.—Vertigo, especially when sitting and closing his eyes; it went off when lying down. Reeling sensation, as after frequently turning in a circle. Cloudiness in the forehead (immediately). Stupefaction of the head, early in the morning. Does not heed those things which take place around him. His head feels cloudy, so that he knows not where he is, when standing. Stupid feeling in the head, with nausea. Sense of intoxication, especially early in the morning. His head feels confused when sitting or standing. His head feels dull and unable to think.—Slow thinking and talking; when talking she tries to find the words. Weakness in the head; his brain feels dead and numb. He was unable to get rid of the thought which he had in his mind.

**Head.**—Headache, early in the morning; sometimes he feels as if the head were screwed asunder in the articulation of the malar bone and the upper jaw; sometimes as if a nail were driven into the vertex with a sudden jerk; sometimes as if the forehead would fall out, with internal chilliness; all these symptoms improved in the open air. Headache, early in the morning, as after too sound a sleep, or as after stooping, a sort of pulsating, or a sort of short jerks, with pressure, accompanied with redness in the face.—Boring pressure in the head.—Drawing headache.—Tearing in the right side of the snout and face, across the nose, as far as the malar bone, and above the eyes; most violent morning and evening.—Sticking headache. Fine pricking in the head, early in the morning.—Drawing in the temporal muscles, a sort of external headache, worse during deglutition. Pricking pain in the region of the temples. Three red, painful blotches in the region of either temple.—Itching of the occiput. Dull pain in the head, as if stupified. Numb feeling and humming in the left hemisphere of the brain, and in the left ear. Cramp-like sensation in the left side of the head, with subsequent feeling of warmth. Painless drawing in the right parietal bone, with slight pressure, a sort of agreeable warmth, spreading over the whole body. Dull drawing pressure across the forehead, as if a load descended in it. Deep pressure in the right temple. Pressure in the left frontal protuberance, resembling a jerk. Pressure in the right frontal eminence, resembling a jerk, and descending towards the eye. Pressure in the left parietal bone, with a dull pain. Dull aching pains in the occiput, for six hours. Painful pressure across the forehead. Furious pressing in both temples from without inward, as if the brain would be pressed out. Violent, painful pressure in the head, here and there, only momentarily. Drawing, with pressure, in the left temple.—Jerking tearing in the occiput, more on the right side. Drawing tear-

ing headache from the vertex to the middle of the brain.—Heaviness in the head, as from a load pressing upon the brain. Sensation of heaviness in the head, especially in the occiput, increased during every motion. *Heaviness of the head, with ill humor and a want of desire to talk.* Headache from the forehead to the occiput consisting of pressure, and of a feeling as if the head were bruised and torn, on waking, and going off during sleep. Sensation in the upper part of the vertex as if knocked in.—Sensation in the right parietal bone, *as if a nail were driven in*, disappearing on touching the part. Jerk-like stitch through the whole head, leaving a sensation of pressure behind. Prickings, especially along the forehead. Violent lancination through the right hemisphere, from the occiput to the forehead. Violent contractive pressure in the outer parts of the left frontal eminence, which seems to press the upper eyelid down. Headache, as if the head were compressed from without, with pulsative throbbings and stitches in the region of the temples; those pains disappear by external pressure and by bending backward, but return by bending forward. Headache in the posterior region of the skull as if compressed from both sides. Swelling of the veins in the region of the temples, during rest, without heat. *Strong stitches in the outer parts of the left temporal region.* At night he does not like to rest on his left side; when lying on it he feels a pain at a spot near the occipital protuberance; he feels that pain likewise when touching the part; even the hairs in that region are painful when touched.—Dull aching behind the left ear. Violent burning aching behind the right ear. Corrosive gnawing in the skin of the occiput, with sensation as if something were crawling about on the hairy scalp, for half an hour. Biting and corrosive gnawing in the right side of the hairy scalp, in the evening. Prickling pain in the temples. Three red painful blotches on the temples. Itching of the occiput.

**Eyes.**—*Short-sightedness.* Sensation as of a gauze before the eyes, and a pressure in the same, as if the eyes would be pressed out of the head, or as if the eyes were swollen. The eyes are dim in the open air, as if a gauze were before them, when looking at things either near or distant, with gloominess in the head for half an hour. When reading, things appear darker to him, with a sensation around the eyes as if he had not slept enough.—The sight of the inflamed eye is obscured. Weak eyes; pressure in the eyes as from fine sand. Considerable pressure above the right eye, externally. *Pressure in the eyes*, for two or three days. Burning pressure in the outer canthus of the left eye, without redness. Red blotch on the margin of the lower eyelid. Running of the left eye in the open air. Gum in the inner canthi, the whole day. Boring pain over the inner canthus of the right eye. Feeling of heat and dryness in the outer canthus of the left eye, as if the parts would become inflamed. Dry feeling in the eyes.—Great dilatation of the pupils. The pupils remained contracted for five days. When writing, the objects appeared to tremble (immediately after dinner). Black points before the eyes, even when closing them; those points seem to move amongst one another, accompanied with a dulness of the occiput. The whites of the eye are blood red. The whites of the eyes are inflamed and red, with smarting in the eyes and a pressure as from sand. Redness without sensation in the white of the left eye, near the cornea, early in the morning.—Violent stitch in the inner canthus of the left eye, causing a humor to come out of the eye, which obscured the sight. Stinging in the eyes, in pure air. Stitches in the eye, when the light is too bright. Violent, deeply penetrating sharp stitch, from time to time, in the inner canthus of the right eye. Sticking with pressure above the left eye, moving towards the right eye and disappearing afterwards.—*Tearing pain in the left eyebrow, going off after contact.* Swelling of the upper eyelids. Pimples between the eyebrows, containing pus in their tips, with itching.

**Ears.**—In the evening, when in bed, he experiences a terrible hammering and tearing in the ear until after midnight, accompanied with micturition every half hour, and coldness of the legs up to the knees. Spasm in the inner ear, a sort of compressing and dragging followed by a flashing stitch, causing him to tremble; more frequently in the evening.—Aching pain in the meatus auditorius (at noon). Fine, cramp-like pain in the right outer meatus auditorius.—Violent, sticking pushes in the right side of the fauces, speedily extending to the ear, and causing a sensation in the ear, when opening and closing the mouth, as if a hole were in the ear through which the air can penetrate.—Sticking pain with pressure in the right meatus auditorius.—Pinching pain in the right ear.—Tingling in the ears.—Roaring in the ears as of the wind in a stove.—Tension in the lower part of the outer ear, as if drawn down by means of a ribbon. Crampy sensation in the right outer ear.—Digging-up, painful itching in the left malar bone. *Boring pain in the region of the left malar bone, diminished by contact* Pimples in the whole face. Itching in the face, obliging him to scratch. Creeing and twitching toward the malar bones. Fine darting pain in the malar muscles, only when walking in the open air. Stiffness of the muscles of mastication, on the left side, painful when opening the jaw. Cramp-pain in the right cheek, during rest. Glandular swelling on the side of the left cheek. Burning heat in the face and cheeks, continuing the whole day. Scurfy, itching eruption on the cheek, not far from the corner of the mouth. Itching on the chin. Stitches in the lip. *Jerking in the upper lip.* Burning of the vermilion border and palate. Fine itching of the inner side of the upper lip. Itching pimples on the margin of the upper lip, towards the middle. Red pustules above the lip, emitting blood when scratched. Dryness of the lips, without thirst.

**Nose.**—\*Ulceration half an inch up in the nose; a scurf has formed in that part. Corrosive creeping on the dorsum of the nose.—Nasal mucus mixed with coagulated blood.—Bleeding at the nose, two or three times a day. Red pimple in the hollow behind the right nasal wing, full of a watery fluid, somewhat itching. Tensive sensation above the right nasal wing, going off by friction. Swelling and hardness of the left nasal wing, with a tensive pain. Sensation under the right nostril as if the place would become hard. Drawing pain between the mouth and nose, as if the pericosteum were tighter than usual; afterwards the pain is felt across the nasal bones.—Tingling in the nose, and sneezing—Sudden and fluent coryza.—Dry coryza, with headache.—Fluent coryza, toward evening, with cough.

**Jaws and Teeth.**—Stitches in the lower jaw through the ear. Pressing pain in the hollow tooth when blowing the nose. Sharp drawing toothache, in the teeth of the lower jaw from below upward, frequently without any cause, but usually at dinner. Sticking pain in an incisor. Darting pain in a hollow tooth, early in the morning. Toothache from evening until midnight, dull, as if the nerves were delicately touched; sometimes a jerking was experienced in the tooth. Swollen and sore gums. Considerable swelling of the gums and tongue; the latter is painful when she touches it with anything hard, or when eating. Violent pressing pain below the left molar tooth, as if the tooth were shattered, immediately after every cup of tea which he took; the pain affected the upper and lower jaw, and disappeared gradually. Violent tearing in the left upper jaw, toward the eye. Drawing tearing in the left lower jaw, evening. Gnawing-boring pain in the left upper-jaw, repeatedly. \**Continued gnawing-pain in the teeth,*—particularly in a hollow tooth, affecting the whole side of the head, and increased by anything cold (drink or air), and by mastication. Sudden, violent tearing in the first molar tooth of the left lower jaw, extending rapidly through the whole jaw. Darting through the gums of the posterior molar teeth. Vio-

lent drawing stitch in the angle of the left lower jaw, disappearing after contact. Prickings in the left lower jaw. Sore pain below the posterior teeth of the right side. Sore feeling in the gums of the left lower jaw, when touching them. Toothache, a sort of hacking, or sharp beating in the gums.

**Mouth, Pharynx and Esophagus.**—The tip of the tongue is sore to the touch. White vesicle on the side of the tongue, close to the root, very sore. Rough, scraping feeling on the surface of the tongue; it is crated white; on the forepart of the tongue a white, oblong, somewhat painful-blister. The inner mouth feels as if full of blisters, as if he had burnt it, with much thirst at night. —°Ranuba, transparent, jelly-like, blue-red—gray. When swallowing the saliva he feels a sort of sore pain in the whole palate, towards the left ear, internally, as when air rushes into a wound. Pressure and sensation of heaviness in the velum pendulum palati. Swelling of the salivary glands; they secrete a good deal of saliva.—Swelling of the tonsils and throat.—Roughness in the throat, as from snuff.—Sensation in the throat as if full of mucus, preventing him from swallowing, and as if the fauces were constricted; the throat became rough from hawking.—Sore throat, a sort of swelling, as if brought on by a cold.—Pressure in the back part of the throat during deglutition.—Stinging in the throat.—Desire to swallow.—The saliva is somewhat sanguinolent. Dryness in the back part of the mouth, with thirst, even early in the morning. Gradually increasing stitch with pressure, on the right side below the tongue, as if the part were pricked; sometimes worse when swallowing. White coated tongue, without thirst.—Feeling of dryness in the palate, without thirst. Violent desire for cold drink the whole day, without heat. He hawks up a blood-red mucus.—°Chancreous ulcers in the throat and mouth, from excessive doses of mercury for syphilis.

**Appetite and Gastric Symptoms.**—Flat, sweetish taste in the mouth. Saliva and bread taste bitter. Food has too little saltish taste. (Tobacco has a musty taste when smoking.) A quantity of mucus in the throat when eating, she is obliged to hawk it up; otherwise she is unable to swallow the food. (Everything he eats nauseates him.)—He has an appetite, or else loss of appetite, *he does not relish his food*; after eating he feels faint about the heart, anxious, with palpitation of the heart. A slimy sweetish taste in the mouth after a meal. After eating, the abdomen bloats. Hiccough soon after eating; afterwards pressure in the pit of the stomach, followed by puffiness and eructations, as from a spoiled stomach.—(Bitter eructations after a meal.) Putrid eructations, late in the evening. Eructations tasting of the ingesta when smoking as usual. Rancid vapor rising in the throat, perceptible to the smell. Nausea and quahnishness in the region of the stomach. Nausea and vomiting of a sourish liquid and of food, several times. Desire to vomit after the usual smoking, with sweat breaking out over the whole body, without thirst; nausea and sweat disappeared after the stool. Excessive flatulence, immediately after a meal; the abdomen is distended, with prickings, pressing and pushing, and scanty emission of flatulence. \**Desire for cold drink* before a meal, and some time after a meal. Frequent pinching in the region of the stomach, during dinner.—Debility and laziness after a meal; the least exercise gives him trouble; he feels nauseated and has to lie down.—°Bad effects from eating greasy things and onions.

**Stomach and Abdomen.**—Cramp-pain in the pit of the stomach. Cramp in the stomach, increasing very much in the evening. Contractive cramp in the epigastrium. Fine, painless beating in the middle of the scrobiculus cordis, almost like the beating of an artery. Tension in the abdomen. Tension in the abdomen as if tied too fast. Bloatingness of the abdomen, with contractive pains,

like cramps. Bloating abdomen. Pressure in the right side of the abdomen, as if too full, in the lumbar region, when lying in bed, after midnight; it impedes respiration. (Burning in the abdomen, but more in the chest, the hypochondria and pit of the stomach; all those parts felt hot to the touch. (Burning, especially in the hepatic region.) Pain in the pit of the stomach after a meal, when moving the body or when touching the region of the stomach. Pressure in the pit of the stomach, immediately after a meal.—Anguish in the pit of the stomach, rising into the head and returning again to the stomach; accompanied with qualmishness. Movement in the abdomen as of something alive, as if the abdominal muscles were pushed outward by the arm of a foetus, but painless. Tearing in the abdomen from below upwards, commencing in the right groin, in paroxysms. Pinching in the left side of the abdomen. When standing and leaning on one side, he experiences a dull pricking above the hip, in the lumbar region, close to the dorsal spine. Sticking in the left side of the abdomen, impeding the walking. Pressure in the lower part of the liver, as from a stone, when walking. Cutting in the side, above the liver, during an inspiration, when walking, going off when standing, or when pressing on the part. Pressing pains in the left renal region, from within outward, when sitting. Drawing pains with pressure in the left lumbar region.—° Indurations in the abdomen.—Feeling of burning heat in the lumbar region. Pain in the abdominal muscles of the left side, as if a hook were being drawn up in the part, a sort of hooking from below upward. Pain in the abdominal muscles, as if sprained, when bending backwards. Burning pressing-together across the abdomen, externally as it were. Distention of the abdomen, as if the intestines were constricted in the umbilical region. Beating-sticking pains in the right groin. Pressure from without inward, in the right groin. Audible grumbling in the abdomen. Grumbling in the right side of the abdomen, after stool. *Cutting pains in the hypogastrium.* *Noiseless emission of flatulence.* Pressing in the abdomen, especially against the sides, as from flatulence, previous to stool. Painless swelling in the groin, when walking, or touching the part. Drawing pain in the groin, when standing still or walking, not when sitting. Drawing pain extending from the inguinal glands through the thighs as far as the knee, more violent when sleeping, with subsequent laziness in the limbs. Stitches from the groin through the thigh, only when sitting.—° Painful swelling of the inguinal glands.

**Stool.**—\*Constipation for several days, after a copious emission of semen. Urging to stool, but ineffectual; afterwards (on the first day) loose stool; next day loose stool without pressing; no stool on the third day. Urging to stool, with erection. The evacuations take place with a painful constriction of the anus. Diminished stool. *Several ordinary stools.* *Several loose stools.* Frequent and copious papescent evacuations, they give him a good deal of relief. Discharge of hard, large, brown feces, in balls, streaked with blood. \*Hard, difficult stool, especially in the afternoon.† (Debility after stool.) Violent pain in the rectum during stool; the pain was so violent that she was unable to pass the stool. Painful contraction of the rectum and anus, followed by tearing, as if in the bowels, in paroxysms. Violent burning in the fold between the nates, when walking. Burning in the anus. Burning-pricking in the rectum, between the stools. The hæmorrhoidal tumour is painful when touched ever so slightly. (Red, painless blotches about the anus, resembling fig-warts.) Single painful prickings in the perinæum, from within outwards, going off when drawing the anus in.

**Urinary Organs.**—Frequent micturition, almost every hour, but no pain.

† Primary effect; the contrary takes place after 12, 14 days, as a secondary effect.

A good deal of micturition, had to urinate at night. Frequent and copious micturition. He has to strain when urinating, with urging every minute; some urine comes out now and then only, which is accompanied with a burning pain in the urethra. The stream is interrupted five or six times, before the urine is entirely voided. Sensation in the urethra, as of a fluid running along it, especially in the evening. Sensation after micturition as if some drops were running out of the urethra, for a quarter of an hour. After micturition, some urine remains in the urethra, which drops out afterwards. *The urine looks like water while coming out; after long standing, it becomes cloudy.*—°Bloody urine. Red urine, depositing a thick brick-dust sediment when standing.—*Burning in the urethra* during micturition and some time after. \*Burning in the urethra, between the acts of micturition. Cutting during micturition. Burning pain in the urethra, when urinating, as if excoriated. Burning itching in the tip of the glans, when urinating. Smarting and itching of the pudendum, especially in the urethra, during and a little while after micturition. Pain in the pudendum, as if sore and smarting, especially when urinating. Stitches in the urethra from behind forward, between, not during the acts of urinating. Stitch from the rectum into the urethra, below the frænulum. Severe stitch in the urethra, in the evening. Stitches in the urethra, at night, preventing sleep, accompanied with frequent erections. Lancinations in the forepart of the urethra. Lancination in the urethra between the acts of urinating. Cutting pain, which is most violent when walking, immediately before, and during the acts of urinating, also at other times, behind the pubic bone, in the region of the bladder. Burning, piercing stitches in the neighbourhood of the orifice of the urethra, between the acts of micturition. Drawing-cutting pain in the urethra, when walking. Violent stitches in the glans, near the urethra, constantly accompanied with a desire to urinate; the urine comes out in drops when the stitches are felt; while the urine comes off the stitches are sometimes more violent, sometimes they disappear altogether; the desire to urinate continues until the sticking ceases entirely.—°Sycoëtic gonorrhœa.

**Male Genital Organs.**—Single stitches in the tip of the glans, between the acts of micturition, especially when squeezing the part. Painful stitches in the internal surface of the prepuce. Stinging itching in the tip of the glans. Stinging and itching of the glans. Erection for several hours, early in the morning, when half asleep. Prickings in the scrotum at night. Itching of the left side of the scrotum (evening). Drawing sensation in the testes. The left testicle is drawn up to the abdomen, accompanied with swelling of the inguinal glands. (The epididymis grows into a sort of goitre.) Crawling and itching in the scrotum; the rubbed place feels painful and burning.—Sweat of the scrotum. Sweat of one-half of the scrotum. Profuse sweat of the organs of generation all over. Humid pimple on the scrotum. Considerable swelling of the prepuce. Red spot, like a miliary pimple, on the outer surface of the prepuce; it changes to an ulcer, is covered with scurf, itches, and is sometimes painful and burning. \**Round, flat, unclean ulcer on the corona glandis*, painful and burning, surrounded with redness; in a few days a stinging is felt in it. Small pocks on the internal surface of the prepuce, depressed in the middle and humid and suppurating; painful only when touched. \**A few red, smooth excrescences* behind the glans, under the prepuce, with a creeping sensation, continuing ten days. Red excrescence on the inner surface of the prepuce, resembling a fig-wart. °Fig-warts (see Cl. Obs.).—Balanorrhœa °particularly after abuse of Mercury. °Chancrous ulcers in mercurial syphilis. Small flat vesicle on the glans, occasioning a stinging pain when urinating. Tickling of the

fig-warts. Titillation of the fig-warts. Itching stinging of the fig-warts. Burning and painful stinging in the fig-warts. *Fine stitches in the fig-warts near the anus*, when walking. Severe stitches in the fig-warts on the genital organs. Burning pain of the fig-warts when touched. (Sore pain of the fig-warts near the anus, also when touching them.) Bleeding of the fig-warts.—°Inflammation of the prostate, (see Cl. Obs.). Discharge of prostatic juice, in threads, early in the morning after waking. Nocturnal emission with fatiguing pain in the orifice of the urethra, as if too narrow. Nocturnal emission, which wakes him. Frequent burning stitches in the penis, continuing as far as the testes and the umbilical region, most violent when sitting, disappearing when walking and returning when sitting. Jerking pain in the penis, as if a nerve were suddenly and painfully put upon the stretch. Aching pain in the testes as if contused when walking or sitting, increased by walking. Titillating sensation between the prepuce and glans. Several burning stitches in the glans. Burning stitches with pressure through the scrotum and spermatic cord, from below upward. Repeated sharp stitches in the left testis.

**Female Organs of Generation.**—Itching of the pudendum, when walking. The pudendum feels sore and smarting. Swelling of both labia, painful and burning only when walking and when touching them. Burning and smarting in the vagina, when walking and sitting. Sticking in the pudendum after a long walk. Pressing and contractive pain in the pudendum when sitting. Cramp-pain in the pudendum and in the perinæum, when rising from a seat. Cramp-pain in the pudendum, extending as far as the abdomen. Mucous discharge from the female urethra. °Wart-shaped excrescences at the orifice of the uterus, with stinging and burning when urinating.—°Cancer of the womb? (Whitish ulcer on the internal surface of the great labium, first sore and painful to the touch, afterwards itching, and of long duration.)

**Respiratory Organs and Chest.**—Hoarseness, as if occasioned by a contraction of the pharynx. Violent coryza with nightly cough. Sticking in the larynx, in the region of the pit of the throat, during an inspiration, for two days. Sticking with pressure on the left side of the trachea, close below the larynx, aggravated by deglutition. Hoarseness and fluent coryza (towards evening). Dry coryza, without sneezing, with phlegm in the fauces, obliging one to hawk, but which cannot be hawked up. Cough early in the morning when rising, as is excited by sharp things. Pressure as from a heavy body in the middle of the chest, which does not impede respiration (when sitting). Tension from the first false rib as far as the left axilla, especially when raising the arm. Prickling in the right chest. Dull stitches with pressure in the left side of the chest, unchanged during inspirations or expirations. Several beating stitches in the left side of the chest. Strong, dull, intermittent stitches in the chest, from the left axilla inwards. Pinching pain in the region of the fifth and sixth ribs. Boring pressure above the pit of the stomach. Sensation as if sprained or strained in the left side of the chest, close to the region of the scrobiculus cordis. Bruising pain in the right side of the chest below the arm. Uneasiness in the cervical muscles, in the nape of the neck, and in the chest, or slow squeezing at intervals, accompanied with a sort of nausea. Blueness of the skin in the region of the clavicles. Oppression of the chest as if something had grown fast in it. Asthmatic, obliging one to take a deep inspiration. Tightness now in the left chest, now in the left hypochondrium, inducing a hacking cough. Difficult, oppressed breathing with great desire for water and much anxiety. Sensation as if some one were excoriating the chest from within. Pain in the region of the heart. Pressure in the chest, coming on after a meal. Pain in the chest, resembling a pressure, most violent after a meal. Paroxysms

of pressure in the outer parts of the chest, around the axilla. \*Considerable orgasm of the blood when going up stairs; her heart beats violently; she has to rest frequently. Visible palpitation of the heart, without anxiety.

**Back.**—(Stitch in the back through the chest from below upward.) Aching pain in the back, here and there, when sitting. Boring at a small spot in the back. Sore feeling in the outer parts of the back. *Drawing pain in the back, when sitting.* Tensive pain in the small of the back. *Drawing in the small of the back.* Dull painful pressure in the small of the back and in the lumbar region, as if bruised, early in the morning after rising, more violent when standing and turning the trunk, less when walking. Itching boil with a large red border, near the small of the back. Aching pain in the small of the back, when stooping. Stitches with pressure from the os sacrum as far as the side of the pelvis. Paroxysmal burning stinging on the right side, close to the os sacrum, disappearing entirely after strong friction. Violent, stitch-like pains in the back when walking, along the left side of the lumbar vertebræ, not changed by sitting. Stitches with pressure in the back. Burning-stinging pains in the back, between the scapulæ, when sitting. Pains in the back, as from continued stooping, in the evening, immediately after lying down. Painful drawing in the os sacrum and os coccygis and in the thighs, when sitting; after having been seated for a while the drawing hinders erect standing. Sudden, cramp-like pain in the small of the back when changing the position of the feet after long standing; he threatens to fall. Sensation as of the beating of a large artery in the dorsal spine, when sitting. Sensation of stiffness in the spine as after standing for a long time bent. Pointed stitches between the scapulæ. Tearing in the left scapula. Bruising pain below the scapula for several hours. Beating and throbbing in the shoulder-joint.—Small red pimples on the neck, close to each other, painful when touched. Sensation in the nape of the neck as if knocked in twain. Tension of the skin in the nape of the neck when moving the head. *Feeling of stiffness in the nape of the neck and in the left side of the neck, extending as high up as the ear, even during rest, not impeding the motion of the neck* (the painful stiffness did not increase by the motion of the neck). Drawing pain with pressure from below upward, in the right side of the neck, even during rest. Pain in the left side of the neck, as if he had been lying on a hard couch, or in a forced position. When moving the neck he experiences a short stitch in the cervical muscles, which causes him to start. Pain in the swollen glands of the neck, so that he was not able to lie on them. The veins of the neck are bloated and blue. Itching of the anterior surface of the neck, inducing scratching. Stinging pains in the anterior surface of the neck, below the larynx. Pinching stitch in the right side of the neck, disappearing by moving and turning it.

**Upper Limbs.**—Cracking of the shoulder-joint when bending the arm backward; she was then unable to move the arm on account of the dislocation-pain felt in the joint. Profuse sweat in the axilla. Painful stinging in the anterior and superior part of the right shoulder, near the clavicle, accompanied with dull tearing. Drawing stitches in the right shoulder-joint and the bend of the right elbow. Paralytic feeling in the arms, as if he had lifted too heavy a burthen. Frequent paralytic pain in the middle of the muscles of the left upper arm, during rest and motion. Stitches in the outer parts of the right upper arm, in any position of the arm, going off by contact. Bruising pain in the upper arms as if beaten black and blue. Sticking pain in the right deltoid muscle, as with a dull point, when walking in the open air. Heaviness in the left arm from the middle of the upper arm as far as the fingers, during rest and motion. *Involuntary jerking of the arm in the day-time.* A sort of painful tumult in

both arms, from three o'clock in the morning, until six. Violent drawing for several hours, apparently in the bones of the arms. Digging-up drawing pain in the whole arm, in the periosteum, as far as the fingers, accompanied with a pressure as from within outwards; when waking, pressure down to the periosteum; he feels a pain as if the flesh were separated from the bones. °Tearing beating ulcerative pain from the shoulder to the fingers. Titillation on the upper arm, followed by a fine stitch at a small spot. The arm trembles after having been writing for half an hour, and a drawing pain is felt in it. Painful difficulty of moving either arm, as if the joints had no synovial fluid. (Prickling pain in the elbow-joint.) Throbbing in the elbow-joint, like pulsations, in the day-time; in the evening he feels a drawing in the arm extending as far as the fingers. Prickings at the left elbow, in any position of the arm, speedily disappearing by contact. Boring pain in the outer parts of the elbow-joints. Heaviness in the forearms. Pain in the outer parts of the right forearm as from excoriation. Lancination, from time to time, in the outer side of the right forearm. Lancination in the internal side of the left forearm, from the hand to the elbow-joint. Pain in the elbow and wrist-joints, as if dashed to pieces and crumbling. Burning-sticking pain immediately above the right wrist-joint. Drawing pain in the left lower arm, from above downward. Painless red circumscribed spot on the left forearm. The skin, especially that of the hands, feels dry. Tearing in the left wrist-joint. Pain in the right wrist-joint, as if sprained. Feeling of dryness in the outer parts of the hands. When writing the hands tremble as if from old age. Sticking behind the middle joint of the middle finger, as from a thorn, most painful when bending the fingers. Violent, cramp-like pressure in the left hand, between the inner sides of the little and ring-fingers, with a feeling of heat in all the fingers of that hand, whereas the left metacarpus and the whole of the right hand were icy-cold. *Tingling in the tips of the three middle fingers of the left hand, as if they had gone to sleep.* Lancination in the little finger. The balls of the two index-fingers become red and big. Prickling pain in the posterior finger-joints. Fine stinging in the backs of the fingers. Stinging in the tips of the three middle left fingers (afternoon). (All her fingers feel numb.) Sharp stitch in the nail of the left thumb. The anterior joints of the three middle fingers of the left hand become red and swollen, with stinging, extending as far as the tips of the fingers (at five o'clock in the afternoon).

**Lower Limbs.**—Cracking in the elbow, knee, and tarsal joints, when stretching the limbs. Pimples on the right buttock, itching and burning when touched or scratched. Tension from the hip-joint to the groin and along the posterior part of the thigh down to the bend of the knee, also when sitting quietly, but more when walking, less when standing. The thighs and legs go to sleep when sitting. Sticking in the upper part of the thigh. Sweat of the upper part of the thighs near the genital organs. Pain as if bruised above the middle of both thighs, when walking in the open air. Weariness of the internal muscles of both thighs, in paroxysms. Fleet, burning stitches in the lower limbs, spreading through the same all over. Painful feeling of relaxation in both hip-joints, as if the articular capsules were too flaccid and weak to support the body, only when standing, not when walking, accompanied with weakness of the whole body. Pain in the left thigh (in the evening) when walking, as if it would break. Scraping, smarting sensation on the inner side of the right thigh. Pain in the right thigh and leg as if dislocated, when the limb was standing backward, when walking, and was being moved forward. Abrupt, burning-biting stitches near the inner hamstring. Continued burning-biting stitch in the anterior surface of the left knee. Long-continuing burning in the bend of

the left knee, as if an eruption would break out. Continuous, corrosive stiches in the skin of the right patella, when bending and stretching the right leg. Dull beating pain in the outer side of the knee, when sitting, increased by walking. Painful pressure on the inner side of the knee, from without inwards, when sitting. Cramp-pain above the left knee, when sitting. Sensation above the knee, as if the parts were cut into with a fine knife; a sort of coarse sticking pain as if bruised in the legs. Pimples on the knees, resembling chicken-pox; they suppurate, do not itch, and disappear in eighteen hours. Itching pimples on both knees, burning when touched and scratched. Single stiches in the knees, only when commencing to walk, and especially when rising from a seat. Involuntary motion of the knee to and fro, when the pain increases. The limb is heavy and stiff when walking. A drawing pain in the right leg, from above downward, in paroxysms. White blotches on the calf, of the size of a hazel-nut, itching violently, and far around, but occasioning a stinging-burning pain when rubbed. Tension through the leg, as from weariness. Pressure from within outwards in the tibia. (Enlargement of the tibia as if swollen.) Intermittent pinching in the calves. Weakness of the left leg when sitting, with a cutting sensation in the gastrocnemii muscles when walking, which recurred at intervals in the sitting posture. Sharp-drawing pain in the outer parts of the internal malleolus of the left foot, thence extending gradually into the calf. Frequent, stupifying pain in the region of the internal malleolus of the right foot. Fine stiches in the outer parts of the external malleolus of the right foot. Continuous, burning stich, near the external malleolus of the right foot during rest. Fine, painful stiches, like mosquito-bites, in rapid succession, in the bend of the right foot. A sort of cutting with subsequent sensation of warmth, in the dorsum of the left foot, near the joint, while walking. Voluptuous itching of the inner side of the dorsum of the right foot. The dorsum of the foot and the toes are swollen, inflamed and red, and they are painful as if pithy, a tensive pain is experienced in them when stepping or when moving the foot. Involuntary jerking upward of the foot when the pain increases. Painless, red spot on the dorsum of the right foot.—Pain in the heel as if gone to sleep, early in the morning, when rising from bed. Sharp stich in the tendo-Achillis, above the heel. Drawing in all the toes, extending into the leg. Drawing in the big toe. Lancinations on both sides of the nails of the big toes. Lancinations in the corn. All the toes are inflamed, shining-red and swollen; they itch, and a burning is felt after rubbing. Sweat of the feet, especially of the toes. Sweat of the hands and feet. Cramp-like drawing in the fleshy part of the anterior joint of the big toe of the right foot, with a feeling of warmth, less when walking than when sitting. Intermittent pinching near the metatarsal bone of the little toe. When sitting or walking, he experiences a feeling of weariness in the sole of the right foot, as after a long walk, and as if bruised. Creeping jerkings in the soles of the feet, as after a long walk. Voluptuous itching under the toes of the right foot, in any position of the foot. Quickly passing, violent stinging in the sole of the left foot, near the big toe. Burning of the corns.

**Sleep.**—Excessive drowsiness in the afternoon; his eyes closed while sitting. Drowsiness towards evening, without being able to sleep. He becomes sleepy early, but his sleep is restless, disturbed with dreams, and he wakes very early, out of humour, and not disposed to rise. She tossed about for an hour in her sleep before midnight. Restless for two hours in the evening when in bed, before he was able to fall asleep. Restless sleep; he tosses about because he feels too warm. A good deal of dry heat at night, and restless sleep. Restlessness at night and anxiety; he cannot sleep; his legs feel cold and are cover-

ed with cold sweat. He cannot sleep before midnight, and then he wakes again at four o'clock in the morning.—Very restless before falling asleep. Sleepless nights; he is very restless, and the body feels cold; when he fell into a nap *he dreamed at once of dead bodies*. He dreamed as soon as he fell asleep. Sleep full of dreams and startings. He slept only until twelve o'clock, and remained wide awake the whole night, nor was he sleepy in the morning.—Disposed to vomit the whole night; he brought up nothing but mucus. He talked calmly in his sleep. Anxious dreams with loud exclamations. She weeps in her sleep. When lying on the left side he dreams of danger and death.—He dreams of having had an embrace, but without an emission; painful erection on waking. Early in the morning, on waking, he is scarcely able to collect his senses, for half an hour. Tired early in the morning on rising. Violent headache in the morning on waking, after a deep sleep at night, as if the brain were distended, with nausea and vomiting of bitter water three times, accompanied with chilliness, which lasts five hours; he did not get warm in bed; had neither appetite nor thirst. Long dreams occasioned by the evening conversation, with deep meditation; when accused of a crime, he relies on his clear conscience. Frightful dreams; they wake him, with a feeling of heat in the body. Restless night: he woke frequently; fell from one dream into another, with emission of semen. Anxious vision while falling sleep; he then feels a few dull shocks in the left side, and gasps for air. Restless sleep with inodorous sweat. As soon as he falls asleep at night, all the covered parts exhibit an agreeable, warm sweat, which disappears on waking; this sweat breaks out frequently in the night.

**Fever.**—Chilliness without thirst, every morning.—Chills, in the evening when in bed, only on the left side of the body, which felt cold to the touch. Chilliness every evening from six to half past seven o'clock, with external heat of the body, dryness in the mouth, and thirst. Shaking chill over the whole body, without the body feeling cold to the hand. A shuddering creeps over his back from time to time. Coldness in the back which cannot be relieved by the warmth of the stove. *Shuddering through and through when uncovering the body ever so little in the warm air*, with or without goose-flesh, hands and face being warm. While dressing he has frequent shudderings through the whole body, without goose-skin. *Shaking chill with much yawning; the warm air feels cold to him, and the heat of the sun does not seem to be strong enough to warm him*. Nausea and vomiting, the vomiting being followed by several chills, with heaviness in the upper and lower limbs and a tearing in the occiput.—Violent orgasm of the blood every evening; throbbing in all the arteries, at every motion; less when sitting. Heat in the face and burning and redness of the cheeks, two evenings in succession.—Redness and burning of the left cheek, accompanied with chilliness of the back from below upwards, when performing any movement (not when standing or when sitting still); her fingers become numb. Violent chill for a quarter of an hour at three o'clock in the morning: afterwards thirst, then profuse sweat all over, but not about the head, which was only warm. Clammy sweat towards morning. Thirst without heat early in the morning when rising. The pulse becomes weak and goes down to 60. Sudden heat in the face, and redness. *Excessive heat of the face without thirst*, the hands and the rest of the body being merely warm. Heat and redness of the face without thirst, when sitting. Continuous feeling of heat in the whole face, without any change of complexion, without thirst, the tips of the fingers being cold, the remainder of the hand being moderately warm, and the remainder of the body feeling hot. *Feeling of burning heat in the face, producing neither real heat nor redness, nor sweat, the hands being icy-cold, the body moderately warm*

Swelling of the veins of the temples and hands (during rest) without heat. The tips of the fingers are icy cold as if dead, the rest of the hand, the face, and the rest of the body feeling hot to the touch, without thirst. Agreeable warmth over the whole body the whole evening, with coldness of the fingers, especially those of the left hand, without thirst; accompanied with a sensation as of goose-flesh, and a slight shuddering over the body. Warm hands with bloated veins, the face being cold, but the forehead hot. Rush of blood to the head with sweat in the face and desire for cold drink, even when undressed. Slight heat, followed by a creeping chill, with icy-cold hands in the evening. *Heat with thirst, without chilliness either before or after the heat, the mind feeling well-disposed.* During the febrile heat he had more lucid thoughts and was more disposed to conversation or business.

**Skin.**—The skin of the whole body is painful to the touch. Pimples resembling varicella on some parts of the thighs, elbows and forearms; they were surrounded with a red areola, and their tips were full of pus. Itching of the body, back, and upper and lower limbs, like fleabites, especially in the evening and night. Prickling itching of the whole body, until one o'clock at night, not affected by rubbing. Titillating itching of the whole body. The itching spots on the body become burning and painful after rubbing (nettle-rash).

**General Symptoms.**—°Rheumatic and arthritic pains.—Painful drawing from the legs through the thighs into the head, and thence back again into the pit of the stomach, during which attack her sight was obscured, and she felt qualmish. Pressure in different parts, as if on the bones, accompanied with a seraping, prickling sensation. Paroxysm: when walking in the open air he felt nauseated, intoxicated and giddy; he had heat in the face, with anguish and sweat, and was scarcely able to breathe; his feet felt so heavy that he staggered (for an hour). Weariness and bruised feeling in the shoulders and thighs. Weakness of the body, not of mind.—Stiffness and heaviness in all the limbs. The body feels very weary and as if bruised, with aversion to exercise, in the afternoon. Great lassitude in all the limbs, in the afternoon when sitting. While sitting he was several times attacked with drowsiness, without feeling tired. Sensation as if the whole body were very thin and delicate and could not resist the least attack, as if the continuity of the body would be dissolved.

**Characteristic Peculiarities.**—The symptoms are most violent after three o'clock in the afternoon and night, preventing one from falling asleep.

## 243. TONGO.

TONG.—*Baryosma tongo*; *Conmarouma odorata*; Tongo-bean.—See NENNING in Hartlaub and Trinks' Annals.

### SYMPTOMS.

**Head and Sensorium.**—Weariness, with sensation as if the head were larger, towards the forepart, scarcely allowing him to close his eyes.—Compressive sensation in the occiput, with external sensitiveness. Pressure on the vertex, with throbbing.—Drawing pain, particularly in the right frontal eminence. Drawing from the occiput through the head, as far as a painful lower tooth. Painful drawing deep in the brain, when lying.—Tearing in the head, the whole forenoon, with pressure and sticking, great ill-humour, painful sensitiveness of the scalp, tearing in the left side of the face from below upwards, particularly on entering the room and going off at noon, after taking vinegar.

Sticking in the vertex, also with contractive cutting in the occiput. Sticking in the right side of the head, particularly when laughing, or succeeded by tearing in the ear. Stitch from the right parietal bone through the occiput. Throbbing stitch from the left parietal bone to the forehead, on leaning the head on the hand. Stitch in the right occiput, followed by tension, the itching of the skin going off by scratching.—Beating headache early after rising, with heaviness of the head. Beating pain on both sides of the head on entering the room, after dinner, with sensation as if sewed together, and external sensitiveness of the scalp. Beating in the left side of the head, towards the vertex, followed by tearing on the left parietal bone, and stitches in the head. Ulcerative pain in the right occiput, with sensitiveness of the skin to the touch.—Heat in the head.—The headache is relieved by taking vinegar.—Sensitiveness of the scalp to contact. Tension at a small spot of the scalp. Tearing over the left orbit of the eye.

**Eyes and Nose.**—Pressure in the right inner canthus as if from sand. Drawing and tension in the left lower lid. Violent twitching in the right lid, pressing out tears. Tearing over the margin of the right eye. *Itching of the inner canthus.* *Burning and dryness of the eyes*, particularly in the afternoon, or in the evening on reading. *Tearing* in the ears, particularly in the left, succeeded by tingling. Deeply-penetrating tearing in the ears. Stitches in the right ear from without inwards. Painful creeping in the right ear, going off by boring with the finger into the ear. Itching in the right ear, worse by scratching.—Tearing in the root of the nose, with desire to sneeze. Coryza with stoppage of the nose, until morning and returning at noon.

**Face and Teeth.**—Pale complexion, with red cheeks. Sensation as if the skin of the inner left cheek were drawn up. Tension in the right malar bone, with pressure as from a load.—Toothache relieved by vinegar.—*Tearing* in the right lower jaw, with tingling itching in the tips and roots of the teeth, going off by pressing the teeth against each other. Tearing in the gums or roots of the teeth. Tearing in the *upper molares*, particularly in the afternoon on laughing, or in the roots, extending as far as the malar bone, succeeded by tingling in the tips, first aggravated, then relieved by pressure. *Tearing in the left lower molares*, also as if they would be lifted out of their sockets by the roots, relieved by cold water, or made worse by pressure. Tearing in all the lower teeth from behind forwards, as if they would be lifted out of their sockets by the roots. Tearing from the left upper tooth into the head, early after rising.—*Tingling* in right molares, on pressing the teeth together, going off on opening the mouth. Stitch from the painful tooth to the nape of the neck. Grumbling in the left lower tooth, aggravated by the contact of food.—Bleeding from a decayed molar tooth, with sour taste.—Bleeding of the gums.

**Mouth, etc.**—Constant accumulation of water in the mouth, particularly in the afternoon.—Roughness in the throat, going off after eating soup. Sensation on the right side of the œsophagus, as if a rough, stinging body were rising into the ear where it seems to move about still longer.—Sourish taste, after rising.—Frequent thirst.—Frequent eructations tasting of bitter almonds.

**Stomach and Abdomen.**—Pecking sensation in the stomach, almost like splenic stitches. Cutting around the stomach, along a narrow streak, on both sides of the stomach. Stinging, first on the right side of the stomach, then in the left knee, in the forenoon.—Stinging pecking in the region of the right hypochondrium. Burning and cutting in the right hypochondrium as from a sharp ripping up body, or as if a ribbon were cutting into the part, with sensitiveness to pressure.—The bowels are very sensitive (after the diarrhœa).—Burning tension in the right hypogastrium, and along the chest as far as the right sea-

pula. Sensation in the hypogastrium as if a string were being drawn around the right side, with biting and gnawing at a small spot, and great sensitiveness.—Pinching in both sides of the abdomen. Pinching in the epigastrium, with turning in the stomach as of a ball. Pinching with rumbling, succeeded by discharge of mucus from the bowels and tenesmus.—Shifting of pinching flatulence in the abdomen, with discharge of hard faeces and clawing in the anus, remaining long after the evacuation.—Painful pressure from without inwards, as if the abdominal walls would be drawn in. Burning in the abdomen, going and coming during walking. Sticking followed by burning, with sensation as if an oblong depression existed there.

**Stool, etc.**—Violent ineffectual urging. Hard stool, with much straining. An ordinary evacuation is followed by a very soft evacuation, with pinching and tenesmus. Pinching and rumbling in the abdomen, followed by diarrhoeic stool with mucus, and succeeded by tenesmus. Urging to urinate, even in bed. Scanty urine with white sediment. Wine-coloured urine, depositing a sediment of visceous mucus immediately.—The menses are too early by seven days, and scanty. Discharge of thick mucus from the vagina, when straining at stool.

**Chest, etc.**—Burning in the larynx, with hoarseness.—Stitches deep in the chest. Stitches under the left chest, extending to the axilla. Burning stitches on raising the trunk after stooping. Burning and stinging in the xiphoid cartilage. Bruised sensation and cutting under the left chest, thence shifting to the pit of the stomach and back again, relieved by pressure.—Stinging in the region of the ribs, succeeded by burning and stinging on a large surface. Several attacks of sudden burning in the region of the left lower ribs, causing one to start, in the evening. Tensive burning in the left costal region, a hand's breadth below the axilla, when sitting, or inclining to the right side.—Pain in the small of the back, with sensitiveness to pressure. Violent pain as if bruised, when sitting, going off during motion. Pain as if sprained, on the left side of the nape of the neck, with sensitiveness to pressure, relieved by turning the head. Stitch from the right scapula through the shoulder, early in the morning.

**Extremities.**—Stitches in the left shoulder, in front. Lancination in the right upper arm, or also in the head of the left humerus. Burning at the right elbow, going off by rubbing. Tearing over the left olecranon, going off for a short time by pressure. Tearing along the right ulna, as far as the wrist-joint. Pressure from within outwards in the region of the left radius. Tearing in a finger, or also in the articulation of the thumb. Stinging in several tendons of the fingers, at table.—Sticking in the right hip, when standing. Tearing in the left hip-joint, during an afternoon-walk, relieved by rubbing. Darting in the right thigh, when sitting, also relieved by pressing on the part. Tearing from the knee to the middle of the tibia, afterwards from the middle of the thigh to the hip-joint, relieved by pressure. Violent tearing in the left thigh, as if in the femur, when standing; going off when sitting. Tearing at times in the thigh, at others in the knee, relieved by pressure and walking, the whole day. When walking, the knees shake as if she would fall, (during the menses). Tearings in the right heel. Violent prickings in the ball of the right big toe, after dinner, when sitting.

**General Symptoms.**—Tearing in the limbs, relieved by motion and pressure. Epileptic paroxysms.—Yawning, with stretching and dread of labour, in the afternoon. Drowsiness and great indolence after dinner.—Chill in the open air, afternoon.—Sad and apprehensive. Ill-humoured, not disposed to anything, business, or conversation. Sensation of ease, soon after taking the drug. Great mirthfulness.

**Characteristic Peculiarities.**—Most of the symptoms come on while sitting, and during rest generally.

## 244.—TRIOSTEUM PERFOLIATUM.

**TRIOST. PERF.**—Dr. Tinker's Weed, Wild Coffee, Gentian, Horse Gentian, White Gentian, Horse Ginseng, Fever Root, Fever Wort, Wild Ipecac, Bastard Ipecacuanha, Sweet Bitter, Cinque, etc.—See **TRANSACTIONS OF AMER. INST.**, Vol. I.

(The following symptoms were obtained from taking a few drops of the tincture in water, every day, for three successive days.)

**Head.**—Giddiness when rising at midnight, with extreme drowsiness.—Headache, which is worse in the right side of the fore part of the head, and right temple.—Pain in the back part of the head with sensation of weight.—Headache worse from sitting up.—*Boring pain in the temples.*—Pain in the right side of the head and in the back.—Pain in the nape and occiput, with coldness and stiffness in the feet.

**Eyes.**—Slight pain in the left eye-ball.

**Nose.**—Sneezing.

**Pharynx.**—Soreness as if from swelling of the pharynx, and pain in the œsophagus on swallowing.

**Appetite.**—Increased appetite through the day.—Loathing of all food.—Thirst, but not a very urgent desire for drink.

**Stomach.**—At four o'clock in the morning, feeling of a load and oppression in the epigastrium, with throbbing and an undulating sensation all through the system.—Pain in the epigastrium, increased by drinking water, or by turning in bed.—Oppression in the epigastrium through the night.—Soreness in the epigastric region.

**Gastric Symptoms.**—Slight nausea.—Nausea on rising, which was immediately followed by copious vomiting of very sour ingesta, attended with cramp in the stomach, and followed by perspiration and a pain in the forehead, which was worse on the left side.—Vomiting at five o'clock in the morning on rising to stool.—Vomiturition, attended with severe pain in the epigastrium, and drawing in the calves, almost amounting to a cramp.—Flatulency, confined to the stomach.

**Abdomen.**—Heat and sharp pain in the right side of the abdomen in the evening.

**Stool.**—Stool in the morning, followed by numbness of the lower extremities.—Copious evacuation of thin stools without pain.—The evacuations from the bowels seemed to proceed from the small intestines.—Stools watery or frothy, voided without pain, and followed by exhaustion.—Evacuation in the morning, preceded by pain in the abdomen. The evacuations are most frequent in the evening.—\*Diarrhœa attended with colic pains.—Irritation in the anus with exudation of mucus.

**Genitals.**—Discharge of semen during sleep without erection.

**Chest.**—Audible beating of the heart and slight pain under the left breast.

**Back.**—Pain in the right shoulder from lying on it.—Pain in the nape and back.—Pain in the nape with perspiration.—Rheumatic pain in the back from stooping.—Pain and stiffness in the loins.—The pain in the loins is confined to the left side.

**Extremities.**—*Stiffness* of all the joints of the upper, as well as of the lower extremities.—Remarkable stiffness in the lower extremities with slight coldness, and a tingling sensation.—Stiffness in the knees when attempting to rise.—Pain in the right knee.—Numbness in the calves.—Penetrating pain under and behind the left external malleolus after sleeping.—Stiffness of the

joints of the toes, ankles and knees, when lying.—Drawing and shrinking sensation in the legs, and the most decided pricking in the soles of the feet.—Coldness and stiffness in the feet.

**Sleep.**—Dulness and drowsiness, with disinclination to engage actively in business.—Greater cheerfulness.—Sleepiness without the ability to sleep sound after midnight.

**Fever.**—General perspiration.—Drying away of the perspiration, and development of fever, with hot skin and increased thirst:—Aching in all the bones.

**Skin.**—Vesicular eruption on the forehead over the left eye, on the middle of the chest and on the right arm.—Very great itching at night, with welts all over the surface.—Violent itching eruption of the skin, generally with elevation of the skin.

## 245. URTICA URENS.

URT.—Recommended for burns, dysenteric diarrhœa, and nettle-rash.

## 246. UVA URSI.

UVA.—*Arbutus uva ursi*.—See HAHNEMANN'S Organon.

### SYMPTOMS.

Relieves ascites in affections of the heart and liver.—Painful micturition with burning. Slimy, purulent urine. Hæmaturia.

## 247. VALERIANA OFFICINALIS.

VALER.—See STAFF'S Additions.

COMPARE WITH—*Bell.*, *Camph.*, *Canth.*, *Cocœ.*, *Coff.*, *Con.*, *Ign.*, *Merc.*, *Nux v.*, *Plat.*, *Puls.*, *Stann.*, *Tarax.*, *Spong.*

ANTIDOTES.—*Camph.*, *Coff.*

**Mind and Disposition.**—Tremulousness, he has no rest anywhere, as one feels when expecting a joyful event. Palpitation of the heart. Fearfulness, in the evening when sitting in the dark (imagining that some one might hurt him). More cheerful than before; he comprehended everything more easily than before; a sort of joyfulness, as is sometimes felt after drinking coffee. (Seriousness.) Anxious, hypochondriac feeling, as if the objects around him had been estranged from him; the room appears to him desolate, he does not feel at home in the room, he is impelled to leave it (from the vapour).

**Sensorium and Head.**—Cloudiness (from the vapour). Feeling in the head, as after intoxication, somewhat elated. Sudden stupefaction in the head, causing him to stagger and almost to fall to one side, when standing. Stupid feeling in the head when stooping. Feeling of intoxication and vertigo when stooping, sensation as if everything were turning around her. Great flow of ideas, one chasing the other, as in intoxication; confused, faint recollections of former thoughts and actions presented themselves to his mind, but they

chased each other with so much rapidity, that he at last became quite stupified and lost his thoughts; he felt like one who is dreaming (from the vapour). *Sticking headache* for eight hours. Sticking on the top of the head. Piercing *drawing*, with pressure, from the nape of the neck to the occiput, when bending the head backwards, at eleven o'clock in the morning, after two hours. Pressure and drawing penetrating into the side of the occiput, from the vapour. Passing pain, as from a hard blow on the vertex, a painful, stupifying, contractive sensation, affecting the whole head, although it emanates from the vertex as the centre, afterwards disappearing from the other parts of the head, and lastly from the vertex. Sensation of icy coldness in the upper half of the head, when pressing the hand firmly on the head. A current of air instantaneously causes a drawing pain in the right side of the head.—Dull *pressure* in the right temple, from without inward, at intervals. Fleet jerkings in the right temple. Constrictive drawing across the forehead. Numb, tensive sensation behind the frontal eminence. A drawing together in the left half of the forehead, with a dull pressure. *Violent pressure in the forehead*, followed in a few minutes by sticking in the forehead, and especially over the orbits; soon after the sticking changes again to pressure, and so on in constant alternation. The sticking is like a darting-tearing, as if it would *pierce the eyes from within outward*, continuing a few hours. Violent stitches (darting-tearing) in the middle of the forehead, deep interiorly, coming and going at intervals. Headache one hour after dinner, pressure over the eyes, as if the eyeballs should be pressed out, especially when moving them; from one to four in the afternoon. *Headache, the aching being especially violent over the orbits*; at eleven o'clock in the evening, second day. Painful drawing around the orbits, more toward the side, especially when stooping. Suddenly-passing feeling of heat in the head when stooping. The hair of the forehead sweats about noon, with stiffness of the loins, the pulse being 90. Sweat on the forehead about noon; after dinner the eyes feel weak as after revelry.

**Eyes.**—Tearing in the right eyeball (from the vapour). *Smarting in the eyes, as if occasioned by smoke*; at three o'clock in the afternoon, after six hours. Burning smarting in the eyes; at ten o'clock in the morning, second day.† Stitches in the inner canthus. Pain and swelling of the eyelids. Swelling of the lids, with smarting and stinging. *Pressure in the eyes* only in the morning after rising; *the margins of the eyelids seem swollen and sore*, especially in the region of the left inner canthus, they look red. Sensation of pressure in the right eye, as from a sty. The pupils are somewhat dilated.—Dimness of sight early in the morning, and pain in the eyes, as if he had not slept sufficiently. \*He sees things at a distance more distinctly than usual. The eyes shine. Scintillations before the eyes. \*Black motes before the eyes. Light before the eyes in the dark; the closed and dark room seemed to him filled with the shine of twilight, so that he imagined he distinguished the objects in the same; this was accompanied with a sensation as if things were near him, even when not looking at them; on looking, he perceived that the things were really there; at ten o'clock in the evening.

**Ears.**—Slight jerkings in the right meatus auditorius. Crampy drawing in the left ear. Ringing in the ears in the evening, in bed, and illusion of hearing;

† These affections of the eyes, which had been entirely caused by Valer., without any disposition for such pains having existed before, were excited at intervals for the period of four months, the cause being frequently unknown. This shows that the symptoms of Valer. are deeply rooted in the organism, and that it is with great difficulty that they are removed. In this respect it is like the mercurial sufferings which frequently last for years, and during the whole of one's life, and sometimes return after having been dormant for months.

he imagined he heard the bell strike, at ten o'clock in the evening, after fourteen hours. Smell and taste of fetid tallow.

**Face.**—Crampy, quickly-passing, repeated jerkings in the region of the left malar bone. Painful, crampy drawing in the right malar bone, passing. Quick painless twitching from time to time behind the skin of the left cheek, which he thought might be seen; this is however not the case; it goes off for a short time by moving the hand over the cheek. In the open air the cheeks become *hot and red*, without sweat; a quarter of an hour afterwards sweat breaks out over the whole body, and especially in the face.

**Jaws and Teeth.**—Repeated dartings, as from electricity, in the right ramus of the lower jaw. A pressure (almost resembling a darting) in the right side of the lower lip and in the gums of the right cuspidatus. Pimples in the white of the upper lip and on the cheek; small white vesicles on an elevated red border, painful to the touch. *Toothache*. Shooting pains in the teeth. Drawing in the teeth of the lower jaw, from before backwards, and in the upper jaw from behind forwards.

**Mouth and Pharynx.**—Feeling of dryness in the tip of the tongue, for a quarter of an hour, without thirst, early in the morning. Gradually-increasing sticking pain in the region of the *velum pendulum palati*, accompanied toward the end with a bitter taste in the mouth, and accumulation of saliva, inducing cough (from the vapour). Scraping sensation in the throat, with an ineffectual desire to hawk.

**Taste and Appetite.**—Early in the morning, after waking, he has a flat, slimy taste in the mouth. Bitter taste on the tip of the tongue, a quarter of an hour after eating meat and vegetables, when licking the lips. Before dinner he has a taste and smell as of fetid tallow. Violent appetite at dinner, affecting the stomach with a sort of nausea (canine hunger); although he remains indifferent when thinking of eating, yet he eats with much relish, and a large quantity.

**Gastric Symptoms.**—*Frequent empty eructations*. Frequent empty risings before a meal. *Gulping up of a rancid fluid*, not rising into the mouth (heartburn.) Early in the morning, immediately after waking, risings, tasting of *Hepar sulphuris*. *Disposition to vomit*. Quickly-passing nausea, as if one would vomit. Nausea with desire to vomit, as if a thread were hanging in the throat, arising from the region of the umbilicus, and gradually rising to the fauces, and exciting a copious accumulation of saliva. Warm rising from the epigastric region, arresting the breathing. She feels nauseated, faint, her lips are white, and the body is icy cold, followed by vomiting of bile and considerable chills. *Vomiting*. Nightly vomiting. Pressure, which suddenly rises to the pit of the stomach and disappears speedily, with gurgling in the abdomen.

**Stomach and Abdomen.**—Weakness of the abdomen. Painful jerks in the right hypochondrium. The epigastrium, and the region of the liver are painful to the touch. Violent stitches and pressing from within outward, in the region of the last true ribs, when standing. Dull sticking intermittent pressure on the left side and over the pit of the stomach, in the region of a cartilage of the ribs. Shooting cutting from the pit of the stomach to the umbilical region. °Abdominal spasms, particularly after dinner, or in the evening in bed. Two evenings in succession he is attacked with violent colic after ten o'clock, in the left side of the abdomen, as if there were subcutaneous ulceration. The whole evening he feels a pain in various parts of the abdomen, which is at one time felt like a pressing in the umbilical region. *Bloatedness of the abdomen*. Hard abdomen. Feeling in the abdomen as if it would become excessively distended, even unto bursting. Great inclination to draw the abdomen in; he does it even

involuntarily (alternate effect). Pain in the abdomen when drawing it in, like a pinching and cutting. Colic, in bed, in the evening; a pinching in the abdomen. A sort of dragging in the abdomen, with a sort of nausea, as if the menses would come on. Digging-up pain in the abdomen. Aching pain in the abdomen. Severe aching-drawing pain in the hypogastrium, from ten to eleven in the evening. Dull-aching pain in the abdominal muscles, as if bruised, or as if from a cold; worse during an inspiration. Pain in the left side of the hypogastrium, as if he had sprained the part, when sitting, at seven o'clock in the evening. Pressing crampy pain in the left side of the hypogastrium, when sitting. Drawing pain, as if bruised, in the left iliac region, spreading to the middle of the abdomen; shortly after, rumbling in the bowels. Bruised pain in the hypogastrium, especially in the parts covering the os pubis, increasing in paroxysms, like a painful pressure or drawing. Drawing pressure in the inguinal glands, only when spreading the thighs; the place is painful to the touch.

**Stool.**—*Diarrhœa*. Frequent evacuations. On getting up from stool he feels a severe tenesmus in the anus, as if diarrhœa would set in; this disappears gradually, but returns with great violence in a few hours, obliging him to go to stool again, when he has a natural evacuation. (The baby, who had had frequent loose stools, has now many more looser and more watery discharges, in which solid particles, resembling pieces of curdled milk, are floating.) On the first day the stool looks natural; after twenty-four hours he has a greenish papescent stool with some blood.—Boring in the rectum, at ten o'clock in the evening. Boring pain in the left side of the rectum, when standing, apparently in the sphincter. Stitch in the rectum when standing. Violent tearing in the anus when moving, a little while sitting.

**Urinary Organs.**—(When emitting water the baby cries and strains: occasionally he passes a little blood by the rectum.) When emitting water the baby presses very hard, causing the dark-red rectum to protrude, when a few drops of blood fall out. *Frequent emission of urine*. Passing cramp-pain in the region of the bladder.

**Genital Organs.**—Creeping and drawing in the penis, as if it had gone to sleep; frequent erections the day previous. Tensive-gurgling pain in the right testicle when sitting.

**Chest.**—Passing oppression of the chest, in the region of the lower true rib of the right side (from the vapour.) Difficulty of breathing and anxiety in the chest after the usual breakfast. When walking, he feels a pressure across the lower half of the chest, with oppression of breathing. Frequent stitches in the chest during a slow ride. Sudden stitches in the chest and in the region of the liver from within outward, causing him to start. Darting-tearing pain in the chest. A few sudden jerks, like electric shocks, below the right axilla. *Dull stitch, resembling a pressing from within outward, in the left side of the chest (below the axilla), during a deep inspiration; the stitch lasts as long as the inspiration*; external pressure excites a sore pain. Sudden stitches in the region of the heart when sitting erect or standing, abating when stooping, only during an inspiration.

**Back.**—Drawing across the small of the back, in the evening, when in bed. Bubbling pressure above the anus in the region of the os coccygis. *Intense pain in the left lumbar region above the hip*, as if he had strained the parts a good deal, worse when standing, and especially when sitting. Single stitches in the left side, below the short ribs. Stitches in the region of the kidneys, when sitting. Drawing pain in the back (Hahnemann). Rheumatic pains in the scapulæ. Painfully-disagreeable itching in the axilla, at three o'clock in the afternoon.

**Upper Limbs.**—Smarting pressure as from an excoriation, or dull stitches as with a hard blunt instrument, in the region of the shoulder and in other places. Dull pressure, as if with the tip of the finger, in the region of the head of the humerus. A stinging pain in the region of the posterior border of the deltoid muscle, at eleven o'clock in the evening. Sudden crampy drawing (a sort of darting-tearing) in the muscles of the upper arm immediately above the bend of the elbow and in the outer muscles of the thigh, at noon. Crampy drawing in the region of the biceps in the right upper arm, from above downwards (from the vapour). Crampy darting-tearing, like an electric shock, in the humerus, intensely painful. When laying the left arm on the table and bending it, while writing, he experiences a drawing pain in the deltoid muscle from above downward, and in the bend of the elbow; if he lets the arm hang down, the drawing is changed to a feeling of heaviness pervading the whole arm as far as the fingers, as if the limb were turgid with blood. In the muscles of the left arm, from the shoulder down to the fingers, he experiences a very painful drawing mixed with single stitches; a sort of tearing, which is neither increased nor decreased by any position of the limb; after taking a second dose, the tearing returned much more violently (although it had disappeared for several hours); it disappeared afterwards in walking, after a violent stitch in the knee (so violent that she was scarcely able to walk), and was followed by a pain which moved up and down from the knee to the toes, and back again (being felt less when walking than when sitting); finally it affected likewise the right foot, although less. Stitches below the tip of the elbow; at six o'clock in the evening. (Tearing in the elbow-joint.) Pain as if bruised, in the bends of the elbows, when writing, afterwards extending as a drawing pain along the biceps muscle of the upper arm. Tearing in the inner side of the forearm, from below upward. Tremor of the hands, heat and redness of the cheeks, with warmth of the rest of the body. Sudden violent jerks in the hand, which disappear again immediately; the hand is afterwards painful to the touch. Crampy jerks through the thumb, as if caused by electricity, several times. Stitches in the middle phalanges of the fingers, in the bones.

**Lower Limbs.**—Twitching and jerking in the muscles of the right hip. A bubbling pressure over the anus, in the parts covering the os coccygis. Crampy-tearing (tearing-darting) pain in the outer side of the thigh, extending into the hip. Crampy pain in the front part of the thigh, extending as far as the groin. Drawing in the outer side of the thighs from above downwards; it is felt only when extending the lower limb sideways; early in the morning, after two hours. Repeated darts, as from an electric spark, in the middle of the left thigh, when standing, followed by a bruised pain in the same parts. Dull pressure, recurring at intervals, above the left knee, across the thigh; afterwards descending again from the thigh to the knee. Pain as if bruised, from the middle of the right thigh above the knee, along the outer side, while riding in a carriage, especially when the carriage jolts. When commencing to walk, especially when missing a step, he feels a crampy pain above the bend of the right knee. Pain in the patellæ. Smarting in the outer side of the left knee, as if excoriated. Tearing in the bends of the knees when sitting or standing. Dull pressure as with the tip of the finger, on the left side, below the left knee. Stitch in the front region of the tuberosity of the tibia. Excessive heaviness and lassitude of the legs, when standing, going off when sitting. Bruised pain in the front part of the middle of the tibia, when walking, as if the bones had been broken in that part and had not been entirely cured (continuing for days). After a violent stitch in the left knee she feels a pain extending from the knee to the toes and back again, afterwards affecting also the other limb; preceded by pain from the

shoulder to the fingers. Tensive pain from the bend of the knee through the whole calf, when sitting. Heaviness in the calves; when walking, she feels as if she could not get along easily. Lassitude and tension in the calves, when standing. When laying the right limb across the left, he experiences a tearing in the left calf. Pulsative tearing in the right calf when sitting.† Pricking pain in the outer side of the calf when sitting. Drawing in the tarsal joints when sitting. Pain as if bruised, in the left tarsal joint, while riding in a carriage, when the carriage jolted. Fleeting pain, as if sprained, in the right tarsal joint; the pain came on after having gone up stairs fast; it was felt most when standing, scarcely any when walking; on the contrary, the pain seemed to disappear when walking. Darting-tearing in the inner border of the right foot, repeatedly, as if caused by electricity. Sudden pain as if bruised, in the outer ankle of the right foot; he feels the pain more when standing than when walking. Continuous sticking directly over the left malleolus, in the region of the tendo-Achillis. Drawing, and a weak feeling along the tendo-Achillis, towards the heel, as if the part had lost all strength, when sitting; disappearing when rising from a seat (from the vapour). *Constant pain in the heels.* When sitting, the heels, especially the right heel, feel painful. Stinging and pain in the heels when sitting. Tearing in the ball of the sole of either foot, with subsequent warmth. Tearing in the dorsum of the toes, especially the big toes; from eleven to twelve o'clock at night. Heaviness in the tips of the middle toes, accompanied with a drawing pain and as if there were subcutaneous ulceration, and with a cooling sensation as if a current of air were moving through the sole of either foot as far as the calves. The tips of the toes feel painful.

**Sleep.**—Yawning and stretching of the limbs. Great debility and drowsiness in the evening. In the first night the sleep is disturbed with many confused dreams; early in the morning he feels very tired. In the second night the sleep is disturbed with anxious and partly voluptuous dreams: for instance, that he is driving in a carriage through deep water. She and her baby sleep more quietly than before without any anxious or confused dreams (curative effect).—Sleeplessness. Tossing about during sleep.

**Fever.**—Increased pulse. The pulse is somewhat accelerated and irregular, two or three beats being occasionally quicker than the others; at the same time the pulse is lighter. Pulse ninety, in the first quarter of an hour the beats are full and vigorous, in the second the diastole is shorter, the whole body being agreeably warm, and a tremulous anxious sensation being experienced which seems to proceed from the abdomen. Pulse unequal, in one minute sixty, and in the next ninety; weak and small. Pulse seventy-eight, after three quarters of an hour, the beats of the heart being weak and scarcely felt (eighty-six beats).—Chilliness. Paroxysms of shuddering from the nape of the neck downward. Chilly creeping over the whole body from above downward. Tremulous, passing chilly feeling. *Synochus. Increased warmth.* Agreeable increase of internal and external warmth, the first two hours. Increased warmth the whole day, with quick and frequent pulse. Constant heat in the whole body, and uneasiness, the first four hours. Dry heat in the face and the whole body, in the evening when sitting. Flushes of heat over the cheeks for two hours, several times, in the evening, the pulse being sixty; with feeling of dryness on the tongue, without thirst and without any previous chilliness. She

† These four symptoms were very obstinate: they returned periodically even two or three months after the proving.

‡ These pains returned for two or three months, without any previous disposition for them.

feels warm all over, except in the region of the hip, where she feels as if she had cold water poured over her. Drawing-aching pain in the right side of the head, during the flushes of heat over the cheeks; the pain afterwards extends as an aching pain into the orbit of the right eye; colic one or two hours after. Increased warmth of the body the whole day, especially during motion, with sweat breaking out on the face, the forehead, etc., the pulse being strong, from eighty to ninety beats. During dinner he feels a heat in the whole body and face, with sweat in the hairs on the forehead. Heat the whole forenoon, and sweat during the slightest motion. *Frequent sweat.* Heat and sweat over the whole body, especially in the face, as soon as he begins to walk.

**Skin.**—Eruption, first red and confluent, afterwards small, white, hard, elevated pimples in numbers on the arm and chest.

**General Symptoms.**—°Hypochondriac and hysteric complaints. \**Rheumatic pains* in the limbs, generally between the joints, particularly when excited by mercury. Slow, painful drawing and tearing-darting, as if in the bone (when sitting still). Paralytic numbness in the limbs. Paralytic pain in the knees, elbows and shoulder-joints, when ceasing to walk. Excessive debility in the bends of the knees and tarsal joints, with a bruised pain across the thighs and in the small of the back. After having walked a little, he feels a stiffness and painful weariness in the bends of the arms and knees. Bruised pain in the limbs. *Drawing, in many places, here and there, like suddenly passing jerks.* Twitching and jerking in various parts of the muscles, superficially. Smarting pressure as if excoriated, or dull sticking as with a hard, blunt tool, at a small spot in various parts. Morbid irritation of the nerves; although he appears more cheerful and vigorous than before, nevertheless his eyes, arms, knee-joints, feel very weak.†

## 248. VERATRUM ALBUM.

VERAT.—White Hellebore.—HANNEMANN'S Mat. Med. Pur., IV.

COMPARE WITH—Acon., Ambr., Arn., Ars., Bell., Bov., Bry., Camph., Caps., Caust., Chin., Cic., Coff., Coloc., Cupr., Dros., Ferr., Hell., Hyos., Ign., Ipec., Jod., Lauroc., Lyc., Mangan., Magn. mur., Merc., Mez., Op., Petrol., Phosph., Phosph. ac., Puls., Ran. seel., Rhus t., Ruta, Sab., Sec., Sep., Sil., Spig., Staph., Stram., Sulph., Tartar em., Zinc.—Verat. is frequently suitable after: Ars., Chin., Cupr., Phosph. ae.—After Verat. are frequently indicated: Ars., Arn., Chin., Cupr., Ipec.

ANTIDOTES.—Acon., Camph., Coff.—Verat. is used as an antidote against Ars., Chin., Ferr.

### CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

Excessive paralytic chronic debility, particularly after abuse of China and after an exhausting illness, with disposition to faint.—Fainting from slight exertions, such as straining at stool.—Fainting turns preceded by anguish, despondency.—Dry, itch-like eruptions of a child, with nightly itching and crying, inflammation of the eyelids, constant diarrhoea, distention of the abdomen, emaciation.—Quotidian fever: violent chilliness, with much thirst, delirium, vertigo,

† The first and most rapid effect of Valerian which precedes any after symptom, is an acceleration of the pulse and congestions of the head.

nausea, profuse sweat towards morning, without thirst, with paleness of face, quotidian fever after abuse of quinine, with abdominal pains, constipation, spasms.—*Tertian fever*: chilliness without subsequent heat, afterwards warm sweat which soon changed to cold.—*Abdominal typhus*, with vomiting and diarrhoea, coldness of the limbs and cold sweat. Typhus: vertigo, headache, rumbling in the abdomen, constant chilliness.—Hypochondria and abdominal pains.—Nymphomania, with suppression or diminution of the lochial discharge.—Melancholy.—Hypochondriac melancholy (relieved).—Religious melancholy. Melancholy with disposition to suicide (relieved).—Mania. Mania with lewdness and lascivious speeches.—Furious mania.—Puerperal mania, (in alternation with Bell.).—Preeursory symptoms of apoplexy: Contraction and burning on the tongue, which changes to a cold feeling on drawing breath, vertigo, buzzing in the ears, dull pressure on the vertex, distortion of the mouth, feeling of numbness in the fingers of the right hand.—Nervous headache with nausea and vomiting.—Acute hydrocephalus of infants, with sopor, shrieking, boring with the head, dim eyes, contracted pupils, emaciation, disposition to vomit on raising the head, hot head, cool body, weak pulse, etc.—Strabismus and weakness of the eyes after an operation for cataract.—(Blepharoptosis) paralysis of the eyelids.—Hemeralopia.—Beating toothache and toothache of various kinds, with swelling of the face, great debility, nausea and vomiting, bruised feeling, failing of strength, coldness of the body, etc. Paralysis of the organs of deglutition.—Insatiable hunger.—Vomiting of the ingesta, with thin, slimy, brownish, diarrhoeic stools. Vomiting of a watery, tasteless liquid, with spasmodic choking. Vomiting which cannot be arrested, and is excited by drinking a little water, by moving or raising one's-self. Morbus niger Hippocratis.—Pressure at the stomach, hiccough, retching, waterbrash with bitter taste, cutting in the abdomen, tearing in the limbs, coldness of the body and feet, in the case of a pregnant female.—Gastric symptoms with fever.—Cholera infantum.—Sporadic cholera.—Violent vomiting with colic and diarrhoea.—Asiatic cholera: rice-water evacuations with retching and vomiting of a similar substance, with chilliness, choleric countenance, difficulty of breathing, diminished temperature of the skin, colicky pains, unquenchable thirst for cold water, coldness and paleness of the buccal cavity, tongue and lips, choleric voice, collapse of pulse, cold limbs, cold, clammy sweat on the face. Cholera with coldness of the body, excessive debility, cramps in the calves, retention of urine and cold sweats.—Cardialgia: violent, painful constriction of the stomach, extending to both præcordia, attended with several diarrhoeic stools.—Flatulent colic.—Unbilical hernia of new-born infants.—Costiveness of infants at the breast.—Violent diarrhoea.—Diarrhoea with vomiting, early in the morning and immediately after a meal.—Chronic diarrhoea.—Dysentery with painful cramps in the calves, vomiting or disposition to vomit, cold skin.—Menostasia.—Asthma thymicum.—Nightly cough.—Whooping-cough with irregular paroxysms and vomiting of a watery fluid.—Whooping-cough with choking.—Convulsive stage of the whooping-cough.—Suffocative catarrh.

#### SYMPTOMS.

**Mind and Disposition.**—He does not talk, except when irritated, and then he scolds. He gets vexed when provoked. Taciturnity: he dreads to talk; talking is very hard for him; he speaks with a low and feeble voice. Cannot bear being spoken to. Every little thing irritates him. Vexed at the least trifle, accompanied with palpitation of the heart, and hurried, audible breathing. He hunts up other people's weak sides, and reproaches those persons with their weak sides. Activity and mobility of the limbs, the pains and emotions dimi-

ishing.—Excessive sensitiveness; increase of the mental powers. He is extremely lively, eccentric, wild.—Loquacity.—Fear.—Despair.—Melancholia, and chilliness as if cold water were poured over him, accompanied with frequent desire to vomit. Sadness, despondency, grief, with involuntary weeping and disposition to lay down his head. She is disconsolate about her imaginary misfortune; she runs about the room howling and screaming, her eyes turned to the floor, or she sits in a corner absorbed in reverie, moaning, weeping and lamenting; worst in the evening; sleeps only until two o'clock. He moans and is beside himself, he cannot restrain himself. \**Anxiety, as if he had committed an evil deed.* \**Anxiety, as if he apprehended some misfortune.* Anxiety and vertigo. Excessive anguish in the evening and after dinner. Great anguish, the whole night. Great anguish, early in the morning. Sensation in his whole frame as if he were going to his end; however, he is composed. Soft grief, until he sheds tears.—Slight delirium.—He is very noisy, wants to escape, and can scarcely be held back. He curses and swears the whole night, and complains of a stupid feeling in the head, with headache and ptialism. Stamps with his feet (with want of appetite).—Rage, with great heat of the body. Rage: he tears his clothes and does not talk. He bites his shoes to pieces, and eats them. He eats his own faeces. \*He does not know his relatives.

**Sensorium.**—Insanity: he says he is a hunter. He pretends he is a prince, and demeans himself with pride. He pretends he is deaf, and blind, and has a cancer. She pretends she is in labor. She boasts of being pregnant. She says she will soon be confined. She kisses everybody, previous to the appearance of the menses. Bright redness and heat of the face, with constant laughing. Alternation of laughing and moaning. He sings and whistles merrily, in the night. She claps her hands over her head and sings; accompanied with cough and tenacious mucus in the chest. Frequent paroxysms; she runs about in the room until she falls down. She screams and runs about, with a dark-blue face. Uneasiness of mind, oppression and anxiety. Anxiety, screaming and running about. Screaming and running about, with paleness of face and fearfulness. Fearfulness, terminating in frequent eructations. Tendency to start and fearfulness. His head feels bright, when he is busy: but when he has nothing to do, he feels stupid and is taciturn. Eager to work, with restlessness; he attempts a great many things, but he gets tired of a thing as soon as begun; he does not accomplish anything. A sort of indifference the whole day; he frequently rubbed his forehead, in order to clear up his mind. Want of ideas. He loses his mind. *He is only conscious of himself as in a dream.* °Furious delirium. Bland delirium; coldness of the body, with his eyes open, and a cheerful and sometimes a smiling countenance; he talks of religious things, and of vows which he had promised to fulfil; he prays, and he imagines he is anywhere else than home. His memory leaves him. Reeling and intoxication. *Dizzy, as if nothing in his head were firm.* Dizzy for three days. Excessive dizziness.—Vanishing of the senses.—Stupid feeling in the head, with nausea, for two days. Painful dulness of the head, with contracted pupils.

**Head.**—Headache, with some stiffness. Headache, with vomiting of green mucus. °Headache, with nausea, vomiting and pale face. Headache and pain in the back with colic, and desire to vomit. Painful dulness of the head, with tensive pressure now in the temples, now in the vertex, most violent when sitting straight and standing, diminished when stooping and when lying on the back, with contraction of the pupils. Violent headache with diuresis. Dull headache, extending from the temples to the forehead, increased by stooping, going off by bending backward, and by pressing on the head, but returning

again when raising the head. Intermittent beating headache. Beating headache, over the left eye, for a quarter of an hour.—*Dull pressure in the vertex, early in the morning after waking.* Aching pain in one side of the head, accompanied with pain in the stomach.—Headache as if the brain were broken.—*Paroxysms of pain in various parts of the brain, partly as if bruised, partly pressure.*—Constrictive headache, with constrictive pain in the fauces. When stooping the blood rushes to the head. °Burning in the brain. When walking the headache increases unto reeling, but it abates again when sitting. *Pressing pain in the vertex, as if the head were pressed flat, changed to a beating pain by motion.*—Internal cutting in the vertex.—Single stitches in the forehead, even when sitting. His head feels heavy, and everything seems to turn in the head.—Buzzing and humming in the fore part of the forehead, with dull internal headache.—Drawing pain in the head and small of the back.—Excessive headache, disappearing at the appearance of the menses.—Concussion in the head and jerking in the left arm, with paleness of the fingers.

**Scalp.**—Sensation along the temple, as of a drop of water running down, without producing a cool sensation. Feeling of warmth and coldness on the head at the same time, *\*his hairs being sensitive.* *\*He feels chilly on the top of the head,* and at the same time about the feet. Itching of the forehead. *\*Cold sweat on the forehead.* °Sensation as of a piece of ice on the head. Corrosive itching, continuous stitch in the hairy scalp, obliging him to scratch. *Sensation on the right side of the head as if a cluster of hairs were electrified, a sort of creeping in the hairs and a tendency to stand on end, with a slight shuddering of the skin under the hairs.*

**Eyes.**—Pain in the eyes. Complains of pain in both eyes, and raises the hands above the head. Painful pressure in the eye, with want of appetite. Pressure in the eyelids, as if too dry, after a short siesta, followed by lachrymation. Painful feeling of dryness in the upper eyelid, as if salt were between it and the eyeball, without any considerable redness of the eye, after dinner. Painful sticking, with pressure in the upper eyelid, near the outer canthus. Fine, sharp stitches in the canthi. Stinging itching in the inner sides of the eyelids. Bruising pain of the right eyeball near the outer canthus, in paroxysms; when pressing on it, it ceases to ache. Profuse lachrymation and cutting pains, accompanied with a feeling of dryness and heat. Long-continuing, strong feeling of heat in the eyes. The eyelids are glued together during sleep. Heat in the eyes and face, with redness of the cheeks, as if caused by a hot vapour blowing on them. Painful ophthalmia with excessive headache, preventing the nightly sleep. Ophthalmia with tearing pain. Weak feeling in the eyes. The eyes look faint, surrounded with blue rings.—The eyes are distorted and protrude.—A sort of paralysis of the eyelids; they felt as if too heavy: he was scarcely able to raise them.—Feeling of dryness about the eyelids. The eyelids are dry, especially after he has been sleeping; they are painful as if excoeriated; they are rigid and glued together. *Excessive dryness of the eyelids.* Contraction of the pupils (immediately and after six hours); also with continued compressive pain in the eyes.—Excessive dilatation of the pupils, with perceptible weakness of sight; he does not even recognise persons standing close by, or recognises them only very slowly (at 7 o'clock in the evening). Heat in the eyes with headache. *Inflammation of the right eye.* Inflammation of the right eye with febrile heat. The eyes look watery, as if covered with albumen.—Blueness of the left eye, with frequent eructations.—The eyes are turned backward so that the whites only can be seen, for an hour.—Scintillations before the eyes.—When rising he sees black spots and sparks before his eyes; he was on that account unable to rise for eight hours, and had either to sit still or lie

down.—Vanishing of sight; he is unable to see.—*Diplopia*. •*Hemeralopia*, commencing at twilight.

**Face.**—\**Cold, disfigured face, as of a dead person*, °also with pointed nose and sunken cheeks. °*Bluish face*. °*Yellowish face*. \**Pale face*. \**Dark-red, hot face*. Redness of face with great thirst and diuresis. \**Extreme redness and heat of the face*. °One cheek is red, the other pale. °Redness of the face when lying, paleness on rising. °Alternate redness and paleness of the face. *Burning on the face* and about the head. Itching here and there in the face, and behind the ears, as if pimples would break out (without any visible redness,) with a feeling of soreness behind the ears. Titillating itching in different parts of the face, rather biting than stinging; afterwards small red pimples break out, with red, hard, elevated borders, and *brown, afterwards yellow tips containing pus*; these are painless at first, but when matured they are sore to the touch.—Thick *rash* on the cheek, with pain in the face. Copper-red eruption in the face, around the mouth and the chin.—Swelling of the face for several days. Jerking-pinching sensation in the muscular parts of the face. Drawing and tense pain over the whole right side of the face and over the right ear. \**Sweat* in the face and in the axillæ, when walking. Jerking in the cheek at noon; scintillations before the left eye; paleness of face and fainting, followed by vomiting of a quantity of white foam; the paroxysm returns for three days. Stitches in the right cheek and the right chest, with pyalism.—The skin of the lips become chapped. °Dry, black and parched lips. Burning of the vermilion border of the upper lip, and a little above. Vesicles near the left corner of the mouth. Red eruption around the mouth and on the chin. Dry lips and dry mouth, in the evening, not without thirst. Pimple near the corner of the mouth, in the margin of the vermilion border, painful, particularly when touched.

**Ears.**—Pressing in the right ear, early in the morning. Tingling in the ear.—Roaring in the ears as of wind. Sensation as of a pellicle being stretched across the ear. One or the other ear is stopped up. Aching pain in the meatus auditorius. (Tearing in the lobule.) Sharp stitches behind the left ear and jaw. Single stitches deep in the left ear. Sensation as of a cold breath in the right ear, followed by a feeling of great heat in the ear, then again a feeling of coldness; this alternates several times. When rising from a seat he is attacked at once with a humming and roaring in the ears, and he fancies he sees nothing but fire before his eyes, for eight hours. He complains of deafness, and pain in the chest. Biting titillation and itching below the right lobule.

**Nose.**—Red spots on the nose. Vesicles on the nose, close to each other. Hemorrhage from the right nostril. Smell as of manure. *Sensation as if the nose were too dry inside*. Bleeding of the nose, while sleeping, at night. Sensation as if the nose was ulcerated inside. Sensation as if the nasal bone were compressed and pressed in.

**Jaws and Teeth.**—*Lock-jaw*. Dull pressure in the muscles of the left jaw, resembling a strong pressure with a dull-pointed piece of wood. Sticking pain in the articulation of the jaw when opening the mouth, preventing him from depressing the lower jaw easily. When eating, all the muscles of the lower jaw are painful as if bruised, so that he is obliged to stop chewing. Painful blotch on the lower jaw; when touching it, it causes at first a contractive pain, but afterwards it changed to a pustule with an inflamed border. Smarting pain in the front part of the lower jaw. Swelling of the left sub-maxillary glands, accompanied with sore throat, especially on the left side, causing a sort of strangulation and constriction of the fauces when swallowing, continuing a short while after swallowing. Pain in the sub-maxillary glands as if pinch-

ed.—Grinding of the teeth.—Swelling of the gums and jaws.—Violent toothache and headache.—First he had toothache, afterwards the face was red and swollen. \**Great weakness*, with the toothache and the inflammation of the tonsils. A pain in the upper and left molar teeth, pressure and weariness, as if filled with lead. The toothache is at first a painful pressure; afterwards, when chewing, it changes to a drawing extending to the roots of the tooth, even when taking only soft things between the teeth. °Beating toothache. °Toothache with nausea and vomiting, bruised feeling and coldness of the limbs, cold sweat on the forehead, internal heat and unquenchable thirst.—*Looseness of the teeth*.

**Mouth, Pharynx, and Œsophagus.**—Spasmodic constriction and strangulation of the Œsophagus, as if one had eaten an astringent pear. Contraction of the Œsophagus, as if occasioned by a tumour. Burning in the throat. *Scraping in the throat. Roughness in the throat.* Numb sensation in the palate, as if a burnt place had been healed and were covered with a thick epidermis, or as if the palate were lined with the skin of a plum. Dryness in the throat, which cannot be removed by drink. Sensation of coldness in the Œsophagus from below upward, (a cold spot being likewise felt in the posterior part of the palate;) this is soon followed by the gulping up of a quantity of warm, sweetish-saltish, slimy fluid; after which the coldness in the Œsophagus and palate abates for a while, but then returns. Drawing pain in the throat, thirst, and colic. Distention of the Œsophagus, also with sensation as if he would suffocate.

**Mouth.**—Stammering—*Speechlessness.* Burning on the tongue and in the pharynx. Burning in the mouth, as if rubbed with pepper; however, the mouth is not dry. *Inflammation of the buccal cavity.*—Warm sensation in the posterior part of the mouth and fauces. Pain in the mouth after the nausea; afterwards considerable inflammation in the mouth; lastly redness and swelling of the tongue. °The tongue is dry, blackish and cracked. °Yellow-coated tongue.—Dryness in the region of the palate, and desire for water. Dryness and viscosity in the mouth, without any particular thirst. Early in the morning, after waking, he has for an hour an extremely troublesome feeling of dryness in the mouth, and viscosity, without thirst, diminishing but little after rinsing the mouth. The mouth feels alternately dry and viscid, and then watery.—Accumulation of tasteless water in the mouth. Ptyalism. Flow of viscid saliva. Sudden accumulation of a quantity of water in the mouth, which he cannot swallow quickly enough, and which therefore chokes him somewhat. Increased flow of saliva with an acrid, saltish taste in the mouth and on the tongue, and great heat in the palm of the hand and in the pit of the stomach. Flow of mucus from the mouth, toward noon.

**Taste, Appetite and Gastric Symptoms.**—Aversion to warm food, with desire for fruit. \**Desire for fruit.* Desire for lemon juice.—\**Desire for acid things.* °Desire for cooling things. *Diminished taste; pappy taste.* Constant sourish taste, with accumulation of a quantity of watery saliva. *Tasteless saliva; no taste in the mouth.* *Taste and coolness in the mouth, as is occasioned by peppermint.* Putrid, herb-like taste in the mouth. *Smarting taste as of peppermint with sensation as of heat rising from the Œsophagus into the mouth,* which continues and is attended with nausea and inclination to vomit. Putrid taste, as of manure. °Bitter taste as of bile. *Voracity* without thirst. °*Canine hunger.*—\*Unquenchable thirst, particularly for cold drinks.—Hunger and great thirst. No desire for warm food at noon, but so much the more for fruit. Desires only cold things, herrings, sardines, fruit.—Continuous greediness for sour cucumbers. Has no appetite or hunger; did

not relish his food. Empty eructations (immediately). Eructations even before breakfast; sour eructations in the afternoon. \*Bitter eructations. Empty eructations in the evening after lying down in bed, followed by a scraping sensation in the region of the larynx, almost as after heartburn. (Eructations tasting of the ingesta.) Frequent expectoration of mucus, after frequent eructations. Constant eructations, with disposition to vomit, and accompanied with excessive cough. *Constant flow of saliva from the mouth, like water-brush.* Nausea, with hunger and pressure in the region of the stomach, while eating, disappearing after eating. Disposition to vomit after breakfast, going off after dinner. *Great nausea before breakfast. Inclination to vomit with a bilious taste in the mouth.* Hiccough. Hiccough in the morning when smoking. Cardialgia. Hiccough, continuing a long while. Fulness in the chest, he would like to eructate all the time, without any nausea. Frequent disposition to nausea. Drinking is followed by shuddering or goose-skin. Diuresis, accompanying hunger and thirst. He feels qualmish; he would like to eat, still he has no appetite for food.—He eats a good deal, still he complains of hunger and emptiness of the stomach. Qualmishness in the pit of the stomach. Nausea. Constant nausea and pyalism, the appetite and thirst being natural. Great nausea and disposition to vomit, with great thirst. Great nausea, with profuse flow of saliva. Nausea, with great thirst and diuresis, for three days. Great nausea, with red, sweaty face. Disposition to vomit, and hoarseness; a good deal of cough. Disposition to vomit, foam coming out of his mouth.—Disposition to vomit, with lockjaw. Disposition to vomit and pyalism, with lock-jaw. Excessive desire to vomit, even unto fainting. °Bitter vomiting. \**Vomiting of the ingesta.*—*Vomiting of the ingesta with green mucus.* Vomiting of all the food he had taken, and long sleep. *Vomiting of green mucus,* afterwards of copious froth. Vomiting of green mucus, followed by chilliness. Vomiting of froth, followed by vomiting of a yellow-green, sour-smelling mucus. Nightly vomiting of tenacious mucus. Vomiting of white mucus at night. Vomiting of white mucus, with good appetite. Vomiting of dark-green mucus, with diarrhoea, in spite of which he has an appetite for eating and drinking. Vomiting of a good deal of mucus, with excessive weakness. Vomiting of black-green mucus. \**Black vomit.* \*Vomiting of bile and mucus, then of black bile, and lastly of blood.—Cholera. Violent, excessive vomiting. Two paroxysms of vomiting, three or four turns of vomiting each time; the nausea continued between the paroxysms; the things vomited smelled sour.† Vomiting of bile, afterwards of tenacious mucus. Every vomiting was preceded by shuddering over the whole body. He has to lie down even at the commencement of the vomiting; after the vomiting he feels so debilitated that the femora feel as if they would escape from the acetabula. Cold hands previous to the vomiting; after the vomiting the hands became hot, with orgasm of the blood. Vomiting with heat of the body. °Painful retraction of the abdomen during the vomiting. °The vomiting is renewed by the least motion, or by swallowing the least quantity of liquid. °Vomiting with diarrhoea and pressure in the pit of the stomach. °Asiatic cholera.

**Stomach and Abdomen.**—Crampy pain in the pit of the stomach, especially when walking. Pain in the stomach as from canine hunger. Feeling of weakness in the stomach with internal coldness in the region of the stomach, and a slight pressure. °Painful sensitiveness of the pit of the stomach. °Anguish in the pit of the stomach. Burning in the pit of the stomach. °Inflammation of the stomach. ? \**Violent pressure in the pit of the stomach, extending*

† The vomiting was appeased by drinking cold milk, but the patient was attacked with excessive chilliness in bed.

as far as the sternum, the infra-costal region and the ossa ilii.—Pricking in the region of the spleen, after a moderate meal, when walking in the open air.—Tensive pain in the hypochondria, as from flatulence. Painful pressure and drawing around the pit of the stomach. Pain in the hypochondria and chest, owing to a deficient emission of flatulence. \*Pain in the abdomen here and there, as if cut with knives (immediately). Drawing tearing pain deep in the abdomen, for minutes, most violent above the pubic bone. °Colic after a cold, or °after abuse of Chin. *Cutting colic.* Cutting colic with diarrhœa, early in the morning at four o'clock. *Flatulent colic affecting the bowels and the whole abdomen, here and there; the flatulence is emitted with so much more difficulty as it passes off more tardily.* The intestines are painful, as if bruised, when the flatulence is not emitted. Painful pressure in the region of the cœcum, as if caused by a spasmodic incarceration of flatulence. Frequent emission of flatulence (the first hours). The flatulence passes off with great force upward and downward. Jerking in the abdominal muscles with warmth in the chest which is not disagreeable. Sensation before stool, deep in the abdomen, as if he would faint. Writling sensation in the abdomen and back, previous to stool, with great weakness; he felt lighter and stronger after stool.—Anxiety during an evacuation, with apprehension of apoplexy. *Distention of the abdomen,* with ptyalism. Swelling of the abdomen, with colic and emission of flatulence. Loud rumbling in the abdomen. Colic, with loud rumbling. Painless grumbling in the abdomen. Grumbling and pinching in the abdomen, as from flatulence, accompanied with scanty emission of flatulence. Rumbling in the abdomen, as if he had diarrhœa, accompanied with frequent emission of wind. Complains of pain in the stomach, still he eats, drinks, and sleeps a good deal. Pains in the stomach and intestines. Pinching in the abdomen, at times below, at times above the umbilicus, in the afternoon, shortly after a meal; when sitting, it was felt at a different place than when walking, and vice versa. Colic, thirst, and diuresis. Nightly colic, with sleeplessness. Colic in the umbilical region. Lancinating pain in the abdomen, soon after a meal. Cutting colic in the umbilical region, with diuresis and thirst. At times he experiences a sticking colic, at times sticking pains here and there in the body, accompanied with a smarting in the throat, as from pepper.—Dull aching pain, as if bruised in the intestines in the pubic region, the whole morning, accompanied with a sensation in the left groin as if inguinal hernia would protrude, mostly when sitting. Colic around the umbilicus, as from flatulence, without any considerable tightness of the abdomen. Pinching in the abdomen, as in diarrhœa, but without desire for stool. Drawing-aching pain in the evening during a walk. Colic from the back towards the umbilicus.—Drawing-pinching colic, followed by flatulence and expulsion of tenacious fœces, which adhere to the rectum. Frequent sensation in the abdomen as if diarrhœa would set in, but without urging; a sort of laxness and rumbling in the abdomen. Sudden (pinching?) colic early in the morning, in bed, followed immediately by urging; during the colic he expelled yellow-green papescient fœces, the last portion of which were half mucus; the urging remained after the evacuation, some mucus being yet passed in consequence of it; a bruising sensation in the bowels above the pubic bones, and a qualmish sensation in the pit of the stomach remained.

**Stool.**—Constipation on the first day. Costiveness with diuresis. °Chronic constipation of infants. Heat and pain in the head with the costiveness. \*Chronic constipation. The first portion of the stool is of large size; the latter consists of thin strings, although they have the proper consistence and colour. Unperceived discharge of loose fœces, with flatulence. Sudden, frequent loose stools (the first hours.) Flatulence after dinner, accompanied with unperceived

discharge of liquid stool; afterwards discharge of acrid fæces with tenesmus. *Costiveness, owing to the hardness and size of the fæces.* Urging in the epigastrium; nevertheless the expulsion of fæces is either difficult or does not take place at all, as if owing to a want of activity of the rectum, which does not seem to participate in the peristaltic movement of the rest of the intestines. Dull colic, on account of the abdomen being distended by wind, as if the bowels were bound, with uneasiness. Suppression of all the secretions.†—Diarrhœa with pain, the pain existing during and after stool. Motion as if hernia would become incarcerated. °Diarrhœa with cutting before and after stool. °Greenish, watery, flocculent diarrhœa. °Brownish, °blackish, diarrhœa. °Nocturnal diarrhœa. Excessive alvine discharges. Frequent and painful diarrhœa. \*Frequent and violent diarrhœa (immediately). Diarrhœa with profuse sweat. Chilliness and shuddering with the frequent stools.—\*Extreme weakness during stool. During stool he turns pale. During stool he turns pale. Diarrhœa, with appetite for food or drink. Violent, bloody diarrhœa. The evacuations are accompanied with a cold, profuse sweat on the forehead. Burning at the anus during stool (smarting pain at the anus). Pressing towards the anus with blind piles.

**Urinary Organs.**—Burning urine. The scanty urine is yellow and turbid, even while emitting it. Acid urine. °Greenish urine. °Frequent, but scanty emission of dark-red urine. Stitch in the orifice of the urethra, after micturition.—Pinching pain in the urethra, between the acts of micturition. Pain in the urethra as if constricted behind the glans, accompanied with ineffectual desire to urinate, the bladder being empty. Painful pressure on the bladder, and burning during micturition. Burning in the forepart of the urethra during micturition. Involuntary micturition. Diuresis, with loud rumbling in the abdomen. Diuresis, with profuse coryza.

**Genital Organs.**—Soreness of the prepuce. Drawing pain in the testes.—Erections. Increased sensitiveness of the genital organs.—Re-appearance of the menses about new-moon, after having been suppressed a long time. Headache (tearing?) especially in the morning, accompanied with a disposition to vomit, during the menstrual flow, which had delayed six weeks; the headache abates in the evening. Profuse menses. The appearance of the menses is preceded by bleeding at the nose. The menses appear too soon, on the thirteenth and ninth days. Pimples on the right labium, before the menses. The menses are preceded by vertigo (toward noon) and sweat (at night). The menses are accompanied by buzzing in the ears, pain in all the limbs and great thirst. Grinding of the teeth, and bluish face, toward the end of the menses.—°Puerperal fever. °Suppression of the lochia, with delirium.? °Nymphomania of lying-in females.

**Larynx, Trachea.**—*Spasmodic constriction of the larynx, with contraction of the pupil. Paroxysms of constriction of the larynx, suffocative fits, with protruded eyes.* Catarrh on the chest, without any real (involuntary) cough; the viscid mucus has to be hawked up. Scraping in the throat, as in catarrh. *Tickling in the lower parts of the bronchial tubes, inducing cough, with slight expectoration.* Dry and hacking cough, excited by a titillation in the lowest region of the sternum (immediately.) Tickling in the lower part of the bronchial tubes, inducing cough, without expectoration. Stitches along the spermatic cord when coughing. Oppression of the chest, when coughing.—Short breath (a sort of oppression of the chest) when performing the least exercise, even at home; the cough does not cease until he sits quite

† NOTE BY HAHNEMANN.—For some days, from too large a dose.

still. °Violent cough with constant eructations as if he would vomit. °Cough resembling whooping-cough, with vomiting. °Cough with yellow expectoration, on entering the room, with bruised pain in the chest, after coughing. Pain in the chest, with dry cough. Pain in the side, and headache, with almost dry cough. Pain in the left side when coughing, with weakness and difficulty of breathing. Three or four turns of a deep hollow cough in the evening, which seems to proceed from the abdomen.—Long turns of hollow cough, with cutting pain in the abdomen. *Titillation in the chest, as if cough would set in*, in the middle of the sternum. Severe cough in the evening, for three hours, with ptyalism. Hoarse, dry cough at night. Severe, dry cough at night and in the morning. Frequent expectoration after a dry cough. Cough with profuse expectoration, blue face and involuntary emission of urine.

**Chest.**—Spasmodic contraction of the intercostal muscles of the left side, arresting the breathing. Painful constriction of the chest. Cramp-like contractive pain in the left chest, returning periodically (immediately). Many paroxysms of oppression of the chest, and a pain in the side when taking an inspiration, especially in the morning on rising. Cramp-pain in the region of the sternum, more after drinking than eating.—*Aching pain in the region of the sternum after eating or drinking.* Pressure in the region of the sternum. Pressure under the last rib, which ends in a stitch, worst during an inspiration. Cutting pain in the chest. Pain under the ribs, especially during an expiration. Several paroxysms during the day, of sticking pain in the right chest, arresting the breathing. Stinging-beating pain in the left chest, at a small spot. *Excessive anguish arresting the breathing.* Oppression of the chest, after burning in the throat and a gnawing pain in the stomach. Dyspnœa and difficult breathing even when sitting, accompanied with headache. Dyspnœa, he cannot take sufficient breath, on account of the windpipe being clogged up with tenacious mucus. Painful and difficult breathing. The breathing has almost ceased. Soft pressure on the chest, when standing, and oppression of the chest. Oppression of the chest, when walking, and pressing in the same, as if too full, arresting the breathing. Suffocative oppression of breathing. Pulsative pressure in the left chest, in the region of the fourth rib, as with a dull point: when touching the part, it felt sore and as if there were subcutaneous ulceration. Stitches in the right side. Pain in the side, with pains in the region of the stomach. Pain in the region of all the ribs. Pain in the side, in the mammæ and thighs. Sharp, slow stitches, near the nipple, terminating in itching. Pain in the left chest, afterwards in the back. Frequent pain in the chest. Painful pressure in the upper part of the sternum, occurring regularly as beats in music. Gripping pain in the right chest.—Violent beating of the heart, raising the ribs; the heart causes the hand to start back, without pain. *Palpitation of the heart, with anxiety and hurried, audible breathing.* Paroxysms of anguish about the heart, which beats very strongly, with sensation as if it were very warm.

**Back.**—Paralytic and bruising pain in the sacro-lumbar articulation and the knee-joint. Pain in the small of the back when walking on a level, not when sitting (in the morning). Stitch in the small of the back when stooping, continuing a long while. Aching pain in the small of the back when standing. Pain in the loins. Pain in the loins and arthritic tearing pains in the lower limbs. Bruising pain in the left side of the small of the back, when stooping or when rising again. Intermittent stitches in the region of the os coccygis, when standing, more itching than stinging.—Pain from the scapulæ along the whole of the back, with diuresis, thirst and costiveness. Colic in the umbilical region, after pain in the small of the back. When stooping and then rising

again, he feels an aching in the back, and as if the back were broken. A painful drawing pressure and a bruising pain is experienced in the spine when walking; the pain goes off by pressure. *During exercise he feels a rheumatic pain between the scapulæ from the nape of the neck to the small of the back;* it is especially violent when going to stool. Violent pressure in the region of the scapulæ, as if crushed and bruised. Heaviness of the nape of the neck; the cervical muscles refuse to support the head.—The muscles of the nape of the neck feel paralyzed. Rheumatic stiffness of the nape of the neck, occasioning vertigo, especially during motion. Stinging around the neck and the chest, as from nettles, abating when gently rubbing the parts with the hand (with redness and rash-like pimples which could only be felt). Pain in the neck, as if the skin were sore. Pain between the scapulæ, which becomes dragging when turning.

**Upper Limbs.**—\*Painful paralytic weakness in the upper and lower limbs; he is scarcely able to drag them. Cutting pain on the shoulder, one turn. Single stitches in the left shoulder-joint, even during rest. Dull, indescribable pain in the right axilla. Twitchings in either arm. Heavy pain in the middle of the left humerus, from above downward. Arthritic pain in the deltoid muscles and in the knee. \**Paralytic and bruising pain in the arms;* he cannot raise them and keep them raised without pain or effort. Paralytic and bruising pain of the left upper arm, when stretching it. The arms feel cold when raising them. Feeling in the arm as if it were too full and swollen. *Pain in the middle of the left forearm, as if the bone were pressed upon.* Trembling in the arm when grasping anything with the hand. Drawing pain in the bend of the elbows, when drawing them up; sensation as if there were a swelling in the bends, and as if this prevented him from drawing them up; accompanied with a paralytic feeling in the arm.—Jerking in the right wrist and further on toward the elbow. (Dry herpes between the thumb and index-finger, on the hand.) Corrosive itching of the inner side of the wrist. °Ice-coldness of the hands. *Tingling in the hand as if it had gone to sleep.* Tingling in the fingers, causing anxiety. The fingers feel dead, and as if gone to sleep. The metacarpal bones are painful to the touch. Red, painless blotches on the backs of the fingers between the second and third joints. Tensive pain in the middle-finger when moving it. °Drawing and cramp in the fingers. Pain in the joint of the thumb as if sprained. Burning-itching pain in the first joint of the little-finger, as if it had been frozen.

**Lower Limbs.**—*Difficult walking; first the right, then the left hip-joint feels paralytic.* The thighs and hips feel as if they would break: a paralytic pain is experienced in them. Weakness in the thighs and knees.—Staggering gait. Cramp-like drawing in the glutei muscles, when standing. Visible pulsative jerking of the vastus externus, when sitting or standing; the muscle rose and descended again, regularly as the pulse; painless, and returning immediately after walking. Rheumatic drawing pain in the muscles of the thigh, when standing. Cramp-like painful pressure in the thigh or calf when bearing on that foot, less while standing. Pain in the thighs, when sitting, as if broken. Cramp-like drawing pain in the right thigh, when standing, commencing in the bend of the knee. Cold smarting sensation in the outer parts of the knee-joint. Cracking in the region of the knee. Cutting pain in the knee, one turn. (Sticking in the knee and ankle.) Occasional drawing in the knees, when standing, walking or sitting. Tension of the bends of the knees when standing or walking, as if too short. Bruising pain in the knees when going down stairs. Painful jerking in the right knee. Visible raising of the knee when sitting, every quarter or half hour, without

pain; she started every time; it ceased in the evening after lying down. Electric starts, followed by a bruising pain in the knee and elbow. Pains in the feet, especially the knees, as if too weary, as if heavy stones were tied to the parts; he has to move them hither and thither to find relief.—*When stepping he experiences a pain below the knee, in the bone, as if it had been broken and were not yet firmly united. Painful heaviness of the legs, as if too weary.* Pain in the calves and tibiae, as if they would break. Creeping in the legs as far as the knees; a painful tingling. Painful heaviness of the legs, as if threatened with paralysis, in the morning. Tearing pain in the tibiae, from above downward. \**Cramp in the calves* (and feet) also very violent. °*Icy coldness of the feet.* Burning of the tibiae, in the evening, as if they had been exposed to severe cold. Biting-itching and creeping sensation in the calf, when standing. Painful drawing through the tarsal joints, when sitting. Pain of the tarsal joints, when walking, as if sprained, after previously stretching the feet backward while sitting, so as to rest them on the backs of the toes. The feet swell rapidly and become thin again in a few hours. Jerkings in the weak foot, when standing, in quick succession, not when walking. Coldness in the feet, as if cold water were flowing through them, with trembling. Tensive pain in the extensor muscles of the toes, when walking. Burning in the ankle. Sticking pains in the big toe. Return of gout. Burning itching in the left heel, deep-seated. *Short-lasting, sticking pains in the toes of the right foot*, when standing, for two hours. Violent stitch in the corn of the left foot, when sitting. Sore pain in the corn, when standing on tip-toe.

**Sleep.**—Yawning and stretching after the siesta. Yawning, which was frequently so violent that it occasioned a roaring in the ears.—Repeated yawning and stretching, with weakness and a bruised feeling in all the limbs, as if he had not slept enough (in the morning). General debility, as if he had not slept enough; his mind was otherwise bright (in the morning). His mind was so lively for two evenings in succession that he was unable to go to sleep before midnight; accompanied with an intolerable feeling of heat, in bed (he tried to uncover himself), with restless tossing about. Long, uninterrupted sleep. Sleeps for three days, even during his epileptic fits.†) Quiet sleep, with thirst and diuresis. He fell asleep on his chair, with half consciousness. His sleep is disturbed with anguish and emotion: he complains that the blood in all his veins, especially about the head, is burning, that a spasm arises from the chest towards the throat, with great heat of the head and hands; heat and anguish disappeared in the open air, and were followed by frequent yawning. Coma vigil. Coma vigil: one eye is open, the other is closed half or entirely, and he frequently starts as if in affright. Anxiety after going to bed, until midnight; coma vigil, with drawing movements in the abdomen, causing a humming in the head). Drowsiness, with starting as in affright, preventing sleep; afterwards febrile paroxysms. Sweat all over, in the evening, when he wants to go to sleep. Sweat in the morning, especially in the face; also in the day-time his face inclines to sweat. Heat and sweat, in the evening when in bed, but more heat. While sleeping he stretches his arms above his head (the first hours). Moaning during sleep. Vivid and anxious dreams about robbers; he woke as in affright, and imagined still that the dream was true. He dreams that he is chased violently. Indistinct dreams; he wakes unusually early in the morning. Frightful dreams, followed by vomiting of tenacious, green mucus. Frightful anxious dreams at night, for instance, that he was bit by a dog and was not able to escape. Quarrelsome dreams.

† In the case of an epileptic patient.

**Fever.—Yawning.** (He wakes in the night with a good deal of chilly trembling in the arm).—Febrile motions. Shuddering, cold chilliness in the skin, for instance, of the face. *Coldness of the whole body.* Fever returning for several days, sometimes for a long time.† Quotidian fever, before midnight. Heat and redness in the face, in the evening (and shuddering over the whole body); also in the morning, when in bed, the face feels hot. Heat on the sinciput and forehead, going over first into a warm, afterwards a continuous cold sweat on the forehead. Redness and heat of the face, with slight chills.—Heat and redness of the face and heat of the hands, with an unsollicitous mood, which makes him heed only the nearest things, with tendency to start. \**The whole body feels cold to him and others,* (after eleven minutes). *Coldness over the whole body, soon after taking the medicine,* also with cold, clammy sweats. *Internal cold thrill from the head to the toes of either foot, with thirst* (immediately after taking the medicine). Chilliness over the whole body. Chilliness and shuddering early in the morning. *Constant chills over the back and arms.* Chilliness and shuddering the whole day, with drawing pain in the neck and back. Chilliness in the limbs, and a drawing pain in the same. Chill early in the morning after rising, while dressing. Occasional alternation of chilliness and heat, accompanied with vertigo, constant anxiety and disposition to vomit. Sudden alternation of complete paleness, and heat and redness of the face. Chill in the morning, and coldness with thirst, for half an hour, without subsequent heat, with weakness in the limbs, especially the thighs. Great desire for cold drinks (immediately). Much thirst, in the afternoon and evening. Heat and glow, and redness of the cheeks, with contracted pupils and cold feet. Internal heat, without thirst. Heat and sweat all over, without thirst, pale face. Heat on the back, as if sweat would break out, in the evening, during a slow walk in the open air. °Intermittent fevers: °quotidian, °tertian, °quartan; °setting in early in the morning or in the forenoon; °with external coldness only; with internal heat only and dark urine; °first, violent chill, (afterwards heat with thirst,) then sweat which soon changes to coldness; °chilliness with much thirst, followed by alternate chilliness and heat, afterwards continual heat with thirst; °during the chilliness: vertigo, nausea, pains in the small of the back and back; °during the heat: constant slumber or delirium with red face.—°Typhoid fever, also lentescent.?—Fever returning for several days; some sweat of the hands. Profuse sweat all over, toward morning. Sweat having a bitter smell toward morning. \*As soon as he rises from his seat, a cold sweat breaks out on his forehead. \**Cold sweat all over.* \*Cold sweat all over the head and trunk. Sour sweat. Sweat with burning skin. Long-lasting night-sweat. Profuse, continuous sweat, during a long sleep. Profuse sweat, with thirst and good appetite. Sweat with excessive thirst. \**The pulse collapses,* almost. \*Imperceptible pulse. There is the usual number of pulsations, but the pulse is weak and almost imperceptible.

**Skin.**—Corrosive itching of the skin. °Blue skin during cholera. \**Cutaneous eruptions, resembling itch;* °dry, with nightly itching. Sealing off of the epidermis. Clusters of painful pimples, here and there. Rash; itching also in the day-time when one is warm (only in the joints?); the places burnt after scratching them, and blotches made their appearance, as if occasioned by nettles. Heat and tingling in the whole body as far as the tips of the fingers and toes. Itching of the arms and feet as if an eruption would break out, but without redness. Burning sensation. Itching in the bones.

† NOTE BY HAHNEMANN.—I have observed it sometimes in the evening, sometimes in the morning.

**General Symptoms.**—°Chronic ailments from abuse of China. °Bad effects from fear or fright, anger or chagrin.—°Scrofulous complaints.—°Attacks of pain, occasioning for a short time delirium and rage. \**Paralytic pain in the limbs as after excessive fatigue.*—°Pains in the limbs which do not bear the warmth of the bed, cease entirely on walking about, and generally appear early in the morning. *Pain in the muscular parts of the body, composed of pressure and a bruised feeling.* Sensation in the bones as if bruised. Shootings in the body, here and there. Drawing pain in the limbs. Drawing pain in the limbs during a rapid walk, disappearing when continuing to walk. Tearing pain in the extensor muscles when sitting. (Pain in the limbs on which one is lying, as if the couch were hard as stone.) Pressure in the region of the ankle, as if it were touched and pressed immediately, momentarily. Stiffness of the limbs, especially in the forenoon and afternoon. *The limbs go to sleep.* When walking, his feet and knees feel heavy and strange. His arms and feet always feel as if gone to sleep, also when lying down. Stretching of the limbs. Cramp-like drawing above the joints, in the limbs, from above upward, during motion. Convulsions in the limbs and profuse sweat; afterwards headache, vertigo, and a good deal of drinking. Chronic weakness. The open air affects him like one who is just recovering from a severe illness. Sweats easily during motion. Feels weak, as if the air had been too hot. *Fainting fit.* Slow motion of the body. Relaxation of the muscles. \**Excessive weakness.*† °Also after abuse of China. He apprehends a swoon. °He faints at the least motion. He falls down from weakness. Paralytic failing of strength. Sudden failing of strength, inducing sleep, in the forenoon. Debility in all the limbs. Inclines to lie down. Sleepy weakness in the morning, preventing him from rising.—(Spasms, convulsions.‡) °Tonic spasms with contraction of the palms of the hands and soles of the feet. °Cataleptic fit, with lockjaw, loss of sensation and motion, convulsive twitching of the eyes; the paroxysms are preceded by anguish, despair, the patient being beside himself. Epileptic convulsions. Trembling in all the limbs, horrid anguish about the heart, and disposition to faint. Twitching in the left cheek every noon, with scintillation, paleness of face and fainting, followed by vomiting of a quantity of white foam. Weakness all over, as after a long walk. *Debility of the whole body*, especially of the arms and hands; he was not able to lift up even a book. \**He is unable to rise for eight hours*; has either to sit or lie down; when rising he is tormented by a horrid anguish, the forehead being covered with a cold sweat, and a nausea unto vomiting befalling him. The debility continued when lying, but all the other symptoms ceased; they came on again on rising; they ceased likewise when sitting, but the headache remained.

**Characteristic Peculiarities.**—°The pains in the limbs are worse in the fall and spring, also in bad, damp and chilly weather. °The pains are aggravated by the talking of other people. Many symptoms appear on rising and disappear again after lying down.

† Which seemed to yield to iron.

‡ The general spasms of Veratrum seem to set in shortly before death, and seem to be a secondary symptom, indicating an inability on the part of the organism to react.

## 249. VERATRINUM.

(See *Noack and Trinks.*)

(From small doses.)

Peculiar sensations in the stomach, frequently a sensation of coldness Warmth, and prickling, stinging, or somewhat electric sensations in the skin.

(From large doses.)

Burning in the stomach, ptyalism, loathing, nausea, colic, diarrhœa, increased urging to urinate, sweat, spasmodic symptoms, increased menstruation, dull pains, shooting sensations in the back, in various portions of muscles and in the joints, resembling electric sensations.

(From applying it endermatically.)

Warmth, prickling, burning, passing from the spot where the poison is applied to other parts of the skin, frequently disappearing suddenly at one and re-appearing at some other place: electric currents in the nerves radiating in various directions; occasional sensation as if boiling water were running down the back; slight convulsions. When rubbed on the back, electric currents are frequently experienced to the nervous plexuses of the abdomen, mammæ and heart. When rubbed hard on the small of the back, the bladder is spasmodically irritated, and a good deal of watery urine is voided, (*Gebhard*).

(From  $\frac{1}{6}$  to  $\frac{1}{4}$  of a grain.)

Sensation of prickling or sparkling in parts which are remote from the stomach, most frequently in the feet and tips of the fingers, elbows, bends of the knees, shoulder, forehead, eyebrows, less frequently and later on the thighs, abdomen, back; some experienced a coldness and others a warmth in several parts of the extremities and trunk, generally in the hands and feet, on the soles of the feet, in the knees and mouth; sensation of warmth in and around the stomach; transitory twitching and trembling; appetite; pustulous eruption around the mouth, resembling crusta lactea; rash; exanthem resembling variella (*Forcke*).

(From  $\frac{1}{24}$  to  $\frac{1}{8}$  of a grain.)

Dull, afterwards burning pain in the lower part of the small of the back; afterwards increased stool accompanied with painful sensation in the abdomen, and sometimes with painful twitching in the lower extremities; stools of a watery-mucous consistence; dryness of the mouth, burning, unquenchable thirst; nausea, vomiting, slimy, bloody stool; burning in the præcordia; scanty emission of thick and red urine; coldness in the extremities, with trembling and insensibility; great unsteadiness during motion; inability to grasp the desired object directly, he first misses it in endeavoring to take hold of it; vertigo, delirium, fancies of a peculiar kind, the patients require to be reminded of what they ought to do; paralysis of single limbs.

ANTIDOTES.—Black coffee with lemon-juice.

(From  $\frac{1}{4}$ ,  $\frac{1}{2}$ ,  $\frac{2}{3}$  of a grain, employed endermatically.)

Constant sickness at the stomach; oppressions of the chest, electric shocks through the chest and epigastrium; painful twitching in the limbs. At the place where the drug was rubbed in, a pleasant warmth is experienced which increases to a burning. On continuing the endermatic use, an indescribable feeling of uneasiness, with anxiety and a burning prickling is experienced, from which electric emanations are sent out in every direction; violet-reddish eruption, intermediate between rash and petechiæ, with violent itching; pulse accelerated and full; the urine is somewhat more copious. Ptyalism for several weeks, with an offensive sour smell coming out of the mouth (from the external use.) Miscarriage in the third month (from the external use.) Strangury and ischuria renalis of 48 hours' duration (*Reiche*). Transitory photophobia and spasm of the eyebrows (in several dropsical patients, from the endermatic use).

In small doses, given internally: vomituration, diarrhœa, increased secretion of bile, slow circulation, impeded respiration, diminished animal heat, disturbance of the *census communis*, alteration of the quality of the blood. Larger doses affect the voluntary muscles, producing weakness, convulsions, and tetanus (*Esche*).—Intense feeling of pain, extending over all the peripheral nerves of the abdomen; drawing along the spinal marrow, convulsions, great anguish, orthopnœ; nausea and vomiting, and indescribable sensation of *malaise* (from applying it to the pit of the stomach). From  $\frac{1}{10}$  of a grain, internally: Nausea, disposition to vomit, anguish, vertigo and complete loss of appetite (*Ebers*).—Feeling of coldness, as if cold air were blowing on several parts of the body; other patients experience a sensation as if hot drops were poured upon their limbs; convulsions and tremor of paralyzed parts. At the place where the poison was applied, the patients experienced prickling itching as from electric sparks, afterwards pain and burning; the skin is slightly irritated, red, with increased turgor and warmth, even erythema which assumes a bluish-red appearance. After rubbing the drug in the skin: sensation as if the parts had gone to sleep, formication, pain and itching in the limbs; redness of the conjunctiva, sneezing, accumulation of saliva; (in dropsical patients: increased sweat and urine, *Ebers*).—Ptyalism; intolerable acidity in the mouth and pharynx, (*Magendie*).

#### *Post-mortem Examination.*

*In Animals*.—From large doses: considerable contraction of the œsophagus, stomach and intestinal canal, of the gall-bladder and urinary bladder; considerable effusion of bile and mucus.—(*Gebhard*.)

## 250. VERBASCUM.

VERB.—Verbascum thapsus, Great mullein, cow's lungwort.—See HAHNEMANN'S *Mat. Med. Pura*, VI.

ANTIDOTE.—Camphor.?

#### CLINICAL OBSERVATIONS

Prosopalgia, pressure in the region of the malar bone, in paroxysms, stupefying and sticking, aggravated by pressing on the parts; or as if the zygomatic

processes of the temporal bones were pinched with pincers.—Cough from continual titillation in the throat, with a sharp, hollow, trumpet-like sound, deep out of the chest.

SYMPTOMS.

**Mind and Disposition.**—Excessive mirthfulness. Lascivious fancies. Various thoughts and fancies crowd upon the mind.—Indifference. Despondency. Vexed the whole day. Vexed and peevish; nevertheless he likes to work, and to see people around him.—Indisposition to work.

**Head.**—Sudden vertigo, as from pressure on the whole head. *Attacks of vertigo, on pressing the left cheek and supporting the head in this way.* Dullness and confusion in the forehead, as if every thing would press through it.—Dull and painful heaviness of the head.—Stupefying drawing in the left temple, in a draught of air. Shooting in the left temple, afterwards in the right, externally. Violent aching pain in the whole right hemisphere of the brain, from within outwards. Violent painful pressure in the forehead, from within outwards, disappearing by stooping. Pressure in the left temple, from behind forwards. Violent pressure, from without inwards, in the left side of the temporal bone, as if stupefied. Shooting pressure in the left hemisphere of the brain. Violent, stupefying, deep pressure in the right frontal protuberance, on passing from a cold into a warm temperature. Pressure with tearing in the right hemisphere of the brain. Intermittent pressure and beating near the left frontal protuberance. Stupefying pressure on the whole left side of the head and face. Pain over the left orbit, less tearing than pressure. Aching in the vertex. *Aching, stupefying pain in both sides of the forehead, in every position.*—Violent intermittent sticking, deep-seated, behind the protuberance of the left parietal bone. *Stupefying, deeply-penetrating sticking in the right temple, during dinner, aggravated by external pressure: in a few hours the pain shifts to the upper tee'h of that side, and changes to a tearing.* Stitch in the left occiput. Violent stitch in the left frontal eminence, slowly coming and going, from within outwards. *Slow, long stitch through the left hemisphere of the brain, from behind forwards, with pressure.* Deep, sharp, intermittent stitches between the left frontal eminence and the protuberance of the left parietal bone. Sharp, stupefying cuttings, directly over the right temple. Fine prickings in the right side of the forehead, intermittent. Prickling in the left frontal cavity. *Sensation as if both temples were pinched with pincers.*—Slow hammering in the left frontal eminence.—Pressing pain in the occiput. Constant pressing in the forehead from within outwards, particularly between the eyebrows.—Tension on the left side of the vertex, gradually changing to a sharp pressure, with sensation as if the ramus of the left lower jaw were pressed against the upper jaw.—Burning and prickling in the left temple.

**Eyes.**—Heat in the eyes, and sensation as if the orbits were contracted. Gauzy and watery dimsightedness; objects become indistinct and grow larger; the light of day seems to grow darker.—Dilatation of the pupils.

**Ears.**—Pimple in front of the right ear, with stinging pain when touched.—Violent tearing in the right ear. *Painful tearing and drawing in the left ear, from without inwards. Sensation as if the left ear were drawn inwards.* Tearing stitch in the left ear. Sudden pressure behind the right ear, with violent stitch, disappearing gradually. *Sensation as if the ears were obstructed, first the left, then the right.*

**Nose.**—Sensation on reading loud, as if the nose, larynx and ears were obstructed.

**Face.**—Violent pressure on the right malar bone. Stupefying, intermitting

pressure in the upper border of the left malar bone. *Sensation as if violent pressure were made on the left malar bone, as far as the ear, aggravated by pressure with the hand, frequently during the day, in the evening before falling asleep, and in the morning on waking. Dull pressure in the region of the articular process of the temporal bone, aggravated by pressing the teeth together. The whole cheek is affected by the dull pressure in the articulation of the jaw, it increases to a stupefying tension.* Intermittent, horrid sticking in the left malar bone. *Tension in the left malar bone, in the articular process of the temporal bone, and in the frontal eminence, when exposed to a current of air and when the air blows on the parts. Sensation of dull pressure in the region of the zygoma.*

**Jaws and Teeth.**—Crampy sensation, with pressure, in the right lower jaw. Pressure in the left articulation of the jaw, affecting the whole cheek and changing to violent tension. Violent tension in the integuments of the chin, the masseter muscles and neck.—Tearing pain in the right and left molar teeth.

**Mouth, etc.**—The tongue is brown at the root, early on rising, and in the forenoon, sometimes attended with flat, nauseous taste. Brown-yellow tongue, coated with tenacious mucus, accompanied with bad taste, immediately after dinner.—Hunger without appetite; wants to eat, but does not relish any thing. Unquenchable thirst.—*Empty eructations.* Bitter eructations, with disposition to vomit. Gulping up of an insipid fluid. Accumulation of saltish water in the mouth.—Frequent hiccough.

**Stomach and Abdomen.**—Pressure in the stomach. Sensation of great emptiness in the pit of the stomach, going off by grumbling in the left hypochondrium. Sticking on the left side near the xiphoid cartilage.—Sticking pinching in the right hypochondrium. Stupefying, violent cutting below the left ribs. Deep stitch under the left ribs, causing one to start.—Pain, as if the bowels adhered to the peritoneum in the umbilical region and were pulled out, aggravated by pressure. Frequent constriction of the abdomen in the umbilical region. The pain in the abdomen, which extends to the lower parts of the abdomen, occasions an urging to stool and a closing of the sphincter.—Pressure on the umbilicus as from a stone, aggravated by bending forward.—Pinching in the abdomen as from incarcerated flatulence. Cutting-pinching in the whole abdomen, with frequent eructations, also here and there only, mounting towards the ribs, where the pain becomes seated. Sticking in the umbilical region, particularly after dinner, aggravated by bending forwards and by deep inspirations, also in the dorsal vertebræ. Lancinations in the abdomen from above downwards. Cutting in the right hypogastrium, over the pubic bones. Distention of the abdomen, with rumbling and eructations. Constant rumbling under the last ribs.

**Stool, etc.**—Scanty discharge of stool like sheep's dung, with straining.—Frequent urging to urinate, with copious, frequent emission, in the first two hours. Diminished secretion of urine after 7, and 36 hours.—Nocturnal emissions, without dreams.

**Larynx, etc.**—Obstruction of the larynx and nose. \*Hoarseness, on reading loud.—Tension across the chest, after going to bed, with sticking in the region of the heart. Pressure under the left nipple. Frequent sticking under the left nipple, on drawing breath, inducing deep inspirations on disappearing. Sticking in the region of the costal cartilages, externally, with pressure or oppression, arresting the breathing.

**Back, etc.**—Sticking in the region of the last dorsal vertebra. Cutting between the right loin and spinal column.—Sticking in the left scapula.—Tearing, with pressure, on the right shoulder, aggravated by motion.

**Upper Extremities.**—Cramp-like pressure from the left elbow to the forearm.—Itching on the forearm. Tearing in the left radius from above downwards.—Tearing, with pressure, on the dorsum of the right hand. Tension in the left wrist. Cramp-like pressure in the metacarpus, on moving the arms. *Sticking*, particularly in the palm of the hand. Cutting between two metacarpal bones. Laming, contusive pain, with sticking, in the metacarpal bone of the thumb.—Laming pain in the fingers of the left hand, particularly in the posterior joints. Contusive pain in the metacarpal bone of the little finger, only during motion. Peeking, sticking in one of the joints. Violent sticking in the tip of the index-finger, shooting to the posterior-joint, during motion. Itching tingling in a finger of the left hand.—Deadness and insensibility about the thumb. Sticking in the posterior joint of the left thumb. Cramp-like pressure in the right thumb, going off by motion.

**Lower Extremities.**—Great heaviness in the lower limbs, on going up and down stairs. Staggering gait in the open air. Laming pain about the right thigh, on drawing up the limb while sitting, with sticking in those parts on stepping. Drawing pressure, as far as the knee, when sitting. Cramp-pain in the thigh, during a walk in the open air.—Trembling knees, as after great fright. Sudden pain through the right knee. Spasmodic pain, with pressure, over the right knee when sitting or standing. Sticking over the right patella, on stepping.—Tearing in the leg, from above downwards. Crampy pressure, near the left tarsal joint. Weariness and weakness in the bones of the right limb, on crossing the right thigh over the left, when sitting.—Sticking in the left metatarsal bones. Crampy pressure in the right sole, aggravated by walking.

**Sleep.**—Frequent stretching and yawning. Drowsiness after getting up in the morning, or after dinner.—Restless sleep, with dreams about wars and dead bodies.

**Fever.**—Slight, passing coldness in the whole body, also of the hands and feet. Shuddering on one side of the body, from the shoulders to the thighs, as if cold water were poured over him.—Unquenchable thirst.

## 251. VINCA MINOR.

VINC. MIN.—Wintergreen.—See Archiv. XVII.

### CLINICAL OBSERVATIONS.

This plant is said to be a remedy for *plica polonica* (see Arch. XI., 3, p. 138). Dr. Schuler has cured with it a badly-smelling eruption on the head, in the face, and behind the ears.

### SYMPTOMS.

**Head, etc.**—Vertigo, with gauze and flickering before the eyes. Tearing in the head as if the skull would split, with hammering from within outwards. Corrosive itching on the hairy scalp. *The hairs are entangled as in plica polonica.*—Humid eruptions on the head, with much vermin and nightly itching, with burning after scratching. Burning and itching of the eyelids, with redness. Dimsightedness on reading.—Tingling in the ears, with sensation as if air were passing out, particularly in the left.—The tip of the nose becomes red on getting the least angry. Frequent bleeding of the nose.

**Face, etc.**—Pale face. Bloated face, with pimples. *The lips are, dry.*

*Swelling of the upper lip and of the corner of the mouth.*—Aphthæ in the mouth. Ulcers in the throat.

**Appetite, etc.**—Flat taste. Alternate loss of appetite and insatiable hunger.—Rising of air. Vomiting of a yellow, bitter fluid.—Fetid flatulence.—Tenesmus of the rectum. Exhausting stools, with burning at the anus.—Diminished secretion of urine.—Excessively profuse menses, flowing like a stream of water, with great debility.

**Larynx, etc.**—Hoarseness. Spasmodic cough, with tickling in the larynx, and tenacious mucus in the trachea. Oppression of the chest, with sticking.—Painful tension in the nape of the neck, with stiffness and heaviness as from a load.—Spasmodic drawing and tearing in the arms and tips of the fingers. Swelling and stiffness of the anterior joints of the fingers, with burning in the nails.—Burning and ulcerative pain of the left buttock. Spasmodic drawing in the feet and toes.

**General Symptoms.**—Excessive debility. Arthritic tearing in the bones. *Hemorrhages.*—Sensitiveness of the skin, with redness and soreness from the least friction.—Sleeplessness and uneasiness at night.—Sudden shuddering. Heat of the cheeks, without redness. Pulse full and hard. Sensation of tremor in every blood-vessel.—Sadness, with fear of death. Attacks of anger, soon followed by repentance.

## 252. VIOLA ODORATA.

**VIOL. ODOR.**—Violet.—Stapf's Additions.

**COMPARE WITH.**—Kali, Mur. ac, Nux. v., Phosph., Plat.

**ANTILOTE.**—Camph.

### CLINICAL OBSERVATIONS.

Hypochondria and hysteric affections.—Hysteria, with constant disposition to weep, without any definite cause.

### SYMPTOMS.

**Head.**—Dulness and painful confusion of the head. Vertigo, also when sitting.—Headache, with spasm of the eyes and a fiery semicircle before the eyes. Heaviness of the head, with sensation of weakness in the posterior cervical muscles. Rush of blood to the head, with prickling in the anterior portion of the head. Tension of the integuments of the head, extending to the face, nose, and ears, and frequently obliging him to draw the forehead into wrinkles. Heat in the forehead.

**Eyes, Ears and Nose.**—Spasm in the eyelids. The eyelids close, as if from drowsiness and heaviness. Sensation of compression in the eyeball. Heat and burning in the eyes. Fiery appearances before the eyes.—Stinging in the ears. He detests music, particularly the sound of the violin. Rushing and singing in the ears.—The tip of the nose is numb, as from a blow.

**Face, etc.**—Drawing pressure in the malar bones. Tension in the skin of the face, particularly under the eyes. Tearing from the lower jaw to the ear.—Tearing in the lower teeth.—Constipation, with ineffectual urging.—Nocturnal emissions, followed by headache.

**Chest, etc.**—The breathing is heavy and scarcely perceptible, with difficult expirations, great anxiety and palpitation of the heart. Violent dyspnoea, with

pressure on the chest, as from a stone.—Tension in the cervical muscles.—Drawing pain in the elbow-joint and dorsum of the hand. Aching pain in the wrist.

**General Symptoms.**—General relaxation of all the muscles. Drawing pain in the limbs. Bruising pain in all the joints, on waking. Trembling of the limbs. Fleeting burning in different parts.—Yawning and lachrymation every morning. He sleeps on his back, with the left hand under his head and the knees bent.—Feverish shuddering, night-sweat.—Gloomy melancholy. \*Hysteric mood, with constant weeping, without knowing why. Weakness of memory. Constant wandering of ideas. Great acuteness and activity of the mind. The mind is more active than the emotions.

## 253. VIOLA TRICOLOR.

VIOL. TRIC.—*Jucea*, Heart's-ease, Pansy. Archiv. VII.

COMPARE WITH.—Baryt., Caps., Merc., Natr. mur., Nitr. ac., Sulph., Viol. od.

ANTIDOTE.—Camph.

### SYMPTOMS.

**Head.**—Fulness and dulness of the head. Vertigo and reeling.—Headache from the root of the nose into the brain, going off in the open air. Heaviness of the head which is drawn backwards in consequence, worse on raising the head; relieved by stooping. Aching pain in the forehead and temples. Sticking in the occiput, day and night. Shaking sensation in the brain, when walking.—Pain in the eyes as if something hard were between the upper eyelids and the eye. Itching-cutting, stinging in the eye. The lids close, with drowsiness.

**Face, etc.**—Heat of the face, also of one cheek, (the one that is uncovered.) Thick, hard skin of the face. Tension in the integuments of the face and forehead.—Much saliva in the mouth, with feeling of dryness.

**Appetite, etc.**—Loss of appetite. General heat after eating, particularly in the face, with oppression of the chest, and great anguish. Nausea and retching.—Cutting pains in the bowels, with urging to stool, flatulence and discharge of large pieces of mucus. Sticking, with pressure, in the diaphragm.

**Stool, etc.**—Soft stools. Copious emission of urine. The urine smells like cat's urine. Stitches in the urethra. Sticking or pressure through the glans. Burning in the glans. Itching and swelling of the prepuce.—Leucorrhœa.

**Chest, etc.**—Oppression and stitches in the region of the heart, on bending the chest forward when sitting. Anxiety about the heart, with palpitation, when lying.—*Cramp-pain and pinching contraction between the scapula, with cutting and tingling in the skin.*—Stitches in the shoulder-joints, elbows, forearms and fingers. The thighs feel bruised, early on waking. The knees give way in walking, with drawing in the calves and thighs. Muscular twitchings in the calves. Sticking in the patellæ, tibiæ and feet.

**General Symptoms.**—General relaxation of the body, as if he had not slept enough. Sticking pains in the limbs.—Rash over the whole body, with corrosive-stinging sensation.—Drowsiness in the afternoon. Restless sleep, with frequent waking. He falls asleep late, owing to ideas crowding upon his mind, with difficulty of waking in the morning. Vivid and amorous dreams. Twitching of the hands and clenching of the thumbs during sleep, with redness of the face, and general dry heat.—*Chilliness* in the open air.—Hurriedness, as from

internal anxiety, with sensation of internal weakness. Weeping, peevish mood. Great quarrelsomeness and sensitiveness of temper. Disobedience. Indisposition to work and talk.

## 254. VIPERA REDI.

VIPER. R.—Italian viper.—See Hering's Treatise on the Poison of Serpents.

COMPARE WITH.—Lachesis.

### SYMPTOMS.

**Mind and Disposition.**—Indifference to every thing she sees or hears.—Restlessness (and swoons.)

**Sensorium and Head.**—Delirium, during the vomiting or pains.—*Frequent vertigo*, unto fainting, particularly during the nausea and vomiting.—Violent headache, with disposition to sleep, restlessness increasing unto despair, glistening eyes, yellow complexion with red cheeks, violent thirst, (with moist, white tongue with red borders), feeble, small pulse, constant disposition to faint, pains in the loins, warm, dry skin, constipation and copious secretion of clear urine.

**Eyes, etc.**—Heat in the eyes and profuse lachrymation. *Protruded eyes* (with swelling of the face.) Dark, yellow eyes, (immediately.) Weakness of one eye. Obscuration of sight.—*Swelling of the face*, or particularly of the lips and eyelids.

**Mouth, etc.**—Burning on the tongue, when the poison is applied to it, the tongue swelling up immediately. Moist tongue, with white borders, and red in the centre, (with cerebral symptoms.) Swelling of the tongue, which turns black-brown, and protrudes. *Difficulty of speech*, with swelling of the tongue, or lock-jaw.—Burning in the fauces and chest. *Difficulty of swallowing*. Respiration is impeded by attempts to swallow.

**Appetite, etc.**—Astringent taste on the tongue.—Burning thirst with violent heat.—*Nausea and fainting*.—Bilious vomiting. Convulsive vomiting, with eructations. Vomiting and diarrhoea. Vomiting and colic.

**Stomach, etc.**—Violent pain in the umbilical region, during the vomiting. *Enteritis*.

**Stool and Urine.**—Diarrhoea and vomiting, with profuse emission of urine.

**Chest.**—Cannot bear any pressure on the larynx, the mere pressure of the shirt causes a feeling of suffocation. Fearful screaming, immediately.—*Difficulty of breathing*, with cold sweat.—*Oppression of the chest*, with anguish, or with chills and vertigo.—Burning in the larynx and chest, excessively painful.—Pain about the heart, with fainting. Stinging pain about the heart, with great weakness, difficult breathing, and copious sweats. Pain on the chest, proceeding from the bitten hand or arm.

**Back, etc.**—Pain in the back and abdomen, with bloatedness or profuse emission of urine. Blisters on the shoulders. Large swelling on the neck, which breaks, (after which the patient recovers.)—Violent tearing in the arms, wrist, elbow, particularly in the axilla, shoulders and chest, with restlessness, vomiting and sleeplessness. Numbness of the bitten hands and fingers, followed immediately by swelling.

**Sleep.**—Great drowsiness, with languor, (cured by strong wine and running, which causes sweat to break out.) *Sopor*, with languor, loss of sight, difficult breathing, retching, vomiting, spasms, violent pain in the umbilical region, tension of the abdomen, and small frequent pulse. *Wants to sleep, even if he should die from it.* The vomiting is followed by critical sleep, and feeling of ease on awakening.—Ill feeling at night, with delirium and vomiting, followed by profuse sweat.

**Fever.**—Coldness, with clammy sweats.—Shuddering, mingled with flashes of heat. Shuddering, after violent heat. Feverish motions, with quick, small, contracted, unequal, intermittent pulse.—Burning heat ascending along the bitten arm. *Burning heat from the bitten heel to the tongue*, with burning thirst, followed by uneasiness, feverish chills, debility and trembling of the whole body. Burning heat through the whole body, with swelling of both hands, even the one which had not been bitten.—Pulse small and contracted, or feeble and irregular, or frequent, or quick. Pulse scarcely perceptible, also with fainting, or frequent, small and contracted. Pulse intermittent and small. Pulse slow, hard and full, with stiffness, coldness and sweat.—*Cold sweat*, during the violent paroxysms. Profuse, or warm sweat.

**Skin.**—Brownish vesicles at the place where the bite had been inflicted. *Large gangrenous blisters* around the wound, discharging a thin ichor.—Yellow spots on the red and swollen limb. *Reddish, black*, lentil-sized spots all over, even in the face.—Incipient erysipelas, or boils.—*Gangrenous ulcers* at the place where the bite had been inflicted, discharging a fetid ichor, with swelling and lameness of the part.—*During the bite*: Pain as from the sting of a wasp; flash of heat through the body; violent pains in the bitten limb, and stitches in the tips of the fingers; mounting of burning heat from the bitten spot through the arm and chest.

**General Symptoms.**—Paralysis of single limbs, or of one half of the body, frequently during life. The powers of the mind and body fail immediately in those who are bitten. Fainting, immediately after the bite, until aroused by cold water. Fainting with vertigo, nausea and pain about the heart. Fainting with stinging about the heart. Fainting with loss of sight and hearing, imperceptible pulse, bloated and cold body.—Rigidity and coldness of the body, with clammy sweat. Convulsions and spasms with shrieks. °Convulsions in hydrophobia. °The spirits of viper are recommended for epilepsy.

#### PATHOLOGICAL ANATOMY.

The lungs are covered with bluish spots, emitting air when touched, the blood being coagulated and black, the serum separated; heart and lungs are very much affected.—The blood in the ventricles is coagulated and black, (in rabbits.) The aorta and the pulmonary artery are of a vermilion-red internally, likewise the edges of the valves of the heart.

### 255. VIPERA TORVA.

**VIPER. TORV.**—German viper.—See *Hering's Treatise on the Poison of Serpents.*

**COMPARE WITH.**—*Lachesis.*

## SYMPTOMS.

**Mind and Disposition.**—Restlessness, with headache which drives him to despair.—Anguish, with vomiting (followed by recovery.)

**Sensorium and Head.**—Loss of consciousness, with swelling.—Stupefaction with cutting in the abdomen.—*Cerebral affection.* The eyes look as if he were raving mad, with staggering and stumbling forward, talks about going home, tumbles against a bureau, rises and falls again, finally remains lying, with red face, *heavy head*, tongue between his teeth, rattling and death, with turgescence of the vessels of the dura mater and surface of the brain.—Headache, immediately after being bitten in the foot. Heaviness of the head, with reeling and red face. Tearing and sticking at every change of weather (chronic consequence.) Headache, with vomiting and convulsions. Raging pains in the head (jaw and abdomen), with general spasms.

**Eyes, etc.**—Redness of the eyes, with profuse lachrymation. Protruded eyes, with swelling of the face. Frequent loss of sight.—Chronic deafness.

**Face.**—Distortion of features when pressing on the distended abdomen. Tight swelling of the face, which soon turns black, with closing of the throat. Œdema of the bitten spot ten years after the bite. Redness of the face, with disposition to perspire.—The lips are blue, the mouth swollen.—Lameness of the left jaw. Raging pains in the jaws.—Sordes on the teeth.

**Mouth, etc.**—Discharge of white saliva, with deathlike fainting.—*Protruded* and pale, *swollen* tongue.—Inability to swallow, after a bite in the neck. *Closing of the throat*, after a bite in the face which swells and becomes black.

**Appetite, etc.**—Unquenchable thirst. Thirst, with suddering and vomiting, in the evening, disappearing towards morning.—Nausea, with vomiting and thirst. Retching after drinking milk, with vomiting of masses of lumbrici.—Vomiting, with mucus, blood, worms. Vomiting with stupefaction, or convulsions, or diarrhœa. Vomiting before and during fainting. Vomiting with diminution of the swelling of the abdomen. Vomiting with erysipelas. Vomiting with headache, or with shuddering and violent thirst.

**Stomach, etc.**—Violent pains in the abdomen and shoulders. Violent pains in the abdomen, afterwards in the jaw and head, with spasms. Pains in the abdomen, with violent thirst and vomiting. Pains in the abdomen alternating with pains in the limbs. Colic with headache at the moment when the bite takes place, with complete stupefaction, vomiting, swelling and blueness of the foot (restored in 20 days.) Swelling of the abdomen, with great distention of the veins on the chest and abdomen.

**Stool, etc.**—Diarrhœa, affording relief. Several evacuations, with urging, shuddering and thirst, the urging continuing afterwards and being accompanied with coldness.—Constipation, nine days after the bite, then stool with much pain and tenesmus in the rectum.—Stinging pains in the kidneys, soon after the bite.—Excessive swelling of the scrotum and penis, after a bite in the former, the parts turned black, with excessive pains and vomiting.

**Chest, etc.**—Violent pain in the chest, then chilliness.—Suffocative attacks, in a girl of 11 years, soon followed by death, (after a bite in the foot.)—Violent congestion to the heart, he tears his clothes open, with excessive sensation of sickness in the abdomen. Every year, about the period when she had been bitten, she was attacked with anguish about the heart, soreness of the wounded foot and paralysis of the right arm, even after four years.—Swelling up of the chest, with difficulty of breathing.

**Back and Extremities.**—Pains in the back and abdomen. Violent sting-

ing pain in the bitten thumb, penetrating to the tip, afterwards spreading over the whole arm, followed shortly after by a sensation as if a flame were burning the arm from below upward. Excessive swelling of the hand and arm, painful when touched, with pale colour, leaving no pit. Erysipelatous eruption along the inner surface of the upper arm and on the side of the body. Stinging in the bitten hand, which swells, with great languor of the whole body. Burning and swelling of a finger from rubbing it against a stick with which the head of a viper had been bruised.—Sticking and tearing in the bitten foot, at every change of weather, even after years. The leg is somewhat contracted and is dragged along (chronic effect.) The bitten foot swells up to the knee, became hard, blue-red, and remained so even for years.

**Sleep and Fever.**—Icy-coldness of the body. Shuddering, with febrile motions and quick, small, contracted, sometimes unequal, intermittent pulse. Cold shiverings, with nausea, vomiting and great thirst. Chilliness, with paleness of face and thirst. Chilliness and pains in the chest.—Violent, acute fever at night, with delirium. Fever with erysipelas.—*Feeble and irregular pulse.* The pulse remains quick for a long time.—Sweat, which affords relief.—*Cold* sweats, before death.

**Skin.**—Blisters full of ichor, near the wound. *Black blisters*, with suppuration and subsequent recovery. Blisters with red areolæ, near the axilla.—*The bitten part turns blue, black-blue, or black.*—A number of yellow spots above the elbow. The swollen hand is covered with spots. The bitten leg turns blue and yellow, with violent swelling. The bitten forearm becomes discoloured, and turns yellow, green, and blue. The swelling on the bitten foot becomes gangrenous, with constant vomiting, bleeding at the nose, oppression of the chest, great anguish, sunken eyes, distorted countenance, gray-yellow blisters on the foot.—*Œdematous swelling* of the bitten part, even of the whole body.—Large ulcers on the tibia, penetrating to the bone, and leaving considerable cicatrices (after being healed with sulphur-ointment.) Deeply-penetrating suppuration after shining swelling with blue blisters. Black crust on the wound. Small, red, hard tip at the spot where the bite had been inflicted, (on the fourth day,) with discharge of greenish matter, after the scurf was removed.—During the bite: *Stitch, which strikes through the body like lightning.*

**General Symptoms.**—Alternate pains in the limbs and abdomen (chronic effect.)—Paralysis of the right arm, every year, after a bite in the foot. *Paralysis of the foot which had been bitten years before.* Dragging gait, remaining after an ulcer on the foot (chronic effect.)—Excessive weakness. Falls down, immediately after the bite. His head inclines forward when sitting, from weakness.—Fainting fits, with discharge of saliva, or preceded by violent pains, or attended with violent congestion to the heart. Frequent fainting fits, at night, alternating with vomiting and diarrhoea.—Apparent death until violent vomiting sets in.—General spasms during the violent pains in the abdomen and head. *Epilepsy* every year, arrested by larch-tree fungus.

#### PATHOLOGICAL ANATOMY.

Gangrene of the concave side of the liver. The liver has lost all consistence. The lungs are unusually blue. Gangrene extending from the bitten lobe, to the ribs, muscles, and pleura; the adjacent parts of the lungs are discoloured.

## 256. ZINCUM METALLICUM.

ZINC. MET.—See HAHNEMANN'S *Chron. Diseases* V.

COMPARE WITH.—Anac., Arn., Ars., Bell., Bry., Cale., Canth., Carb. veg., Hep. s. e., Ignat. Hyos., Kali. e., Lyc., Natr. mur., Nux v., Phosph., Plat., Plumb., Puls., Rhus t., Sep., Sil., Stann., Staph., Stront., Sulph., Thuja.

ANTIDOTES.—Camph. Hep. s. e., Ignat.—Is used as an antidote for Baryt.—Cham. and Nux v., aggravate the effects of Zinc.

## CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

Chronic rheumatic complaints.—Spasms during an attack of Asiatic cholera. Convulsions of children from suppression of tinea.—Dropsical affections, particularly if pain or an uneasy feeling in the kidneys are present.—Chorea St. Viti (by Sulphate of Zinc.)—*Obstinate chronic eruptions*.—*Lepra Americana*, (by Dr. Hering.) Herpetie, rough, itching places with bleeding of the gums and bad smell from the mouth. Dry herpes over the whole body, (in conjunction with sulphur). *Scaly eruption* like the scales of fishes.—*Melancholia with visions of devils, anguish as if he had committed an evil deed*, dread of men, sleeplessness, alternation of heat and coldness in the body, heat of the head and face, dark, dingy redness of the face, sunken countenance, vertigo, unsteady gait, loss of appetite, slow stool, turbid urine with brickdust sediment, great languor after unrefreshing sleep in the daytime, in the case of an unmarried female of 46 years (repeated doses of the oxyde of zinc.)—*Excessively violent and obstinate pain in the brain*, with paroxysms and sometimes assuming the form of a masked and intermittent fever, (repeated doses of the flowers of zinc.)—*Incipient paralysis of the brain* in scarlatina, with involuntary discharge of feces and urine, icy coldness of the skin, quick pulse, trembling and paralytic condition of the extremities, sopor and loss of consciousness, or sopor alternating with violent delirium, (first trit. every hour or two hours.) Incipient paralysis of the brain in the last stage of acute hydrocephalus, during dentition, and with deficient nutrition.—Hemicrania—pressure with tearing in the occiput, sticking in the right eye, tearing and sticking in the ears and teeth.—Swelling of the soft and hard parts of the nose, with great sensitiveness, loss of smell, constant dryness of the nasal meatus, and profuse lachrymation.—Nervous prosopalgia.—Herpes of the tonsils, soft palate, root of the tongue, swelling of the tonsils, slight redness of the tonsils and velum pendulum palati, afterwards irregular, white-bluish, flat spots having the appearance of lard and resembling venereal ulcers, with raised epidermis; the whitish, smooth, jelly-like surface feels hard and cannot be abraded; with smarting, stinging, sore feeling, which is aggravated by hawking and swallowing. (This venereal herpes comes on in consequence of gonorrhœa; in another case nitric ac. was the remedy.)—*Chronic gastroenteritis* (being the principal remedy, with Arsenic).—Obstinate constipation.—Scanty menses.—Aching pains in both sides, followed by shortness of breath, convulsions at the termination of the paroxysm, and vomiting of a tenacious, white mucus.—Convulsive asthma.—Lameness of both arms after previous violent pains in the hands and feet, and abdominal spasms.—*Ischias nervosa*, (in two cases, *Trinks*.)—Swelling of the tendo-Achillis, over the heel, hindering motion.

## SYMPTOMS.

**Mind and Disposition.**—*Desponding* and sad. *Taciturn* and out of humour, especially in the evening. Excessively sullen and pceevish. Low-spirited. Anxiety caused by thieves or horrid phantoms which he sees when waking, as if in a state of feverish fancy. \**Thinks calmly of dying*, in the afternoon, feeling exhausted. Hypochondriac mood, three hours after dinner, with pressure under the last ribs, especially on the right side; aversion to work, and uncomfortableness of the whole body. Relaxation of the moral energies. Indifference. \**Aversion to labour*.—Inclines to internal rancor and chagrin; he is taciturn and dislikes to speak a single word. He *moans from chagrin*, without any apparent cause, with an aching pain in the upper part of the head. Is easily carried away by anger. He would like to have some one upon whom he could wreak his anger, (which breaks forth without any apparent cause.) Irritable, starts easily.—The talking of other people and every little noise are intolerable to him. *After a little emotion he trembles for a long while*, as with chilliness.—His imagination is excited.—Talking of others, even of persons who are dear to him, makes him nervous and pceevish. Impatient, but without ill-humour.—Changeable mood, sad and melancholy at noon, cheerful and contented in the evening. A trifle excites his laughter or his anger. Lazy and out of humor the first days, cheerful afterward.

**Sensorium.**—Illusion of the fancy, when holding the head down, as if she had a tall head, over which she cannot look. Incoherent ideas.—Absence of thought, the mind being in a sort of stupor. \**Forgetful*.—Dizziness, drowsiness and heaviness of the head. Feeling of weakness in the head, especially in the eyes. Dulness and painful heaviness of the occiput. Stupefied and dizzy, at noon. Vertiginous stupefaction in short paroxysms, with obscuration of sight and general weakness, especially in the afternoon and evening, for several days.—Vertigo when sitting or standing, going off when walking. Vertigo with weakness in the head and abdomen, she had to lie down. Vertigo in the whole brain, especially the occiput, he had to lie down. *Vertigo in the occiput, when walking, as if he would fall to the left side*. Violent vertigo when sitting in bed, as if the bed were balancing to and fro. Vertiginous drawing in the right side of the occiput, when sitting. Vertigo on waking, as if the head were moving up and down; the visions before his fancy moved up and down in a similar manner; in a state of half consciousness. Vertigo, as if he were on the point of having an apoplectic fit, with dread of falling over. Faintishness with nausea and a sort of vertigo, when staying up a little too long, in the evening; or when one smokes tobacco which is too strong. Vertigo in the occiput, in the evening, when sitting and smoking the usual tobacco, with urging to stool. Violent vertigo when stooping and raising the head again, as if everything were turning around her, with buzzing in the head.

**Head.**—Headache after dinner, in the region of the left frontal eminence. Violent pain in the head, eyes and abdomen, in the evening after going to bed. Violent pain in the head and eyes after drinking a glass of wine as usual. Dull pain in the left half of the head. Pain in the occiput as if bruised.—Stupefying headache, he has to lie down. Stupefying headache, the whole morning, as from the vapour of coal.—Pressure in the head, with a stupid feeling.—*Pressure in the forehead, with dulness of the head*, making it difficult to think. Aching pain in the right frontal eminence. Aching pain in the forehead, with general dulness of the head, drowsiness and pain in the eyes, forenoon. Violent pressure at a small spot in the middle of the forehead, in short paroxysms.

*Frequent aching in the forehead.* Sharp aching pain in the forehead, in the morning on waking, becoming afterwards a mere pressure in the temples. *Pressure in the sinciput with dullness of the head, extending as far as the eyes,* after dinner. Aching pain in the sinciput, worst in the temples. Pressure in the left temple. Sudden pressure in the right temple. Continual pressure, now in the temples, now in the occiput. Continual pressing and pushing in either temple. Pressure in the right side of the occiput. *Sharp pressure at a small spot of the forehead, in the evening.* Dull sticking pressure at a small spot of the occiput. Sharp, crampy pressure in the left temple. Cramp-like, dull pressure in both temples from without inward.—Frequent pain in both sides of the head, as if between screws, in the evening.—Hard aching pain in the right side of the head, pulsative.—Pain in the right side of the occiput, as if the parts would be pressed asunder. Pain in the left side of the occiput, near the cervical vertebrae, as if the parts would be pressed asunder.—Drawing in the left side of the occiput. Drawing and beating in the forehead. Drawing in the occiput, with gnawing in the forehead, as from worms. Drawing and sticking in the forehead, with pain as if the skull would be cleft.—*Tearing in the right temple. Tearing in the temples after dinner, with stitches* behind the ears. Tearing in the right half of the head. Tearing in the right side of the head and in the teeth, in the afternoon. Tearing in the forepart of the left half of the head over the forehead. Tearing in the upper part of the head over the forehead. Tearing in the forehead. Tearing in the left frontal eminence. Tearing in the frontal eminence as far as the orbit and the upper eyelid. Tearing behind the vertex. Tearing in the left and right occiput. Tearing in the right side of the occiput, with dull stitches in the upper part of the head. Sharp tearing in the vertex and left parietal bone. *Crampy tearing in the right and left temple,* at different periods. *Tearing with pressure, in the left frontal eminence, after dinner.* Drawing tearing in the left half of the head. Drawing tearing, with pressure, in the top of the head and still more in the forehead, in frequent transitory paroxysms. Jerking tearing over the left temple. Lancinations in the forehead, with great but ineffectual desire to sneeze; towards noon. Lancinations in the temple. Lancination in the left side of the integuments of the forehead, over the eyebrow. Stitching in the forehead, with a tearing as if the head would burst. Prickings in the left temple. Dull stitches in the right temple from time to time. Fine, burning prickings in the middle of the vertex. Boring, dull stitch directly over the right frontal eminence. Boring in the left parietal bone, from without inward. Boring in the right parietal bone, from without inward, with sensation as if the parts would burst, in the evening, when standing. Beating pain in the right side of the head, in the evening. Beating and tearing in the fore part of the head, after dinner. Violent beating and tearing in the whole head, especially in the right frontal region, from morning till evening.—Painful tumult, like the dashing of waves, and feeling of heat, at a spot on the right side of the occiput, extending beyond the vertex, in the evening.—Groaning and sounding in the head, when talking aloud. Sensation in the frontal cavities as if the open air were penetrating into them and affected the parts with intense pain. Feeling of heat in the head, with redness of the face.

**Scalp.**—*Ulcerative pain* in the vertex when touching it. Painful sore feeling at a small spot of the hairy scalp on the right side. Painful gnawing in the right occipital protuberance, as from a mouse. Feeling of soreness in the scalp even when not touched. Frequent sore itching at a small spot of the centre of the scalp.—Itching pimples on the scalp. Itching and humid eruption in the region of and over both temples. Sensation as if the scalp were pressed together in one place.—Sensation as if the hairs stood on end, especially over the

**left ear.** Pain of the hairs on the vertex, even when touched ever so lightly.—Great falling off of the hair.

**Eyes.**—Pain in the eyes, as if they would be pressed into the head. Sudden and painful pressure over the right eye, with sensation in the lids, as if pressed downward. Pressure in the eyes, toward evening. Continual pressure in the left eye. Pressure in the margin of the left lower eyelid, near the inner canthus. Violent pressure in the right eye and temple. Painful pressure in the right inner canthus, with redness of the conjunctiva. Tensive pressure in the right eye, rheumatic.—Tearing, with pressure, in the left eye.—Lancinations in the eyes and head. Fine lancinations in and over the left eyebrow. Lancination over the left eye, and at the same time in the umbilical region. Fine prickings in the right lower and left upper eye-lid. Sticking, with pressure, in the right eye-ball.—Cutting, with pressure, in the right eye.—Itching of the eyes. Itching of the margin of the left upper eye-lid. *Violent itching of the left eye.* Smarting in the inner canthus of the left eye, going off by rubbing. Prickling smarting in the lower part of the left eye and below, in the cheek. Sore smarting of the eyes, especially the right, towards evening.—*Feeling of soreness in the inner canthi.* Feeling of soreness in the right upper eye-lid. Painful smarting soreness of the outer canthi. Burning and smarting in the eye, with lachrymation, especially in the evening, and agglutination in the morning. Continual burning of the eyes. Burning of the left eye-lid, as if too dry. A good deal of burning in the eyes and lids, morning and evening, with feeling of dryness and pressure in the eyes. Burning, with pressure, when reading, especially in the left eyelid.—Inflammation and redness of the conjunctiva of the right eye, with suppuration of the internal canthus; the eye is especially painful in the evening and night, as if sand were in the eye, with frequent lachrymation; that part of the upper lid which is near the inner canthus, is likewise red and swollen. Violent inflammation of the eyes, without photophobia, (during the menses.)—Considerable moisture in the eyes, in the day-time, with agglutination in the morning. Agglutination of the inner canthus, in the morning, with feeling of soreness and pressure.—Twitchings in the left lower eyelid, and left eyeball. The upper lids are lame and droop.—Jerking in the left eyebrow. Great uneasiness and intolerable pain in the left eye, frequently with great weakness in the head. *Constant weariness of the eyes.* Morbid feeling of weakness in the eyes.—Vanishing of sight, with lachrymation and burning, after dinner and frequently when writing, for a fortnight. Vanishing of sight, with absence of ideas. Obscuration of sight. Dimness and haziness of the eyes, in the morning. Whirling motions before the eyes. Yellow, blue, and green wheels before the eyes, with drowsiness and a wretched look. Fiery balls hover before the eyes in large demi-circles, when looking up to the skies. Dread of the light of the sun, with dim eyes and lachrymation.

**Ears.**—*Oalgia.*—Tearing in the ears at different periods, sometimes with itching, or in the morning with creeping, or in the evening with burning. Crampy drawing behind the left ear, extending into the lower jaw. Painful cramp in the left lobule. Violent cramp-pain in the left lobule, in the direction of the neck, when boring with the finger in the left ear.—Sticking in the right ear.—Sticking and itching in the ear. Violent stitches in the ears. *Frequent and continued intensely painful lancinations deep in the right ear, near the tympanum*—Itching in the left ear, with sensation, when inserting the finger into it, as if fleas were jumping about in it. Itching in the right ear, removed by boring. Titillation in the left ear, not going off when rubbing the part.—Discharge from the left ear. Fetid humor from the left ear. Purulent discharge from the left ear, day and night; the orifice of the meatus is hot and swollen, with

headache on the left side.—Hardness of hearing.—Buzzing as from a may-bug before the left ear. Dull buzzing and evening-pulsations in the ear, very troublesome when writing. Noise in the ear, when falling asleep, as if a glass-pane were breaking. Whizzing in the ears. Reports in the ear, after breakfast.

**Nose.**—Sticking pain in the septum when touching it. *Intolerable pressure at the root of the nose, as if it would be pressed in.* Crampy feeling at the root of the nose, with dulness of the forehead, or with stitches in the jaw, or extending into the eye.—Drawing and tearing in the right nostril from below upward, after dinner. Jerking tearing in the right side of the nose.—Sharp cutting in the inner margin of the left wing of the nose.—Feeling of soreness in the upper part of the nostrils with tearing in the right.—Swelling of the right side of the nose.—\**Swelling and painfulness of the left nasal wing.*—Itching in the right nostril. Chilliness of the tip of the nose and the lobules, although the weather is not very cold.—Red, swollen, hard point in the left wing of the nose, painful to the touch, for three days. He blows blood from the nose, the first days. *Sneezing preceded by a cutting creeping in the nose.* Sneezing, morning and afternoon.—Itching of the right nostril.—Itching of the left nostril, then frequent sneezing, followed by violent bleeding of the nose, which was stopped by cold water.—Obstruction of both nostrils. Violent dry coryza the whole day, with pain in the back. Alternate dry and fluent coryza.—Fluent coryza, with creeping in the nose, and frequent sneezing. Fluent coryza towards evening, with pressure in the right tonsil when swallowing or yawning.—Increased discharge of mucus from the nose, without coryza.

**Face.**—*Pale face.* Livid face.—Bruised pain below and in front of the right ear, apparently in the bone, with dulness of the forehead. Aching pain in the upper jaw near the left wing of the nose.—Tearing in the bones in front of the left ear. Tearing in the left cheek. Tearing in the right malar bone, with bruised pain when pressing on it. Bruised pain of the facial and orbital bones.—Prickings in the face, at intervals and suddenly. Sudden stitch with pressure, from the right malar bone to the upper border of the orbit, deep in the bone; afterwards the place is very sensitive to pain, in the evening.—Swelling and itching of the left cheek. Itching of the face, in the evening.—Pimples in the face.—Pain in the lips; jerking tearing in the right side of the upper lip.—Fine stinging in the upper lip. Shooting in the upper lip.—Violent jactitation of the muscles in the left side of the upper lip.—*Swelling* of the upper lip. Itching of the upper lip, chin, and around the mouth, without eruption.—Burning in the right corner of the mouth.—Pimple on the upper lip. Vesicles clear as water, or suppurating pimples on the upper lip. Flat, red pimple in the middle of the margin of the upper lip, painful when touched. Small, white pimples, containing a little moisture, on the upper lip, chin and forehead, (after drinking a little wine.) Large, yellowish-white itching pimple on the lower lip.—Thick, viscid humor on the lips, having neither taste nor smell.—Dry, chapped lips. Sore, ulcerated corners of the mouth. Soreness of the upper lip, ulcerated in the middle. Yellow little ulcer on the internal surface of the lower lip. Tensive painful rhagades in the lower lip. Burning rhagades in the inner surface of the upper lip.—Violent itching of the chin, and redness of its prominent part. Violently itching pimple almost in the centre of the chin. A number of small pustules under the chin, set close to each other, itching violently. Lacerations in the chin and neck, running into each other.

**Jaws and Teeth.**—Cramp-like tearing in the lower jaw, especially in the chin. Stitching pain in the articulation of the jaw, below and in front of the left ear, when moving the lower jaw sideways, when biting hard, and when pressing

upon the joint with the finger.—Swelling of the sub-maxillary glands.—*Frequent drawing toothache in the roots of the incisores.* Drawing in the left upper incisores. Drawing pain in the roots of the upper front teeth, and at the same time in the fauces, extending as far as the cervical muscles. Drawing in the last lower molar tooth, now on the right, now on the left side. *Intensely painful drawing in the upper front teeth*, with sore feeling in the gums; towards noon. Drawing, with pressure, in the right lower molares. Beating drawing in the last molares, alternately on the right and left sides. Jerking, sharp drawing in the last two upper molares, at different periods. Sharp drawing in all the incisores, coming on at intervals and with a jerk.—Jerking in the right lower molares, in the evening after lying down. Jerking in the left teeth from time to time. Painful jerk in a tooth. Jerking, violent tearing in the last lower molar tooth of the right side.—Tearings in the last lower molar teeth of the left side, in the evening. Tearing in the last upper and lower molar teeth of the left side, followed by tearing in the cheek in the region of the temple, and extending as far as the forehead. *Tearing in a hollow molar tooth*; when sucking it, blood comes out. Tearing, extending from one of the upper roots of the right side towards the temple, in the evening after lying down. Tearing in the roots of the upper teeth of the right side. Tearing and drawing in the left lower teeth, especially the incisores. Tearing in the left upper molares.—*\*Sensitiveness and painful soreness of the upper molares*, with drawing sore pain in one of the left lower molares, which becomes raised out of its socket and vacillates; this is accompanied with swelling of the sub-maxillary gland of the same side.—Continued stitching in the left lower molares, in the evening. Stitching in the roots of the left upper cuspidatus and the adjoining incisor tooth. Stitches in the left row of teeth, in the lower jaw and down the neck. Jerking stitches in the last left molares, also in the evening, and rousing him from sleep suddenly. Prickling and pecking in sound teeth, with drawing pain in the jaws.—Beating pain in the hollow tooth, after eating, or after becoming heated, or taking cold.—Painful burning in all the front teeth, with smarting in the lower surface of the tongue.—The teeth feel dull.—Ulcer in the region of a decayed tooth, with sensation as if the tooth were elongated. *\*Sore pain of the inner surface of the gums*,—as if they were detached from the teeth. The gums are so painful that he is no longer able to chew. Gnawing and itching of the inner gums. White gums. *Swelling of the gums.* The gums bleed at the slightest touch. *\*Violent bleeding of the gums.* Bleeding from the teeth and gums.

**Mouth.**—Accumulation of saliva in the mouth, with inclination to vomit. *Increased secretion of saliva, with metallic taste* in the mouth, and shootings in the tip of the tongue. *Increased secretion of saliva with creeping in the inner surface of the cheek.* Yellow little ulcer on the internal surface of the left cheek, especially painful in the morning.—The tongue is painful as if sore. Yellowish-white coating of the tongue, especially towards the root. White-coated tongue, without taste, but with a feeling of icy coldness in the morning.—Dry tongue.—*Vesicles on the tongue.* Vesicles on the tongue, painful when eating. Swelling of the left side of the tongue, hindering talking.—Weakness of the organs of speech, when reading loud.—*Stinging smarting in the palate, close to the roots of the front teeth, and in those roots.* Swelling of the prominence of the palate directly behind the incisores, with pain to the touch, for three days. Painfulness of the palate and gums, while at dinner; when chewing. Simple pain in the posterior part of the palate and the velum pendulum palati, especially when yawning.

**Pharynx and Trachea.**—*Dryness of the throat*, in the evening. Scrap-

ing rawness in the pharynx, towards evening. Frequent smarting scraping in the posterior fauces, as in violent catarrh. Sensation in the posterior part of the fauces, as if mucus had accumulated there, with desire to clear the throat from time to time. White mucus gets into the mouth through the posterior nares. Hawking up of greenish mucus which adheres firmly to the lower part of the throat; the chest feels sore and painful while hawking. Aching pain in both tonsils, when swallowing, in the evening and through the night.—Spasmodic and crampy sensation in the pit of the throat, or in the upper part of the œsophagus, resembling a pressure from below upward, or as when swallowing. Cramp-like strangling pain in the throat, rather externally in the muscles, when swallowing, even drinks.—*Pain in the throat as from an internal swelling*, also during empty deglutition. Painful soreness in the throat, and sensation as if the œsophagus were crammed full. Pain in the throat when swallowing, with swelling of the outer neck and the tonsils.—*Tearing, drawing-pain, in both sides of the posterior fauces, more between than during the acts of empty deglutition*. Sharp jerking tearing extending from the fauces into the left cervical muscles. °Herpes in the throat, after neglected gonorrhœa, bluish. Sort of heart-burn in the throat, also when swallowing.

**Taste and Appetite.**—Taste of blood in the mouth and sweetish risings from the stomach. Taste in the mouth as of spoiled cheese, going off during deglutition. Taste of blood in the throat, with feeling of dryness in the throat, and sensation of soreness rising from the chest. Sweet taste on the anterior and inferior surface of the tongue. Saltish taste in the mouth, and dryness in the throat. Bitter taste in the mouth. Taste in the mouth as of raw peas chewed.—Burning thirst. Violent thirst for water. Thirst at or after dinner. Thirst, with heat in the palms of the hands.—Little appetite, and almost no taste.—Aversion to meat, and boiled warm food. Aversion to fish, he was generally very fond of it. No hunger, at supper or at breakfast. *Aversion to veal*, of which she used to be fond. Aversion to the sweetness of sugar.—Canine hunger. *Great greediness when eating*, and hurried deglutition. Insatiableness, but does not relish his food. Insatiableness at dinner or supper, nevertheless feels full after a meal. Desire to eat, in the pharynx, even after a meal; after having satisfied it, the stomach feels full, with pressure in the head.

**Gastric Symptoms.**—Difficult digestion. Appears to create acidity of the stomach. Sour eructations after eating. Sour eructations after taking bread and milk for breakfast. After eating sweet things, an acrid fluid rises into the fauces, causing a troublesome scraping in the larynx, like heartburn. After dinner the food seemed to have remained lodged in the throat. After the supper a violent bitterness is perceived in the mouth, but only for a short while. Burning at the stomach, and eructations with desire to vomit, an hour and a half after a moderate dinner. Great fulness and distention of the abdomen, immediately or two hours after a meal. Two hours after dinner, disagreeable feeling of emptiness in the abdomen and stomach, with hunger. After dinner and supper, nausea, bloatedness and inclination to vomit, in the stomach, with inclination to eructate, going off after bringing up wind. Pressure and gurgling in the epigastrium, after a meal. Gripping in the epigastrium, at dinner. Gripping in the epigastrium, after eating soup. Bleeding of the nose when blowing it, lasting but a short while, after dinner, followed by a sensation in the forehead as if stunned by a blow, the head swimming. *Dizziness after dinner*, as if he were looking through a gauze.—*Frequent and empty eructations*, evening or forenoon. Unsuccessful eructations, with pressure in the middle of the spine. Raising of wind, with pressure in the chest. Frequent loud eructations, the pulse being weak and alternately quick and slow. Eructations tast-

ing of milk. Sweetish eructations. *Sourish*, empty eructations, after drinking, or after dinner. Eructations tasting of the ingesta.—Hiccough for half an hour. Hiccough, very violent in the evening, or after breakfast.—Nausea during breakfast. Nausea in the morning, as from an emetic. Nausea at the stomach, with tremor, exhaustion and debility in the whole body. Feeling of nausea in the stomach brought on by shaking the body when washing, and after stooping when sitting. Nausea after a siesta of half an hour; he was obliged to spit a good deal, for a whole hour. Nausea, with retching, and vomiting of a bitter, slimy fluid, and lastly of the ingesta, with turns of cough, feeling of warmth, especially in the abdomen, sweat, chilliness on the arms, shaking of the body, empty eructations, hiccough, rumbling and pinching in the abdomen; the nausea is relieved by sitting bent; nausea and vomiting return immediately on sitting erect, moving about, or when pressing on the abdomen. Brings up sanguineous mucus with an effort.

**Stomach.**—Pain in the stomach, as if empty, and with nausea. Qualmishness in the stomach, in bed, and sometimes after breakfast or dinner. Disagreeable sensation in the upper orifice of the stomach and a little beyond in the œsophagus.—Sharp pains in the stomach and pit of the stomach. Pain in the pit of the stomach when taking an inspiration; the breathing is impeded, after dinner. Pain in the pit of the stomach, where a burning pain is experienced when pressing upon it, in the evening. Pressure at the stomach, followed by stitching in the pit of the stomach, in the morning after rising. Pressure at the stomach, with feeling of coldness, at noon. *Pressure in the pit of the stomach.* Contraction from both sides of the stomach, with anxiousness and increased warmth in the head and whole body. Sensation in the pit of the stomach as if screwed together. Pain, before breakfast, as if the stomach were pressed together. Frequent cramp-feeling in the pit of the stomach.—Pinching deep in the region of the heart, increased during a deep inspiration.—Drawing in and below the pit of the stomach. *Tearing and pinching in and below the pit of the stomach*, frequently. Stitches in the direction of each other, starting from both sides of the stomach, accompanied with a stitch in the middle of the sternum.—Beating below the pit of the stomach, apparently in the integuments, resembling a pulsation or the movement of a worm.—Burning in the upper part of the stomach, before breakfast.

**Hypochondria.**—Spasmodic pains in the hypochondria, alternating with oppression of the chest and difficult breathing.—Pressure at a small spot in the right hypochondrium.—Crampy pressure in the region of the liver. Crampy-pinching pressure at a small spot in the region of the liver. Cramp-feeling in the right hypochondrium and the right side of the abdomen, as if occasioned by incarcerated flatulence, increased during motion.—Tearing, drawing and pressure in the right hypochondrium, in paroxysms. Intermittent tearing in the region of the liver.—Stitching in the hepatic region and the right hip. Stitching in the right hypochondrium, during a sour eructation and an inspiration. Stitching in the right hypochondrium at various periods, sometimes at the same time in the region of the hip, violent or accompanied with burning or smarting on the outside; sometimes in the evening or after dinner. A few stitches in the right side of the abdomen. Sharp, jerking stitches in the hepatic region, after supper.—Pressure in the left hypochondria. *Cramp feeling, with pressure*, in the left hypochondrium, (the region of the spleen,) sometimes in paroxysms. *Stitching, with pressure, deep in the region of the spleen*, increased by pressing on the part. *Dull stitching in the region of the spleen.* Pulsative feeling. Sore feeling in the left hypochondrium.—The region of the left kidney is sensitive to the touch.—*Pressure in the region of the left kidney,*

sometimes with violent cramp-feeling.—Tearing in the region of the right kidney, sometimes stitching. Sharp, intermittent tearing in the region of the left kidney. *Sometimes a cutting tearing, sometimes a drawing pressure in the region of the right kidney.* Stitching in the region of the kidneys, sometimes reaching into the chest, in the evening, or after dinner. Stitching in the region of the left kidney, in paroxysms. Dull stitching in the region of the right kidney. *Stitching pressure in the region of both kidneys.* Stitching and pain as if bruised, in the region of the left kidney, when standing or walking.—Painful soreness in the region of the left kidney.

**Abdomen.**—Colic, as if diarrhoea would come on. Attacks of violent colic with nausea and flow of water from the mouth, a fetid mucus being sometimes discharged with the water and depriving her of her appetite.—Pressure in the whole abdomen. Pressure in the abdomen, close to the right hip. Pressure in the abdomen, and puffiness extending from the pit of the stomach below the umbilicus, with sensitiveness of the right upper eyelid. Pressure in the abdomen with much distention, after eating but little. Feeling of pressure deep in the hypogastrium, with tingling, extending to the commencement of the urethra. Pressure in the bloated abdomen, with emission of a quantity of inodorous flatulence. Pressure extending as far as the abdomen, from the fauces downward, as if a hard body resisted from below. *Dull pressure at a small spot below the umbilicus, as if there were an internal induration,* increased by external pressure and by drawing-in the abdomen. *Hard pressure in the sides of the abdomen, the hypochondria and the back, as if caused by flatulence,* in the morning when in bed; increased by walking, without emission of flatulence; relieved but little after stool, and renewed again by walking, many days in succession. Sharp pressure between the pit of the stomach and the umbilicus, increased by drawing-in the abdomen, relieved by eructations. Pressure in the middle of the abdomen, shortly after the moderate supper.—\**Tension* in both sides of the abdomen. Tensive sensation above the umbilicus, with a feeling of qualmishness in the pit of the stomach. Tensive colic in the left side of the abdomen, relieved by eructations.—*Violent distention of the abdomen in the evening,* when going to bed, without having eaten any supper. Repletion in the abdomen, immediately after a meal, as if filled with flatulence.—Weight in the abdomen.—Colicky, dull pain in the abdomen.—Constrictive colic, arresting the breathing. Contractive pain in the left iliac region, when walking and pressing upon it; going off when sitting, after dinner. Violent colic contracting the abdomen, after midnight, when lying down, still more on rising.—Pinching in the abdomen in the epigastrium, with frequent emission of flatulence. Subdued pinching here and there in the abdomen. Pinching, with pressure, below the umbilicus, as if from flatulence. Tensive pinching in the abdomen, followed by dull stitching toward the pit of the stomach, felt more sensibly when shaking the abdomen, and drawing it in. *Stitching pinching in the umbilical region.*—Cutting through the abdomen, below the umbilicus. *Cutting in the epigastrium,* also during a meal. Cutting in the whole abdomen, from evening until morning. Violent cutting in the whole abdomen, after tasting milk, with rumbling and frequent emission of flatulence. Sharp, cutting stitch in the left iliac region, shortly after emission of flatulence. Cutting stitch across the umbilical region.—Stitching in the abdomen during distention. Prickings in the hypogastrium. Dull stitching as from an internal ulcer, at a small spot on the right side and above the umbilicus, increased by movement and contact. Sharp stitching in the abdomen, as if the intestines were pricked with fine pins, in paroxysms. Violent, piercing stitch through the right os ilium, from above downward, when bending the body forward while the abdomen is pressed against

something hard. Pressure in the abdomen after dinner and supper, as if from flatulence; walking changes it to a stitching; it is relieved by emission of flatulence. Burning prickings in the abdomen. Lancinations in the umbilical region. Frequent dull tearing, deep in the right iliac region, extending into the groin. Dull tearing deep in the left iliac region, commencing in the region of the hip. Writhing pain in the abdomen preceding every emission of flatulence, in the morning when in bed.—Bruised feeling in the right iliac region, as if the part where that pain is felt, were decaying.—Sensation, when walking, as if the psoas muscles were too short.—Biting sensation in the whole epigastrium.—Sensation in the left inguinal region as if the parts were screwed together, extending into the chest.—Violent cramp-pain in the right groin and inguinal region, as in retention of urine, during rest and motion, and recurring when rising from one's seat. Stitches in the left groin, in the morning after waking. Stitching pressure, a little above the inguinal region. Prickling, with alternate drawing, in the left inguinal region, at night, disturbing sleep.—Frequent drawing in the left inguinal region, (the first days.) Drawing pain in the left inguinal region when sitting. Drawing and pressing in the pubic and inguinal regions, many days in succession. *Pressing and pushing in the pubic region*, for four days. Jerking pressure in the right inguinal region—Painful strangling sensation in the left groin, as if hernia would set in. Protrusion of inguinal hernia. Sensation in the inguinal gland, as if swollen.—Movement of flatulence in the abdomen. A quantity of flatulence in the abdomen which is not passed; afterwards oppressive flatulent colic shortly after a meal, considerably increased by walking or by exercise. Accumulation and incarceration of flatulence in the abdomen, more in the hypogastrium, and oppressive flatulent colic, in the evening. Accumulation of flatulence in the abdomen, which causes the varices to protrude; these become painful, especially when lying. *Incarceration of flatulence, in the morning when in bed, occasioning a colicky pain, with loud rumbling and grumbling in the abdomen.* Uneasiness in the abdomen, painless, but very disagreeable. *Movements and rumbling in the abdomen, with frequent emission of flatulence, especially in the evening*, or with cutting in the hypogastrium after dinner. Rumbling in the whole abdomen followed by painful retraction of the same, as if stool would come on. Violent, fermenting rumbling in the right side of the abdomen, followed by a noise as when walking on boggy ground. Frequent gurgling in the epigastrium and hypogastrium. Frequent emission of hot fetid flatulence from noon till evening.

**Stool.**—*Constipation*, but some slight indications for stool. Frequent ineffectual urging to stool. Long urging to stool, which was finally passed with great difficulty, although soft. *Dry, insufficient stool*, every two or three days. Tough, scanty stool, followed by pressing, and heat and burning at the anus. Tough, light-yellow stool, with pricking at the anus. Difficult expulsion of soft stool, with discharge of the prostatic fluid. *Stool of a large size, expelled with great difficulty.* Difficult, hard stool, the first time of proving. Hard stool, frequently in lumps, and accompanied *with pressing* in the anus. Hard, small, dry stool, with much straining and rumbling. Hard stool in the morning, without straining; after dinner, soft stool, accompanied and followed by humming in the head and giddiness. A little hard stool at first, followed by several small loose stools in the evening.—Several loose papæscnt stools, enveloped in bright-red, foamy blood, and preceded by colic. Diarrhœic stool, with flatulence. Papæscnt diarrhœa for many days, painless, but some tenesmus after stool.—Colic at every stool and emission of flatulence. *Burning at the anus*, during and after stool. Pressure in the hypogastrium, after dry stool. Stitching pain in the abdomen, after a good stool, colic after copious stool.—The rectum feels

as if pressed upon by wind, but none is passed. Sensation in the rectum, in the evening, as if the wind were pushed towards the os coccygis and were retained there. Pressing and boring from the rectum into the abdomen, which made it impossible for her to keep her seat. Heaviness in the rectum when standing, going off by emission of flatulence. Drawing pain in the rectum, as far as the abdomen. Cutting and smarting sensation in the rectum.—Cutting at the anus, at intervals. Tearing at the anus. Stitches in the anus. Stitch with a strangling sensation, quick as lightning and causing one to start, from the anus to the rectum. Jerking stitches from the rectum to the root of the penis. Burning stitches in the anus, in the evening when walking.—Creeping stinging in the anus, in the morning. Creeping, with pressure, in the anus. *Creeping at the anus, as of worms.*—Itching at the rectum. Itching at the anus, terminating in a dull stitch. Violent itching of the anus after soft stool. Violent itching of the anus, and exsudation of a corrosive humour.—Soreness and tingling in the anus. Soreness of the rectum. Burning sensation of soreness in the anus, evening. *Burning at the anus.*—Protrusion of the varices, smarting and painful. Discharge of blood from the anus.

**Urinary Organs.**—Frequent pressure on the bladder, at night, with scanty emission. °Retention of urine, when commencing to urinate. Diminished secretion of urine. Frequent and somewhat increased secretion of urine, clear as water and sometimes lemon-yellow, (the first days.) Excessive desire to urinate, he urinates a good deal. She urinates a good deal at night, without having taken much drink. Involuntary discharge of urine when blowing her nose, (after a difficult evacuation of the bowels.) °Also when walking, coughing, and sneezing. Reddish urine. *The urine looks turbid and loam-coloured in the morning.* Very yellow urine, depositing whitish flocks when standing a good while. Orange-coloured urine, depositing flocks. Flow of blood from the urethra, after painful micturition. Pressure on the bladder, but no desire to urinate.—Colic, followed by spasm in the bladder.—*Intensely painful drawing in the urethra and the fore-part of the penis.* Intensely painful drawing and creeping from the abdomen as far as the penis. Drawing and tearing in the fore part of the urethra. Biting sensation in the orifice of the urethra after micturition. Sharp, tearing cutting, from the middle of the urethra to the fore-part. Cutting in the orifice of the urethra, in the evening, when sitting. Stitching in the orifice of the urethra. Stitch in the urethra, with strangling sensation, from the fore to the back-part, quick as lightning.—Itching in the urethra.—Burning in the urethra, after urinating. Tearing burning in the urethra. Sore pain in the fore-part of the urethra, (between the acts of micturition.

**Male Genital Organs.**—Great falling off of the hair of the genital organs. The penis is very sensitive to pain when walking, as if the shirt were too rough and produced friction. Jerking, from the groin towards the penis. Painful jerking in the root of the penis. Dull stitching near the genital organs in the abdomen, succeeded by tearing drawing in the root of the penis. Tearing in the tip of the glans. Dull stitches in the glans, proceeding from the scrotum. Shuddering about the scrotum and the adjoining parts. Shuddering about the scrotum, which becomes shrivelled. Shrivelling of the scrotum. Violent itching of the scrotum, almost causing a feeling of soreness, which cannot be removed by scratching, many evenings in succession. A small, red and sore pimple around one of the hairs of the scrotum, for three days. Sore feeling in one side of the scrotum and likewise on the thigh where the scrotum touches it. The right testicle is painful, especially when touched. Shootings, with pressure, in the left testicle, during rest. Drawing in the left, afterwards in the right testicle. *Frequent drawing, commencing in the testicles, and following the course*

of the *spermatic cord*. Prickling pain in the testes, mostly when sitting and stooping, for many days. \**Either the right or the left testicle is drawn up, with some pain and swelling.* \*The sexual organs are easily excited, and the semen is emitted too rapidly during an embrace. Great desire for an embrace in the genital organs; the emission of semen being nevertheless difficult and almost impossible.—\*Violent, and long-lasting erections. Emission without dreams, two nights in succession. Copious discharge of prostatic fluid, without any cause.

**Female Sexual Organs.**—Sexual desire in a female, several times at night, without lascivious dreams. Irresistible desire for onanism, in a female, without any lascivious dreams. Pressing in the pudendum and rectum. Varices of the pudendum.—Suppression of the lochia and decrease of the quantity of milk in the mammaræ.—Re-appearance of the menses, which had been suppressed for three months, with alternate paleness and redness of the face. Menses too early and more profuse than usual. Discharge of lumps of coagulated blood during the menses, mostly when walking. Menses too early by a fortnight. The period of the menses is longer. During the menses, heaviness in the limbs, with violent drawing around the knees, as if they would be twisted off; inflammation of the eyes; sudden tightness and oppression of the region of the stomach, she had to loosen her dress; weakness in the hands and feet; chilliness;—Weeping mood and out of humour, during the menses; anxiety; stitching, biting and itching of the pudendum, with sensation as if the parts were swollen; distention of the abdomen; discharge of bloody mucus after the menses, causing an itching of the pudendum.—Recurrence of leucorrhœa for one day, after which it ceased.—Cutting-colic succeeded by leucorrhœa. Discharge of thick mucus for three days, before and after the menses. °Sore nipples. °Deficiency of milk.

**Larynx and Trachea.**—*Roughness and dryness of the throat and fauces, frequently and at different periods. Roughness and rawness in the chest, with nightly heat and sweat.*—Hawking up of a quantity of black, coagulated blood, after mucus.—Hoarseness of the chest, as if full of mucus. *Hoarseness, with burning in the trachea.*—Hawks up a quantity of mucus from the chest.—Titillating cough, very fatiguing, in the day-time, but worse at night. Short cough produced by a tickling under the sternum. Suffocative cough; the titillation takes away his breath. Dry cough, with violent stitches in the chest, and sensation as if it would fly to pieces; she has great trouble in breathing or talking. Cough, at night, with pricking in the chest and little thirst. Cough with stitches in the head. Discharge of tenacious mucus when coughing, with sensation after the expectoration as if the chest were hollow and cold inside. Discharge of sanguineous mucus when coughing, preceded by stitches in the side. *Discharge of blood during dry cough, with burning, and sore pain in the chest, morning and evening.* Thick, purulent expectoration when coughing, day and night.

**Chest.**—The breathing is more oppressed than usual. °Chest and breathing are unusually free and easy. Constrictive sensation around the chest, with pain in the chest, as if cut to pieces. Oppression of the chest, when walking in the open air, as if constricted with a bandage tied across. *Oppression of the chest, two evenings in succession, with dull stitching and pressure in the middle of the sternum, the pulse being quick and small.* *Anxiety in the chest, going off in the evening, with headache.* Pain in the chest, especially in the right side, as if the blood were forcing its way into the capillaries of the lungs. °Spasmodic dyspnœa. °Shortness of breath, from flatulence, after dinner.—Pressure in the region of the right extremity of the left clavicle, in the

morning. Pressure in the chest, extending into the throat, as if a foreign body were rising. Pressure in the left chest, or in the whole chest, here and there. Aching pain in the chest, frequently, (the first two days.) Pressure in the chest, as if from rheumatism or from incarcerated flatulence. Pressure in the chest, arising from the pit of the stomach, going off by an eructation. Pressure at the upper part of the sternum, or in the lower part of the chest, after dinner, for a long time. Pressure below the left nipple. Pressure, a sort of rheumatic drawing, below the clavicle, near the joint of the upper arm. Pressure in the region of the left clavicle. Sharp pressure in the right chest, near the axilla. Tearing pressure in the lower part of the left chest. Intermittent pressure from without inward, and drawing *\*tension here and there in the left chest.* Tensive pains in the chest. Tension and drawing in the region of the left clavicle. - Tension, bruised pain and stitching in the whole right side of the chest. Tension and stitching in the region of the heart. - Cramp-pain in the chest, intermittent, with qualmishness, in the morning, early. - Pinching and hard aching pain in the chest, from time to time. - Tearing in the right chest. Tearing in the left chest, below the axilla. Tearing in the region of the right upper ribs, almost in the back. Dull tearing pain in the chest, above the pit of the stomach. - Lancination in the left chest. Tearing stitches in the chest, below the axilla, succeeded by soreness. Violent stitches in the chest, when walking in the open air, extending as far up as the left side of the neck, with difficult breathing, for several hours. Stitching pain in the sternum. Pricking in the chest, here or there, during a deep inspiration. Violent stitches in the sternum, when stooping, followed by painful pressure extending from the inmost chest into the throat. Stitch in the upper part of the sternum, extending into the left lumbar region, with dread of stooping, early in the morning. Stitching in the right chest, sometimes when turning the trunk to one side, or after dinner, followed by pressure, or alternating with stitching in the right groin and side of the abdomen. Stitch under the right nipple. *Dull stitching in the right chest.* Dull stitching in the region of the right short ribs. Stitch in the left chest, when moving the arm. Stitching in the region of the left ribs, opposite the pit of the stomach, with ulcerative pain whether pressing on the part, or not, in the evening. *Stitching pain in a place of the size of the hand in the left chest, with sensation as if the place were decaying and dashed to pieces.* Stitches in the left chest, in the evening when standing, the place feeling bruised and painful. Stitches under the heart, like pleuritic stitches. Stitches over the heart, in the evening. Intensely painful stitch in the left clavicle. Violent stitches in the left side, worse during an inspiration, relieved by stretching one's self. Sharp stitches deep in the right chest. Sharp stitching in the region of the heart, increased by violent expirations. Dull stitching in the upper part of the left chest. Dull stitch under the sternum, when eating. Stitching and tension in the chest below the right axilla. Continuous stitch, with pressure, in the right side of the chest, increased by a violent expiration. Sensation of weakness and burning in the sternum. - *Burning in the left chest. Burning in the right chest.* The chest-symptoms become more violent when she moves about, or when she lifts something or seizes something with her hands. - Painful throbbing in the left chest, near the axilla. *Frequent palpitation of the heart, without anxiety.* Painful palpitation of the heart, and a stitch at every beat. - Pain in the chest as if bruised, when riding. Pain of the left pectoral muscle, as if sore or bruised. Sore aching pain round the right nipple. Sharp drawing around the left nipple, with painful soreness when touching the part, the pain soon becoming pulsative. Violent aching pain in the right mamma. Feeling of distension in the left mamma. Dull and painful stitches in the left mam-

ma. Burning at a small spot on the chest, on the right side near the pit of the stomach, also over the left nipple. Burning in the right chest, apparently in the skin, extending as far as the back.

**Back.**—Pain in the *small of the back*, when walking or sitting. Violent pain in the small of the back when walking, frequently obliging him to stand still: nevertheless, the pain diminished more and more by continued walking. Pain in the region of the *os coccygis*, sometimes pushing-aching, sometimes pinching. Pressure over the small of the back in the lower part of the spine. Paralytic aching pain in the small of the back, when lying in bed in a wrong position, most violent when rising from a seat and when commencing to walk. Tension and feeling of weakness in the small of the back, when sitting, with tension in the head. Sensation in the small of the back, when rising from a seat, as if the parts were screwed in. Drawing in the small of the back and spine, a sort of painful weakness, when sitting or stooping. Violent cutting in the small of the back, at the least motion, extending into the calves and feet; he is neither able to walk, stand, nor lie down. Lancination in the *os sacrum*. Cracking in the small of the back, when walking. Weak feeling in the small of the back, when walking.—Pain in the *back*, when sitting. Stiffness and pain in the upper dorsal muscles, especially during motion, for four nights, not in the day-time. Sharp pressure in the back, close to the right scapula. Burning pressure in the region of the dorsal spine, a little over the small of the back. Pressure in the back, under the left scapula. Pressure on the right side and near the middle of the spine. Tension, with pressure, in the back, at a small spot in the border of the right scapula. \**Violent tensive pains, like rheumatic pains*, in the lumbar region and on the shoulders.—Tensive pain between the shoulders during rest and motion. Tensive feeling, as from a pitch-plaster, near the internal border of the right scapula. Pinching and burning pain in single parts of the back. Burning-drawing in the back and small of the back. Burning-tearing between the spine and right scapula. Tearing in the right scapula. Violent pain in the back, as if bruised, when walking in the open air, with weakness, so that she was scarcely able to get home. Stitches under the left scapula, extending to the forepart of the left chest. Stitching pain in the back and small of the back, when sitting and walking. Violent stitching in the middle of the back, when standing. Stitches in the left scapula. Continuous stitching in the border of the left scapula, towards the axilla, so violent that it caused her to start, with mounting of heat to the head. Sharp stitching close to the upper part of the right scapula, most painful during an eructation, for many days. Dull stitches under the right scapula. Dull stitches and pressure in the region of the internal border of the right scapula. Dull, darting stitching directly under and by the left scapula. Burning in the left side of the left scapula. Burning in the skin of the right scapula. Itching between the scapulae, in the evening, with eruption. Itching spots on the back, and little scabs which are painful to the touch.—The nape of the *neck* and the back are painful; as if bruised and worn out by too great fatigue. Pain in the nape of the neck, when sitting or writing, as if it would not support the head. The nape of the neck feels weary, in the evening, when writing. Stiffness and pain of the posterior *cervicle* and upper dorsal muscles, several mornings, not in the day-time. Cramp-like stiffness of the left side of the nape of the neck. Tension and drawing in the right side of the nape of the neck, during rest and motion. A nodosity in the right side of the nape of the neck, painful like an ulcer when pressing upon it. Pain of the cervical muscles at night, as if the head had been for a long time in an inconvenient position; the pain is even felt during sleep. Tension in the anterior cervical muscles. Rigidity in the left side of the neck. Crampy sensation in

both sides of the neck, near the trunk. Cramp-like drawing along the cervical muscles, from above downward, when chewing. Cramp-like drawing in the right side of the neck, when holding the head erect, as if the neck were stiff. Pain in the side of the neck as far as the shoulder with stiffness of the parts, several mornings when in bed; going off in the day-time. Pressure in the right side of the neck, as with a finger, when talking. *Tearing in the right side of the neck*, posteriorly, also below the jaw, and behind and below the ear. *Tearing* in the left side of the neck, extending behind the left ear. Frequent and violent tearing in the left side of the neck, going off by pressure, in the morning. Dull tearing in the right side of the neck, posteriorly. Lancinations in the neck and chin running into each other. Lancinations in the posterior and inferior part of the right side of the neck, at a small spot. Stitches in the cervical muscles. Tickling in the neck, region of the larynx, accompanied with stitching. Frequent, intensely painful tickling in the neck, region of the larynx.

**Upper Limbs.**—Feeling of soreness in the axillæ, at a small spot, as if bruised. Stitching in the left axilla, and in the fore-part of the chest from above downward, with arrest of breathing, in the evening. Dull stitching tearing in the right axilla. Tearing under the left arm, extending as far as the axilla. Burning in the left axilla.—Rheumatic tension in the head of the left humerus. Tension and tearing in both shoulder-joints. Pressure, with tearing, in the left side of the shoulder, where the neck commences. Tearing on the right shoulder. Violent tearing in the shoulder-joint, on which he had been lying at night. Lancination in the top of the right shoulder. Stitching in the left shoulder. The shoulder-joints feel as if gone to sleep. Small pimples on both shoulders, like boils.—Disposition to move the arms. Jerking of the left arm. Tearing in the arms and hands. Pain as if bruised in the arm, morning and evening. Pain as if bruised in the left arm; the deltoid muscle is so painful that he is unable to raise the arm.—Dull pain in the right upper arm. Rheumatic pain in the deltoid muscles of the upper arm, increased by raising the arm. Drawing in the left upper arm, close to the elbow. *Tearing in the left upper arm*, near the shoulder. Tearing in both upper arms, from the deltoid muscles downwards. Intermittent tearing in the middle of the inner side of the left upper arm. Stitching in the right upper arm, in the morning, while dressing. Stitching and burning in the anterior surface of the left upper arm, after dinner. Pain as if bruised in the right humerus. Gurgling in the left upper arm. Biting burning in the skin of the upper and posterior portion of the left upper arm. Large boil on the left upper arm.—Rheumatic pressure in the elbows. Tearing in the bend of the elbows. *Tearing in the right elbow-joint*, going off by friction. Stitching and tension in the right elbow-joint, in the evening when yawning. Rash in the bend of the elbow.—Spasmodic drawing, occasionally, in the lower arms or fingers. Drawing pain in the lower arm, apparently in the bone. Tearing in the left radius, afterwards in the knee. Sharp tearing in the left lower arm, mostly in the upper half. Pain as if bruised in the lower arms, when feeling and turning the arm, with occasional tearing in the fleshy part of the arm. Gurgling, dull tearing in the muscles of the inner side of the right lower arm, not far from the bend of the elbow. Burning in the forearm, over the right wrist-joint, when moving the arm. *Burning on the left lower arm*, at night. Pimples on the lower arm, itching violently in the day-time.—Pressure in the ball of the left thumb.—Stiffness in the dorsum of the hand, and cramp-feeling in the extensor muscles of the thumb, when playing on the piano. Tension in the metacarpal bone of the little finger, towards the wrist-joint. Tension in the right wrist, as if the muscles were too short. Rheumatic tension above the left wrist. Rheumatic drawing in the right wrist-joint. Tearing drawing

in the palm of the left hand, between the thumb and index-finger. Tearing in the right wrist. Tearing in the exterior of the wrist. Tearing in the bend of the left wrist-joint, with tearing stitches in the dorsum of the left hand. Tearing in the dorsum of the right hand, in the fourth and fifth metacarpal bones, and in the wrist. Tearing in the metacarpal bones of both index-fingers. *Tearing* in the dorsum of the left hand, sometimes alternating with tearing in the right. Frequent tearing in the palm of the right hand near the fingers. Tearing in the middle of the right wrist, followed by tearing extending toward the backs of the fingers. Sharp tearing in the right hand, directly under the wrist-joint. Tensive tearing in the palm of the right hand. Tearing, with pressure, in the wrist-joint, in the region of the os pisiforme. Lancination in the right hand, in the bend of the wrist and palm of the hand, near the little finger. *Weakness and tremor of the hands when writing.* Rigidity of the hands, especially the right hand. *Paralytic condition of the right hand*, it looks bluish, is dead, heavy and insensible, and the pulse is small, scarcely perceptible and thready. Cool hands. Burning pain in the right wrist and the palm of the hand. Burning at a small spot on the left hand. Burning of the border of the right hand. Biting in the dorsum of the right hand, extending beyond the wrist, as if an eruption would break out. Itching pimple on the dorsum of the hand. Red, small, round spots on the hands and fingers. °Rough, itching herpetic spots on the hands. Sweaty hands. \**The epidermis of the hands becomes chapped and painful*, even in rather mild weather. Chilblains on the hands, itching and swelling violently.—Piercing stitching in the fingers. Long pricking through the posterior joint of the left thumb, several times. Sharp cutting stitch in the tips of both thumbs. Lancination in the upper (anterior?) joint of the right thumb. Lancinations in the fingers. Lancinations in the middle joints of the \*three last fingers of both hands. *Tearing in the lower (posterior?) joints and phalanges of the fingers.* Tearing in the tips of the index, middle, and little fingers.—Tearing under the nail of the right thumb. Tearing and painful beating in the tip of the left thumb, as in an ulcer, with sensation of numbness, and with heat which can be felt by others. Tearing drawing in the anterior joints of the left ring and middle fingers. Drawing tearing in the right thumb. Jerking tearing, extending from the posterior joints of the fingers of the left hand towards the tips, in the evening. Painless jerking in the posterior joint of the right thumb. Aching pain in the middle joint of the right index-finger, and, at intervals, in the lower joint of that finger. Frequent creeping and beating in the left thumb, with a feeling of heat in the thumb, without any heat being perceived by others. Burning in the flexor surface of the finger. Pricking itching at a spot on the left fourth finger, followed shortly by a red pustule at that same spot, with beating-burning pain. Nodosity under the skin in the bend of the anterior joint of the ring-finger. Burning-painful rhagades between two fingers of the left hand.

**Lower Limbs.**—The left hip is painful posteriorly. Dull pressure close above the right hip. Drawing, with pressure, directly over the right buttock. Pressure and drawing in the posterior surface of the thigh, preventing him from sitting: it disappears gradually in walking. Tearing with pressure, in the left hip. Drawing pain in the nates, after drinking wine. Drawing, tearing and burning in the posterior surface of the left hip. Tearing in the forepart of the crest of the ilium, when sitting. Tearing in the buttock under the left hip. Tearing directly under both hips and posteriorly in the right. Lancination in the buttock under the right hip. Pain as if bruised, with cramp-feeling, heat and burning in the region of the left hip, extending to the middle of the thigh, with languor of the limb and continued sensitiveness of the hip when walking

or standing; the pain went off by sitting. Pain as if bruised in the hip-joint, as if the flesh had become detached from the bones. Pain as if bruised, in the glutei muscles and the posterior muscles of the thigh, for two days. Gurgling in the right buttock.—*Rheumatic drawing in the right limb.* *Heaviness in the limbs*, with tearing, she is scarcely able to raise them. Weakness and pain in the limbs, so that she is scarcely able to step, with sensitiveness to every little wind that gets into the room. Violent itching of the whole lower limb.—*Rheumatic drawing in the thighs.* Drawing pain in the thighs, from time to time, in the evening. Drawing pain in the inner side of the right thigh. Dull jerking pain in the inner side of the thigh. Drawing sore pain in the external muscles of the right thigh. Drawing tearing in the head of the left femur and in the hip. *Tearing in the thighs*, especially the fleshy parts, sometimes violent and continuous. Tearing in the inner side of the left thigh, going off by motion. Painful tearing in the left thigh, from the knee to the middle of the thigh. Violent tearing in the outer side of the thigh, apparently in the femur, from the hip down to the middle of the thigh. Lancinations in the thigh, when lying and walking. Dull stitches in the middle of the right thigh. Stitching in the posterior surface of the thigh when yawning. Pain as if bruised in the anterior surface of the left thigh; the parts are painful when pressed upon. Heaviness and paralytic pain in the left femur, over the knee, very violent when walking, standing or sitting. Painful, heavy and paralytic feeling in the right thigh, when walking. Paralytic pain in the right thigh, in the upper part at first, afterwards toward the knee, when standing; relieved by sitting, in the evening. Itching burning in the outer side of the right thigh, over the knee. *Itching of the thighs* and bend of the knee; very violent, in the evening, with blotches after scratching, resembling those produced by nettles. Itching of the anterior surface of the thigh, over the knee, five evenings in succession, with pimples on those parts which are easily scratched open. Varices of the thigh, as high up as the labia.—Dull pain in the *knee*, gradually increasing and decreasing. Dull, digging-up pain in the knees, frequently. In a dream the knee-joints seem to him heavy and almost immovable; indeed, on waking, which happens much earlier than usual, they are painful as after a violent fatigue, more so during rest than motion. Violent pain, at first in the right, afterwards in the left patella and heel, evening and night. Tensive pain in the right knee-joint, when walking. Tension, followed by burning, directly under the right knee. Painful tension in the bend of the knee, when walking in the open air. Rheumatic drawing in the right knee and along the tibia. Tearing in the right knee and in the outer border of the bend of the knee, down to the calf. Tearing in the outer side of the right patella. Tearing, and pain as if bruised, in the bends of both knees, worse when walking. Tearing in the knees. Painful tearing and gnawing in the left knee, upwards and downwards. Gnawing and boring in the left knee, with tension in the upper part of the calf, renewed by sitting down. Stitches in the knee. Stitch in the inner side of the right knee, like a flea-bite. Stitch, with pressure, in the inner side of the right knee, during rest. Painful boring in the knees. Tremor of the knees, when sitting after a short walk. *Violent itching in the right knee-joint.*—Pressure, afterwards tearing of the inner side of the left leg, between ankle and calf. Alternate drawing and pressure in both bones of the right leg. Rheumatic drawing and tension in the right tibia. Drawing pain in the legs in the evening. Pain in the right tibia. Drawing in both calves, from above downwards. Drawing and contractive sensation in the right tendo-Achillis. Tearing in the left leg, in front, below the knee; afterwards a bruised pain is felt at that place. *Tearing in the calves.* Tearing in the region of the right tibia. Tearing in the left leg, between tibia and ankle-joint. Tearing in the

lower end of the right tibia. Stitch over the right foot when running. Stitching pain in both tibiæ, when walking. Piercing stitching in the tibiæ. Jerking in the left calf. Rigidity and stiffness of the muscles of the calf when walking. Rigidity and drawing in the calf. Cramp-pain in the left calf, at night. Cramp-pain in the left calf and foot. Cramp in the leg when drawing it up. Cramp threatens to come on when turning the body. Frequent sensation in the left lower limb, especially the leg, as if the circulation were arrested. The right leg goes to sleep, at night. Formication in both calves. Burning of the skin below the right calf. Burning pain in the region of the tibia. Erysipelas and painful swelling of the tendo-Achillis. Pulsative tearing in the tendines-Achillis. Red spot on the leg, becoming covered with scurf, and itching. Disappearance of the varices of the leg, (curative effect.)—Rheumatic tension in the left tarsal joint, when at rest. Pain in the outer border of the right foot, as if the bones would break, when walking, raising the foot, holding it on one side and raising it on the toes. Tension in the right foot, along the heel, as if the foot had been sprained, or as if the muscles were too short. Tension in the right sole, as if the tendons were too short, when stepping and walking, in the evening. Aching pain below the outer ankle. Drawing tearing in the right foot, as far as the ankles, with a feeling of heaviness when at rest. Drawing tearing around both inner ankles and in the tendines-Achillis. Tearing in the bends of the tarsal joints, also in the border and in the dorsum of the left foot. Tearing in the soles. Tearing pain in the outer ankle of the right foot. Tearing and creeping in the dorsum of the left foot, with a numb feeling in the soles, going off when walking. Tearing in the outer border of the right foot, towards the toes, going off by friction. Tearing from under the right inner ankle to the heel, in the evening, when sitting. *Tearing and tension in the borders of the right foot.* Tearing and pain in the heels; the feet feel as if knocked off from the body. Lancination in the sole and in the bends of the joints of the lesser right toes. Stitches in the heel. Piercing stitching in the ball of the toes. Burning stitching in the bones of the dorsum of the foot, here and there. Burning below the right inner ankle. Burning under the right heel, most violent when stepping. Burning of the soles. Burning and ulcerative pain of the soles. Ulcerative pain in both heels, most violent when walking. Intolerable boring pain in the heel, *after drinking wine.* Pain as if sprained in the tarsal joint. Pain in the soles when stepping; they feel as if swollen, with sensation as if the teeth of an instrument were scratching them for several days. Violent inflammatory swelling of the foot. Swelling around the ankles, (this foot had been affected with disease.) Cold feet, even in bed. Fetid sweat of the feet; his feet become sore by walking. The feet frequently go to sleep, which is painful, in the evening. Weak feet in the morning, going off by walking. Trembling of the foot when lifting it. Itching of the soles. Ulcerated blister on the dorsum of the right foot, as from a burn. Pain of the toes as if they had become sore by walking. Ulcerative pain in the right big toe. Sensation as if his toes had become blistered by walking. Tearing and sore pain in the tip of the big toe and under the nail. Pain of the nail of the big toe as if there were subcutaneous ulceration, when touching it. *Pain as if sprained in the bends of the posterior joints of the toes.* Drawing tearing in the toes and the anterior half of the foot. Tearing in the two first toes of the right foot, inferiorly. Tearing in the right little toe. Lancinations in all the toes. *Lancination in the posterior joint of the right big toe.* Lancination in the bends of the anterior joints of the two first right toes. Pulsative stitching in the tip of the right big toe. Prickling in the left big toe. Prickling in the inner side of the anterior joint of the left big toe. Violent stinging itching in the anterior ball of

the big toe, in the evening. Burning and pricking in the ball of the big toe, when at rest, as if the part had been frozen. Painful itching of the right toes, with heat, redness and swelling, *as if frozen*; the pain is increased by friction and scratching. Blotch on the little toe and the ball of the right toes with stinging pain when walking.

**Skin.**—Itching all over, sometimes with burning or redness, and pimples after scratching. Itching in the bends of the joints. Itching of the extremities, not in the joints. Violent itching in all the joints in succession, and lastly in the hip-joint. Frequent and violent itching, at night, like flea bites, especially on the back and abdomen. Single itching points in the skin, especially on the hands, without external redness and elevation. Sudden itching, here and there, especially in the evening when in bed, going off by contact. Pricking here and there. Prickling itching, in the evening, when in bed, on the forehead, thigh, ankle, tarsal joint and in other places. Stinging itching in the skin, with nettle rash after friction.—Itching *rash* in the bends of the knees and elbows. Red pimples on the chest and face. Small pimples on the thighs, calves, and around the knees; itching violently. °Herpes and herpetic ulcers.—Small *boils* between the scapulæ, on the back, and in many other places. °Ganglia.—A slight injury causes a good deal of bleeding. The external parts, lobules of the ears, tip of the nose, are chilled easily, even in a moderate temperature. Great sensitiveness to the cold, especially in the tips of the fingers and in the feet.

**Characteristic Peculiarities.**—The pains caused by zinc seem to exist sometimes between skin and flesh. *Wine increases the sufferings even when they seemed to be removed by camphor.* Wine and nux v. increase the symptoms, (especially the nightly restlessness and the constipation,) and excite them again. *Most of the symptoms appear after dinner and towards evening.* The symptoms are generally felt during rest and when sitting, less during motion.

**General Symptoms.**—Jactitation in various parts of the body. Twitchings in various muscles. Twitchings and jerkings in various parts of the muscles. A good deal of visible twitching in the body and face. Visible twitching in both arms and hands.—Violent trembling of all the limbs. Tremulous weakness of the lower limbs, with great paleness of the face; going off by walking. Cramp-pain in the muscles, here and there. Cramp in the extremities. A sort of subdued nausea, with a tremulous feeling in the chest, aching in the forehead, and diminished power of comprehension, two hours after dinner.—General exhaustion the whole day, drowsiness, aversion to noise, and, nevertheless, hardness of hearing, dreaming, appearance as if he had not been to bed over night, accompanied by shuddering, cold creeping, as one feels when exposed to cold after having been in perspiration.—Uncomfortable feeling and pressing on the inner walls of the thorax, as if the whole body would be driven asunder, without flatulency, the sensation seeming to proceed more from the nerves and being felt more in the right than the left side.—*Violent beating in the whole body.*—Pressure on the chest and back, here and there. Aching pain in the left groin, on the left side near the umbilicus, in the left chest, and in the left side of the head. Cutting-stitching pain in the whole right side. *Very violent drawing-tearing in the middle of almost all the long bones, the pain being so great that they seem unable to hold together.* Piercing stitching in the joints. Stitching and tearing in all the limbs, down to the tips of the fingers, worst when sitting after having been heated. Tearing in all the limbs after bodily exertions and fast walking. When sitting, an almost burning heat is experienced in some parts, for instance: between the thigh and abdomen, on the side of the abdomen, etc.—Profuse sweat *when walking in the open air.* Violent aching pain in the left eye, when walking in the open air.—Sensitive to the open air, afternoon and

evening. A piercing wind causes a shuddering.—Great heaviness in the limbs, when walking in the open air. Increased strength and lightness when beginning to walk, afterwards greater weakness. Great weakness in the bends of the knees, and small of the back, when walking. Feeling of weakness in the small of the back and sudden weakness of the lower limbs when commencing to walk. Sudden weakness of all the limbs, at noon, with tremor and sensation of canine hunger, more when standing than when sitting. Paralytic weakness and heaviness in the lower limbs, in the afternoon, when commencing to walk, going off by continued walking. Sudden feeling of weakness in the extremities, with canine hunger. Great weakness in all the limbs. Sudden fainting sort of weakness when standing, she is scarcely able to reach a chair.—In the morning on waking, pain as if bruised in all the limbs, and weariness. Excessive weariness in the morning, on waking. Involuntary discharge of thin stool in the morning, on rising. In the morning when in bed, he is obliged to stretch the limb, it feels so uncomfortable when drawn up. In the morning, on waking, his hands have gone to sleep. In the morning, on waking, *his body feels heavy and his limbs weary.*

**Sleep.**—Constant stretching of the limbs, the face looking pale and wretched.—Constant yawning. Drowsiness in the morning and after dinner. Drowsiness, with spasmodic lightness of the head, she is unable to fall asleep. Falls asleep late, owing to the vivacity of the mind. *Frequent waking in the night.* Restless; he wakes early, with weariness and a feeling as if the eyes were too deep in the sockets.—Great *drowsiness*, in spite of which he wakes often at night, with violent palpitation of the heart and exclamations, owing to anxious dreams about thieves.—*Frequent waking from frightful dreams.* Restless sleep with vivid dreams. Deep, fatiguing sleep.—He dreams the whole night, wakes occasionally, and is very tired in the morning; vivid dreams after midnight: he sees them in his fancy in the morning. \*Sleep full of fancies. Her sleep is interrupted by visions and ideas which oblige her to reflect. Disgusting dreams, about befouling other people with human excrements and urine. Quarrelsome dreams. Anxious dreams, the anxiety remaining after waking. Dreams about dead men and horses, which become converted into hogs while he rides upon them. Restless night; on waking he exclaims that geese are biting him. She dreams that she is being strangled, and fears, after waking, that the murderer might return. In the evening, after lying down, she immediately rose again in bed and uttered unintelligible words; her breathing was short and trembling. He starts from his night's rest, with an involuntary jerk of the left lower limb. *Jerks through the whole body, both during the siesta and the night's sleep.* Uneasiness in the lower limbs at night, he is unable to hold them still. Anxious feeling of soreness, especially at night. Two loose stools at night. Eructations, at night, tasting of the food which he had taken at dinner. Her feet are so cold at night, that the coldness wakes her. Pleuritic stitches at night. Violent pain in the small of the back and colic at night, with stitching in the left side and drawing pain in the lower limbs. Drawing pain in the knee at night. At night, sudden violent stitches in the left side of the abdomen, made worse by breathing and pressing on the part. Burning drawing pain in the small of the back and back during the morning sleep; also sensation as of going to sleep in the shoulder-joint, disturbing sleep, disappearing on waking.

**Fever.**—Shuddering in the evening. Shuddering and uncomfortableness, as if a thunder storm were approaching. *Frequent feverish shuddering over the back.*—Shaking chilliness, in the evening, when seizing something cold.—Chilliness in the open air, or after dinner. Chilliness in the morning on waking. Constant chilliness, with increased internal warmth. Chilliness when writing,

for a quarter of an hour, with sensation as if a body, hard as a stone, had got into his throat. Chilliness, with shaking, from afternoon till evening.—Several attacks of fever a day, fore and afternoon; chilliness and shuddering, flushes of heat over the whole body, *violent trembling of all the limbs*, extreme malaise unto fainting, qualmish taste, the food seeming to swell up in the mouth, feeling of emptiness in the stomach, *violent throbbing through the whole body*, *short and hot breath*, dry mouth, hot and dry hands.—Heat in the head in the evening, and two hours after, chilliness. Violent heat in the head, in the evening, his eyes burned, three days in succession. Heat in the face without headache, the body being cool, the whole forenoon.—Agreeable warmth with slight sweat over the whole body. Increased internal warmth, not perceptible on the outside. Increased warmth in the whole body, except the interior of the abdomen, which feels cold. Heat in the evening, after lying down, with anxiety the whole night. Feeling of heat, with cold forehead. Heat and thirst, with cool skin.—*Pulse quicker in the evening*.—Night sweat on the whole body, but especially on the lower limbs, for many nights in succession. *Night sweat* the whole night, and heat; she could not bear any covering. Sour smelling sweat. Profuse night-sweat.

## 257. ZINCUM OXYDATUM.

ZINC. OXYD.—Oxyde of Zinc.—See *Hygea* XIV.

### SYMPTOMS.

**Mind and Disposition.**—Restlessness as after having committed a crime. Spasmodic (sardonic) laughter.

**Head and Sensorium.**—Dulness and heaviness of the occiput.—Vertigo with flushes of heat.—*Tightness in the forehead*, also with pressure. Sticking and tearing in the right side of the head at night.

**Ears and Nose.**—Pulsations and buzzing in the ears, with increase of liquid wax and difficulty of hearing.—*Want of air in the nose*, with anxiety and oppression, or as if from violent coryza. *Fluent coryza*, worse after eating.

**Face and Teeth.**—Spasmodic twitching of the facial muscles, with constant disposition to laugh.—Dulness of the teeth; on pressing the molar teeth together, they feel soft, as it were, and stick together.

**Mouth, etc.**—Accumulation of bitter-sour water in the mouth.

**Appetite, etc.**—Loss of appetite. Loathing.—*Violent thirst*.—*Eruptions*.—Gulping up of yellow, bitter, bilious water.—Violent hiccough which ceases after gulping up bile.—*Nausea* with sourish taste in the mouth. Nausea followed by vertigo, and attended with flushes of heat, spasmodic pulso and great languor.—*Sickness and nausea*.—Sudden vomiting, of children. Vomiting of slimy water, after which the headache disappears. *Bilious vomiting*. Vomiting and diarrhoea.

**Stomach.**—*Crampy pressure in the pit of the stomach*, with tightness and sensitiveness.—*Burning in the region* of the stomach, with loathing.—*Fulness in the stomach*, with sweat of the hands and head, followed by easy vomiting of the contents of the stomach, causing a burning in the parts over which they pass, the throat remaining rough for a long time and the attack leaving a strong appetite.—Sticking in the diaphragm.

**Abdomen, etc.**—Tearing below the umbilicus, from one side to the other.

Spasmodic drawing in the middle of the abdomen, with dull pains in the whole abdomen.—Distention of the abdomen. Rumbling.—*Boil* above the genital organs, first red, then dark-blue, with hard areola and discharge of yellow, dirty pus, after which the areola remains for some time red and hard.—Liquid stools with tenesmus and pinching in the abdomen. *Bilious* stools, followed by great relief of all the symptoms.

**Larynx, etc.**—Accumulation of mucus in the larynx, with dryness of the throat, and constant hawking of tenacious, slimy saliva.—Difficult breathing, particularly with the left lung. Constriction of the chest. *Spasmodic sensation* in the lungs and heart. Spasmodic pressure in the chest and pit of the stomach. *Sticking in the left side of the chest*, also with pressure, or with painfulness of the left nipple.—*Palpitation of the heart with anguish*, also particularly in the evening and with spasmodic pulse. The beats of the heart are more numerous and perceptible. Sensation of pressure, heaviness and spasmodic tension in the heart.—All the ribs are sensitive to the touch.

**Extremities.**—Pain in the small of the back, at night, on turning in bed. Feeling of lameness, extending to the hips.—Sticking and tearing between the shoulders, or pain extending to the small of the back and sacrum. Beating under the left shoulder-blade. Pressure on both shoulders on waking, with dulness of the head.—*The arms feel bruised*, particularly the left deltoid muscle, or the bend of the left elbow. Heaviness and laming pressure in the bend of the left elbow.—Constant weakness of the lower limbs. Bruising pain of the lower limbs, also particularly of the left, or in the hip, and knee-joints. Pulsations in the left buttock. Tension in the left lower limb. Frequent tingling in the left knee-joint. Drawing in the bones of the left foot. Trembling of the feet.

**Sleep.**—Restless sleep, with dreams about falling, fire, counterfeit money.

**Fever.**—Feeling of coldness, followed by febrile motions through the whole body.—*Shuddering over the whole abdomen.*—*Pulse small and hard.* *Spasmodic pulse.* Tight, quick, irregular, hard and dull pulse.—*Sweat particularly toward morning.*

**General Symptoms.**—*Tension in the muscles*, and painfulness during motion. Drawing in the limbs, with pains in the small of the back. Tingling in all the limbs.—Undulating movements in single muscles. Trembling of the limbs, also with jactitation of the muscles of the lower limbs. *Remarkable sinking of strength*, also with internal sick feeling.

## 258. ZINCUM SULPHURICUM.

ZINC. SULPH.—Sulphate of zinc.

### CLINICAL OBSERVATION.

This remedy has been recommended for certain kinds of chorea.

## 259. ZINGIBER.

ZINGIB.—Ginger.—See Archiv. XVI.

## SYMPTOMS.

Pressure and drawing in the sinciput.—Pressure in the eyes as from sand.—Tingling itching in the nostrils. Obstruction of the nose and great dryness of the posterior nares.—Pressure and drawing in the roots of the teeth.—Cough excited by a smarting and burning in the larynx, or with thick expectoration.—Rheumatic drawing in the backs of the hands. Heat in the palms of the hands and face.—Burning-stinging tingling in the feet. The heels are painful, when standing a long time.

## A P P E N D I X .

The following symptoms of Carb. Veg. and Colocynth, are from Dr. Neidhard of Philadelphia.

### CARBO VEGETABILIS.

**Pathogenes.**—From Carb. Veget. 2 gr. 1 tritur. for six hours.

**First Day.**—In  $\frac{3}{4}$ ths of an hour, sensation like electric strokes in the head. Distention of the stomach and bowels; obtuse pain in the right hypochondrium; viscid mucus in the mouth; foul taste; loss of appetite. A remission of these symptoms in the morning.

**Second Day.**—Afternoon again mouth glutinous; discharge of flatulency downwards with offensive smell, particularly after midnight; has not voided half a pint of urine for three days, the first day after taking the medicine, not a gill; smarting at the neck of the bladder, very vivid dreams.

### COLOCYNTH.

**Pathogen, Symptoms.**—From the manuscript of Rev. Dr. L.

*Troublesome itching with great restlessness in the whole body*, especially in the evening in bed, followed by perspiration. The skin of the whole body comes off in scales. Loose evacuations of a greenish-yellow colour, frothy and of a sour putrid smell. Retraction of the prepuce behind the glans penis; cramp-like affection in both thighs during coition.

### RHUS RADICANS.

Doctor D. S. Kimball, of Sacket's Harbor, has sent us the following more particular description of the "*Rhus radicans*." No. 7 of the Symptomen Codex, page 671, 12th line of the Note, should be made to read :

"As the leaves of both plants are sometimes trifoliate, the *Toxicodendron* *always*, and the *Radicans* *rarely* on the same vine, though generally quinquefoliate with leaflets decidedly serrate, toothed, or lobed, and smooth, and glabrous on both surfaces as well as smaller, terminal one the largest, the two next the foot stalk the smallest when 5, whilst those of the *Toxicodendron* are frequently entire at their margins, and always sparingly toothed or lobed, and often on one side only, and these not so fine as the preceding species, pubescent on both surfaces, but the inferior the most so, and leaflets larger." At the bottom of the same page after "rootlets," add, "and bark generally smooth and spotted," and in the next line *strike out* "and decidedly serrate, toothed or lobed." On next page, 8th line from top, *strike out* "entire," and add *serrate* instead.

Dr. Kimball experienced the following symptoms, on gathering and preparing some of the *Tox.* Itching, burning, (especially in the morning,) and vesicular eruption on the hands and wrists and about the eyes, with smarting and redness of the eyes and photophobia 24 hours after gathering, but commencing about 18

hours previously. Headache through the eyes and temples, with dullness and sleepiness 30 to 36 hours after, in the afternoon. Secretion of urine more copious, and rather pale. Next day, itching, burning, and extension of the vesicular eruption around the eyes, upper lids, supercillia, mouth, and external orifice of the ears, and drowsiness and dullness of spirits in the afternoon. Headache, slight photophobia, and obscured vision at times, as well as on the previous day. Itching of the scalp. Tongue more furred, and appetite not as good. After midnight on the beginning of the 3d day, pain colic, rumbling and griping in the bowels during repose, with sulphuretted eructations, and discharge of flatus. (Had eaten custard at noon before.) Two or three years ago, when similarly affected from preparing some, had loose serous evacuations in the morning, for several days running, in addition to the colic and cutting pains in the abdomen. Rather copious secretion of palish urine continues. Rheumatic pain in the lumbar region, and through the hips. Nausea, want of appetite, and loathing of food on rising in the morning, and colic and griping, &c. continues, but better after moving about during the day. Tongue still more coated. Itching on the hands and face still continues, and more extended. Took a dose of Bryonia, and it is proper to remark, that I inhaled Bryonia rather freely the evening of the exposure, otherwise I probably would have suffered still more, as I had done two or three times in as many years before. 4th day, symptoms all materially relieved, excepting the eruption which is more extended. 5th, 6th and 7th days, first eruption drying up, but coming out on new spots. What makes these symptoms still more striking is, that from a boy up to 1842, I had always been able to handle this and the Rad., and be among it without experiencing any inconvenience."

### SYMPHYTUM OFFICINALE.

This remedy has been used in fractures of bones to facilitate their reunion ; it is said to have been employed with success in several cases.

### CLINICAL NOTE RESPECTING TARTAR EMETIC, BY DR. GRAY.

1. I HAVE given the tartar emetic with success in a case of apoplexy, accompanied by fruitless efforts to vomit. The patient, a woman of sixty years, after lying quite unconscious for nearly 24 hours, had partially recovered her senses for 48 hours before I saw her, but had taken neither food nor drinks. Her efforts to vomit were repeated about every half hour. Between these turns she appeared to be in an uneasy coma. The remedy was given in a watery solution 1-60th of a grain ; and this one dose was completely successful ; no more efforts at vomiting occurred, the coma disappeared rapidly, and a hemiplegia which remained after the full restoration of her consciousness, faded away in a very few days. No other remedy was exhibited.

2. I have for many years been in the habit of treating the coma which occurs in the height of febrile paroxysms, especially the violent ephemeral attacks to which young children are liable, by the tartar emetic in doses of the 1-100th of a grain, repeated every hour till the heat and coma abate. The presence of vomiting strengthens the indication for the drug so much, as to make it advisable to give a smaller quantity, and at intervals of from a half to a full hour longer. The very hot paroxysms of fever, occurring in the course of dentition, and especially such as are excited by errors of diet, and tend to the development of severe

convulsions, have been much more satisfactorily treated by this drug than by the aconite, belladonna, or chamomilla, which I have often applied singly and æriatim, as is the general practice in our school. The first sign of abatement in the fever, or coma, is, with me, the signal for stopping the remedy.

3. In the first stage of influenza (generally of itself a fugitive state), I think it by very much the most strictly indicated, and on that account, as well as from my own observations in many hundreds of cases, by very far the most efficacious means we can apply. The state against which I give it is: lassitude with great sensitiveness to cold, with chilly feelings, headache, pasty tongue, inflammation of the throat (tonsils, arches of the palate or pharynx), short turns of nausea, aching in the bones, especially of the lower extremities, yellowness of the skin, slight hoarseness, more or less fever-heat and sweats.

The antimony often acts as a perfect remedy in the stage of incubation, especially in those cases which would of themselves close this stage by profuse watery diarrhœa with some vomiting and cramps.\*

The second or bronchial stage of the true influenza having been successfully managed by phosphorus or bryonia, with the aid of aconite or hyoscyamus, I complete the cure by a return to the antimony; that is to say, when the air-passages are loaded with mucus, the cough being frequent and the expectoration copious.

4. I have preferred this preparation to the crude antimony in the treatment of acute inflammatory rheumatisms in cases embarrassed by gastric symptoms, which according to our authorities call for that preparation. My reason for this choice is, that the tartar emetic has produced the desired result more promptly in my hands than the crude antimony.

5. In the treatment of gastric and bilious fevers, I have, for the same reason, done the same thing; and that for many years past and with equally satisfactory results.

6. Respecting the malarious fevers, I suggest, with unfeigned diffidence, the application of the tartarized antimony in doses of the 1-60th of a grain, repeated every two to four hours throughout the whole period or stage of incubation, and further still, (unless very strong indications for other drugs are developed,) even till the fever assumes a distinctly intermittent character, admitting of its then denoted specific, as for example, china, arsenic, or ipecacuanha.

If, however, the dose above indicated produce any sensible effects, especially if it provoke nausea, or clearly aggravate it when previously present, I would immediately stop its use for 12 hours, giving in the interval a dose or two of pulsatilla, and then resume it, in a smaller quantity, say the first or second trituration. The success of our school in the treatment of severe forms of malarious fevers, has not been such as in my judgment to render this suggestion respecting the antimony wholly superfluous. It is my conviction that this drug covers more of the symptoms of the bilious fevers of our climate, in the first 7 to 14 days of their existence, than any other as yet known; and I am accordingly persuaded that the riper experience of later times will give it in our school the rank which George Fordyce in vain sought to give it a hundred years ago, in

---

\* This stage, of which the angina faucium, the chills, and the bone pains, are the prominent sufferings, subsides of itself in 24 to 48 hours, and the physician is very apt to be deceived as to the efficacy of his treatment. The allopathist praises his atrocious lancet and heroic purgatives, and the homœopathist his mercuries, or belladonna or nux, and the patient in either case thinks a wonder has been done for him; but the disease, if it be a real influenza, is not removed; it has only advanced a step beyond the process of incubation, towards the stadium of bronchitis, with its concomitant cough, dyspnœa, fever-sweats and prostration.

the ordinary practice.—(See his Essay on Fevers.) Dr. Fordyce says, that given below the nauseating point, throughout the continued fevers (of England), it produced better results, especially when solely relied on, than any other treatment then known.

7. In croup, the tartar emetic, in watery solution, applied in all states prior to the deposition of plastic lymph (diphthérie), is in my opinion a safer practice than the acon. spong. and hepar. hitherto so much, and as I think unjustly, lauded in our books.

8. The tartar emetic is certainly a simillimum to variola and variolois. In the incubation of these diseases I give it in doses of the  $\frac{1}{100}$  of a grain; later, in the 2d and 3d trituration. Since treating them in this way (now 15 years), I have not had an instance of retrocession of the eruption.\* Should I be called to such a case, I should rely on the same remedy, but in a high attenuation.

9. I desire again to call the attention of the heroic men of our school, who are really engaged in testing the physiological powers of the drugs on their own persons, to the facts, *that antimony, arsenic, and phosphorus produce very analogous results in the healthy, and that these great drugs have isomorphous relations with each other.*

It is certainly worthy of sturdy inquiry, whether isomorphous drugs can be used as substitutes for each other in any or all cases; for, if the curative power be that unknown force which determines their atomic relations and their crystalline form, then not only will a test be presented whereby the errors and falsities of pathogenetics (a canker worm in homœopathy) may be corrected promptly and soundly; but by the simple consideration of these known elements, the atomic relations and crystalline dimensions, we may be enabled to determine the therapeutic value of very many, as yet untried agents of the future art of healing.

### TUSSILAGO PETASITES.

This remedy has been recommended by some physicians for gonorrhœa. The particular symptoms are not stated.

---

\* I have been informed by Dr. Hunter of this city, that he has produced the tartar emetic pustules on the skin, by its internal administration, in two instances of phthisis pulmonalis.

## GLOSSARY OF TECHNICAL TERMS.

[For botanical, chemical, and foreign names of remedies, see list given at p. 1062.]

- Abdomen*, the cavity between the thorax and pelvis; the belly.
- Aberration*, departure from the natural, healthy action.
- Ablactation*, weaning of children.
- Abnormal*, *anormal*, not natural; unhealthy; morbid; irregular.
- Abortus*, abortion; miscarriage.
- Abouchement*, anastomosis.
- Abrade*, abrasion, loss of skin or membrane, by scraping, &c.; excoriation.
- Abscess*, cavity containing pus.
- Abscission*, cutting away a soft part.
- Absorbents*, small vessels to convey matters to the blood; lacteals, lymphatics: absorbing earths, alkalies, &c.
- Abstergent*, cleansing.
- Acarus*, insect infecting the skin, as in itch.
- Accession*, the onset of fever, &c.
- Accouchement*, child-bearing.
- Accretion*, growth, increase.
- Acephalous*, having no head.
- Acerbity*, sourness; acidity.
- Acetabulum*, cup-like cavity, receiving the head of the femur at the hip-joint.
- Acetum*, vinegar.
- Acme*, height of a disease.
- Acne*, pimples.
- Acne rosacea*, carbuncled face.
- Acoustic*, referring to sound.
- Acrid*, corrosive; pungent; irritating.
- Acromial*, pertaining to the acromion.
- Acromion*, a process of the scapula.
- Acuminated*, sharp-pointed.
- Acupuncture*, plunging of needles into the soft parts.
- Acute*, of disease, sharp, rapid; of pain, severe.
- Adhesion*, reunion of wounded or fractured parts; morbid connection of contiguous surfaces.
- Adipification*, deposition of fat.
- Adipsia*, absence of thirst.
- Adolescence*, approach to maturity.
- Adynamic*, attended with great debility, prostration.
- Agglutination*, adhesion: gluing together.
- Agophonism*, sound of the voice like the bleating of a goat.
- Ætiology*, doctrine of morbid causes.
- Affinity*, chemical attraction.
- Affusion*, pouring or dashing water, &c., on the body.
- Affluxion*, accumulation of fluids; flowing together.
- Agonecia*, *agonia*; impotence; sterility.
- Agrypnia*, sleeplessness.
- Ague*, chill; cold stage of intermittent; apyrexia.
- Agustia*, loss of taste.
- Alæ nasi*, wings of the nose; lateral cartilages of the nose.
- Albuginea oculi*, *testis*, tunic of the eye, of the testicle.
- Albugo*, white speck; leucoma.
- Albumen*, an organic element of the blood, &c., found almost pure in the white of an egg.
- Albuminuria*, albuminous urine; a dropsical disease, in which much albumen exists in the urine.
- Alienatio mentis*, mental delusion, insanity.
- Aliment*, food.
- Alimentary*, connected with food.
- Alkali*, substance which neutralizes acids, and changes vegetable blues to green, as potash, soda, &c.
- Alkaloids*, substances possessing somewhat similar properties to alkalies.
- Allopathy*, system of medical practice based upon the principle "*contraria contrariis curantur*."
- Alopecia*, loss of hair; baldness.
- Alveoli*, the bony sockets of the teeth.
- Alveolar*, belonging to the alveoli.
- Alvenc*, pertaining to the stomach or intestines.
- Anaurosis*, paralysis of the optic nerve; gutta serena.
- Amblyopia*, dimness of sight.
- Amblyosmias*, dulness of hearing.
- Amenorrhæa*, absence or stoppage of the menstrual discharge; suppressed menstruation.
- Amentia*, idiocy.
- Amnesia*, loss of memory.
- Amnion*, *amnios*, envelope of the fœtus.
- Amorphous*, *anideus*, irregularly shaped.
- Amygdalæ*, tonsils.
- Amygdalitis*, quinsy; cynanche tonsillar.

- Anal*, pertaining to the anus.  
*Anæmia*, deficiency of blood.  
*Anaphrodisia*, venereal impotence.  
*Anasarca*, dropsy of the cellular tissue.  
*Anastomosis*, inosculation of vessels.  
*Anchyloblepharon*, adhesion of the eyelids.  
*Anchylosis*, *ankylosis*, stiffness of a joint ; adhesion of articulating surfaces.  
*Ancon*, *ancus*, elbow-joint.  
*Andromania*, nymphomania.  
*Androgyuus*, *andrin*, hermaphrodite.  
*Anesthesia*, paralysis of nerves of sensation.  
*Aneurism*, morbid enlargement of an artery.  
*Angina*, affections of the throat, as sore throat, &c.  
*Angina gangrænosa*, malignant inflammation of the throat.  
*Angina membranacea*, croup.  
*Angina maligna*, putrid sore throat.  
*Angina parotideæ*, mumps.  
*Angina tonsillaris*, quinsy.  
*Angina pectoris*, inflammation of the chest.  
*Angina pharyngea*, inflammation of the mucous membrane of the pharynx.  
*Angiology*, doctrine of the vascular system.  
*Anhelation*, pausing ; difficult breathing.  
*Animalculæ*, insects visible only through the microscope.  
*Animalization*, conversion of food into organic matter.  
*Annular*, circular ; like a ring.  
*Anoia*, idiocy ; anæa.  
*Anodyne*, a soothing remedy.  
*Anomalous*, irregular, unnatural.  
*Anorexia*, want of appetite.  
*Anosmia*, loss of the sense of smelling.  
*Antacid*, a substance which neutralizes acids.  
*Antagonistic*, acting in an opposite way.  
*Antaphrodisiac*, agents intended to diminish sexual desire.  
*Antebrachial*, relating to the forearm.  
*Anterior*, before, in front.  
*Anthelmintic*, vermifuge ; antidote for worms.  
*Anthrax*, *ANTHRACIA*, carbuncle.  
*Anthropophobia*, dread of human beings.  
*Anticardium*, epigastrium, pit of the stomach.  
*Antiphlogistic*, remedies in the old system against inflammation ; cooling remedies.  
*Anticipating*, returning before the usual time, said of intermittent fever.  
*Antidote*, a counter remedy ; an agent to annul the action of another remedy or poison.  
*Antihelix*, a prominence of the outer ear.  
*Antiseptic*, designed to prevent putrefaction.  
*Antispasmodic*, remedy relieving spasm.  
*Antrum*, bony cavity.  
*Antrum-highmorianum*, cavity above the teeth in the upper jaw.  
*Anus*, external opening of the rectum ; fundament.  
*Aorta*, great artery of the body.  
*Aortitis*, inflammation of the aorta.  
*Apathy*, insensibility.  
*Apepsia*, weakness of digestion.  
*Aperient*, gentle laxative.  
*Apex*, summit, point.  
*Aphonia*, loss of voice.  
*Aphoria*, sterility.  
*Aphrodisiac*, provocative to venery ; remedy for sterility.  
*Aphthæ*, thrush ; *sprue* ; sore-mouth.  
*Apnœa*, suffocation.  
*Aponeurosis*, (pl. *aponeuroses*.) fascia, tendinous expansion of muscles.  
*Apophysis*, projecting end of a bone.  
*Apoplexia*, *apoplexy*, loss of sensation and voluntary motion.  
*Apyrexia*, intermission of febrile paroxysms.  
*Arachnitis*, a form of phreinitis ; inflammation of the arachnoid membrane.  
*Arachnoid*, membrane of the brain ; tunic of the eye.  
*Arc*, *arch*, segment of a circle, as in the colon, aorta, palate, &c.  
*Ardor urinæ* ; *ventriculi*, scalding urination ; heartburn.  
*Areola*, circle, as around the nipple.  
*Argillaceous*, partaking of the nature of clay.  
*Aridity*, dryness.  
*Aroma*, fragrant odor.  
*Arterial*, pertaining to the arteries.  
*Arterialization*, decarbonization of the blood, while passing through the lungs.  
*Arteritis*, inflammation of the arterial coats.  
*Arteries*, vessels conveying the blood from the heart.  
*Arthralgia*, *arthrodynia*, pain in the joints.  
*Arthritis*, *arthrosiz*, gout ; inflammation of the joints.  
*Arthritis vaga*, erratic gout.  
*Arthrocece*, spina ventora, decay of the articular portions of bones, spreading from the marrow outwards.  
*Arthromeningitis*, inflammation of the membranes of a joint.  
*Arthronalgia*, chronic rheumatism.  
*Arthrosis*, articulation, joint.  
*Ascaris*, (pl. *ascarides*.) small intestinal worms ; pin worms ; thread worms.  
*Ascites*, abdominal dropsy.  
*Asphyxia*, suspended animation, as by suffocation, &c.  
*Asthenia*, extreme debility ; weakness of the heart's action.  
*Asthenic*, debilitated ; applied to disease, low.  
*Asthma*, violent oppression of breathing.  
*Astragalus*, upper bone of the tarsus, on which the tibia rests.  
*Astringents*, medicines used to contract muscular fibre, and constrict vessels, to restrain discharges.  
*Ataxic*, typhus characterized by excessive prostration and colliquation.  
*Athletic*, vigorous, muscular.  
*Athymia*, despondency.  
*Atlas*, first vertebra of the neck.

- Atom*, ultimate particle of matter.  
*Atony*, relaxation, want of energy or tone.  
*Attenuation*, emaciation, dilution of a medicine in homœopathic practice.  
*Atrophy*, wasting away of the system, from functional disturbance.  
*Atypic*, erratic, irregular; having no characteristic symptoms.  
*Auditory*, pertaining to the ear.  
*Auricula*, external ear.  
*Aurigo*, jaundice.  
*Aurium tinnitus*, ringing in the ears.  
*Aurium sordes*, ear-wax; cerumen.  
*Auscultation*, the detection of symptoms by the ear; stethoscopic diagnosis.  
*Autocracy*, vis medicatrix nature.  
*Autopsy*, ocular evidence.  
*Autopsia cadaveris*, post-mortem examination by dissection.  
*Automatic*, involuntary motions.  
*Axilla*, (pl. *axillæ*.) arm-pits.  
*Axillary*, pertaining to the axilla.  
*Azis*, second vertebra of the neck.  
*Azygos*, muscles, &c., having no mate; not double.
- Balanitis*, inflammation of the glans penis.  
*Balanorrhœa*, *balanoblennorrhœa*, false gonorrhœa.  
*Biceps*, double-headed muscle.  
*Bicuspides*, first molares.  
*Bifurcation*, division into branches.  
*Bigaster*, *biventer*, double-bellied muscle.  
*Bile*, gall secreted in the liver.  
*Biliary*, pertaining to the secretions of the liver.  
*Bilious*, abounding in bile.  
*Blennorrhœa*, *blennorrhagia*, gleet, discharge from the urethra, chronic gonorrhœa.  
*Blepharitis*, *blepharophthalmia*, inflammation of the eyelids.  
*Blepharou*, eyelid.  
*Blepharophthalmitis*, inflammation of the eyelid.  
*Blepharoptosis*, paralytic falling of the upper eyelid.  
*Blepharospasmus*, spasm of the eyelid.  
*Borboryginus*, rumbling in the bowels from flatus.  
*Bothriocephalus*, broad tape-worm.  
*Brachial*, pertaining to the arms.  
*Bronchial*, pertaining to the bronchi.  
*Bronchitis*, inflammation of the bronchia.  
*Bronchophony*, abnormal resonance of the voice in the bronchial tubes corresponding to obliterated air-vesicles.  
*Bronchus*, (pl. *bronchi*, *bronchia*.) one of the tubes into which the trachea bifurcates; air-passages.  
*Bruit*, term applied to certain sounds in auscultation.  
*Brygmus*, grating of teeth.  
*Bubo*, an inflamed gland.  
*Bubonocèle*, inguinal hernia.  
*Bucca*, the cheek.
- Buccal*, belonging to the cheeks; pertaining to the mouth.  
*Buccinator*, muscle of the cheek.  
*Bucnemia*, tumid leg.  
*Bulimy*, *bulimia*, excessive appetite; canine hunger.  
*Bullæ*, large vesicles.
- Cachexy*, *cachexia*, vitiated constitution; bad habit; morbid condition of the body characterized by deficient digestion, nutrition and assimilation.  
*Cachinnation*, hysterical laughter.  
*Cadaver*, a dead body.  
*Cadaverous*, resembling a corpse.  
*Cæcal*, belonging to the cæcum.  
*Cæcum*, caput coli; blind gut.  
*Calculus*, (pl. *calculi*.) stone, gravel; concretions in the bladder, kidneys, gallducts, etc.  
*Calibre*, cavity of hollow vessels.  
*Caligo*, blindness.  
*Calli*, nodes.  
*Callosity*, hardness, as of tumors.  
*Callous*, hard. *Callus*, osseous matter connecting fractured bones.  
*Caloric*, principle of heat.  
*Canalis*, *canal*, channel or tube in the body.  
*Cancelli*, spongy structure in bones.  
*Cancerum oris*, fetid ulcer in the mouth.  
*Canine*, belonging to the dog-species.  
*Canker*, ulceration of the mouth or throat.  
*Canthus*, angle of the eyelids.  
*Capillaries*, hair-like minute vessels.  
*Capitis*, of the head.  
*Caput*, the head. *Caput obstipum*, wry neck.  
*Capsule*, membranous sac.  
*Carcinoma*, adj. *carcinomatous*, cancer.  
*Cardia*, upper orifice of the stomach.  
*Cardiac*, appertaining to the heart.  
*Cardialgia*, spasm of the stomach.  
*Carditis*, inflammation of the heart.  
*Caries*, ulceration of the bone.  
*Carminatives*, medicaments to remove flatulence.  
*Carneous*, fleshy.  
*Carotids*, two large arteries of the neck.  
*Carpologia*, picking at the bed-clothes.  
*Carpus*, the wrist. *Carpal*, belonging to the wrist.  
*Carus*, coma; profound stupor; torpor.  
*Caruncle*, small fleshy excrescence.  
*Caseous*, like cheese.  
*Catalepsy*, nervous attack, characterized by temporary interruption of the organic functions of the body and mind.  
*Catamenia*, menses.  
*Cataplasm*, poultice.  
*Cataract*, opacity in the crystalline lens.  
*Catarrh*, cold; inflammation of mucous membrane of air passages, etc.  
*Catharsis*, purging.  
*Cathartic*, purgative; cleansing medicine.  
*Cauda*, tail. *Cauda equina*, lower extremity of the spine.

- Cellular tissue*, net-like formation composed of cells.
- Cephalalgia*, headache.
- Cephalic*, pertaining to the head.
- Cephalitis*, inflammation of the brain.
- Cephaloma*, a tumor resembling brain.
- Cerebellum*, lower, back part of the brain.
- Cerebral*, pertaining to the brain.
- Cerebritis*, inflammation of the brain.
- Cerebrum*, upper and front part of the brain.
- Cerous*, like wax.
- Cerumen*, ear-wax.
- Cervical*, belonging to the neck.
- Cervix vesicæ, uteri*, neck of the bladder; uterus.
- Chancre*, syphilitic ulcer.
- Cheiragra*, gout in the hand.
- Chemosis*, inflammatory swelling of the conjunctiva.
- Chloasma*, chlorosis.
- Chlorosis*, green sickness.
- Cholagogues*, medicines producing bilious discharges.
- Cholera*, a disease attended with violent vomiting and purging. *Choleric*, bilious temperament.
- Cholerine*, a milder kind of cholera.
- Chordæ vocales*, vocal cords, four ligaments uniting the thyroid and arytenoid cartilages.
- Chordee*, painful erection of the penis.
- Chorea Sancti Viti*, St. Vitus's dance.
- Chorion*, external membrane of the fœtus.
- Choroid*, similar in appearance to the chorion.
- Chromatopsia*, colored vision.
- Chronic*, long-continued; in contradistinction to acute.
- Chyle*, a white fluid entering the vascular system from the thoracic duct.
- Chylification*, the process by which the chyme is converted into chyle.
- Chyme*, the ingesta after they have been digested in the stomach.
- Chymification*, process of digestion, converting the food into chyme.
- Cicatrization*, healing—of a wound, etc.
- Cicatrix*, (pl. *cicatrices*), scar left after the healing of a wound, etc.
- Cilium*, eyelash; the edge of the eyelids.
- Ciliary*, pertaining to the eyelids.
- Cineritious*, ash-colored.
- Cingulum*, the waist.
- Clavicle*, collar bone.
- Clavi pedis*, corns.
- Clavus hystericus*, fixed pain in the forehead, as if a nail were stuck in.
- Climacteric*, period of organic change; cessation of menstrual functions.
- Clinical*, pertaining to the sick-chamber; practical medicine.
- Clitoris*, part of the pudendum in the female sexual organs.
- Clitorismus*, morbid enlargement of the clitoris.
- Cloacæ*, openings from necrosis of the bone.
- Clonic spasm*, not permanently rigid, but with alternations of relaxation.
- Coagula*, clots of blood; curds of milk.
- Coccyx*, extremity of the vertebral column; cauda.
- Cochlea*, cavity of the internal ear.
- Calia*, intestinal tube.
- Cæliac*, artery and vein of the abdomen.
- Cæliac passion*, colic.
- Coitus*, coition, act of venery.
- Colic*, griping in the intestines; pain at the umbilicus.
- Colitis*, inflammation of the colon.
- Collapse*, failure of vital power.
- Colliquative*, profuse discharge of a secretion.
- Collum*, the neck.
- Collyrium*, eye-water.
- Colon*, the large intestine.
- Columnæ carneæ*, fleshy columns which separate the meshes or areolæ of the walls of the right ventricle.
- Coma*, lethargy, stupor.
- Coma somnolentum*, intense drowsiness.
- Coma vigil*, ineffectual attempt to sleep.
- Comatose*, drowsy, lethargic.
- Comminution*, minute division by bruising.
- Commissure*, opening seam of the eyes, mouth, labia pudendi, etc.
- Compress*, folded lint, etc., used in dressing wounds, or where real pressure is necessary.
- Conception*, first stage of utero-gestation.
- Condyle, condyloid*, processes, etc. of certain bones.
- Condyloma*, wart-like excrescence on the pudenda or anus.
- Confluent*, running together, as of the pustules in some exanthemata.
- Congenital*, hereditary, existing at birth.
- Congestio ad caput*, determination of blood to the head.
- Congestio ad pectus*, determination of blood to the chest.
- Congestion*, over fullness of the blood vessels.
- Conjunctiva*, lining of the eyelids; external coat of the eyeball.
- Conoid*, cone-shaped.
- Constipation*, costiveness.
- Constitutional*, hereditary or acquired characteristic disease.
- Constrictive*, styptic, astringent.
- Contagion*, propagation of disease by contact.
- Continuity*, direct connection, integrity of structure.
- Continece*, retention, as of urine, etc.
- Contusion*, bruise.
- Convalescent*, recovering from sickness.
- Cophosis*, loss of hearing; paracusis.
- Copulation*, coition.
- Coracoid*, a process of the scapula.
- Cornea*, horny, transparent coat of front part of the eyeball.
- Corona*, top of the head; crown.
- Coronal*, a suture of the cranium.

*Coronary*, arteries and veins of the heart ; certain ligaments.

*Coronoid*, process of the ulna.

*Corpora quadrigemina*, four tubercles situated regularly upon the upper surface of the isthmus of the brain.

*Corpus callosum*, firm substance uniting the hemispheres of the cerebrum at the base.

*Corpus cavernosum*, in the body of the penis.

*Corpus luteum*, cicatrix of the ovarium after the escape of an ovum.

*Corpus mucosum*, rete mucosum, giving the characteristic color to the skin.

*Corpuscle*, globule.

*Corrugation*, wrinkling.

*Cortical*, external portion of the brain ; kidneys.

*Coryza*, cold in the head.

*Costa*, rib. *Costal*, pertaining to the ribs.

*Cotyloid*, cavity and ligament of the acetabulum.

*Coxa*, hip ; haunch.

*Coxagra*, *cozalgia*, inflammation of the hip-joint ; pain in the hip-joint.

*Coxarthrocace*, disease of the hip-joint.

*Cranium*, skull.

*Crassamentum*, clot, coagulum of the blood.

*Crepitation*, rattling, grating sensation in the lungs and air-passages.

*Crepitant*, *rhonchus* or *rale*, fine crackling noise of air passing through obstructed tubes, as in first stage of pneumonia.

*Crepitus*, crackling, grating.

*Crest of the Ilium*, upper margin of the pelvis ; haunch.

*Crest of the tibia*, edge of tibia, shin.

*Cricoid*, ring-like ; cartilage of the larynx.

*Crisis*, the acme of a disease ; turning point.

*Critical*, pertaining to the crisis.

*Crudity*, undigested food in the stomach.

*Cruon*, crassamentum.

*Crural*, belonging to the legs.

*Cruræus*, *cruralis*, muscles and nerves of the leg.

*Crusta lactea*, scaled head ; milk crust.

*Crypta*, concealed mucous follicles.

*Cuboides*, bone in the ankle.

*Cubital*, pertaining to the forearm.

*Cubitus*, the forearm ; elbow.

*Curative*, tending to restore health.

*Cuspidati*, canine teeth ; eye-teeth.

*Custodia virginitatis*, hymen.

*Cutaneous*, pertaining to the skin.

*Cuticle*, outer skin.

*Cutis anserina*, goose-skin ; goose-flesh.

*Cutis vera*, true skin under the epidermis.

*Cyanosis*, blue disease ; morbus ceruleus.

*Cynanche*, disease of the throat.

*Cynanche trachealis*, croup.

" *tonsillaris*, quinsy.

" *parotidea*, mumps.

" *maligna*, putrid sore throat.

*Cynorexia*, canine appetite.

*Cyst*, a bladder.

*Cystolithos*, stone in the bladder.

*Cystic duct*, from the gall-bladder.

*Cystirrhagia*, hemorrhage from the bladder

*Cystirrhæa*, catarrh of the bladder.

*Cystitis*, inflammation of the bladder.

*Cystocele*, hernia of the bladder.

*Cystospastic*, spasm of the bladder.

*Cystotomy*, lithotomy.

*Dartos*, structure which corrugates the scrotum.

*Decubitus*, soreness from long confinement in bed.

*Defecation*, stool, alvine evacuation.

*Deglutition*, act of swallowing.

*Dejection*, alvine discharge.

*Deliquium animi*, fainting, syncope.

*Delirium*, derangement of mental functions.

*Delitescence*, sudden subsidence of inflammation.

*Deltoid*, muscle of the shoulder.

*Dementia*, insanity, idiocy.

*Dental*, pertaining to the teeth.

*Dentatus*, second cervical vertebræ.

*Dentes canini*—*incisores*—*molars*—*sapientia*, eye-teeth, front-teeth, molar-teeth, wisdom-teeth.

*Dentition*, process of cutting teeth.

*Denudation*, laying bare the bone.

*Deobstruent*, removing obstructions.

*Depilation*, falling off of the hair.

*Depletion*, abstraction of fluids as by bleeding, &c.

*Depurating*, purifying.

*Derivatives*, revulsive remedies, counter-irritants.

*Dermis*, true skin ; cutis vera.

*Dermoid*, resembling the skin.

*Desiccation*, drying up.

*Desquamation*, exfoliation, scaling of the epidermis.

*Detergents*, cleansing remedies.

*Diabetes*, morbid secretion of urine, containing sugar, &c.

*Diagnosis*, discrimination of maladies.

*Diaphoresis*, increased perspiration ; sweating.

*Diaphoretics*, remedies intended to induce sweating.

*Diaphragm*, midriff, muscular partition between the thorax and abdomen.

*Diaphragmitis*, inflammation of the diaphragm.

*Diarrhæa*, looseness of the bowels.

*Diarthrosis*, moveable joint.

*Diastole*, dilatation of the heart and arteries.

*Diathesis*, constitutional tendency.

*Dietetic*, pertaining to diet.

*Digital*, belonging to the fingers.

*Digit minimi*, the little fingers.

*Diphtheritis*, a species of croup.

*Diplopia*, double vision.

*Dysecoia*, deafness.

*Dysopia*, depraved vision.

*Disorganization*, destruction of an organ.

*Distal*, the part farthest from the heart.

- Diuresis*, copious flow of urine.  
*Diuretic*, medicines which increase the secretion of urine.  
*Diurnal*, daily.  
*Dolor*, pain. *Dolorous*, painful.  
*Dorsal*, pertaining to the back, or posterior part.  
*Dorsum*, the back; the posterior side of any part.  
*Dothineritis*, inflammation of the mucous follicles in the bowels.  
*Douche*, forcible affusion of water.  
*Drastic*, violent, active—purgatives.  
*Ductus*, a canal or vessel for conveying fluids.  
*Duodenum*, the first part of the intestine next to the stomach.  
*Duplicature*, reflection of a membrane on itself.  
*Dura mater*, the outer membrane of the brain.  
*Dynamic* force, vital power.  
*Dyscrasia*, abnormal composition of the fluids.  
*Dysecoia*, deafness.  
*Dysentery*, a disease of the intestines attended with frequent bloody and mucous stools.  
*Dysmenorrhæa*, painful menstruation.  
*Dysorexia*, depraved appetite.  
*Dysosmia*, diminished sense of smelling.  
*Dyspepsia*, weakness of digestion.  
*Dyspermatismus*, impotency in the male.  
*Dysphagia*, difficulty of swallowing.  
*Dysphonia*, impaired power of speech.  
*Dyspnæa*, difficult breathing.  
*Dysuria*, painful micturition, difficulty in passing urine.  
*Ecchymosis*, extravasation of blood under the skin, as in bruises.  
*Eclampsia*, puerperal convulsions.  
*Ecthyma*, irritable pustule.  
*Ecstasis*, state of morbid exaltation of the soul, with loss of consciousness of the reality of things in consequence of the mind being intensely and exclusively absorbed in the contemplation of supernatural subjects.  
*Ectropium*, eversion of the eyelids.  
*Eczema*, eruption of small vesicles on various parts of the skin, usually close or crowded together, with little or no inflammation round their bases.  
*Efflorescence*, redness of the skin.  
*Effluvia*, impure exhalations.  
*Effluxion*, early abortion, during the first three months.  
*Effusion*, escape of fluids; extravasation.  
*Ejaculator*, muscle of the urethra.  
*Elephantiasis*, tuberculous lepra, characterized by nodous swellings in the armpits and groins, eyebrows, on the face; and arms, sometimes becoming cancerous, with destruction of bones and whole limbs, etc.  
*Elytrocele*, hernia of the vagina.  
*Emaciation*, wasting away of flesh.  
*Emesis*, act of vomiting.  
*Emetic*, medicine to produce vomiting.  
*Emission*, discharge of semen, &c.  
*Emmenagogue*, designed to aid menstruation.  
*Emollient*, soothing, softening.  
*Emphysema*, effusion of air into the cellular tissue.  
*Empirical*, practice, based on experience alone.  
*Empresma*, internal inflammation; phlegmasia.  
*Emprosthotonos*, spasm in which the body is bent forward, as in tetanus.  
*Empyema*, collection of purulent matter in the cavity of the chest.  
*Empyreumatic*, having a burnt taste or smell.  
*Emulsion*, a milk-like mixture, cooling drink.  
*Emunctory*, the outlet of an excretory duct.  
*Enamel*, the outer coat of the teeth.  
*Encephalitis*, inflammation of the brain and membrane.  
*Encephalon*, the brain. *Encephaloid*, like brain.  
*Encysted*, covered with a membranous sac.  
*Endemic*, peculiar to a circumscribed locality.  
*Endermic*, introduced through the skin, by abrading the surface.  
*Endocarditis*, inflammation of the internal parts of the heart.  
*Enema*, clyster, injection.  
*Enervation*, exhaustion, debility, languor.  
*Engorgement*, accumulation of fluids in vessels and hollow organs.  
*Ennui*, listlessness, weariness.  
*Ensiform*, sword-like, as the cartilage of the sternum.  
*Entera*, the bowels. *Enteric*, pertaining to the bowels.  
*Enteralgia*, pain in the bowels; colic.  
*Enteritis*, inflammation of the bowels.  
*Enteromphalos*, umbilical hernia. *Enteroscheocele*, scrotal hernia.  
*Entozoa*, intestinal worms.  
*Entropium*, inversion of the eyelids.  
*Enuresis*, incontinence of urine.  
*Ephelis*, freckles.  
*Ephemeral*, of one day's duration.  
*Ephialtes*, nightmare.  
*Epicanthus*, fold of skin covering the inner canthus.  
*Epicranium*, integument of the skull.  
*Epidemic*, a generally-pervading disease.  
*Epidermis*, cuticle, sear-skin.  
*Epidermoid*, pertaining to the cuticle.  
*Epididymis*, part of the testes.  
*Epigastric*, pertaining to the stomach.  
*Epigastrium*, region of the stomach.  
*Epiglottis*, covering of the entrance to the trachea.  
*Epilepsy*, *epilepsia*, falling sickness.  
*Epiphora*, watery eyes.  
*Epiphysis*, spongy extremity of bones.  
*Epiplocele*, hernia of the omentum.  
*Epiploon*, omentum.  
*Epiploscheocele*, scrotal hernia of the omentum.

- Epispadias*, urethra opening on the dorsum of the penis.
- Epispastic*, blistering, vesicatory.
- Epistaxis*, bleeding from the nose.
- Episthotonos*, emprosthotonos, tetanic spasm.
- Epithelium*, cuticle of the mucous membrane.
- Eplulis*, tumor on the gums.
- Erethismus*, *erethism*, constitutional irritation; great commotion (?)
- Erosion*, destruction by ulceration, &c.
- Erratic*, wandering, irregular.
- Errhine*, sternutatory drugs, to produce sneezing.
- Eruclation*, belching, rising of wind from the stomach.
- Erysipelas*, St. Anthony's fire; an inflammatory cutaneous disease.
- Erysipelatous*, partaking of the nature of erysipelas.
- Erythema*, rash or efflorescence not accompanied by any swelling, vesication or fever.
- Eschar*, dry slough; scab.
- Escharotic*, caustic to destroy fleshy structure.
- Esculent*, good for food.
- Etiology*, history of the causes of disease.
- Eustachian tube*, leading from the throat to the inner ear.
- Evacuation*, discharge.
- Eversion*, turning outward.
- Exacerbation*, aggravation of fever, &c.
- Exanthema*, (pl. *exanthemata*), cutaneous eruption.
- Exanthematous*, pertaining to exanthema.
- Excoriation*, abrasion of the skin, &c.
- Excrecence*, a morbid growth, as a fungus, &c.
- Excretory*, vessel, &c., to discharge matters.
- Exfoliation*, peeling off in thin layers, as of dead bone.
- Exomphalos*, umbilical hernia.
- Exophthalmia*, protrusion of the eyeball.
- Exostosis*, a bony excrescence.
- Expectant*, as applied to practical medicine—palliative, relying on the power of nature.
- Expectoration*, discharge of any matter from the chest, as mucus, pus, &c.
- Expiration*, expulsion of air from the lungs.
- Exsanguinity*, bloodlessness; anæmia.
- Extravasation*, effusion of fluid into a structure.
- Exudation*, passage of fluid through a membrane.
- Facies hippocratica*, *cadaverica*, death-like countenance.
- Facial*, pertaining to the face.
- Fæces*, excrements.
- Fætor*, *fætor*, disgusting stench. *Fætor oris*, offensive breath.
- Falciform*, scythe-shaped.
- Fallopian tubes*, from the ovaries to the womb.
- Farinaceous*, mealy; like flour.
- Fascia*, fibrous membrane, arranged in the form of an inextensible texture and constituting a sheath for muscles.
- Fasciculus*, a bundle of fibres. *Fascicular*, composed of fasciculi.
- Fauces*, throat.
- Favosa*, like a honeycomb.
- Febrifuge*, remedial agent to subdue fever.
- Febrile*, pertaining to fever.
- Febris* (pl. *febres*), fever.
- Fecundity*, fruitfulness.
- Femoral*, belonging to the thigh.
- Femur* (pl. *femora*), thigh-bone.
- Ferruginous*, of the nature of iron.
- Fibre*, a filament. *Fibrous*, composed of fibres.
- Fibrin*, the filamentous portion of muscle, etc.
- Fibula*, small bone of the leg.
- Fibular*, vessels, etc., of the leg.
- Fimbria*, fringe-like extremity of a structure.
- Fistula*, a tubular ulcer.
- Flaccid*, relaxed, soft.
- Flexion*, bending.
- Flocci volitantes*, specks floating before the eyes, in impaired vision.
- Floccitatio*, picking at the bed-clothes.
- Flocculi*, cloudy sediment.
- Fluor albus*, whites; leucorrhæa.
- Fætal*, pertaining to the fœtus.
- Fœtus*, the young animal in the uterus.
- Follicle*, fold, small sac.
- Fomentation*, outward application to assuage pain, etc.
- Fontanel*, aperture in the infant skull at the junction of the sutures.
- Foramen*, aperture, as in bones.
- Forearm*, between the wrist and elbow.
- Formication*, sensation, as of ants creeping over the part.
- Fossa* (pl. *fossæ*), groove, shallow cavity.
- Frænum*, *frænulum*, bridle, as of the tongue; prepuce.
- Frigidity*, coldness. *Frontal*, pertaining to the forehead.
- Functional*, pertaining to the office or action of an organ.
- Fundus*, body of an organ.
- Fungus*, spongy, fleshy excrescence; proud flesh.
- Funis*, *funiculus*, umbilical cord.
- Furfuraceous*, like bran.
- Furor*, violent delirium.
- Furor uterinus*, nymphomania; excessive sexual desire.
- Furunculus* (pl. *furunculi*), a boil. *Furunculus malignans*, carbuncle.
- Galactorrhæa*, excessive lactation; inordinate flow of milk.
- Galactophorous*, milk-carrying vessels, etc.
- Galaxia*, thoracic duct.
- Gallinaginis caput*, an eminence in the urethra; verumontanum.
- Ganglion* (pl. *ganglia*), grayish knot or swelling situated along the course of the nerves; also a tumor on a tendon or aponeurosis.

- Gangrænosis*, putrid sore mouth.  
*Gangrene*, mortification.  
*Gastralgia*, spasm of the stomach.  
*Gastric*, belonging to the stomach.  
*Gastritis*, inflammation of the stomach.  
*Gastrocnemii*, muscles of the lower leg; the calf of the leg.  
*Gastrodynia*, neuralgic pain in the stomach.  
*Gastro enteritis*, inflammation of the mucous membrane of the primæ viæ,  
*Gingromalacia*, softening of the stomach.  
*Gastrosis*, a disease of the stomach.  
*Genital*, pertaining to generation; sexual.  
*Genuflexion*, kneeling. *Genugra*, gout in the knee.  
*Geophagism*, depraved habit of eating earth.  
*Gestation*, pregnancy.  
*Ginglymus*, *ginglymoid*, hinge-joint, as the elbow.  
*Glabella*, *gabella*, space between the eyebrows.  
*Glands*, small secretory bodies met with in various parts of the system.  
*Glandular*, relating to the glands.  
*Glans penis*, extremity of the penis.  
*Glaucoma*, opacity of the ophthalmic humors and defective retina.  
*Glenoid*, cavity in the scapula to receive the head of the humerus.  
*Globules*, small round particles, red corpuscles of the blood.  
*Globus hystericus*, choking sensation in hysteria.  
*Glossa*, the tongue.  
*Glossitis*, inflammation of the tongue.  
*Glossoplegia*, paralysis of the tongue.  
*Glottis*, opening into the windpipe at the larynx.  
*Gluteus*, a muscle on the buttocks.  
*Goitre*, enlargement of the thyroid gland.  
*Gonagra*, gout in the knees.  
*Gonalgia*, pain in the knee.  
*Gonitis*, inflammation of the knee.  
*Gonorrhæa*, infectious discharge from the urethra; clap.  
*Graafian vesicles*, cysts in the ovary.  
*Granulation*, the process of healing by the deposition of fleshy particles.  
*Gravid*, pregnant.  
*Grippe*, epidemic influenza.  
*Gumous*, clotted, dark-colored.  
*Gummata*, tumors on the periosteum.  
*Gutta*, drop. *Guttatim*, by drops.  
*Gutta opaca*, cataract. *Gutta serena*, amaurosis.  
  
*Habit*, *habitus*, *habitudo*, constitutional predisposition; diathesis.  
*Hæmalopia*, effusion of blood into the eye.  
*Hæmatemesis*, vomiting of blood.  
*Hæmatocele*, swelling of the scrotum from effusion of blood.  
*Hæmatosis*, process of sanguification.  
*Hæmaturia*, hemorrhage from the bladder.  
*Hæmoptoë*, *hæmoptysis*, expectoration of blood.
- Hæmorrhoidal*, blood vessels about the anus.  
*Hæmorrhoids*, piles.  
*Hæmostasia*, stagnation of blood.  
*Hallucination*, illusion of the senses from a morbidly excited imagination.  
*Hectic*, debilitating and emaciating fever.  
*Helix*, border of outer ear.  
*Helminthiasis*, worm disease.  
*Hematochesia*, intestinal hemorrhage.  
*Hemeralopia*, day vision.  
*Hemiplegia*, paralysis of one side of the body.  
*Hemicranial*, belonging to one side of the head.  
*Hemiopia*, imperfect sight; semi-vision.  
*Hemispheres*, the symmetrical halves of the cerebrum.  
*Hemorrhage*, morbid flow of blood.  
*Hepatitis*, inflammation of the liver.  
*Hepaticization*, change in the lung by which it assumes the appearance of liver.  
*Hepatic*, pertaining to the liver.  
*Hepatorrhagia*, bleeding from the liver.  
*Hepatocèle*, hernial tumor of the liver.  
*Hernia*, rupture, protrusion of viscera.  
*Herpes*, certain cutaneous eruptions.  
*Herpes esthiomenos*, ulcerative eruption destroying the skin.  
*Herpes exedens*, rapidly-spreading herpes.  
*Herpes farinosus*, *furfuraceus*, herpes characterized by mealy exfoliations.  
*Herpes labialis*, herpetic eruption of the lips.  
*Herpes præputialis*, herpes on the prepuce.  
*Herpes psoricus* *Polya*, erysipelatous herpetic eruption on the skin.  
*Herpes circinnatus*, ringworm.  
*Hickup*, *hiccough*, singultus.  
*Homæopathy*, (from the Greek words, *homoios*, similar, and *pathos*, disease, pain,) literally like the symptoms of the disease; a system of cure founded on the principle—*similia similibus curantur*.  
*Hordecolum*, (pl. *hordeola*) styte.  
*Horripilation*, rigor, sense of creeping, formation.  
*Humerus*, bone of the upper arm.  
*Humeral*, belonging to the upper arm.  
*Hydrarthrus*, white swelling; spina ventosa.  
*Hydatid*, species of intestinal worms; serous vesicles.  
*Hydragogues*, medicines inducing watery alvine discharges.  
*Hydrargyrosis*, mercurial disease.  
*Hydroa febrilia*, fever attended with the eruption of watery pustules.  
*Hydrocèle*, dropsy in the tunica vaginalis testis.  
*Hydrocephalus*, water on the brain; dropsy of the head.  
*Hydrophobia*, *hydriatria*, water cure.  
*Hydrophobia*, dread of water, with convulsions, from the bite of a rabid animal.  
*Hydrophthalmia*, dropsy of the eye.  
*Hydrosarca*, anasarca.  
*Hydrothorax*, dropsy in the chest.  
*Hygiene*, preservative of health.

- Hymen*, membrane at the entrance of the vagina.
- Hyoides*, bone between the base of the tongue and the larynx.
- Hypercatharsis*, excessive purging.
- Hyperæmia*, engorgement of the blood vessels.
- Hyperæsthenia*, great sensibility.
- Hyperemesis*, excessive vomiting.
- Hyperostosis*, exostosis; morbid enlargement of a bone.
- Hypertrophy*, morbid enlargement of an organ.
- Hypochondrium*, region under the false ribs.
- Hypochondriasis*, melancholy; spleen disease.
- Hypogastrie*, pertaining to the hypogastrium.
- Hypogastrium*, the lower, anterior part of the abdomen.
- Hypospadias*, urethra opening on the under side of the penis.
- Hysteralgia*, pain in the womb.
- Hysteria*, a nervous affection, supposed to be connected with uterine irregularity.
- Hysteritis*, inflammation of the womb.
- Hysterocele*, falling of the womb; prolapsus uteri.
- Ichor*, fetid watery discharge from wounds, &c.
- Ichthyosis*, a species of eruption.
- Icterodes*, complexion resembling jaundice.
- Icterus*, jaundice. *Icterus albus*, chlorosis.
- Idiopathic*, primary, original disease.
- Idiosyncrasy*, individual peculiarity of constitution.
- Ileum*, the longest of the smaller intestines.
- Ileus, miserece*, colic in the smaller intestines.
- Iliac passion*, inverted peristaltic action.
- Iliac*, pertaining to the ileum, also to the ilium.
- Ilium*, haunch-bone; the superior side bone of the pelvis.
- Immobility*, stiffness; incapable of motion.
- Imperforate*, closure of a natural opening.
- Impetigines, impetigo*, pustular eruptions.
- Imponderabilia*, agents having no sensible weight.
- Impotence*, powerlessness; inability to perform an embrace.
- Impregnation*, fecundation of the ova.
- Incarescent*, glowing like hot coals.
- Incarcerated*, strangulation, constriction, as in hernia, intus-susceptio, &c.
- Incineration*, reducing to ashes.
- Incisores*, front teeth; cutting teeth.
- Incontinence*, involuntary passage of urine; inability to retain semen, &c.
- Increment*, increase; growth.
- Inebus*, nightmare.
- Index-finger, index*, the forefinger.
- Indolent*, slow of action, or growth.
- Induration*, hardening.
- Infarection*, plugging; wedging up.
- Infection*, propagation of disease by miasm or contact.
- Inferior*, lower.
- Infiltration*, infiltration of fluids into the cellular tissue.
- Inflation*, filling with air, distention by flatus.
- Influenza*, epidemic catarrh.
- Infra*, under.
- Infra orbital*, beneath the orbit—of the eye.
- Ingesta*, food, aliment.
- Inguinal*, belonging to the groin.
- Inhalation*, inspiration of gas, air, &c.
- Inoculation*, insertion of contagious virus beneath the cuticle.
- Inorganic*, not supplied with organs, as minerals.
- Inosculation*, connecting of the extremities of the blood vessels.
- Inspiration*, drawing air into the lungs; inhalation.
- Insipated*, thickened.
- Insulation*, cutting off communication with other bodies.
- Insufflation*, inflating with air.
- Integuments*, coverings of any part of the body, as the skin, cellular tissue, fat, &c.
- Intercostal*, between the ribs.
- Intertrigo*, excoriation about the anus.
- Intestines*, the bowels.
- Intolerance*, inability to endure—light, food, &c., said of the eye, stomach, &c.
- Intumescence*, swelling.
- Intussusceptio, Introsusception*, a portion of the intestine falling into the adjoining part and choking up the aperture, producing strangulation.
- Invermination*, morbid states caused by worms in the intestinal canal.
- Iris*, circle around the pupil of the eye.
- Iritis*, inflammation of the iris.
- Irritability*, contractility of the solids.
- Ischias*, pain in the hip.
- Ischium*, hip-bone, lower bone of the pelvis.
- Ischuria*, suppression of urine; difficult micturition.
- Isochronous*, occurring at equal periods of time, said of the pulsations of the heart, &c.
- Isomorphous*, similarly shaped; bodies impressing upon their compounds with the same bodies, the same crystalline form.
- Jactitation*, tossing about, restlessness, twitching.
- Jaundice*, a bilious disease, inducing yellowness of skin, &c.
- Jejunum*, the second of the smaller intestines.
- Jugulars*, large veins in the neck.
- Jugulum*, the throat.
- Labia*, lips, as of the pudendum, etc.
- Labia leporina*, hare-lip.
- Labial*, belonging to the lips.
- Laceration*, tearing.
- Lachrymal sac*, tear-bag; gland secreting tears.
- Lachrymation*, profuse discharge of water from the eyes.
- Lactation*, secretion of milk; suckling.

- Lacteal*, absorbent vessel of the lymphatic system; adj. pertaining to the secretion of milk.
- Lactiferous*, milk-carrying vessels.
- Læve*, flat, smooth eruption.
- Lamellar*, arranged in thin layers.
- Lambdoidal*, occipito parietal suture of the skull.
- Lancinating*, sharp, shooting pain.
- Languor*, relaxation, debility, lassitude.
- Laryngeal*, belonging to the larynx.
- Laryngitis*, inflammation of the larynx.
- Laryngismus stridulus*, thymus asthma of infancy; asthma Millari.
- Larynx*, upper part of the windpipe.
- Latent*, hidden.
- Lateritious*, sediment in the urine like brick-dust.
- Laxative*, gently purgative.
- Lenticular*, bean-shaped, said of eruptions, etc.
- Leontiasis*, a leprosy of the face.
- Lepra*, leprosy.
- Leproides*, scaly, rough crust on the skin.
- Lesion*, hurt or injury, caused by violence or disease.
- Lethargy*, stupor, continued sleepiness.
- Leucoma*, white speck on the eye; albugo.
- Leuco-phlegmatic*, torpid or sluggish temperament.
- Leucorrhœa*, whites, fluor albus.
- Lichen*, a popular cutaneous eruption.
- Lienitis*, inflammation of the spleen.
- Lienteria*, diarrhœa consisting of undigested food.
- Ligament*, inelastic tendinous cord.
- Ligature*, bandage.
- Linea alba*, a tendinous band from the epigastrium to the pubis.
- Lingual*, pertaining to the tongue; glossal.
- Lipoma*, fatty tumor.
- Lippitudo*, puriform exudation from the eyelids.
- Liquor amnii*, fluid by which the fœtus is surrounded in the womb.
- Liquor sanguinis*, fluid part of the blood.
- Lithiasis*, formation of calculi.
- Lithontriptic*, solvent of urinary calculi.
- Livid*, discolored, purplish.
- Lobe*, *lobule*, a division of an organ.
- Lochia*, flow of blood from the womb after delivery.
- Lues venerea*, syphilis.
- Lumbago*, rheumatism in the loins.
- Lumbar*, pertaining to the loins.
- Lumbricus* (pl. *lumbrici*), round worms in the intestines.
- Lupus*, corrosive herpetic ulceration.
- Luxation*, dislocation.
- Lymph*, a thin liquid conveyed to the thoracic duct by the lymphatics.
- Lymphatics*, vessels carrying lymph.
- Lymphatic*, adj., pertaining to the absorbent system; temperament similar to the leuco-phlegmatic.
- Macies infantum*, tabes mesenterica; intestinal tubercular disease.
- Maculae*, spots; marks.
- Malar*, pertaining to the cheek.
- Malaria*, infectious effluvia.
- Malleolus*, the ankle.
- Malleus*, small bone of the inner ear.
- Mamma* (pl. *mammæ*), the female breast.
- Mammilla*, the nipple.
- Mammillary*, *mammary*, pertaining to the mamme.
- Mania*, insanity, madness.
- Marasmus*, wasting away of the body; emaciation; atrophy.
- Masseter*, muscle of the face.
- Mastication*, chewing.
- Mastitis*, inflammation of the breast.
- Mastodynia*, pain in the mamma.
- Mastoid*, process connected with the temporal bone.
- Masturbation*, onanism, artificial excitement of the genital organs.
- Materia Medica*, substances employed medicinally.
- Materia Medica Pura*, Hahnemann's celebrated work on therapeutic agents.
- Maturation*, ripening; full development.
- Maxilla*, the jaw.
- Maxillary*, pertaining to the jaws.
- Meatus*, passage, aperture, as of the ear, etc.
- Meconium*, excrement discharged from the bowels of a newly-born infant.
- Median line*, an imaginary vertical line through the body.
- Mediastinum*, septum between the lungs.
- Medicament*, a remedial agent.
- Medulla*, marrow in the bones. *Medullary*, pertaining to the marrow.
- Megrim*, pain affecting one side of the head; hemicrania.
- Meibomian glands*, small glands within the inner membrane of the eyelids.
- Melæna*, black discharges, vomiting.
- Melancholia*, hypochondriasis, insanity.
- Melancholia religiosa*, insanity from morbid exaltation of the religious faculties.
- Melanosis*, black deposits in tumors, tubercles, etc.
- Meninges*, membranes of the brain.
- Menochesia*, feeble menstruation.
- Menoposia*, critical age of women.
- Menorrhagia*, excessive menstruation.
- Menostasis*, cessation of the menses.
- Menstrual flux*, monthly courses.
- Meningitis*, inflammation of the membranes of the brain, etc.
- Mentagra*, eruption on the chin.
- Menti*, of the chin.
- Mesenteric*, belonging to the mesentery.
- Mesocolon*, membrane of the colon.
- Metacarpus*, middle-hand.
- Metastasis*, transfer of a disease from one part to another.
- Metatarsus*, middle-foot.
- Meteorismus*, *meteorism*, extreme inflation of the intestines.

- Metralgia*, uterine spasmodic pain.  
*Metritis*, inflammation of the womb; hysteria.  
*Metrorrhagia*, uterine hemorrhage, discharge of blood from the womb.  
*Miasm*, morbid effluvia from swamps, etc.  
*Micturition*, urination.  
*Miliaria*, eruption of minute transparent vesicles; miliary eruption.  
*Miliaria purpurea*, scarlet rash.  
*Misanthropy*, morbid love of solitude.  
*Mitral*, valves of the heart.  
*Molares*, the double teeth; grinders.  
*Mole*, false conception. *Molecule*, minute atoms.  
*Mollities ossium*, softening of the bones.  
*Mollities cerebri*, ramolissement of the brain.  
*Monomania*, mental aberration on one point only.  
*Mons veneris*, the pubic prominence.  
*Morbid*, diseased.  
*Morbilli*, measles.  
*Morbus*, disease.  
*Morbus cæruleus*, blue disease.  
*Morbus maculosus Werlhofii*, purpura hemorrhagica.  
*Moza*, a burning body applied to the skin to produce an issue.  
*Mucous membrane*, the lining of the cavities communicating with the external air, as the mouth, windpipe, stomach, intestines, etc.  
*Mucus*, the secretion from the mucous membranes.  
*Musca volitantes*, pseudoblepsis; spots before the eyes.  
*Myelitis*, inflammation of the spinal marrow.  
*Myopia*, short-sightedness, near-sightedness.  
*Myotomy*, surgical division of a muscle.
- Nævus maternus*, mother's mark, mole.  
*Narcotic*, stupefying, producing sleep.  
*Narcotism*, stupor produced by drugs.  
*Nares*, the nostrils.  
*Nasal*, belonging to the nose.  
*Nates*, the buttocks.  
*Nausea*, qualmishness; sickness of stomach.  
*Naviculare*, bones in the wrist and ankle.  
*Nebula*, cloudy speck in the eye.  
*Necrosis*, decay of a bone.  
*Nephralgia*, pain in the kidneys.  
*Nephritis*, inflammation of the kidneys.  
*Neuralgia*, nervous pain.  
*Neuroses, neurotica*, diseases of the nervous system.  
*Neurilema*, envelope of the nerves.  
*Neuroma*, tumors on nerves.  
*Nictation, nictitation*, quivering of the eyelids.  
*Noctambulatio, somnambulism*; sleep-walking.  
*Nodosities*, nodes; swelling of the bone or periosteum; exostosis.  
*Noli me tangere*, irritable fungous ulcers; lupus.  
*Normal*, natural, healthy.  
*Nosology*, classification of diseases.
- Nostalgia*, home-sickness.  
*Notalgia*, pains in the loins.  
*Nothæ costæ*, false ribs.  
*Nucha*, nape of the neck.  
*Nyctalopia*, night-vision.  
*Nymphæ*, external labia of the vulva.  
*Nymphomania*, uterine furor; excessive venereal desire.
- Obesity*, excess of fat; corpulence.  
*Obstipatio*, constipation.  
*Obstructio*, obstruction of the primæ viæ, etc.  
*Occipital*, pertaining to the occiput.  
*Occiput*, posterior part of the head.  
*Occlusion*, mechanical closure of an orifice or canal.  
*Octana*, intermittent fever, returning on the eighth day.  
*Ocular*, pertaining to the eye.  
*Odontalgia*, toothache.  
*Edema*, tumefaction; dropsical swelling.  
*Olecranon*, end of the ulna; elbow bone.  
*Olfaction*, smelling.  
*Olivæ corpora*, eminences in the spinal marrow.  
*Omagra*, gout in the shoulder.  
*Omentitis*, inflammation of the omentum.  
*Omentum*, caul; peritoneal covering of the bowels; epiploon.  
*Omoxyoides*, muscles of the neck.  
*Onanism*, artificial excitement of the sexual organs; masturbation.  
*Onychia*, whitlow; abscess near the finger nail.  
*Oophoritis*, inflammation of the ovaries.  
*Ophthalmia*, inflammation of the eye, especially of the conjunctiva.  
*Ophthalmic*, pertaining to the eye.  
*Ophthalmitis*, inflammation of the ball of the eye.  
*Opisthotonos*, spasmodic bending backward, as in tetanus.  
*Optic*, belonging to the vision.  
*Orbit*, cavity in which the eye is placed.  
*Orbital*, pertaining to the orbit.  
*Orchea, scrotum. Orchis*, testicle.  
*Orchitis*, inflammation of the testicle.  
*Organ*, a part having definite functions.  
*Organic*, pertaining to the organs of the body; structural.  
*Orgasm*, venereal thrill; excitement of the blood.  
*Orthopnæa*, difficult respiration.  
*Œsophagitis*, inflammation of the œsophagus.  
*Œsophagus*, gullet; passage from the pharynx to the stomach.  
*Os (pl. ossa)*, bone. *Ossicula*, little bones.  
*Ossification*, conversion into bone.  
*Ostalgia*, pain in a bone.  
*Osteoma*, bony tumor.  
*Osteosarcoma*, cancer of the bones.  
*Osthexia*, an ossific diathesis; constitutional tendency to deposit bony matter.  
*Os uteri, os tinæ*, mouth of the womb.  
*Otalgia*, ear-ache.

- Otitis*, inflammation of the ear.  
*Otorrhœa*, running from the ear.  
*Oval foramen*, aperture between the auricles of the fœtal heart.  
*Ovaria*, ovaries whence the ova pass through the fallopian tubes into the uterus.  
*Ovarian*, pertaining to the ovaries.  
*Oxidation*, rusting; conversion of metals into oxides.  
*Ozæna*, ulcerative destruction of the Schneiderian membrane.
- Pabulum*, aliment, food.  
*Palate*, posterior part of the roof of the mouth.  
*Palatine*, belonging to the palate.  
*Palliative*, medicines affording relief only, not curative.  
*Palmar*, belonging to the palm of the hand.  
*Palpebræ*, eyelids.  
*Palpitation cordis*, palpitation of the heart.  
*Pamphlegia*, general paralysis.  
*Panacea*, a universal remedy.  
*Panaris*, *panaritium*, *paronychia*, whitlow.  
*Pancreas*, gland behind the stomach secreting the pancreatic fluid.  
*Papilla*, eminences on the tongue, skin, the inner coat of the bowels, etc.  
*Papular*, abounding in pimples.  
*Paralysis*, palsy; loss of motion or sensation.  
*Paranoia*, dementia.  
*Paracentesis*, tapping for the relief of dropsy.  
*Paraphrosyne*, mania.  
*Paraplegia*, *paraplexia*, paralysis of the lower half of the body.  
*Parasitical*, plants or animals growing upon or within others.  
*Parenchyma*, the connecting structure of the viscera.  
*Paresis*, imperfect palsy.  
*Parietes*, walls, as of the thorax, etc.  
*Parietal*, bone each side of the skull.  
*Paropsis*, *invertus*, inverted vision.  
*Parosmia*, perversion of smell.  
*Parotid glands*, salivary glands beneath the ears.  
*Parotitis*, mumps; inflammation of the parotid glands.  
*Paroxysm*, periodical fit of a disease.  
*Parturition*, child-birth.  
*Parulis*, gum-boil.  
*Par vagum*, pneumogastric nerve.  
*Patella*, knee-pan.  
*Pathogenetic*, relating to the action of drugs upon the healthy organism.  
*Pathogeny*, that which relates to the origin or cause of disease.  
*Pathognomic*, characteristic symptoms.  
*Pathology*, doctrine of the nature of diseases.  
*Pectoral*, pertaining to the chest.  
*Pectus*, the chest.  
*Pediculi*, lice.  
*Pellicle*, a thin skin.  
*Pelvis*, basin-shaped cavity formed by the innominate and sacrum.
- Pemphigus*, vesicular eruption with or without fever.  
*Percussion*, striking the walls of a cavity, as the chest, etc., to ascertain the state of the subjacent parts.  
*Pericardium*, sac containing the heart.  
*Pericarditis*, inflammation of the pericardium.  
*Perichondritis*, inflammation of the perichondrium.  
*Perineum*, *perineum*, the part between the anus and sexual organs.  
*Periodicity*, regular recurrence of paroxysms.  
*Periosteum*, the membrane enveloping the bones.  
*Periostitis*, inflammation of the periosteum.  
*Peripneumonia*, inflammation of the lungs and pleura.  
*Peristole*, *peristaltic action*, vermicular motion of the intestines.  
*Peritoneum*, serous membrane lining the abdomen and enveloping its membranes.  
*Peritonitis*, inflammation of the peritoneum.  
*Perniones*, chilblains.  
*Pertussis*, whooping cough.  
*Pes anserinus*, goose's foot; plexus of nerves distributed on the side of the face.  
*Petechiæ*, purple spots on the skin; ecchymosis.  
*Petrous*, hard, of the nature of stone.  
*Peyer's glands*, situated under the villous coat of the intestines.  
*Phagedenic*, corroding, ragged sores.  
*Phalanges*, bones of the fingers and toes.  
*Phantasy*, morbid innagination.  
*Pharynx*, throat, upper part of the gullet.  
*Phases*, changes of appearance in a disease or structure.  
*Phlebitis*, inflammation of the veins.  
*Phlegmasia*, inflammation.  
*Phlegmasia alba dolens*, milk leg.  
*Phlegmatic*, vid. *Leuco-phlegmatic*.  
*Phlegmon*, boil, furunculus; simplest form of inflammation in cellular tissue.  
*Phlegmonous*, pertaining to inflammation in the cellular tissue.  
*Phlogistic*, inflammatory.  
*Phlyzaceæ*, ecthyma.  
*Photomania*, insanity induced by light.  
*Photophobia*, intolerance of light.  
*Photopsia*, luminous vision.  
*Phymosis*, *phimosis*, contraction of the prepuce, so that it cannot be drawn back over the glans.  
*Phrenitis*, inflammation of the brain.  
*Phthiriasis*, lice disease; pediculatio.  
*Phthisis*, consumption.  
*Pia mater*, thin investing membrane of the brain.  
*Pictonum*, from paint, as painter's colic, colica pictonum.  
*Pigmentum*, pigment, paint.  
*Pituita*, viscid mucus; phlegm.  
*Pituitary membrane*, lining of the nostrils.  
*Pityriasis*, dandruff; bran-like scales on the scalp.

- Placenta*, the afterbirth.
- Plantar*, muscles etc. of the foot.
- Plethora*, over-fulness of the blood-vessels; repletion.
- Pleura*, lining membrane of the thorax, investing also the lungs.
- Pleuralgia*, acute pain in the side.
- Pleuritis*, pleurisy, inflammation of the pleura.
- Pleurodynia*, pain in the side.
- Plexus*, net-work of nerves or vessels.
- Plica*, morbid matting of the hair.
- Plica polonica*, swelling and bleeding of the hair, so that it knits together.
- Pneumogastric*, eighth pair of nerves; par vagum.
- Pneumonia*, *pneumonitis*, inflammation of the lungs.
- Pneumothorax*, air in the pleural sac.
- Podagra*, gout.
- Polyphagia*, ravenous desire to eat.
- Polydipsia*, morbid thirst.
- Polypus*, soft tumor in the nose, uterus, etc., attached by a pedicel.
- Polysarcia*, excessive corpulency.
- Pompholyx*, a cutaneous disease, with a small vesicular eruption.
- Popliteal*, muscles, etc. of the ham.
- Porrigio farosa*, scald head, with large, soft straw-colored pustules.
- Porrigio scutellata*, ringworm of the scalp.
- Porrigio larvalis*, milk crust; milk-scab.
- Posterior nares*, the opening of the nostrils into the fauces.
- Post-mortem*, after death.
- Postponing*, when the paroxysms recur after the regular time.
- Poupart's ligament*, ligament extending from the ilium to the pubes.
- Precoordial*, belonging to the forepart of the chest; in front of the heart.
- Prepuce*, foreskin of the penis.
- Presbyopia*, far-sightedness.
- Priapism*, involuntary erection of the penis.
- Prima viæ*, first passages; stomach and intestines.
- Procidencia*, prolapsus: falling down, as of the uterus.
- Proctalgia*, pain in the rectum.
- Proctitis*, inflammation of the rectum.
- Prodromus*, period immediately preceding the attack of a disease.
- Prognosis*, art of foretelling results in disease.
- Prolapsus ani*, protrusion of the anus.
- Prolapsus uteri*, falling of the womb.
- Pronator*, muscle of the forearm.
- Prophylactics*, means used as preservatives against disease.
- Prosopalgia*, face-ache.
- Prostate gland*, situated around the neck of the bladder in the male, secreting the prostatic fluid.
- Prostatitis*, inflammation of the prostate gland.
- Prurigo*, *pruritus*, itching of the skin.
- Psellismus*, stammering.
- Pseudo*, false.
- Pseudopia*, false sight; imperfect vision.
- Psoas muscles*, in the loins. *Psoas abscess*, lumbar abscess.
- Psoriasis*, inflammation of the psoas muscle.
- Psora*, one of the three chronic miasms, according to Hahnemann.
- Psoriasis*, cutaneous disease, with a rough and scaly state of the cuticle.
- Psorophthalmia*, inflammation of the eyes, attended with itching.
- Pterygoid*, wing-like muscles and bony processes in the pterygo-maxillary region.
- Ptisans*, bland decoctions, as barley broth, etc.
- Ptosis*, palsy of the upper eyelid, etc.
- Ptyalism*, salivation.
- Pubis* (pl. *pubes*), pubic bone. *Pubic*, belonging to the pubes.
- Puerperal*, pertaining to child-bed.
- Pulsation*, throbbing, beating of the heart, etc.
- Pulse*, arterial throbbing, especially of the radial artery at the wrist.
- Pulsus dicrotus*, double pulsation.
- Puncta lachrymalia*, orifices of the lachrymal canals.
- Puriform*, pus-like; resembling pus.
- Purpura*, small, circumscribed red spots under the epidermis, arising from effusion of blood.
- Purulent*, composed of pus.
- Pus*, cream-like matter, produced in abscesses, etc., by suppuration.
- Pustule*, a pimple containing pus.
- Putrefaction*, decomposition of animal matter.
- Pylorus*, lower orifice of the stomach.
- Pyrexia*, hot stage of fevers.
- Pyriform*, pear-shaped.
- Pyrosis*, heartburn.
- Pyuria*, purulent urination.
- Quadrigemi*, four muscles on the buttocks.
- Quartan*, intermittent fever, recurring on the fourth day.
- Quinsy*, inflammatory sore-throat.
- Quintana*, intermittent, recurring every fifth day.
- Quotidian*, intermittent fever, recurring every day.
- Rabies*, hydrophobia; madness from the bite of a rabid animal.
- Rachialgia*, acute pain in the spine.
- Rachitis*, rickets.
- Radial*, belonging to the radius.
- Radiating*, diverging from a common centre.
- Radius*, upper bone of the fore-arm.
- Rale*, rattles, peculiar sound in the chest.
- Ranolissement*, softening; mollities.
- Ramus*, plate of the lower jaw.
- Ramula*, tumor under the tongue.
- Rancid*, stale, musty, rank.
- Raphe*, seam, as on the scrotum.
- Raucitas*, hoarseness.
- Rectum*, straight gut, terminating at the anus.
- Reflection*, duplicature; turning back.

*Refroidissement*, general chilliness, cold.  
*Regurgitation*, return of food or drink from the stomach.  
*Remittent*, a class of fevers, marked by remissions, and exacerbations, without intermissions.  
*Renal*, belonging to the kidneys.  
*Repercussed*, driven in.  
*Repletion*, fulness.  
*Resolution*, dispersion of a disease; discursion of an inflammation, swelling, induration, &c.  
*Respiration*, the act of breathing.  
*Resonance*, reverberation of the voice.  
*Rete mucosum*, mucous tissue beneath the cuticle.  
*Retention*, stoppage of natural discharges, as of urine.  
*Reticulated*, net-like.  
*Retina*, expansion of the optic nerve.  
*Retrocession*, retirement of symptoms; recession of exanthemata, &c.  
*Rhagades*, chaps.  
*Rheuma*, catarrh.  
*Rheumatologia*, chronic rheumatism.  
*Rhonchus*, wheezing or rattling sound; in auscultation, a sound of obstructed respiration.  
*Rhythm*, stated movement, regular action of the heart.  
*Rigidity*, stiffness.  
*Rigor*, chilliness, with more or less of shivering; the cold stage of fevers.  
*Rima*, a fissure, as of the glottis.  
*Risus sardonius*, hysterical, spasmodic laughter.  
*Roscola*, eruption of small red pimples; rash.  
*Rubefacient*, producing redness when applied to the skin.  
*Rubeola*, measles.  
*Ruga*, (pl. *rugæ*), wrinkles.  
*Rupia*, exanthema with flat vesicles.  
  
*Saburra*, dirt; sordes. *Suburral*, attended with foul discharges.  
*Sac*, bag, envelope of a tumor, &c.  
*Sacral*, belonging to the sacrum.  
*Sacrum*, posterior bone of the pelvis, on which the spine rests.  
*Sagittal*, suture between the parietal bones.  
*Salacity*, sexual orgasm; satyriasis.  
*Saliva*, spittle; secretion from the salivary glands of the mouth.  
*Sanguification*, conversion of chyle into blood.  
*Sanguineous*, consisting of blood.  
*Sanies*, thin acrid discharge from ulcers; ichor.  
*Saphena*, vein in the leg.  
*Sapientiæ dentes*, wisdom teeth; posterior molares.  
*Sarcocoele*, fleshy tumor of the testicle.  
*Sarcoma*, fleshy tumor.  
*Saturnine*, preparations containing lead.  
*Satyriasis*, excessive sexual inclination.  
*Scabies*, psora, itch.

*Scabies vesicularis humida*, watery itch.  
*Scapula*, shoulder-blade.  
*Sciatic*, pertaining to the hip.  
*Sciatica*, rheumatic affection of the hip-joint.  
*Scintillation*, sparks.  
*Scirrhus*, indolent, hard, glandular tumor, often terminating in cancer.  
*Scirrhusity*, hardness of tumors, &c.  
*Schneiderian*, pituitary membranous lining of the nose, &c.  
*Sclerotic*, the hard coat of the eyeball, next to the conjunctiva.  
*Scleratitis*, inflammation of the sclerotic.  
*Serobiculus cordis*, pit of the stomach.  
*Scorbutus*, scurvy.  
*Scrophulous*, pertaining to scrophulosis.  
*Scrophulosis*, scrofula, kings-evil.  
*Scrotum*, bag enclosing the testicles.  
*Scrotocele*, hernia in the scrotum.  
*Scybala*, hard lumps of excrement.  
*Secretory vessels*, &c., parts of the system in which various fluids are eliminated.  
*Secundines*, after-birth.  
*Sedative*, anodyne, depressing.  
*Semen*, spermatie fluid; seed of the male.  
*Semilateral*, limited to one side. (?)  
*Septum*, a partition.  
*Sequela*, (pl. *sequelæ*), consequences resulting from disease.  
*Serum*, fluid portion of the blood.  
*Serous*, of the nature of serum.  
*Sesamoid*, small bones in the thumb and great toe.  
*Sibilant*, hissing.  
*Sibilus*, the hissing sound in bronchitis, &c.  
*Sinapism*, mustard plaster.  
*Sinciput*, forehead of the head.  
*Singultus*, hiccup, hiccough.  
*Sinus*, a cavity, or hollow.  
*Slough*, the part which separates from a foul ulcer, &c.  
*Solidification*, the effect of disease of the lungs, causing them to solidify; hepatization.  
*Somnambulism*, sleep-walking.  
*Somnolence*, disposition to sleep.  
*Sordes*, fetid, brownish matter discharged from ulcers; the dark-coloured deposit on teeth.  
*Souffle*, auscultic term for a peculiar sound in the chest.  
*Spasm*, morbid contraction of muscles.  
*Spasticus*, spastic, spasmodic.  
*Specific*, a remedy possessing definite curative properties.  
*Spermatie fluid*, semen of the male.  
*Spermatie*, pertaining to the male sexual organs.  
*Sphacelus*, mortification.  
*Sphincter*, circular muscles to close the bladder or rectum.  
*Spinal*, pertaining to the spine or vertebral column.  
*Spleen*, an organ in the left hypochondrium.  
*Splenalgia*, pain in the splenic region.  
*Splenitis*, inflammation of the spleen.

- Splanchnic*, pertaining to the viscera.  
*Splints*, pieces of pasteboard, thin wood, &c. used to secure fractured bones, &c.  
*Sporadic*, arising from an occasional cause; not epidemic.  
*Sputa*, spittle; matter expectorated.  
*Sputum cruentum*, bloody expectoration.  
*Squama*, scaly eruption.  
*Squamous*, of a scaly nature.  
*St. Anthony's fire*, erysipelas.  
*Staphyloma*, dropsy of the cornea of the eye.  
*Status*, condition; diathesis.  
*Steatoma*, suet-like tumor.  
*Stercoraceous*, vomiting of fecal matter.  
*Sternal*, belonging to the sternum.  
*Sternu-Meido rastroideus*, a muscle connecting the sternum and clavicle with the mastoid process.  
*Sternum*, the breast bone.  
*Sternutation*, sneezing.  
*Stertor*, noisy respiration.  
*Stertorous*, snoring.  
*Stethoscope*, a hollow cylindrical instrument used in examining the chest, &c., in auscultation.  
*Sthenic*, vigorous, powerful, strong.  
*Stomacace*, putrid sore mouth.  
*Strabismus*, squinting.  
*Strangury*, painful or suppressed urination.  
*Stricture*, contraction of a passage; as of the urethra. &c.  
*Stridordentinm*, grinding of the teeth.  
*Strophulus*, an infantile disease of the gums.  
*Struma*, scrofula; king's evil. *Strumous*, of the nature of struma.  
*Stupor*, drowsiness.  
*Stye*, small inflammatory tumor on the eyelid; hordeolum.  
*Styptic*, astringent; designed to arrest bleeding.  
*Subacute*, not severe; of moderate activity.  
*Subclavian*, under the collar-bones.  
*Subcutaneous*, beneath the skin.  
*Sublingual*, under the tongue.  
*Submaxillary*, pertaining to the lower jaw.  
*Submucous*, situated beneath the mucous membrane.  
*Subsultus tendinum*, spasmodic twitching of the tendons.  
*Succession*, shaking.  
*Sudamina*, milky eruptions.  
*Sudorifics*, medicines to produce sweating.  
*Sugillation*, extravasated blood caused by a bruise, &c., ecchymosis.  
*Sulcus*, a furrow.  
*Supercilia*, the eyebrows.  
*Superior*, upper.  
*Suppression*, artificial arrest of a discharge or removal of an eruption.  
*Suppuration*, production of pus, as in inflammatory tumor.  
*Surditas*, deafness.  
*Suture*, connection of the cranial bones.  
*Sycosis*, fig-wart, a venereal disease.  
*Symphysis*, union of bones, as the pubic, &c.  
*Symptomatic*, constituting a symptom.  
*Symptomatology*, description of symptoms.  
*Synchronous*, occurring at the same time.  
*Syncope*, fainting, swooning.  
*Synocha*, inflammatory fever.  
*Synochus*, hectic fever.  
*Synovia*, the unctuous fluid which lubricates the joints.  
*Synovial*, pertaining to the synovia.  
*Syphilis*, lues venerea.  
*Syphiloid*, resembling syphilis.  
*Systole*, contraction of the heart and arteries.  
*Tabes*, wasting, as in hectic fever.  
*Tabes dorsalis*, wasting of the spinal marrow.  
*Tabes mesenterica*, tuberculous disease of the mesenteric glands.  
*Tænia*, tape-worm.  
*Tarantism*, disease said to be caused by the bite of tarantula, characterized by an immoderate desire for dancing and music.  
*Tarsus*, bones connecting the tibia and fibula with the foot; cartilaginous edge of the eyelids.  
*Telangiectasia*, net-work of dilated terminal arteries, veins and lymphatic vessels.  
*Temporal*, pertaining to the temples.  
*Tendon*, the white, tough extremity of the muscles.  
*Tendo-Achillis*, the tendon of the gastrocnemii muscles, attached to the heel.  
*Tenesmus*, painful, ineffectual urging to stool.  
*Tertian*, intermittents returning the third day.  
*Testes*, the testicles.  
*Tetanus*, locked-jaw; trismus; spasmodic rigidity of the parts.  
*Tetter*, herpetic eruption.  
*Therapeutic*, relating to the cure of disease by remedial agents.  
*Thoracic*, belonging to the chest.  
*Thorax*, the chest.  
*Throbbing*, pulsating.  
*Thrush*, aphtha; sprue; white vesicles in the mouth.  
*Thymus gland*, gland behind the sternum and below the thyroid body.  
*Thyroid cartilage*, part of the larynx.  
*Thyroid gland*, situated near the thyroid cartilage.  
*Tibia*, large bone of the lower leg.  
*Tic douloureux*, neuralgic face-ache; neuralgia.  
*Tinea anularis*, *tinea capitis*, ringworm of the scalp; scald head.  
*Tinea faciei*, milk-crust, milk-scab.  
*Tinnitus aurium*, ringing in the ears.  
*Tissue*, web or membrane.  
*Titillation*, tickling.  
*Tonics*, medicines intended to increase the tone of the muscles.  
*Tonic spasm*, permanent rigidity of the muscles.  
*Tonsillitis*, inflammation of the tonsils.  
*Tonsils*, glands on each side of the throat; amygdalæ.

- Tophi*, swellings on bones or the periosteum.  
*Topical*, local, to the part.  
*Formina*, griping pains.  
*Torpor*, inactivity; dulness.  
*Torticollis*, wry neck.  
*Toxicology*, description of poisons and their effects.  
*Trachea*, windpipe.  
*Tracheal*, belonging to the windpipe.  
*Tracheotomy*, opening the windpipe by a surgical operation.  
*Tracheitis*, inflammation of the mucous membrane of the trachea; croup; cynauche trachealis.  
*Tragus*, cartilaginous eminence of the outer ear.  
*Translation*, metastasis.  
*Transudation*, passage of fluids through membranes.  
*Trapezium, trapezoides*, bones of the carpus; wrist-bones  
*Trapezius*, muscle of the shoulder-blade.  
*Traumatic*, morbid condition of a part arising from wounds inflicted on other parts of the body.  
*Tremor*, trembling.  
*Trephine*, a circular instrument for perforating the bones of the skull, &c  
*Triceps*, muscles in the thighs and arms.  
*Triehiasis*, inclination of the eyelashes inwards against the globe of the eye.  
*Trismus*, locked-jaw.  
*Trituration*, rubbing down a substance in a mortar, &c., until minutely divided.  
*Trochanter*, tuberosity on the thigh bone.  
*Trochlearis*, muscle, &c., of the eye.  
*Tubercle*, in pathology, small, round, yellowish-gray deposits, as in scrofulous tumors.  
*Tumefaction*, swelling.  
*Tumid, tumefied*, swollen, distended.  
*Tumor*, a swelling.  
*Tunica*, a membranous coat or covering.  
*Tunica adnata*, lining membrane of the eyelids.  
*Tunica albuginea testis*, envelope of the testicles.  
*Tunica arachnoidea*, membrane covering the brain.  
*Tunica vaginalis*, envelop of the testicles, and epididymis.  
*Turbinated bones*, spongiosa inferiora in the nostrils.  
*Turbidity*, cloudiness; muddiness.  
*Turgescence*, swelling up, growing large, distention of blood vessels.  
*Tussis*, cough.  
*Tussis humida, — sicca, — convulsiva*, catarrhal—dry—and whooping cough.  
*Tympanitis*, flatulent distention of the abdomen; abdominal emphysema.  
*Tympanitis*, inflammation of the membrano tympani; otitis  
*Tympanum*, drum of the ear.  
*Type*, periodicity of a paroxysm in fevers.  
*Typhomania*, delirium with stupor.  
*Typhoid*, resembling typhus.  
*Ulna*, bone of the forearm.  
*Ulnar*, pertaining to the ulna.  
*Umbilical cord*, the navel-string.  
*Umbilicus*, the navel.  
*Union by first intention*, healing of a wound by adhesion.  
*Urea*, a principle of urine.  
*Uresis*, micturition.  
*Ureters*, canals between the kidney and bladder.  
*Urethra*, the urinary canal from the bladder.  
*Urethritis*, inflammation of the urethra; gonorrhœa.  
*Uric acid*, an acid found in urine.  
*Urticaria*, nettle-rash.  
*Uterine*, pertaining to the womb.  
*Utero-gestation*, pregnancy.  
*Uterus*, womb.  
*Uvula*, pendulous body behind the soft palate.  
*Uvulitis*, inflammatory elongation of the uvula.  
*Vaccination*, the prophylactic application of cow-pox virus.  
*Vagina*, passago from the labia pudendi to the uterus.  
*Vagus nervus*, pneumogastric nerve.  
*Valgus*, eversion of the toes; talipes valgus.  
*Varicella*, chicken-pox; eruptive fever, with quickly-forming pustules, bursting and drying into scabs, ordinarily without suppurating.  
*Varicocele*, enlargement of the vessels of the scrotum.  
*Variola*, small-pox. *Variola spuria*, chicken-pox.  
*Varioloid*, milder form of small-pox.  
*Varix*, (pl. *varices*), varicose veins; morbid dilatation of the veins.  
*Varus*, inversion of the toes; talipes varus.  
*Vas* (pl. *vasa*), a vessel.  
*Vascular*, pertaining to vessels, particularly the blood vessels.  
*Vas deferens*, excretory duct of the testis.  
*Vastus externus, internus*, muscles of the thigh.  
*Velum, velum pendulum palati*, curtain of the palate.  
*Vena*, vein.  
*Vena cava*, veins returning the blood to the heart.  
*Vena porta*, large vein of the liver.  
*Venesection*, blood-letting; bleeding.  
*Venery*, excessive sexual indulgence.  
*Ventricles*, cavities in the brain and heart.  
*Vermes*, worms. *Vermineous*, pertaining to worms.  
*Vermiform*, like a worm. *Vermifuge*, an anthelmintic; remedy to destroy worms.  
*Verruca*, wart.  
*Vertebra* (pl. *vertebræ*), bone of the spine.  
*Vertebral*, belonging to the spine.  
*Vertigo*, giddiness, dizziness.  
*Vertex*, crown of the head.

- Vesical*, appertaining to the bladder.  
*Vesication*, artificial formation of a blister.  
*Vesicatory*, producing blisters.  
*Vesicle*, watery bladder-like eruption; blister.  
*Vesiculæ seminales*, seminal vesicles.  
*Vicarious*, acting as a substitute.  
*Vinum*, wine.  
*Virus*, venom, contagious matter.  
*Viscus*, (pl. *viscera*,) internal organ of the system.  
*Vis medicatrix naturæ*, curative power of the animal economy.  
*Visus nebulosus*, cloudy vision.  
*Vis vitæ*, vital power.  
*Vola*, palm of the hand.  
*Volvulus*, intussusception of the bowels.  
*Vomer*, posterior part of the septum of the nostrils.  
*Vomica*, abscess in the lungs.  
*Vomiturition*, retching, ineffectual attempt to vomit.  
*Vulva*, pudendum, in female sexual organs.  
*Wen*, an indolent tumor.  
*Whites*, fluor albus.  
*Whitlow*, abscess of the finger-ends.  
*Xiphoid*, ensiform, or sword-like cartilage of the sternum.  
*Zona*, shingles; belt-shaped eruption around the body or a limb.  
*Zygoma*, the bony yoke connecting the malar and temporal bones.  
*Zygomatic*, belonging to the zygoma.

THE  
HOMŒOPATHIC EXAMINER,

EDITED BY

**DRs. GRAY AND HEMPEL,**

IN TWO VOLUMES, WITH A COMPLETE INDEX.

Can be used as a Manual. Elegantly bound in 2 volumes. 1846 and 1847. \$6 00.

---

HOMŒOPATHIC BOOKS.

*Just Published, by William Radde :*

**LAURIE, DR. J. HOMŒOPATHIC DOMESTIC MEDICINE**, with the Treatment and Diseases of Females, Infants, Children, and Adults. Fourth American edition, much enlarged, with additions by A. Gerald Hull, M. D. 1848. Bound, \$1 50.

**G. L. RAU'S ORGANON** of the Specific Healing Art of Homœopathy. Translated by C. J. Hempel, M. D. 1848. \$1 25.

**E. STAFF'S ADDITIONS** to the *Materia Medica Pura*. Translated by C. J. Hempel, M. D. \$1 50.

**HEMPEL'S BÖENNINGHAUSEN**, for Homœopathic Physicians ; to be used at the Bedside of the Patient, and in studying the *Materia Medica Pura*. 1 octavo vol., most complete edition, including the Concordances of Homœopathic Remedies. Translated and adapted to the use of the American Profession, by C. J. HEMPEL, M. D. 1847. \$1 50.

**HEMPEL'S HARTMANN**. The Acute Diseases, and their Homœopathic Treatment. Third German edition, revised and considerably enlarged by the author. Translated, with additions, and adapted to the use of the American Profession, by C. J. Hempel, M. D. 1847. \$1 50.

**BECKER, M. D., ON CONSUMPTION**. Translated from the German. 1848. 38 cts.

— **ON DISEASES OF THE EYE**. Translated from the German. 1848. 38 cts.

— **ON CONSTIPATION**. Translation from the German. 1848. 38 cts.

— **ON DENTITION**. Translated from the German. 1848. 38 cts.

**E. BAYARD, M. D.** *Jahr's Short Elementary Treatise upon Homœopathia* and the Manner of its Practice, with some of the most important effects of ten of the principal Homœopathic remedies ; for the use of all honest men who desire to convince themselves, by experiment, of the truth of the doctrine. Second French edition, corrected and enlarged. Translated by Edward Bayard, M. D. Bound, 37½ cts.

**HAHNEMANN, Dr. S.** *The Chronic Diseases, their Specific Nature and Homœopathic Treatment*. Translated and edited by Charles J. Hempel, M. D., with a Preface by Constantine Hering, M. D., of Philadelphia. 8vo. 5 volumes. Bound. 1845. \$7.

**HEMPEL'S HOMŒOPATHIC DOMESTIC PHYSICIAN**. 1847. Bound, 50 cts.

**BÖENNINGHAUSEN'S ESSAY ON THE HOMŒOPATHIC TREATMENT OF INTERMITTENT FEVERS**. Translated and edited by Charles Julius Hempel, M. D. 1845. 38 cts.

**HOMŒOPATHIC COOKERY**. Second edition, with additions by the lady of an American Homœopathic Physician. Designed chiefly for the use of such persons as are under Homœopathic Treatment. 50 cts.

**RUECKERT'S THERAPEUTICS ; or, Successful Homœopathic Cures**, collected from the best Homœopathic Periodicals, translated and edited by C. J. HEMPEL. 1 large 8vo. vol., bound. 1846. \$3 50.

TRANSACTIONS OF THE AMERICAN INSTITUTE OF HOMŒOPATHY. 1846. Bound, \$1 50.

HAHNEMANN, Dr. S. *Materia Medica Pura*. Translated and edited by Charles Julius Hempel, M.D. 4 vols. 1846. \$6.

REASONS why Homœopathy should receive an Impartial Investigation from the Medical Profession and the Public. By B. F. BOWERS, M. D. 13 cts.

THE BRITISH JOURNAL OF HOMŒOPATHY. Edited by J. J. DRYSDALE, M. D.; J. R. RUSSELL, M. D.; and R. J. DUDGEON, M. D. The two quarterly numbers of 1848 are on hand, at 75 cts. each number. Several volumes of 1846 and 1847 are complete, on hand, at \$3 each volume, of four quarterly numbers, with Title and Index.

WM. HENDERSON, M. D. *Homœopathic Practice*, 1846. 50 cts.

FORBES, M. D. *Homœopathy, Allopathy, and Young Physic*, 1846. 19 cts.

WM. HENDERSON, M. D. Letter to John Forbes, 1846. 19 cts.

§ The above three books, bound in one volume, \$1.

HARTMANN, DR. F. PRACTICAL OBSERVATIONS ON SOME OF THE CHIEF HOMŒOPATHIC REMEDIES. Translated from the German by A. H. OKIE, M. D. First series. Bound, \$1.

The second and last series. Bound, \$1.

EPPS, DR. J. DOMESTIC HOMŒOPATHY; or, Rules for the Domestic Treatment of the Maladies of Infants, Children, and Adults, etc. Second American from the fourth London edition. 1845. Bound, 75 cts.

J. JEANES, M. D. HOMŒOPATHIC PRACTICE OF MEDICINE. \$3.

DEFENCE OF HAHNEMANN AND HIS DOCTRINES, INCLUDING AN EXPOSURE OF DR. ALEX. WOOD'S "HOMŒOPATHY UNMASKED." London, 1844. 50 cts.

RUOF'S REPERTORY OF HOMŒOPATHIC MEDICINE, nosologically arranged. Translated from the German by A. H. Okie, M. D., translator of Hartmann's Remedies. Second American edition, with additions and improvements by G. HUMPHREY, M. D., etc. 1844. Bound, \$1 50.

THE PRACTICAL ADVANTAGES OF HOMŒOPATHY, illustrated by numerous cases, Dedicated by permission to Her Majesty Queen Adelaide. By H. DUNSFORD, M.D. \$1.

HYDRATICS, OR MANUAL OF THE WATER CURE. Especially as practised by Vincent Priessnitz, in Gräffenberg; compiled and translated from the writings of Charles Munde, Dr. Oertel, Dr. B. Hirschel, and other eye-witnesses and practitioners.—4th edition, by FRANCIS GRAETER, price 50 cents, with one plate or six engravings. 1844.

ROKYTANSKY'S PATHOLOGICAL ANATOMY, translated from the German, with additions on Diagnosis, from Schönlein, Skoda, and others, by Dr. JOHN C. PETERS. 1844. 75 cents.

*Opinions of the Press*—"Dr. Rokytsky's book is no more than it professes to be: it is morbid Anatomy in its densest and most compact form, scarcely ever alleviated by histories, cases, or hypotheses. It is just such a work as might be expected from its author, who is said to have written in it the result of his experience gained in the careful examination of over 12,000 bodies, and who is possessed of a truly marvellous power of observing and amassing facts. In the course of our analysis we have amid comparatively little of its merits, the best evidence of which is found in the length to which our abstracts have been carried without passing beyond the bounds of what is novel or important. Nor would this fault have been committed though much more had been borrowed, for no modern volume on morbid Anatomy contains half so many genuine facts as this; it is alone sufficient to place its author in the highest rank of European medical observers."—*British and Foreign Medical Review*, January, 1843.

ENCHIRIDION MEDICUM, or the Practice of Medicine; the result of fifty years' experience, by C. W. HUFELAND, counsellor of state, physician in ordinary of the late King of Prussia, professor in the University of Berlin. From the sixth German edition; translated by C. Bruchhausen, M.D. Revised by R. Nelson, M.D. Second American Edition. 1844. Bound, \$2 50.

*Opinions*:—The following lines from Dr. Manley, formerly President of the Medical Society of the State of New York, contains his opinion in few words of the merits of the book:

I am happy to have the opportunity of recommending to the Medical profession the *Manual of the Practice of Medicine*, by Hufeland. It is not often that books of this character, on perusal, make good the claims which their titles assume, but this is a well-marked exception: its description of diseases though concise, are comprehensive; its reasonings just and philosophical, and its practice, as a consequence, intelligible and rational. The character of the author, and his experience, of more than half a century, together with the unexampled popularity of the work in its original language, render in my opinion all individual recommendation superfluous. I hope that it may soon be found in the hands of every medical man, whether pupil or practitioner.

JAMES R. MANLEY, M.D.

New-York, September 7, 1842.
